

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

PREFACE.

THE present publication attempts to make good a real deficiency—existing at any rate in this country—namely, that of a fairly adequate and exhaustive Dictionary of Recent and Contemporary Biography, including foreign as well as national celebrities. The greater lights of the century have been treated with some fulness; in the case of those of minor importance, it was unnecessary to do more than give a concise summary of the leading events of their lives. Again, the introduction of contemporaries necessarily implied two standards of criticism. In their case the aim has been to make the articles something better than mere strings of facts and dates, while avoiding on the one hand flippancy expressions of individual opinions, on the other empty eulogy.

A few words as to the scope and arrangement of the book. It was of course inevitable, where a purely arbitrary frontier line, such as that of the century, was selected, that there should be a considerable number of subjects lying partly within and partly without it. As a rule those who merely survived the year 1800, without making any material addition to the landmarks of their lives, have been altogether excluded, or treated with great brevity; even in cases like those of Fox and Pitt, the earlier part of their career has been shortly summarised. Within the compass of eleven hundred pages of a moderate size, utility rather than completeness was the object chiefly kept in view. In drawing up the lists of names, the wants of the average reader were consulted as far as possible, and an effort was made to avoid serious omissions by a diligent consultation of standard works and the catalogue of the British Museum. Also, inasmuch as the world has not stood still while the work was in progress, care has been taken in the case of living men to include occurrences of consequence down to the eve of going to press. In order to give a connected idea of the leading facts in the annals of minor nationalities, their potentates have been treated under the heading of the country over which they rule. Thus, the article on "Egypt, The Khedives of," may be of some value as a commentary on what has taken place in that country within the last few years. To save the reader the trouble of hunting up and down the book, authors who have written under a *nom de plume* of European celebrity, such as George Eliot,

George Sand, and Mark Twain, are dealt with under the title by which they have chosen to be known to the world at large.

Such value as this volume may be found to possess, is due for the most part to the able staff of contributors who have given it their invaluable aid, and have constantly supplied useful suggestions and much zealous co-operation. To all of them the Editor renders his most grateful thanks, but especially to Mr. H. W. Nevinson, B.A., who has been his right-hand man throughout, and given him much sound advice upon matters on which he was insufficiently informed. His thanks are also due to the great band of men of mark who have been kind enough to give information about themselves, or to revise the notices that were sent to them. The Editor has met with few refusals, and the ready courtesy of his correspondents has made his labours far lighter than they would have been otherwise.

January, 1887.

CELEBRITIES OF THE CENTURY.

A'ali Pasha (b. 1815, d. 1871) was a Turkish statesman, who on five occasions filled the post of Grand Vizier. A'ali Pasha, who was a zealous advocate of reform, first entered the service of the Sultan in 1830, and was subsequently transferred from one diplomatic post to another. He was accredited Ambassador to England from 1841 to 1844. On his return to Constantinople he was made a member of the Council of State. In 1846 he received the portfolio of the Ministry of Foreign Affairs, and in 1852 filled the office of Grand Vizier for six months. In 1854 he was nominated President of the Council of the Tauximat; and, as Foreign Minister, he took part in the deliberations of the Conference at Vienna in 1855, convened for the purpose of terminating the Crimean War. A'ali also represented Turkey in 1856 at the Paris Conference, at which the Declaration of Peace was signed, and presided over the Congress at Paris of 1864, called to settle the affairs of Roumania. When the Sultan visited the Courts of Europe in 1867, A'ali was appointed Regent. His tenure of the office of Grand Vizier in no instance lasted more than a few months.

***Aarifi Pasha** (b. 1830) is the son of a distinguished Turkish diplomatist, by whom he was introduced at an early age into political life. His knowledge of languages gained him the post of Interpreter to the Divan, which he held for many years. In 1872 he became Ambassador at Vienna, and two years later he held successively the offices of Minister of Public Instruction and Minister of Justice. When in 1876 an attempt was made to stave off the intervention of the Powers in Turkish affairs by the promulgation of a new Constitution, Aarifi Pasha became the President of the Senate. In 1879 he was appointed Prime Minister, the Grand Vizierate having been temporarily abolished by decree. His Ministry, which included Safvet Pasha, only lasted, however, for a few months. Aarifi Pasha became President of the Council in the new ministry of Oct., 1885.

Abascal, José Fernando (b. 1743, d. 1821), after rising to the rank of Brigadier-General in the Spanish army, was appointed commander of the island of Cuba in 1796, and defended its capital, Havana, against

the English. In 1804 he became Viceroy of Peru, and in the face of the general revolt of the Spanish possessions, he managed to keep that colony faithful to the Government. In 1816, however, owing to several reverses suffered by his troops, both from the insurgents and the English, he was recalled to Spain.

W. B. Stephenson, *Twenty Years' Residence in South America.*

Abbas Pasha. [EGYPT.]

Abbot, CHARLES. [COLCHESTER, LORD.]

Abbott, CHARLES. [TENTERDEN, LORD.]

***Abbott, EVELYN, M.A., LL.D.** (b. March 10th, 1843), was educated at Balliol College, Oxford, and obtained the Gaisford Prize, 1864, and a first-class (classics) in 1866. He became a fellow of the college in 1874, and subsequently classical tutor and librarian. Mr. Abbott is well known as a classical scholar. Perhaps his most useful work is his masterly translation of Professor Duncker's *History of Antiquity* (1877). He has also edited, in conjunction with Professor Lewis Campbell, an admirable edition of the plays of Sophocles for the Clarendon Press. Among his other works are *Selections from Lucian* (1872), *The Elements of Greek Accidence* (1874), and he has edited a collection of essays on Greek subjects, styled *Hellenica* (1881).

***Abbott, THE REV. EDWIN ABBOTT, D.D.** (b. 1838), became a Fellow of St. John's College, Cambridge, in 1861. After being for three years Assistant Master of King Edward's School, Birmingham, he was appointed Head Master of the City of London School in 1865. He has been Select Preacher at both the Universities of Oxford and Cambridge, and Hulsean Lecturer in the latter University in 1876. Dr. Abbott is understood to be the author of two remarkable religious romances, published anonymously—*Philochristus: Memoirs of a Disciple of our Lord* (1878), and *Onesimus: Memoirs of a Disciple of St. Paul* (1882). His religious works include *Bible Lessons* (1872), and *Through Nature to Christ* (1877). His educational works are:—a *Shakespeareian Grammar* (1870), an edition of *Bacon's Essays* (1876), and an *English Grammar* (3rd edition, 1877). He has also written a sketch

of Bacon's earlier life, entitled *Bacon and Essex* (1877), and *Francis Bacon* (1885).

***'Abd-el-Al Pasha**, an Egyptian officer, was identified with the nationalist movement of 1881 and the following years. An attempt made by the Egyptian Government in February to seize him and his fellow-officers, Ali Bey Fehmy, and Arabi Bey, was followed by a mutiny of the troops, and he played a prominent part in the measures taken by Arabi for the coercion of the Government. In 1882 he was appointed commandant of Damietta by the National Council, and some days after the battle of Tell-el-Kebir, surrendered there with six thousand black troops. He was tried with the other leaders of the rebellion and sentenced to death, a punishment subsequently commuted for perpetual banishment in Ceylon.

A. M. Broadley, *How we Defended Arabi and his Friends*.

'Abd-el-'Aziz ("Servant of the Mighty"), thirty-second Sultan of Turkey (b. 1830, d. 1876), succeeded his brother, 'Abd-el-Mejid, June 25th, 1861. Unlike his humane and kindly predecessor, 'Abd-el-'Aziz was of a gloomy, morose disposition, more interested in cock-fights than in the soft delights of the harim which entranced 'Abd-el-Mejid. The chief events of his reign, which was not marked by the reforming tendencies of the preceding (unless his visit to London in 1867—an event unprecedented in Turkish annals—is to be counted as a reform), were the Cretan revolt, which was brought to an end in 1869 by the remonstrance of the Powers addressed to Greece, who had assisted the insurgents; the withdrawal of the garrisons on the Servian frontier, whereby that principality became virtually independent; the insurrection in Herzegovina in 1875, which was followed by disturbances in most of the Christian provinces of the Empire, where Russian agents fomented the discontent of the rayahs and eventually brought about the now celebrated Bulgarian "atrocities," and the Servian, Montenegrin, and finally the Turco-Russian War; but these disturbances and their momentous consequences overran the reign of this Sultan. The great external event was the repudiation by Russia of the provision of the Treaty of Paris which guaranteed the neutrality of the Black Sea. This breach of international faith was successful mainly because France was exhausted by the struggle with Germany; Austria and Germany were indifferent, and England, without an ally, was under the direction of the government of Mr. Gladstone, which was not remarkable for its interference in foreign questions. Hence, by a treaty signed at London, Feb. 13th, 1871, Russia was permitted to violate the laws of nations. Another serious occurrence in the reign of 'Abd-el-'Aziz, was the insolvency of Turkey, which impended during the latter years of his rule, and was actually announced under

his successor in July, 1876, when the Porte declared itself unable to make any payments on its national debt, and thereby lost the confidence and favour of the English middle class. On May 30th, 1876, 'Abd-el-'Aziz was deposed, ostensibly because his reason had given way, and on the 4th of June he was found murdered, probably to prevent his being used as an excuse for risings among the disaffected; but by whom the deed was committed is still a matter of dispute.

[S. L.-P.]

***'Abd-el-Hamid** ("Servant of the Praised"), the reigning Sultan of Turkey (b. 1842), thirty-fourth of his line, son of 'Abd-el-Mejid, succeeded his brother, Murād V., on Aug. 31st, 1876. He found the internal affairs of the Ottoman Empire in a calamitous condition: the Christian provinces were either in open insurrection or teeming with revolutionary societies, who received their inspiration and the sinews of war from Russia; Servia and Montenegro declared war in sympathy with the already revolted Herzegovina; Bulgaria, stirred by the agents of the Pan Slavists, attempted to throw off the yoke of the Turk, and the wanton cruelty which was then shown in reducing a peasantry of which stupidity was the chief crime did more to weaken the Ottoman Power in the eyes of civilised Europe than centuries of bad government could have effected. The Bulgarian "atrocities" led to the Turco-Russian War in 1876, which ended in the defeat of the Turks, the reconstruction of the Christian provinces, and the permanent weakening of the Ottoman Empire. By the treaties of St. Stefano and Berlin, Turkey was virtually shorn of her northern provinces, and Russia became more influential than ever in the councils of the Porte. A little later, the disturbances caused in Egypt, partly by misgovernment and debt, and partly by the intrigues of the Khedive Ismail, led to his deposition, and the consequent reinforcement of the disaffected, who found the new Khedive Tawfik (or Tewfik) powerless to contend with the factions that were destroying his dominions. The result was the insurrection of 'Araby, and the interposition of England, in the bombardment of Alexandria, the defeat of the Egyptian rebels at Tell-el-Kebir, and the practical administration of Egypt by England with exceedingly scant success ever since. The Sultan could scarcely regard those operations with favour; he was forced to look on whilst his most important province was placed in the hands of English officials, and a dangerous religious movement in the Sudan was fostered by official incompetence. 'Abd-el-Hamid, however, has studied how to wait, and his acquiescence in these and other shocks to his empire is the result of policy, and not of indifference. On the contrary, he is devoted to the business of

his position, does an immense amount of work personally, and takes a keen interest in all matters that concern his country. That he indulges dreams of the restoration of the ancient power of Turkey and of Islam is well known, and should the Pan-Islamic movement ever come to anything, 'Abd-el-Hamid will be its head. But with all his zeal for his creed and nation, he is no fanatic, and produces a very favourable impression upon Christians. Lord Dufferin said of him that he "excels all the monarchs of the day in the urbanity and charm of his manners, and in the gracious consideration he shows to those who have the happiness of being admitted to his presence;" and the universal opinion is that he is no less capable as a ruler than personally engaging. [S. L.-P.]

'**Abd-el-Kādir** ("Servant of the Powerful"), (b. 1807, d. 1883), Algerian patriot, belonged to a family of rank and influence in Oran, and was himself as much renowned in youth for intelligence as for athletic accomplishments. The Dey of Algiers foresaw danger in the young man, and sought to kill him; so 'Abd-el-Kādir fled into Egypt, and performed the pilgrimage to Mekka. When he returned to Algiers he found the French in possession of his country, and forthwith set about turning them out. The people of Oran rose in 1831, and made him king, or at least Emir of Mascara, his birthplace, and he preached the Holy War, and led the tribes against the French with so much success that he concluded a favourable treaty, in 1834, with the French general, which recognised him as absolute Emir of Mascara. In the following year 'Abd-el-Kādir again raised the cry of the Holy War, and the conflict lasted ten years, and cost France more men and money than she cares to own. 'Abd-el-Kādir's brilliant tactics won the admiration of the Duke of Wellington, and baffled all the marshals and royal princes of France. Marshal Bugeaud and 40,000 French troops, however, at length set themselves determinedly to subdue the Arabs, and succeeded, after an heroic resistance, in compelling 'Abd-el-Kādir to surrender in 1847, on condition that he should be allowed to retire to Alexandria or Acre. This promise was broken by the French Government, and the Arab hero was imprisoned in the castle of Pau, and afterwards at Amboise, till 1852, when Napoleon III. restored him to liberty upon condition of never returning to Algiers. 'Abd-el-Kādir thenceforward lived, a pensioner of the Second Empire, at Brusa, Constantinople, and Damascus, and died at Mekka. He was an Arab of the best type: generous, hospitable, frank, with a quick and vivid temperament; and a devotion to his country. During the Syrian massacres, in 1863, he befriended the Christians publicly, for which he received the Grand Cross of the

Legion of Honour. He came to Paris to see the 1867 Exhibition, and on the outbreak of the Franco-Prussian war, the old chief begged to be allowed to lead an Arab army against the Germans. [S. L.-P.]

***Abd-el Kerim Pasha** (b. circa 1817), after a distinguished career in the Turkish army, was appointed Commander-in-Chief of the army of the Danube on the outbreak of war with Russia in 1877. He proved, however, exceedingly unequal to the occasion; the Russians crossed that river without being compelled to strike a blow, and the line of the Balkans was speedily penetrated at several parts. In September he was accordingly recalled in disgrace, and succeeded by Mehmet Aly Pasha.

'**Abd-el-Mejid** ("Servant of the Glorified"), thirty-first Sultan of Turkey (b. 1823, d. 1861), succeeded his father, the famous Sultan Mahmūd II., July 2nd, 1839. At the time of his accession to the throne the youthful Sultan found the very existence of his Empire menaced by the successful advances of the Egyptian army under Ibrahim Pasha, the son of Mohammed 'Aly. On June 25th, 1839, the Turkish troops had been disastrously routed at the battle of Nezib, when many of the officers were induced by bribes to go over to the enemy; and in July the Turkish fleet was traitorously surrendered to the Egyptians. In the midst of these calamities Sultan Mahmūd died, and left his young son to meet what appeared to be the probable dissolution of the Empire. Such a catastrophe, however, was not to be contemplated by the great Powers, who, with the exception of France, now came to the rescue of the Porte. The bombardment of Beyrūt and Acre in August and November, 1840, proved to Mohammed 'Aly that the warnings of the four Powers were not to be disregarded; the Pasha yielded, and the firman of Feb. 13th, 1841, laid down the future relations of Turkey and her rebellious province, fixed the annual tribute, made the vicereignty hereditary to the descendants of Mohammed 'Aly, and regulated other disputed matters. Another outcome of the war was the celebrated Convention of London, July 13th, 1841, whereby the right of the Sultan to control the navigation of the Dardanelles was recognised by the five Powers, who bound themselves to respect the Porte's right to refuse passage to foreign ships of war. Twelve years of peace, broken only by insignificant insurrections, which were ably subdued by the Ottoman general, 'Omar Pasha, enabled the Sultan to carry out some of the reforms which had been initiated by his great father. In the first year of his reign he promulgated the famous Hatti-sherif of Gülhané, whereby equal rights and liberties were decreed to all his subjects, without distinction of nationality or religious belief; the law, especially with regard to public trial for capital offences, was

re-asserted ; and regulations for the improvement of the military system and the collection of taxes were introduced. The Sultan himself was generally a passive agent in these affairs, for his disposition was that of a refined voluptuary, and his devotion to the pleasures of his harim left him little energy to expend on public concerns, which he was content to leave to his ministers. His kindly, gentle nature, however, was completely in accord with the civilising policy inaugurated by his father. In his advisers he was singularly fortunate ; for not only was Reshid Pasha an enlightened and able statesman, but during most of his reign the Sultan had the priceless advantage of the counsels of Sir Stratford Canning, afterwards Lord Stratford de Redcliffe, who was in effect the Prime Minister of Turkey so long as he remained at Constantinople, i.e. from 1842, but with brief intervals, to 1858. He it was who kept the more enlightened school of Turkish ministers in power, and enforced the detailed application of the provisions indicated in the Hatti-sherif ; obtained the formal renunciation of the old system of torture ; of the execution of renegades ; insisted on the practical adoption of the principles of religious toleration which had been enounced in the Hatti-sherif ; procured a just revision of the commercial treaties, and secured the rights of trade and other advantages for English merchants, to the benefit of both countries ; and steered the Porte through the complications of 1849, when 'Abd-el-Mejid courageously refused to give up Kossuth and the other Hungarian patriots who had taken refuge in Turkey, in spite of the menaces of Russia and Austria. Under 'Abd-el-Mejid's rule, or that of his ministers, guided by Lord Stratford, the Ottoman Empire made real progress, and the reform of the army, the new system of recruiting, and the reduction of the local feudatories, rendered the Porte the better prepared to carry out the successful campaign on the Danube which preceded the Crimean War. Of that war, which was the great event of 'Abd-el-Mejid's reign, it is not necessary here to relate the incidents. Russia had before attempted to force the Porte, in 1850, but diplomacy had then averted the extremity of war. In 1853, however, in pursuance of an intolerable demand for the virtual sovereignty of the thirteen million subjects of the Porte who belonged to the Greek Church, Russia poured her troops into the Danubian Principalities, by way of securing "material guarantees" for a totally unjustifiable claim. The result is familiar to all. The capture of Sevastopol in September, 1855, terminated the war, and the Treaty of Paris of March 30th, 1856, provided for the settlement of the Danubian Principalities, the neutrality of the Black Sea, and the internal administrative independence of the Turkish Empire ; while a convention of the same date re-asserted the closing of the Darda-

nelles to ships of war so long as the Porte was at peace, and proclaimed the adhesion of the six Powers (Sardinia included) to this principle. By a separate treaty of the 15th of April, 1856, England, France, and Austria guaranteed the independence and integrity of the Ottoman Empire, and bound themselves to treat any infraction of the treaty of March as a *casus belli*. In the same year 'Abd-el-Mejid promulgated the Hatti-Humâyûn, which confirmed the reforms of the Hattisherif, and recapitulated many of the concessions which Lord Stratford had obtained with respect to the liberties and legal privileges of the Christian rayahs. In 1858 the Principalities were finally settled, and united as the kingdom now known as Roumania. In 1860 massacres of Christians in the Lebanon and Damascus were near exciting a general conflagration, and a French expedition was, with the approval of the Powers and the consent of Turkey, despatched to restore order. The Porte, however, misliking the interference of foreign troops in Ottoman territory, managed to pacify the disturbed districts by the firm hand of Fuâd Pasha before the French arrived on the scene, and the expedition shortly returned home. This was the last important event of the reign of 'Abd-el-Mejid. On the whole, his rule was signalised by many valuable reforms, some of which, in Turkish manner, remain more effective on paper than in practice, but many have been really carried out, and his period, thanks in a large degree to Lord Stratford, was marked by progress and enlightened ideas. [S. L. P.]

'Abd-er-Rahmân Khan. [AFGHANISTAN.]

***Abdy, JOHN THOMAS, LL.D.** (b. 1822), an English barrister and author, son of Lieut.-Colonel J. N. Abdy, took his degree from Trinity Hall, Cambridge. Three years later (1847) he obtained the degree of LL.B. ; in 1850 was chosen Fellow of his college, and called to the bar. In 1852 he was created LL.D., and in 1854 was appointed Regius professor of civil law at Cambridge University, which post he held for nineteen years. Dr. Abdy was appointed Recorder of Bedford in 1870, and a County Court Judge in the following year. Among his legal works may be mentioned annotated translations of *The Institutes of Justinian* (1876), and of the *Commentaries of Gaius* (1870), an edition of *Kent's Commentary on International Law* (1878), and a *Sketch of Civil Procedure among the Romans* (1857).

***A'Beckett, ARTHUR WILLIAM** (b. 1844), journalist, author, and dramatist, son of Gilbert Abbot A'Beckett, was (1862-64) a clerk in the War Office, an appointment he left to edit the *Glorworm*, a London evening paper. Subsequently he devoted himself chiefly to periodical literature, and in 1870-71 officiated as war correspondent for the *Globe* and *Standard*.

He joined the *Punch* staff in 1874, and is the author of several successful novels and plays. Among his works are:—*Fallen Among Thieves*, *Our Holiday in the Scottish Highlands*, *The Modern Arabian Nights*, *The Ghost of Grey-stone Grange*, and *The Mystery of Mostyn Manor*. He is also the author of the plays *L. S. D.* (1872), *About Town* (1873), *On Strike* (1873), *Faded Flowers* (1873), and *Long Ago* (1883). In conjunction with Mr. J. Palgrave Simpson, he dramatised the novel *Fallen Among Thieves*, which was acted under the title of *From Father to Son* (1883).

A'Beckett, GILBERT ABBOT (b. 1811, d. 1856), comic writer, was educated for the bar, to which he was called at Gray's Inn in 1841. When quite a boy he was connected with the newspaper press, and became the editor of the *Figaro in London*, which was illustrated by Cruikshank, and was one of the numerous predecessors of *Punch*. When that paper was founded (in 1841) A'Beckett was a member of the original staff; but for a short period, when Mark Lemon was appointed sole editor, he ceased his contributions, and started a comic paper of his own, called the *Squib*, which had a brief career. After this short secession he continued to contribute to *Punch* until his death. He also contributed to the *Times* (the whole of the leading articles of which are said to have been written by him on one occasion), the *Morning Post*, and the *Illustrated London News*. His principal publications are the exceedingly popular *Quizzology of the British Drama* and the *Comic Blackstone* (1846); the *Comic History of England* (1847) and the *Comic History of Rome* (1852). He was also the editor of the *Table Book*, which contained Thackeray's *Legend of the Rhine*, and wrote numerous plays, which in their day were very successful. In conjunction with Mark Lemon, he dramatised several of Charles Dickens's novels, at the request of their author. In his legal capacity A'Beckett was made a Poor-Law Commissioner, and his reports were made the basis of poor-law legislation. In 1849 he was made a Metropolitan Police magistrate, and discharged his duties very efficiently.

Abeken, BERNHARD RUDOLPH (b. 1780, d. 1854), a German writer, was tutor to the children of Schiller, and professor in the College of Osnabruck. He wrote *Studies on the Divina Commedia of Dante* (1826), and *Cicero in Seinen Briefen* (1835), a biography of Cicero, which has been translated into English.

Abel, NIELS HENRIK (b. 1802, d. 1829), though little known to the world at large, was one of the ablest and most acute of modern mathematicians. He was born at Findöe, in Norway. Though his career extended over little more than twenty-seven years, in that

period his great powers of generalisation were displayed so remarkably in the development of the theory of elliptic formation that Legendre, who had occupied all his life with similar investigations, exclaimed, when he read for the first time Abel's investigations, "Quelle tête celle du jeune Norvégien!" In 1839 Abel's works were published by the Swedish Government, with the editorial care of Holmbro, under whom he had studied at Christiania, and several of the papers have at subsequent dates been reprinted in the mathematical journals of Germany, France, and Great Britain.

***Abel**, SIR FREDERICK AUGUSTUS (b. 1827), a distinguished chemist, is a native of London. Chiefly known in connection with explosives, his researches have been published in *The Modern History of Gunpowder* (1866), *Gun Cotton* (1866), *On Explosive Agents* (1872), *Researches in Explosives* (1875), *Electricity Applied to Explosive Purposes* (1884). He is also the author, in conjunction with Colonel Bloxam, of a *Handbook of Chemistry*. Sir Frederick has been at various times President of the Institute of Chemistry, of the Society of Chemical Industry, and of the Society of Telegraph Engineers and Electricians. In 1867 he was appointed Associate Member of the Ordnance Committee, a post which he still holds, together with those of Chemist to the War Department and Chemical Referee to the Government. He sat on the Royal Commission on Accidents in Mines in 1883, was Commissioner to the Electrical Exhibition at Vienna, and in 1885 a leading member of the Council of the Inventions Exhibition. He was created C.B. in 1877, and Hon. D.C.L., Oxford, in 1883, in which year he was knighted.

Abercorn, JAMES HAMILTON, DUKE OF, statesman (b. 1811, d. 1885), was the head of the Irish Hamiltons. His father, James Viscount Hamilton, died in 1814, and his mother married secondly Lord Aberdeen, afterwards Prime Minister. In 1818 he became Marquis of Abercorn, on the death of his grandfather. Lord Abercorn was educated at Christ Church, Oxford. In politics he was a consistent Conservative. He was made K.G. in 1844, and was for fourteen years (1846-59) attached to the household of the late Prince Consort as Groom of the Stole. The Marquis claimed the Dukedom of Chatelherault in France, but the Emperor Napoleon III., in 1864, decided the matter in favour of the Duke of Hamilton, a descendant of the Grand Duchess of Baden, who belonged to the Beauharnais family. In 1866 the Marquis went to Ireland as Viceroy, an appointment which was well received. The chief incident of his administration was the visit of the Prince and Princess of Wales to Ireland, and during its whole period the executive had to contend with agrarian disturbances and Fenian move-

ments which compelled the Government to suspend the Habeas Corpus Act. In August, 1868, he was raised to a dukedom, and resigned his office after the Conservative defeat at the general elections. On the return of the Conservatives to power in 1874, the Duke was again appointed Lord-Lieutenant of Ireland, and, after an uneventful tenure of office, he resigned in 1876, and was succeeded by the Duke of Marlborough. He moved several important amendments to the Irish Land Bill of 1880, some of which were accepted by the Government. The Duke of Abercorn was Lord-Lieutenant of Donegal, and Grand Master of the Irish Freemasons. He was also one of the largest landowners in Ireland.

Abercrombie, JOHN. (b. 1781, d. 1844), is a name now rapidly fading from the memory of the younger school of psychologists, though at one time no works were more extensively read and admired than those of the accomplished Edinburgh physician. Born in Aberdeen in 1781, he was carefully trained by his father, the Rev. George Abercrombie, and subsequently attended the Grammar School and Marischal College of that city. He afterwards studied medicine at Edinburgh, graduating M.D. in 1803. After a year's attendance on the practice of St. George's Hospital, London, he returned to Edinburgh, became a Fellow of the Royal College of Surgeons, and began practice as a general practitioner. In a few years his acuteness in detecting disease, and the reputation which he obtained for sagacity in its treatment, gained for him a wide circle of patients, and eventually raised him to the first place in his profession. In 1824 he became a Fellow of the Royal College of Physicians, and after the death of Dr. Gregory in 1822 he was considered the first physician in Scotland. At a time when pathological anatomy was almost neglected, Abercrombie cultivated the habit of noting all the special features of the cases which came before him, and endeavoured at a subsequent period to compare the state of the organs after death with the condition which they normally possess during life. By a sedulous perseverance in this habit he accumulated in time a more minute and extensive acquaintance with disease than was possessed by most of his contemporaries. The result of these observations began to be recorded in the *Edinburgh Medical and Surgical Journal* in 1816, in his essays on diseases of the spinal cord and brain, and on diseases of the pancreas, spleen, and intestinal canal, which formed the basis of his *Pathological and Practical Researches in Diseases of the Brain and Spinal Cord, and Researches in the Diseases of the Intestinal Canal, Liver, and other Viscera of the Abdomen*, both of which were issued in 1828. These purely medical works led to others more metaphysical, for, in spite of his large and lucrative practice,

there appeared two years later the *Inquiries Concerning the Intellectual Powers of Man and the Investigation of Truth*, and in 1833 a sequel, entitled *The Philosophy of the Moral Feelings*. In neither work is there exhibited the original observation so amply displayed in the more professional treatises above-mentioned; and, indeed, the author made no pretence of their containing more than a popular digest of the chief facts of the science of mind, and its connection with the doctrines of revealed religion. Indeed, no one was more astonished than Dr. Abercrombie at the success which his books met with. They are still read, for the sound information they contain, and the pleasing style in which they are written. But the more critical students of these times no longer hold these works in the same esteem as the admiring generation which ran them into eighteen and fourteen editions respectively. It is, indeed, not quite easy nowadays to understand the lavish praise heaped upon them by the thousands of readers who bought them; by the University of Oxford, which conferred an honorary Doctorate on their author; by the students of Marischal College, who elected him Lord Rector; and by the Royal Society of Edinburgh, over which he ruled as Vice-President. He was also, it may be added, Physician to the Queen of Scotland. No doubt, apart from his scientific merits, much of Abercrombie's unwonted success was due to the suavity of his manners, his unvarying kindness of heart, and the benevolence and unaffected piety which distinguished him in every walk of life. [R. B.]

Abercromby, J. [DUNFERMLINE, LORD.]

Abercromby, LIEUTENANT-GENERAL SIR RALPH, K.C.B. (b. 1734, d. 1801), was the son of George Abercromby of Tullibody, in Clackmannan. He was educated at Rugby and at Edinburgh University, and though sent to Leipzig to study civil law in 1754, he selected the military profession, and was in 1756 gazetted to the 3rd Dragoon Guards. He became lieutenant-colonel of the regiment in 1773, and in 1781 was appointed colonel of the 103rd; but when the battalion was disbanded in 1783 he was placed on half-pay. During his retirement from the military profession he was (in 1773) elected to represent his native county in the House of Commons, but on the dissolution he did not seek re-election. His retirement may have been partly due to political reasons, for his sympathy with the American colonists in the War of Independence was great, and freely expressed. Nevertheless, his value as a soldier could not be altogether ignored, so that in 1793 he was appointed to the command of a brigade under the Duke of York, in the expedition to Holland. He was engaged in the action at Cateau, and received his first wound at the battle of Nimeguen.

He commanded the rear-guard in the disastrous retreat from the Netherlands in 1794, and his services were rewarded by the Knight Commandership of the Bath, followed by the appointment to the West Indian command. Here he was not idle. In 1796 he successfully organised the attack on Grenada, and, later on, directed the operations that resulted in the capture of Demerara, Essequibo, St. Lucia, St. Vincent, and Trinidad. Returning to England in 1797, he was made colonel of the Scots Greys (2nd Dragoons), and with the rank of lieutenant-general received the appointments of Governor of the Isle of Wight, Fort George, and Fort Augustus. He commanded in Ireland in 1797-98, at a time when the invasion of the island by the French was threatened, and did his utmost to suppress the rising rebellion of the people, and to curb the consequent tendency to military oppression. His clemency, though greatly to his credit, was not much appreciated at the time, and receiving little assistance from the Government, both to effect these objects and to improve the lax discipline of the army, he resigned his command, and, after holding the position of Commander-in-Chief in Scotland for awhile, joined for a second time the army of the Duke of York in Holland in 1799. The country was fated to be a scene of British disaster, not merely from the inclemency of the season, but from the ill-conduct of the Russian and Dutch allies; but Sir Ralph's own energy and ability were so apparent, even under the disadvantageous circumstances of such a campaign, that, though the army returned without laurels, his own reputation had not suffered. When, therefore, the expedition to Egypt in 1801 was decided on, his appointment in chief command met with general approval. The embarkation of the army at Alexandria, in face of stout opposition, was fully successful. It was followed by a decisive battle under the walls of Alexandria, on March 21st, 1801, when the general was mortally wounded by a musket ball in the upper part of the thigh, and was conveyed on board H.M.S. *Foudroyant*, where he died on the 28th. Major-General T. H. Hutchinson, who succeeded him in chief command, echoed the feelings of the army in the order of the day in which he said, "Were it permitted to a soldier to regret any one who has fallen in the service of his country, I might be excused for lamenting him more than any other person; but it is some consolation to those who tenderly loved him, that as his life was honourable, so was his death glorious." His monument in St. Paul's Cathedral was erected in accordance with a vote of the House of Commons, and his widow was created a peeress, with a pension of £2,000 a year settled on her and two successors to the title.

Lord Dunfermline, *Memoir of Sir R. Abercromby*. [C. C. K.]

***Aberdare**, THE RIGHT HON. HENRY AUSTIN BRUCE, BARON, statesman (b. 1815), is the son of John Price Bruce, of Duffryn St. Nicholas, in Glamorganshire. In 1832 he came to London, and was for some time in the chambers of Lord Justice Knight Bruce. In 1837 he was called to the bar at Lincoln's Inn, but only practised a few years, retiring in 1843. He entered Parliament in 1852, as Liberal member for Merthyr-Tydvil, and sat as its representative for twelve years. The general election of 1868 compelled Mr. Bruce to look out for a new constituency, and in January, 1869, he was elected to represent the county of Renfrew. Mr. Bruce's ministerial career began in 1862, when he was appointed Under-Secretary for the Home Department; in April, 1864, he became Vice-President of the Council on Education, an office which he held until July, 1866. In 1864, Mr. Bruce was also made a Privy Councillor and a Charity Commissioner for England and Wales; in 1865, he filled the office of Second Church Estates Commissioner. After the Liberal victory of 1868, he entered the Cabinet as Home Secretary, and while in that position he successfully carried the Act amending the licensing laws, generally known as "Bruce's Act," which received the royal assent in 1869; in 1873 he was created Lord Aberdare, and appointed Lord President of the Council, but the result of the general elections of Feb., 1874, caused his tenure of office to be brief. Lord Aberdare has published some of his speeches and addresses on educational topics, and a *Life of General Sir William Napier, K.C.B.* (1864). He has been prominent in his efforts to relieve the Welsh miners in times of distress, and has at various times arbitrated in disputes between masters and men.

Aberdeen, GEORGE HAMILTON GORDON, 4TH EARL OF (b. 1784, d. 1860), was educated at Harrow School and St. John's College, Cambridge, where he took his degree in 1804. He had succeeded to his grandfather's title in 1801, and for some time he occupied himself chiefly in the study of Hellenic antiquities, a subject in which throughout his life he took the utmost interest. His political career began in 1806, when he was elected one of the representative peers for Scotland, and he took his seat upon the Tory side of the House. His ability soon became recognised, and in 1813 he was sent on a special mission to Vienna, with the object of inducing the Emperor of Austria to join the coalition against Napoleon, and the Treaty of Töplitz crowned his efforts with success. After his return he was raised to the English peerage with the title of Viscount Gordon. Lord Aberdeen was a member of the Duke of Wellington's Cabinet of 1828-30, and during most of the time held the office of Foreign

Secretary. During that period he was in favour of a policy of neutrality; he refused to employ the English power to dispossess Don Miguel of the throne of Portugal, and he strongly objected to the Quadruple Alliance negotiated by Lord Palmerston. He took, however, a prominent share in the formation of the Greek kingdom, recognised by the Powers in 1829. When his party, now calling itself Conservative, returned to a brief spell of power in 1834, under Sir Robert Peel, he was Secretary of State for the Colonies, but he again received the office of Secretary of State for Foreign Affairs when Sir Robert Peel formed his second administration in 1841. Throughout the six years during which our relations with the Continental Powers were in his hands, Lord Aberdeen pursued, as before, a uniformly pacific policy, which was the subject of much bitter comment in this country, but which may perhaps on the whole be defended. The difficulty with France about Tahiti and Queen Pomare was most satisfactorily arranged, and Lord Aberdeen's compromise of 1846 (the Oregon Treaty), by fixing a boundary between English and American dominions west of the Rocky Mountains, closed a dispute which many in the United States were anxious to settle by an appeal to the sword. Upon home affairs his views were of a decidedly Liberal character: the causes of Catholic emancipation and of the repeal of the Corn Laws were advocated by him in all sincerity, and in 1843 he made a well-intentioned but futile attempt to avert the schism in the Scottish Church by a Bill to remove doubts respecting the admission of ministers to benefices, commonly known as "Lord Aberdeen's Bill." He did not receive office again until 1852, when the collapse of Lord Derby's ministry left parties so evenly divided that a coalition of some sort was evidently imperative if affairs were to be carried on at all. Lord Aberdeen's extremely moderate views on most subjects, and the general popularity he had acquired as the leader of the Peelites after the death of that statesman, indicated him as the man who would most competently fill the delicate position of leader of a motley ministry. He obtained the support of Lord John Russell at the Foreign Office; Lord Palmerston became Home Secretary; and Mr. Gladstone was Chancellor of the Exchequer. In quiet times all might have been well; but the Eastern question began to burn again, and the Government, when its most able diplomatist, Lord Palmerston, declined to come to its assistance, and expressed his contempt for his colleagues by a temporary resignation, proved unequal to the crisis. From simple want of nerve, Lord Aberdeen and his fellow-ministers allowed England to "drift" into the Crimean War. Their management of the war was even worse than their conduct of the negotiations that preceded it. Confusion reigned over all the preparations, particularly

in the commissariat, and, in spite of its large majority of two years before, the ministry at the beginning of 1855 was evidently extremely unpopular. Mr. Roebuck gave the *coup de grâce* by his motion for a Select Committee to inquire into the condition of the army before Sebastopol, which was carried by no less than 157 votes — 305 to 148. Lord Aberdeen wisely regarded the vote as one of want of confidence, and promptly resigned. During the remainder of his life he took very little part in public affairs. It may perhaps be said of him that he was a man of decided ability, and with generous sympathies; but lacking in spirit, and decidedly unfortunate in being at the head of a divided ministry at a time when unity of councils was of the utmost necessity.

Kinglake, *Invation of the Crimea*, ii. 62 and X
passim. [L. C. S.]

Abernethy, JOHN (b. 1764, d. 1831), an eminent surgeon, and a scarcely less celebrated humourist, was born in London on April 3rd, 1764. His father was a London merchant, but some of his peculiar traits of character may have been derived from his grandfather, who was a Protestant dissenting clergyman, famous all over Ireland as a ready-witted controversialist whom it was prudent to leave in possession of the field. The future surgeon was educated at Wolverhampton Grammar School, and in 1779 apprenticed, as was then the custom, to Sir Charles Blicke, an operator in extensive practice. Besides the private instruction of his master, young Abernethy attended the lectures of Sir William Blizard at the London Hospital, where he acted as "demonstrator" in anatomy; also those of Potts, surgical lecturer at St. Bartholomew's; and for a time the still more important discourses of John Hunter. On Potts' resignation, Sir Charles Blicke, who had been assistant, became full surgeon of St. Bartholomew's, and Abernethy was elected to the vacant post. He now began to lecture, and proved so successful that a new theatre had to be built in order to accommodate the crowds of students who flocked to hear him; Abernethy thus becoming the actual founder of the flourishing school of St. Bartholomew's. For twenty-eight years (from 1787 to 1815) he held office as assistant surgeon, but in the latter year he was chosen as principal surgeon. Two years before he had been appointed surgeon to Christ's Hospital, and in 1814 professor of anatomy and surgery to the Royal College of Surgeons. His fame as a skilful practitioner was now well established, and for many years his income was one of the largest ever known in the profession. Blunt almost to rudeness, full of biting sarcasm, he was more feared than loved by his patients. But they bore with his peculiar manner out of regard for the consummate skill which accompanied it, and the punc-

tilious sense of honour which distinguished him in all the dealings of his life. For years Abernethy anecdotes were the stock-in-trade of medical diners-out, but nowadays the more refined taste of the age enjoys these somewhat full-bodied tales less readily than did the men who had been reared in a more pungent atmosphere. In his family circle, however, and among his personal friends, Abernethy was quite another personage, for there he was as noted for his courtesy and affection as in his public career he was notorious for a brusque independence, which was often bearish. "I suppose you want my vote?" the pompous grocer-governor of St. Bartholomew's blustered out when the assistant surgeon came into his counting-room on the eve of an election. "No," was the sharp reply, "I want a penn'orth of figs, and be quick about them!" A lady had a tumour in her throat which could not be reached by the knife. But by making a feint of tossing her tray of precious china out of the window he succeeded in evoking a terrified scream, that did all that was required. These are types of many tales of the same description. Abernethy was too busy a practitioner to write much. Indeed, the only important contribution to surgical literature which he left behind him was "*my book*"—viz. his *Surgical Observations on the Constitutional Origin and Treatment of Local Diseases* (1809). It was his manifesto. Whenever he was unwilling to waste time by going over the old ground he referred his students to *my book*. "*My book*," in fact, was his legacy to the world. In 1827, he resigned his chair at St. Bartholomew's, and two years later his professorship at the College of Surgeons, and on the 20th of April, 1831, he died at Enfield.

His scattered papers were collected in 1830, and published in five volumes, and in 1853 his *Memoirs*, by George Macilvain, appeared, though a satisfactory biography of Abernethy and his times has still to be written. [R. B.]

Abinger, JAMES SCARLETT, LORD (b. 1769, d. 1844), was born in Jamaica, and having come to England for his education, took his degree at Trinity College, Cambridge, in 1785. He was called to the bar in 1791, and soon obtained a very large practice. Scarlett's political career began in 1818, when, after two defeats at the hustings, he was returned for Peterborough, a borough of the Fitzwilliam family. At first he voted regularly with the Whigs, and was in particular a powerful advocate of the amelioration of the criminal code. On the breaking up of the Liverpool administration in 1827 he became Attorney-General, and was knighted. Gradually Sir James Scarlett adopted Conservative views, and in 1829, as Attorney-General in the Wellington administration, he conducted the ill-advised press prosecutions caused by comments passed on the Cabinet's change of front with regard to Catholic emancipation. On

the formation of the Peel Ministry of 1834 Sir James Scarlett was made Chief Baron, with a peerage. As a judge he was hardly so successful as he had been as an advocate. He had not self-command enough to be absolutely impartial, and sometimes lectured juries with undue severity.

Foss, *Lives of the Judges*; Scarlett, *Memoir of* ? Lord Abinger.

Abington, FRANCES, actress (b. 1737, d. 1815), was of obscure origin, and during her early life was a flower-seller, a milliner's apprentice, and subsequently a cookmaid. Her first appearance (under her maiden name of Barton) on the stage was at the Haymarket theatre in 1755, and in the following year she became a member of the Drury Lane company. In 1759 she married her music-master, but soon separated from him. She afterwards went to Dublin, and there laid the foundations of her reputation. On her return she was at once engaged by Garrick (1764), and continued a member of his company until 1782, when she went to the rival theatre of Covent Garden. In 1790 she retired from the stage, but reappeared for a season in 1797, and played for the last time two years later. Mrs. Abington, in spite of her origin, was popular in society, and Dr. Johnson testified to the favour she enjoyed with the general public. Her business relations with Garrick were not of the most cordial, the manager complaining of her peevishness, the actress imagining that she was the victim of intrigue and slander. Mrs. Abington was equally at home in high or low comedy; she was the original Lady Teazle, in 1777, and her Beatrice was considered unequalled; while upon occasion she would assume a part like that of Scrub in the *Beaux's Stratagem*.

Genest, *History of the Stage*; Dutton Cook, *Hours with the Players*.

About, EDMOND FRANÇOIS VALENTIN (b. 1828, d. 1885), novelist, essayist, and author of a few not very successful plays, was born at Dieuze in 1828. After distinguishing himself at school, he entered in 1848 the École Normale, whence he was sent with a travelling allowance in 1851 to the French school at Athens. On his return he published *La Grèce Contemporaine*, in which the Greek people, and especially Greek politicians, were treated with humorous severity. Soon afterwards he published, in the *Revue des Deux Mondes*, his first novel, called *Tolla*, which drew upon the author accusations of plagiarism. Nor, from his friends, did he seek to conceal the fact that the story of *Tolla* was in substance borrowed. A comedy in three acts, called *Guillery*, was M. About's next work. Produced at the Théâtre Français, it failed to please; and *Gaïtana*, by which it was followed at the Odéon, caused so much dissatisfaction that it was hissed and hooted.

From this time the author of *Tolla* occupied himself chiefly with literature in narrative form, and never again ran the risk of a dramatic experiment without some experienced playwright as his associate. In *Le Roi des Montagnes* M. About gave an amusing account of the transactions supposed to be carried on between a Greek brigand and his business correspondent, a Paris banker. *Germaine*, which belongs to the same period, is based on the supposition that, arsenic being a specific for consumption, a murderer endeavouring to poison a consumptive girl by repeated and constantly increased doses of arsenic, would not kill but cure his intended victim. This tale, founded on a fantastic idea, but developed seriously, was followed by purely fantastic tales, such as *L'Homme à l'Oreille Cassée*, in which a man's ear freezes, and in its frozen condition gets chipped; and *Le Nez d'un Notaire*, wherein a notary, having replaced a lost nose by that of a dissipated man, finds his newly acquired proboscis grow compromisingly red whenever its original owner has been indulging in drink. This idea seems, as an idea, to have been borrowed from Swift, by whom, however, it was never developed in narrative form. In 1863 About published *Madelon*, one of his most successful, though not in a moral point of view one of his most commendable, novels. *Le Mari Imprévu*, *Les Vacances de la Comtesse*, and the *Marquis de Lanrose*, were published collectively under the title of *La Vieille Roche*. *Les Mariages de Province* must be mentioned among About's best novels of observation, and *Le Capitaine Bitterlin* as one of his most amusing tales. It has been seen that M. About's first work was not a story, but an essay; and he continued throughout his life to publish studies as well as tales. His *Question Romaine*, written after a brief residence at Rome, and full of clever, biting remarks on the shortcomings of the papal government, obtained great success; and *Le Progrès*, in which the writer contrasts the present with the past, and shows on how many points progress of a most undeniable kind has been made, produced as great an impression, and a more durable one, than his pamphlet on what was only a question of the day. Soon after the war of 1870 Edmond About, who was at that time a regular contributor to *Le Soir*, was sent as correspondent of that journal to the headquarters of Marshal MacMahon. He does not seem to have been present at any engagement; but he wrote several letters on the military situation, and the aspect of the theatre of war. After the peace he published a volume called *Alsace*; and as he was now living in the newly annexed territory, where his wife had an estate, his attacks on the Prussians caused him to be arrested, though after a few days' imprisonment he was set at liberty. During the last years of his life this charming writer produced very little. [H. S. E.]

Abrantes, Duc and DUCHESSE DE. [JUNOT.]

Abt, FRANZ (b. 1819, d. 1885), German composer, was educated chiefly for the clerical profession at the University of Leipzig. After the death of his father, however, in 1841, he devoted himself entirely to music, and resided first at Zurich (1841), where he became kapellmeister, and, after 1852, at Brunswick, where he was first engaged at the Hof-theater, and in 1855 became kapellmeister. Abt's musical publications include pieces for the pianoforte of a light character, which are not well known. His fame rests almost entirely on his songs, some four hundred and fifty in number, and of the most various kinds. These, as for instance, "When the swallows homeward fly," are almost as popular in England as in Germany, and although destitute of feeling, and therefore not of the most perfect art, they are eminently graceful, and devoid of meretricious trickery. They have been published in this country in many collections, among which may be mentioned that called *German National Songs*, by J. E. Carpenter.

Abyssinia, KINGS OF. (1) THEODORE (b. circa 1818, d. 1868) was the son of noble parents. His original name was Lij Kassa. He succeeded, on the death of his uncle, to the governorship of Kuara, to which he added Dembea at the expense of the puppet king, Ras Ali, and compelled the latter to give him his daughter in marriage. Shortly afterwards, having been taunted by a member of the royal family for a defeat by the Turks, he proclaimed his independence, and in 1855 had deposed Ras Ali, and caused himself to be crowned Emperor of Ethiopia, under the title of Theodore III. At first he proved an admirable ruler, merciful to the conquered, and excessively generous, but full of religious fanaticism, and exceedingly passionate. Want of money, however, caused by his extensive military expeditions, of which the most important is that against the Gallas, and which resulted in the capture of Magdala, made him oppressive, and after the death of his first wife his character rapidly degenerated. In 1860, Plowden, the English consul at Massowah, who had been his attached friend, was killed by a rebel chief, and Captain Cameron was sent out as his successor, with instructions to refrain from taking as active a part in Abyssinian politics as his predecessor had done. Theodore imagined himself to be slighted by the British, a suspicion confirmed in his mind by the accidental neglect of the authorities of the Foreign Office to answer one of his letters. He further imagined Cameron to be intriguing with Egypt, and accordingly, in January, 1864, seized him and his suite, and threw them into prison. A mission of conciliation, at the head of which was Mr. Hormuzd Rassam, shared their fate;

and as Theodore showed no disposition to release his captives, war was declared against him in July, 1867. The expedition, commanded by Sir Robert Napier (afterwards Lord Napier of Magdala), penetrated into the country without mishap, and Theodore, deserted by his army, shut himself up in his fortress of Magdala. After attempting in vain to avert ruin by the liberation of the captives, he died by his own hand shortly before Napier stormed the position (April 13th). His son, Prince Alam-ayahu, was taken to England, where he died in 1869.

- 7 H. Rassam, *Narrative of the Mission to Theodore*; C. B. Markham, *Abyssinian Expedition*;
- 7 Holland and Hosier, *Record of the Expedition to Abyssinia*.

(2) JOHANNES II., originally known as Prince Dejach Kassai, was appointed Governor of Tigré by Wagsham Gobaze, King of Amhara, who had thrown off the yoke of Theodore in 1867. He speedily, however, rebelled, in turn, against his master, and having rendered valuable assistance to the British against Theodore, was rewarded by them, on their departure, by a present of arms. In 1872 he was crowned King of Abyssinia, with the title of King Johannes II., and has proved an able ruler. His relations with the Khedives of Egypt have not been satisfactory. Shortly after his accession he had to oppose an armed force, which, after he had appealed to several of the Powers in vain, was withdrawn; and again in 1876 he was attacked, but utterly repulsed the enemy. In 1877, after the Abyssinians had been defeated, Colonel Gordon, the Governor of the Soudan, succeeded in negotiating a peace, and in 1879, when he attempted to conclude a new one, he was treated by the king with gross indignity, but nevertheless made King Johannes come to terms. During the troubles in the Soudan Abyssinia preserved an attitude of expectant neutrality, but in the autumn of 1885 very leisurely preparations were being made for the relief of the besieged Egyptian garrison at Kassala. [OSMAN DIGNA.] [L. C. S.]

Accum, FREDERICK CHRISTIAN (b. 1769, d. 1838), chemist, was a native of Westphalia, and came to London in 1793. After being engaged for several years in the writing of manuals of chemistry and mineralogy, he became associated with Ackermann (q.v.) in the introduction of gas for the lighting of towns. His *Practical Treatise on Gas Lights* (1815) is said to have led to the adoption of that improvement in London, and the work was promptly translated into several languages. He was made librarian of the Royal Institution, Albemarle Street, but was dismissed on a charge of embezzlement. On being brought to trial he was acquitted, but immediately left London for Berlin, where in 1822 he became a professor at the Technical Institute. Accum wrote numerous treatises

on chemical subjects, among which may be mentioned *Chemical Reagents* (1813) and *Culinary Chemistry* (1821).

Achard, FRANZ KARL, a German chemist (b. 1753, d. 1821), was elected a member of the Royal Academy of Science at Berlin in 1776. He devoted himself especially to the extraction of sugar from beetroot, and it was chiefly through his writings that that industry was introduced into France.

Acharius, ERIK (b. 1757, d. 1819), was a Swedish botanist of the first rank, but owing to the extremely technical character of his researches, he is very little known outside the circles of the speciality to which he devoted himself. From manhood to the period of his death, all his industry, learning, and acuteness were bestowed on the study of the minutest forms of vegetable life, and more particularly on the forms of lichens, with which his name must ever be honourably connected. Otherwise his life was singularly uneventful. Born at Gefle in 1757, the son of a Comptroller of Customs, he studied first at the gymnasium of his native town, and then left (1773) for the University of Upsala, where, among other lectures, he attended those of Linnæus, then in the heyday of his fame. In 1782, contrary to the custom which compelled the physician who desired the *cachet* of fashion to graduate abroad, he took the degree of M.D. in the University of Lund, and tried to practice, with indifferent success, in various parts of his native country. But a physician he was destined to be in name only, for in 1801, through the posthumous influence of Linnæus, who had expressed a favourable opinion of his researches, he was enabled to devote himself to science by obtaining the chair of botany in the Wadstena High School. Five years before, his merit had been recognised by his election into the Academy of Sciences, while his now classic treatise, the *Lichenographia Universalis*, published at Göttingen in 1804, and a number of other works and memoirs on the lichens, made him the indisputable ruler of this branch of botany, at a time when specialism in this science was little known. His name has been given to a genus, *Acharia*, and to more than one species of plant.

[R. B.]

***Achenbach**, ANDREAS, landscape painter (b. 1815), was born at Cassel, and through business journeys with his father, early acquired a knowledge of nature. In 1823 the family settled in Düsseldorf, and Achenbach studied in the academy there from 1827 to 1835. In his earlier works, which chiefly represent Rhineland scenery, traces are still perceptible of the sentimentality of the romantic Düsseldorf school, but these disappeared after his travels in Holland, Norway, and the Baltic, in the years 1833

and 1835, during which he began the series of marine pictures in which, perhaps, his real strength lies, notwithstanding the general admiration for his mountain studies in Norway and the Tyrol. In 1843 he visited Italy, but, in spite of industrious efforts, he was unable to treat southern scenery with the truth and vigour he could display in the wilder scenes and mistier skies under which his youth had been spent. His genius is nevertheless very versatile, and has even shown itself in architectural interiors and in caricatures. The best collection of his works is in the modern Pinakothek at Munich. He has often exhibited in the Paris Salon, and though of late years the copiousness and facility of his execution have too often rendered his colouring garish and crude, he will be remembered as one of the most conspicuous leaders of the modern realistic school of landscape painting.

Ackermann, Rudolf, art publisher and bookseller (*b.* 1764, *d.* 1834), was born and educated in Germany. His first occupation was that of a coach-builder, but in 1795, after he had come to London, he set up a print shop in the Strand, in connection with which was a very successful drawing school, which had to be closed in 1806, in consequence of the pressure of other business. Ackermann's most important publication was the *Registry of Arts, Literature, Fashions, Manufactures, etc.*, from 1809-28, which was very popular in its day. He also published illustrated descriptions of the universities and public schools, and a series of *Picturesque Tours*. His illustrated annuals, entitled *Forget-me-nots*, were an entire novelty. In his publications Ackermann made a large use of lithography, and was the first to introduce that invention as a fine art into England. He was also among the first to encourage the use of gas for the lighting of streets and private houses. Poverty and distress always found in him a warm sympathiser; he promoted several subscription lists for the German sufferers in the Continental war against Napoleon, and frequently assisted French and Spanish *émigrés*.

***Acland, Sir Henry Wentworth** (*b.* 1815), is an English physician and scholar. He is the fourth son of the late Sir Thomas Dyke Acland, Bart., and was educated at Harrow and Christ Church, Oxford, where he graduated in 1841, and was elected to a fellowship at All Souls' College. In 1848 he took the degree of M.D., and after filling for a time the office of Lee's Reader in Anatomy, and adding extensively to the Christ Church Physiological Series, now the University Museum, he was elected Regius Professor of Medicine (1858) and Radcliffe Librarian, which office he still holds. He has filled various other positions of dignity, such as that of a member of the "Cubic Space Commission" (1866) and

Royal Sanitary Commission (1869-72); he was president of the Physiological Section of the British Association, and, after being from 1858 to 1875 the representative of Oxford on the Medical Council, president of that body. His chief works are *The Plain of Troy* (1839), *Memoir on the Visitation of Cholera in Oxford* in 1854, and various medical, sanitary, and scientific memoirs. In 1860 he accompanied the Prince of Wales to America, and since his return in 1861 has been His Royal Highness's Honorary Physician. He is F.R.S., LL.D. Edinburgh and Cambridge, Hon. M.D. of Dublin, and in addition to being a Dignitary of the Rose of Brazil, was created K.C.B. by the Queen on the recommendation of Mr. Gladstone, whose intimate friend he has been ever since they were fellow-students at Oxford.

***Acton, John Adams**, sculptor (*b.* 1833), was admitted to the Royal Academy in 1853, and gained the gold medal for original composition in sculpture. Being elected to a travelling studentship, he went to study in Rome. He has produced several works in ideal sculpture, such as *The First Sacrifice*, *Zenobia*, *Pharaoh's Daughter*, and *Psyche*; also several busts and portrait statues of eminent modern statesmen and men of letters for public buildings, and some monuments in cathedrals and churches; for instance, the memorial to the Wesleys in Westminster Abbey. He became a member of the Society of British Artists in 1883.

Acton, Sir John Francis Edward, administrator and statesman (*b.* 1736, *d.* 1811), born at Besançon, 1736, entered the Tuscan navy, and took part in an expedition against Algiers in 1775. Through the influence of Caramanico, and Queen Caroline of Naples, he was appointed to reorganise the Neapolitan navy in 1779, and even before the death of Caramanico in 1794 he had gathered all the actual power of the state into his own hands. His expenditure as generalissimo of the large land and sea forces which he had himself created, was so great that he was appointed Minister of Finance to superintend the taxation, and finally Prime Minister of Naples. Popular discontent at the appointment of Nelson to command the fleet drove him and the royal family to Palermo for a short time in 1798, but on his return he crushed the rebellion with cruel severity. In 1804 he was removed from power by French influence, was recalled for a time, but was finally driven to take refuge in Sicily by the entrance of the French into Naples in 1806. He died at Palermo. His brother, JOSEPH EDWARD ACTON, born at Besançon in 1737, also entered the Neapolitan service, was governor of Gaeta, and died in 1808.

***Acton, The Right Hon. John Emerich Edward Dalberg Acton, Lord** (*b.* 1834), studied for a few years under Dr. (afterwards

Cardinal) Wiseman at the Catholic College of St. Mary's, Oscott, near Birmingham, and afterwards in Munich under the celebrated Catholic historian, Dr. Döllinger. In 1856 he accompanied his stepfather, the second Lord Granville, to Moscow to witness the coronation of Alexander II. From 1859 to 1865 he was member of parliament for Carlisle. In 1862 he edited the *Home and Foreign Review*, a quarterly magazine in the "Liberal Catholic" interest, but it was condemned by the priesthood, and expired in 1864. Next year he stood as a candidate for Bridgnorth, hoping to represent, as he said in a famous phrase, "not the body, but the spirit of the Catholic Church." He was elected by a majority of one, but unseated after a scrutiny. In 1869 Mr. Acton was raised to the peerage under the title of Baron Acton of Aldenham, and in the same year he was present at the assembling of the Œcumenical Council in Rome, where, by his powers of organisation as well as by his writings in his own organ, the *North British Review*, and, it is supposed, his contributions to the *Allgemeine Zeitung*, he did much to strengthen the opposition of the minority to the definition of papal infallibility, and to support the views of Dr. Döllinger and the other subsequent leaders of the "Old Catholic" party. In September, 1870, he published a *Letter to a German Bishop of the Vatican Council*, advocating the same cause. In the next year he also published an eloquent and perspicuous account of the Franco-German war, its causes and progress. In 1872 he received the honorary degree of Doctor of Philosophy from the University of Munich. He was among the first to attempt an answer to Mr. Gladstone's pamphlet on *The Vatican Decrees*; but it is, perhaps intentionally, an answer that makes for the opponent's cause, inasmuch as it maintains that it is still open to good Catholics to set aside the decrees of Pius IX., just as they have in fact disregarded the political mistakes and moral shortcomings of the popes of former ages. Lord Acton also wrote the article on *Wolsey and the Divorce of Henry VIII.* in the *Quarterly Review* for January, 1877.

Adair, Sir Robert, English diplomatist (b. 1763, d. 1855), was the son of a medical attendant of George III. He was educated at Westminster School and the University of Göttingen, where Canning, in one of his satirical poems, represents him as falling in love with "Sweet Matilda Pottingen." He entered political life under the auspices of Charles James Fox, and became one of his most intimate friends, but he devoted his attention to foreign rather than home affairs. The story that he was sent by Fox to Russia to intrigue against Pitt will not bear examination; and his first important mission seems to have been in 1806, when he was sent to

Vienna to warn Austria against Napoleon, and on his return to England he was despatched by his old enemy, Canning, to Constantinople to negotiate the peace of the Dardanelles with the Porte. In 1831 he was sent to the Low Countries in order to stave off a war between Flanders and the Dutch, and his successful labours were rewarded by the title of Privy Councillor and a considerable pension. Sir Robert Adair outlived his friends, but to the last he was extremely popular in London society.

Sir R. Adair, *Two Letters to the Bishop of Winchester; Memoir of a Mission to the Court of Vienna; and Negotiations for the Peace of the Dardanelles*; Lord J. Russell, *Memorials of C. J. Fox*.

Adalbert, Heinrich Wilhelm, Prince of Prussia, cousin of Friedrich Wilhelm IV. (b. 1811, d. 1873), entered the army at an early age. Between the years 1826 and 1837 he visited all the principal nations of Europe, and in 1842 sailed from Italy down the Mediterranean for South America, where he explored the coast of Brazil and parts of the course of the Amazon. In 1847 he published a large work on his voyage, *Aus meinem Reise tagebuche*, with a few illustrations and copious carefully drawn charts. Next year he was appointed to organise a national German navy, and published a pamphlet, *Denkschrift über die Bildung einer deutschen Flotte*, in which he critically surveyed the possibilities of the formation of a German fleet of steamships of war, and maintained its necessity for the cause of German unity. In 1856 he was wounded in an engagement with the pirates of Morocco. During the Danish war of 1864 he acted as admiral of the Austro-Prussian fleet.

Adam, Adolphe Charles, French dramatic composer (b. 1803, d. 1856), received his earliest instruction from his father, also a notable musician, till he entered the Conservatoire, and became a pupil of Reicha and Boieldieu. In drawing room fantasias and piano variations he early gave signs of the extreme and almost dangerous facility that distinguished him through life. In 1829, a short opera by Adam was accepted by the Opera Comique in Paris, and from this time forward his works succeeded one another with bewildering rapidity. He produced four operas in the eighteen months before his journey to London in 1832, where another opera, entitled *His First Campaign*, and a ballet on *Faust*, were well received. His return to Paris in the next year was marked by a change in style, which showed itself in *Le Proscrit* and *Le Châlet*, in which he departed to some extent from the manner of Auber and Boieldieu. His masterpiece, *Le Postillon de Longjumeau*, was produced in 1836, and his best ballet, *Giselle*, in 1841. In 1847 he founded a third theatre for comic opera in Paris, in hopes of aiding young and unknown composers, but the revolutionary disturbances

of the following year closed the house. Adam was ruined, and was obliged to support himself by giving lessons, and writing musical reviews for the *Constitutionnel* and the *Assemblée Nationale*. He also succeeded his father as professor of composition in the Conservatoire. At the time of his death he had produced about thirty-five important dramatic compositions, and two religious masses.

Adam, Sir Charles, admiral (b. 1780, d. 1853) was the son of the Right. Hon. William Adam (q.v.). He entered the navy very young, and for a time served under his uncle, Lord Keith. In 1801, as captain of the *Sybil* frigate, he captured the French frigate *Chiffone* in the Seychelle Islands. On the *Chiffone* he blockaded the north coast of France in 1805, and commanded the *Invincible* from 1811 to 1813. After the peace he became captain of the royal yacht. He was made K.C.B. in 1835, and sat as M.P. for Clackmannan and Kinross, 1833 to 1841, after which he was Commander of the Fleet in the West Indies till 1845. He was appointed Governor of Greenwich Hospital in 1847, became admiral in the following year, and died in 1853.

Adam, The Right Hon. William, of Blair Adam, politician and lawyer (b. 1751, d. 1839), entered Parliament in 1774. His half-hearted support to Lord North in 1779 drew an ironical speech from Fox, that led to a duel, in which Fox was wounded. A doggerel poem, *Paradise Regained; or, the Battle of Adam and the Fox*, was written on the encounter. After this Adam and Fox became firm friends. Adam began to practise at the bar in 1782, was appointed one of the managers of the impeachment of Warren Hastings in 1788, and soon afterwards became auditor to the Duke of Bedford. At the beginning of this century he was patronised by the Prince of Wales, and once defended the Duke of York in an inquiry before the House. In 1815 he was appointed Privy Councillor, and the following year Lord Commissioner of the Scottish Jury Court. He was a friend of Sir Walter Scott.

Lockhart, *Life of Scott*.

Adam, The Right Hon. William Patrick, of Blair Adam (b. 1823, d. 1881), Liberal Whip, and Governor of Madras, son of Sir Charles Adam (q.v.), was called to the bar in 1849, and next year was rejected by the constituency of Clackmannan and Kinross. From 1853 to 1858 he was private secretary to Lord Elphinstone, Governor of Bombay, and in 1859 was returned as M.P. for Clackmannan and Kinross, for which constituency he sat for twenty-one years. He became First Commissioner of Public Works and Privy Councillor in 1873. During the Beaconsfield Administration (1874-1880) he rendered high service to the Liberal party as Whip, and was one of the few to foretell the Liberal triumph

of the next election. Towards the end of 1880 he accepted the Governorship of Madras, but in the next spring he died at Ootacamund.

Adams, Charles Francis (b. 1807, d. 1886), the son of John Quincy Adams (q.v.). His boyhood was spent with his father in the European capitals, and after his return to the United States, in 1817, he took his degree at Harvard University in 1825. He was called to the Boston bar, but never practised. In 1830 he entered the Massachusetts Legislature as representative of Boston, and was subsequently transferred to the Senate. In 1848 he was nominated by the "Free-Soil" party, or anti-slavery democrats, as their candidate for the Vice-Presidency on the Van Buren ticket, but without success. In 1859 he was sent to Congress, and soon became a prominent member of the Free-Soil and Whig coalition, now known as the Republican party. In 1861 he was appointed by President Lincoln, whose candidature he had vigorously supported, Minister to Great Britain, and remained in England until 1868, when he asked to be recalled. On the ratification by England and America of the Treaty of Washington (1871), he was appointed by the President as arbitrator for America for the settlement of the claims under that treaty, and it was chiefly owing to his consummate diplomatic tact that the award of the Geneva tribunal was so decidedly in favour of the United States. In 1872 he was a candidate for the Presidency at the "Liberal Republican" convention, but the claims of Horace Greeley were preferred to his; and Mr. Adams subsequently joined the Democrats, by whom he was nominated in 1876 for the governorship of Massachusetts, but without success. Besides many fugitive productions, Mr. Adams has written admirable biographies of his grandfather, John Adams (1850-56), and of his father, John Quincy Adams (1874-76). Of his sons, John Quincy Adams has played a prominent part as a democratic politician, and Charles Francis Adams is an authority on railroads.

Adams, John (b. Oct. 30, 1735; d. July 4, 1826), American statesman, was a native of Braintree, Massachusetts. He studied at Harvard University, and graduated M.A. in 1758. In 1761 he was admitted a barrister, and obtained a considerable practice in Boston. In 1770 he defended the soldiers charged with the "Boston massacre," and henceforward was known as a prominent champion of the rights of the colonists. In the Philadelphia Congress of 1774 he sat as delegate for Massachusetts. The following year he was a member of the "Continental Congress," and was strongly in favour of declining further attempts at reconciliation with the British Government, and preparing for immediate hostilities. He took a large part in shaping the Federal and State con-

stitutions, and was a strong opponent of the "pure democracy" advocated by a section of the Republican leaders. A jurist and student of theoretical politics, Adams was in favour of the system of government by double chambers, which was often objected to as aristocratic. From June, 1776, to November, 1777, he was chairman of the Board of War. In 1778 he was appointed Commissioner to the Court of France. In 1779 he was sent on an embassy to England, and for the greater part of the next nine years was engaged in various diplomatic missions in Europe. In 1789 he was chosen Vice-President of the Union, and was involved in the contests between the Federalists and Republicans. In 1797 he was elected President of the Union by a slight Federalist majority. During his presidency he was bitterly attacked for keeping aloof from the contest between France and the allied Powers. In 1801 he was again a candidate for the Presidency, but was defeated by Jefferson, and being now extremely, though undeservedly, unpopular, retired from public life. He devoted the remainder of his life chiefly to agricultural pursuits and philosophical speculations. Among his works are:—*A Defence of the Constitution of the United States*, *Letters upon Interesting Subjects respecting the Revolution in America*, and *A Dissertation upon the Canon and Feudal Law*.

→ F. Adams, *Life and Works of John Adams*, 1850; J. Q. and C. F. Adams, *Life of John Adams*, 1871; Jared Sparks, *Diplomatic Correspondence of the American Revolution*.

***Adams, JOHN CROUCH** (b. 1816), one of the leading astronomers of the nineteenth century, born near Launceston, in Cornwall, was sent to St. John's College, Cambridge, where, after distinguishing himself highly, he graduated, in 1838, as senior wrangler, receiving in due course a fellowship and mathematical tutorship in Pembroke College. Since the discovery of Uranus by William Herschel in 1781, the irregularities in the motion of that planet had led astronomers to believe in these perturbations being due to the influence of another planet still unknown. This subject Adams undertook to investigate in 1841, clearly demonstrating, in a paper which he left with the Astronomer Royal in October, 1845, that the disturbance was due to a planet (Neptune), the probable position of which he indicated. Meantime, however, Le Verrier, in France, had, unknown to Adams, been engaged on the same enticing theme, and, though he did not begin work till the summer of 1845, he was enabled by the 10th of November to publish the results of his researches, which were in every essential particular identical with the conclusions of Adams, lying in manuscript at Greenwich. Le Verrier had, however, the honour of the discovery, though the fact of Adams having begun the investigation earlier, and of having indepen-

dently arrived at the great fact sooner, is now universally conceded, and long before Le Verrier's death Adams was by common consent bracketed with his French rival in one of the most remarkable triumphs of the Newtonian theory. Indeed, the Council of the Royal Astronomical Society settled the point, so far as they were able to do so, by awarding the same honours to both. Other papers of high, but naturally not of such high merit, proceeded from Adams's pen, though the very character of the mathematician's study renders literary fecundity impossible, and even moderate activity in print undesirable. In 1858 he was elected to the professorship of mathematics in St. Andrews, but the Lowndesian chair of astronomy in Cambridge falling vacant a few months later, Adams was induced to remigrate to his own University, where he has ever since resided.

Adams, JOHN QUINCY (b. 1767, d. 1848), sixth President of the United States, was the eldest son of President John Adams. After being educated at Leyden University and Harvard College, he was called to the bar (1791). He entered the diplomatic service, and from 1794 he was American Minister in Holland, England, and Prussia (1797), appointments obtained through the influence of Washington. In 1803 he was elected a senator of the United States, but owing to a disagreement with the Federalist majority of the Massachusetts Legislature, through his support of Jefferson's Embargo Act, he resigned his position in 1808. From 1806 to 1809 he filled the office of professor of rhetoric at Harvard. Returning to Europe as minister to Russia (1809), he was one of the negotiators of the Treaty of Ghent in 1814, which terminated the unfortunate war with England. In 1817 he was Secretary of State in President Monroe's Cabinet, having in 1806 quitted the Federalists and joined the Democratic party. In 1825 he was elected President of the United States over three other candidates, who were also Democrats. His return, which was principally due to the influence of Henry Clay, was said by the defeated candidates to have been caused by extensive corruption, and though the charge was probably baseless, it seriously weakened his position. His opponents, headed by General Jackson (q.v.), formed a coalition against him, and speedily obtained a majority in both Houses of Congress. Thus weakened, he was able to effect little during his presidency, and as his enemies alleged, he was compelled to yield extreme deference to European opinion. In 1828 he offered himself for re-election, but was defeated by a crushing majority by General Jackson. In 1830 he was elected a member of Congress, and "the old man eloquent" distinguished himself till his death by his ardent advocacy of the Abolitionist cause. He was the author of *Letters on*

- * *Silesia* (1804); *Lectures on Rhetoric* (1810);
 * *Dermot MacMorrough*, a poem (1832).

Jared Sparks, *Diplomatic Corresp. of the Amer. Rev.*, *Bibliotheca Americana*, *Letters of Mrs. Adams* (1840); Seward, *Life of J. Q. Adams*.

* **Adams, WILLIAM**, author of the *Sacred Allegories* (b. 1814, d. 1848), was educated at Eton and Merton College, Oxford, of which he became a fellow and tutor. In 1840 he was appointed to the living of St. Peter's-in-the-East, in Oxford, but two years later, owing to an accidental chill, he incurred the lung disease that ultimately proved fatal. After a winter passed in Madeira he resigned his living, and settled at Bonchurch, in the Isle of Wight, where, with the exception of the *Shadow of the Cross*, written in 1842, he produced the series of sacred allegories by which his name is known. These are *The Distant Hills*, *The King's Messengers*, and *The Old Man's Home*, the last being by far his most beautiful work, both by the delicacy of its pathos and the reality of its form, in which the ordinary allegorical methods are, for the most part, abandoned. It is the story of an aged lunatic who puzzles his well-meaning keeper, and, to some extent, his sympathising friend, by the simplicity with which he acts upon the literal interpretation of the laws of life inculcated by Christianity. Besides these, Adams wrote *Warnings of the Holy Week*, a series of lectures delivered in 1842; *Cherry Stones*; or, *Charlton School*, a book for boys; and *Silvio*, an early allegory.

Addington. [SIDMOUTH, VISCOUNT.]

Adelaide, PRINCESS (b. 1777, d. 1847), the daughter of Philippe Egalité, Duc d'Orléans, and sister of Louis Philippe, after her father's execution in 1793 remained in exile in various parts of Switzerland and Hungary, and was at length able to rejoin her brother at Portsmouth in 1808, after which they were never separated again for any length of time. After living for some years in Italy and Sardinia, she returned to Paris in 1814, was in England for two years in consequence of her brother's quarrel with Louis XVIII., but returned to France in 1817, and was living at Neuilly when M. Thiers and M. Scheffer came, in 1830, to urge upon her brother the acceptance of the crown. She received them in his absence, and it was partly through her influence that Louis Philippe complied with their request.

Adelaide, Queen of England (b. 1792, d. 1849), was the eldest child of George Duke of Saxe-Meiningen and Princess Louisa of Hohenlohe-Langenburg. After the death of her father, in 1803, she was carefully educated by her mother during the disturbed years of the French occupation, years which increased her natural horror of progressive or revolutionary ideas. On the death of the Princess Charlotte, a marriage was arranged between

her and the Duke of Clarence, third son of George III., and, after some difficulties, owing to the opposition of Parliament to the required grants, the alliance was concluded in 1818. None of the children of the marriage survived more than a few months. The duke and duchess resided chiefly at Bushey till they succeeded to the crown on the death of George IV., 1830, the coronation ceremony being conducted with such thrift that it was called the "half-crownation." Owing to the revolutionary spirit of the time, the queen was thought to be in danger of her life at intervals during the next few years, and her unpopularity was further increased by her real or supposed opposition to the passage of the Reform Bill, till on the resignation of the Melbourne Ministry of 1834 it reached a climax in the famous words of the *Times*, "The queen has done it all." But her devotion to the king during his fatal illness in 1837 restored her to public favour, and for the remaining twelve years of her life she lived in respected retirement, moving from one country seat to another, and occasionally undertaking longer journeys for the sake of her health, as to Malta and Madeira. She was known for her simplicity of life and manners, and for her charitable liberality, especially to seamen. She died at Bentley Priory, near Stanmore, and was buried at Windsor.

Doran, *Life of Queen Adelaide*.

* **Adeler, MAX**, the pseudonym of CHARLES HEBER CLARK, American humourist, first became known by his humorous sketches of American life, entitled *Out of the Hurly-Burly* (1874). These were succeeded in 1876 by *Elbow Room*, in 1879 by *Random Shots*, in 1881 by *An Old Fogey*, and in 1883 by *Transformations*. His humour is of the genuine American type, revealing the quaint situations of ordinary life, and abounding in startling exaggerations and no less startling simplicity of bathos.

Adler, JAKOB GEORG CHRISTIAN (b. 1755, d. 1805), Orientalist, son of Georg Christian Adler, a theologian of repute, was born at Arnis, in Schleswig, studied Oriental languages at Rome, where he found a patron in Cardinal Borgia, and, on returning to Denmark, was appointed professor of Syriac in 1783, and subsequently, in 1788, professor of theology at Copenhagen, in which capacity he preached and published many sermons. He was only seventeen when he published a collection of contracts in rabbinical Hebrew and German (1773), which went to a second edition in 1792. His chief talent was in Oriental palæography and numismatics, of which last he may almost be regarded as the parent. His *Museum Cuscum Borganum* (1782) is indeed full of mistakes, but it is the first of the long line of catalogues of Arabic coins, which have extended from Adler's time to the present day with increasing numbers and accuracy. Adler also published descriptions of

Kufic MSS., and assisted in the great translation of Abulfeda's *Annales*, 1790-4, which was the stock authority for Oriental history until the publication of Ibn-al-Athir's *Kāmil*, by Tornborg, superseded it.

B. Schmidt published an *éloge* on Adler, at Altona, 1805. Cp. *Lexicon d. Schleswig-Holsteinischen Schriftsteller*, s.v. [S. L.-P.]

* **Adler**, THE REV. DR. NATHAN MARCUS, Chief Rabbi (b. 1803), born at Hanover, studied at Göttingen, Erlangen, and Würzburg. After being Chief Rabbi of Oldenburg and Hanover, he was created Chief Rabbi of the United Congregations of the British Empire in 1845. Besides some Hebrew Commentaries, he has published several sermons, such as his farewell sermon to his congregation at Hanover, and *The Jewish Faith*, a clear and brief exposition of the unchangeable doctrines revealed to his nation at Sinai.

* **Adler**, THE REV. DR. HERMANN (b. 1839), son of Dr. Nathan Marcus Adler (q.v.), was born in Hanover, and studied in London, Prague, and Leipzig. He became Principal of the Jews' College in London in 1863, and Minister of the Bayswater Synagogue in 1864. He has published several lectures, such as a *Short History of the Jews in England*, a course of *Sermons on the Passages in the Bible adduced by Christian Theologians in support of their Faith* (1869), in which he exposes certain errors of the common interpretation that disregards context; and a sermon, entitled, *Is Judaism a Missionary Faith?* a reply to Professor Max Müller, who, in a course of lectures on religion, had maintained that it was not. It is noteworthy, however, that in the sermons of 1869 Dr. Adler had himself admitted that Judaism seeks no proselytes. He became Delegate Chief Rabbi in 1879, taking part of his father's duties.

Adolphus, JOHN (b. 1768, d. 1845), historian, was the grandson of a physician to Frederick the Great, but born in England, where his father resided. After passing a year in the island of St. Kitts, Adolphus returned to England, and in 1790 was admitted as an attorney. In 1793 he married a Miss Leycester. He soon abandoned law for literature. The friendship of Archdeacon Coxe, whom he assisted in preparing his *Memoirs of Walpole*, turned Adolphus' attention to recent history. After several lesser works, he published in 1802 his *History of England from 1760 to 1783*. It proved very successful. Its conservative tone won the favour of a public strongly alarmed at the excesses of the French Revolution. His command of fresh materials enabled Adolphus to describe the early history of George III.'s reign with an accuracy that extorted praise from the king himself. A dash of vigour in its style atoned for the pomposity and hollowness that now make the book intolerably dull reading.

Adolphus next won the patronage of Addington, and devoted himself to writing and electioneering in favour of the Government, which liberally rewarded him. In 1807 he became a barrister, and while still continuing his literary work, soon won a foremost place at the criminal bar; his defence of the Cato Street Conspirators in 1820 being especially famous. In his old age he devoted himself to the continuation of his *History*, and had published as far as the fall of Addington when, in 1845, he died, at the ripe age of 77. His *History* has several times been reprinted. Still occasionally useful as a storehouse of facts, it has been, for most purposes, quite superseded by later works of fuller knowledge and wider views.

Dictionary of National Biography: Recollections of Adolphus, by his Daughter, 1871; Fraser's Magazine (May and July, 1862). [T. F. T.]

* **Adye**, GENERAL SIR JOHN MILLER, G.C.B., soldier (b. 1819), is the son of J. P. Adye, Major in the Royal Artillery. He passed out of the Royal Military Academy in 1836. He served in the Crimea, was present at the affairs of Bulganac and McKenzie's Farm, at the battles of the Alma, Balaclava, and Inkerman, and at the capture of Balaclava Castle and the fortress of Sebastopol. For these services he received the medal with four clasps, a Companionship of the Bath, a Companionship of the Legion of Honour, the fourth class of the Medjidie, and the Turkish medal. He occupied a position on the staff of the Royal Artillery in the Indian Mutiny during the years 1857-58. He was three times mentioned in despatches, and received the Indian war medal. In 1863 he was employed in the Sitana expedition against the tribes on the north-west frontier of India, and was present at the storming of Laloo, the capture of Umbeylah, and the destruction of Mulkah; for this he received the medal with clasp. He received promotion in the Order of the Bath, by being made a Knight Commander in 1873, and the following year was made a Commander of the Legion of Honour. In 1875 he was appointed Governor of the Royal Military Academy, and became Lieut.-General in 1879. In 1880 he was appointed Surveyor-General of the Ordnance, and in 1884 Colonel Commandant of the Royal Artillery. When the Egyptian expedition was formed in 1882, Sir John was appointed Chief of Staff to Sir Garnet Wolseley. He took part in the actions at Mahasmeah and Tell-el-Kebir. For these services he received the thanks of the Houses of Parliament, the war medal, and the bronze star presented by the Khedive of Egypt, and was promoted to the Grand Cross of both the Medjidie and Bath. On his return from the campaign he was appointed Governor of Gibraltar. Sir John has written several military works, including *The Defence of Cawnpore, A Review of the Crimean War to the Winter of 1854-5*, and *Sitana: a*

Mountain Campaign on the Borders of Afghanistan.

Affre, DENIS AUGUSTE, Archbishop of Paris (b. 1793, d. 1848), received his early education at the seminary of St. Sulpice, studied philosophy at Nantes, and returned to finish his theological course in Paris, where he was ordained, 1820. As a priest at Amiens he did much to improve the education of the country people, and besides several branches of literary study, such as the Egyptian hieroglyphics and questions of ecclesiastical law, he was engaged in a controversy in which he resisted the revival of the doctrine of the Pope's temporal power. Appointed Canon-Titular and Vicar-General of Paris in 1834, after five years of quiet literary life he became Assistant-Bishop of Strasburg, and Archbishop of Paris in the next year, 1840. In this capacity he distinguished himself by his personal benevolence and philanthropy, as well as by dignity and moderation in dealing with opponents. But the rigour of his system of theological training led to a disagreement with the Abbé Dupanloup, and his tenacity of the rights of his Church on the question of freedom of education led to a coolness between him and Louis Philippe, in spite of their former intimacy. On the outbreak of the Revolution of 1848 he was, for the most part, content to support the Provisional Government, and it was with the sanction of General Cavaignac that on the third day of the Workmen's Rebellion (June 25th) he endeavoured to act as mediator with the insurgents; but they, owing to a mistaken suspicion of treachery, opened fire as he mounted the barricade in the Faubourg St. Antoine, and he fell, mortally wounded, to the common regret of both parties.

Abbé Bruice, *Vie de Denis Auguste Affre*, 1849.

Afghanistan, THE AMEERS OF. (1) MAHMŪD SHĀH (d. 1820) succeeded to the throne of Afghanistan in 1800, after deposing and blinding his half-brother, Shāh Zeman. He was, however, speedily overthrown by his half-brother, Shāh Shujā (1802), but in 1808 he escaped from prison, and was restored, through the influence of his powerful vizier, Futteh Khan. A period of creditable rule followed, during which Cashmere was re-conquered; this was brought to a close by the brutal assassination, in 1816, of the able Futteh Khan, by the orders of feeble and unprincipled Mahmūd. Two years afterwards he was driven out of Cabul, and died in exile.

(2) SHĀH SHUJĀ (b. circa 1780, d. 1842) was the brother of Shāh Zeman, and half-brother of Mahmūd Shāh (q.v.). After his brother's overthrow he escaped to the Khyber Pass, and two years later succeeded in establishing himself on the throne of Cabul. His first period of government is remarkable chiefly for the first English mission to Af-

ghanistan, that of Mountstuart Elphinstone in 1809, to counteract the intrigues of Napoleon in Persia. Soon afterwards he was expelled by Mahmūd Shāh, and took refuge with Runjet Singh, the ruler of the Punjab, who deprived him of the precious Koh-i-noor. Thence he escaped to the British territories, which formed the basis of two unsuccessful attempts to recover the throne, the second of which was defeated by Dost Muhammad in 1834. In 1838 came the rash resolution of the British Government to restore him to the throne, and Shāh Shujā re-entered Cabul in August, 1839. Soon after occurred the murders of Burnes and Macnaughten (q.v.), and the consequent evacuation of Afghanistan by the British garrison, and Shāh Shujā left utterly without support, was assassinated.

(3) DOST MUHAMMAD KHAN (b. 1806, d. 1863) was the brother of Mahmūd Shāh's able minister, Futteh Khan, the chief of the Barakzdi tribe. He early attracted the notice of his brother, and, in spite of a youth of vice, became his chief confidant. At the time of the death of Futteh Khan he had fled for safety into Cashmere; but two years afterwards, after the flight of Mahmūd Shāh (1818), he returned to make himself master of the whole of Afghanistan, with the exception of Herat and Candahar. His rule was one of very great ability, and the attempts of Shāh Shujā to recover the throne were frustrated with ease. About 1837, however, his relations with the English Government began to be strained. Dost Muhammad was believed by the British Government to be intriguing with Russia, and partly to counteract those intrigues, partly to keep an eye on the Persian attack on Herat, Burnes (q.v.) was sent as British Resident to Cabul. He failed to impress his superiors with his own belief in the sincerity of the Ameer, and the rash resolution was taken by Lord Auckland to depose Dost Muhammad, and replace Shāh Shujā on the throne. The "army of the Indus," under Sir J. Keane, speedily accomplished its mission, and Dost Muhammad fled over the Hindu Kush. He joined the first insurrection of his son Akhbar (q.v.), but, seeing the futility of resistance, surrendered, and was deported to India. He was thus guiltless of any share in Akhbar's atrocities, the murder of Macnaughten, and the massacre of the retiring English; and after the war of vengeance was at an end, Lord Ellenborough determined to restore him to the throne of Cabul. During the remainder of his active life, Dost Muhammad remained on the most friendly terms with the English Government, except during the Sikh War of 1848, when he sent reinforcements to the enemy. In 1855 his independence was recognised by the Treaty of Peshawur, an arrangement followed up by an annual subsidy of twelve lakhs of rupees (£120,000) for military purposes. Its

value was seen when, during the Indian Mutiny, he remained faithful to us. His extraordinary military ability was displayed by his capture of Candahar in 1855, and his re-conquest of Herat from the Persians a few days before his death.

Kaye, *History of the War in Afghanistan*.

(4) SHIR ALI (*b. circa 1809, d. 1879*) was the second son of Dost Muhammad, and succeeded him in 1863, in preference to his elder brother, Azful Khan. A civil war immediately broke out between the two, during which Shir Ali was at one time so reduced as to give up Cabul and Candahar; but in 1868 he drove his nephew, 'Abd-er-Rahmān, the present Ameer, into exile, and established himself on the throne. He was recognised by the English Government, and in 1869 was splendidly received at Umballah by Lord Mayo. In 1872 Afghanistan was declared by Prince Gortschakoff to be an "intermediary zone" between Russia and India. In 1873 came Shir Ali's effort to obtain a British guarantee for his sovereignty and family succession; and in 1876 Lord Lytton's efforts to obtain the establishment of a British Resident in Cabul, which were repeated at the futile Peshawur Conference of 1877. In July, 1878, after a long series of communications, a Russian mission, under General Stolietoff, was received with honour at Cabul, and when a similar British mission was stopped on the frontier, war with Afghanistan was declared by England. After a series of defeats had been inflicted on his troops in the Khyber Pass and the Kurum Valley, Shir Ali fled from his capital in December, 1878, and being informed that he must expect no help from the Russian Government, he died, worn out by disappointment and fatigue, at Mazar-i-Sherif, near Balkh, on Feb. 21st. An unfortunate man, he inherited much of the military ability of his father, and is said to have displayed zeal for reform.

The relations between Shir Ali and the British Government are clearly described, from a party point of view, by the Duke of Argyll, in *The Eastern Question*.

(5) * YAKUB KHAN, the son of Shir Ali (*b. circa 1847*), distinguished himself in 1867 by inflicting a considerable defeat upon his cousin, the present Ameer. Finding his claims ignored in favour of his younger brother, Abdulla Jan, he rebelled against his father in 1870, and was in prison when the Ameer, in 1879, resolved, in consequence of his defeats by the English, to abandon his capital. Acknowledged by the people, he hastened to conciliate the advancing enemy, and by the Treaty of Gandamak (May 26) he agreed to place his foreign policy in the hands of the British, and to accept a British Resident at Cabul. On Sept. 3rd the Resident, Sir Louis Cavagnari, with his escort, was murdered, in a religious riot, and the

war was renewed. Without making an attempt at resistance, the Ameer placed himself in the hands of General Roberts, and soon afterwards resigned. It being held that owing to his criminal weakness, if not to actual sympathy with the rioters, he was responsible for the massacre of the British mission, he was deported to India as a prisoner of State.

* (6) 'ABD-ER-RAHMĀN KHAN, the present Ameer (*b. circa 1830*), is the son of Azful Khan, and the grandson of Dost Muhammad. Azful Khan was the elder brother of Shir Ali, and was accordingly the natural successor to the throne, but the latter was the successful candidate. A civil war immediately broke out, in which 'Abd-er-Rahmān took a prominent part in his father's behalf; in 1865 he seized Balkh, and in the following year Cabul surrendered to him, and he proclaimed Azful Ameer. Azful, however, died after a reign of a few months, his death being hastened by his drunken habits, and was succeeded at Cabul by his brother Azim, to whom 'Abd-er-Rahmān swore allegiance, but soon quitted the capital in disgust, and retired to Turkestan. His most able opponent out of the way, Shir Ali promptly made an effort to recover his lost territory, and lived for ten years at Bokhara. A pension of £3,000 a year, which he carefully husbanded, was given him by the Russian dominions, and though 'Abd-er-Rahmān hurried up to the assistance of his uncle, Azim, he was defeated with loss by Yakub Khan (q.v.) in 1867, and again in 1868 at Tinah Khan. With the last battle the civil war came to an end; 'Abd-er-Rahmān took refuge in Russian government, but his requests for assistance in men and arms was steadily refused. In 1880, when war broke out between Shir Ali and the Indian Government, he repaired to Balkh, to watch the progress of affairs; and when the English Government, in March, 1880, decided that his claims to the vacant throne were superior to those of the other competitors, negotiations were opened with him by Lord Lytton, and continued by Lord Ripon. On his side, 'Abd-er-Rahmān displayed the utmost caution, but at length he closed with the overtures made through Mr. Lepel Griffin (who was much impressed by his ability), and in July was recognised by the British Government as ruler of Afghanistan, with the exception of Candahar. On the evacuation of Cabul, in September, he immediately occupied it, but for awhile his position was most insecure. Nevertheless, when it was decided by the Liberal Government to abandon Candahar, he determined to occupy that city also, and did so in April, 1881. His governor, Muhammad Hassan Khan, was driven out by Ayoub Khan (q.v.) in August; but the Ameer arrived with an army from Cabul, defeated his cousin outside the walls of Candahar, and re-occupied it. The year 1882 was also one of trouble, caused chiefly by 'Abd-er-Rahmān's

efforts to collect revenue in advance, and in the following year there were several outbreaks, particularly of the Shinwari tribe. Nevertheless, his position was immensely improved by an arrangement made by the British Government of the payment to him of an annual subsidy of twelve lakhs of rupees (£120,000), and his friendly relations with England were strengthened at a conference held between him and the Viceroy, Lord Dufferin, at Rawul Pindi, in March, 1885. Shortly afterwards the southward advance of Russia, culminating in the seizure of Pend-jeh, in April, must have been a cause of much anxiety to him.

[L. C. S.]

Afzelius, ADAM, a Swedish naturalist (b. 1750, d. 1836), was one of the most distinguished of the pupils of Linnæus, under whom he studied, at Upsala. At first, however, his bent was not for science. For a time he was a teacher of Oriental languages in the University, and eight years later (1785) became Demonstrator of Botany to his famous master. Between the years 1792-94 he resided on the west coast of Africa as botanist to the Sierra Leone Company, and then, after acting for a short period as secretary to the Swedish Embassy in London, he resumed his duties as a botanical teacher in Upsala, where, in 1812, at the mature age of sixty-two, he was appointed Professor of Materia Medica. In 1823 he edited the *Autobiography of Linnæus*, and, in addition to his works on the plants of Guinea and Sweden, contributed a large number of papers to the *Transactions* of the Linnean Society of London and the Royal Academy of Stockholm. He bequeathed his extensive collection of dried plants to the University Herbarium, where it is still preserved. Afzelius was a man of fine culture, and capable of excelling in almost any department of intellectual life. His name is perpetuated in the genus *Afzelia*, and in the "trivial" name of several species of plants.

Agardh, CARL ADOLF (b. 1785, d. 1859), celebrated at once as a botanist and as a political economist, was born in Bastad, in the province of Scania, Sweden, and after a course of study at the University of Lund, was elected Professor of Botany in the same institution in 1812. Agardh was the first botanist who devoted his attention to the scientific study of Algae, and his great works on the subject may be regarded as the foundation of all our present knowledge in regard to these sea plants and their fresh-water allies. A keen patriot, he took an active part in all the stirring events of the Napoleonic régime, and the replacement in Sweden of the old line of kings by the Bernadotte dynasty. Latterly, however, his politics took the more practical shape of trying to develop the natural resources of his native land, and from this point of view his *Förnöik till en statsekonomisk Statistik öfver Sverige* (Parts 1-3, Karlstadt, 1852-59;

Ljungberg added a fourth part in 1863) may be regarded as his legacy to Sweden. But Agardh's fame rests on his botanical works. These, in addition to many memoirs in the "Transactions" of learned societies and in scientific journals, are:—*Systema Algarum* (Lund, 1824); *Species Algarum* (3 vols., Lund and Greifswald, 1820-28); *Icones Algarum Europæarum* (Leipzig, 1828-35); *Lärobok i Botanik* (2 vols., Malmö, 1830-32; translated into German by Meyer and Von Creplin).

* **Agardh, JAKOB GEORGE** (b. 1813), a Swedish botanist, son of C. A. Agardh, was born at Lund, and after assisting his father, succeeded him in 1854, retiring as Emeritus Professor in 1879. The younger Agardh's botanical labours may be regarded as simply a continuation of those of his father, for he devoted his life to the same studies as he, and to the collection of the same plants, and those of which the elder *savant* had accumulated so vast an herbarium. His chief works are:—*Species, Genera, et Ordines Algarum* (4 vols., Lund, 1848-1863); *Synopsis generis Lupini* (Lund, 1835); *Recessio generis Pteridis* (Lund, 1839); *Algæ Maris Mediterranei et Adriatici* (Paris, 1842); *In Systema Algarum Hodierna Adversaria* (Lund, 1845); and *Theoria Systematis Naturalis Plantarum* (Lund, 1858), besides many memoirs in "Transactions" and journals. Like his father, Professor Agardh writes Latin with an ease and an elegance fast becoming one of the lost arts.

* **Agassiz, ALEXANDER** (b. 1835), an American zoologist, son of Louis Agassiz, was born in Switzerland, but went to the United States with his father in 1846, and may now be regarded as American, both by training and by sympathy. The son of such a father could scarcely have avoided being a naturalist. Yet, knowing the uncertainty of the life scientific, the elder Agassiz sent Alexander, soon after he graduated at Harvard in 1855, to study civil engineering in the Lawrence Scientific School, where in 1857 he received the degree of B.Sc. The engineers were, however, not destined to shine in the reflected light of the younger Agassiz, for he began to teach chemistry in the lady's school which his father had established in Boston. In March, 1859, more congenial work was found for him in the United States Coast Survey of California, where for some time he was occupied in collecting and studying marine animals for the Harvard Museum of Comparative Anatomy, then in charge of his father. On his return to Cambridge Agassiz became connected with the Museum, and henceforth devoted most of his time to its development. In 1865 he became "interested" in the Pennsylvania coal mines, and subsequently in the copper mines of Lake Superior. These proved the El Dorado of the younger Agassiz, for by a lucky hit, due in part at least to his geological knowledge, he succeeded, in the two and a half

years he spent in that region, in developing the richest copper lode in the world, and in becoming one of the wealthiest of naturalists, just as his father had been one of the poorest. Freed from any future care regarding the wherewithal to live, Agassiz now devoted himself to unremunerative researches, and, as a preliminary training, visited the principal museums of Europe, resuming, however, on his return in 1871, his duties as Assistant Curator of the Harvard collections. In 1873, after the death of his father, Mr. Agassiz succeeded him as head of the museum, and to his munificent endowments and labours the establishment, in a certain degree founded by his father, may be said to have been raised to its present stage of excellence. Some years ago it was estimated that Alexander Agassiz's gifts during a single decade had amounted to 230,000 dollars in money, besides numerous donations to the other departments of the University; and in 1885, when he retired from active connection with the University, it was estimated that he had endowed his *alma mater* to the extent of half a million of dollars. But this expresses very imperfectly the munificence of Mr. Agassiz, for in 1875 he visited Peru and Chili, in connection with his copper mining "interests," and as the scientific result of his journey, enriched the museum with a fine collection of antiquities. For several successive seasons he engaged in deep-sea dredging expeditions, akin to those undertaken by the *Challenger* and the *Porcupine*, the tangible harvest of which labours found their way into the Natural History Museum over which he presided; while the School of Zoology, after the model of Anton Dohrn's at Naples, which he founded at his own cost on the terminus of the Neck, at Newport, Rhode Island, close to his summer residence on the crest of Castle Hill, has given a stimulus to biological study which cannot well be over-estimated. Here, again, he followed his father's lead, though with resources which his father never could command. Louis Agassiz had, with some assistance from friends, fixed on Penikese Island, below New Bedford, Massachusetts, as the site of his "Summer School." But it was soon discovered that the inaccessibility of the situation, and other circumstances, would render the establishment unprofitable from every point of view. The school was accordingly closed, and the present more useful building erected, though it is quite a mistake to suppose that it is only a "weak perpetuation" of the Penikese laboratory. Mr. Agassiz's numerous papers are, for the most part, on the embryology of fishes, radiates, crustacea, annelids, and "pelagic tunicates." Several of his contributions to the *National Academy of Sciences* and *American Academy of Arts and Sciences* have grown out of his work at "the School:" such as those on the young stages of the flounder, goose-fish, and other genera; embryological

observations on the ctenophoric jelly-fishes, on the garpike, and on *Balanoglossus*. For some years past Mr. Agassiz has been engaged in working at the sea-urchins brought home by the *Challenger*, and now that he is at perfect leisure, his literary labours may be expected to be even more abundant. A list of his papers may be found in the Royal Society's *Catalogue*, and among the publications of the Cambridge (U.S.) Museum of Comparative Anatomy; though "rushing into print" is rather frowned upon by the cautious coterie who work at Newport, some of their tentative observations lying so long in note-books that they are anticipated by more precipitate workers.

Agassiz, LOUIS JOHANN RUDOLPH (b. 1807, d. 1878), one of the most eminent naturalists of the nineteenth century, was the son of a Swiss Protestant clergyman, pastor of the small town of Motiers, not far from the eastern extremity of Neuchatel Lake, where, on May 28th, 1807, his distinguished son was born. Educated at home and at the Gymnasium of Biel, he completed his elementary training at the Academy of Lausanne, where he was noted for his love of the natural sciences, and the talent he displayed for their study. Adopting medicine as his profession, he entered himself successively at the Universities of Zurich, Heidelberg, and Munich, graduating M.D. in the latter seat of learning. Hitherto botany had been his favourite science, and it is possible that ichthyology might have lost one of its principal cultivators had not the death of Spix made it necessary for some one to finish the work which he had begun in the great collection of fishes made by himself and Martius during their journey in Brazil. For this task, Agassiz, though little more than a student, was selected, and during many subsequent years ichthyology was his chief occupation. The Brazilian species were described, figured, and published by 1829; but in 1830 appeared, as the result of his studies on those of Europe, and especially of Switzerland, the prospectus of a *History of the Fresh-water Fishes of Europe*, of which the first part was issued in 1839, though not until the eager young naturalist had involved himself in what were to him serious financial responsibilities. The fossil species next claimed his attention, and between the years 1833 and 1844 appeared, as the result of his labours in that then almost untrodden field, the *Recherches sur les Poissons Fossiles*, in five magnificent quarto volumes, illustrated by plates, which have to this day a high place in the esteem of palæontologists. The cost of producing this monumental work was so great that he had to apply to the British Association for aid, and Lord Francis Egerton, afterwards the Earl of Ellesmere, rendered him the most timely help in defraying the cost of what was too much for the slender resources of the author. While prosecuting

this work he visited England, and immediately detected in the Scottish hills those signs of ice action which proved the foundation for that generalisation regarding an ice cap, like that of Greenland, having at one time covered the north, which is still almost universally held. Quick in assimilating the observations of others, and with a memory singularly retentive, and an industry which never tired, he was soon after, in Paris, working at the starfish and sea-urchin order of animals, though, from his residence in an inland country, his acquaintance with these marine subjects was mainly from museum specimens. Notwithstanding his poverty, he managed by 1838 to publish the first part of a monograph on the recent and fossil Echinodermata, and in 1839-40 two quarto vols. on the fossil species of Switzerland, besides numerous papers and elaborate memoirs on other subjects. The Echinodermata, indeed, were always favourites with him, for almost to the close of his life he was engaged in studying them, and the taste for the group was inherited by his son, who is now one of the best authorities on his father's early theme of research. But wide though the field of fishes and sea-urchins is, it was far too circumscribed for Agassiz, for the history of the Belemnites, the classification of the animal kingdom, the muscular system of shell-fish, the genera of fossil mollusca, the development of salmon, and the collection of specimens for the Neuchatel Museum during his frequent journeys in the interests of science, engrossed him, either consecutively or occasionally, at one and the same time; and the fossil fishes of the Scottish Devonian beds formed the theme of a separate monograph (1844). Between the years 1840-46 he was eagerly occupied in studying the glaciers of his native land, and, with the assistance of Buckland, in applying this knowledge to the elucidation of the traces of extinct ones in North Britain and other parts of Europe. His *Etudes sur les Glaciers*, issued in the usual sumptuous form of all Agassiz's works, laid the foundation for a notably fresh departure, and may be said to have been the parent of Forbes's still better-known travels, though possibly modern investigators have not adopted *in toto* the conclusions of either. In 1838 he had been appointed to the Chair of Natural History in Neuchatel, and though the emoluments of the office were small, it seemed that henceforward his life was to be that of the frugal Swiss professor. In 1846, however, began a second career for Agassiz. In that year he crossed the Atlantic, to deliver some lectures before the Lowell Institute, but was induced to remain as Professor of Zoology and Geology in the University of Cambridge (Harvard College). In 1851 he accepted a Chair of Comparative Anatomy in Charleston (S.C.) Medical College, but two years later he returned to Cambridge, and there remained as professor and director of the museum which he organised. In due

time he was also naturalised as a citizen of Massachusetts, and appointed a Regent of the Smithsonian Institution. As a "Lyceum" lecturer he might have earned a large income, but, to use his own expression, "he could not afford to make money." Still he found that in America there was a remunerative sale for books which in Europe would never have paid the printer, and *post hoc, propter hoc*, volume after volume poured from his tireless pen. Among these may be enumerated his *Lake Superior, Contributions to the Natural History of the United States* (4 vols.), *Introduction to the Study of Comparative Physiology, Geological Papers, Zoologie Générale et Esquisses Générales de Zoologie*, &c. (1854), his vast *Catalogue of Scientific Memoirs (Bibliographia Zoologie et Geologie)*, &c., &c. The Museum of Comparative Anatomy was a still greater work, and in 1865, at the expense of Mr. Thayer, a Boston banker, he, his wife, and a staff of assistants, made a voyage to Brazil, as a means not only of adding to his second-hand knowledge of that region, but of recruiting his waning health. The result was published in various works, and a popular account of the expedition in a book by Mrs. Agassiz. In 1871 he visited the Pacific shores of the United States, and shortly before his death succeeded, by the liberality of Mr. John Anderson, a New York tobaccoist, in founding a School of Practical Natural History at Penikese. [AGASSIZ, ALEXANDER.] Another friend presented him with a steam yacht for dredging purposes, and in short, it had become the fashion to "help Agassiz," when he died, full of work and of extensive plans for the future. In private life he was one of the most amiable of men. His enthusiasm was contagious; and though boundless in his contempt for the "Philistines" who could not appreciate science, the range of his studies was so wide that he was saved from the narrowness which specialism is apt to induce in the votaries of a little by-way of Nature, to the dimensions of which the mind of the specialist shrinks. He estimated his own work at its full value, but he never exaggerated its importance over that of other men. Sometimes, by taking too broad an area for examination, he was inaccurate in little details, and occasionally failed in his deductions, as in his idea regarding the Brazilian plains having been covered with a glacier sheet, just as Switzerland and Northern Europe had been. But these drawbacks scarcely, if at all, detract from the vast services which he rendered to natural history, and the indelible mark he has left on the intellectual life of his age. He was not apt to change his opinions with every wind that blew. Hence, to the last he was a disbeliever in Darwinism, and in glacial doctrines held to his own early theory, uninfluenced by the "discoveries," which he not unjustly regarded as the guesses of men whose acquaintance with the

Arctic ice action which they invoked was *nil*, and with that of the Alps much less than his own. It may be added that though he took no part in politics, his views were so decided that he refused to settle in Paris at the invitation of the French Emperor, and that though he would fain have taken office in Edinburgh, he was not fated to be an ornament of that University, or to return, as he always hoped he would, to his native land, even when, as Longfellow puts it, his heart at times beat wildly "for the beautiful Pays de Vand."

Louis Agassiz: his Life and Work, by his Wife (1885); Professor Williamson's article on Agassiz in the *Encyclopædia Britannica*.

[R. B.]

Aguilar, GRACE (b. 1816, d. 1847), authoress of moral tales and religious tracts, was a Jewess of Spanish extraction. For the shortness of her life, her works are very numerous. They may be divided as follows: Two historic novels, *The Vale of Cedars*, a story of the Jews in Spain during the fifteenth century, and *The Days of Bruce*, which remains the most popular of her works; they are written in the heroic style fit for the mouths of the knights of bygone days or the heroes of modern melodrama, and, but for the entire absence of humour, would recall *Ivanhoe* and the *Talisman*; three domestic stories, *Home Influence*, *The Mother's Recompense*, and *Woman's Friendship*; and a collection of short stories, *Home Scenes and Heart Studies*, the general character of which is like Miss Edgeworth's tales, though again the style is for the most part heroic, and humour absent; *The Women of Israel*, a series of short sketches of some of the notable women in ancient Jewish history; and a few religious treatises, the most important being *The Spirit of Judaism*, in which she defends the purity of her religion against the perversions and persecutions of Christianity. She died at Frankfort.

***Ahmed-Vefik** ПАСХА (b. circa 1818), Turkish statesman and politician, was educated for some years in Paris. Having been appointed to a post in the Ottoman Civil Service on his return, he founded the Salaamé, or Annuary of the Ottoman Empire, in 1847. He was Commissioner to the Principalities in 1849 and 1850, and in the following year was sent as Ambassador Extraordinary to Persia, where his firmness and diplomatic skill withdrew the Shah from the alliance of Russia. After his return in 1855, he became in succession member of the Council of State, of the Council of War, and the Tanzimat, and in 1857 he was Minister of Justice for a few months. In 1860 he was sent on a special embassy to Paris relative to the French occupation of Syria, and was created Pasha. Since 1871 he has held various important positions in the administration.

***Aidé, HAMILTON**, novelist and song-writer, is the author of several novels, such as *Carr of Carlyon* (1841), *The Marston* (1868), *Morals and Mysteries* (1872), *Poet and Peer* (1880), and *Introduced to Society* (1884). He also published a book of verses, *Eleonore and other Poems*, in 1856; and is well known as the author of the words of several popular drawing-room songs, such as *Bride, with thy truthful eyes*; *Close thy eyes, the day is done*; *Lie at peace, little one*; *Morning star, that shin'st above her*; and *When we are parted*, the last two of which are set to music by Blumenthal.

***Aikins, THE HON. JAMES COX** (b. 1823), Lieutenant-Governor of the province of Manitoba, was born in Toronto, and educated at Victoria College, Cobourg. From 1854 to 1861 he represented County Peel, Ontario, in the Canadian Assembly. In 1862 he was elected member of the Legislative Council, on the abolition of which he obtained a seat in the Senate. From 1869 to 1873 he was Privy Councillor and Secretary of State under the Macdonald Government, and during this time he passed the Public Lands Act, and organised the Dominion Lands Bureau for the management of lands acquired in the North-West. In 1878 he again became Secretary of State, two years later Minister of Inland Revenue, and Lieutenant-Governor of Manitoba in 1882.

Aimard, GUSTAVE (b. 1818, d. 1883), novelist, lived for many early years an adventurous life, chiefly in America and among savage tribes. Travelling subsequently in Spain and Turkey, he was much concerned in conspiracies of a doubtful character. At thirty years of age he was appointed to an office of credit in Paris, and eventually settled down to the life of an author, employing his own varied experiences in the production of romances full of extraordinary incidents. He published about twelve stories, the most popular being *Les Trappeurs de l'Arkansas*. Several of his works have been translated into English by Sir F. Wraxall.

Ainmüller, MAX EMANUEL (b. 1807, d. 1870), artist and painter on glass, studied at the academy in Munich. He turned his attention to glass under the direction of S. Frank. He executed the new windows in Ratisbon Cathedral, and in the church of Au, a suburb of Munich. In 1844 he became inspector of the new Royal Glass Works at Munich. Several of the new windows at Spire, Cologne, and in St. Paul's, in London, are by his hand, though the figures are often painted by other German masters. He may thus be regarded as the leader of the Munich School of Glass Painting, which has done so much to ruin the interiors of so many European churches and cathedrals. He was also an architectural painter of some merit.

***Ainsworth, WILLIAM FRANCIS** (b. 1807), an English naturalist, traveller, and *littérateur*, and a cousin of the novelist. Born in Exeter, he studied medicine in Edinburgh, receiving when barely of age the diploma of the Royal College of Surgeons. But medicine was not his profession—it was only a means towards an end, which was the study of natural history. Soon after leaving the University, he travelled in Auvergne and the Pyrenees in search of data in support of the Huttonian theory, which in those days divided with the doctrines of the Wernerians, of whom Jameson was the high priest, the allegiance of the northern geologists. Returning (1828) to Edinburgh, he edited for a short time—indeed, during its brief career—Cheek's *Journal of Natural and Geographical Science*, which, though rather a poor affair, combining, towards the close of its career, coloured plates of birds and other animals as a pictorial bait to purchasers, was the first attempt to found a geographical magazine in this country. In 1835 Ainsworth was attached as physician and naturalist to Chesney's Euphrates Expedition, returning home two years later through Kurdistan, the Taurus, and Asia Minor. In 1838, in company with Rassam and Russell, he was sent by the then young Geographical Society and the Society for the Diffusion of Christian Knowledge into Asia Minor, with the object of exploring the course of the Halys, and ascertaining the condition of the Christians in Kurdistan. On his return, in 1841, he published his *Researches in Kurdistan*, and, during the years which followed, a variety of other works touching on the countries he had visited. The chief of these are:—*Claims of the Christian Aborigines in the East; Travels in the Track of the Ten Thousand*, &c. He also edited *Lares and Penates*, and advocated an Indo-European telegraph by way of the Tigris Valley, a project which has since been carried out. Latterly he devoted himself to general literature, writing and editing *All Round the World*, a popular work on travel and geography (1859-60); *The Illustrated Universal Gazetteer*, &c.; and latterly became the proprietor and editor of the now extinct *New Monthly Magazine*. For his eminent services to Oriental research he received the honorary degree of Ph.D. from Jena, and besides being one of the founders of the Royal Geographical Society, and one of the six surviving Fellows who appear in the list for 1830, he is an honorary or ordinary member of many English and foreign learned associations.

Ainsworth, WILLIAM HARRISON, novelist (b. 1805, d. 1882), was the eldest son of a Manchester solicitor. He was educated at the Manchester Free Grammar School, and articulated to a local solicitor. In 1824 he removed to London, where, two years later, he married a daughter of a Bond Street publisher, and

abandoned law in order to devote himself to literature. His first important work was the romance entitled *Sir John Chiverton*, which was written in his twenty-first year. It won the admiration of Scott. The most popular of his stories was also an early work. *Rookwood* appeared in 1834, and at once established his reputation. The story of *Jack Sheppard*, only less popular, appeared first in *Bentley's Miscellany* in 1839, Mr. Ainsworth having newly accepted the editorship of that periodical, in succession to Dickens. Following these stories came *The Tower of London*, *Old Saint Paul's*, and *The Miser's Daughter*. Subsequent romances are too numerous for particular mention. In 1841 Mr. Ainsworth retired from the editorship of *Bentley*, and established a magazine under his own name. In 1845 he became proprietor and editor of the *New Monthly Magazine*. In 1854 he purchased *Bentley's Miscellany*, and conducted it afresh. His life was purely literary, being almost devoid of any interest except such as is incident to the production of books. He was a friend and companion of some of the most popular writers of the time, Dickens among others. Respected and beloved, he passed through life without more than a single misunderstanding with any brother of the craft. In 1870 George Cruikshank, who had then newly surprised the world with a claim to be accounted the originator of *Oliver Twist*, wrote a letter to the *Times* asserting his right to be considered the creator of Ainsworth's *Old Saint Paul's*, *The Tower of London*, and *The Miser's Daughter*. The romancist contented himself with giving the statement of the artist an unequivocal denial, and the facts subsequently made public were not such as seriously disturbed that repudiation. It is just possible, however, that some central idea may have originated with Cruikshank in each of the cases cited by him. Ainsworth's place as a writer of romance is distinctly in the school of Mrs. Radcliffe. Picturesque, distinguished by light and shade, not above the little tricks of artificial effect, by no means eminent in naturalness or a nice sense of fidelity to life, almost destitute of humour as understood by the true humourists, yet full of rollicking fun, and with a method of narration that was at least direct, spirited, and vigorous, Ainsworth was a writer of distinct though limited quality. His sympathies were with the past, mainly perhaps because the past appeared picturesque. Gloomy, lurid, gruesome effects suited best with his idiosyncrasy, but he was capable of racy, bracing writing. With the niceties of human character his art had small commerce; and with the subtleties of metaphysical or physical intention it had no dealings at all. His plots were rarely or never constructed with any endeavour after symmetry or unity, but they were often ingenious and surprising. Where the romances of the eighteenth century find favour the

author of *Rookwood* and *Old Saint Paul's* will not fail of his measure of fame; but where psychology or philosophy, metaphysics or unadorned human passion are most in requisition, the name of Harrison Ainsworth will be placed side by side with that of Monk Lewis, or perhaps that of his acknowledged mistress in fiction. Some of Ainsworth's novels enjoyed an extraordinary popularity, being translated into half the languages of Europe, and dramatised again and again. In his later years he departed from his early practice, and wrote two or three novels of modern life, *Hilary St. Ives* being one of them. He was a rapid writer, and produced about thirty volumes in all. His long account of Dick Turpin's ride to York, embodied in *Rookwood*, was written in as short a time as the ride itself is described as occupying. [T. H. C.]

AIRD, THOMAS, poet and journalist (b. 1802, d. 1876), was born at Bowden, Roxburghshire, and his university was that of Edinburgh. He contributed both poetry and prose to *Blackwood's Magazine*. *Religious Characteristics* he published in 1827; *The Old Bachelor in the Old Scottish Village*, a volume of tales and sketches, in 1845; and a collected edition of his *Poetical Works*, including most of his contributions to *Blackwood*, in 1848-56. Of these, his poem of *The Devil's Dream* is best known. After the death of James Ballantyne, Sir Walter Scott's friend, he edited for a year the *Edinburgh Weekly Journal*, and in 1835 he was appointed editor of the *Dumfries Herald*, a Conservative journal of considerable influence. In 1852 he brought out an edition in two vols. of the select poems of D. M. Moir (the "Delta" of *Blackwood*), with a memoir prefixed. Personally, Thomas Aird was a man of nice culture and gentle manners, and was held in high esteem by all his contemporaries. He died at Castle Bank, Dumfries.

Rev. Jardine Wallace, *Aird's Works*, with a memoir.

AIREY, RICHARD, BARON, General (b. 1803, d. 1881), was educated at Sandhurst, and entered the army in 1821. From 1827 to 1830 he was aide-de-camp to Sir Frederick Adam in the Ionian Islands, and for the next two years to Lord Aylmer in British North America. During the Crimean War he acted as quartermaster-general in the critical years 1854, 1855, in which capacity his industrious energy won him the admiration of his superior officers; but partly owing to his undisguised contempt for war-correspondents, the whole blame for the inefficiency of the commissariat was thrown on his shoulders. On his return to England he demanded a military inquiry. According to the old ideas of a quartermaster-general's duties, his defence was complete, and he remained quartermaster-general at the Horse Guards till 1865, when he became Governor of Gibraltar. In 1871 he was raised to the rank of general, and was adjutant-

general at the Horse Guards till 1876, when he retired from service, with the title of Lord Airey. In 1879 he was president of the Airey commission to inquire into the new short service system, which he strongly condemned. He died at the seat of Lord Wolseley at Leatherhead.

Kinglake, *Invasion of the Crimea*.

***AIRY**, SIR GEORGE BIDDELL (b. 1801), a distinguished English astronomer, a native of Alnwick, was educated principally at Colchester Grammar School and at Trinity College, Cambridge. In 1822 he was elected scholar, and in 1823 graduated B.A. as senior wrangler, and was duly elected a fellow. In 1826 he proceeded to the degree of M.A., and in the same year was appointed to the Lucasian Professorship of Experimental Science, which, though formerly held by Barrow and Newton, had for long been little better than a sinecure. Airy, however, re-deemed it from this reproach by delivering an annual course of lectures, until in 1828 he was made Plumian Professor of Astronomy, and director of the newly erected Cambridge Observatory. This establishment now became one of the finest in England, and the improvements made by Airy in the methods of calculation and the publication of observations were soon adopted by Greenwich and other observatories (*Astronomical Observations*, Cambridge, 1829-39, 9 vols.). In 1835, the office of Astronomer-Royal falling vacant, the Plumian professor was selected for the post by Lord Auckland, then First Lord of the Admiralty, as the most fitting successor of John Pond. To him the observatory is indebted for the introduction of the altazimuth, the water telescope, the transit circle, and the large equatorial, which was erected from his plans in 1859. Under Dr. Airy's superintendence more rapid methods of calculation were put in operation. Nor were his labours solely confined to the mere routine duties of his office, for he was for fully half a century the recognised adviser of the Government on nearly every scientific question of general interest. In 1834, when the old standards of weights and measures were destroyed by the fire at the Houses of Parliament, he was chosen chairman of the commission charged with the construction of new ones, and, among other public measures, headvoted a decimal coinage and the adoption of the railroad gauge of four feet eight inches instead of six feet. In 1838 he investigated the disturbance of the compass in iron ships, and devised means to correct the irregularity. The preliminary observations necessary for fixing the boundary between Canada and the United States were conducted by him, and he also aided in tracing the North-Western boundary. Many of the data at present relied on for determining the weight of the earth and the theory of gravity were obtained by his experiments, while ancient chronology

has been rendered more exact by his computation of the exact time of the most important eclipses on record. In 1842 he went to Turin, in 1851 to Gothenburg, and in 1868 to Spain, for the purpose of observing solar eclipses, and in 1874 organised the British expedition for observing the transit of Venus. More recently he has given attention to the lunar theory, in regard to which he has proposed a new method; and in 1869 he communicated to the Royal Astronomical Society an interesting discovery on "Atmospheric Chromatic Dispersion, as affecting Telescopic Observation, and the mode of correcting it." In 1881, owing to the weight of advancing years, he resigned in favour of the present Astronomer Royal (Mr. Christie), and has ever since lived in retirement. Sir George's career, though not distinguished by any great discoveries, has been a remarkably industrious and meritorious one, highly honourable to himself and useful to the science of astronomy. He has published *Mathematical Tracts, Lectures on Astronomy*; treatises on *Sound, Magnetism, Gravitation, Tides*, and on *Errors of Observation*, besides many technical papers in the *Philosophical Transactions*, the *Cambridge Philosophical Society's Transactions*, the *Memoirs of the Royal Astronomical Society* and the *Philosophical Magazine*, and an antiquarian work on *The Invasion of Britain by Julius Caesar* (1865). Besides receiving numerous medals and other marks of honour, he is a D.C.L. of Oxford, and an LL.D. of Cambridge. In 1871 he was made C.B., and next year K.C.B. In 1851 (Ipswich meeting) he was President of the British Association, and from 1871 to 1877, when he resigned, was President of the Royal Society, of which for nearly sixty years he has been a fellow. He is also, among other distinctions of a like order, an honorary member of the Institute of Civil Engineers, and a corresponding member of the Institute of France.

***Aitchison, GEORGE, B.A., A.R.A.**, architect (b. 1825), was born in one of the north-west suburbs of London. His general education was commenced at Merchant Taylors' School, and continued at University College, London, and his professional training was obtained at the Royal Academy, which he entered as a student in 1847. He graduated B.A. in 1850, and in 1853 he proceeded to the Continent, and spent nearly two years studying art in France and Italy. In 1862 he was elected a fellow of the Royal Institute of British Architects, and afterwards was placed on the Council. He was also appointed examiner for the Voluntary Architectural Examination and for the National Art Prizes at South Kensington. He gained medals at the Philadelphia, Sydney, and Melbourne Exhibitions, and in 1877 read an important paper before the Social Science Congress at Aberdeen on "The

Principles which should govern the Restoration of Ancient Buildings." In 1879 he was made an officer of Public Instruction by the French Government, and on June 2nd, 1881, was elected an Associate of the Royal Academy, in the place of the late William Burges. He has lectured on architecture at the Royal Academy since 1882, and the practical results of his professional knowledge are to be seen in many large warehouses in the City, and at the London and St. Katharine Docks. Like the Brothers Adam of last century, he regards house decoration as an essential part of the architect's business, and his taste and judgment in this respect are manifested in alterations and decorations of such houses as those of the Princess Louise, Sir F. Leighton, Lord R. Grosvenor, and other members of the aristocracy. He was also the designer of the fittings and furniture for the British Art Section of the Paris International Exhibition of 1878.

Akerman, JOHN YOUNG (b. 1806, d. 1873), antiquary and numismatist, was born in London, June 12th, 1806. He was successively secretary to Cobbett, the Greenwich Railway Company, and Lord Albert Conyngham; and, after being elected a fellow, became secretary to the Society of Antiquaries in 1848, at first jointly with Sir H. Ellis, but from 1853 alone, until his health compelled him to resign in 1860, after which he retired to Abingdon, where he died. As editor of the *Archæologia*, Akerman was interested in antiquities generally, and his *Archæological Index for Celtic, Romano-British, and Anglo-Saxon Remains* (1847), and *Glossary of Provincial Words and Phrases in Use in Wiltshire* (1842), together with his *Wiltshire Tales* (1853), bear witness to the varied character of his learning. But his special study was numismatics, and in 1836 he filled an acknowledged void in English periodical literature by starting the *Numismatic Journal*, which, after two years, was merged in the *Numismatic Chronicle*, or *Journal of the Numismatic Society of London*—a society he was largely instrumental in founding in 1836, and of which he was secretary. His *Numismatic Manual* appeared in 1832, and again in 1840; *Descriptive Catalogue of Rare and Unedited Roman Coins*, 2 vols., 1834; *Coins of the Romans in Britain*, 1836, enlarged 1842, and again 1844; *Ancient Coins of Cities and Princes*, 1846; *Numismatic Illustrations of the New Testament*, 1846; *Introduction to the Study of Ancient and Modern Coins*, 1848. He also wrote a book on angling (1850). He was rewarded for his many services to numismatics—not the less deserving because they are now superseded—with the gold medal of the French Institute, and was elected an honorary member of various learned societies abroad.

See a list of his works and an account of his life in the *Numismatic Chronicle*, new series, xiv. 13-19. [S. L.-P.]

Akhbar Khan (*d.* 1847) was one of the three sons of Dost Mahomed, the ruler of Cabul. He supported his father in the negotiations with Captain Alexander Burnes, at the time when Persia was besieging Herat, and the Russian agent, Vitkovitch, was intriguing to extend Russia's influence in Afghanistan. When, after the dispute about Peshawur, Lord Auckland determined to restore Shah-Shuja to power, and the British troops entered Cabul in 1839, Akhbar retired till the outbreak of the rebellion in the following year. Though his father surrendered early in the movement, Akhbar remained at large, and was able to take command of the Afghans, blockading the British division in Cabul after the murder of Sir Alexander Burnes. During a conference on the proposed evacuation of the city, the envoy, Macnaughten, was treacherously murdered in Akhbar's presence, some say by his own hand (*Dec.*, 1841). A few weeks afterwards the British army began the fatal retreat from Cabul, which ended in the extermination of the whole force, except Dr. Brydon and a few hostages, chiefly ladies, given up at Akhbar's demand, and restored by him at the end of the war, after fairly generous treatment. Akhbar next proceeded to besiege Jellalabad, but was defeated in April by Sir Robert Sale. Soon afterwards Jellalabad was relieved by General Pollock, who defeated Akhbar in two successive battles on his way to Cabul in September, 1842. After the evacuation of Afghanistan by the British, Dost Mahomed returned to his capital, and Akhbar died there. [AFGHANISTAN.]

***Alard**, JEAN DELPHIN, violinist (*b.* 1815), was a native of Bayonne, and early began the study of his instrument. Already fairly proficient at the age of eleven, he was sent to the Paris Conservatoire, and became a pupil of Habeneck. In 1843 he was appointed solo violinist in the Tuileries Chapel, and three years later professor of the violin in the Conservatoire. Soon afterwards, in conjunction with M. Franchomme, he began the series of concerts for classical chamber music that maintained their popularity in the musical world till their close, in 1872. In 1875 he resigned his professorship in the Conservatoire. One of the most skilful violinists of the century, he has also written a *School for the Violin*.

***Albani**, EMMA (*b. circa* 1847), whose real name was La Jeunesse, is a native of Canada, and the descendant of French settlers. She was educated at the Convent of the Sacré Cœur at Montreal, and later went to Europe for her musical education. She studied in Paris under Duprez, and at Milan under the old maestro Lamperti. Her *début* was made at Albany, whence she took her name. In 1870 she appeared at Messina with success; also at Malta, and at La Pergola, Florence. She first sang in London at the Italian Opera

in 1872, where she has been a favourite ever since. Her most successful rôles are "Amina," "Marguerite," "Mignon," and "Ophelia," in the last of which she made a marked success. A landmark in her career was her appearance as "Elsa," in *Lohengrin* (1873). She married Mr. Ernest Gye, formerly manager of the Italian Opera in London.

Albany, LOUISA, COUNTESS OF (*b.* 1753, *d.* 1820), was a cousin of the last reigning prince of the house of Stolberg. In 1772 she married the young Pretender; but he had become utterly degenerate, was a confirmed drunkard, and, after a married life which Sir Horace Mann describes as a martyrdom, she retired into a cloister in 1780, by the aid of the poet Alfieri, to whom for some years she had been passionately attached. A legal separation from her husband having been effected in 1784, she lived with the poet in Colmar; and after the death of the Pretender, in 1788, the two are said to have been secretly married. Alfieri always ascribed much of his success to her influence. In 1791 she visited England, and was received at court. Widowed a second time in 1803, she went to Florence, and there, until her death, was the centre of a society which included Sismondi, Mme. de Staël, Moore, Lamartine, and Foscolo. She seems to have been a woman of average culture, very hardly treated by fortune.

Vernon Lee, *The Countess of Albany*.

Albany, LEOPOLD GEORGE DUNCAN ALBERT, DUKE OF (*b.* 1853, *d.* 1884), was the fourth son of Queen Victoria. He was delicate all through his childhood and youth, but he was able to receive an excellent education, which was completed at Christ Church, Oxford. He had a thorough knowledge of modern languages, and was cultivated and accomplished in an unusual degree. His health improved as he grew up, and he entered on public life, in which he promised to fill a distinct and important place, his utterances, especially on educational topics, being full of thought. A career of much hope was unfortunately cut short by his early death. He was at a ball at Cannes, when he slipped and fell; this accident proved fatal in a few hours. The Duke of Albany married in 1882 the Princess Hélène of Waldeck, and leaves two children, one of whom was born after his death.

***Albert**, KING OF SAXONY. [SAXONY.]

***Albert** (*b.* 1815) was the name assumed by Alexander Martin, French mechanic and journalist. When quite a lad he fought in the Lyons insurrection of 1831. In 1840 he founded at Paris a mechanics' journal, *L'Atelier*, but continued to occupy himself at the same time in manual labour. When the Revolution of 1848 broke out, he took up arms, and together with Louis Blanc, whose friend he was, became a member of the

Provisional Government. He also became a member of the Constituent Assembly, but being implicated in the mob attack upon it of May 15th, he was tried, and imprisoned first at Doullens, then at Tours. After the amnesty he returned to Paris, and remained in the background until 1870, when he was nominated member of the Commission of the Barricades for the Defence of Paris. In 1871 he was an unsuccessful candidate for the National Assembly.

Albert, FRANCIS CHARLES AUGUSTUS EMMANUEL, Prince Consort of England (b. 1819, d. 1861), the second of the two sons of Ernest, Duke of Saxe-Coburg-Gotha, was born at Rosenau, near Coburg. When he was seven years old his parents were divorced, the education of the two boys being left chiefly to their grandmother, who in turn entrusted them to the care of Herr Flor-schütz, a competent tutor, under whom they remained at home till 1832. In that year they visited their Uncle Leopold, King of the Belgians, with whom Prince Albert remained on terms of great friendship throughout life, and in 1835 the young princes made a tour through Germany. In the next year, when the succession of the Princess Victoria to the throne of England had become almost a certainty, King Leopold sent his trusted adviser, Baron von Stockmar, to Coburg, that from personal intercourse with the young prince he might decide as to the desirability of a marriage between the cousins. Stockmar's verdict was favourable, and in May the Duke of Coburg came to England with his two sons. On their departure King Leopold informed his niece of his hopes, and the inclinations of the princess were found to coincide with her guardian's wishes. Prince Albert remained for ten months at Brussels, and afterwards resided for a year and a half at Bonn University. Before he left the University his cousin Victoria had become Queen, and in order further to prepare himself for his exalted and unenviable future, the prince undertook a lengthy tour through the chief cities of Italy in company with Baron von Stockmar, who after this time remained his most upright, cautious, and pedantic counsellor. The prince came to England for a time in the autumn of 1839; on his return to Coburg the engagement was publicly announced, and Lord Melbourne proposed an annuity for the prince of £50,000, but owing to the general distress of the country, Joseph Hume wished to reduce this sum to £21,000, and finally an annuity of £30,000 was agreed to. It was not, however, till after the usual rejoicings at the marriage ceremony (Feb. 16, 1840) that the real difficulties of the prince's situation became gradually apparent; for, as he said of himself, he soon found that he was husband, and not master. It was not till 1857 that the title of Prince Consort, by

which he had long been popularly known, was officially confirmed to him by letters patent. The royal household eyed him askance as a new-comer, the Tories doubted a foreigner's loyalty to the realm; the Protestants had raised suspicions of Popery; the orthodox had raised suspicions of scepticism; squires and landlords accused him of indifference to sport, and had no sympathy with his love of music and the arts. His knowledge irritated the ignorant and his virtue bored the fashionable world, whilst the average Briton despised him as a foreigner. But more difficult to contend with than all was the suspicion that, especially in foreign affairs, he exercised an undue influence on the decisions of the Crown. The charge was again and again repeated, but four occasions are made conspicuous by the virulence of the press and the excitement of the public mind. On Jan. 27, 1846, the prince was present at the debate in which Sir Robert Peel proposed the abolition of the Corn Laws. A few nights afterwards Lord George Bentinck accused him of having "allowed himself to be seduced by the First Minister of the Crown to come down to this House to usher in, to give *éclat*, and, as it were, by reflection from the Queen, to give the semblance of a personal sanction of Her Majesty to the measure." Though the prince never repeated the supposed offence, the indignation of the High Tory party had not yet cooled down when, soon after the arrival of the news of the *Coup d'État*, in 1851, Palmerston was obliged to resign his position as Foreign Secretary, and the journals that had supported him declared that the action of Lord John Russell was due to "poison instilled into his mind by Russian emissaries" and "enemies of England," not obscurely hinting at the prince. But it was not till two years after this, during the winter of 1853-54, that the climax of Prince Albert's unpopularity was reached. The occasion was again the resignation of Lord Palmerston for ten days in December, attributed to Court intrigues and "an influence behind the throne;" but there were deeper causes at work. The irritation of the Protectionists continued; the Radicals embraced any opportunity to diminish the prestige of the Crown: the nation at large had a vague idea that the prince was in league with Russia and Germany, and that his relationship to the Orleanist family disinclined him to the French alliance. There was also much jealousy at the success of the Exhibition, and indignation at the Lord Mayor's proposal to raise a statue to the prince on its site. For some weeks the tone of the press and the popular feeling were almost incredibly bitter. The excitement was only allayed by the complete explanations of the ministry on Jan. 31st, 1854. In the following year, after becoming Prime Minister, Lord Palmerston was entirely reconciled to the prince, and joined in the

general admiration of all who knew him intimately. But the *Times*, which, in its famous series of articles against the Prussian dynasty, had tried early in 1861 to bring the prince's name once more into suspicion and contempt, had hardly time to change its tone before bursting into the most extravagant eulogy on his career after the news of his death. Such were the difficulties of the prince's position, and he struggled to overcome them with an admirable mixture of energy and tact. Much of his time was, of course, unavoidably wasted in the compulsory pleasures and political entertainments of Court life, receptions, and progresses through the country or to noblemen's seats. But he worked hard, and for the most part intelligently, for the good of the people as a whole. His own private life was a model of level virtue, his household a model of thrift and good management. He superintended the Crown estates with care, and did much for the improvement and encouragement of agriculture. It was through his influence on the Duke of Wellington that duelling in the army was abolished in 1844. He always displayed an intelligent interest in the army and navy, though he modestly refused the office of Commander-in-Chief, urged on him by the Duke of Wellington in 1850. The housing of the working classes first became a prominent question by the aid of his speeches. Though he displayed no signs of artistic genius, he might have become a fair musician or artist, but that individuality was suppressed by his unfortunate position. As it was, he tried to do much to encourage the fine arts, and was more successful than most royal patrons. His own object in conceiving and industriously carrying out the design of the Great Exhibition of 1851, by which his name will be longest remembered, was rather to stimulate art and industry than to promote any illusive dream of eternal peace and mercantile brotherhood. And yet his love of peace was genuine, and his last act was to draft a conciliatory despatch, which probably averted war with America after the seizure of Confederate envoys on the Trent. A fortnight afterwards he died, Dec. 14th, low fever and prostration having developed into typhoid. On his death his former detractors vied with one another in extravagance of panegyric, and he is now generally recognised as a man of singular purity of life and intention, whose aim it was, in spite of the constraint of his position, to devote his bright and many-sided powers to the furtherance of moral beauty and the happiness of his fellow-subjects.

See Sir Theodore Martin's *Life of the Prince Consort*. [H. W. N.]

***Albert**, FRIEDRICH RUDOLPH, Archduke of Austria (b. 1817), is the son of the late Archduke Charles. Having early entered the army, he commanded a division in the

Italian war of 1849, and took part in the battle of Novara. He was afterwards appointed Governor-General of Hungary, and in 1866 he gained a victory over the Italian army at Custoza. After Sadowa, he was made Commander-in-Chief of the Austrian army, a position which he held till 1869, when he exchanged it for that of Inspector-General of the army. In the same year he published a work *Ueber die Verantwortlichkeit im Kriege* ("On Responsibility in War").

***Albert Edward**, PRINCE. [WALES, PRINCE OF.]

***Albery**, JAMES (b. 1832), a dramatic author, was originally intended for an architect, but owing to family considerations, he gave this up, and entered on a commercial career. From early youth, however, he showed a marked talent for caricature, and wrote farces for the Southwark Literary Society. His first known play was *Dr. Dury*, acted at the Lyceum, and he gained the second T. P. Cooke prize with the *Mate of the Mountjoy*, a four-act drama. After some years of obscurity, he wrote the play that made his fame, *The Two Roses*, a very favourite piece in the Robertsonian style (in 1870). He has since written some popular pieces, including *The Denhams* (1877), *Pink Dominoes* (1877), *Where's the Cat?* (1880), *Featherbrain* (1885), &c., most of which are adaptations from the French, and are comedies of the Palais Royal type.

***Alboni**, MARIA, singer (b. 1824), is a native of Cesena, in Romagna. She had the great fortune to meet Rossini at Bologna, and became his favourite pupil. Her *début* was at La Scala, Milan, in the part of "Maffio Orsini" (1843). After appearing at most of the European capitals, she sang at the Covent Garden theatre, London, during the season of 1847; and was immediately accepted by the public as second only to Jenny Lind, and perhaps her equal. Alboni's voice was of wonderful compass, and included notes far beyond the reach of the ordinary contralto; her style had much distinction, but it sometimes lacked inspiration, particularly during performances of the same opera. Her great creations were chiefly in Rossini's operas—for instance, the part of "Arsace" in *Semiramide*. She was equally at home in comedy and tragedy. She appeared before London audiences at frequent intervals between 1848 and 1858, generally at Her Majesty's. Her new rôles were as a rule produced in Paris, where, as in Brussels and the United States, she passed from triumph to triumph. Her retirement from public life took place in 1863, after the death of her husband, Count de Pepolo, but she has occasionally sung since in religious music.

***Alcester**, RIGHT HONOURABLE FREDERICK BEAUCHAMP PAGET SEYMOUR, BARON, (i.C.B. (b. 1820), is the son of Sir Horace Beauchamp Seymour and Elizabeth Mallett,

daughter of Sir Lawrence Palk. He was educated at Eton, and entered the Royal Navy in 1834. He was gazetted lieutenant in 1842, captain in 1854, rear-admiral in 1870, vice-admiral in 1876, and admiral in 1882. He served as a volunteer in the Burmese War of 1852-3, as aide-de-camp to General Godwin, and led the Fusiliers to the capture of the Pagoda at Pegu. He was present in many engagements, and was gazetted four times. He received the Burmese medal, with the clasp of Pegu, in 1854, and the Baltic medal for his services against the Russians in the White Sea. In 1860-1 Sir Beauchamp was commodore in command of the Naval Brigade in New Zealand, after which he received the New Zealand medal, and was made a C.B. In 1866 he was appointed aide-de-camp to the Queen, and in 1868-70 he was private secretary to the First Lord of the Admiralty. In 1870-2, he commanded the Detached Squadron, and in 1874-7 the Channel Squadron. In the interval he had been a Lord of the Admiralty. In 1877 he was made a K.C.B., and Commander-in-Chief in the Mediterranean. In 1880 he was given the supreme command of the Allied Fleet of the European Powers, which was posted on the Albanian coast when the Turks refused to cede Dulcigno to Montenegro. The Porte yielded, the fleet was dispersed, and Sir Beauchamp Seymour received the thanks of the Government, and the Grand Cross of the Bath. In 1882 he held an important position with relation to the war in Egypt, as he was Commander-in-Chief of the Mediterranean Fleet. On July 6th he demanded of Araby Pasha the cessation of all works on the forts of Alexandria, under the penalty of bombardment, and on the 10th he further demanded that the forts at the mouth of the river should be given up. As Araby did not yield, Sir Beauchamp attacked on the 11th, and in a few hours ruined or silenced all the forts, with the loss of very few English, and with little injury to his ships. He remained in supreme command of all Egyptian affairs till the arrival of Sir Garnet Wolseley. He received the thanks of the Parliament, and was raised to the Peerage under the title of Baron Alcester of Alcester.

***Alcock**, SIR RUTHERFORD (b. 1809), is the son of Thomas Alcock, formerly a well-known doctor. He was educated for the medical profession, and in that capacity he served on the medical staff of the British Auxiliary Forces employed in Spain and Portugal to support Isabella II. against the Carlists, and Maria II. against the Miguelists, in accordance with the terms of the Quadruple Alliance (1832-37). For his courage and ability he received honours and decorations from the Spanish, Portuguese, and English Governments. He then sat

on the two "mixed" commissions which met in London to adjudicate the claims of the British Auxiliary Forces. In 1844 he entered the consular service, and was appointed consul at Foo-chow, whence he was transferred to Shanghai (1846) and Canton (1858). During that period he originated the foreign inspectorship of customs at Shanghai, and in 1853 reorganised the municipal government of that town, and it became known as the "Model Settlement." Transferred to the diplomatic service, he was (1858-65) envoy extraordinary, minister plenipotentiary, and consul-general in Japan, being the first minister appointed after the Treaty of Yeddo, by which England secured important commercial privileges. The position of the Embassy became most precarious, owing to the fanatical dislike of the natives to Europeans, and in 1862, in consequence of an armed attack, it was removed to Yokohama. Two years afterwards, in consequence of the closing of the Straits of Simonosaki, and the hostile demonstrations against European vessels, it became necessary for a united English, French, and American squadron to bombard the Japanese forts. This step, which was taken at the instigation of Sir Rutherford, dealt the death-blow to Japanese hostility, and when his mission came to an end relations of the most friendly character had been established. Created a K.C.B. in 1862, he was transferred in 1865 to Peking, as Chief Superintendent of Trade in China, and remained there until 1870, when his long period of foreign service came to an end. In 1876 he was President of the Royal Geographical Society, and in 1878 British Commissioner at the Paris Exhibition. He sat on the Royal Commission of 1881 appointed to investigate the London small-pox and fever hospitals. In 1882 he presided over the health department of the Social Science Congress. Sir Rutherford is the author of *Notes on the Medical History of the British Legion of Spain* (1838), *Elements of Japanese Grammar* (1861), *The Capital of the Tycoon* (1863), *Familiar Dialogues in Japanese* (1868), *Art and Art Industries in Japan* (1878). He also wrote a concluding chapter to *The Journal of Augustus Margary* (1876).

***Alcott**, LOUISA MAY (b. 1833), American authoress, is the daughter of Amos Bronson Alcott, who was occupied in education, and wrote some books of a mystical character. Miss Alcott began to write when very young, and in 1855 she published a collection of *Fairy Tales*. During the American War of 1863 she nursed the wounded, after which she brought out a volume of *Hospital Sketches*. Her books for children and young people are widely and deservedly popular; some of these are *Little Women* (1868), with its sequels—*Good Wives*

and *Little Men ; An Old-fashioned Girl ; and Cupid and Chow-Chow* (1873). *Work*, which she calls *A Story of Experience*, is supposed to illustrate some passages in her own life.

***Aldrich, THOMAS BAILEY**, American poet and novelist (*b.* 1836), has published numerous collections of verses of a sweetly unpretentious nature, of which the best, perhaps, are *The Bells* (1855), *Poems* (1865), *Lyrics and Sonnets* (1880). He has also written several popular prose stories: for instance, *Daisy's Necklace* (1857), *The Story of a Bad Boy* (1869), and *Stillwater Tragedy* (1880). Mr. Aldrich is editor of the *Atlantic Monthly*. *Marjorie Daw* (1873) is his most popular work.

***Aleko Pasha, or Prince Vogorides**, Governor of Eastern Roumelia (*b.* 1830), is a Christian Bulgarian by birth. His father, Prince Vogorides, played an important part during the Crimean War, and was the first Prince of Samos. Having occupied minor diplomatic posts, the son was Turkish Ambassador at Vienna at the outbreak of the Russo-Turkish war, but was recalled, partly owing to his strong support of Midhat Pasha. In 1879, with the title of Aleko Pasha, he was appointed Governor of Eastern Roumelia, under the control of the European Commission, and under the express condition that he was to discourage any popular attempts at union with Bulgaria. In this, however, he was far from successful, even if he aimed at success; for the so-called "gymnastic societies" of Bulgaria continued to support the national cause with men and funds. But at the end of 1882, when Russia, having recently greatly advanced her influence in Bulgaria, demanded that the Eastern Roumelian army should be supplied with Russian weapons and commanded by a Russian general, and also asked leave to erect a Russian monastery on the Shipka Pass, she was met by a firm refusal from Aleko. Diplomatic relations were for a time suspended, but in the next year the matter was with difficulty arranged by Russia's withdrawal. He was recalled early in 1885.

Alexander I. OF BULGARIA. [BULGARIA.]

Alexander I., Tsar of Russia (*b.* at St. Petersburg, 1777, *d.* at Taganrog, 1825), was the son of his predecessor, Paul, one of the most despotic sovereigns, in great things as in small, that ever reigned, even in Russia; and as if in virtue of the pretended law by which in Russia despotic sovereigns are followed by liberal ones, the Emperor Alexander showed at an early age kindly tendencies, and a disposition to benefit his subjects. The liberal-minded, literature-loving Catherine had been succeeded by the madly tyrannical Paul, who was followed on the throne by the gentle-mannered Alexander I. He, again, was to make way for the iron-handed Nicholas, who was in time to be re-

placed by the well-intentioned reformer, Alexander II. The character of Alexander I. must have been influenced by his training as a young man under his French, or rather Swiss, preceptor, La Harpe. His religious education seems to have been entirely neglected. But his teacher, nourished on the writings of Voltaire and Rousseau, did his best to impress upon him lessons of humanity, and to fill him with a sense of the responsibilities he would inherit as the ruler of an immense empire. One of the first acts of the Emperor Paul had been to make the assassins of his father, or reputed father, Peter III., do penance at the tomb of their victim; and it cannot be said that Alexander I. adopted as dignified an attitude towards the murderers of Paul as Paul had adopted towards those of Peter III. Without, indeed, being privy to the assassination (1801), Alexander seems to have known what was going on at the time that his father was being slain. He was shut up by the conspirators in a room by himself, and immediately afterwards was saluted by them as Emperor. At his coronation, they, in common with the survivors among those who had put to a violent end the unfortunate, incapable Peter III., marched in the procession, causing one of the foreign envoys to exclaim: "There he goes, preceded by the murderers of his grandfather, surrounded by the murderers of his father, and followed by his own!" The prophetic part of this utterance cannot be said to have been fulfilled. On ascending the throne the first act of the new sovereign was to revoke the policy of his predecessor in regard to England. Paul had joined the Napoleonic league against Great Britain, thus depriving the great Russian proprietors of the best market for their corn, tallow, timber, and other produce; and it was partly, no doubt, in consequence of this policy that Paul was assassinated. Nor had Paul adopted towards this country a mere attitude of passive hostility. He had, just before his death, despatched an expedition of 30,000 men and 60,000 horses to Khiva, with instructions to raise the Central Asian tribes, and advance through Khiva and Bokhara, across the Oxus, to Afghanistan and India. Alexander hastened to recall this expedition; and Orloff, Hetman of the Cossacks of the Don, under whose command it had started, was obliged to retrace his steps before he had advanced a quarter of the way. Alexander I. remained the enemy of Napoleon until after the battles of Eylau and Friedland, when, abandoning his Prussian ally, he made terms with the conqueror, and held with him (1807) the celebrated interview of Tilsit. A secret treaty was the result, having for its object the partition of Europe between the two sovereigns. Napoleon, at the Russian Emperor's request, abstained from giving the name of Poland to the Polish provinces taken from Prussia, which he collectively designated the

Duchy of Warsaw. Alexander, on his side, entered into the continental system, as maintained against England. But the friendly meetings of the two great European monarchs at Tilsit, and afterwards at Erfurt, gave no permanent results, and the Emperor Napoleon had been personally hurt by the refusal of the Emperor Alexander to accept him as the husband of a Russian grand duchess. The project of invading India with a combined French and Russian force, originally proposed by Paul to Napoleon, was now pressed, but in vain, by Napoleon upon Alexander, and the French Emperor found the Russian Emperor such a lukewarm friend and such a feeble ally, that in order to bring this "Greek of the Lower Empire," as he called him, to terms—perhaps also to give himself the opportunity of planting the French standards in the only continental capital where they had never yet been seen—he undertook the campaign against Russia: so formidable in its conception, so fatal in its results. Alexander I. will be remembered as the sovereign under whom Russia was invaded by the French and their allies, and under whom, in due time, the Russians, forcing the French to retrace their steps, and constantly strengthened by defections from Napoleon's army, pursued them from Moscow to Paris. "Napoleon," says the inscription on the national monument which marks the battle-field of Borodino, "entered Moscow 1812; Alexander entered Paris 1814." At Paris and at Vienna in 1814, and again in 1815, Alexander I. was the most popular of the sovereigns who assembled in those capitals, and who at Vienna regulated the future of Europe; not, as seems to have been supposed at the time, for an indefinite period, but at least until 1830, and, perhaps, until 1859. After the events of 1815 Alexander I. visited London, where he made a most favourable impression. He was theoretically Liberal, and seemed disposed, had the task presented less difficulties, to introduce Liberal institutions into his own country, as he really did in the newly formed kingdom of Poland; constituted within narrower limits than he had desired for it. During his stay in Western Europe Alexander held long political conversations with Madame de Staël, and still longer religious ones with Madame de Krüdner. On one occasion, when he was speaking to Madame de Staël as to the possibility of introducing constitutional government into Russia, she assured him that his own character was at once "a charter and a constitution" for his subjects, to which he becomingly replied that, even in that case, he would only be a "fortunate accident." After his return to Russia he made no attempt to put his Liberal ideas into practice, and as he had already been distanced in this direction by the officers of the army which had occupied Paris, he had now enough to do in controlling the manifestations of Liberalism

which, at his death, were to assume a most dangerous aspect. He spent his last days in the Crimea, and died there, apparently of low fever.

Life of Alexander I., by Baron Korff (in Russian); *Life and Times of Alexander I.* (in English). See also *Fyfe's Modern Europe*, vol. I.

[H. S. E.]

Alexander II. OF RUSSIA, son of Nicholas (b. 1818, d. 1881), ascended the throne in February, 1855, while the Crimean War was still going on. One of his first acts was to assemble his ministers in council to consider the advisability of making peace, for which propositions had been forwarded from Vienna. Each minister spoke in turn, and, after a series of most pessimistic remarks had been delivered, the only minister who seemed in favour of carrying on the war said at last, with tears in his eyes, and in the words of a French minister spoken on a very critical occasion: "Since we do not know how to make war, let us make peace." The general opinion of the assembly was that if Russia came to terms with the Western Powers she might renew the war after an interval of some years, whereas if she went on with it against the present coalition, the country would be reduced permanently to the position of a second or third-rate Power. Peace then was made, on conditions not too onerous or too humiliating for Russia. The treaty deprived the country of a strip of Moldavian territory, forming till then part of the Russian province of Bessarabia, and forbade the presence of Russian war-ships in the Black Sea. Immediately after the signing of the Paris Treaty of Peace, Count Nesselrode, who had been Minister of Foreign Affairs almost from the beginning of the reign of the Emperor Nicholas, resigned, and was replaced by Prince Gortschakoff, who, many years later, declared that it had been the object of his life to destroy the Paris Treaty. Alexander II. was crowned in Aug., 1856, and he issued on the occasion from Moscow several edicts, which, though not very important in themselves, gave promise of certain concessions both to his own Russian subjects and to the Poles. It soon got to be known that the question of emancipating the serfs was being seriously considered; and, that it might be thoroughly examined in all its bearings, committees of landed proprietors, State officials, and others, were formed. At the same time, the action of the censorship was greatly relaxed. New journals were established, and often without any reference to existing laws on the subject. Considerable freedom of discussion was allowed to writers in newspapers and magazines. Great changes were introduced in the university regulations, which, under the Emperor Nicholas, limited the number of students admissible at each university to three hundred. This, according to the view of the Emperor Nicholas, would furnish quite

enough educated men for the service of the State. Alexander II., on the other hand, requiring a better class of functionaries for carrying out his reforms, thought it advisable to extend university education to as many young men as possible. The fees then were reduced to merely nominal charges. Exhibitions were founded, and the universities were now attended by crowds of young men, rich and poor. It was understood, moreover, that legal reforms would be introduced, and that provincial assemblies for the discussion and management of local affairs would be established. The first half-dozen years of the reign of the Emperor Alexander were a period at once of reform and of relief; for the government of his predecessor, the Emperor Nicholas, had been stern and rigid. It was not until Feb., 1861, that, after a long and painful process of elaboration, the reform known officially as the "Law for the Amelioration of the Condition of the Peasantry"—in other words, the emancipation of the serfs—was proclaimed. In the course of the next three years district provincial assemblies, open tribunals, with oral evidence and the jury system (the necessary accompaniments of the emancipation of the serfs), were introduced. Meanwhile a serious insurrection had broken out in Poland, caused, not by increased oppression on the part of the Russian authorities, but rather by the relaxation of the old system, and by the raising of hopes which were not to be gratified. The Poles, moreover, who since the days of the first Napoleon had been accustomed to look for sympathy and support to France, had persuaded themselves—not, probably, without assurances to that effect—that when Napoleon III., who had already freed Italy, should have settled the affairs of Mexico, he would turn his attention to the North, and give independence to Poland. The first disturbances in Poland began early in 1861. On their suppression, reforms were introduced; and the Marquis Wielopolski obtained for his countrymen a complete system of self-government. This, however, especially as the administrative autonomy which had been granted was not accompanied by the restoration of the Polish Legislative Assembly, had no effect in reconciling the Poles to Russian rule; and Wielopolski was looked upon as a timid pacifist, when the necessity of the moment was bold resistance. The Marquis was indeed regarded not as the friend of Poland, but as the tool of Russia, though at this very time the Russians mistrusted him. Many Russians, however, approved of the concessions made to the Poles, from a hope that like concessions must afterwards, as a matter of course, be extended to Russia itself. The Polish insurrection, notwithstanding remonstrances and protests from all the Western Powers, with the exception only of Prussia, was suppressed with great severity; and as an anarchical movement had already

shown itself in Russia, the Government, from the year 1863 or 1864, entered everywhere upon a reactionary system. The emancipation of the serfs had hitherto produced no direct political effect. But the discussion of the question had caused a general fermentation among the great bulk of educated Russians, while to the partially dispossessed proprietors it suggested, moreover, the idea of a moral compensation in the shape of political rights. The petitions of the nobles for a Constitution were dismissed, and those who had taken a leading part in promoting their adoption were in several cases imprisoned. Nihilism, which had shown its head almost as soon as the repressive system of the Emperor Nicholas was discarded, seemed at first a mere philosophical theory as to the nothingness of human life and the worthlessness of all human institutions. But when, in 1866, a student named Karakozoff, a member of the Nihilistic Society, fired at the Emperor, it had evidently become a formidable creed. Karakozoff's attempt led to an inquiry, which resulted in the discovery of Nihilistic organisations in various parts of the Empire; and since then, the one thing that has made constant progress in Russia, until at last it accomplished the death of the Emperor Alexander II., is Nihilism. Towards the end of the Franco-German War, Prince Gortschakoff had "denounced" that clause in the Treaty of Paris which forbade the Russians to maintain warships in the Black Sea; and the denunciation, in spite of much English indignation, was accepted and sanctioned in 1871 by the Conference of London. Finally, by the Turkish War of 1877, into which the Emperor personally entered with great reluctance, Russia regained the strip of territory—Moldavian Bessarabia—of which she had been deprived for the benefit of the Moldavians at the end of the Crimean War. In this reign, too, Russia gained a great extension of territory in Central Asia, subjecting to her sway the Khanates of Khokand, Bokhara, and Khiva. The Czar was assassinated on March 13th, 1881, in the streets of St. Petersburg. The man who threw the fatal bomb, Grenevitsky, perished in the explosion, but his companions were hanged.

Life of Alexander II., by the author of *Life and Times of Alexander I.* [H. S. E.]

* **Alexander III.**, second son of Alexander II. (b. March 10th, 1845), married, in Nov., 1866, the Princess Maria Sophia Frederica Dagmar of Denmark, sister to the Princess of Wales. He had not been educated with a view to the throne, and beyond military exercises, had learned very little. To give him full knowledge, from the Russian point of view, of contemporary European politics, an elaborate "Diplomatic Study on the Crimean War," its causes and its consequences, was prepared for his benefit

by the Russian Foreign Office, under the direction of Prince Gortschakoff, at that time Minister of Foreign Affairs; and this survey of the political history of Europe from the general settlement of 1815 until the close of the Crimean War and the signing of the Treaty of 1856, was afterwards issued by the publishers for the Imperial Court, under the title of *Étude diplomatique sur la Guerre de Crimée*. In consequence of the unsettled condition of the Empire, and the danger of attacks from the more fanatical of the Nihilist party, the coronation of Alexander III. was delayed until 1883. His reign has not been signalised by any reforms. Everything, on the contrary, has been maintained in Russia as it was at the time of his father's assassination in March, 1881. As regards foreign affairs, the reign of Alexander III. has hitherto been remarkable for the progress made by the Russian arms in Central Asia. Soon after the accession of the new sovereign it was rashly stated in the British Parliament that the young Emperor had abandoned his Central Asian policy, when all he had done had been to recall the troops which had just taken Geok-Tepe, a strong post on the road to Merv. Assurances were still given that to Merv itself the Russians had no intention of advancing. But this quasi-promise—not, it is true, made in categorical form or as binding for an indefinite time—was possibly not intended to be kept. On a certain number of the elders of Merv petitioning that their territory might be received under Russian protection, their request was very readily granted (Jan., 1884). From Merv, the Russians pushed on towards the Afghan frontier: and a question was now raised as to where the frontier of Afghanistan should be drawn. A discussion on this very subject had been kept up from 1869 to 1872. It had already been agreed that the northern frontier of Afghanistan was formed by the Oxus westward as far as Khoja-Salee; and from Khoja-Salee in a south-western direction to Sarakhs, on the Persian frontier. In 1882, Lord Granville informed M. de Giers that he regarded the course of the boundary as marked by a straight line between the two points already agreed upon—Sarakhs and Khoja-Salee. No answer was received to this communication; and it was proposed in 1885, on the part of England, that the frontier should be traced by a joint commission of English and Russian officers. The proposition was accepted; but when General Sir Peter Lumsden, with a large escort, had reached the disputed territory as English commissioner, he found that General Zelenoi, the Russian commissioner, had not arrived. The Russians, too, had occupied posts on the Afghan side of what the English Government regarded as the true frontier line, and declined to withdraw. An understanding was now

come to between the two Governments, by which, while negotiations were pending, neither Russians nor Afghans should advance. A collision, however, was brought about by General Komaroff (q.v.), who felt it necessary to dislodge the Afghans from certain positions which he accused them of having taken up after the arrangement for maintaining the military *status quo* had been arrived at. In Europe Russia has shown a disposition to coquette with France from time to time, and to oppose the further advance of Austria towards the East. Nevertheless, at the important meeting of the three Emperors at Skierniewice, in Russian Poland (Sept., 1884), it was understood that the Triple Alliance had been re-established in its integrity. The gathering of notabilities at Copenhagen in Aug., 1885, was probably not of political significance, although it included the Czar, the Kings of Greece and Denmark, and Mr. Gladstone. Nihilism on the one hand, and the secret police on the other, have shown themselves as active under Alexander III. as during the reign of his father.

Alexander, GENERAL SIR JAMES EDWARD, C.B. (b. 1803, d. 1885), the eldest son of the late Edward Alexander, of Powis, Clackmannan. Having entered the army at an early age, he held several appointments in India, the Cape, and North America, and took part in the Burmese, Persian, Portuguese, and Kaffir Wars. In 1836-7 he conducted an expedition of discovery into Central Africa, and he also explored New Brunswick. In the Crimean War he commanded the 14th regiment, and was commander in New Zealand during the war with the Maoris, of which he has written an account, entitled *Bush Fighting*. He has also published several books of travel, besides a *Life of the Duke of Wellington* (1840), *Passages in the Life of a Soldier*, and an account of the removal and transport of Cleopatra's Needle, which he was appointed to superintend in 1875. He is a Fellow of the Royal Geographical and Royal Asiatic Societies, and has been frequently decorated by foreign Governments.

Alexander of Servia. [SERVIA.]

***Alexander**, STEPHEN, LL.D. (b. 1806), was born at Schenectady, New York, and was appointed adjunct professor of mathematics in the College of New Jersey in 1834, and professor of astronomy on the creation of the Chair in 1840. In 1845 he was transferred to the professorship of mathematics, which he exchanged again for the professorship of mechanics and astronomy in 1854. He retired from this position in 1878. He was appointed to conduct the expedition to Labrador to observe the solar eclipse in 1860, and a similar expedition to the west in 1869. Among his numerous scientific writings are:—*Physical Pheno-*

mens attendant upon Solar Eclipses, Fundamental Principles of Mathematics, and On the Origin of the Forms and the Present Condition of some of the Clusters of Stars.

Alfieri, VITTORIO, COUNT, poet (b. Jan. 17th, 1749; d. Oct. 8th, 1803), was the son of rich and noble Florentine parents. At the age of sixteen he was left master of a considerable fortune, and plunged into dissipation. He travelled in various European countries, and made some acquaintance with their literature. In 1775 he returned to Italy, and composed his tragedy of *Cleopatra*, which was acted at Turin the same year. He now devoted himself to severe study, and wrote several tragedies. He formed a celebrated *liaison* with the Countess of Albany, the wife of the Young Pretender, Charles Edward Stuart, which lasted till the end of his life. The Pretender died in 1788, but it does not appear that his widow was ever legally married to the poet. After composing fourteen dramas, which included *Maria Stuart*, *Philip II.*, *Antigone*, and *Polynices*, Alfieri issued two political treatises, both of them marked by strong sentiments in favour of civil liberty and the reformation of abuses. Alfieri was at Paris with the Countess of Albany when the French Revolution broke out. Though at first an ardent partisan of the Revolution, he was obliged to quit Paris secretly, losing a large part of his fortune. He now established himself with the Countess at Florence, where he lived till his death. In 1798, he published a volume of satires directed against the French, called *Misogallo*. His hatred against the French continued till his death, but he was not molested during the French occupation of Florence. He died in 1803, and was buried in the church of Santa Croce. The Countess of Albany caused a fine marble monument, by Canova, to be placed over the poet's remains. She also published a complete edition of Alfieri's works in 35 vols. (Pisa, 1805-1813), which includes a curious and interesting autobiography, which gives much information on the literary and political society of the Continent in the eighteenth century.

The best authority is the *Vita di Vittorio Alfieri*, written by himself. See also Teza, *Vita di Alfieri* (Florence, 1861); Sismondi, *Littérature du Midi*; Lombardi, *Storia della Letteratura Italiana*.

Alfonso XII., King of Spain (b. 1857, d. 1885), eldest son of the ex-Queen Isabella II., on the revolution of 1868, accompanied her to Paris, where he remained till 1872, when he visited Vienna. In 1870 the ex-Queen abdicated her claims in his favour. He was styled Prince of the Asturias, but no immediate movement was made. In 1874 Alfonso came to England, and entered the Military College at Sandhurst, where, in the autumn, loyal addresses reached him from several of the nobility and upper classes of Madrid. On Dec. 31st it was announced that

General Martinez Campos had proclaimed him King at Valencia, and that the armies of the North and Centre had joined his cause. The Prince started almost immediately from Paris, and was received with the greatest enthusiasm in Barcelona, Valencia, and Madrid. He at once repaired to the army of the North, but as the paroxysms of the Carlist War still continued, he was obliged to return to Madrid, and it was not till the spring of 1876 that, after the defeat at Tolosa, Don Carlos, in despair of his cause, fled to France, and the King was able to enter his capital in triumph. A few months later his mother, Isabella, returned to Spain. Besides the prolonged troubles of the Carlist War, the opening of the young King's reign was clouded by disturbances in the Basque Provinces, and the continuation of the insurrection in Cuba, which very nearly led to a rupture with the United States. The history of the Cortes under the monarchy was a series of conflicts and intrigues among the Clericals, the Conservative or Government party, and the Liberals. Crisis succeeded crisis, but on the whole power remained with the Conservatives (*Moderados*), and government was secured, in spite of occasional mutinies in the army, and more serious outbreaks among the socialistic working classes. The King was twice shot at—in 1878 and in the following year. In Jan., 1878, he married his cousin, Princess Maria de las Mercedes, daughter of the Duc de Montpensier. But this union of the two branches of the House of Bourbon was cut short in June of the same year by the Queen's death. In Nov., 1879, he married secondly Maria Christina, daughter of the late Archduke Charles Ferdinand of Austria. In the autumn of 1883 he visited Berlin, and was presented by the German Government with a colonelcy in a Uhlan regiment then stationed at Strasburg. Certain French Irreconcilable journalists represented this as an insult to their nation, and upon the King's entry into Paris, a few days afterwards, he was received by the howls and execrations of the assembled mob, and the matter was with difficulty adjusted, after an apology from the French Government. A few weeks later the King received a return visit from the Crown Prince at Madrid. During the outbreak of the cholera epidemic in 1885 he courageously visited the affected districts, and later on confronted with valour the popular outburst which followed the annexation of the Caroline Islands by Germany. By his death on Nov. 25th, 1885, Spain was threatened with the dangers of a minority reign.

Alford, THE VERY REV. HENRY, D.D. (b. 1810, d. 1871), was born in London, where his father had obtained some success as a special pleader. He was educated at Charmouth and Ilminster, and afterwards at Trinity College, Cambridge, where he began a friendship with

Tennyson and Arthur Hallam. He took the Bell scholarship, and afterwards a fellowship. In 1833 he published some poems. When he left Trinity he took pupils, and was ordained soon after, becoming curate of Ampton. In 1835 he was presented with the living of Wymeswold, and married his cousin, Fanny Alford. In 1841 he became Hulsean Lecturer at Cambridge; in 1853 minister of Quebec Chapel; in 1857 Dean of Canterbury. He published many works, chief of which is his edition of the *Greek Testament* (1849-61), which is written in a liberal spirit, and is full of much independent judgment. He was also the author of the *New Testament for English Readers*, a translation of the *Odyssey*, *The Queen's English*, several articles in the *Contemporary*, and many sermons. In 1869 he gave some lectures at Liverpool, Leeds, and Bradford. Soon after this, failing health obliged him to give up literary work, but he continued to do duty and to preach till almost the last day of his life. His doctrinal views were of an Evangelical nature.

Life of Dean Alford, edited by his widow.

Alfred, PRINCE. [EDINBURGH, DUKE OF.]

Ali Pasha. [ALY PASHA.]

Alice MAUD MARY, Princess of Great Britain and Ireland, Duchess of Saxony, Grand Duchess of Hesse-Darmstadt (*b.* April 25th, 1843; *d.* Dec. 14th, 1878), was the third child of Queen Victoria and the Prince Consort, and was highly accomplished, and of a sympathetic and affectionate character. In Dec., 1861, she greatly endeared herself to the nation by the devoted way in which she nursed the Prince Consort. In 1862 she married Frederick William Louis of Hesse, nephew of the Grand Duke of Hesse, whom he succeeded in 1877. The Princess identified herself with German interests, and she showed much taste for art and literature, being able to model and paint with skill. She became intimate with Strauss, and permitted him to dedicate to her his *Life of Voltaire*, which he had read to her in MS. During the Franco-German War she nursed the sick and wounded (French as well as German) at the Darmstadt Hospital and in the field. Her name was given to the Women's Union for Nursing, which she then founded. In 1871 she nursed the Prince of Wales during his severe illness. She died of diphtheria, which she caught while nursing her husband and children.

Life and Letters of the Princess Alice: Memoir by Dr. Sell of Darmstadt, translated 1884.

***Alikhanoff-Avarsky**, A., Russian officer, was formerly a major of a Cossack regiment in the Caucasus, but served as a private in the expedition of 1879 against the Akhal Tekke-Turcomans. Early in 1882 he

entered Merv disguised as a Russian merchant accompanying the Konashin caravan. He has written many letters and despatches on Central Asia, and several of his own sketches have been published. As colonel acting under General Komaroff, he led the attack on Penj-deh, March, 1885.

* **Alison**, LIEUT.-GENERAL SIR ARCHIBALD, BART., K.C.B. (*b.* 1826), the son of the historian (q.v.), was educated at the Universities of Glasgow and Edinburgh, and entered the army on Nov. 3rd, 1846. He was gazetted lieutenant 1849, captain 1853, brevet-major 1856, lieutenant-colonel 1858, brevet-colonel 1867, major-general 1877, and lieutenant-general 1882. His first active service was with the 72nd Highlanders in the Crimean campaign, when he took part in the expedition to Kerch, and was present during the siege of Sebastopol, taking part in the attack on the Redan. For this he received the Crimean medal, with clasp, and the Turkish medal. When the Indian Mutiny broke out he was appointed military secretary to Sir Colin Campbell, afterwards Lord Clyde, and during the campaign of Aug., 1857, to March, 1858, was so severely wounded at the Relief of Lucknow as to lose his left arm. In addition to the war medal, he was created a Companion of the Bath at the termination of hostilities. In 1872 he was appointed Adjutant-General in the South-western district, but in December the following year he assumed command, as brigadier, of the European Brigade in the expedition to Ashantee, and was present in that capacity at the battles of Amoafu, Becqua, Ordahsu, and at the capture of Coomassie. The medal, with clasp, and the promotion to a Knight Commandership of the Bath, were the rewards for his distinguished service in this war, and the thanks of Parliament were conveyed to him and those under his command. On his return from Ashantee, he became Deputy Adjutant-General in Ireland, a position he retained until 1877, shortly after which he was appointed Commandant of the Staff College, and in the same year (1878) to the important post of Deputy Quartermaster-General at the head of the Intelligence Department of the Horse Guards. The outbreak of active operations in Egypt in 1883 commenced with the bombardment of Alexandria by Sir Beauchamp Seymour (Lord Alcester) and the occupation of the town. Sir Archibald took command of the British force there, successfully checking the army of Araby Pasha, which was opposed to him, and on the arrival of Sir Garnet Wolseley he was transferred, with his brigade, to Ismailia, and shared in the operations which culminated in the capture of Cairo. He commanded the Highland Brigade, composed of the 42nd, 74th, 75th, and 79th regiments, at the decisive battle of Tell-el-Kebir. After his return he

was appointed to the command of the Alder-shot division.

Alison, SIR ARCHIBALD, BART. (b. 1792, d. 1867), historian, was born at his father's parsonage at Kenley, in Shropshire, on Dec. 29th, 1792. His father, an Edinburgh man by birth, was famous as a preacher and as the author of the *Essay on Taste*, and became in 1800 minister of an Episcopalian chapel in his native city. There Archibald was brought up. In 1805 he became a student of the University. In 1814 he was called to the Scottish bar, and rapidly acquired a large practice. He spent his leisure in systematic travelling to places of historical interest in Western Europe, an account of which he published in 1815. Always a staunch Tory, the fall of his party in 1830 deprived Alison of an almost certain prospect of the Solicitor-Generalship of Scotland. This misfortune, coinciding with a loss of practice at the bar, drove him towards literature. He published in 1832 and 1833 two valuable treatises on the *Principles and Practice of the Criminal Law of Scotland*. He became a contributor to *Blackwood's Magazine*, and soon planned the *History of Europe from the French Revolution to the Fall of Napoleon*, that was to make his name famous. In 1833 vols. i. and ii. appeared. In 1834 he got from Peel's short-lived ministry the post of Sheriff of Lanarkshire, and went to live at Possil House, near Glasgow. There he resided for the remainder of his laborious life, arranging each hour of his day with a precision that enabled him to get through a vast amount of legal and literary work. His fame as an author gradually increased. Each successive volume of the *History of Europe* was received with greater favour by the public. Other books on various subjects flowed from his fertile pen, though they never attained the success of the *History*. They include an *Essay on Population* (1840); a *Life of Marlborough* (1847); the *Lives of Castlereagh and Sir Charles Stewart* (1861); *Collections of Essays* (1845 and 1849), largely consisting of reprints from *Blackwood*; and two economic works, called *England in 1815 and 1845, or a Sufficient and a Contracted Currency* (1845), and *Free Trade and a Fettered Currency* (1847). In 1845 he was made Lord Rector of Marischal College, Aberdeen, and in 1851 Rector of Glasgow University. In 1852 Lord Derby made him a baronet. He died May 23rd, 1867, after a singularly robust and active old age. He had married, in 1825, Miss Elizabeth Tytler, and left a family. The absence in English of any really good books that cover the ground of Alison's great work makes it still of some use to the student, while the interest of the subject, and its possession of some of the more superficial qualities of popular history, make it attractive to the general reader. But its style is bad, its

arrangement faulty, its political prejudices most violent, and its statements often inaccurate or based on insufficient authority. In some parts of the *History*—as, for example, his account of German affairs—he is seriously misleading, while his conception of the Revolution as a whole is ludicrously inadequate. Written, as Disraeli said, to show that "Providence was on the side of the Tories," the shortcomings of the original work were intensified in the *Continuation*, from 1815 to 1852, which was the work of Alison's old age. In his *Autobiography* (1883) Alison has fully revealed himself to posterity, with his prejudices, his honesty, his kindness, his geniality, and calm self-confidence.

Autobiography; *Dictionary of National Biography*. [T. F. T.]

Alison, WILLIAM PULTENEY (b. 1790, d. Sept., 1859), an Edinburgh political economist, physician, and physiologist, was the elder brother of Sir Archibald Alison, the historian (q.v.). His philanthropical efforts to relieve the sufferings of the poor were the principal means of bringing about an improved Poor Law for Scotland. As a physician he was also held in high esteem, while as Professor of the Institutes of Medicine (Physiology) in the University of Edinburgh, from 1820 to 1855 (when he resigned), he was regarded with peculiar affection by a long succession of students. In addition to a treatise on the *Reclamation of Waste Lands*, with a view to their colonisation by paupers and criminals, which he published in 1850, Dr. Alison's principal works were the *Outlines of Physiology*, the *Outlines of Pathology*, and the *Practice of Medicine*, which for many years were favourite text-books.

Allan, SIR WILLIAM, R.A., P.R.S.A., and Limner to the Queen in Scotland (b. 1782, d. 1830), was born in Edinburgh. He commenced life as a coach-painter, but afterwards studied several years at the Trustees' Academy of his native city under John Graham, having for fellow-pupils David Wilkie and John Burnet, the engraver and writer on art. He was the first of the three to find his way to London, and studied for a short time at the Royal Academy. Imitating the manner of Opie, he painted a *Gipsy Boy and Ass*, which was exhibited at the Royal Academy in 1803. Not meeting, however, with the success he expected, he went to St. Petersburg, and, through the influence of his countryman, Sir Alexander Crichton, physician to the Imperial family, obtained considerable practice as a portrait painter. He afterwards visited the interior of Russia, Turkey, and Tartary, gathering materials for his works. He returned to London in 1814, and in the following year exhibited *Circassian Captives*, which was followed by *A Circassian Chief selling to a Turkish Pasha Captives taken in War*, and other subjects equally Oriental in character. These pictures

failed to attract buyers, and, disheartened thereby, he would have abandoned his profession altogether and retired to the wilds of Circassia, as Henry Ottley tells us, had not Sir Walter Scott started a lottery for the purchase of the last-named work. After this Allan adopted quite a different class of subject, and painted such pictures as *The Parting between Prince Charles Stuart and Flora Macdonald*, and *Jeanie Deans' First Interview with her Father after her Return from London*. Still Allan failed to secure public favour, but the kindly intervention of the great novelist again not only saved him from despair, but helped him to fame. The latter saw his sketch of *The Murder of Archbishop Sharpe on Magnus Muir*, and urged him to make a picture of it. The work was purchased by John Lockhart, and when engraved, it met with unquestionable success. He now devoted himself to subjects of Scottish history, and his *Regent Murray shot by Hamilton of Bothwellhaugh* procured him, in 1825, the Associateship of the Academy. Allan re-visited the Continent in 1830, and again in 1834, when he sojourned in Spain. The year afterwards his *Moorish Love Letter*, and other works, procured for him the full membership of the Academy; in 1838 he was chosen President of the Royal Academy of Scotland; and in 1842 he succeeded his old fellow-student, Sir David Wilkie, as Her Majesty's Principal Limner for Scotland, an office which entitles the holder to the honour of knighthood. In 1844 he re-visited St. Petersburg, and on his return painted for the Emperor Nicholas *Peter the Great Teaching his Subjects the Art of Shipbuilding*. Sir William died in his painting-room at Edinburgh before a large unfinished picture of *The Battle of Bannockburn*. As a painter, he could project his subject on the canvas with dramatic power, but there was not a corresponding force in his colouring.

[J. F. R.]

***Allen, CHARLES GRANT** (b. at Kingston, Canada, 1848), was educated at Merton College, Oxford, where he graduated in 1870. He has ever since contributed largely to periodical literature, besides publishing some important books. The best known of these are:—*Physiological Esthetics* (1877); *The Colour Sense* (1879); *The Evolutionist at Large* (1881); *Vignettes from Nature*; *Colours of Flowers*, some *Biographies of Working-men*, and a *Life of Charles Darwin* (1885). He is also the author of several clever novels, of which *Babylon* (1885) is the best.

***Allen, JOEL ABAPH** (b. at Springfield, Massachusetts, 1838), is one of the best known of American ornithologists and mammalogists. Early in life he became a pupil of Louis Agassiz at Harvard College, and three years later (1865) accompanied him on his expedition to Brazil. On his return he as-

sisted in the preparation of the scientific report of the expedition, and until he was appointed (in May, 1885) Curator of Ornithology and Mammalogy in the American Museum of Natural History in New York, filled a similar position in the Museum of Comparative Zoology in Cambridge. Mr. Allen was elected a member of the American Academy of Arts and Sciences, Boston, in 1873; of the National Academy of Sciences, Washington, in 1876; and of the American Philosophical Society, Philadelphia, in 1878. He has been President of the American Ornithologists' Union since its organisation (1883), and editor of its organ, *The Auk*, as well as of the predecessor of *The Auk*, from its inception in 1876. In addition to many separate papers and memoirs, Mr. Allen is the author of a work on *The Buffalo* (Mem. Mus. Comp. Zoology, Cambridge, U.S., 1876), *A Catalogue of the Mammals of Massachusetts* (1869), *History of North American Pinnipeds* (U.S. Geological and Geographical Survey of the Territories, Miscellaneous Publications, No. 12, 1880), and, in partnership with Dr. Coues, of a series of *Monographs of the North American Rodentia* (U.S. Geol. Survey, 1877, 3 vols. 4to), all distinguished by great knowledge and care, and written with much literary attractiveness.

Allen, WILLIAM, chemist and philanthropist (b. 1770, d. 1843), in 1802 was appointed chemical lecturer at Guy's Hospital, and was elected F.R.S. in 1807. He was on intimate terms with Sir H. Davy and W. H. Pepys, the latter of whom he assisted in his researches on animal respiration and the formation of atmosphere. He was also the first President of the Pharmaceutical Society. A member of the Society of Friends, he was a warm supporter of the abolition of slavery, and of many philanthropic schemes for the education and improvement of the poor. In 1820 he traversed Russia from north to south, besides visiting several towns in Turkey and Italy. Two years later he had an interview with the Czar Alexander in Vienna on the questions of schools, the slave trade, and the Greeks. In 1832 and 1833 he again visited the Continent on philanthropic missions.

***Allibone, SAMUEL AUSTIN** (b. 1816, in Philadelphia), was engaged in his youth in mercantile pursuits, but soon acquired a reputation in literature. He has been for many years connected with the American Sunday-school Union, of which he has edited the publications. He is best known by his *Critical Dictionary of English Literature and Authors*. This great work took seventeen years in preparation, and shows immense labour and research.

***Allingham, MRS. HELEN** (b. 1848), painter, is the best living exponent of the school of the late Frederick Walker and George Pinwell. She is the eldest child of the late

Alexander Henry Paterson, M.D. On her father's death, she came, early in 1867, to reside in London with her aunt, Miss Laura Herford, an artist, who for many years had successfully laboured to promote the artistic education of women. In the April of the same year in which she took up her abode in London, Miss Paterson herself entered the schools of the Academy. She very soon began to acquire fame by working in black and white for the *Cornhill Magazine*, and several other periodicals, especially the *Graphic*, of whose staff she became a distinguished member. Meanwhile, in the intervals of drawing on wood she addressed herself to water-colour painting, and her pictures at the Dudley and the Royal Academy attracted the admiration of all competent judges. She was married, Aug. 22nd, 1874, to William Allingham, the poet, and in the following year she was elected an Associate of the Royal Society of Painters in Water-colours. English rural life and *genre* subjects generally are her chosen themes. Among her pictures may be named *The Harvest Moon*, *The Lady of the Manor*, *The Children's Tea*, *Children's Lessons*. She has executed also several portraits of her friend Thomas Carlyle.

***Allingham, WILLIAM**, poet (b. 1828), is a native of Ballyshannon, in the north-west of Ireland, of old Anglo-Irish family. Mr. Allingham had contributed to the *Athenæum*, *Household Words*, and other periodicals prior to 1850, when his first volume of poems appeared. In 1854, *The Music Master*, and *Day and Night Songs*, was published, and in the year following an enlarged edition of the same, illustrated by his friends D. G. Rossetti, Millais, and Arthur Hughes. *Lawrence Bloomfield in Ireland: a Modern Poem, in Twelve Chapters*, made its first appearance in *Fraser's Magazine*, afterwards in volume form in 1864. Mr. Allingham also contributed many prose articles to *Fraser* while acting as its editor, which he did for several years. In *Fairy Land*, illustrated by Richard Doyle, appeared in 1870, and was followed in 1877 by the collection of *Songs, Poems, and Ballads*. *The Fairies*, *Evil May-Day*, and the two-act drama of *Ashby Manor*, were all published in 1883. In his youth Mr. Allingham fell under the powerful influence of the "Pre-Raphaelite Brotherhood," and their school of thought; and his poems have throughout preserved traces of the spiritual mystery, as well as of the careful and sometimes humorous realism of his masters. His ballads are of fairyland and of old Irish scenes, and his songs of the tragic passions and sudden thoughts of every day. His marriage with Miss Helen Paterson, the artist, took place in 1874.

***Allman, GEORGE JAMES**, a distinguished zoologist (b. at Cork in 1812), was educated at the Belfast Academical Institution, and at Trinity College, Dublin, where he graduated

M.D. in 1844. Science had a narrow escape of losing an earnest cultivator, for Dr. Allman's first love was the law, and for a time, though of a Protestant family, his efforts were directed towards Catholic emancipation in his native land. Medicine, however, won him, though mainly for the sake of biology. In 1844, after serving for a short period as demonstrator of anatomy, he was appointed professor of botany in Trinity College, and relinquished all thoughts of medical practice. In 1854 he was appointed Regius Professor of Natural History in the University of Edinburgh, and Thomsonian Lecturer on Mineralogy, in succession to Professor Edward Forbes, and held that post till 1870, when he retired on account of feeble health. In 1876 he was one of the commissioners to inquire into the state of the Queen's Colleges in Ireland, and served as Commissioner of Scottish Fisheries, and for a time he filled the office of inspector under the Vivisection Act. In 1874 he could have been elected Liberal M.P. for Bandon, for which his brother has since sat, without any pledges of a party character, but he preferred to stay in London, and in the same year was chosen President of the Linnean Society, and in 1879 President of the Sheffield Meeting of the British Association. Since that date Dr. Allman has devoted himself entirely to original research. His writings have been numerous, though all purely technical, and for the most part on the zoophytes, and other humble orders of animals. The chief of these are his *History of the Fresh-Water Polyzoa* (Ray Society, 1856), *A Monograph of the Gymnobiastic Hydroids* (Ray Society, 1871-72), the *Hydroids of the "Challenger" Expedition*, besides a number of memoirs in the *Philosophical* (and other) *Transactions* and the different scientific journals. Dr. Allman is an honorary LL.D. of Edinburgh, a Fellow of the Royal Societies of London and Edinburgh, a Fellow of the Royal College of Surgeons of Ireland, and, in addition to being an honorary associate of many foreign societies, is a member of the Royal Irish Academy, of which he is also the Coningham Gold Medallist. In 1872 he received from the Royal Society of Edinburgh the Brisbane medal, and in 1873 one of the royal medals from the Royal Society of London.

***Allman, GEORGE JOHNSTON**, a distinguished mathematician (b. 1824), is the younger son of Dr. Wm. Allman (q.v.). He entered Trinity College in 1839, and graduated B.A. 1844 and LL.D. 1853, and in December of that year was appointed professor of mathematics in the Queen's College, Galway, a post to the duties of which he has ever since devoted himself. Dr. Allman was, in addition, appointed Bursar of Queen's College in 1864, member of the Senate of the Queen's University in Ireland, 1877, and in 1880 was nominated by the Crown one of the

first senators of the Royal University of Ireland. He is F.R.S. (1884), LL.D. *ad eundem* of the Queen's University (1863), and D.Sc. *honoris causâ* (1882). His researches have been almost solely confined to the higher branches of mathematics. A list of them will be found in the Royal Society's *Catalogue*; but since 1873 he has published memoirs on *Some Properties of the Paraboloids* (*Quart. Journal of Mathematics*, 1874), and *Greek Geometry, from Thales to Euclid* (*Hermathena*, vol. iii., No. 5, 1877; vol. iv. No. 7, 1881; vol. v., No. 10, 1884; No. 11, 1885).

Allman, WILLIAM (b. 1776, d. 1846), an Irish botanist and mathematician, was born at Kingston, Jamaica. Before he was four years old his parents went to live in Ireland, near Waterford, his mother being a native of that county. He entered Trinity College, Dublin, where he graduated B.A. 1796, M.A. 1801, and M.D. 1804. He practised physic at Clonmel until 1809, when he was elected professor of botany in the University of Dublin. Soon after his appointment he became acquainted with Robert Brown, the eminent botanist, by whom he was highly esteemed. Brown (q.v.), the first volume of whose *Prodrômus Floræ Novæ Hollandiæ* was published in 1810, was the first English botanist to write a systematic work of any extent according to the natural method of Jussieu, and William Allman, incited by him, was the first professor of botany in the British Isles to introduce (1812) and teach at his lectures the natural method. He was the first observer of a peculiarity (not noticed by De Candolle) in the growth of ferns and some other acotyledonous plants, which he denominated *Enecogens* (*ηνεκγεναι*), which have been named by later botanists *Acrogens* and *Telogens*. In addition to the two mathematical papers by him entered in the *Catalogue of Scientific Papers* of the Royal Society of London, he was author of the paper *On the Mathematical Relations of the Forms of the Cells of Plants* (*Brit. Assoc. Rep.* 1835, p. 2), which is erroneously attributed in the *Catalogue* to Dr. George James Allman. William Allman was also author of a memoir in which he attempted to illustrate a mathematical connection between the external organs of plants and their internal structure, which was read before the Royal Society in the year 1811. A brief abstract of this memoir was printed for private circulation in 1844. He was also author of a plan for the *Arrangement of Plants* according to their natural affinities, which was submitted at the meeting of the British Association held in 1835, and published in the *Proceedings* of that meeting (Dublin: Philip Dixon Hardy, 1835). A more developed plan, entitled *Familias Plantarum* (Dublin: William Curry, jun., and Co.), was published in 1836, and used by Professor All-

man in his lectures in that and subsequent years. He was also author of *Analysis per differentias constantes viginti, inchoata, Generum Plantarum, quæ in Britannia, Gallia, Helvetia, utraque hos fines sponte sua crescut*. He held the Chair of Botany in the University of Dublin from 1809 to 1844, when he was succeeded by Dr. George James Allman (q.v.).

***Allon, THE REV. HENRY, D.D.** (b. 1813), Congregational minister, was in June, 1844, elected assistant to the Rev. T. Lewis, of Union Chapel, Islington, and in 1852 succeeded him in the pastorate. In 1864 he was appointed Chairman of the Congregational Union; in 1865 editor of the *British Quarterly Review*; in 1871 was made a D.D. by Yale College, Connecticut; and in 1881 was again Chairman of the Union. Dr. Allon contributes articles to various magazines, and has published *The Vision of God and Other Sermons* (1876). A handsome chapel was built for Dr. Allon in Upper Street, Islington, and opened for worship in 1877.

Allston, or Alston, WASHINGTON, American artist (b. 1778, d. 1848), was born at Waccamaw, in South Carolina, graduated at Harvard College in 1800, and the next year sailed for England with his artist friend Malbone. Having exhibited in London and visited Paris, he settled for four years in Italy, where he became acquainted with Coleridge. Returning to America in 1809, he married a sister of Channing. In 1811 he came to England again, and became an Associate of the Royal Academy in 1818, but in the same year was obliged to return to America, where he died. The subjects of his pictures are generally taken from ancient Jewish history. The most celebrated are *The Dead Man revived by Elisha's Bones* and *Elijah in the Desert*. He also published a small book of rather conventional verses, *The Sylphs of the Season, and other Poems*, which have little poetic value, but contain the line quoted by Emerson, "Into paint will I grind thee, my bride" (*The Paint King*).

***Alma-Tadema, LAURENCE, R.A.**, the eminent painter (b. at Dronryp, in Friesland, 1836), took eagerly to the ancient classics in his education, which was liberal, and this early love has made itself manifest in almost every one of his many works. In 1852 his professional education commenced in the Royal Academy of Antwerp, one of the best schools in Europe. Afterwards he became a disciple of Baron Henry Leys, and assisted him in painting several of his large works. Mr. Gambart, of the French Gallery, was the first to bring his works before the British public, and so much were they appreciated that Mr. Alma-Tadema soon made London his home, and England his adopted country,

receiving letters of denization from the Queen in 1873. From his first entrance into art, Mr. Alma-Tadema has made a special study of the times when art held its highest place in human life; the epoch of Athenian greatness, or the later years when Greece led her captor captive. The first and second centuries of the Roman Empire especially seem to exercise an irresistible influence on his mind, similar in charm to the tone of much recent literature and speculation. As to his choice of subject, two things may be noticed: first, that his theme is seldom historic in the ordinary sense of the word; no crisis of recorded history is represented; and if some statesman of Greece, some Cæsar or minister of Rome be introduced, it is usually in one of those uneventful moods and happy days that have no history. And secondly, the artist appears at times careless of emotional effect, and indifferent to studied composition and arrangement. As often as not there is neither story nor drama in these scenes, nor any human interest beyond their own beauty. They are mere glimpses into the daily life of a time long past, a time with passions and problems for the most part different from our own. Endowed with a realistic exactness that connects him with the Pre-Raphaelites, and a minute archaeological knowledge that would furnish out the professors of a whole German university, Mr. Alma-Tadema sets before us with unrivalled power, alike of colour and form, some quiet corner of a Roman street, the half-closed door of a marble shrine, cool marble seats for resting youths and girls, a Pompeian mother with her child, a Mænad dancing on the marble floor or brandishing her torch before the brazen gates. Of what dramatic intensity he might also be capable the artist has shown in his well-known picture called *A Roman Emperor* (1871). With the minor qualities that go to make a great painter, such as the power of giving depth to colour—witness his skies—and the power of giving life to drapery and reality to textures, Mr. Alma-Tadema is also richly endowed. Beyond his special province, in which a school of imitators has already arisen, he is known as a portrait painter, the best examples of his power being the portraits of Dr. Richter, the conductor, and of Herr Barnay as Mark Antony. He was elected A.R.A. in 1876, and R.A. in 1879, and is also a member of the principal academies on the Continent. Of his extremely numerous works, we may further mention the following:—*Phidias and the Elgin Marbles*, and *A Roman Amateur* (1868); *A Pyrrhic Dance* (1869); *The Mummy and The Death of the Firstborn* (1872); *The Picture Gallery* (1874); *The Sculpture Gallery* (1875); *An Audience at Agrippa's and Cleopatra* (1876); *A Sculptor's Model* (1878); *In the Time of Constantine* (1879); *Proteus* (1880); *Sappho* (1881); *Oleanders* (1883); *Hadrian in Britain* (1884); and *A*

L.W.—2*

Study in Homer (1885). These are perhaps his masterpieces; and of recent years he has also exhibited *After the Dance* (1876); *The Seasons and Between Hope and Fear* (1877); *A Love Missile* (1878); *Down the River and Pomona Festival* (1879); *Spring Festival* (1880); and *The Way to the Temple* (1883). Mrs. Alma-Tadema is also an artist of high reputation.

Almqvist, KARL JONAS LUDWIG, Swedish author (b. 1793, d. 1866), was a man of extraordinary versatility. His first exploit was to lead a colony to Wermland, but the experiment failed, and he devoted himself to literature. His reputation was made by his novel, *The Book of the Thorn Rose*, a perfect specimen of Swedish prose, but he was unable to adhere to one branch of literature or to one occupation, and, already unpopular for his socialist opinions, he ruined his career in 1851 by forgery and murder. He escaped to America, and under a feigned name became secretary to President Lincoln. Again on account of some offence against the law, he was compelled to fly to Europe, where shortly afterwards he died.

***A. L. O. E.** ("A Lady of England") is the *nom de plume* of Miss Charlotte Tucker. She has written some sixty books for children, in prose and verse, chiefly story-books with a religious point, which are extremely popular. Among them may be mentioned *Thoughtful Alice* (1864), *Angus Tulton* (1877), *Daybreak in Britain* (1880), *Hours with Orientals* (1881).

Althorp, LORD. [SPENCER, EARL.]

Alton-Shée, EDMUND COMTE D' (b. 1810, d. 1874), French politician, was the son of Baron d'Alton and Françoise Shée, daughter of Count Henri Shée. By special decree he united the titles of the two families, and entered the Chamber of Peers as a Conservative in 1836, but suddenly, in 1847, he changed his convictions, and lavished all the abuse of a renegade on M. Guizot, at the same time declaring himself neither Catholic nor Christian. He took an active part in the revolutionary movements of the following year, and was a Democratic Socialist candidate for the elections of May, 1849, but was not returned. In 1869 he reappeared as the Socialist candidate in opposition to M. Thiers, but was again defeated. After the fall of the Empire he took part in the publication of *Le Peuple Souverain*, and the year before his death founded a Republican half-penny paper, *Le Suffrage Universel*. Gambetta wrote a discourse on his funeral.

***Aly Fehmy Pasha**, in company with 'Abd-el-Al Pasha (q.v.), was one of Araby Pasha's chief supporters in the insurrection of 1880 and the following years. In Feb. 1881, he, being colonel of the 1st Regiment of Guards, was arrested, with his associates, in consequence of a strongly worded remonstrance sent to Riaz Pasha complaining of the

favouritism shown to Circassian officers, but his regiment mutinied, and set him free. He supported Araby in his various measures for coercing the Khedive, and in his resistance to the English. He was sentenced, after the defeat of Tell-el-Kebir, to perpetual banishment, but was subsequently pardoned, and took service under the Egyptian Government.

'Aly Pasha, "the Lion of Joannina" (b. 1741, d. 1820), was born at Tepelini, in Albania, where his family, who belonged to the Tosk tribe, had long held the hereditary rank of beys, though 'Aly's father, who is described as a man of a pacific disposition, had lost most of the ancestral possessions before his death, which occurred when the boy was but fourteen years old. His mother, Khamko, however, was of the true Albanian mettle, and brought up the lad to designs of vengeance and restitution. He soon adopted the profession which comes by nature to men of his race, and, having gathered a band of freebooters, entered upon a career of plunder and rapine, which quickly made his name a byword for daring and ferocity. After a few years of brigandage, he succeeded in recovering the ancestral territory at Tepelini, and at once proceeded to aim at higher things. He was able to be of service to the Porte against the Austrians, and helped the Sultan to reduce the revolted Pashas of Scutari and Delvino, for which he was duly rewarded with an official recognition of his title to the Beylik of Tepelini, and was also appointed to the post of lieutenant to the officer whose duty it was to suppress brigandage in Albania. The efficacy of the maxim, "Set a thief to catch a thief," however, was not realised in this instance. 'Aly connived at the escape of the brigands, his former colleagues, for a proper consideration, and when the scandal reached headquarters, he contrived to throw the guilt on his superior officer, and to exculpate himself by a process familiar at Stambul, and briefly described as *bakhshish*. The bribes acted so well that 'Aly succeeded to the place of his disgraced superior, in whose capacity he speedily put a stop to unlicensed brigandage by the simple expedient of enlisting all the culprits under his own banner. This successful career went on without a check; he was made Pasha of Tricala, and eventually seized Joannina (or Janina), which he made his capital, and adorned with many sumptuous palaces. Unscrupulous and cruel as he was, and commonly credited with the murder of his mother and brother, to say nothing of the forcible removal of other impediments, he must be allowed to have turned Albania from a land of anarchy into a prosperous and tranquil country, and the Porte saw that its interest lay for the present in supporting the redoubtable chieftain. He was confirmed in his titles, and allowed to seize Livadia and

reduce Epirus, in spite of the heroic resistance of the Suliots, who were at last treacherously massacred by the relentless Pasha. His territory already extended from Epirus to Montenegro, and he was forming designs of a union with Napoleon, with a view to obtaining the Venetian ports. The negotiations came to nothing, but 'Aly revenged himself by driving the French garrison out of Prevesa. While continuing to treat with the French, he remained on the best of terms with the Porte, and was even appointed Governor of Rumili for a time in 1799, when he did not fail to turn his power in the home province to excellent financial account. So great was his influence in the west, that not long after the English capture of Parga from the French, in 1814, the Sultan handed over the city to 'Aly, whose dominions now extended over Albania, Epirus, part of Thessaly, and the western portion of Northern Greece, while his son governed the Morea. Mahmüd II. was well aware of the danger of allowing so powerful a feudatory to exist, and was only waiting for a favourable opportunity to destroy him. The excuse presented itself in 1820, when 'Aly's agents attempted to assassinate one of the Sultan's officers at Constantinople. He was immediately outlawed. For nearly two years he withstood the collected strength of Turkey, and then, deceived by false promises of pardon, surrendered, only to be overpowered—though the "old lion" of eighty years fought hard—and executed, Feb. 5th, 1820. He was a good example of the strength and the vices of the Albano-Turkish character, of which another notable specimen was seen in Mohammed 'Aly of Egypt. [S. L.-P.]

* **Amadeus**, PRINCE (b. 1845), Duke of Aosta, formerly King of Spain, is the second son of the late Victor Emmanuel, King of Italy. He served in the Italian army, and in 1869 was also appointed Vice-Admiral. In 1870, at the invitation of Marshal Prim, he became a candidate for the crown of Spain, which had been already rejected by many to whom it was offered. He was elected in the Cortes by a majority of seventy-one, and landed at Cartagena Dec. 30th, 1870, the very day that Prim died of his wounds, received from assassins two days before. The young king bravely fronted the difficulties and dangers of his position, but his courage could not long secure popularity. The opposition brought him into contempt as a *rey intruso*. In the Cortes he was but feebly supported. No permanent ministry could be formed. Republican and Communistic insurrections broke out in various parts. In 1872 the new Carlist War burst into flame in the North, and, though apparently quenched, continued to smoulder. The same year, the king and his wife were shot at by a gang of assassins in the streets of Madrid. At length, in Feb., 1873, despairing of order, the king submitted

his abdication to the Cortes, and it was accepted in graceful terms by Señor Castelar. Next day the royal family quitted Madrid, and returned by Lisbon to Florence, where the Prince resumed his former position, was enrolled in the list of senators, and created lieutenant-general.

***Amari, MICHELE** (b. 1806), the historian of mediæval Sicily, was born at Palermo, where, at the age of eleven, he entered the University. Before he had attained the age of fourteen he was appointed by the Government a supernumerary clerk for the publication of despatches, etc. His father joined the Carbonari in the Revolution of 1820, and, having engaged in an abortive conspiracy, was in 1822 condemned to death—a sentence, however, that was commuted to penal servitude for thirty years, and eventually reduced to sixteen. Michele held much the same views as his unfortunate father, and longing for vengeance, began to train himself in martial exercises, and harden himself to exposure and privation. Meanwhile, he worked hard at the editorial department of the Government, and while rambling among the hills, he amused himself with translating *Marmion* into Italian verse (Palermo, 2 vols., 1832). Other fugitive efforts led the way to more serious work. An unfinished history of the Bourbons' rule in Sicily was laid aside for what proved to be his most successful work, the *History of the Sicilian Vespers*. His political opinions were well known in the ministry, and promotion was persistently withheld. In spite of his courage and presence of mind during the terrible ravages of cholera in 1837, when the other officials fled for their lives, he, in common with many of the patriotic party, was banished, though the form of exile was courteously concealed in a post in the Ministry of Justice at Naples. His zeal for official work had cooled by this time, and his energies were wholly absorbed in his *History*, for which the archives at Naples furnished valuable materials. The book was published in 1842, *Un Periodo delle Istorie Siciliane del secolo XIII.*, and the official censor gave his imprimatur without suspicion. There was, indeed, no direct attack upon the Government, but the unvarnished tale of the causes of the revolutions of 1822 read like a chapter of contemporary history, and cast a lurid light on the rule of the Bourbons. The skilful and patriotic narration took not only Sicily, but Italy, and even Europe, by storm. It was suspected that the chief personages of the day were hinted at in the delineations of thirteenth century oppressors; and the King and Government took alarm, deprived Amari of his office, and ordered him to repair from Palermo to Naples. Knowing the fate that in all probability awaited him there, the historian secretly took ship for France, and

arrived at Paris at the end of 1842. There for six years he lived the quiet life of a student, attended Reinaud's Arabic classes, and became himself an Orientalist; brought out a new edition of his *History*, with many additions from the Paris manuscripts, in 1843 (*La Guerra del Vespro Siciliano*), and wrote papers on Arabic scholarship and literature for the *Journal Asiatique* and other learned periodicals in France and Italy. In 1848 he was back again at Palermo in the thick of the revolution, member of the National Committee, deputy for Palermo in the Sicilian Parliament, and Minister of Finance in the Provisional Government. Going out with the other ministers in August, he was sent to England and France on a special mission, to conciliate Cavaignac and Palmerston. But on the renewal of hostilities in Sicily in 1849, he quickly repaired to the scene of action. In vain he urged the townspeople to resist; they were discouraged by the defeat at Novare and by the French expedition to Rome; Amari returned in disgust to Paris and scholarship. His *Vespers* had proved a remarkable success; they were destined to reach an eighth edition in 1876, and were translated into English (1850), French, and German. He published in 1849 *La Sicile et les Bourbons*; in 1854 appeared the first volume of his greatest work, the *Storia dei Musulmani di Sicilia* (vol. ii., 1858; iii., 1872), which was at once recognised as the first authority on this important and interesting subject. In 1856, after long researches in national and other libraries, he brought out at Leipzig the *Biblioteca Arabo-Sicula*, a collection of Arabic texts relating to Sicily. Appointed by the Provisional Government of Tuscany in 1859 professor of Arabic in the Imperial Institute at Florence—a post he still retains—Amari continued to share the hopes and endeavours of the national party. He joined Garibaldi at Palermo in 1860, and was placed in charge of the secretaryship of Education and Public Works, which he shortly exchanged for the portfolio of Foreign Affairs, but retired when Garibaldi refused to countenance an immediate annexation of Sicily. Amari has since been Professor Emeritus at Palermo, Senator of Rome, Minister of Education (1862), correspondent of the Institute of France, member of the Academies of Turin, Naples, Munich, etc. During the past twenty years he has published many valuable memoirs, and edited documents, etc., relating to the place of the Saracens in Italy and Sicily.

See G. Dugat's *Histoire des Orientalistes d'Europe*. [S. L. P.]

Ameer Khan (d. 1825), a Rohilla freebooter, was during part of his career in the pay of the Mahratta chief Holkar, and supported him during the war of 1804, which was brought to a conclusion by Lord Lake.

He afterwards succeeded in creating a principality for himself at the expense of the neighbouring princes, with Tonk, in Rajpootana, as its capital. In 1809 he was forced by the English to withdraw from the Nagpore State, which he had invaded, and his intervention in the Pindarri War of 1817 resulted in his complete defeat. He was, however, confirmed in his principality by treaty, and his descendants still reign under British protection.

Ameer Khan (*b. circa 1790, d. 1874*), born at Patna, became a rich Mussulman merchant in Calcutta. In 1869 he, being then in old age, was suddenly arrested, without warrant being shown, on the charge of attempting to wage war against the Queen, about 1861-9, and committed to gaol at Gza, and afterwards at Patna. He was accused of complicity with the heretical sect of Wahabees, and of endeavouring to incite the natives to a "holy war." It was urged in his defence that the witnesses were suborned and perjured, and that his arrest was a breach of the *habeas corpus*. After remaining in prison for fourteen months, Ameer was released early in 1871, only to be re-arrested at once on a new warrant. His appeal to be tried at Calcutta rather than at Patna was refused, whereupon he, together with Hashmadad Khan, accused on the same charge, entered futile suits at Westminster against the Governor-General and Lieutenant-General of Bengal for "tyranny and oppression."

Amélie, MARIE, formerly Queen of the French (*b. 1782, d. 1866*), daughter of Ferdinand, the first king of the Two Sicilies. In 1809 she married Louis Philippe, then the exiled Duke of Orleans. After the fall of the Empire she removed, with her husband, to Paris, where they resided at the Palace of Neuilly until 1830, when Louis Philippe ascended the throne of France. She endeavoured to prevent her husband's abdication in 1848, but when he resolved upon flight, she shared all his dangers bravely until they reached England. Here, by the generosity of Queen Victoria, a residence was assigned to the exiled King and Queen at Claremont, near Esher, Surrey. Queen Amélie was a devoted wife and mother, and universally respected by the French nation, even by the most bitter enemies of the Orleans family.

Ames, FISHER (*b. 1758, d. 1808*), American orator and essayist, was born at Dedham, near Boston, Massachusetts, was educated at Harvard College, and began to practise law in Dedham in 1781. His name soon became known through his political essays. He sat in the convention to ratify the Federal Constitution in 1788, and next year was chosen by Massachusetts as Federal representative in Congress, and for eight years he held this position as an admiring supporter of Washington. One of his most famous

speeches was in support of a treaty with Great Britain in 1796; the other members were so moved by his eloquence that it was thought advisable not to proceed to the vote till the morrow. Towards the end of 1796 he retired to Dedham, and began a brilliant series of essays on contemporary European history and the dangers attending the American Constitution; most of these were published in the *Repertory*. He recognised the supreme importance of the British navy during the French War, denounced American indifference to French aggression, and, after Washington's death, steadily opposed the foreign policy of Jefferson. Of his own nation he said in prophetic words (1803):—"Our country is too big for union, too sordid for patriotism, too democratic for liberty. Its vice will govern it by practising upon its folly." His eloquence, like his writing, belonged to a transition style, in which the old grandeur of oratory is the pervading tone, but is broken here and there by modern directness and blunt recognition of things as they are.

Works of Fisher Ames (Boston, 1809).

Amherst, WILLIAM PITT, Earl Amherst of Arracan (*b. 1773, d. 1857*), statesman and diplomatist, was nephew to Lord Amherst, Commander-in-Chief, and succeeded as second baron on his uncle's death, in 1797. He early displayed an interest in foreign affairs, and after the peace of 1815 was despatched as British envoy to Kea K'ing, Emperor of China, to complain of the harsh treatment of English merchants at Canton. After difficult negotiations, arising from his refusal to comply with certain customary ceremonies which he thought degrading, he was at last allowed to proceed to the Palace Zuen-ming-zuen, but as he was unwilling to appear before the Emperor the same evening, he was compelled to return to Canton without effecting his mission. In 1823 he was appointed to succeed the Marquis of Hastings as Governor-General of India. Difficulties soon arose from the mistaken pretensions of the King of Burmah, and in 1824 Lord Amherst declared war, the result of which was that Tenasserim, Arracan, and Assam were ceded to England. He was next engaged in restoring a youthful rajah to the kingdom of Bhurtpore, wrongfully seized by his uncle, Doorjun Sál. In 1828 Lord Amherst, now created an earl, was obliged to resign, owing to ill-health, and spent the rest of his life in retirement.

Ampère, ANDRÉ MARIE (*b. 1775, d. 1836*), was one of the earliest and most distinguished of those who devoted their attention to electricity. The death of his father, who fell under the guillotine during the French Reign of Terror, made so deep an impression on the lad that he sought solace in the study of nature and antiquity, and it was not until he had been for some time engaged as a private tutor in

his native town of Lyons and in Bourg, that (in 1805) he was called to Paris, where he distinguished himself as a teacher in the Polytechnic School, and as the author of a treatise on the Theory of Probability (*Sur la Théorie Mathématique du Jeu*, 1802). Previous to this period he is said to have taught himself the practice of arithmetic by means of pebbles and biscuit-crumbs, and in later life he was in the habit of declaring that he knew about as much mathematics by the time he was eighteen as he ever did, though his reading comprised history, travels, poetry, philosophy, and the natural sciences, and the entire *Encyclopédie*. His little work on Chance attracted much attention, and brought him to the notice of M. Delambre, by whose influence he received a Chair in the Polytechnic School, after having for some time occupied a subordinate post in the same establishment. In 1814 he was admitted into the Institute, though hitherto his reputation was merely that of a skilful mathematician and a man of extensive acquirements in the natural and physical sciences. In Sept., 1820, hearing of Ørsted's discovery of a magnetic needle being deflected by a voltaic current, he took up the subject, and showed that magnetic deflection can be produced without magnets by the aid of electricity alone. According to his theory, "every molecule of magnetic matter is acted on by a closed electric current, and magnetisation takes place in proportion as the direction of those currents approaches parallelism." The whole field thus opened up he explored with such untiring skill and success, that he may be termed the father of electro-dynamics. He anticipated the invention of the telegraph, having in 1821 suggested an apparatus of the kind with a separate wire for each letter; and later in life he prepared an extensive scheme for the classification of the sciences, which was not published until after his death. His chief works are the *Recueil d'Observations Electro-dynamiques* (1822) and *Théorie des Phénomènes Electro-dynamiques* (1830), which were the forerunners of Faraday's experiments of a later date. But in addition to these treatises, Ampère was the author of many memoirs and papers in scientific journals, especially the *Annales de Physique et de Chimie*. His character was singularly amiable and child-like, as appears from his *Journal et Correspondance*, published by Madame Chevreux in 1872. In 1881 the Paris Conference of Electricians marked their appreciation of his labours by employing his name to designate one of the measures of electric force. [R. B.]

Ampère, JEAN JACQUES ANTOINE (b. 1800, d. 1844), literary critic, son of the famous electrician, was born at Lyons. He was at first brought up by his father to scientific studies, and attended Cousin's lectures on philosophy. But his real bent was literature,

though he did not immediately discover the special department for which he was peculiarly fitted. Before he had reached the age of twenty-five he had finished seven tragedies, all of which had been read and accepted by the Théâtre Français, and none were ever performed. For in the meantime Ampère turned to his real vocation—literary history and criticism. Seized with the young enthusiasm of the romantic school of poetry, he and his friend Fulgence Frenel plunged into the literatures of the world, and, among the rest, the Arab, the Chinese, the Sanskrit, and the Ancient Egyptian, which could then be studied at Paris under the best masters, Remusat, De Sacy, Julien, and Champollion. Beginning as a mere *littérateur*, writing for the *Globe*, in Guizot's *Revue Française*, and the *Revue des Deux Mondes*, he soon enlarged his sphere of activity; lectured at the Athenæum at Marseilles in 1830, at the Sorbonne after the revolution of July; and in 1833 he was made professor of French literary history at the Collège de France. Among the re-casts of the courses of lectures he here delivered to applauding audiences were his *Histoire Littéraire de la France avant le 12^e Siècle* (1839), *Ancienne Littérature Scandinave* (1832), and *Hist. de la Formation de la Langue Française* (1841, 2nd ed. 1869). His *Littératures et Voyages* (1834) and other bright sketches of travel in the North, in America, and in Egypt, appeared in the *Revue des Deux Mondes*. In 1842 he was elected a member of the Académie des Inscriptions, and in 1847 joined the Sacred Forty of the Académie Française. He was a brilliant leader in an age of genius; and a youth which had felt vehemently the influence of Madame Recamier, whom he could not live without seeing weekly, almost daily, was followed by a manhood of enthusiasm and literary effort. It is true he absorbed more than he could digest, and, except in French literary criticism, his work is not profound, yet his zeal and liberal outlook on the literature of the world imparted an illuminating fire to French students which has not yet lost its kindling influence.

See Hamerton's *Modern Frenchmen*.

Amphill, THE RIGHT HON. ODO WILLIAM LEOPOLD RUSSELL, BARON (b. 1829, d. 1894), diplomatist, third son of Major-General Lord George William Russell, and grandson of John, sixth Duke of Bedford, was born at Florence. His father was minister at Berlin from 1835 to 1841, and, though Odo Russell's name was entered at Westminster School, most of his real education was received abroad. Hence he acquired unrivalled facility in the use of French, German, and Italian. On entering the diplomatic service in 1849, he was attaché to the embassy at Vienna for a short time, but returned to England next year, and served in the Foreign Office under Lord Palmerston. In 1852 he

went as attaché to the embassies at Paris and Vienna, and in 1854 was first paid attaché at Constantinople, where, during Lord Stratford de Redcliffe's two visits to the Crimea in 1855, Mr. Russell remained in charge of the embassy. In 1857 he accompanied Lord Napier of Ettrick to the United States, and remained for a short time as paid attaché in Washington; but in 1858 was transferred to Florence, with instructions to reside in Rome as Secretary of Legation, where he remained twelve years, for after the withdrawal of Her Majesty's mission from Naples in 1860, he continued to be "employed on special service." His chief duty was to keep the Pope informed of the real state of Irish affairs, and to urge open discouragement by the priesthood of Irish outrage; but under the pontificate of Pius IX., during a highly critical period of Papal history, his position required all a diplomatist's tact and management. In Aug., 1870, he was appointed Assistant Under-Secretary of State for Foreign Affairs, and a few months later was despatched on a special mission to the German head-quarters at Versailles to ask Bismarck's opinion of Prince Gortschakoff's note renouncing the obligations of the Black Sea Treaty of 1856. His frankness, courtesy, and determination so impressed Count Bismarck, that in the following year he was chosen to succeed Lord Augustus Loftus as ambassador at Berlin. In this capacity, by his intellectual power and his sympathy with German aims, he retained the favour not only of the Court, but of Prince Bismarck, for the unusually long period of thirteen years. In 1878 he sat with Lords Beaconsfield and Salisbury as the third representative of England in the Congress of Berlin, where his linguistic powers and mastery of detail were of high service to his associates. Having been raised to the rank of a duke's son in 1873, he was now offered a peerage, which, owing to his political views, he was unable to accept. After the return of the Liberals to power, he was created Baron Amphil of Amphil, in 1881.

See *Times*, Aug. 26th, 1884; also *Bismarck und seine Leute*, von Dr. Busch.

Amurath. [MURAD.]

Ancelot, JACQUES ARSÈNE FRANÇOIS POLYCARPE, French dramatist (b. 1794, d. 1854), in spite of his literary tastes, was brought up as a clerk in the Marine Department. After some unsuccessful dramatic attempts, he produced *Louis IX.* in 1819, which was received with enthusiasm, partly as a Royalist opposition to Casimir Delavigne's *Vêpres Siciliennes*. Louis XVIII. bestowed a pension on the author, who for the next ten years continued to produce tragedies, of which *Fiesque*, based on Schiller's play, was the most successful. Having lost his pension at the Revolution of 1830, and being prohibited from tragedy, he turned to satire and comedy by the

advice of his wife, MARGUERITE VIRGINIE CHARDON (1792-1875), who herself became known as a writer for the comic stage and a novelist. Between them they produced an immense number of comedies and operettas during the next ten years, and it has become impossible in many cases to distinguish the wife's work from her husband's. The subjects are generally chosen from the domestic life of the last century. In 1841 Ancelot was elected to the French Academy. His *Vie de Chateaubriand* was published after his death.

See *Discours de M. Ernest Legouvé* on his admission to French Academy (1856).

Andersen, HANS CHRISTIAN, Danish novelist (b. 1805, d. 1875), was the son of a shoemaker of Odense, an obscure town in the Island of Funen. His parents were so poor that he remembered being sent out to beg in his childhood. His father, nevertheless, had some education, and read to him Holberg's comedies and the *Arabian Nights*. He was intended for a tailor, but he wished to be an actor, and he used to dress dolls for a puppet-theatre and to write plays for them. He wrote a tragedy at a very early age, on the subject of Pyramus and Thisbe. When he was fourteen, having managed to save thirty shillings, he insisted on going to Copenhagen, where he "meant to become famous." He tried for a theatrical engagement, and was accepted at the Theatre Royal on account of his beautiful voice. This soon broke, however, and he was unable to get any employment. Fortunately, a kind-hearted man, Conference-Councillor Collin, heard his story, and obtained his admission, at the expense of the State, at the grammar-school at Slagelse, and in due course he passed his philological and philosophical examination. In 1828 he published his first book, *A Journey on Foot to Amager*; and in 1831 he made in Germany the first of his many tours, an intense passion for travelling being one of his chief characteristics. *The Improvisatore*, a romance of much beauty, in which he traced the development of his poetical genius, was begun in Rome in 1854, and was followed by the novels *O. T.* and *Only a Fiddler*, of which the latter contained reminiscences of his early life. There is in them a tone of bitterness which disappears in his later works, written after he had won fame: for instance, *The Post's Bazaar*, the result of an Eastern tour (1842). His first collection of poetry appeared in 1835, and two years later came the *Fantasies and Delights*; while *The Mulatto*, the best of his dramas, was published in 1840. In England, Hans Andersen is chiefly known as a writer of fairy tales. Of these, the first series, containing the famous *Ugly Duckling*, appeared in 1835, and has been admirably translated into English by Mrs. Howitt. Others were included in the *Picture-Book without Pictures* (1840), perhaps his masterpiece, and a classical edition appeared in 1850. They have been translated

into most of the European languages, and, especially the *Flax*, the *Willow Tree*, and the *Dream of Little Lark*, have become household words. The *Dust-Man* was successfully dramatised. Where their chief excellence lies it would be difficult to say. Pervaded by a strong self-consciousness—the *Ugly Duckling* is an autobiography—they are nevertheless admirably simple and chaste in style. Full of real love for nature, they never leave the impression of an imagination straining to grapple with its subject, and, unlike their numerous imitations, are admirably spontaneous. At times a humorous note is struck, more often a pathetic; and throughout there is patent a real sense of the dignity and range of life, and much sweet reasonableness. The phraseology is, as might be expected, admirably happy, and full of unadorned beauty. The middle part of his life was spent in almost incessant travels, due, it is said, to literary jealousies at home, and his charming *Romance of my Life* was begun at Naples and finished in the Pyrenees (1848). To other voyages are due *In Sweden* and *In Spain*. Towards the close of a blameless and innocent career he returned to Copenhagen, where he died, shortly after his seventieth birthday had been celebrated as a national festival.

HANS CHRISTIAN ANDERSEN, *The Romance of my Life*. [L. C. S.]

*ANDERSON, ELIZABETH GARRETT, M.D. (b. 1837), the well-known lady-physician, was born in London. In 1860 she commenced the study of medicine at the Middlesex Hospital, completing the medical curriculum at St. Andrews, Edinburgh, and at the London Hospital. In Oct., 1865, she received the diploma of L.S.A.; the following year she was appointed general medical attendant to St. Mary's Dispensary; and in 1870 was made visiting physician to the East London Hospital for Children and Dispensary for Women. The same year she had obtained the degree of M.D. from the University of Paris. In 1871 she married Mr. J. G. S. Anderson, of the "Orient" line of steamships to Australia. Mrs. Garrett Anderson continues to practise in London, paying particular attention to the diseases of women and children, on which she has written several medical pamphlets of a popular kind.

ANDERSON, JOHN, a negro slave, escaped in 1860 from the United States into Canada, and in effecting his escape killed one of his pursuers. His surrender was demanded by the United States Government, but Anderson, after a short imprisonment, was discharged by the Court of Toronto on the technical ground of an informality in the warrant of detention. He came to England, where he was for some months a popular favourite. Already the Court of Queen's Bench had issued a writ of *habeas corpus* to bring him before it, on the ground that his detention by the Toronto court had been illegal. The case is important

as recognising the great principle that whenever a slave lands on British soil he is free.

*ANDERSON, MARY (b. 1859), was born at Sacramento, in California, shortly before the outbreak of the Civil War in America. Her father died three years after her birth, fighting under the Confederate flag before Mobile, in the Gulf of Mexico. Miss Anderson was brought up at Louisville, Kentucky, where her step-father practised medicine, having given up his plantations after the war. Her dramatic tastes showed themselves from her childhood, when she was always fond of shutting herself up with an old play or romance, Shakespeare being her favourite author even in those early days. When she was about thirteen she saw Booth in *Richard III.*, and her imagination was instantly fired. She afterwards saw him in *Hamlet* and *Macbeth*, and she was perpetually studying these parts and declaiming them to herself; on one occasion she acted part of *Richard III.* before a few friends. She entreated to be allowed to adopt the stage as a profession, and after much opposition her parents consented, and gave her lessons from the best instructors. At sixteen she made her *début* at Louisville in Juliet. For some years she acted all over the States and Canada in various parts, and she has had great success in London in the parts of Parthenia, Pauline, Galatea, and Juliet, during her seasons at the Lyceum theatre in 1884 and 1885. Though relying chiefly on stock pieces, her creation of the character of Clarice in Mr. W. S. Gilbert's *Comedy and Tragedy* showed distinct originality.

ANDERSON, ROBERT (b. 1806, d. 1871), an American general, was born near Louisville, Kentucky, and having entered the army, served under Lincoln in the Black Hawk War, and as captain in the Mexican War (1846-7), during which he distinguished himself in the battle of El Molino del Rey. On the outbreak of the Civil War he was appointed to the defence of Charleston Harbour (1860), and held Fort Sumter for two days against the Confederate army under General Pickens, who bombarded the place with red-hot shot. Soon after his surrender he was promoted to the rank of brigadier-general, but owing to ill-health took no further part in the war.

ANDERSON, SIR GEORGE WILLIAM, K.C.B. (b. 1791, d. 1857), an Indian civil servant, was the son of a London merchant. He was employed by Elphinstone in drawing up the first systematic code of laws in British India, known as "The Bombay Code of 1827." In 1835 Anderson was appointed by the Court of Directors, Bombay, member for the newly constituted Indian Law Commission; in 1838 he became a member of the Council of the Governor of Bombay; and in April, 1841, succeeded, as senior member of the Council, to the office of Governor. This post he held until June, 1842. In 1849 Anderson was

knighted and appointed Governor of Mauritius; here he remained little more than sixteen months, being transferred to the Government of Ceylon; but his health giving way, he was obliged to resign in the spring of 1855.

Anderson, THOMAS (b. 1819, d. 1874), a chemist of good repute in his day, was the son of a Leith physician, and was educated in the University of Edinburgh, where, in 1841, after winning the Hope scholarship in chemistry, he graduated M.D. The next year was spent at Stockholm studying under Berzelius, and 1843 in attending the prelections of the Giessen Professor Liebig. Bonn, Berlin, and Vienna were also visited for the purpose of instruction, so that when Anderson began lecturing in the Extra-Academical School, he was perhaps the most accomplished chemist of his years in Scotland. Two years later he was appointed chemist to the Highland and Agricultural Society. This post he held until the day of his death, and, indeed, it is chiefly in connection with it that he is and was best known. In 1852 he succeeded Dr. Thomas Thomson in the professorship of chemistry in Glasgow University, and henceforth devoted himself to the joint duties of his official posts, until, after two years of intense suffering, mental and bodily, he died on Nov. 2nd, 1874. As an agricultural chemist, Anderson did much to advance the scientific character of Scottish tillage. But his merit as an original investigator also is proved by the many papers which bear his name on their title-pages. He discovered a new pyridine series, and certain fatty amines, and obtained, as the result of his research on the action of sulphur upon fixed oils, a new organic sulphide. He investigated opium in a more exhaustive manner than it has ever been examined since his day, published extensive observations on anthrax and its derivatives and kindred subjects, while his *Elements of Chemistry* (1860) served its uses as a textbook. But Anderson's real work is embodied in the endless papers which he contributed to the *Journal of the Society* which he served so long and so faithfully. A quiet-living man, he was little popularly known, except among the Scottish farmers. Yet he received his fair share of the honours his contemporaries had to bestow. He was president of the Glasgow Philosophical Society, of the Chemical Section of the British Association (1867), was Keith medallist of the Royal Society of Edinburgh, and in 1872 received one of the royal medals from the Royal Society of London. He was, in addition, LL.D. Edin., and member of most of the scientific societies taking cognisance of his speciality.

Andersson, CARL JOHAN (b. 1827, d. 1867), an Anglo-Swedish traveller, was a native of Elfdén, in Vermland. His father was a wealthy Englishman, well known, under the

name of "L. Lloyd," for his works on the natural history, game, and peasant life of Sweden, and with whom, in 1849, he visited England, where he made the acquaintance of Francis Galton, whom he accompanied on his African journey. In 1853-4 he penetrated alone as far as Lake Ngami, an account of which he published in his *Lake Ngami; or, Explorations and Discoveries during Four Years' Wanderings in the Wilds of South-Western Africa* (1855), a work which has been translated into several languages. In 1858-9 he made another laborious and perilous journey to the River Okavango, returning to Otjitua, an account of which may be found in *The Okavango River: a Narrative of Travel, Exploration, and Adventure* (1861). Andersson now settled in Cape Town with a view to avail himself of the experience he had acquired by embarking in the ivory trade, though adventure received a greater share of his attention than mere profit. In May, 1866, he contracted dysentery during a journey to the Cunene river, from which he never recovered, dying in the Ovakuambi country. As a scientific explorer, Andersson cannot take a high place; but few African travellers have displayed greater energy and courage, and in no works describing the "Dark Continent" are there to be found sounder, fuller, or more original observations on natural history than in those which bear his name.

Andersson, NILS JOHAN (b. 1821, d. 1880), a Swedish botanist, was a native of the province of Småland. In 1851-53 he accompanied the frigate *Eugénie* in its voyage round the world, and described the cruise in his *En Verldsomsegling* (3 vols., 1853-54). In 1856 he became professor of botany and curator of the herbarium to the Academy of Sciences in Stockholm, where for the rest of his life he lived, and where, twenty-four years later, he died. His botanical writings are numerous, but, with a few exceptions, very technical. Among those which have been published in separate forms are:—*Salices Lapponie* (1845), *Conspectus Vegetationis Lapponie* (1845), *Atlas öfver den Skandinaviska Florans naturliga familjer* (1849); *Om Galapagos öarnas vegetation* (1854), etc. Personally he was much liked, and had a large share in training many of the rising Scandinavian botanists.

Andral, GABRIEL (b. 1797, d. 1853), a distinguished French physician, born in Paris, a member of the Institute and of the Academy of Medicine. In 1839 he was elected by his colleagues as successor to Broussais in the Chair of pathology and therapeutics in Paris. He has written various medical works—*Clinique Médicale*; *Summary of Pathological Anatomy*; *Sur le Traitement de la Fièvre Typhoïde par les Purgatives*; *Recherches sur les Modifications de Proportion de quelques Principes du Sang*, etc.

***Andrassy, JULIUS, COUNT, Hungarian statesman** (b. 1823), is the second son of Count Charles Andrassy, who was distinguished as an economic and industrial reformer. In 1847 he represented his native town, Zemplin, in the Hungarian Diet. He took part in the revolution of 1848, and in 1849 was sent by the National Government as an envoy to Constantinople. After the defeat of the Hungarians, Count Andrassy was condemned to death, and sought refuge in France and England till the amnesty of 1857. In 1860 he was elected a member of the re-constituted Diet. He became a very prominent follower of Deák, and was a strong supporter of the compromise between Austria and Hungary in 1867. In February of that year Andrassy was nominated Minister-President and Minister of National Defence. In 1871 (Nov. 14th) he became Foreign Minister in the joint Austro-Hungarian Ministry. It was in great part through his agency that the alliance between Austria and Germany, and afterwards between the "three Empires," was compacted. In 1876 the three Emperors of Russia, Austria, and Germany, with their respective Prime Ministers, met at Reichstadt. In the diplomatic transactions which preceded the Russo-Turkish War, and in the negotiations which led to the Conference of Berlin, Count Andrassy took a leading part, the "Andrassy Note" of 1876 being one of the numerous attempts made to avoid bloodshed. At the Berlin Conference (June, 1878) Count Andrassy acted generally in close accord with Prince Bismarck, and succeeded in obtaining for Austria the occupation of the provinces of Bosnia and Herzegovina. Count Andrassy's policy was by no means universally popular in Austria-Hungary. He was severely attacked in Parliament in 1879, and only the personal influence of the Emperor averted his downfall for a time. In 1879 (Oct.), however, he resigned the position of Austro-Hungarian Foreign Minister in favour of Baron Haymerle, and since that period has not taken a very prominent part in politics.

Andréossi, ANTOINE FRANÇOIS, COMTE D' (b. 1761, d. 1828), French general, was born at Castelnaudary, in Languedoc. Having entered the artillery at an early age, he took part in the war in Holland, 1787, and the Italian War of 1796-7. Next year he surveyed the coast with a view to a descent upon England, but he followed Napoleon to Egypt, and was a member of the Egyptian Commission. He supported Napoleon in his seizure of Imperial power, was appointed to superintend the artillery department, and despatched on several delicate embassies to London, Vienna, and Constantinople, from which city he was recalled on the return of Louis XVIII., in 1814. At the beginning of the Hundred Days he was member of the Council of State and of the commission to report on measures

of general safety. After Waterloo he acted as one of the five delegates appointed to treat with the Allies. After the return of the Bourbons he retired to his home, near Paris, devoting himself to the production of his numerous geographical and military works, of which his *Voyage to the Mouth of the Black Sea* may be mentioned. He became a member of the Academy of Sciences in 1826, and was elected to the Chamber of Deputies in 1827.

Anéthan, BARON D'. [D'ANÉTHAN.]

Anglesey, HENRY WILLIAM PAGET, 1st MARQUIS OF (b. 1768, d. 1854), was the eldest son of the first Earl of Uxbridge. Educated at Westminster School and Oxford, where he took an M.A. degree, he entered Parliament in 1790, and represented the Carnarvon Boroughs for six years. On the outbreak of the French Revolution he raised on his father's estate the regiment of Staffordshire Volunteers which eventually became the 80th Foot. Entering the army, he rapidly rose, and by 1794 had attained the rank of lieutenant-colonel, and served under the Duke of York in the Flanders campaign. On his return to England he joined the 16th Light Dragoons, and in 1797 was appointed to the command of the 7th Light Dragoons, with the rank of colonel. He again served under the Duke of York in the campaign in Holland of 1799, and behaved with great gallantry on several occasions. Promoted major-general in 1802, and lieutenant-general in 1808, he was sent in command of two cavalry brigades to join Sir David Baird's Division in Portugal on the outbreak of the Peninsular War. He landed at Corunna, and effected the junction with his chief after some difficulty. He was engaged in the first skirmish with the French at Rueda, and distinguished himself by his skill and bravery in covering the disastrous retreat to Corunna. At the battle of Corunna he commanded the reserve, and saved the fortunes of the day for the British. With this expedition his military career for a time terminated. He again returned to Parliament as member for Milborne Port, and in 1812 he succeeded his father, and took his seat in the House of Lords as Earl of Uxbridge. On the despatch of the army under Wellington to Belgium, in 1815, his services were again required, and he took command of the cavalry at the battle of Waterloo. The most brilliant charge of the day was delivered by his direction with Lord Edward Somerset's and General Ponsonby's Brigade. He received no wound until nearly the termination of the battle, when he was struck in the knee by a shot—one of the last fired—and so severely injured that the limb had to be amputated. With this campaign his active military career terminated, though he was appointed to the Horse Guards in 1842, and gazetted field-marshal in 1846. He was created Marquis of Anglesey, and decorated

with the Grand Cross of the Bath for his war services, and in 1818 was elected a Knight of the Garter. His energy was as much displayed in civil life as in the more active duties of his profession. He was Lord High Steward of England at the coronation of George IV., Master-General of the Ordnance in 1827, sworn in as a member of the Privy Council the same year, and became Lord-Lieutenant of Ireland in 1828. He threw himself earnestly into his new government, and was instrumental in creating the "Board of Education," and in promoting the cause of Catholic emancipation, owing to which he was speedily recalled; but after that measure had been carried, and he returned for the second time as Viceroy (1830-3), the agitation created by O'Connell compelled him to demand Coercion Acts for the security of public peace, and so his popularity waned. Subsequently he was advanced to the rank of field-marshal, and from 1846-52 was again Master-General of the Ordnance. He was thoroughly Liberal, and had some knowledge of statesmanship, which a lack of oratory caused to be under-valued by the world. [C. C. K.]

Angoulême, LOUIS ANTOINE, DUC D', Dauphin of France (b. 1775, d. 1844), was the son of Charles X. He married his cousin, the daughter of Louis XVI. When, on the news of Waterloo, the mob rose at Marseilles and Nîmes, the Duc d'Angoulême had much to do with restraining its ferocity. In 1823 he led an army into Spain against the Constitutionalists. He passed through Madrid, and arrived at Cadiz with but little resistance. He stormed and carried the Spanish batteries, showing great coolness and gallantry. His success was received in France with the greatest enthusiasm, and on his return to Paris he was accorded a triumphal procession. On his father's death in exile he resigned his right to the succession in favour of his nephew, the Duke of Bordeaux.

Angoulême, MARIE THÉRÈSE CHARLOTTE, DUCHESSE D' (b. 1778, d. 1851), was the daughter of Louis XVI. and Marie Antoinette. When about fourteen years old, she was imprisoned with them in the Temple, and shared their miseries. During this time she kept a diary, from which we know much of their lives during their confinement, and of the ill-treatment they received. After the execution of her parents and of her aunt, the Princess Elizabeth, she remained in solitary confinement for six months, but was then sent to Vienna, in exchange for the Commissioners of the Convention, whom Dumouriez had betrayed to the Austrians. In 1799 she married her cousin, the Duc d'Angoulême. When Louis XVIII. made his public entry into Paris, in 1814, she accompanied him, but in spite of her misfortunes, she failed to enlist the sympathy of the French people.

Ångström, ANDERS JONAS (b. 1814, d. 1874), a Swedish physicist, born at a country parsonage in Wester-Norrland. Up to the year 1858 he was known only as an astronomer, but in that year he exchanged his post in Upsala for the Chair of Physics. As Director of the Observatory, he did some service to science, but the reputation of Ångström most rests on his discoveries in optics. In his treatise entitled *Optiska Undersökningar* ("Optical Researches," 1853), he showed that the fixed lines of spectra produced by electric flames are due to the different substances burned or evaporated. This observation is now generally regarded as the basis of spectrum analysis, from which so much gain to science has been obtained within the last twenty years. About the same time it called attention to the so-called "Fraunhofer Lines," in the solar spectrum, though it was reserved for later investigators to discover their real import. His other works, in addition to several memoirs in journals and transactions, are:—*Recherches sur le Spectre Solaire* (1868); *Sur les Spectres des Gens Simples* (1871); *Mémoire sur la Température de la Terre* (1871), etc.

***Anker, ALBERT** (b. 1830), Swiss painter in *genre*, was born at Anet, in the canton of Berne. He intended becoming an evangelical minister; but, on the conclusion of his theological studies, he gave way to his natural aptitudes, and took lessons of the famous French painter, M. C. G. Gleyre, who, like himself, was by birth a Swiss. M. Anker soon became a regular exhibitor at the Salon, and in 1866 he obtained a medal. Among his more famous pictures are *Enterrement d'un Enfant*, *Les Marionnettes*, *Les Petites Brodeuses*, and *La bonne Petite Fille*, and several of his works have been engraved.

***Annandale, THOMAS**, a Scottish surgeon (b. at Newcastle-on-Tyne, 1838), after graduating in the University of Edinburgh, became private assistant to Professor Syme, demonstrator of anatomy in the University, and at a later date lecturer on surgery in the Extra-academical School, and surgeon to the Infirmary. In 1877 he was elected Regius professor of clinical surgery in succession to Lister, and enjoys an extensive practice as an operating and consulting surgeon. In addition to numerous papers in medical journals, Professor Annandale is the author of the Jacksonian Prize Essay on *Malformation, Diseases, and Injuries of the Fingers and Toes* (1865); *Abstracts of Surgical Principles* (1868-70), etc.

Ansdell, RICHARD, R.A. (b. 1815, d. 1885), was educated at the Bluecoat School, Liverpool. His first subjects in the profession which he had adopted were animals and field sports, and to these he adhered more or less closely throughout his life. His earliest

pictures, for example, exhibited at the Royal Academy, 1840, were *Grouse Shooting* and *A Galloway Farm*, the property of the Marquis of Bute; and his last, in 1855, *Off for the Moors*, *A Highland Mother*, *Shooting the Coopers*, and *The Slackened Girth*. Although Mr. Ansell had exhibited many pictures between 1840 and 1856—such as *The Drover's Halt*, *The Stag at Bay*, its companion *The Combat*, and *The Battle of the Standard*—it was not till the last-named year, when he accompanied John Phillip to Spain, that he had an opportunity of putting forth his full powers. The influence of Phillip in the matter both of colour and texture was manifest in the works exhibited by Mr. Ansell in 1857. These were *The Water Carrier* and *Mules Drinking*. Again he went to Spain, and in the following year (1858) he exhibited *The Road to Seville* and *The Spanish Shepherd*; in 1859, *Isla Mayor—Banks of the Guadalquivir*, and *The Spanish Flower-Seller*. On three occasions Mr. Ansell received the Heywood medal for his exhibits at Manchester, and his *Wolf-Slayer* and *Turning the Drove* procured him a gold medal at the Paris Exhibition of 1855. In the year 1861, in which he exhibited at the Academy *Hunted Slaves*—a large canvas—and *Old Friends*, he was elected an A.R.A., and in 1870 a full Academician. Among his later works are *After a Spate*, *The Home of the Red Deer*, *Collecting Sheep for Clipping*, and *Hunting the Boar*. His practice as a painter was, from the very nature of his subjects, one of the most remunerative in England, but he thoroughly deserved his success.

Anson, GEORGE (b. 1797, d. 1857), English general, was the second son of the first Viscount Anson. He entered the army at an early age, and served at Waterloo. In 1818, while still in the army, he was returned to Parliament, and was for many years a member of the House of Commons. In 1854 he was appointed to command the Madras army, and two years later he became commander-in-chief in India. He was thus at the head of affairs on the outbreak of the Mutiny, and was perhaps hardly equal to the emergency, although it is true that he was handicapped by the *laissez-faire* of Lord Canning. On hearing of the outbreak at Delhi, he collected a force at Umballah, but refrained from disarming the disaffected native regiments there, in order to free his hands for immediate action. While on the march he was seized by cholera at Kurnaul, and died on May 27th.

J. W. Kaye, *Sepoy War*; T. R. E. Holmes, *Indian Mutiny*.

Anspach, ELIZABETH BERKELEY, MARGRAVINE of (b. 1750, d. 1828), better known as Lady Craven, was married to her first husband, Lord Craven, in 1767, but the union proving unhappy, she separated from him in 1781, and travelled in Western Europe.

After her husband's death she married her friend the Margrave of Anspach (1791); and it was when a widow a second time that she gave shelter to the unfortunate Queen Caroline of England in 1821. The Margravine wrote some indifferent comedies, a lively satire on the little German courts, and some amusing memoirs (1825).

Memoirs of the Margravine of Anspach, written by herself.

Ansted, DAVID THOMAS (b. 1814, d. 1880), a geologist of some repute as a teacher, expert, and writer, was born in London, and in 1836 graduated at Jesus College, Cambridge, of which he was subsequently elected a fellow. For some years he acted as assistant secretary to the Geological Society, and filled the Chairs of geology at King's College, London, at the Military College at Addiscombe, and at the Civil Engineering College at Putney. The last thirty years of his life were, for the most part, devoted to the more lucrative work of a consulting geologist, his services being in good demand as an adviser in questions of water supply, mining, and so forth. Original research, though he was an F.R.S., obtained almost no place in Ansted's career. But he did much by his writings to popularise geology. However, unless we except his volume on the Channel Isles, written in co-partnership with Dr. Latham, none of his many books have kept their place in the market.

Anster, JOHN (b. circa 1806, d. 1867), was born at Charleville, in Cork County, Ireland. In 1819 he published a volume of *Poems and Translations from the German*, and in 1855 his English version of *Faust*, from the German of Goethe, was commended by the *Edinburgh Review*, and also by Coleridge. Anster was a constant contributor to *Blackwood's Magazine*; he held for many years the post of Regius professor of civil law in the University of Dublin.

Anthon, CHARLES, LL.D. (b. 1797, d. 1867), an American classical scholar, graduated with honours in 1815, and was called to the New York bar in 1819. He, however, forsook law for the classics, and in 1820 accepted the post of adjunct professor of ancient languages in Columbia College, New York. In 1830 he published an edition of *Horace*, and became rector of the grammar-school attached to the college; and in 1835 principal professor of languages, on the resignation of Professor Moor. Dr. Anthon was a voluminous writer, having prepared about fifty volumes, chiefly on classical subjects. In 1841 his *Classical Dictionary* and a *Dictionary of Greek and Roman Antiquities* appeared. A number of his classical text-books have been reproduced in England, but are now rather out of date.

Antonelli, GIACOMO, Cardinal and statesman (b. 1806, d. 1876), was born at Sonnino, a small village near Terracina, on the Pontine Marshes. The account of his parentage varies according to the Liberal or Ultramontane opinions of the writer, but the truth seems to be that his father was a large timber merchant, of ancient family. He was educated from boyhood at the Grand Seminary of Rome. After entering the priesthood, he became a favourite of Gregory XVI., and occupied various subordinate positions in the Papal Ministry. A year after the accession of Pius IX. he was created Cardinal (1847), and next year, at the outbreak of the revolution, was appointed Secretary of State and President in the Liberal Cabinet, that drew up the famous *Statuto*, so soon to be repealed. For a time he was even regarded as a popular leader, but though he promised to put a small army into the field against Austria, he found that the progress of the revolution was making his position untenable. Accordingly he resigned office to Mamiani, and, after the assassination of Rossi, fled with the Pope to Gaeta. During the exile he acted as Papal representative in the conference of the Powers for armed intervention, and on the Pope's return, in 1850, he became Foreign Minister, and practically retained the position till his death, though he proffered his resignation in 1863. Though his administration of the Papal States was deplorably unsuccessful, his appeal to Catholics throughout the world saved the Vatican from bankruptcy. Throughout his long tenure of power he showed himself a determined opponent to Italian unity, and to all other Liberal proposals. In 1867 he raised 12,000 troops to oppose Garibaldi, and appealed in vain for the assistance of the Powers. He took a leading part in assembling the Œcumenical Council of 1869, but did not often join in its deliberations, and it was noticed that he abstained from voting on the Infallibility. Since the decline of Austria, Antonelli had been forced to place all his hopes in the protection of France, and when, at the beginning of the Franco-German War, the French troops were withdrawn from Rome, he recognised that the work of his life had been undone. He continued to raise protest after protest, and for a moment Count Arnim's mission may have awakened a glimmering of hope. But the inevitable was met with dignity. He refused to accept any concessions from the Government, and strenuously opposing the advisers who urged the Pope to abandon Rome, he turned the palace into a voluntary prison. His opposition to the Old Catholics, and his support of Alfonso XII. of Spain, were the last efforts of his unwearied activity. He died, leaving vast possessions, the inheritance of his heirs being afterwards disputed by his supposed daughter, Countess Lambertini.

He was the last of the Cardinal-statesmen, and we cannot but admire the unyielding determination with which he championed a desperate cause.

See Cardinal Antonelli, von Dr. A. de Waal; also Vapereau, *Dictionnaire Universel des Contemporains*.

Antraigues, EMMANUEL LOUIS HENRI DE LAUNAY, COMTE D' (b. 1755, d. 1812), French political adventurer, was born in Vivarais, and was nephew of Saint Priest, Minister of Louis XVI. In 1788 he published a *Memoire sur les États Généraux*, a revolutionary pamphlet, which created some sensation. Nevertheless, on his return next year as Deputy to the States General, he espoused the royalist cause with ardour, was driven into exile in 1790, received large pensions from foreign courts for his efforts in behalf of the Bourbon family, and became a centre of royalist intrigues at Venice and elsewhere. Shortly before Austerlitz he was arrested by Napoleon's army, but escaped into Russia, where he joined the Greek Church, and received a pension. Afterwards, having become acquainted with some secret clauses in the Treaty of Tilsit, he came to London and sold his information to the Government. But at the moment when his intrigues promised success, his correspondence with Canining was betrayed to Napoleon by his servant, who soon afterwards, supposing that his treachery had been discovered, murdered the Count and Countess and committed suicide. The seizure of his papers by the English Government gave rise to a suspicion that they had even brought about his assassination.

Nouvelle Biographie Générale.

Apperley, C. J. [NIMROD.]

***Appert**, BENJAMIN NICHOLAS MARIE, French philanthropist (b. 1797), was born in Paris, and as early as 1815 turned his attention to the education of the poor. He applied the principle of mutual instruction to the military schools, and receiving special powers from Government, he caused more than 100,000 soldiers to be educated in reading and writing within a few years. In 1822 he was imprisoned for having assisted two political prisoners to escape, and during his confinement he determined to devote his life henceforth to prison reform. With this object he visited the galleys and chief prisons in France, and in 1846 made a tour through the prisons of Belgium and Germany. Besides numerous works on this and kindred subjects, such as *Voyage en Belgique*, *Voyage en Prusse*, *Hambourg*, *ses Prisons et Hospices*, he also published in 1846 an account of part of the reign of Louis Philippe (*Dix Ans à la Cour du Roi Louis Philippe*).

***Appian**, ADOLPHE, French painter and engraver (b. at Lyons, 1819), showed a predisposition for art, and became a pupil of

Corot and Daubigny. His first appearance at the Salon was in 1835 with *Roche dans l'île d'Aleine*, and then was absent from its walls for ten years, when he exhibited, in 1855, *Une Idylle*. After that he was a constant exhibitor. He has seldom quitted his native town, unless for short excursions into Savoy, and he appears to derive special inspiration from the region watered by the Rhone. He obtained a medal in 1868 for two paintings and two charcoal drawings. These were:—*Temps Gris, Marais de la Burbanche, Bords de Furon en Octobre à Rouillon, and Environs de Rochefort and Marais de Virieu-le-Grand*. Many of his etchings have been engraved.

Appleton, CHARLES EDWARD CUTTS BIRCH (b. 1841, d. 1879), first editor of the *Academy*, was born March 16th, 1841, and educated at the grammar-school at Reading, where his father was head-master. He went to Oxford in 1859, where he became successively scholar and fellow of St. John's College, and graduated B.A. 1863, and D.C.L. 1871. After his Bachelor's degree he spent some years in foreign travel and study at German universities, and on his return was appointed lecturer on philosophy at St. John's. He was then and always a great reader, and his special delight was the philosophy of Hegel, viewed from an English theological standpoint; but his energies were most strenuously devoted to the encouragement of learning for its own sake, and he was the chief promoter of the movement for the "endowment of research," on which he and some kindred workers published a volume of *Essays* in 1876. In 1869 he founded the *Academy*, "a monthly record of literature, learning, science and art," of which the first number appeared Oct. 9th, and of which Appleton remained editor till his death. In 1875 he visited America, where he interested himself in the question of international copyright. His health, however, was already suffering from the heavy strain of his editorial and other labours connected with the *Academy*, and he was ordered to travel. A tour in Egypt and the Levant in 1877-8, much as he enjoyed it, did him little good, and on a second visit to Egypt in 1879, he died at Luxor, Feb. 1st.

The authority for the life of Appleton is Dr. Appleton: *his Life and Literary Relics*, by J. H. Appleton and A. H. Sayce; and an appreciative article by J. S. Cotton, his successor in the *Academy*, in the *Dictionary of National Biography*.

***Araby, AHMED PASHA**. 'Araby the Egyptian (b. 1839), the son of the Sheykh of Horriet Rizk, a village of the Sharkiyeh province, in the Delta, claims descent from the Prophet Mohammed. Educated first at a school founded by his father in his own village, 'Araby entered the military school at Cairo in 1853, whence he passed into the army

under Sa'id Pasha, and, after serving in Abyssinia and Soudan, was rapidly promoted to be lieutenant-colonel—a rank which no native Egyptian had before attained—and full colonel at the beginning of Tewfik's reign, in 1879. 'Araby took part in the early national movement of 1880. With two other colonels—'Aly Fehmy and 'Abd-el-Al—he led the first military demonstration in support of army reform, in Jan., 1881. Arrested by Riaz, and forcibly released by his fellow-soldiers (Feb. 1st), he became the acknowledged spokesman of the National party, and was charged in the following September to demand a constitution for the people of Egypt. He headed the second military demonstration of Sept. 9th, when his three demands—for the fall of Riaz, an increase of the army, and a liberal constitution—were accepted by the Khedive. Now master of the situation, he was named Under-Secretary for War in January, 1882, and on the resignation of Sherif Pasha, Feb. 2nd, he became Chief Secretary for War in the new Constitutional Ministry, which resigned office May 27th, but he was reinstated two days later, in deference to the popular feeling, as Minister of War—a post he held till after the bombardment of Alexandria. At this time the Khedive's acceptance of the ultimatum created a good deal of popular excitement, and 'Araby made himself responsible for the maintenance of order. His services were recognised by the Porte in the promotion to marshal's rank and the decoration of the Order of the Mejdidiyeh, Garter of Islam, from the Sultan. From July 15th to Sept. 13th, 'Araby Pasha conducted the defence of Egypt, as commander-in-chief, under authority from the Provisional Government of Cairo. He defended the lines of Kafr Dower, raised an army of 60,000 zealous but untrained volunteers, but (it is said, from public-spirited motives) neglected to block the Suez Canal, from which side Sir Garnet Wolseley attacked and defeated him, carrying his lines of Tell-el-Kebir, Sept. 13th, 1882. On the arrival of a troop of English horse at Cairo, 'Araby surrendered to General Drury Lowe, was thrown into prison, and arraigned for trial; but by arrangement with Lord Dufferin the case was not heard out. 'Araby was induced to plead guilty to rebellion, and to accept perpetual exile, on parole, to Ceylon. He left Egypt with five of his fellow-Nationalists on Dec. 24th, 1883. 'Araby possesses many of the qualities of the true patriot. His official career was unstained by selfish motives. Neither he nor any of the chief leaders of his party profited pecuniarily by their tenure of power. He had the patriot's tongue, and was never weary of discoursing, with rare eloquence, of liberty and justice and the brotherhood of man. His unprecedented popularity in Egypt, too, is evidence of his sincerity and earnestness. A

peasant born, he sympathised throughout with the fellahéen, and took to himself as his noblest title the surname of El-Masry, "the Egyptian," and he is the first true-born Egyptian who has held office under the Turkish *régime*. In character he has shown himself humane, large-minded, and sincere. A devout Mohammedan, he is yet no fanatic, and he belongs to the school of practical politicians who look to social reform rather than to conquest for the restoration of Mohammedan prosperity. He has expressed himself in favour of the education of women, the abolition of slavery, and universal toleration for all creeds.

From personal knowledge, and information supplied by *Araby*. [W. S. B.]

***Arago, ÉTIENNE** (b. 1802), French dramatist and politician, is a brother of the celebrated astronomer. He has written a large number of pieces, principally vaudevilles, with collaborateurs, and in 1829 became director of the Théâtre de Vaudeville, but the experiment was financially disastrous. He also took part in several journalistic ventures, and was editor of the old *Figaro*. He played a prominent part in the revolutionary movements of his time, and in the course of that of 1848 he, as the head of the Post Office, introduced the cheap postal system into France. Owing to his opposition to Louis Napoleon, he was compelled to fly into exile, and was sentenced, in default, to transportation. He returned to France in 1859, and in 1870 was nominated Mayor of Paris by the Government of National Defence, but resigned on the occasion of the riot of Oct. 31st, having unwisely promised the mob, in the name of the Government, that the municipal elections should speedily take place. In 1871 he declined to take his seat as deputy for the Pyrénées Orientales, on the plea of age, and retired into private life. He was appointed archivist to the Ecole des Beaux-Arts in 1878.

Arago, FRANÇOIS (b. 1786, d. 1853), a celebrated French astronomer, physicist, and politician, was born at Estagel, near Perpignan, in the department of the Eastern Pyrenees. After a preliminary training at the Municipal College of Perpignan he was sent to the Polytechnic School of Paris. In 1804 he was appointed secretary of the Observatory, and two years later was deputed to assist Biot in measuring that portion of the arc of the meridian between Barcelona and the Balearic Isles. To accomplish this task, the two *savants* established their camp on the summit of Mount Galatzo, in the Eastern Pyrenees, and lived there for many months, communicating with their Spanish collaborateurs across the Mediterranean in the Isle of Ivica by means of signals. Before their labours—which were frequently interrupted by storms—were quite completed, Arago had to return to France. But by this

time war had broken out between Spain and France, and the ignorant country people began to suspect that the beacons lighted on the mountain summit were signals to the invading army. So infuriated, indeed, did this suspicion make his neighbours, that it was with great difficulty he succeeded in reaching Majorca. At last, escaping from the island in a fishing-boat, he reached Algiers in the guise of a pedlar, and, by favour of the Dey, procured a passage for Marseilles. But on the passage he was captured by a Spanish cruiser and sent to the hulks at Palamos. After a time, however, through the intercession of the Dey of Algiers, he was freed, and sailed once more for France; but almost as he was entering the port of Marseilles the vessel on which he was a passenger was drawn across the Mediterranean to the coast of Algeria. But the former Dey who had befriended him was dead, and his successor, a ferocious tyrant, received the Christian by putting him on the list of his slaves, intending to employ him as interpreter. By the intercession of the French Consul he was freed from a bondage which was, however, only nominal, and once more set out for France. While in quarantine at Marseilles he received a letter from Humboldt congratulating him on the end of his labours, which communication was the beginning of a friendship which lasted for forty years without a break. As a reward for his sufferings, the Academy of Sciences suspended their rules, in order to elect him, though only twenty-three, a member in place of Lalande, while the Government appointed him professor of analytical mathematics in the Polytechnic School. For the next twenty years his career was comparatively tranquil. Astronomy, magnetism, galvanism, and the polarisation of light, were among the subjects investigated, and in 1812 he commenced a course of lectures on astronomy which created quite a furore in Paris. In 1816 he joined Gay-Lussac in establishing the *Annales de Chimie et de Physique*, and in the same year visited England, where his researches, and especially the confirmation of the undulating theory of light which he had just made, enabled him to make the acquaintance of the principal men of the day. His attention was now turned to electricity, and in 1825 his discovery of the "development of magnetism by rotation" obtained for him the Copley medal of the Royal Society of London, and in 1834, when he next visited us, still more signal honours from the Universities of Edinburgh and Glasgow; for during the years 1818-19 he had, again in company with Biot, executed along the coasts of France, England, and Scotland, certain geodetic observations ordered by the Board of Longitude. They also measured the length of the seconds pendulum at Leith and in Unst, one of the Shetlands, which service led to Arago's being chosen a member of the Board of Longitude. In 1830 he was

elected Perpetual Secretary of the Academy, and during his twenty-three years' tenure of that office wrote the eloquent *éloges* of the deceased members. Arago was always a keen politician, but up to the year 1830 he had not interfered much with the affairs of State. The first Emperor had bestowed on him special marks of favour, and at a time when Napoleon proposed that he and Monge should explore the New World he pointed out to the Emperor that the inevitable march of the allies on his capital was a matter worthy of far more consideration. As for himself, he absolutely refused to study science so far from home at a time "when France might perhaps lose its independence." But in 1830 he took a prominent part in the July revolution, and was elected a member of the Chamber of Deputies for Perpignan, and took his place there as an adherent of the Extreme Left. In 1848 he was appointed Minister of War and Marine in the Provisional Ministry. Nevertheless, during its life of four months, he vigorously resisted the proposed measures of the Socialists, preferring the Constitution of the United States as the model for the new Republic, and by his popularity in the districts of the Eastern Pyrenees, prevented an uprising of the discontented populace. After the *Coup d'État* he refused to take the oath of allegiance, and the Emperor, in a letter of the most complimentary character, declined to permit this fact to in any way affect the position he occupied. He did not, however, long survive the end of his dream. Energetic, social, and fond of fame, dictatorial in his conduct in the Academy, apt to be almost unfair where the rival claims of a Frenchman and of a foreigner were concerned, Arago was eminently unselfish. With ample opportunities to become rich, and to amass offices on his person, he was all his life poor, his income never, it is said, exceeding £500 per annum. Money he cared for only in so far as it helped him to educate his family and to pursue his chosen labours, and he refused to accept any pay for the period in which he was minister.

Arago's *Œuvres* in 17 vols. (1854-1862), edited by J. A. Barral, contain all that he cared to preserve, while there are English translations of many of his memoirs and *éloges*. See also his *Autobiography*, translated by Baden Powell (1855). [R. B.]

***Arago, FRANÇOIS VICTOR EMMANUEL** (b. 1812), French politician, is a son of the famous astronomer. At first he tried his hand at literature, but afterwards took to the law, and was called to the bar in 1837. He played a prominent part in the Revolution of 1848, and was despatched to Lyons with the title of Commissary-General of the Republic. The tax that he levied there for the support of the national workshops made him extremely unpopular. In 1849 the Executive Commission sent him as plenipotentiary to Berlin, and he exerted himself on behalf of the Poles of

Posen. After the *Coup d'État* of Dec. 2nd, 1852, he retired for the time from public life. In 1869 he was returned to the Legislative Assembly, and after the fall of the Empire in 1870 he became a member of the Government of National Defence as Minister of Justice, and continued to hold office until Feb., 1871, when he was dismissed by M. Thiers, whom, however, he subsequently supported in the Assembly. In 1876 he was elected a Senator for the Pyrénées Orientales.

Arany, JANOS (b. 1819, d. 1882), Hungarian poet, was the son of a peasant, and was educated for the Church, but in 1840 was appointed notary at Szalonta. His satire on the *Lost Constitution* (1843), followed by *Toldi* (1847), a trilogy on a purely Hungarian subject, soon made Arany the idol of the populace. His subsequent efforts, however, among which was the *Conquest of Murany* (1848), were not so successful. He became successively professor of literature at Nagy Kőrös, and editor of a paper at Pesth, and was a member of the Academy of Hungary.

***Arch, JOSEPH** (b. 1826), the leader of the agricultural labourers' movement, was born at Barford, in Warwickshire. His boyhood was spent in the fields, and he was almost entirely self-educated. At the instigation of his wife, the daughter of a mechanic, he acquired some knowledge of logic, mensuration, and surveying. He preached for some years among the Primitive Methodists. When, in 1872, the agricultural labourers' movement for higher wages began in Warwickshire, Arch was requested to become its leader, and in the same year he was chosen the first president of the Agricultural Labourers' Union. After a tour through England, during which he addressed an enormous number of meetings, he went to Canada with Mr. A. Clayden, with the object of making arrangements for extensive emigration, and next visited the United States. In 1880 Mr. Arch unsuccessfully contested the borough of Wilton, but in 1885 he was elected M.P. for North-West Norfolk. He lost his seat in 1886.

F. G. Heath, *The English Peasantry*.

Archer, THOMAS (d. 1848), actor and dramatist, made his first appearance at Drury Lane in 1823, after some experience in the provinces. He began with subordinate characters in revivals of Shakespeare and in melodrama. After two years in London he went to the United States, where he became manager of several theatres in succession. After returning to England, he conducted a company through Belgium and Germany. He was afterwards employed at Drury Lane and Covent Garden. He wrote several fairly successful dramas and extravaganzas, such as *Asmodeus*, an adaptation from the French of Scribe, *The Colours of Margaret*, and *Blood Royal*; or, *the Crown Jewels*.

***Archibald, THE HON. ADAMS GEORGE**, Canadian statesman (b. 1814), having attained high distinction at the bar, was delegate to England in 1857, on the question of the union of the North American Provinces; and again in 1866, to arrange the terms of Confederation. From 1870 to 1873 he was Lieut.-Governor of Manitoba and the North-West Territories, and has since been appointed Lieut.-Governor of Nova Scotia.

***Arditi, LUIGI**, musical composer (b. 1822), studied music at the Conservatoire of Milan, where he learned the violin. In 1839 he began to play at concerts, and in 1841 he succeeded in getting his opera, *I Briganti*, played at the Conservatoire, Milan. He led the orchestra in several Italian opera-houses, and afterwards in America, where he also gave concerts, at Havannah and New York. Here he also wrote his opera *La Spia*, which came out in 1856. His next move was to London, where he conducted at Her Majesty's (from 1857 to 1878), which was considered to have, under his bâton, one of the finest orchestras in Europe. He gave several successful concerts in London. He has published some duets for violin and piano, a sextuor for stringed instruments, etc. His waltzes, especially *Il Bacio*, have been exceedingly popular.

***Areschoug, JOHAN ERHARD** (b. in Gothenborg, 1811), is a Swedish botanist of the first rank. After studying and graduating Ph.D. in Lund, he was in 1858 appointed to succeed the elder Fries as professor of botany in Upsala. His researches are purely technical, and relate for the most part either to Scandinavian botany—for the purpose of studying which he made many journeys through Sweden and Norway—or to the Marine Algae. The chief of his separate works are: *Symbolæ Algarum Scandinaviæ* (1838) and *Phyceæ Marinæ* (1850). He has lately retired with the rank of Emeritus Professor, and at present resides in Stockholm. There is another Professor Areschoug, a son of the preceding, who fills the botanical Chair in Lund.

Arezzo, TOMMASO, Cardinal and statesman (b. 1756, d. 1833), was the grandson of Arezzo (Aretius), historian to Charles V. Having been educated in Rome for the Church, he held various positions under Pius VI., was appointed Archbishop of Seleucia, in Syria, in 1800, and next year sent as Ambassador-Extraordinary to the Court of St. Petersburg, in order to effect a union with the Greek Church. Negotiations were cut short by the death of Paul I. of Russia, and Arezzo retired to Dresden, whence he was summoned by Napoleon in 1807 to act as mediator between France and the Vatican. Being unsuccessful, he was accused of treason, and four years later condemned to death. But having escaped to Sardinia, he became the intimate friend of Victor Emmanuel I. In 1815 he was created

Cardinal by Pius VII., and in 1831 he became Vice-Chancellor of the Church.

Argelander, FRIEDRICH WILHELM AUGUST, German astronomer (b. 1799, d. 1875), and in 1820 became the assistant of Bessel, the astronomer, at Königsberg. He was afterwards director of the observatories at Abo and Helsingfors (1832), and was appointed professor of astronomy at Bonn in 1837. Six years later he published *Uranometria Nova*, a celestial atlas of all the stars visible to the naked eye. In continuation of Bessel's work he further fixed the position of 22,000 stars in the zone 45° to 80° (*Beobachtungen auf der Sternwarte zu Bonn*, 1846). He devoted his later life to observing the variation in the brilliancy and apparent magnitude of stars, and to the demonstration of the theory that the solar system has a progressive motion through absolute space.

***Argyll, GEORGE DOUGLAS CAMPBELL, 8TH DUKE OF** (b. 1823), author and politician, was born at Ardencaple Castle, Dumbartonshire. As Marquis of Lorne, he early became known for his strong personal interest in the controversy about patronage, which for years divided the Presbyterian Church of Scotland, and finally resulted in the secession of the Free Kirk. The Marquis belonged to the "Evangelical" party, and gave a general support to Dr. Chalmers in a series of pamphlets, whilst at the same time he hoped to avert the rupture. On his father's death, in 1847, he became Duke. In 1848 he published *Presbytery Examined*, the last and fullest of his ecclesiastical works, being a critical and historical account of the Scottish Church in the past, together with a few words on its mission and probable future. Turning from theology to politics, the Duke became, and has since remained, one of the most prominent figures in the House of Peers, all the more prominent because it is difficult exactly to define his position. Perhaps he might be described as Whig by family, Liberal by intellect, Independent by nature, and Conservative by inclination. At first he interested himself chiefly in Scottish affairs, especially ecclesiastical, but also spoke on the Jewish emancipation, the Corrupt Practices Bill, and the Repeal of the Paper Duties. In 1851 he was elected Chancellor of the University of St. Andrews, and in the following year took office as Lord Privy Seal under the Earl of Aberdeen, and retained the same position under Lord Palmerston, but at the end of 1856 became Postmaster-General. In 1854 he was elected Rector of the University of Glasgow, and was again Lord Privy Seal in Lord Palmerston's Cabinet of 1859. During the whole of Mr. Gladstone's administration from 1868 to 1874, the Duke was Secretary of State for India; and in the following session he again turned his attention to the ecclesiastical government of

Scotland, giving his earnest support to the Conservative measure for the transfer of the patronage in that Church from individuals to congregations. On the return of the Liberals in 1880, he for the third time held the position of Lord Privy Seal, but early in the following year felt himself obliged to resign owing to disagreement with the Government on certain clauses of the Irish Land Bill, which he maintained tended to destroy ownership altogether. In the land question the Duke, guided by his large experience as an extensive landowner, has always displayed keen interest. In 1877 he wrote for the Cobden Club some observations *On the Important Question involved in the Relation of Landlord and Tenant*. In 1883 he published a letter to Lord Napier and Ettrick, as Chairman of the Royal Commission (Highlands and Islands), containing a full and valuable account of the management of his estates in the Hebrides, especially in the island of Tiree, and in the next year he published an article from the *Nineteenth Century*, on *The Prophet of San Francisco*, which attracted considerable attention by its vehement denunciation of Mr. Henry George's proposed land reform. His Grace has also written a full account of *The Eastern Question, from the Treaty of Paris (1856) to the Berlin Conference (1878)*. But it is perhaps in the field of religious and scientific inquiry, rather than in the field of politics, that the Duke of Argyll's work chiefly lies. His most celebrated book, *The Reign of Law*, was published in 1866, and obtained a wide circulation, being one of the first and most able attempts to reconcile the popular doctrines of Theism, Teleology, and Free Will, with the new scientific method usually connected with Darwin's name. But though the author, accepting certain minor points as beyond dispute, aims at a reconciliation on these, his book is a distinct attack on the main positions of the Darwinian theory, and was replied to as such by Darwin himself in succeeding editions of his works. The principal contentions of the *Reign of Law* were further expanded and illustrated in *The Unity of Nature* (1884), whilst the differences from the extreme Darwinian and Agnostic positions are even more distinctly emphasised. Whatever may be thought of the scientific value of the Duke's conclusions, it is certain that he has done much for the cause of science by his powers of careful observation, and his wide knowledge of the animal kingdom, especially of birds. He has also written a minor work entitled *Primeval Man; an Examination of some Recent Speculations*, and a treatise on *The History and Antiquities of Iona*. He married the eldest daughter of the second Duke of Sutherland in 1844 (she died in 1878); and, secondly, in 1881, the daughter of Dr. Claghon, Bishop of St. Albans, and widow of Colonel Anson.

***Armand-Dumaresq**, CHARLES EDOUARD, French painter (b. 1826), studied under Thomas Couture, and made his *début* as a painter of religious subjects. Among these were his *Christ des Naufragés*, *Saint Bernard Prêchant la Croisade*, and a great canvas in which he has represented *Le Martyre de Saint Pierre*. This work adorns the cathedral of Caen. He has painted also a *Christ* for the Palais de Justice of Paris. He then turned his attention to military subjects, and, with the object of familiarising himself with times of war, he accompanied the French troops in their various expeditions to Italy, Africa, and elsewhere. He painted various subjects from Napoleon's wars, also an *Episode from the Battle of Solferino*, which is placed in the gallery of Versailles. *The Return from Elba*, *The Defence of St. Quentin* in 1870, *The Watch at Austerlitz*, *Cambonne at Waterloo*, are the names of a few others. He produced also a collection of designs for military uniforms, which has been placed in the Museum of Versailles. M. Armand-Dumaresq obtained a medal of the third class in 1861, *un rappel* in 1863, and the decoration of the Legion of Honour in 1867.

Armansperg, JOSEPH LUDWIG, COUNT OF (b. 1787, d. 1853), Bavarian statesman, was born at Kötzing, in Lower Bavaria. Having taken part in the War of Liberation, 1813-14, he was appointed Director and Vice-President of the Rhine District. On the accession of Ludwig I. to the throne of Bavaria, Armansperg was chosen Councillor of State, and next year Minister of Finance (1826). By the severest economy he re-established the financial credit of the country, but, owing to his Liberal proclivities, he was dismissed from office at the beginning of the reactionary period, 1831. Nevertheless, when Otho, Ludwig's second son, was appointed King of Greece by the London Conference, Armansperg sailed in charge of the young Prince as President of the Regency (1833). His administration has been severely criticised for corruption, favouritism towards Bavarians, and dependence on England, but it is certain that during this period Greece as a whole recovered its prosperity with greater rapidity than was expected. In 1837, however, Otho found himself obliged to dismiss his powerful minister, who retired to his estates in Bavaria, where he died.

Allgemeine-deutsche Biographie.

Armellini, CARLO (b. circa 1780, d. 1863), Italian patriot and lawyer, was born in Rome. Throughout life an ardent Republican, he was appointed member of the Triumvirate in Rome (1849), Mazzini and Saffi being his colleagues. When this Provisional Government was overthrown, and the Pope's authority restored through the

treachery of the French troops under General Oudinot, he was driven into exile.

***Armitage**, EDWARD, R.A. (b. 1817), historical and mural painter, was educated in Germany and France. His most eminent English contemporary in Paris was the late John Cross. Mr. Armitage worked under Paul Delaroche, whose studio he entered in 1837. The master selected him as his assistant in the production of the famous *Hémicycle*, which adorns the *École des Beaux-Arts*. His first independent picture was a large canvas, *Prometheus Bound*, which was exhibited at the Paris Exhibition of Living Painters, in 1842. To the Cartoon Exhibition at Westminster Hall in 1843, he sent *The Landing of Julius Caesar in Britain*, which carried off a first-class prize of £300. At a third competition in the same place in 1845, he won a £200 prize for his *Spirit of Religion*. In 1847 Mr. Armitage was again a candidate for honours, and his *Battle of Meane* carried off a first prize of £500. This picture is the property of the Queen. Mr. Armitage then spent a year in Rome, and during our war with Russia he went to the Crimea, and the result of his visit was *The Heavy Cavalry Charge of Balaklava*, and *The Stand of the Guards at Inkerman*. In 1858 he produced a large figure called *Retribution*, symbolical of the suppression of the Indian Mutiny. In all these pictures, boldness and breadth of style are the characteristics. In the Upper Waiting Hall of the Palace of Westminster, he has executed two experimental frescoes, *The Thames with its Tributaries*, and *The Death of Marmion*. He decorated the apse of the Roman Catholic Church of St. John at Islington with noble figures of Christ and the Twelve Apostles, and represented in the same church *St. Francis and his Early Followers before Pope Innocent III.* In 1869 he produced the monochromic series of mural paintings which occupy the walls of University Hall, Gordon Square, in memory of the late Crabb Robinson. In 1867 Mr. Armitage was elected A.R.A.; in December, 1872, R.A.; and in 1875 he was appointed professor and lecturer on painting to the Royal Academy. The following are the names of a few of the many works Mr. Armitage has exhibited on the walls of that institution:—*The Mother of Moses Hiding after having Exposed her Child on the River's Brink* (1860), *Pharaoh's Daughter* (1861), *The Burial of a Christian Martyr in the Time of Nero* (1863), *Ahab and Jezebel* (1864), *Esther's Banquet* (1865), *The Remorse of Judas*, and *The Parents of Christ Seeking Him*, (1866); and so on every year, religious subjects predominating over secular, up to the present date (1885), when his Academy contributions consist of *After the Arena*, *Arcadia*, and *Suggestions for the Decora-*

tion of St. Paul's. In 1876 he exhibited *Phryne*, and in 1878 *Pygmalion's Galatea*. The only year in which he was absent from the walls of the Academy was that of 1880, owing to a winter in Algeria; but the following year he resumed his place upon the walls of the Academy with a large picture of *Samson and Lion*, and an altar-piece in compartments, representing the *Acts of Mercy*. His learning in all that pertains to his profession is of a most exhaustive kind, and his ideas of art are altogether broad and comprehensive. His colouring, however, is scarcely so robust and daring as his draughtsmanship and composition.

***Armstead**, HENRY HUGH, R.A., sculptor (b. 1828), obtained his artistic training at the School of Design, Somerset House, Leigh's School, Carey's School, and the Royal Academy. Long before Mr. Armstead worked monumentally in stone, he enjoyed a well-earned reputation as a designer, modeller, and chaser in silver, gold, and jewellery, as well as a draughtsman on wood. Among his productions in silver, the most important are the *Charles Kean Testimonial*, the *St. George's Vase*, the *Doncaster Race Plate*, and the *Tennyson Vase*. For this last and some other works he obtained a silver medal at the Paris Exhibition in 1855. He designed also the *Pakington Shield*, and for his *Outram Shield* which is always on view at the South Kensington Museum, he obtained the medal from the Exhibition of 1862. His chief work in marble occupies the south and east sides of the podium of the Albert Memorial, Hyde Park, in which he has represented in high relief the chief painters, musicians, and poets of Europe. He has also on the same memorial four large bronze figures of Chemistry, Astronomy, Medicine, and Rhetoric; and that he might the better prepare himself for the efficient carrying out of all this national work, he visited almost every capital in Europe. He also designed the external sculptural decorations in relief of the New Colonial Offices, and statues of Earl Grey, Lord Lytton, Duke of Newcastle, Earl of Derby, Lord Ripon, Sir William Molesworth, and Lord Glenelg. His also are the designs of the carved oak panels beneath Dyce's frescoes in the Queen's Robing Room in the Westminster Palace, illustrating the life of King Arthur and the story of Sir Galahad. The large fountain in the forecourt of King's College, Cambridge, the marble reredos of the *Entertainment of Our Lord*, in Hythe church, Kent, the marble effigy of the late Bishop of Winchester, in Winchester Cathedral, and many other works, are the fruit of his skill and invention. He was elected an Associate of the Academy in 1875, and an Academician in 1879.

***Armstrong**, GEORGE FRANCIS (b. 1845),

born in the county of Dublin, was educated partly at Dublin University and partly in Jersey. In 1865, on the death of his brother Edmund, he was appointed to succeed him in the Presidential Chair of the Philosophical Society. In 1871 he was appointed professor of history and English literature in Queen's College, Cork, and in 1882 he was presented with the degree of Doctor of Literature, and was elected a Fellow of the Royal University of Ireland. Mr. Armstrong has published *The Life and Letters of his brother, Edmund John*, and also his *Poetical Works*. He himself has written a volume of *Poems, Lyrical and Dramatic*, amongst which is the profound love-poem called *Sundered Friendship*; also *Ugoue: a Tragedy, The Tragedy of Israel, A Garland from Greece*.

Armstrong, JOHN (b. 1784, d. 1829), an eminent physician and medical writer, was the son of the superintendent of some glass-works in Ayres Quay. He studied medicine in Edinburgh, and in June, 1808, took the degree of M.D., when he began practice at Bishop Wearmouth. In 1811 he was elected physician to the Sunderland Infirmary, and in 1816 published a work on fevers, which so established his reputation as a sound physician that in 1818 he was induced to settle in London. Here he soon obtained a large practice, and was elected physician to the Fever Hospital, and on the foundation of the Webb Street (Borough) School of Medicine, he gave lectures on "Materia Medica" and the "Practice of Physic." In 1826, having differences with the other lecturers at Webb Street, he joined Dr. Boot and Mr. Bennett in establishing a rival school in Dean Street, though soon afterwards he relinquished all connection with it, the acute consumption under which he was labouring putting an end to his career at the age of forty-five. In diagnosis Dr. Armstrong acquired a great reputation, and the works in which his observations are recorded may even yet be studied with advantage. His prelections, which originally appeared in the *Lancet*, Aug., 1825, were reprinted in 1834, under the title of *Lectures on the Morbid Anatomy, Nature, and Treatment of Acute and Chronic Diseases*. In some biographical accounts he is confounded with another John Armstrong (1709-1779).

***Armstrong, SIR ALEXANDER** (b. 1812), was educated at Trinity College, Dublin, and at the University of Edinburgh. In 1842 he entered the medical department of the Navy, and served for many years in various parts of the world, and for five consecutive years in the arctic regions, being surgeon of H.M.S. *Investigator* during the discovery of the North-West Passage by Sir Robert McClure in 1853-54. Sir A. Armstrong has been presented with the Arctic and Baltic medals,

and also with Sir Gilbert Blane's medal, and for some years was Director-General of the Navy Medical Department. He was knighted in 1871, and is honorary physician to the Queen and Prince of Wales. He has written *A Personal Narrative of the Discovery of the North-West Passage* (1857), and *Observations on Naval Hygiene and Scurvy, more particularly as the latter appeared during a Polar Voyage* (1858).

***Armstrong, SIR WILLIAM GEORGE**, an English mechanical inventor and engineer (b. 1810), is the son of a merchant and alderman of Newcastle-on-Tyne, and though the boy's inclinations were all for mechanics, he was persuaded to adopt the law as a profession, and, indeed, soon entered a firm of solicitors. By 1838, however, the natural bent of Armstrong's mind was bursting the bonds of red tape, for in the *Mechanics' Magazine* in the course of the year appeared a suggestion by him for an important improvement in hydraulic machinery, which he called an "accumulator." The hydraulic crane was another of his inventions, first explained in a lecture delivered before the Literary and Philosophical Society of Newcastle, in Nov., 1845. He now, by the aid of some friends, erected one of his hydraulic cranes on Newcastle quay, and so speedily demonstrated its superiority to all others in existence that almost before knowing it he had become a professional engineer, though still retaining a nominal connection with the law. Five years earlier he had invented the hydro-electric machine, which in 1846 procured his admission into the Royal Society, and has ever since, in one form or another, proved a powerful means for producing frictional electricity. In that year the die was cast, and the Elswick Engineering Works established. Henceforth the law knew the amateur mechanic no more, and in future the manufacture of heavy ordnance and hydraulic cranes claimed his attention. The Crimean War turned the minds of engineers to lethal weapons, and in Armstrong's case resulted in the invention of the breechloading cannon so widely associated with his name. This gun was finally adopted by the Government, though not before the inventor had to surmount vexatious delays and the *vis inertiae* of vested interests and official dislike to an "outsider." On Armstrong presenting the patents to the State he was knighted, and appointed chief engineer of rifled ordnance. The next few years of his life were engrossed in improving his gun, and extending the principle on which it was constructed to cannon of all sizes. The result was that three thousand of them were, between 1859 and 1862, introduced into the service. But by 1861 there began to be a revolution in favour of the old muzzle-loading smooth-bore guns, which at short ranges, and when of less

calibre, were discovered by Armstrong himself to be more effectual in penetrating iron plates than the rifled cannon, and, moreover, it was complained that in actual warfare the Armstrong gun often caused injury to those serving it. The result was that the Government ceased to use it. Armstrong then resigned his appointment, and, returning to Elswick, has ever since contrived to turn out heavy ordnance for all who choose to buy; his guns, despite the dislike of the English official class to them, being in daily use in all countries, from Russia to the Bonney River, where they may be seen in possession of the palm-oil plantations of that unhealthy region. In 1863 he presided over the Newcastle meeting of the British Association, delivering on that occasion an address on the exhaustion of the coal fields, which led to the appointment of a Royal Commission on the subject. The Elswick works extend for nearly a mile along the Tyne, cover forty acres of ground, and employ more than three thousand workmen. Sir William is a C.B., an LL.D. of Cambridge (1862), a D.C.L. of Oxford (1870), and is a knight of various foreign orders, and member of several Continental academies and learned societies. He has also filled the office of president of the Institution of Mechanical Engineering.

Arnaud, FANNY (b. 1802, d. 1870), better known in this country under her married name of Mme. Charles Reybaud. Her husband was an author of some note, and when in Paris she contributed stories to the *feuilleton* of his journal, the *Constitutionnel*, and also to the *Revue des Deux Mondes*. Her chief works are *Le Moine de Chablais*, *La Dernière Bohémienne*, *Le Cabaret de Caubert*, and *Les Anciens Couvents de Paris*, the last of which has been translated into English.

Arndt, ERNST MORITZ (b. 1769, d. 1860), German poet, became professor at Greifswalde in 1806. He set himself, in company with many other thinkers, to work at this time to form a national resistance to Napoleon, and his patriotic songs, *The Spirit of the Age*, *Where is the German Fatherland?* and many others, were immensely popular. In 1812 he published a tract on the *Landwehr* and *Landsturm* (the militia and *levée en masse*). In 1818 he was appointed professor of history at the University of Bonn, but was soon suspended because of his liberal opinions. In 1840, however, he was restored to his Chair, and in 1848-9 was a member of the National Assembly at Frankfurt.

E. M. Arndt, *Autobiography*; W. Neumann, *E. M. Arndt; eine Biographie*.

Arnim, E. VON and L. A. VON. [BETTINA.]

Arnim, HARRY KARL EDOUARD, COUNT VON (b. 1824, d. 1881), Prussian diplomatist, was the son of Count Heinrich von Arnim (q.v.), and was born in Pomerania. Having studied at the University of Berlin, he entered the

diplomatic service, and after occupying subordinate positions at Munich and Vienna, and being sent as extraordinary envoy to Lisbon in 1862, he was in 1864 appointed ambassador and plenipotentiary at Rome, a position which he held till the fall of Pius IX.'s temporal power in 1870. During the time of the Œcumenical Council he made himself prominent by his support of Dr. Döllinger and his party, and by his resolute opposition to the doctrine of Infallibility. For these services his Government bestowed on him the title of Count, and in March, 1871, he was summoned to Brussels, to take part in the negotiations which resulted in the Peace of Frankfurt. In the same summer he acted as the first representative of Germany in France since the war, and early in the following year was appointed Ambassador of the German Empire in Paris. It soon became evident, however—and the evidence is confirmed by published correspondence—that, in spite of their early friendship, the Count was no longer in favour with Prince Bismarck. The alleged causes of offence were mainly the three following: obstruction to the immediate payment of the war indemnity; connivance at the warlike manifestoes of certain French prelates; and, above all, intrigues with the Royalist parties, tending to bring about the fall of Thiers and the ministry in May, 1873. There can be no doubt that Bismarck feared that the success of his extremely difficult line of policy towards France at this time was being frustrated by the independence of a man who was likely to be a dangerous rival. Whatever was the reason, in the spring of 1874 Arnim was recalled from Paris, and sent into honourable exile at Constantinople. But he never entered upon his new position, for during the summer his Roman despatches and correspondence with Dr. Döllinger four years before were published in Vienna, and, in spite of denials, he was detained in Germany on half-pay. Soon afterwards, Prince Hohenlohe, his successor in the Parisian Embassy, accused him of having purloined a large number of important State documents, referring to the Papal succession, from the archives of that embassy. In October he was arrested near Stettin, and imprisoned at Berlin. The trial lasted three months. The Count produced some of the documents, and pleaded that others were his own private property, but was condemned to three months' imprisonment and costs. He appealed against the sentence, but on a second trial in June, 1875, the term of imprisonment was increased to nine months. At this time Count Arnim was living at Lausanne, ostensibly for the sake of his health. A few months later, a pamphlet entitled *Pro Nihilo* appeared anonymously, and it was at once assumed that he was the author. It is an elaborate defence of his conduct during his tenure of office in Paris. It is written in a tone of violent abuse, and

attributes his fall entirely to Bismarck's irritable jealousy and petty spite, basing its accusations chiefly on an account of a stormy interview in Sept., 1873, during which Bismarck is said to have charged Arnim with conspiring with the Empress to thwart his policy. Such an attack upon the Government naturally attracted much attention at the time, and in the spring of 1876 the Count was prosecuted on the charge of high treason and insolent libel against the Emperor and Chancellor. The trial lasted till October, 1877, when Count Arnim was sentenced, in absence, *per contumaciam*, to five years' penal servitude. After this he prudently continued to live in exile. In the two following years, 1878 and 1879, he published two pamphlets, *Der Nuntius kommt* and *Quid faciamus nos?* in which he criticised the attitude of Prince Bismarck towards the Ultramontane party during the *Kulturkampf*, after the enactment of the Falk Laws. But the change of tone in these works from the animus of the earlier pamphlet is so marked that they seem almost intended to prepare the way for a reconciliation. All his appeals, however, were in vain; even his offer to return and stand his trial in person was refused, and he died in exile.

Chas. Lowe, *Prince Bismarck: an Historical Biography*.

Arnim, HEINRICH ALEXANDER, COUNT VON (b. 1798, d. 1861), Prussian statesman, entered the diplomatic service in 1820, and was attached to the legations of several European countries. In 1834 he was attached to the Ministry of Foreign Affairs at Berlin. In 1840 he was sent as ambassador to Brussels, in 1846 was transferred to the embassy at Paris. In 1848 he came to Berlin, and tried to get Prussia to take the lead in proclaiming the unity of Germany, and summoning a German Parliament. In March of this year Arnim was made Minister of Foreign Affairs. His tenure of the office, however, lasted only a few weeks. In 1849 he was chosen to represent the Schleweidnitz district in the Prussian Chamber, where he joined the German Opposition party.

Arnim-Boytzenburg, ADOLF HEINRICH, COUNT (b. 1803, d. 1868), Prussian statesman, born at Berlin, early distinguished himself by his administration of minor provincial offices, and on the accession of Friedrich Wilhelm IV., in 1840, was appointed President of Posen, in the hope that he might conciliate the religious and national malcontents of Poland. Though his endeavours were not altogether successful, he was raised in 1842 to the position of Prime Minister of the Interior, and for the next three years was the king's chief adviser, and the principal, though often unwilling, agent of his projected reforms. But under a master who theorised and hesitated, who rejected his scheme of constitution, strove after ideals no

longer possible, and showed his sentimental affection for his subjects by measures of despotic repression, the Count found his position growing daily more difficult, and though he bore the brunt of increasing unpopularity with generous self-denial, he was obliged in 1846 to give in his resignation. Next year the king was forced to issue his patent offering a Constitution, but it was now too late. The revolutionary movements of 1848 began. The king issued his patent of March 18th, and, abandoned by his Ministers, appealed again to Count Arnim. Whilst awaiting his decision the king gave the order for the withdrawal of the troops, an order that dealt the death-blow to the old Prussian monarchy. Next day the Count took office, and though the refusal of Camphausen and the Liberal leaders to act in concert with him allowed him to hold it for only ten days, he secured the maintenance of the popular Constitution by the "Pledges" of March 22nd. Summoned to the National Assembly in Frankfurt, he declared the impossibility of Prussia's entrance into a German Confederation on terms of mere equality or subordination. At the end of the year, and again in 1849, he was elected to the Second Chamber, taking his seat on the Right Centre. He became a member of the Upper House (*Herrenhaus*) in 1853, and the rest of his life was chiefly occupied in defending the just rights of the landowners (*Junkers*) and defining their duties.

***Arnold, ARTHUR** (b. 1833), politician and social reformer, first became prominent during the period of the cotton famine, being appointed assistant commissioner under the Public Works Act (1863), and continuing to reside in Lancashire for the next three years. In 1864 he published a large work on the *History of the Cotton Famine*. He then travelled for two years in the east of Europe and in Africa, and on his return published an account of his tour, entitled *From the Levant*. Having been appointed first editor of the *Echo*, he succeeded in raising his new paper to a large circulation and wide influence. In 1873 he contested Huntingdon unsuccessfully. In the following year he was invited to become a candidate for Northampton, but declined; and in 1875, having resigned his position on the *Echo*, he undertook a journey through Russia and Persia, of which he published an account, *Through Persia by Caravan*, in 1877. In 1879-80 he published *Social Politics*, a reprint of articles for magazines, advocating the main reforms of the Liberal programme; and *Free Land*, in which he urges the abolition of the custom of entail, and of all difficulties in the way of land transfer and registration. In 1880 he was returned as member for Salford, and was elected chairman of the Greek Committee, to extend the

boundaries of the Hellenic Kingdom, and in 1882 he brought forward in Parliament the resolutions in favour of uniformity of franchise and redistribution of political power. In 1885 he was defeated for the North division of Salford.

***Arnold, EDWIN** (b. 1832), famous as a poet, and well known as a journalist, was educated at King's School, Rochester; King's College, London; and at Oxford. He won the Newdigate prize in 1852, and graduated in honours two years later. He was soon afterwards appointed principal of the Government Sanscrit College at Poona, in the Bombay Presidency. He resigned the post in 1861. From that time forward he contributed largely to periodical literature, often on Indian questions and Sanscrit literature. His connection with the *Daily Telegraph* began on his return from India in 1861. Of this newspaper he was editor for many years, and as editor enjoyed the distinction of having arranged, on behalf of the proprietors, the expedition of Mr. George Smith to Assyria, and that of Mr. Henry Stanley to Africa. His articles, particularly at the time of the Russo-Turkish War, have attracted great attention. His chief claim to public notice is in the character of a poet. Opening up—for the first time since Sir William Jones, with any largeness of research or popularity of treatment—the vast treasures of Sanscrit poetry, he has acquired an individual reputation, not only as a writer of melodious English verse, but as an imaginative poet of fine feeling and rare culture. His *Light of Asia* (1st edition 1879) very speedily passed through no fewer than twenty-six editions in England alone, and its popularity in America has been no less remarkable. Only second to the success of this extraordinary book has been that of its companion volumes. Judged by the popular voice, there can be no question that Mr. Arnold's place is in the front rank of modern poets. Among his other works are *Grielda: a Tragedy* (1856), *The Poets of Greece* (1869), *Pearls of Faith* (1883), *Indian Idylls* (1883), *The Secret of Death, and other Poems* (1885), *The Song Celestial* (1885).

***Arnold, MATTHEW** (b. 1822), eldest son of the famous public-school teacher, the late Dr. Arnold of Rugby (q.v.), and famous himself as poet, scholar, critic, and theologian, was born at Laleham, near Staines. He was educated at Winchester, Rugby, and Balliol College, Oxford. Winning the Newdigate prize for English verse in 1843, he graduated in honours a year later, and was elected Fellow of Oriel College in 1845. From 1847 to 1851 he acted as private secretary to the late Lord Lansdowne. In 1851 he was appointed Lay Inspector of Schools under the Committee of Council on Education. In 1859, as foreign assistant-commissioner to the commissioners appointed to inquire into

the state of education on the Continent, he travelled in France, Germany, and Holland, and submitted a report to the Government in 1860. The following year his records were published. His official duties took him to the Continent again in 1865, to procure information respecting schools for the middle and upper classes. In 1868 Mr. Arnold published the results of his researches in a volume entitled *The Schools and Universities of the Continent*. He resigned the official position held with honour for nearly thirty-five years in 1886. Mr. Arnold's activity as a poet began and ended somewhat early in his career. His Newdigate poem, *Cromwell*, was printed in 1843. Five years later the *Strayed Reveller* appeared, signed simply "A." In 1853 the volume *Empedocles, and other Poems*, was published anonymously. The following year a volume, consisting of poems selected from the two earlier volumes, appeared under the author's name. A second series was published somewhat later, and then the volumes of 1848 and 1853 were withdrawn from circulation. The reception given to the new poet was at first cordial, but not enthusiastic. The *Athenaeum* in 1854 judged his narrative poems to be better than his lyric poems. In some of the latter he was said to have aimed at a simplicity which on proof turned out to be puerility. The *Edinburgh Review* in 1856 was more friendly. For combined culture and fine natural feeling in the matter of versification, the northern critic found no living poet superior to Mr. Arnold. His reputation as a poet grew so rapidly that in 1857, three years after his first acknowledged volume, he was elected professor of poetry at Oxford. He held the Chair until 1867. A tragedy after the antique, *Merope*, published in the year of his election to the Oxford professorship, makes up, with *New Poems* (1869), almost the whole sum of his poetic labours. As a poet his rank is undoubtedly high. Distinctly a Wordsworthian, not uninfluenced by the neo-romantic movement of the century, he is by no means destitute of individual claims. Perhaps, when the sum of other labours can be justly and impartially computed, it will be a subject of regret that Mr. Arnold's period of poetic activity was almost as brief, and quite as early, as that of Coleridge. In his professorial capacity he produced two series of lectures, which served to establish his position as scholar and literary critic. The first was *On Translating Homer*, published in 1861. The second was on *The Study of Celtic Literature*, published in 1868. Between these two, in 1865, a series of *Essays in Criticism* appeared. As a critic Mr. Arnold probably ranks with the best, not only of our age or century, but of our literature. His method is analytical; his aim is simplicity and lucidity. He has faith in fixed principles, but is not without the insight and sympathy that are necessary to the just application of

rigid canons. In 1870 Mr. Arnold published an essay on political and social criticism, entitled *Culture and Anarchy*, in which, even more than in his other works, his genius for definition is displayed. In 1882 he published *Irish Essays, and Others*. His political sympathies are not with the cause of the people as the people's advocates understand it. With mingled ridicule and indignation he exposes what he deems to be the emptiness of the "middle-class" ideals, the want of delicacy and "sweet reasonableness" in the battle-cries and watchwords of orthodox Liberalism, the paltry insignificance of aim in all party politicians. For relief from political and social evils he chiefly looks to "culture," especially in the form of a higher education for the middle classes, and to a breaking-down of all exclusiveness, whether of dissent or professional caste. It is clear that the vigour of his proposals, especially in recent years, frees him from the charge of political quietism. In 1871 he published an essay on Puritanism and the Church of England, entitled *St. Paul and Protestantism*; in 1873, *Literature and Dogma*; in 1875, *God and the Bible*; and in 1877, *Last Essays on Church and State*. These writings on theological subjects were put forth as helps towards a better apprehension of the Bible. Dealing with the supernatural aspects of Christianity from what was considered a rationalistic standpoint, they were fiercely assailed and ardently defended. No longer able to rest content with the earlier dogma and interpretation, but sensitively shrinking from the blundering assurance of an unsympathetic rationalism, he, in his own words, wanders "between two worlds, one dead, the other powerless to be born." The keynote of his work is a yearning for calm peace and beauty in a restless and hideous world; but trusting to the gradual increase of sweetness and light, and to the final authority of the remnant or elect, he refuses either to despair or to close his eyes to the reality of things as they are. Mr. Arnold's minor publications are too numerous for mention. A lecturing tour in America in 1883-4 resulted in two lectures, one on *Emerson* and the other on the principle and value of *Numbers*. Mr. Arnold received the honorary degree of Doctor of Laws from Edinburgh in 1869 and from Oxford in 1870.

ARNOLD, THOMAS (b. 1795, d. 1842), headmaster of Rugby, was born at East Cowes, in the Isle of Wight, and was sent to Winchester College at the age of twelve. Four years later he was elected to a scholarship at Corpus Christi College, Oxford, where he joined a small clique of friends, of which John Keble and John Taylor Coleridge were also members. In 1814 he obtained a first class in classics, in 1815 a fellowship at Oriel and the Chancellor's prize for the Latin essay; and in 1817 the Chancellor's prize for the

English essay. He continued to reside on his fellowship till 1819, when, having been ordained, he retired to Laleham-on-Thames, purposing to devote his life to the preparation of young men for the universities. Next year he married Mary Penrose, daughter of the Rev. John Penrose. The eight quiet years at Laleham were chiefly marked by his increasing knowledge of men, especially of the poor, and his introduction to German literature, through Niebuhr's *History of Rome*. In 1827, the head-mastership of Rugby having fallen vacant, Arnold was with difficulty induced to become a candidate, and was elected on the strength of the famous letter from Dr. Hawkins, in which it was prophesied that "he would change the face of education all through the public schools of England." He removed to Rugby in 1828, and this was the centre of his work for the remaining fourteen years of his life. His extraordinary success as a head-master was due first to his wide sympathies and high vitality, secondly to a few simple principles that his example has changed from paradoxes into truisms. His constant endeavour was to raise the standard of duty, and by teaching and example to encourage the pursuit of a healthy religious life. Morality, and not cleverness, was the final aim of education. But the best memorials of his thoughts on Virtue and her all-importance are the six volumes of sermons, published at intervals from 1829, and for the most part preached in Rugby chapel. As a teacher, he looked for promise rather than performance, joyfully welcoming the smallest sign of original thought. He rarely imparted information, but taught by questioning. Whilst strenuously supporting the study of classics as the best basis of education, he was the first to introduce modern languages, modern history, and mathematics into the regular and necessary school course. In his management of the school his first principle was to place entire confidence in the boys themselves. At the same time he gave large powers into the hands of the sixth-form boys, who came more directly under his own influence, and he maintained an organised system of "fagging." Unpromising boys, or those whom he suspected of exercising an evil moral influence, he did not hesitate to remove at the end, or even in the middle, of term. This apparent harshness in individual cases, added to his breadth of mind, raised distrust in the minds of parents and the guardians of the school, so that for a time the numbers diminished. But the chief cause of this temporary unpopularity was his attitude on political and ecclesiastical questions. His views on religion in relation to society were no doubt largely influenced by his long and intimate friendship with Chevalier Bunsen, whom he met in Rome in 1827. In 1829 Dr. Arnold published his

first pamphlet, entitled *The Christian Duty of Conceding the Roman Catholic Claims*. Two years later he started a journal called *The Englishman's Register*, in the interest of the poor, but it was unsuccessful. In 1833 he issued a pamphlet on the *Principles of Church Reform*, hoping to suggest a means of escape from the "calamity" of disestablishment, then thought to be imminent. As a step in the right direction, he proposed the use of the national churches by different sects in succession, an unimportant detail seized upon and magnified by his opponents with jubilant hostility. He watched the growth of the "Oxford party" with apprehension, though interested in it as involving so many of his former friends; but when the movement suddenly developed (about 1836), interest was converted into alarm and disgust, and in an article called *The Oxford Malignants*, for the *Edinburgh Review*, he attacked the Judaisers, as he delighted to name them, with unusual vehemence and bitterness. At the same time his dissatisfaction with Benthamism and the so-called political economy of the day, his opposition to the admission of Jews to the Government of England, his hatred of the impartial infidelity that can afford to patronise the Christian doctrines, his recognition of the narrowness which he thought characteristic of Dissenters, tended to separate him altogether from the main Liberal body. Hence he was assailed from both sides, from Oxford and from London, where he had been invited to become a member of the new University's senate; but, after the rejection of his proposal for a compulsory religious though unsectarian examination, he withdrew with disappointment in 1838. In the midst of his cares of school work and the bitterness of controversy, he nevertheless found time to publish his edition of his favourite author, Thucydides (1830-35), valuable alike for its text and its geographical annotations, and to elaborate the first three volumes of his projected *History of Rome* (1838-43), the two first being chiefly based on Niebuhr, besides several articles on later Roman history published after his death. He also found relief from present troubles in frequent travels abroad and visits to his holiday home of Fox How, near Rydal, where he enjoyed the friendship of Wordsworth. About 1840, partly owing, no doubt, to the extraordinary success of his pupils at the universities, the tide of his unpopularity began to turn. The surest sign of the revulsion was his appointment in 1841 as Regius professor of history in Oxford, and the unusual enthusiasm aroused by his inaugural address. But he had not completed his first year's course of lectures, when, on the last Sunday of the Rugby term, he arose "to tread, in the summer morning, the road of death, at a call unforeseen, sudden!" He died of angina

pectoris, on the last day of his forty-seventh year.

See Stanley's *Life of Dr. Arnold*; and Tom Brown's *Schooldays*, by Thomas Hughes.
[H. W. N.]

Arnold, WILLIAM DELAFIELD (b. 1828, d. 1859), was a son of Dr. Arnold of Rugby. He became a soldier, and was afterwards appointed director of public education in the Punjab. He published a volume of essays *On Social and Indian Subjects*, and is also the author of a novel—*Oakfield; or, Fellowship in the East*, an account of the trials of a young soldier, who in the army endeavoured to live in accordance with the principles of Christianity. He died at Gibraltar on his homeward voyage from India. Some beautiful lines have been written on his death by his brother, Matthew Arnold.

Arnott, DR. NEIL (b. 1788, d. 1874), physician, philosopher, and inventor, was a native of Arbroath. He was educated at Aberdeen, first at the grammar-school (1798-1801), and then at Marischal College, where he graduated M.A. in 1805. During his Arts course he served as shop-assistant to a druggist, and in the year after graduating he acquired what scanty medical knowledge he could find at the ill-equipped college. In 1806 he came to London, and attended classes at St. George's Hospital. In 1807-11 he made two voyages to China as surgeon in an East Indiaman. In 1811 he commenced practice in London. In 1813 he obtained the diploma of membership of the College of Surgeons, and in 1814 he received M.D. from his *Alma Mater*. He became physician to both the French and Spanish embassies, retaining the latter post to the close of his life. In 1838 he was appointed physician extraordinary to the Queen, and he was elected a Fellow of the Royal Society. In 1855 he retired from practice. In 1813 Arnott delivered a course of lectures on natural philosophy and chemistry at the Philomathic Institution, and in 1825 he gave a course on medical physics in his own house. In 1827 the first volume of the *Physics* appeared, and, being received with unprecedented favour, was soon translated into the principal Continental languages. In 1836 Arnott was nominated by the Crown to the senate of London University, and he took an active part in planning the examinations for degrees in medicine (1836) and in science (1859). In 1838 he published *Warming and Ventilation*, in the preface to which he states why he declined to take out a patent for any of his inventions. Above all, he consistently maintained advanced views on education generally. In his *Survey of Human Progress* (1861) he set forth his views on the subject, and followed this up in 1870 by a clever pamphlet. In 1864-65 appeared a thoroughly revised edition of the *Physics*.

(the sixth), with additional chapters. A separate work on *Medical Physics*, intended to contain his medical inventions and views, was never completed. In 1867 he published a remarkable tract on the simplification of arithmetic. Dr. Arnott's numerous inventions grew out of the exigencies of his practice, and his steadily philanthropic attitude of mind. The heat-transferrer was described in the *Physics* (1827). The hydrostatic bed was devised for the relief of a lady patient (1832). The famous close stove was described in a lecture before the Royal Institution in 1836. In 1842 the chimney ventilating valve, the most widely adopted of his inventions, was in extensive use. In 1846 he secured a fresh atmosphere of uniform temperature in Brompton Hospital for Consumption, and in 1849 he devised a ventilating gasometer pump for the new York Hospital. In 1854 he expounded to the Society of Arts the principle of the smokeless grate, and exhibited its working; and he gave a full description of the invention in the new edition of *Warming and Ventilation* (1855). For this invention the Royal Society awarded him the Rumford medal. His improved methods in surgery and medicine, and his inventions for the relief of pain, were numerous and important. In 1855 he was awarded the gold medal in hygiene, etc., at the Paris Exhibition of that year, for his discoveries, the Emperor adding the Cross of the Legion of Honour. We may adopt the words of the committee of jurors:—"Dr. Arnott, by his inventive genius, by his profound knowledge of the physical sciences, of which his useful applications to medicine and to hygiene exceed those of any other man, by the originality of his views and the fruitfulness of his methods, has made for himself a place apart." Dr. Arnott was a zealous pioneer of sanitary reform. He munificently contributed to the promotion of the study of experimental physics in the four Scottish Universities, and in London University (£2,000 each). He was an excellent linguist, and could play on a variety of instruments.

Biographical Memoir of Dr. Neil Arnott, by Professor Bain, in the Transactions of the Aberdeen Philosophical Society, vol. I. (privately printed). [A. F. M.]

ARNOTT, JAMES MONCRIEFF, F.R.S. (b. 1794, d. 1885), a well-known physician, was born at Chapel, in the county of Fife. He was for many years surgeon to the Middlesex Hospital, and professor of surgery in King's College, London. He was one of the council of the Royal College of Surgeons, and also a member of the Court of Examiners of that body, and in 1860 was elected representative of the College in the General Council of Medical Education and Registration of the United Kingdom. Mr. Arnott was the author of various papers upon medical subjects; the

x. w.—3

most valuable is one on the *Secondary Effects of Inflammation of the Veins* (1829).

Arrest, H. L. D'. [D'ARREST.]

ARROWSMITH, JOHN (b. 1790, d. 1873), was one of a family of professional geographers, whose name has been connected with cartography in England for upwards of a century. The first of the name was Aaron Arrowsmith, born at Wenston, in Durham, in 1750. When young, Aaron Arrowsmith came to London, and was employed by Carey the engraver, but soon entering on business for himself, attracted attention by his large chart of the world on Mercator's projection, and by the map on the globular projection, which he produced four years later, accompanied by a volume of explanations. From this period to his death in 1823 his name was regarded as a guarantee of sound work, a fact recognised by the Admiralty in appointing him Hydrographer. At that period the office was not as it is at present—one bestowed on the head of the Naval Department, charged with the production of sea charts. His sons, Aaron and Samuel, kept up the traditions of their father, the elder being the compiler of the *Eton Comparative Atlas*, of a Biblical atlas, and of various text-books of geography at one time extensively used in schools. John, who was for so many years so familiar a personage to all members and *habitués* of the Royal Geographical Society, was their cousin. Like his uncle, he was born at Wenston, and in 1810 joined him in London. In 1834 he issued the *London Atlas*, then the best collection of its kind in existence, and in the course of the next thirty years followed it up with several other excellent publications. Most of the maps in the Geographical Society's publications were by him, and for John Arrowsmith to draft the map of an explorer's travels was regarded as giving his work an additional claim on the regard of the world. His house in Soho, where he resided nearly all his life, was a spot well known to Livingstone and other travellers. Here the genial old gentleman, tall and vigorous, dispensed an unassuming hospitality, and was held in great esteem. He was one of the founders of the Royal Geographical Society, and in 1863 received the patrons' gold medal "for the very important services he had rendered to geographical science." Almost to the last he was at work, and never for a day abated his interest in his beloved science.

ARTHUR, CHESTER ALLAN (b. 1830, d. 1886), twenty-first President of the United States, was born in Franklin County, Vermont. After taking his degree at Union College Mr. Arthur commenced the practice of law in New York, where he soon became prominent in the Republican party, of which he was one of the original members. On the outbreak of the Civil War, General Morgan entrusted

him with the armament and commissariat of the New York troops, a duty which he fulfilled with such promptitude that he rapidly became engineer-in-chief, inspector-general, and quartermaster-general. From 1871 to 1878 he was Collector of the port of New York City. When the Republican party split during the canvass for the next election, Mr. Arthur adopted the "Stalwart" side, and when General Grant was defeated by the "Anti-Stalwart" Mr. Garfield, as Republican candidate for the presidency, Mr. Arthur was nominated Vice-President, that both divisions of the party might be represented on the ticket. Hence, the Republicans having been successful in the election, and President Garfield having died at the hands of an assassin, Mr. Arthur succeeded to the presidency, Sept. 19th, 1881, not without grave misgivings amongst his opponents in his own party and throughout the country in general. After an uneventful tenure of office, he was succeeded in 1885 by Mr. Cleveland.

Arthur, PRINCE. [CONNAUGHT, DUKE OF.]

ARZOUT, ANTOINE MAURICE APPOLLINAIRE COUNT, French statesman and financier (*b.* 1782, *d.* 1858), though he served in a civil capacity in Belgium and on the Rhine under the first Empire, found no difficulty in transferring his support to the Bourbon cause after its triumph, and in 1819 he was appointed Councillor of State and Peer of France. On the outbreak of the revolution of 1830, hoping to prevent further bloodshed, he accompanied M. de Sémonville to St. Cloud, and induced Charles X. to repeal the ordinances. But it was too late. Nevertheless, he held several important positions in the administration of the new Government, and in 1834 was appointed Governor of the Bank of France, a post which he continued to occupy after the revolution of 1848. In 1851 he was a member of the Deliberative Assembly to supersede the Council of State, and in the next year he became a senator. The five different Governments which he faithfully served owed much to his diligence, integrity, and knowledge of finance.

ASBJÖRNSEN, PETER CHRISTIAN (*b.* 1812, *d.* 1885), famous as a collector of folk-lore, a political economist, and a zoologist, was born at Christiania, of parents so poor that they were able to give him only the barest education. In 1833 he had managed to scrape together sufficient means to enter the University of Christiania, but did not graduate for some years later, being obliged to intermit a semester or two in order to earn, as a private tutor, the means with which to pursue his studies. During this time he picked up many traditional tales from the peasantry, but it was not until 1838 that the fruits of these labours were brought before the world. Then, for the first time, he dis-

covered that Jørgen Moe, a rural "pastor," had been engaged in the same task. Henceforward the two friends worked in partnership, and in 1842 appeared the first joint collection of the now celebrated Norwegian folk-lore. At first the publishers looked askance at these "nursery tales," while the critics were only too ready to confirm the public in their indifference; but once the merit of the new writer was recognised, contempt gave place to admiration. Asbjørnsen's next work was his *Norske Huldre-Eventyr* (1845-8), or *Mountain Spirit Stories*, designed as much to exhibit the romantic scenery and hardy life of his countrymen as to embalm the floating literature of spirits, and fairies, and "nisser," and as such they are still valued in Norway. In 1849, as the result of a cruise which he took to the Mediterranean on board a warship, Asbjørnsen published some sketches of sea life, which were well received, and during the next two years added still further to his reputation by some zoological researches which he made on the Norwegian coast, aided by a grant from the university. Among these discoveries was the *Brisinga endecacnemos*, a deep-sea starfish, which afforded one of the earliest inkings of the relationship of the cretaceous echinodermata, and may be said to have suggested those deep-sea dredging expeditions of thirty or forty years later. In 1856 Asbjørnsen entered on a new department of study, for he left for Germany to study forest science, and on his return was appointed forest inspector, during his tenure of which office he did much to draw general attention to the necessity for attending more carefully to the wealth which Norway possessed in her rapidly decreasing fir woods. Next year he was sent to Denmark, Holland, and Germany, to investigate the peat industries of those countries, and on his return was appointed peat commissioner, which post he retained till 1876, when he retired on account of advancing years, and was pensioned. In 1878, the zoological collection which he had made during his travels, and not secured by the nation, was purchased for the Dublin Museum of Science and Art. In 1871 appeared a new collection of Norwegian stories, with additions by Moe, and in 1879 a complete edition of the *Norske Folke-og Huldre-Eventyr*, with illustrations by the best Norwegian artists. This collection and the previous one have been translated into Swedish, German; and French, and various editions have appeared in English by Dasent, Gosse, Brækstad, and Andersen. His *Juletræet* or *Christmas Tree*, a series of stories for children, were issued in 1850, 1851, 1852, and 1866, but though good of their kind, they were eclipsed by the vastly superior work in the same line by H. C. Andersen. The Danish creator of fairy tales was his master in literary skill, dramatic power, and weirdness

of imagination. But from a scientific point of view Asbjørnsen stands on a distinctly different, and perhaps higher, level. The Dane created beings out of his own dreams; the Norwegian collected the history of those who had, from the remotest ages, been floating about in the unwritten literature of the peasants. He was thus almost the founder of a new science. In addition to the books already mentioned, Asbjørnsen translated several popular treatises from English and German, and published in what may be called his official line of life, *Natural History for Children*, in 6 vols. (1839-49), *On Woods and on Grazing Places* (1861), and *Peat and Peat Cutting* (1868). Asbjørnsen was a man of the kindest disposition, genial to all, and notable for his English-looking face.

Vie et les Œuvres de P. Chr. Asbjørnsen, par Alfred Larsen (1873), and, in addition to a preface by Brækstad to his translation of the folk tales, a sketch by Gosse in *Round the Yule Log* (1881). [R. B.]

Ashantee, THE KINGS OF:—(1) OSAI TUTU QUAMINA (*d.* 1824) ascended the throne in 1800. A man of great ambition, he maintained a large army, with which he ravaged Fanteeland, and even ventured to attack Cape Coast Castle (1817). An embassy was sent to him and friendly relations established. In 1824, however, in consequence of our informal protectorate over Fanteeland, we were compelled to declare war against him, in which Sir C. McCarthy, the Governor of Cape Coast, was utterly defeated and slain at Esmacow. Osei Tutu died on the same day.

Bowdich, *Mission to Ashantee* (1819).

(2) OSAI OKOTO (*d.* 1838) continued the war until he was utterly defeated at Dudowah (1826), and compelled five years afterwards to renounce by treaty his claims to the lands south of the Prah. The remainder of his reign was peaceful.

(3) OSAI QUAKU DUAH (*d.* 1867) was at first on friendly relations with the British, and made no objection to their formal acceptance of the Fantee protectorate in 1852. In 1862 came a quarrel with Governor Pine about a runaway slave, and, in consequence, a renewal of hostilities. The Cape force, however, consisting of West India negroes, was decimated by dysentery, and the enterprise was abandoned.

(4) * COFFEE CALCALI (*b.* 1837) succeeded to the throne of his father in 1867. Shortly before, the Gold Coast territory had been redistributed between England and Holland, and the town of Elmina, over which King Coffee claimed a protectorate, passed into the hands of our Government, which refused to pay the tribute he demanded. Relations were further strained when the Ashantee king, acting under the advice of a war party, seized some missionaries and refused to give them up. In January, 1873, an Ashantee

force invaded the British protectorate and attacked Elmina, from which they were driven off by Colonel Festing, R.M.A. An expedition was organised by the English Government, and Sir Garnet Wolseley sent out as Administrator in October, while Captain Glover, R.N., with native troops, effected a diversion from the Volta. King Coffee's demands were at first couched in terms of arrogance, but his troops having been defeated at Abracampa on Nov. 5th, and when in the following year the Prah was crossed (Jan. 18th), and the last stand at Amoaful (Jan. 31st) was a failure, he fled from his capital, Coomassie, which human sacrifices had turned into a charnel-house. It was fired and then evacuated. On Feb. 13th peace was concluded at Fommanah, by which King Coffee agreed to pay a war indemnity, to respect the British protectorate, to keep the road between Coomassie and the Prah open, and to put an end to human sacrifices. In 1874 he was deposed by his subjects, and his brother Wemsah became king in his stead, nor were his subsequent efforts to regain the throne successful. Wemsah in 1881 sent a gold axe to the Queen, in token of friendship.

Captain Brackenbury, *The Ashantee War*, and accounts of the war by F. Boyle, Winwood Reade, and H. M. Stanley. [L. C. S.]

* **Ashbourne, THE RIGHT HON. EDWARD GIBSON, BARON, LL.D.** (*b.* 1837), is the son of the late William Gibson of Rockforest, Tipperary. He was educated at Trinity College, Dublin, where he obtained the first gold medal in history, English literature, and political science; graduated B.A. 1858, M.A. 1861, and Hon. LL.D. 1881. He was called to the Irish bar in 1860, and in 1872 took silk. After unsuccessfully contesting Waterford in 1874, he was returned for Dublin University in 1875, and again in 1877 and 1880. Mr. Gibson was Attorney-General for Ireland from 1877 to 1880; and, on the fall of the Conservative ministry, he became one of the leaders of the Opposition, being chosen, in particular, to lead the attack on Mr. Gladstone's Irish Land Bill of 1882. In 1885 he became Lord Chancellor of Ireland and a member of the Cabinet in Lord Salisbury's administration, and was raised to the peerage, with the title of Baron Ashbourne. He introduced soon afterwards a Bill to facilitate the purchasing clauses of the Irish Land Act.

Ashburton, ALEXANDER BARING, BARON (*b.* 1774, *d.* 1848), financier and politician, was the son of Sir Francis Baring (q.v.). He passed several years of his early life in America conducting the transatlantic business for his father. In 1812 he entered parliament as member for Taunton. He was a Whig in politics until at the time of the Reform Bill he joined the side of the Tories, and he supported all the measures

of Sir Robert Peel, with the exception of the repeal of the Corn Laws, to which he was strongly opposed. In 1835 he was raised to the peerage, and in 1842 was sent by Sir R. Peel as special commissioner to the United States to settle the disputes about the Maine boundary, Daniel Webster being the representative of the United States. His mission was highly successful, and the treaty was signed that same year. It is generally known as the Ashburton Treaty. Lord Ashburton was a great lover of the fine arts, and amassed a very valuable collection of pictures.

Ashburton, WILLIAM BINGHAM BARING, BARON (b. 1799, d. 1864), was eldest son of Alexander Baring Lord Ashburton. He entered the house as M.P. for Metford, and held the posts of Secretary of the Board of Control and Paymaster of the Forces. In 1855 he was made a Knight of the Legion of Honour, and in 1860 was appointed president of the Geographical Society. Lord Ashburton was head of the great house of Baring Bros., and is well known for the energy and earnestness with which he advocated the teaching of "Common Things" in the national schools.

***Ashley, THE HON. EVELYN** (b. 1836), son of the seventh Earl of Shaftesbury, educated at Harrow and at Trinity College, Cambridge. In 1874 he was elected to represent Poole in the Liberal interest, and in 1880 was returned for the Isle of Wight, the same constituency rejecting him in 1885. He was appointed Parliamentary Secretary to the Board of Trade, and in 1882 he succeeded Mr. Courtney as Under-Secretary of State for the Colonies. Mr. Ashley has published the concluding volume of Lord Dalling's *Life of Henry John Temple, Viscount Palmerston*, and an abridged edition of the work in 1879.

***Assollant, JEAN BAPTISTE ALFRED** (b. 1827), French man of letters, was born at Aubusson (Creuse), and at the age of about twenty-five made a visit to the United States, which supplied the subject of his first noteworthy appearance in literature, three brilliant, if rather exaggerated, sketches of American life, entitled *Acacia*, *Les Butterfly*, and *Une Fantaisie Américaine* (1858). After this, romances, novels, and fairy tales succeeded each other with great rapidity. But his real strength lies in the brilliant wit and pungency of his social and political articles and pamphlets, published for the most part in *La Presse*, which was suspended for two months owing to his attacks upon the Government in 1864. His description of British policy in *Canonnières à vos Pièces* in 1861, when an Anglo-American war seemed inevitable, is a model of sarcastic invective, as is the pamphlet, *À Ceux qui Pensent Encore* (1861), an appeal for liberty against the tyranny of the Empire. Together with M. Raspail he contested a division of Paris in the Republican

interest in 1869, but failed, and in the elections of 1871 he was again unsuccessful. In *Le Marseille* he resolutely opposed the opportunist Government of the succeeding years.

Astor, JOHN JACOB (b. 1763, d. 1848), was an American merchant prince. He came from Walderf, in Germany, in 1779; he joined his elder brother as a dealer in musical instruments in London. When he was twenty, he purchased a small stock of furs, and began business on his own account in New York. He traded in furs with the Indians, and pushed his business as far as the Columbia River, on which he founded the City of Astoria in 1811. He also engaged in the Canton trade, and bought land in New York. He realised an immense fortune, to which his son succeeded. He left \$400,000 to the famous Astor Library, which he founded in New York, and \$50,000 to the poor of his native village. The incidents of the founding of *Astoria* are related by Washington Irving in his *Astoria and Life of Captain Bonneville*.

Drake, *Dictionary of American Biography*.

Atherstone, EDWIN (b. 1788, d. 1872), was a novelist and poet. His chief poems are, *The Last Days of Heracleum* (1821), *A Midsummer Day's Dream* (1824), *The Fall of Nineveh* (1868), *Israel in Egypt* (1861). He contributed largely to the *Edinburgh Review*, and has also published two romances, *The Sea Kings in England* (1830), and *The Handwriting on the Wall* (1858), a story of the Jewish Captivity.

Atherton, CHARLES G. (b. 1804, d. 1853), was an American Democratic politician. In 1837 he was elected to Congress, and in the following year introduced the resolution declaring that "Congress has no jurisdiction over the institution of slavery in the several States of the Confederacy, and that all petitions relating to slavery or to its abolition be laid on the table without debate." These rules, forming the basis of the "gag-law," were in force until 1845, when their repeal was brought about by the exertions of John Quincy Adams.

Atherton, SIR WILLIAM (b. 1806, d. 1864), lawyer, born at Glasgow, was the son of a well-known Wesleyan minister, William Atherton. In 1839 he was called to the bar, and entered parliament as Liberal member for Durham in 1852; the same year he was made a Queen's Counsel. In 1859 he received the honour of knighthood, and succeeded Sir H. S. Keatinge as Solicitor-General. This office he held until 1861, when he was appointed Attorney-General. He wrote *An Elementary and Practical Treatise on the Commencement of Personal Actions*, published in 1833.

Athlumney, THE RIGHT HON. WILLIAM MEEDYTH SOMERVILLE, BARON (b. 1802, d. 1873), politician, was a native of co. Meath, and was educated at Harrow. In 1837 he was returned as Liberal member for Drogheda. He held the post of Under-Secre-

tary for the Home Department from 1846 till 1847, and that of Chief Secretary for Ireland from 1847 till 1852. He became a peer in 1863.

Atkinson, JAMES (b. 1780, d. 1852), Persian scholar, was born in the county of Durham, March 9th, 1780, studied medicine at Edinburgh and London, and was in 1805 appointed assistant-surgeon in the Bengal service, with the post of medical officer at Bakirganj. Lord Minto brought him to Calcutta, with the appointment of Assay-Master at the Mint (1813-28), combined with that of editor of the *Government Gazette*, from 1817 to 1828, when he took furlough for five years to England. On his return to India he resumed his professional duties, and was appointed superintending-surgeon to the army of the Indus in 1838, and joined in the march to Cabul, but, being relieved in ordinary course soon after the surrender of Dost Muhammad, he escaped the fate which awaited the English force in Afghanistan. He was appointed a member of the Medical Board at Calcutta in 1845, resigned after forty-two years of service in 1847, and died of apoplexy. The leisure spared from his official duties was devoted to Eastern languages, in which he became so proficient that he was appointed professor of Persian at Fort William in 1818. His principal work was his select translation of the *Shāh-Nāmah* of Firdausy (1832), the first worthy attempt to introduce the *Epic of Kings* to English readers. He also translated in verse Nizamy's *Leyla and Mejnun* (1836), and, in prose, a curious treatise on *The Customs and Manners of the Women of Persia* (1832); edited the Persian romance of *Hātim Tai* (1818); and published in early life (1801-25) various translations from the Italian, and some volumes of original verse. His *Sketches in Afghanistan* (1842), and *Expedition into Afghanistan* (1842), are valuable records of the ill-fated campaign of 1839-40.

See the notice of Atkinson in the *Annual Report of the Royal Asiatic Society for 1853*.

Attwood, THOMAS (b. 1767, d. 1838), organist and composer, when quite a child became a chorister in the Chapel Royal, and in his sixteenth year, at a concert in Buckingham Palace, his singing attracted the attention of the Prince of Wales (afterwards George IV.), who sent him to be educated in Italy. He studied at Naples, and also at Vienna, under Mozart. On his return to England he became successively organist at St. George the Martyr, Queen Square, at St. Paul's Cathedral in 1796, and at the Chapel Royal in 1836. He was one of the first members of the Philharmonic Society, and occasionally acted as conductor of their concerts. Attwood has left some operas, besides songs, glees, sonatas, anthems, and church music. Of his songs, *The harp's wild notes* and *In this fair vale*

are the most popular, and of his anthems *The King shall rejoice*, composed for the coronation of George IV.

Auber, DANIEL FRANÇOIS ESPIRIT (b. 1782, d. 1871), was the first French composer whose music became popular throughout Europe. His father was a fruit-seller at Paris, but apparently a man of artistic tastes. Artists and amateurs, especially musicians, were in the habit of meeting at his house; and it was here, no doubt, that young Auber had his musical instincts first brought into activity. He appears at an early age to have composed a few songs; but it was not until he had reached a comparatively advanced age that he adopted music as a profession. His father intended him for a business career; and with this view—probably, too, in some degree, by reason of the revolutionary troubles—sent him to London to learn the business of a merchant's clerk. Of Auber's stay in London little seems to be known. But it is certain that when, immediately after the rupture of the Peace of Amiens, he was recalled by his father to Paris, he brought back with him some quartets for strings, which he had composed during his absence from his native land. He now began to study music more systematically than heretofore, and took lessons regularly in harmony and orchestration from Lamare, a distinguished violoncellist of that day. French music in the early part of the present century was not in a very flourishing condition, and Auber had probably but little difficulty in getting his first work accepted—*Le Séjour Militaire* it was called, and it was brought out in 1813, when the composer was just thirty-one years of age. So little promise did the work give of future excellence that it failed completely. So great, indeed, was the *fiasco* that Auber seems for some considerable time to have abandoned all thoughts of achieving a position as an operatic composer. He went on, all the same, with his musical studies, and for a time directed his energies towards the composition of church music. An *Agnus Dei*, which he composed soon after the failure of his first opera, was some dozen years later to become the melodious and impressive prayer in *La Muette de Portici*, or *Masaniello*, as that work is called in the English, as also in the Anglo-Italian version. In 1819 Auber's father died, leaving so little money that his son was obliged, in self-defence, to turn his attention once more towards what he still considered to be his vocation. He addressed himself to the manager of the Opéra Comique, where he produced two works, the *Testament* and *Les Billets-doux*. Even now, at the age of forty-one, he had made no great mark; and it was not until 1823, when he had the good fortune to meet with Scribe, that he began that long series of successes which was not to terminate until his death, nearly fifty years

afterwards. *Leicester*, a comic opera in three acts, was the first result of the new collaboration; and this was followed three years afterwards, in 1825, by *Le Maçon*, a work of similar character and dimensions. Auber, in company with Scribe, was now invited to turn his attention towards grand opera, and in 1828 he brought out at the Académie Royale de Musique—the old historic title of the national French opera-house—the before-mentioned *Muette de Portici*, generally known in England as *Masaniello*. *La Muette de Portici* met with the greatest success that had yet been obtained at the theatre where it was brought out, and its fame soon spread through Europe. It was produced in several foreign countries; and at Brussels had such an effect in rousing the patriotic spirit of the inhabitants that it may be regarded as the immediate, though not, of course, the substantial, cause of the revolution which in 1830 caused the separation of Belgium from Holland. The duet *Amour sacré de la patrie* excited the audience to the highest point of enthusiasm; and numbers of those present at the performance rushed, at the end of the duet, into the street and at once took up arms. The revolutionary character of the work was not, however, conducive to its general success, and in the despotically governed countries, especially after what had taken place at Brussels, Auber's great work was looked upon with disfavour, and even prohibited, and it was not until a comparatively recent period that Auber's masterpiece in the serious style could be played freely in any part of Europe. In *Gustave III.* (produced 1833) Auber had again chosen a subject which again could not commend itself to the tyrannies of Europe; and the representation of the assassination of Gustavus III. by Angerstrom was, after a few nights, deemed objectionable in France itself. This subject was afterwards treated by Verdi in his *Ballo in Maschera*. Among Auber's works for the Opéra Comique may in particular be mentioned *Le Domino Noir*, *Fra Diavolo*, and *Les Diamants de la Couronne*, all of which enjoy a European reputation. Auber's last work was *Le Rêve d'Amour*, produced in 1870, just before the Franco-German War, which its composer, much affected by the troubles of his country, survived only a few months. [H. S. E.]

***Aubert**, JEAN ERNEST (b. 1824), French engraver and lithographer, was born in Paris. He entered the École des Beaux-Arts in 1841, and became a pupil of Paul Delaroche and Achille Martinet. He carried off the grand prize for engraving in 1844, and then spent five years in Italy. After having accomplished many important works in engraving, he turned his attention in 1853 to lithography. He produced many works after Raphael, Hamon, Heilbuth, Jobbé-Duval, and others.

He obtained three medals: in 1844 for engraving, in 1857 for lithography, and in 1861 for painting.

Aubigné, J. H. MERLE D'. [D'AUBIGNÉ.]

Auchmuty, SIR SAMUEL (b. 1756, d. 1822), was the son of a clergyman from New York. He graduated at the college at New York, and joined the 45th Regiment in 1776, seeing much service as a loyalist under Sir William Howe during the American revolution. On the return of the army to England he served in the Mysore and Rohilla campaigns. Lord Cornwallis soon afterwards appointed him Deputy Judge-Advocate-General of Madras, a post he held for some years. Returning to England in 1797, he two years later proceeded to Suez and joined the Indian army under Sir David Baird as adjutant-general. In 1802 he returned to England, and saw no further service until 1806, when he sailed with an expedition to reinforce General Beresford in Buenos Ayres. The force, under the supreme command of General Whitelocke, determined on the investment of Monte Video. The bombardment soon produced a practicable breach, and the place was carried by assault. Reinforcements arriving under Craufurd, an attempt was made to retake Buenos Ayres. The operations were unskilfully conducted, for though the place was partially taken, the position of the British was so unsatisfactory that it was arranged with the Spanish general to evacuate Monte Video and the whole of the River Plate after a mutual exchange of prisoners. This capitulation caused great indignation in England, and Whitelocke was dismissed the service; but Sir Samuel was held blameless, and was appointed, in 1811, commander-in-chief in Madras. In that capacity he commanded the expedition which took Java. A few months before his death he was appointed commander-in-chief in Ireland.

Auckland, GEORGE EDEN, EARL OF (b. 1784, d. 1849), statesman, was the second son of William Eden Lord Auckland, the diplomatist, who died in 1814, and whose work lies outside the century. On the death of his elder brother (1810), George Eden succeeded him as member for Woodstock, and on the death of his father took his seat in the House of Lords. He was a steady supporter of Whig principles, and in 1830 became President of the Board of Trade and Master of the Mint in Earl Grey's ministry. At the end of 1834 he was appointed Governor-General of India, and his administration was marked by the disastrous Afghan War of 1839-42. For that war, into which he plunged from simple want of nerve, Lord Auckland must bear the chief responsibility, and it is the great blot on an administration remarkable for some excellent legislation, particularly with

the view of developing trade and improving the native schools. It is extremely improbable that there was much truth in the story about Dost Muhammad's intrigues with Russia, and Burnes (q.v.), from Cabul, did his best to impress upon Lord Auckland his belief in the sincerity of the Ameer. The rash decision of the Viceroy to restore Shah Shujah has since been emphatically condemned, and its folly was at the time hidden from the public only by garbling Burnes's despatches. It was one thing to dethrone Dost Muhammad; it was another to make Shah Shujah popular; and the murder of Burnes in 1841 was the beginning of the end. The rebellion of Akhbar (q.v.) followed his assassination of Macnaughten, and the disastrous retreat of the English from Cabul in 1842. Lord Auckland, a kindly man, was broken-hearted. In the latter year he was recalled owing to the change of ministry of 1841, and succeeded by Lord Ellenborough; and on the return of his party to power in 1846 he became First Lord of the Admiralty, a position which he had held for a few months in 1834, and now continued to hold till his sudden death three years later.

Kaye, *Afghanistan*.

***Audiffret-Pasquier, EDMÉ ARMAND GASTON, Duc d'** (b. 1823), French politician, was the son of Comte d'Audiffret, Receiver-General under the Restoration. His title as Duc de Pasquier was derived from his mother's uncle, who died childless in 1844. Next year young Audiffret entered the Council of State, but his political career was for a time cut short by domestic losses and the revolution of 1848, and for the next twenty years he lived, with but few interruptions, in the intellectual retirement of his castle at Sacy. In 1871 he was elected to the National Assembly, and voted with the Right Centre. As president of the committee of purchases he inveighed eloquently against the late Emperor, "the author of the demoralisation of his country," in opposition to M. Rouher (May 22nd, 1872). As president of the Right Centre in the next year he was one of the chief agents in bringing about the downfall of M. Thiers. When his hopes of a restoration of the legitimist monarchy under the house of Bourbon were frustrated, he gave his support to the Septennate of Marshal MacMahon, and was soon afterwards elected president of the National Assembly amidst general enthusiasm, especially from the Left (March 15th, 1875). In the autumn of the same year he was elected life senator by a very large majority, and president of the Senate on March 13th, 1876, a position which he continued to hold till the return of the Republican majority in 1879, though he was opposed to MacMahon's *coup* of May 16th, 1877, and used his personal influence with him to conclude the long crisis

in December of that year. At the end of 1878, though he had published no writings, the Duke was elected member of the French Academy in place of Mgr. Dupanloup.

Audoin, JEAN VICTOR (b. 1797, d. 1841), a distinguished French entomologist, first began to study law, but was early diverted from this career, by his love of natural history, into the adoption of medicine as a profession. Medicine, however, was never more than the nominal mistress of Audoin, for in 1824 he was appointed assistant to Latreille in the entomological Chair of the Jardin des Plantes School of Natural History, and nine years later succeeded his master in the full labours of this post. Before that date, however, he had become a man of eminence, and in conjunction with Dumas and Adolphe Brongniart established the *Annales des Sciences Naturelles*, and at a later period the *Société Entomologique*, to the transactions of which he made many contributions. After serving for a term as president of the Entomological Society, Audoin was elected a member of the Academy of Sciences, and was on the fair way to become one of the most famous biologists of France, when he died at the age of forty-four, worn out with the unrelenting labour of his busy life. His writings have never been collected, but the main results of his researches may be found in his *Histoire des Insectes Nuisibles à la Vigne*, which was continued after his death by Milne-Edwards and Blanchard (1842), and still continues the chief authority on the subject.

Audubon, JOHN JAMES (b. 1780, d. 1851), an American naturalist of French extraction, is celebrated for his beautifully illustrated works on the birds and mammals of the New World. His parents had settled on a plantation in Louisiana. But displaying a taste more marked for art than for commerce, Audubon was sent to Paris, where he remained for two years, studying under David and other masters. On his return he began life as a planter, and married. However, the passion he had early acquired for natural history soon again gained the upper hand, and for the next fifteen years his time was almost wholly occupied in exploring the forests of the West, and filling portfolio after portfolio with the most vivid representations of birds, mammals, and the vegetation among which they move. Hitherto he had never dreamt of publishing. His sole object was the gratification of his love of nature. Indeed, it was only on removing with his family to the village of Henderson, on the Ohio, that he began to regard the idea of authorship with any seriousness. In 1824 he visited Philadelphia, considering the time had now come for realising the idea of a book which had for some time past been gradually shaping itself, and meeting there Prince Charles Lucien Bonaparte, was warmly encouraged by him in

his design. Here also he met for the first time with the works of Alexander Wilson, the Paisley weaver, who had for years been engaged in labours very similar to his own. The work in which he had figured and described his collections, though unfinished (the continuation being by George Ord and Prince C. L. Bonaparte), displayed so much talent, that Audubon despaired of ever excelling it. He nevertheless determined to make the attempt, meantime leaving his portfolios in charge of a friend. On returning, he was horrified to find that the rats had converted them into waste paper. This blow threw him into a fever which nearly cost him his life; but he recovered, and again, after three years' renewed roamings, more than recouped his losses. He now resolved to have his paintings reproduced in Europe, each bird the size of life. Herschel, Brewster, Wilson, Humboldt, and Sir Walter Scott, warmly espoused his plan. Cuvier declared that his work would form "le plus magnifique monument que l'Art ait encore élevé à la Nature," while William Macgillivray, then the most accomplished ornithologist in Britain, aided him with his scientific knowledge. Indeed, it is still a moot point how much of the four volumes of the *Ornithological Biography* (1831-9) was the work of the ostensible author, and how much of his Scottish coadjutor. The plates appeared in 87 parts, elephant folio, containing 435 plates, each sheet containing a representation, in most cases of one bird only. At last (in 1838) it was finished, but the enormous cost of the issue left him a very inadequate return for many years' labour. Nor, in truth, was the result quite worthy of the toil. The text is, on the whole, very creditable, but the drawing is defective. Between 1840-4 he published an octavo edition in 7 vols., under the title of *The Birds of America*, in which the large plates were reduced by means of the camera lucida. The text was also revised, and the whole systematically arranged. Other reprints have since been issued, but without an exception they are much inferior to the original. Elliot and Cassin have also published what may be regarded as continuations of Audubon's works. After his return to America he did not intermit his labours, for, accompanied by his sons and other friends, he continued his excursions, and in 1840-50 issued, with the assistance of Dr. Bachman, *The Quadrupeds of America* (atlas folio) and *The Biography of American Quadrupeds*, which in some respects is superior to its companion work in ornithology. Audubon was a man of great intelligence, and his powers of observation, naturally strong, were strengthened by long practice. In manner he was unassuming, in conversation instructive and animated.

Life and Adventures of J. J. Audubon, by Robert Buchanan (1868).

Auerbach, BERTHOLD (b. 1812, d. 1882), novelist, was of Jewish extraction. His parents lived at Nordsteden in the Black Forest, and it was in this district that he passed his early years. He studied at Tübingen, Munich, and Heidelberg, and was intended by his parents to devote himself to theology; but he quitted this study for literature. In 1836 he published an essay on *The Jewish Nation and its Recent Literature*. He was devoted to the writings of Spinoza, and in 1841 published a life of the philosopher and a translation of his works, having previously published an "Historical Romance" on the same subject. His true powers, however, were not displayed till he published, in 1843, his *Dorfgeschichten, or Village Tales from the Black Forest*, which immediately became popular. Auerbach's tales are remarkable for their intimate and life-like pictures of peasant life in Southern Germany. From this time he published a number of novels which attained a wide circulation. The most popular of all are *Barfussel* (1856), *Auf der Höhe* (1865), and *Das Landhaus am Rhein* (1869), which have been translated into English and most European languages. His patriotic sympathies were deeply stirred by the war of 1870, and after its close he wrote a short history of the circumstances connected with it, and a new series of village stories (*Nach dreissig Jahren*, 1876) exhibiting the change of the temper of the people. His last novel, *Brigitta*, appeared in 1880. He died at Cannes.

* **Auersperg, ADOLPHUS WILLIAM, PRINCE** (b. 1821), Austrian statesman, served in his youth in the Austrian army. In 1868 he was chosen a member of the Bohemian Diet, and soon afterwards was appointed governor of the kingdom. In 1871 (Nov.), on the fall of the Hohenwart ministry, he was appointed by the Emperor the head of the Austrian (Cisleithan) Cabinet. His policy was Liberal and constitutional. In 1873 he carried out the great Electoral Reform, which caused the members of the Austrian parliament to be chosen by direct popular election. During the greater part of his premiership, Prince Auersperg was engaged in a constant struggle with the Federalist party, and with the extreme Clericals. Over the latter he was successful, and compelled (1874) the Church to acknowledge the supremacy of the State in matters connected with marriages and wills, and to adopt the Confessional Law, formulated by his Minister of Public Worship, Herr Stremayr. The German Constitutional party was in a permanent majority in the Cisleithan parliament until 1879, when the Czech party, who had previously abstained from attendance at the House, returned and strengthened the Slavonic and Autonomist side; and in August Prince Auersperg resigned.

Auersperg, ANTON ALEXANDER, COUNT (b. 1806, d. 1876), perhaps better known under his pseudonym of Anastasius Grün, was descended from an ancient and noble family of Carniola. He studied at the Universities of Vienna and Gratz, and published his first poems at an early age. He became closely connected with Lenau, Grillparzer, and other poets, and in his earlier poems attacked Metternich and the Absolutist régime. In 1832 he entered the Laybach Provincial Chamber, and was a prominent champion of liberty and progress. In 1839 he married the Countess Maria Attems. In 1848 Auersperg was sent to the Frankfurt Diet as deputy from his native province. In 1860 he was summoned to the Austrian Reichsrath, and remained an active and influential member of that assembly till his death. His body lies in a stately mausoleum at the ancestral seat of his family, Thurn-am-Hart, in Carniola. As a poet Count Auersperg is better known than as a politician, though the part he played in the latter character was by no means unimportant. His chief works are his early lyrics (collected in 1837); *Schutt*, a satire (1835); several metrical romances, such as *Der letzte Ritter* (1830); his Carniolan *Volklieder*, a "ballad-cycle" on *Robin Hood* (1864). His beautiful poem *In der Veranda* was completed on his death-bed. His satires are lively, but appeal chiefly to a Viennese audience. His lyric poems are entitled to a high—perhaps the highest—place in the literature of German Austria.

Radics, Anastasius Grün (1879).

***Aufrecht**, THEODOR, LL.D., M.A. (b. 1822), an eminent Sanscrit scholar, was born at Leschnitz, Silesia. He studied at the University of Berlin, and in 1862 was appointed professor of Sanscrit and comparative philology in the University of Edinburgh. Here he remained until 1875, when he left Scotland to return to his native country, having been appointed professor of Sanscrit at Bonn. Professor Aufrecht has written many valuable works upon the Sanscrit language and literature. Among the most important are: *Ujjvaladatta's Commentary on the Unādisūtras* (1859); *Hablayudha's Abhidhanaratnamala: a Sanscrit Vocabulary, edited with a Complete Sanscrit-English Glossary*; and *The Hymns of the Rig Veda* Bonn (1877).

Augereau, PIERRE FRANÇOIS CHARLES, Duke of Castiglione (b. 1757, d. 1816), was of obscure birth, and served for a short time in both the French and Neapolitan armies, before the outbreak of the revolution. He joined the Republican army of France in 1792, and was first engaged on the Pyrenean frontier. He rapidly rose, and commanded a division in the army of Italy in 1796. He took active part in the actions at Millesimo, Dego,

and Castiglione, which resulted in the withdrawal of Beaulieu and the Austrian army into Venetia, and personally led the charges over the bridge of Lodi and at Arcola. In 1797 he joined Barras and the Directory, and took part in the revolution of the 16th Fructidor (Sept. 4), but he was jealous of Bonaparte, and for some time received no important command. Finally, he was appointed to the command of the army of Holland and the lower Rhine, but was superseded in 1801. He was not employed again until 1804, when he was made Marshal of France, and was sent in command of the expedition against the Vorarlberg, which he subdued. He was present in the campaign of 1807 against Prussia, and fought at Jena and Preussisch-Eylau, where he was wounded. So severe was the loss his corps received, that after the battle it was broken up and distributed among other corps. In 1809 he commanded the French army in Catalonia, where he displayed great cruelty towards the Spaniards. In 1813 he did good service at the battle of Leipzig. In 1814 he commanded the reserve army at Lyons, and displayed great vigour in preparing for the defence of the district, and in the minor operations against the Austrians under Bubna, who, however, finally compelled him, after a battle on March 21st, to abandon the town. But his feelings towards Napoleon were lukewarm, so he readily submitted to the Bourbons and retained his command. He would not at first join the Emperor on his return from Elba, so that he received no appointment on the restoration, nor did he get military command after the deposition. He served on the commission which tried and condemned his old comrade Ney, and returning to his estate died there.

***Augier**, GUILLAUME VICTOR EMILE (b. 1820), French dramatist, was educated for the bar, but soon turned to literature. His first, and perhaps his best, piece, *La Cigüe* (1844), was rejected by the directors of the Théâtre Français on account of the author's youth, but was accepted at the Odéon, and proved a great success. It is a carefully finished satire on the decadence of the moderns, and still holds the stage. His next great triumph was a five-act comedy, entitled *Gabrielle* (1849), which was awarded the Montyon prize at the Academy. In 1853 *La Pierre de Touche*, written in conjunction with Jules Sandeau, was a new departure, inasmuch as it was concerned with the intrigues and manners of the day. In that line his best pieces have been *Le Gendre de M. Poirier* (1855), also written in conjunction with Sandeau, *Les Lionnes Pauvres*, in which M. Fouscier was his collaborateur, *Les Effrontés* (1861), *Le Fils de Giboyer* (1862), *Maître Guérin* (1864), *Paul Forestier* (1868), a piece, like some of the others, of somewhat questionable taste. Among his later works, which show little or

no sign of waning powers, may be mentioned *Les Lions et les Renards* (1871), *Mademoiselle de la Reynie* (1876), and *Les Fourchambaults* (1878). M. Augier has published some rather pretty verses (1856) and a collection of his works. He was elected to succeed Salvandy in the French Academy in 1858, and received the Legion of Honour in 1850.

Augustenburg, SCHLESWIG-HOLSTEIN-SONDERBURG, DUKES OF:—(1) CHRISTIAN AUGUST (*b.* 1798, *d.* 1869), born at Copenhagen, was chief of the younger branch of the royal line of the house of Holstein. Having succeeded to the dukedom in 1814, he spent some years in travelling through Europe. After the revolution of 1830 he took a prominent part in the Diet of Stadt-holders as a champion of liberty and advancement. During the three years war of 1848–1851 he was a leader in the rebellion of Schleswig-Holstein against the Danish crown, but, being obliged to submit after the withdrawal of Prussian assistance, he undertook, in his own name and the name of his family, never to disturb the tranquillity of Denmark again. In 1852 he sold his property in the Duchies to Denmark for about £500,000, and retired for a time into Silesia in 1853. Some time after this he abdicated his claims in favour of his son Frederick, but no doubt gave him moral support in his unsuccessful breach of faith in 1860. (2) FRIEDRICH KARL (*b.* 1829, *d.* 1880) was the son of Duke Christian mentioned above. Having entered the Prussian army, he became Major in the First Infantry Regiment of the Prussian Guards. In 1863, when the dispute between Denmark and the German Confederacy with regard to Schleswig-Holstein was again coming to a head, he issued a manifesto to the Duchies, claiming the rights which his father had solemnly renounced by special treaty for himself and his heirs. Nevertheless, he was supported by the smaller German States, was received with enthusiasm at Kiel as the rightful Duke, and during the next year was spoken of as Friedrich VIII. After Denmark, deserted by her natural allies, had been compelled to surrender the disputed provinces to the victorious arms of Prussia and Austria, the Prussian Crown lawyers were commissioned to examine the Augustenburg claims, and decreed that since the Treaty of 1852 the Augustenburg family had receded behind the Danish king, and that, therefore, Prince Friedrich, after his father's decease, could not lay claim to a right of succession to the Duchies. (3) *ERNST GONTHIER (*b.* 1863) succeeded his father, Friedrich Karl, in 1880.

Augustus, PRINCE. [SUSSEX, DUKE OF.]

Aumale, DUC D'. [D'AUMALE.]

Aurelles de Paladine, LOUIS JEAN BAPTISTE D'. (*b.* 1804, *d.* 1877), French

general, was educated at the school of St. Cyr, and entered the infantry as sub-lieutenant in 1824. He served in Africa in 1841 and 1848, at Rome in the latter year, and during the Crimean War. At the beginning of the Franco-German War he was stationed at Marseilles, but in November was summoned to take command of the army of the Loire, which he tried to organise with the strictest discipline. He forced the enemy to evacuate Orleans, but, on the arrival of Prince Frederick Charles with the troops from Metz, was himself compelled to retire upon Sologne. As an inquiry into his conduct was threatened, he resigned his command, and took no further part in the war. In Feb., 1871, he was chosen Deputy for the National Assembly by two departments, and was one of the fifteen appointed to negotiate terms of peace with Germany. In the Assembly he voted with the Right Centre, and having been chosen life senator in 1875, he supported the monarchical majority of Aug., 1876. He published an account of his campaign on the Loire.

Austen, JANE (*b.* 1775, *d.* 1817), a novelist of the utmost eminence, was born at the parsonage of Steventon, in Hampshire, where her father lived as rector for many years. Little is known of her domestic life. That it was tranquil and happy, and that neither her domestic circumstances nor her literary surroundings gave rise to an unusual incident, is almost the full sum of her personal record. Down to 1870, the facts of her life made public were so few and meagre that a rumour became current that no single letter written by her was known to exist, and that the materials for a biography were at least as sparse in her case as in the case of the great poet with whose name her own name was constantly coupled. But when the memoir by her nephew, the Rev. J. Austen-Leigh, was published (1870), it was found to contain many letters which threw light on the reading and literary opinions of the novelist, if they added but little to the slight stock of personal incidents. Jane Austen's beginnings in literature appear to have dated from her twelfth year, and to have been continued with constancy down to the production of *Pride and Prejudice* in her twenty-second year. Of her early efforts only a few are extant, and though distinguished by clear literary talent, they are hardly such as would have justified a confident prophecy of future distinction. Their merit is, however, identical with the merit of the maturer work, namely, naturalness, fidelity of delineation, and a total absence of the meretricious arts which were in vogue at the time of their production. As far, therefore, as a daring originality was a sign of genius, these fragments were promising. *Pride and Prejudice*, the author's first important novel, was written in ten

months of 1796, but was not published until seventeen years later. The novelist's father appears to have offered it in vain to more than one publishing house, and to have attempted, with as little success, to have it produced at his own risk. It was published anonymously in 1813, but in the meantime, in 1811, a later work, *Sense and Sensibility*, was put forth with a measure of success. This second novel had shared the neglect of the first one, having been written as early as 1797. In 1798 *Northanger Abbey* was written, and this third story achieved the dubious success of being sold for £10 to a publisher in Bath, who, however, had so little confidence in his bargain that he never printed the novel. The work was eventually bought back by the author, and was published posthumously in 1818. The success of the two earlier stories was at first no more than moderate; but fully satisfied with her reception, the novelist produced two further stories, *Mansfield Park* (published in 1814) and *Emma* (published in 1816). It is said that the author received £150 for *Sense and Sensibility*, which was a fair payment for a first novel. From 1801 to 1805 Jane Austen resided with her family at Bath. In 1817 her health began to break, and she was removed to Winchester for a change of air. She died there on July 18th, 1817, and was buried in Winchester Cathedral. In person she is described as tall and attractive, and of a gentle disposition. Though possessing few modern accomplishments, she is said to have been well educated, reading French well and Italian slightly. This statement does not agree with her own account of her attainments, as given in a letter to a friend, who recommended a character-study requiring larger culture than she felt herself to possess. She there speaks of herself distinctly as a woman who knew only her mother-tongue. Jane Austen's favourite poets were Crabbe and Cowper, the insight into character possessed by the one, and the love of natural beauty in the other, appealing strongly to her idiosyncrasy. Her favourite novelist was Richardson. Her fame grew slowly, but there is evidence enough in her letters that she was fully sensible of her place in literature, and very much in the habit of measuring herself, within the limits of modesty, against her contemporaries. A limited circle of eminent men and women discovered her merit before her death, but the acknowledged guides of public opinion were tardy, and perhaps grudging, of recognition. The *Quarterly Review*, which was loud in its praise of one of her books, vexed her by ignoring another of them. It was not until 1830 that any complete and adequate estimate of her claims was put forth. The *Edinburgh Review* in that year placed her almost, if not quite, at the head of modern fiction. Earlier than this, Macau-

lay had said that though Shakespeare had neither equal nor second, Jane Austen approached nearer than any other to the manner of the great master. Scott had repeatedly spoken of her to Lockhart, Joanna Baillie, and others, as eminent in correct drawing and masterly in detail. Coleridge had found her full of nature; and of later critics, George Henry Lewes ranked her among the greatest painters of human character. If before 1830 she had not been as popular as she deserved to be, neither has she since enjoyed any distinctly popular following. It is hardly in the nature of her genius that she should appeal to the average temperament. Not that she is too much above it, but that the love of qualities such as hers—naturalness, fidelity, and closeness of observation—is never strong. She has not, however, lacked worshippers in later days. Following Macaulay, Tennyson, as reported by Sir Henry Taylor, placed her, in 1862, next after Shakespeare. There are not a few competent critics of fiction who are totally at a loss to understand what a judgment like this can mean. Variety, and perfect discrimination of the shades of character, Jane Austen shares with the master of human portraiture; but it is difficult to see how this claim can place her even at the feet of Shakespeare, except by a total disregard of the many other great qualities that went to the making of the greatest of dramatic creators. When a friend recommended Charlotte Brontë to avoid melodramatic effects and study the arts of Jane Austen, the younger novelist found the model to be no more than shrewd and observant. In force of passion, the author of *Jane Eyre* was as much beyond the author of *Pride and Prejudice* as Scott was beyond Mrs. Radcliffe in human nature or Fielding beyond Richardson in humour. But Charlotte Brontë came to see that though, like Scott, she could manage the "big bow-wow" style with as much success as any modern writer, the niceties of Jane Austen's quieter and subtler method made demand of an acuteness which she did not possess. In 1811 Jane Austen came as a river of morning air after the nocturnal vapours of the school of Mrs. Radcliffe and "Monk" Lewis, admirable as these writers are of their kind. In our own time she is still refreshing for her quickness of insight and truth in drawing. Her characters are commonplace, and her incidents and emotions live, not on the heights of sentiment, but in the plains of everyday experience. Nevertheless, there is a sense in which it is true that within her range of human life she is with Shakespeare.

Jane Austen's Letters, edited by Lord Bra-bourne; Rev. J. Austen-Leigh, *Memoir of Jane Austen*. [T. H. C.]

* **Austin**, ALFRED (b. 1835), is a critic, journalist, and satiric poet. His parents being Roman Catholics, he was educated at

Stonyhurst, and at St. Mary's College, Oscott. He took his degree at London University, and in 1853 entered the Inner Temple. In 1854 he began his literary career by publishing an anonymous poem called *Randolph*, showing great sympathy with the Poles. His first important publication was *The Season: a Satire* (1861). This work showed considerable satirical powers, but its individuality of form and bitterness of tone were so severely criticised by the press that Mr. Austin retorted in a small book, called *My Satire and its Censors*. At this date he had entirely given up the bar for literature. In 1862 he published *The Human Tragedy*, which he soon withdrew in order to reconstruct and amplify it. The poem reappeared in its altered form in 1876, and in 1871 another satire, called *The Golden Age*. He has written three novels, *Five Years of It*, *An Artist's Proof*, and *Won by a Head*. His remaining poems are:—*Interludes*, a volume of poems (1862); *The Poetry of the Period*, a collection issued in 1870; *Rome or Death* (1873); *The Tower of Babel*, a drama (1874); *Leszko the Bastard: a Tale of Polish Grief* (1877); *Savonarola*, a tragedy (1881); *Soliloquies in Song* (1882); *At the Gate of the Convent* (1885). He is chiefly popular as a poet, and his works, though sometimes deficient in melody, are instinct with much passion and comprehensiveness of soul. Mr. Austin is leader-writer and has acted as correspondent to the *Standard*. For some years past he has entered the field of politics, and is a strong Conservative. He has written many political letters and essays, of which the most important are:—*Russia before Europe* (1876); *Tory Horrors*, an answer to Mr. Gladstone's *Bulgarian Horrors*; *England's Policy and Peril*, a letter to Lord Beaconsfield (1877); *Hibernian Horrors* (1880). He was a candidate for Taunton in 1865, and for Dewsbury in 1880, but was unsuccessful on both occasions, and refused to stand at the election of 1885, because he felt out of sympathy with the party. He is one of the editors of the *National Review*, which was founded as a Conservative publication in 1883.

Austin, JOHN (b. 1790, d. 1859), jurist, was the eldest son of Jonathan Austin, of Creeting Mill, Suffolk, a Government contractor during the French War. After five years' soldiering, from his sixteenth to his twenty-first year, he quitted the camp for the bar, and was called by the Inner Temple in 1818. He is said to have gone the Norfolk circuit. In 1821 he became acquainted with James Mill, and in 1821-2 he read *Blackstone* and *Roman Law* three or four hours daily with John Stuart Mill, who was then studying for the bar. To the *Westminster Review* for October, 1824, he contributed a remarkable article on *Primogeniture*. In 1825 he gave up practice. In spite of his

intellectual power, his mental acuteness, and his faculty of clear exposition, his "over-scrupulous and over-sensitive spirit" unfitted him for the rough-and-ready activity of successful practice. His health, also, was delicate and uncertain, and his heart was not in the work. On the establishment of the University of London (now University College) in 1826, Austin was appointed to the congenial Chair of jurisprudence. His first lecture was not due till October, 1828, and in the meantime he went to Germany, to study jurisprudence there. Through the winter of 1827-8 he settled at Bonn, then the residence of Niebuhr, Schlegel, Arndt, and other eminent men. He entered on his professional duties with the highest conception of the importance of his work, and with the utmost enthusiasm, yet not without intrusive anticipations of chilling indifference on the part of the public. At first he "had, perhaps, the most distinguished attendance that ever honoured any lecturer" (Bain, *James Mill*, p. 329). But the numbers fell away dishearteningly, and in June, 1835, he delivered his last lecture. The failure of his professorship was "the real and irremediable calamity of his life." In the year 1832 he published *The Province of Jurisprudence Determined*. Next year he was appointed by Lord Brougham a member of the Criminal Law Commission, but he soon resigned the position, through hopeless disappointment with the probable results of the Commissioners' labours. In 1834 he was engaged to deliver a course of lectures on jurisprudence at the Inner Temple, but here also failure attended his efforts. Depressed in mind and shattered in health, he retired to Boulogne for about a year and a half. In 1836 he went out to Malta, with Mr. (afterwards Sir) George Cornwall Lewis, as Royal Commissioner, to inquire into the nature and extent of the grievances that the natives complained of; and although the Colonial Office eventually closed the commission abruptly, and without a single word of recognition of his services, the Maltese were not unmindful of the vast improvements in their institutions that they owed to his recommendations. He returned from Malta in 1838, with greatly enfeebled health. From 1840 to 1844 he resided in Germany. In 1844 he went to Paris, and shortly after was elected by the Institute a corresponding member of the Moral and Political Class. Soon after the breaking out of the revolution of 1848 he retired from Paris, and settled finally at Weybridge, in Surrey. Here he died in December, 1859. In the last twenty years of his life Austin had published nothing, except one or two articles in the *Edinburgh Review* and *A Plea for the Constitution* (1859), a rejected review article on Earl Grey's *Parliamentary Reform*, in which he showed that, under German and French influences, he had strayed far from the political views of his early

associates. In 1861 Mrs. Austin brought out a second edition of *The Province of Jurisprudence Determined*, with biographical preface; in 1863 she published his remaining *Lectures on Jurisprudence*, in two volumes; and on her death, in 1867, she left in preparation another edition, which was completed by Mr. R. Campbell (1869), by help of J. S. Mill's copious notes. "I was born out of time and place," said Austin; "I ought to have been a schoolman of the twelfth century, or a German professor." "If John Austin had had health, neither Lyndhurst nor I would have been Chancellor," was Brougham's friendly exaggeration. But Austin has achieved a distinction that any Lord Chancellor might envy, for he introduced into jurisprudence precision and clearness in thought and in expression. He defined with elaborate precision the leading terms of jurisprudence, and he marked a clear boundary between law proper and other matters, more or less similar or analogous, that had previously been, and too often are still, confused with law. J. S. Mill relates that Austin himself said, that if he had any intellectual vocation, it was that of "untying knots." "The untying of intellectual knots," says Mill; "the clearing up of the puzzles arising from complex combinations of ideas confusedly apprehended, and not analysed into their elements; the building up of definite conceptions where only indefinite ones existed, and where the current phrases disguised and perpetuated the indefiniteness; the disentangling of the classifications and distinctions grounded on differences in things themselves, from those arising out of the mere accidents of their history, and, when disentangled, applying the distinctions (often for the first time) clearly, consistently, and uniformly—these were, of the many admirable characteristics of Mr. Austin's work as a jurist, those which most especially distinguish him" (*Edinburgh Review*, Oct., 1863). Austin further pointed out the conditions of successful codification. He also urged the importance, and indicated the lines, of a comprehensive legal education. And it may be fairly said that, in spite of sharp criticism, his main positions yet stand practically untouched. In 1820 Austin married Miss Sarah Taylor, of Norwich. [AUSTIN, MRS. SARAH.] Their only child, Lucie, became Lady Duff Gordon.

Advertisement and preface to *Lectures on Jurisprudence* (R. Campbell's ed.). [A. F. M.]

Austin, Mrs. SARAH (b. 1793, d. 1867), an English writer and translator, was a daughter of Mr. John Taylor, yarn maker, of Norwich. In 1820 she married John Austin (q.v.). Mrs. Austin translated Ranke's *History of the Popes*, for which she was warmly praised by Macaulay; *Characteristics of Goethe*, from the German of Falk, Von Müller, and others; and *The Story without an End*, by Carové,

and was, besides, the author of many original compositions, the best known of which is *Germany from 1760 to 1814*.

Austin, STEPHEN T. (d. 1836), was the founder of the State of Texas. His father, Moses Austin, had made an application to the Mexican Government for permission to establish an American colony in Texas, and in 1822 the grant was confirmed to the son. In 1833 Austin went to Mexico to obtain the ratification of the State Constitution, which the Texans had formed for themselves. He was unsuccessful in his mission, and was detained there as prisoner. In 1835 the Texans took up arms to drive the Mexicans out of Texas, and Austin was appointed commander of the army. Shortly before his death he went as Commissioner to the United States, to further the liberation of Texas from the Mexican Government, and to obtain the recognition of Texan independence.

Austria, THE EMPERORS OF. [See under *Christian names*.]

Auzoux, THÉODORE LOUIS (b. circa 1797, d. 1880), was a French anatomist. He took pains to popularise the study of anatomy by means of casts made from a paste, which dries very hard. This paste, applied to the organs of dead bodies, gives a most perfect fac-simile of the formation of every vein and fibre; the models are then coloured, and so an exact representation of nature is obtained. Each part of the cast is separate, to represent distinct organs, or distinct portions of the same organ, and it can be taken to pieces at pleasure, to show the relation of the different organs to each other. Hence the name of "anatomie elastique" (Greek, *καστω*, to break). M. Auzoux had a large factory for the manufacture of the casts in his native town of Aubin d'Ecroville (Eure).

Awdry, SIR JOHN WITHER (b. 1795, d. 1878), Indian judge, was educated at Winchester, and elected to a fellowship at Oriel College, Oxford. After being called to the bar in 1822, he was appointed a puisne judge and commissioner of the Insolvent Debtors' Court in Bombay (1830), and subsequently Chief Justice of the Supreme Court of that presidency (1839). He resigned in 1842, and was appointed one of the commissioners of the University of Oxford in 1852.

Ayrton, THE RIGHT HON. ACTON SMEE, F.R.G.S. (b. 1816, d. 1886), was called to the bar in 1853, and elected M.P. for the Tower Hamlets in 1857. On the return of a Liberal administration in 1868 he was appointed one of the Joint Secretaries to the Treasury, and in 1869 was created First Commissioner of Works and Public Buildings. In 1872 he exposed himself and the Government to much unpopularity by his Parks Regulation Bill. In the following year, when the ministry was reconstructed

after the resignation of Mr. Lowe, which was partly due to differences with Mr. Ayrton, the latter was appointed Judge-Advocate-General. Having failed to secure his return for the Tower Hamlets in 1874, he took no further part in public life till 1885, when he became a candidate for Mile End, but without success.

Aytoun, WILLIAM EDMONSTOUNE, D.C.L. (*b.* 1813, *d.* 1865), poet, and professor of rhetoric and belles-lettres in the University of Edinburgh, was a native of that city. He was educated for the law, and was called to the Scottish bar in 1840, and in the same year he published *The Life and Times of Richard I.*, a work in perfect harmony with his heroic nature. In 1848 he was appointed Regius professor of English literature in his native university. In 1848 he published *The Lays of the Scottish Cavaliers*, which established his fame as a poet of the Walter Scott school. This collection, in which of all his works his chivalrous ardour is most contagious, the impetuous swing of his muse most felt, has required about thirty distinct issues to satisfy the craving of readers. In 1852, during the Derby administration, he was promoted to the shrievalty of Orkney and Shetland. He found in 1849 a genial helpmate in the youngest daughter of "Christopher North" (Professor Wilson), in whose person he saw an ideal combination of the athlete, the scholar, and the gentleman. Aytoun added to his poetic gifts a fine sense of irony and humour, and when his *Firmilian: a Spasmodic Tragedy*, appeared in 1854, some London critics treated the work quite seriously, not perceiving that Aytoun was all the while launching shafts of ridicule at the subjective school of poets, who at that particular time, he thought, were rather loud in their wailings, and in their writhings too spasmodic. *Bothwell*, a long narrative poem, in the simple measure and direct manner of Scott, appeared first in 1856, and his edition of the *Scottish Ballads*, in two volumes, came out in 1858. In the following year, he, in conjunction with his friend Sir Theodore Martin, brought out translations of various minor poems of Goethe. The two also co-operated in producing *Bon Gaultier's Book of Ballads*, and some of the raciest of those most humorous productions are understood to be from Aytoun's pen. This volume has gone through thirteen editions. In his tales, his peculiar humour is best seen in *The Glen-mutehkin Railway* and *How I became a Yeoman*. Mr. Aytoun was, till his death, which took place on Aug. 4th, 1865, one of the most brilliant of the contributors to *Blackwood*, and he was equally happy whether he was dealing with politics or with matters of pure literature. He took for his second wife Miss Kinnear, shortly before his death.

Sir T. Martin, *Life of W. E. Aytoun*.

[J. F. R.]

Ayub Khan (*b. circa* 1849), son of Sheer Ali, Ameer of Afghanistan, and thus brother of Yakub Khan, had long been an exile in Persia, when his father, driven from his kingdom, died in despair near Balkh (1879). Immediately after, or even before, this event, Ayub entered Herat, and was soon recognised as governor of the city. His patriotic detestation of the English caused him to disapprove of Yakub's policy during the latter's short tenure of power, but he does not seem to have taken any definitely hostile steps till after Yakub's abdication and detention, when Abd-er-Rahman was appointed his successor (1880). It was then rumoured that Ayub was advancing from Herat upon Candahar, and in July General Burrows, with a small force, was despatched to check his progress. Unfortunately, on the 27th of that month General Burrows was induced to offer battle on disadvantageous ground near a village called Maiwand, about fifty miles from Candahar. The British force was almost annihilated, the survivors retreated to Candahar, and after some delay Ayub began the siege of the city, but was compelled to withdraw to the neighbouring village of Mazra, where he was completely defeated by General Roberts, who arrived for the relief of Candahar after a forced march from Cabul. Ayub fled to Herat, where he spent several months in consolidating his power. In the summer of 1881, after the British had evacuated Afghanistan, Ayub once more began a cautious advance upon Candahar, and the history of the previous year almost repeated itself. Ayub gained a brilliant victory over the Ameer's troops near Maiwand, and on the anniversary of that battle, but on the arrival of the Ameer himself from Cabul, he was again defeated near Candahar, and again fled to Herat, but was afterwards compelled to take refuge in Persian territory. For the next few years he remained in Persia, living chiefly at Teheran, engaged in unsuccessful intrigues. Hearing of the Russian advance upon Penj-deh, in 1885, he meditated joining it, but on the representations of our minister at Teheran he was made a prisoner of state.

Azeglio, MASSIMO TAPPARELLI, MARQUIS D' (*b.* 1800, *d.* 1866), Italian novelist and patriot, son of Cesare Azeglio, Sardinian ambassador and minister, was born at Turin, and in 1821 went to study art in Rome, where he gained considerable distinction as a landscape painter and musician. Some of his pictures are in the Louvre. In 1830 he met Manzoni in Milan, and married his daughter. By his advice he turned to literature, and produced two novels, somewhat after his master's manner, namely, *Ettore Fieramosco* (1833), and *Nicolo d'Zappi* (1841), a tale of the siege of Florence under Charles V. Both were received with great enthusiasm

by the patriotic party, whose cause he also furthered by a pamphlet, *Degli Ultimi Casi di Romagna* (On the Recent Events in the Romagna), 1846. Two years later he joined the patriot army against Austria, and was wounded at Vicenza. In 1849 Victor Emmanuel appointed him President of the Council (Prime Minister), but he was supplanted by Cavour in 1852, having failed to gain the favour of the extreme Republicans.

Gentleman's Magazine, March, 1866.

Asimollah Khan (*d. circa* 1860), was sent to London by the Nana Sahib in 1854, to push his master's claims to a pension, which he claimed as the adopted son of the Peiswah of Poonah. Having previously acquired some knowledge of languages as a servant in an English family, he became very popular in London society. Failing to persuade the Government to accede to his representations, he returned to India *via* the Crimea, where he became impressed with the idea that England was plunging into inevitable ruin. By him the Nana is believed to have been instigated to the treacherous attack on Cawnpore, and the infamy of the massacre is generally ascribed to his advice. His ultimate fate, like that of his master, is wrapped in mystery.

B

Babbage, CHARLES (*b.* 1792, *d.* 1871), an eminent mathematician and mechanician, was born near Teignmouth. Being a delicate child, he received his early education in private schools, passing from thence to Trinity College, Cambridge, in 1811. There he became the fellow-student of Herschel and Peacock, with them and others founding, in 1812, the Analytical Society, for the promotion of pure mathematics. The three friends conjointly published, in 1816, a translation of Lacroix's *Elementary Treatise on the Differential and Integral Calculus*, and two volumes of *Examples* in 1820. Babbage graduated in 1814 (without, however, competing in the Mathematical Tripos, notwithstanding his great reputation at the University), was elected F.R.S. in 1816, and took the degree of M.A. in 1817. In 1820 he assisted in founding the Astronomical Society, and in 1825 joined Herschel in repeating Arago's experiments on the magnetisation of rotating plates; what is known as the "astatic" needle was invented during these researches. He was Lucasian professor at Cambridge for eleven years. Among the eighty works published by him are a *Comparative View of the Different Institutions for the Assurance of Life*; *A Table of the Logarithms of the Natural Numbers*, from 1 to 108,000; *Economy of Manu-*

factures and Machinery, called by Blanqui a hymn in honour of machinery; and the *Ninth Bridgewater Treatise*, defending mathematical studies as serviceable to religion, and not as tending to infidelity. He became celebrated as the inventor of the calculating machine, constructed, as its name implies, to aid the practice of arithmetic by machinery. To the perfecting of this ingenious idea he devoted a large portion of his life and fortune, while the Government, at various periods, contributed £17,000 of public money. A portion of the machine is in the South Kensington Museum. In reality it was never completed. The inventor desiring to adopt a new principle when the first specimen was nearly completed, in order to make not a "difference," but an "analytical" engine; the Government declined to accept further risk. As a man, his habits were rather peculiar, and in his *Passages from the Life of a Philosopher* (1864) we have some curious glimpses of the great mathematician living in London, surrounded by his workshops, and waging undying warfare against the street musicians. Only once, in 1832, he attempted to enter public life. But as Finsbury preferred to be represented in Parliament by a more "practical" politician, he never again offered his services to the nation in that capacity.

C. Babbage, *Passages from the Life of a Philosopher*.

Babinet, JACQUES (*b.* 1794, *d.* 1872), a French physicist and astronomer, was a native of Lusignan. In 1811 he entered the Lycée Napoléon, in the following year the Polytechnic, and, after further training at Metz, the Imperial army, as a sub-lieutenant of artillery. His military career terminated with the downfall of the Empire in 1815, after which he was successively professor of mathematics at Fontenoy, of physics at Poitiers, and again, in 1820, of physics in the College of St. Louis, at Paris, a position held by him for forty-nine years. In 1825 he lectured at the Athenæum on meteorology, and, indeed, claimed the title of that science as his invention. He was elected member of the Academy of Sciences in 1840. He improved many scientific instruments, including the pneumatic machine, and invented a hygrometer, a goniometer, to measure the refraction of transparent bodies, and a photometer, still used to measure the intensity of illuminating gas. His lectures were celebrated for their easy and attractive style, and were familiarly known in Paris as the *Causeries du Père Babinet*. Some unfortunate predictions of his in regard to the failure of the Atlantic cable have been much ridiculed. One of his best known works is *Études et Lectures sur les Sciences d'Observation et sur leurs Applications Pratiques*. Babinet also designed an atlas of *Cartes Homographiques*, as he termed them, in which a new system of projection is utilised.

***Babington**, CHARLES CARDALE (b. 1808), a distinguished botanist, antiquarian, and scientific writer, was born at Ludlow, and educated at St. John's, Cambridge, taking his B.A. degree in 1830, and that of M.A. in 1833. His botanical works have brought him considerable reputation, his *Manual of British Botany* having reached an eighth edition, though now somewhat superseded by the *Floras* which do not adopt so hair-splitting a method as that favoured by the pre-Darwinian school of systematic writers. Other published contributions to this science include *Flora Bathoniensis*, *The Flora of the Channel Islands*, *The Flora of Cambridgeshire*, *The British Rubi*, and *The Flora of Iceland*, besides numbers of papers in the *Transactions* of the Linnean Society, and in those of the Edinburgh Botanical Society, of which he was one of the earliest members and principal supporters. He is professor of botany in the University of Cambridge (succeeding Henslow), and holds a professorial fellowship at his own college, of the chapel of which he has published a history. Mr. Babington has also identified himself with his university and Cambridgeshire generally by the contribution of various papers to the publications of the Cambridge Antiquarian and other learned societies. His brother, the Rev. Professor Churchill Babington, is of some reputation as an antiquarian and a botanist.

Bache, ALEXANDER DALLAS (b. 1806, d. 1867), an American hydrographer, was a native of Philadelphia, and in his fifteenth year was appointed a cadet at West Point, where he graduated with high honours in 1825, becoming a lieutenant of Engineers, though retained at the academy as an assistant-professor for some time afterwards. He was professor of mathematics in the University of Pennsylvania from 1827 to 1836, when he was appointed president of the Board of Trustees of Girard College, and was immediately thereafter, prior to the organisation of that institution, despatched to Europe to examine the educational systems of England, France, Germany, and other countries. On his return, in 1838, he submitted a full report, which contributed much to improve the American system of public instruction. On the death of Professor Hassler, in 1843, he was appointed superintendent of the Coast Survey, and the results of his work in this department secured him a high place in the scientific world. Congress aided the survey with liberal grants, and he was enabled, not merely to map out the coast-line with great accuracy, but to collect an enormous mass of valuable magnetic and meteorological observations. He was also superintendent of weights and measures, light-house commissioner, Regent of the Smithsonian Institution, and vice-president of the United States Sanitary Commission, besides being a leading spirit in several scientific societies. He bequeathed about 42,000 dollars (over

£8,000) to the National Academy of Sciences. His scientific writings are for the most part embodied in his official reports and in the *Transactions* of various scientific societies. But his claim on the gratitude of his country, and of the world at large, was due quite as much to the services which he rendered by stimulating that appreciation of science which the United States Government has ever since so keenly cherished. In America he was also regarded with a sort of personal affection, owing to the fact that he was a great-grandson of Benjamin Franklin.

Bachman, JOHN (b. 1790, d. 1874), an American naturalist and clergyman, was born in Dutchess County, New York. At the age of twenty-three he was licensed to preach, and in 1815 became pastor of the German Lutheran Church at Charleston (S.C.), a position he held to the date of his death, in 1874. He was long an enthusiastic collaborateur of Audubon, the great ornithologist, assisting the latter materially in the preparation of his magnificent monograph on *The Birds of America*, while he was the principal author of *The Quadrupeds of North America*, the pictorial portions being due to Audubon and his sons. He published several other works, among which are numbered a *Defence of Luther and the Reformation*, *The Doctrine of the Unity of the Human Race exemplified on the Principles of Science, and Characteristics of Genera and Species as applicable to the Doctrine of the Unity of the Human Race*.

Back, SIR GEORGE (b. 1796, d. 1878), admiral and Arctic navigator, was a native of Stockport, and entered the Royal Navy as midshipman in 1808. The following year he was taken prisoner by the French, and when sent across the Pyrenees to St. Sebastian, was so small that he was carried in one of the panniers of a pack-mule. He remained a prisoner-of-war for five years. In 1818 he volunteered for service under Franklin, and the next year set out with that commander on his land expedition from Hudson's Bay to the Coppermine river. The party reached Fort Enterprise in July, 1820, and a little later Back was despatched on a long journey to obtain supplies. In five months he travelled 1,200 miles on snow-shoes in the severest weather, and often himself on the verge of starvation. To his energy and courage on this, and a subsequent expedition, the survivors, including Franklin himself, owed their lives. Back served with Franklin's expedition to the Mackenzie river, and in 1833 took charge of the party sent out in search of Sir John Ross, when he travelled by land and rivers 7,500 miles, making several discoveries of importance. On his return, he was awarded the Geographical Society's gold medal, and promoted to the rank of captain. In June, 1836, he took command of the *Terror* on a new Arctic expedition, which accomplished

little, and nearly came to a disastrous end on two occasions. He published two "narratives" of his expeditions, and the sufferings and privations described therein fully account for his health being much broken after his return from the latter one. He was knighted in 1837, and made rear-admiral in 1859. Sir George for many years took an active part in the affairs of the Royal Geographical Society, and was a leading adviser in all the Arctic expeditions, from that of Franklin in 1846, to Nares's in 1875; and left the "Back Bequest" for the advancement of exploration.

***Baden, FREDERICK WILLIAM LOUIS, GRAND DUKE OF** (b. 1826), became regent in place of his elder brother Louis, who was insane, in 1852, succeeded him in 1856, and married in the same year a daughter of King William I. of Prussia. He took part in the Franco-German War of 1870-1. As a confederate of the North German Bund, the Duke has always endeavoured to check in his dominions the power of the Church of Rome, and in 1855 the Jesuits were banished from the duchy.

***Badger, THE REV. GEORGE PERCY, D.C.L.** (b. 1815), an eminent Oriental scholar and diplomatist, was born at Chelmsford, Essex. His early life was spent at Malta and at Beyrout. In 1842 he took holy orders, and was appointed by the Primate delegate to the Eastern Churches, and more especially to the Nestorians of Kurdistan. Mr. Badger was subsequently appointed Government Chaplain at Bombay, and afterwards at Aden. Dr. Badger frequently acted as interpreter to Sir James Outram, Sir William Coghlan, and Sir Bartle Frere, during their various diplomatic expeditions in Arabia, Persia, East Africa, and Egypt. Dr. Badger is also the author of many works upon the history and literature of Arabia and the East:—*The Nestorians and their Rituals* (1852), *History of the Imāms and Scyids of Omān* (a translation from the original Arabic of *Salīb-ibn-razik*) (1871), *Travels of Ludovic di Varthema in India and the East, A.D. 1503-8* (1863), *An English-Arabic Lexicon* (1881). Among his minor writings are treatises upon education in India, and a description of the Suez Canal works. Mr. Badger received the degree of D.C.L. from the Archbishop of Canterbury in 1873; he has also been created Companion of the Gleaming Star by the Sultan of Zanzibar, whose suite he attended as confidential adviser during their stay in England in 1875.

Baer, KARL ERNST VON (b. 1792, d. 1876), a Russian naturalist, was a native of Esthonia. He entered the University of Dorpat, in 1810, as a medical student, graduated in 1814, and practised for a short time subsequently in

Vienna. He afterwards gave up the medical profession, finding natural science more congenial, and in 1817 proceeded to Königsberg, where he remained till 1834, filling, in the interval, several Chairs and other positions. His studies there were mainly devoted to the elucidation of animal development, of which he is regarded as one of the greatest exponents. He has been often described as the "father of comparative embryology." In 1834, Von Baer received the appointment of librarian to the Academy of St. Petersburg, and soon came to be regarded as one of its most eminent members. In 1851 he commenced an investigation into the Russian fisheries, and the unscientific modes employed in them, which resulted in the publication of an important work on the subject in 1859, and much practical good to the fisheries themselves. He made an expedition to the Caspian, described in his *Kaspiſche Studien*, and his treatises on the zoology and botany of Northern Russia are greatly esteemed. The subjects he treated include glacial action, river-beds, the Siberian mammoths, and the potato disease.

Bagshot, WALTER (b. 1826, d. 1877), was a Somerset man, born at Langport, where he was connected with the Somersetshire Bank, and eventually succeeded his father as vice-chairman. He was educated at Bristol, and then at University College, London, where he had the advantage of De Morgan's mathematical and George Long's classical teaching; he took his B.A. London degree with the mathematical scholarship (1846), and his M.A. with the gold medal in moral philosophy, etc. (1848). He studied law, but though called to the bar in 1852, he determined not to pursue the profession, and returned to Langport to his father's bank and shipping business. He was not, however, the man to allow business to absorb all his energies. He was a considerable writer, and besides contributing to the quarterly *National Review* from 1855, he was one of its editors throughout its existence. His essays were often very brilliant; he had, as Mr. Hutton says, "a very curious combination of dash and doubt, great vivacity in describing the superficial impressions produced on him by every subject-matter with which he was dealing, and great caution in yielding his mind to that superficial impression." His most popular work undoubtedly is *Lombard Street*, a vivid account of the money market, which has reached its seventh edition, though *The English Constitution* stands very near it in general estimation, and has been translated into French, Italian, and German. His political views here expressed are sometimes original and worth considering, though his friends perhaps exaggerate their importance. *Physics and Politics*, which has also proved very popular, is "an attempt to apply the principles of natural selection and inheritance

to political society." Long and deep-rooted tendencies he regarded as the spring of efficient political life, and therefore preferred the stupid but healthy uniformity of the English mind in politics to the will-o'-the-wisp uncertainty and variety of the French. For the last seventeen years of his life he edited the *Economist*, a paper founded by his father-in-law, the Right Hon. James Wilson. Bagehot was an economist of the Ricardo school, but had his independent views on this, as on most subjects. Two volumes of *Literary Studies* and one of *Biographical Studies* were collected and published after his death, and these six volumes, with a *Treatise on the Depreciation of Silver between 1865 and 1875*, some essays on *Parliamentary Reform*, and a volume of *Economic Studies*, constitute his literary effects.

See an interesting memoir by E. H. Hutton in the *Dictionary of National Biography*, s.v., and a memoir prefixed to Bagehot's *Literary Studies*.

Bagrati, PRINCE PETER (b. circa 1765, d. 1812), a celebrated Russian general, served under Suvaroff in the campaigns of Italy and Switzerland. During the Austrian campaign of 1805, and at the battle of Austerlitz, he led the vanguard of the army with extraordinary bravery and skill. Having raised himself by his services against Sweden and the Turks to the highest position in the Russian army, he contributed to Napoleon's ruin by diverting the course of his invasion from St. Petersburg towards Moscow, but fell mortally wounded in the battle of Borodino, having unwisely determined to meet Napoleon in the field, instead of pursuing the Fabian tactics advocated by Barclay de Tolly (q.v.).

Baikie, WILLIAM BALFOUR, M.D. (b. 1825, d. 1864), the explorer of the Niger, was the eldest son of Captain John Baikie, R.N., and was born and bred at Kirkwall, Orkney, finishing his education at Edinburgh University, where he took his medical degree. He served on various vessels of the Royal Navy, and also at the Haslar Hospital, as assistant-surgeon, and was in 1854 recommended by Sir Roderick Murchison to the post of surgeon and naturalist to the Niger expedition, just preparing to start. On the death of the commander at Fernando Po, Baikie succeeded to the leadership of the expedition, and the results of his first exploration, which penetrated 250 miles higher up the Niger than had before been reached, are described in his *Narrative of an Exploring Voyage up the Niger* (1856). He conducted a second expedition in 1857, and was wrecked high up the river, deserted by his companions, and left to finish his researches alone. Nothing daunted, he purchased land at Lukoja, the confluence of the Quorra and Benué, formed a native settlement, and ruled it; and from this basis proceeded to survey the country

around, open outroads, establish regular markets, make treaties with neighbouring potentates, collect vocabularies of African dialects, translate the Bible and Prayer Book into Hausa, and generally act the part of priest and king to the neighbourhood. He died while on his way home for a holiday. He was a good naturalist and an indefatigable explorer, and his contributions to African philology are valuable.

See the *Dictionary of National Biography*, s.v.

***Bailey**, PHILIP JAMES (b. 1816), an English poet, born at Nottingham. He studied at the University of Glasgow, and began the practice of law. In 1839 he published his first and best-known poem, *Festus*, which was much read and appreciated both in England and America. *Festus* was evidently suggested by Goethe's *Faust*; it deals with the highest questions of religion and philosophy, and contains passages of striking power and beauty. The faults of the poem arise from the confused fervour and passion of the poet. In a criticism (before 1850) Alfred Tennyson writes of *Festus*:—"I can scarcely trust myself to say how much I admire it, for fear of falling into extravagance." Mr. Bailey has also written *The Angel World* (1850), *The Mystic* (1855), *The Age*, a satire (1858), and *The Universal Hymn* (1867).

Bailey, SAMUEL (b. 1787, d. 1870), English philosopher, was born at Sheffield, and from his residence there has become generally known as "Bailey of Sheffield." He published his first volume of essays *On the Formation and Publication of Opinions* in 1820. It attracted considerable attention, and was followed in 1829 by *Essays on the Pursuit of Truth and Progress of Knowledge*, and some years later by the *Theory of Reasoning*. Many of the essays are written to defend unlimited freedom of speculation and inquiry in the pursuit of truth. In ethics, Bailey was an adherent of the early Utilitarian school; in psychology, of the English philosophy of "common sense." He resisted the tendency to barren platitude more successfully than the inferior writers of this school, and his mental analysis is often as paradoxical as acute: e.g., "Man's strongest wish is not to discover truth, but to discover new grounds for adhering to opinions already formed;" and "Dread to find a conclusion true often brings about the conviction which we wish to shun." In later life Bailey turned his attention also to political economy and Shaksperian criticism.

Baillie, JOANNA (b. 1762, d. 1851), dramatist and poetess, was born at the manse of Bothwell, in Lanark. Her mother was the sister of William and John Hunter, whose genius for anatomy descended to her brother, Sir Matthew Baillie, the celebrated morbid anatomist and physician extraordinary to George III. Till she was twenty-two Joanna

lived with her family in various towns of the Lowlands, and for a time in Glasgow, where her father was professor of divinity to the university. During this period she gathered the wide knowledge of nature and of Scotch speech and manners that is displayed in so many of her works, as well as the uninteresting morality and singleness of soul that destroys their beauty as dramatic art. She early showed signs of productive talent, especially in her ready improvisations in assumed character. In 1784, the father having died, the rest of the family went to London, and lived for a time with Matthew Baillie, who had inherited Dr. William Hunter's house and museum. At the beginning of the century they retired to Hampstead, where, after the mother's death, Joanna, with her sister, continued to live for the remaining fifty years of her life. But before this removal several of her *Plays on the Passions* had already appeared. The first series, consisting of a tragedy and a comedy on love, and a tragedy (*De Monfort*) on hatred, was published in 1798; the second series in 1802. They at once attracted attention; many critics, probably judging from the language and subjects rather than the treatment, attributed them to Sir Walter Scott himself; at all events, they won for her his friendship, her greatest triumph. In 1800 John Kemble ventured to produce *De Monfort* at Drury Lane, Mrs. Siddons taking the part of the heroine, Jane de Monfort. But the play was not well received, though it held the stage for eleven nights, a fairly long run in those days. The rest of her numerous dramas followed each other in regular succession. A volume of miscellaneous plays, including *Rayner* and the *Country Inn*, appeared in 1804; the third series of *Plays on the Passions* in 1812; the *Martyr* in 1826, and three volumes of collected miscellaneous plays in 1836. Only some six or eight of these were ever produced on the stage. Her greatest dramatic success was the *Family Legend*, produced in Edinburgh in 1810, and occasionally revived; but no doubt it owed its favour mainly to the active support of Sir Walter Scott, and to its theme, which was drawn from an old Scottish tradition of clan rivalry. For, indeed, the plays have none of the highest characteristics of drama. There is no surprise of plot, no complexity of nature, no inexorable decree of fate. The characters come from an unreal world of very good and very bad—a world where all turns out as every one might naturally expect, and all is shaped to an edifying end by a divinity that keeps the wires well in hand. The tragedies are uninteresting melodramas; the comedies are farces of scrupulous gentility. Yet the latter are, on the whole, the most valuable of Joanna Baillie's works. They sometimes give us glimpses of the genuine life and manners of her time; and though the themes for the most part are long since out-worn, the dialogue is

relieved by genuine humour: though, too often, for dramatic success, it is humour of phrase rather than humour of situation. The tragedies, on the other hand, tell us neither of the complex passions that are eternal, nor of the manners of any possible age. From first to last they are overshadowed by the false romanticism once considered the only fit medium for the heroic and ideal. And yet it is lamentable to find how nearly these plays, with all their faults, approach real excellence. They abound in passages of some beauty. In 1821 Joanna Baillie published a series of three or four *Metrical Legends*, drawn from Scottish history, and a fairly close imitation of Scott's poems. She also wrote several passable songs, chiefly to old and Scottish tunes, with the original burdens. But her only title to lasting fame is the praise of Sir Walter Scott.

[H. W. N.]

* **Baillon**, ERNEST HENRI (b. 1827), a French physician and naturalist, was born at Calais. His medical studies were prosecuted in Paris, and he early obtained prizes for work in "l'École Pratique" and in the hospitals. In 1855 he received the double degree of Doctor of Medicine and of the Natural Sciences. Botany, and natural science generally, having from an early period of his life engaged his attention, he was selected in 1864 professor of medical natural history to the Faculty of Paris. Soon after, M. Baillon was appointed professor of hygiene to the Central School of Art and Manufactures. He was decorated in 1867. Among his numerous works and memoirs are:—a *Guide de l'Étudiant au Nouveau Jardin Botanique de la Faculté de Médecine de Paris*, *Zoologie Médicale*, and a *Histoire des Plantes*. The latter, in 6 vols., is almost an *édition de luxe*, and is recognised as a standard work in France and England, where it has been translated. There was another naturalist of the same name (Emanuel Baillon), the friend of Buffon, who died in 1802.

Baily, EDWARD HODGES, R.A., sculptor (b. 1788, d. 1867), inheriting the faculty possessed by his father, amused himself, when at the grammar-school of his native city, Bristol, by carving the likenesses of his school-fellows. At the age of fourteen he was placed in a merchant's office, but he abandoned the desk after two years, and commenced portraiture in wax. Some studies from the antique procured him the notice of Flaxman, and coming to London in 1807, he was admitted by the great master to his studio, where he worked for nearly seven years. In 1809 he entered the schools of the Royal Academy, and the same year gained a silver medal; and in 1811 he carried off the gold medal for his group of *Hercules rescuing Alceste*. On his election, in 1817, to the Associateship of the Academy, he produced for the following year's exhibition *Eve at*

the *Fountain*, which greatly enhanced his reputation. His fame, indeed, as a sculptor rests almost entirely on this figure. When elected a full member of the Academy, in 1821, he was entrusted with the execution of the Bassi-rilievi on the Marble Arch. Although so long under Flaxman, he never caught any of his classic spirit, and preferred working on subjects of a homely kind, such as *Mother and Child*, *Group of Children*, *Sleeping Girl*, and these he several times repeated. Monumental statues and portrait busts largely occupied his attention and skill. Charles James Fox and Lord Mansfield in St. Stephen's Hall, Westminster, are favourable examples of this branch of his art, and others will be found in St. Paul's. In 1863 he accepted the position of Honorary Retired Academician. [J. F. R.]

Baily, FRANCIS (b. 1774, d. 1844), an eminent astronomer, was a native of Newbury, Berks. He engaged in business as a London stockbroker, and during his commercial career wrote several works on annuities, assurances, and kindred subjects. Meantime, he was making astronomy his special study, and on March 14th, 1811, a remarkable paper written by him was read before the Royal Society, "which involved the computation," Sir John Herschel tells us, in a *Memoir* written after Baily's death, "of all the solar eclipses during a period of seventy years, six centuries before the Christian era." From this time astronomy engaged more and more of his attention, and some very necessary improvements of the *Nautical Almanac* were largely due to him. He was elected F.R.S. in 1821, and four years later retired from the Stock Exchange, to devote the whole of his subsequent career to the service of the Astronomical Society and the British Association. He prepared the *Star Catalogue* for the former Society, and left behind him ninety-one distinct memoirs and other publications. In addition to various honours from foreign states and universities, he was LL.D. of Dublin, and D.C.L. of Oxford.

Sir J. Herschel, *Memoirs R. A. S.*, xv. 311 (also published separately, 1845).

* **Bain, ALEXANDER, LL.D.** (b. 1818), writer on the philosophy of mind, is a native of Aberdeen. He studied at Marischal College and University, 1836-40, and graduated M.A. in 1840. In 1841-4 he acted as deputy for the professor of moral philosophy, and in 1844-5 for the professor of natural philosophy, in his *Alma Mater*. In 1845 he was appointed professor of natural philosophy in the Andersonian University, Glasgow. In 1847 he became assistant-secretary to the Metropolitan Sanitary Commission, and in 1848-50 he was assistant-secretary to the General Board of Health. In 1857-62, and again in 1864-9, he was examiner in mental

philosophy in the University of London. From 1860 to 1880 he occupied the Chair of logic (to which is attached the Chair of English) in the University of Aberdeen. In 1881 he was elected Lord Rector of the University of Aberdeen by a majority of the students in each of the four "nations," an unprecedented mark of appreciation; and in 1884 he was re-elected. In 1869 he received from the University of Edinburgh the degree of LL.D. Dr. Bain commenced his diligent literary career in the year of his graduation (1840) in the *Westminster Review*. In 1842 he read Mill's *Logic* in manuscript, and discussed the whole work in detail with the author, at the same time providing him with a large stock of illustrative examples, mostly drawn from the experimental sciences (Bain's *J. S. Mill*, pp. 52-61). In 1847-8 he wrote for Chambers's Educational Course the text-books on *Astronomy*, *Electricity*, and *Meteorology*. In 1852 he edited Paley's *Moral Philosophy*, with notes and dissertations. In 1855 he published *The Senses and the Intellect*, and in 1859 *The Emotions and the Will*, constituting together a systematic exposition of the human mind. This is Dr. Bain's principal work. It exhibits a strikingly penetrating analysis, a patient and masterly marshalling of pointed illustrations, severe precision of thought and unrivalled clearness of exposition. Dr. Bain belongs to the school of Locke and Hartley; like Hartley, he grounds psychology on physiology, but he improves upon the position of his predecessors by regarding the human organism as capable of originating active impulses, not dependent on the stimulation of the senses. The work was at once pronounced by J. S. Mill to be "the most careful, the most complete, and the most genuinely scientific analytical exposition of the human mind which the *a posteriori* psychology has up to this time produced" (*Edin. Rev.*, Oct., 1859; *Dissertations*, vol. iii., p. 100); and by means of unsparing revisions, it maintains its title to a continuance of Mill's high praise. In 1861 appeared *The Study of Character, including an Estimate of Phrenology*. The needs of the English Chair led to the publication of an *English Grammar* (now called *A Higher English Grammar*) in 1863, and of a *Manual of English Composition and Rhetoric* in 1866. *A First English Grammar* was issued in 1872, and in 1874 a *Companion to the Higher Grammar*, with discussions, expositions, and abundant illustrative examples. In addition to strict definition and classification in grammar, Dr. Bain has strenuously advocated a great variety of means towards clearness, emphasis, and the useful differentiation of alternative forms for the expression of different shades of meaning; and in composition his aim is to secure the most effective application of the available means of expression. In 1868 Dr. Bain published a *Compendium of Mental and Moral Science*; in 1870 *Logic, Deductive and Induc-*

ties; and in 1873 *Mind and Body: the Theories of their Relation*. In education generally Dr. Bain has taken the closest interest; in 1872-8 he was a member of the Aberdeen School Board, and in 1879 he wrote for the International Series *Education as a Science*. Dr. Bain has always been mindful of his intellectual friends. In 1869 he co-operated with John Stuart Mill in editing, with notes, James Mill's *Analysis of the Human Mind*. In 1872 he and Professor Croom Robertson prepared for publication Grote's posthumous work on *Aristotle*; in 1873 he edited *The Minor Works of George Grote, with Critical Remarks on his Intellectual Character, Writings, and Speeches*; and in 1885 he issued a revised and re-arranged edition (for students) of Grote's *Plato*. In 1882 he published *James Mill: a Biography*, and *John Stuart Mill: a Criticism, with Personal Recollections*. In 1884 Dr. Bain collected a number of occasional papers into a volume, entitled *Practical Essays*.

Baird, Sir David (b. 1757, d. 1829), general, born at Newbyth, Aberdeenshire, entered the army at an early age, and in 1779 was ordered to India, where Hyder Ali was invading the Carnatic. At the battle of Perimbanam the English were defeated; Baird and many others were taken prisoners, and detained in captivity for nearly four years, during which time they received the most barbarous treatment at the hands of Hyder Ali and his son, Tippoo Sahib. Shortly after his release, in 1787, Baird was made major of his regiment, and purchased the office of lieutenant-colonel in the following year. In 1793, at the head of a brigade of Europeans, he took Pondicherry from the French, almost without resistance; for this he was promoted to the rank of colonel. He headed the storming party at Seringapatam (1799); the town was taken, and Tippoo Sahib was slain. For this brilliant achievement he received the thanks of Parliament, though General Harris, passing over the man who had really taken the town, most unjustly appointed Colonel Wellesley, afterwards the Duke of Wellington, Governor of Seringapatam. In 1801 he headed the perilous expedition to Egypt, and in spite of the many difficulties of the march, joined General Hutchinson in time to co-operate in the taking of Alexandria. On his return to India in the following year, he received the command of a division of the Madras army; however, at the outbreak of the Mahratta War, he found Wellesley again preferred before him, and, convinced that he had no chance in India, he gave up his command, and returned to England. In 1805 he was put at the head of an army to re-capture the Cape of Good Hope, accompanied Lord Cathcart to Denmark in 1807, and served in the Peninsular campaign, where at Corunna, his last battle, he was

badly wounded. There can be no doubt that the services of Sir David Baird were shamefully neglected by the Government; his application for the government of the Cape was refused in 1813, and it was only in 1819 that some recognition was made the gallant soldier by his appointment to the governorship of Kinsale. With the people Baird had always been a hero—"not Baird, but Bayard."

Theodore Hook, *Life of Sir D. Baird*; Grant Duff, *History of Mysore*.

***Baird, Spencer Fullerton** (b. 1823), a distinguished American naturalist, is a native of Reading, Pennsylvania. He was educated at Dickinson College, at which school of learning he was appointed professor of natural science in 1846. In 1850 he commenced his connection with the Smithsonian Institution at Washington—an establishment with which his name has become inseparably connected since that time. He held the appointment of assistant-secretary till 1878, and on the death of Professor Henry, in that year, succeeded to his post as secretary—a position he now holds. His first literary work of any importance was a translation in 4 vols. (1848-51) of Heck's *Bilder Atlas*, but his first notable original contribution to science was the *Report on the Mammals of North America*, forming vol. viii. of the *Reports of the Survey of the Railroad Routes to the Pacific*, which was followed in 1858 by a still more extended work (vol. ix. of the series) on the birds of the same country. He has since published several volumes on the latter subject, either independently or in conjunction with Messrs. Brower and Ridgway. In 1871 he was specially selected by President Grant as United States Commissioner of Fish and Fisheries, for the purpose of investigating the decline in the supply of food-fishes, and the methods of restoring it. This appointment was associated in the following year with active efforts for increasing the fish supply by artificial propagation. These experiments have been very successful, and there are now many fish-hatching and growing establishments scattered over the United States. Professor Baird is also director of the National Museum, for which institution a building covering two and a half acres was erected in 1880. His minor writings, which are very numerous, are for the most part contained in the annual reports of the Smithsonian Institution and the *Proceedings of the Academy of Natural Sciences of Philadelphia*. But Mr. Baird's great work is the unwearied care he has for more than thirty-five years devoted to the advancement of science by directing the labours of the army of *collaborateurs* whom the "Smithsonian" has called into existence, or who, but for it, might have toiled in vain.

Bajee Rao. [POONAH.]

***Baker, SIR SAMUEL WHITE, PASHA, K.C.B., F.R.S.** (b. 1821), a distinguished explorer, born in London, was educated in a private school, finishing his youthful studies in Germany. At an early age he displayed a strong desire for travel, and in 1848, in conjunction with his brother, Colonel Baker, organised a model colony and coffee estate in Ceylon. In 1855 he went to the Crimea, and subsequently originated the first Turkish railway. In 1861 he organised an important expedition, with the design of reaching the head-waters of the Nile, and also of meeting Captains Speke and Grant, then travelling in the interior of Africa. Baker, accompanied by his wife, a Hungarian by birth, after having explored the regions of the Blue Nile, followed the course of the White Nile, till, on Feb. 15th, 1863, he met Speke and Grant, who had discovered the great lake, a principal feeder of the Nile, now known as the Victoria N'yanza. The former told him, on native authority, of another vast lake to the west, which Baker resolved to find. The natives of his expedition refused to accompany him further, but, nothing daunted, the explorer and his wife prosecuted their journey, till at length, on March 14th, 1864, they reached a great fresh-water lake, to which Baker gave the name of Albert N'yanza. On the way his wife nearly lost her life from sunstroke, and both endured many privations. On his return to England he was knighted (K.C.B.), and published an account of his explorations (*Albert N'yanza*, 1866). In 1869 the Khedive of Egypt gave him the command of an expedition for the suppression of the slave-trade, carried on by the Arabs and other tribes in the basin of the Nile, and for extending the cultivation of cotton, which bore good results for the time being. He was succeeded in 1874 by Colonel C. G. Gordon, and in the same year published an account of his combats with slave-dealers, and other mishaps, in a work entitled *Ismâïlia*, a new name which he bestowed, in honour of the Khedive, on the country formerly known as Gondokoro, on its annexation to Egypt. Sir Samuel has since visited and described Cyprus, and has passed some of the last few years in travelling through India. He is F.R.S., an Hon. M.A. of Oxford, a member of the Legion of Honour, and of various high Turkish and other orders. He has published six distinct works descriptive of his travels and adventures, besides numbers of memoirs in the *Transactions* of the Geographical and other Societies, and letters scarcely less elaborate in the daily newspapers touching certain political questions.

***Baker, VALENTINE, COLONEL AND PASHA** (b. 1831), is a brother of the above. He joined the army in 1848, was transferred to the 12th Lancers in 1852, served through the

Kaffir War, and was mentioned in despatches for gallantry in the action of Berea, gaining the usual war medal. After serving in India, he accompanied the regiment to the Crimea during 1855; he was present at the battle of Tchernaya and during the siege of Sebastopol, receiving the medal, with clasp, and Turkish medal. In 1859 he was appointed to the command of the 10th Hussars, and raised the efficiency of the regiment to the highest pitch of perfection. He was present as a spectator during the Austro-Prussian War in 1866 and the Franco-German War of 1870-1; and in 1872 made an effort to reach Khiva, which failed. The results of his impressions on the debatable land between Russia and Persia with Afghanistan are told in his book, *Clouds in the East*. Shortly afterwards, in 1875, while holding the appointment of assistant-quartermaster-general at Aldershot, he was compelled to leave the service, on being found guilty by civil law of a misdemeanour. On the outbreak of the Russo-Turkish War of 1877-8, he took service with the Sultan of Turkey as major-general of the gendarmerie, but was afterwards given command of a division on the Balkans. There he displayed distinguished gallantry and generalship in covering the retreat of Suleiman Pasha's army on Adrianople and Constantinople, fighting a brilliant rear-guard action at Tash-keesen. He gave an account of the campaign in his book, *The War in Bulgaria*, and for his services received the decoration of the Medjidieh. He was next sent to Armenia, in order to superintend the reforms which the Porte was supposed to be inaugurating there. After the collapse of the Egyptians under Arâby, in 1882, Baker Pasha was appointed to organise the gendarmerie for the Khedive; but as the advance of the Mahdi into the provinces of the Soudan became more threatening, he was despatched to Suakim with an army of ill-disciplined men to meet the force of the Mahdi's lieutenant, Osman Digna. In the battle of El Teb (Feb. 11th, 1884), the Egyptian rabble fled, and General Baker was in imminent danger during the rout. In the campaign over the same ground in the following year, by Sir Gerald Graham, Baker Pasha acted on the Intelligence Staff of the British force, and was severely wounded at the second battle of El Teb. Since then he has been employed in the service of the Khedive of Egypt.

Balard, ANTOINE JÉRÔME (b. 1802, d. 1876), a distinguished French chemist, is celebrated as being the first to isolate bromium. He was elected a member of the Academy of Sciences in 1844, and professor of chemistry in the Collège de France in 1851.

Balbo, CESARE (b. 1789, d. 1853), an Italian statesman and writer, was born at Turin. In 1843 he published his work, *Hopes of Italy (Spérance d'Italia)*, which was widely read, and universally admired. His *History of*

Italy from the Earliest Times until 1814 is a standard work; he wrote, besides, *A Life of Dante, Meditation, Thoughts and Examples, On Revolutions*, and several tales. He also translated from the German Leo's *Exposition of the Constitutions of the Lombard States*. In politics Balbo belonged to the Moderate party, and in 1848 he zealously supported the administration of D'Azeglio against the attacks of the Republicans.

Balfe, MICHAEL WILLIAM (b. 1801, d. 1870), was of Irish origin, and made his first musical studies when a boy at Wexford. At an early age he was placed under O'Rourke (afterwards known as Rook), who, in 1816, brought him out as a violinist. At the age of ten he composed a ballad, which was afterwards sung by Madame Vestris in the comedy of *Paul Pry*; and Mr. Charles Kenney tells us, in his *Life of Balfe*, how, going to the theatre to hear his own composition, and venturing to assert paternal claims over it, Balfe was ridiculed by the people around him. At the age of sixteen he was engaged as a member of the Drury Lane orchestra, which he directed when its ordinary conductor, Mr. T. Cooke, was absent. He now took lessons in composition from Mr. C. F. Horn, organist of St. George's Chapel, Windsor. But it was not until he went to Italy, in 1825, that his musical genius asserted itself in any force. He was taken to Rome by Count Mazzara, in whose house he resided while studying harmony and counterpoint under Frederici, afterwards director of the Milan Conservatorio. In his twentieth year he went to Milan, and there studied singing under Galli. At Milan he made his first appearance as a vocalist. Here, too, he first tried his hand at dramatic composition. Soon afterwards, Rossini, then director of the Théâtre des Italiens of Paris, engaged him for the part of Figaro in *Il Barbiere*; and his success was such that he was invited to return to Italy, where he appeared in a succession of characters. At Palermo, in 1830, he produced his first complete opera, *I Rivali di se stessi*. After bringing out *Un Avvertimento* at Paris, and *Enrico Quarto* at Milan, he went to Bergamo, where he married a German or Hungarian singer, Mlle. Rosen. He remained in Italy singing and composing until 1835, when he came to London, and appeared for the first time at one of the earliest of Benedict's concerts, singing under the name of "Signor Balfi," the stage name adopted by him in Italy. In this year Balfe began a career as a composer of English operas; and he produced between the years 1835 and 1840 the *Siege of Rochelle*, the *Maid of Artois*, *Catherine Grey*, *Joan of Arc*, *Falstaff* (given in Italian at Her Majesty's theatre), *Diadeste* and *Keolanthe*. Balfe now visited Paris, where he brought out *Le Puits d'Amour* (afterwards given in London, under the title of *Geraldine*; or, the

Lovers' Well) and *Les Quatres Fils Aymon* (called in England the *Castle of Aymon*) at the Opéra Comique. On his returning to England, Bunn produced at Drury Lane the most successful of all his works, the *Bohemian Girl* (1844), which was in due time to be translated into Italian, French, and German, and which has now been performed in every capital where operatic music is cultivated. The *Bohemian Girl* was followed by the *Daughter of St. Mark* and *The Enchantress*. In 1845 Balfe composed *L'Etoile de Seville* for the Grand Opéra of Paris, where it was performed without much success. Several pieces from this work found their way into the *Rose of Castille*, an opera written by Balfe for Miss Louisa Pyne and Mr. W. Harrison, and produced by them at Covent Garden. Balfe had now purchased a property in Hertfordshire, called Rowney Abbey, where he spent most of his time. In September, 1870, he succumbed to an attack of bronchitis. Four years after his death *Il Talismano*, the Italian version of his last opera, the *Knight of the Leopard*, was produced at Drury Lane.

Life of Balfe, by C. L. Kenney; *Life of Balfe*, by W. A. Barrett. [H. S. E.]

***Balfour, THE RIGHT HON. ARTHUR JAMES, LL.D.** (b. 1848), is a nephew of the Marquis of Salisbury. He was educated at Eton, and at Trinity College, Cambridge. He was first elected for Hertford in 1874. He was assistant private secretary to Lord Salisbury from 1878-80, and was employed on the mission of Lord Salisbury and Lord Beaconsfield to Berlin. After the general election of 1880, Mr. Balfour was a member of the "Fourth Party" led by Lord R. Churchill, but he eventually severed himself from the connection. In 1882 he conducted the Opposition attack on the "Kilmainham Treaty" in a speech of much fire. He was chosen by Lord Salisbury to negotiate with Lord Hartington during the autumn of 1884, and aided in effecting the compromise on the franchise question. In June, 1885, he was appointed President of the Local Government Board, and introduced a Bill removing the disqualification from the franchise of those voters who were in receipt of medical relief. At the general election of the same year he was returned for Manchester (East). Mr. Balfour is the author of a remarkable essay on the foundations of belief, entitled, *A Defence of Philosophic Doubt* (1879).

Balfour, FRANCIS MAITLAND (b. 1851, d. 1882), brother of the Right Hon. Arthur James Balfour, was an eminent embryologist, who at a very early age attained unwonted distinction. He was the younger son of Mr. Maitland Balfour, of Whittinghame, a wealthy Scottish "laird," and of a daughter of the 2nd Marquis of Salisbury, so that, his natural talents apart, he commenced life with every social

advantage. In Jan., 1865, he entered Harrow School, and very early evinced a leaning towards scientific studies. In 1870 he entered Trinity College, Cambridge, and graduated in the Natural Science Tripos in 1873. After some researches at the Zoological Station at Naples, he was elected a fellow of Trinity as early as that honour could be conferred upon him, and having very rapidly acquired a reputation as an original investigator in embryology and comparative anatomy, on which he lectured at Cambridge, was elected F.R.S. in 1878, and was afterwards a member of the council. In Nov., 1881, he was awarded a medal by the same society. He studied for some time at the newly established Zoological Station at Naples, and, in addition to numerous papers and essays, wrote a large work on comparative embryology; in conjunction with Dr. Foster, *Elements of Embryology*, and a *Monograph on the Development of the Elasmobranch Fishes*. In 1880 he received the honorary degree of LL.D. from the University of Glasgow, and next year was elected president of the Cambridge Philosophical Society. In 1882, after he was understood to have declined the professorship of natural history in Edinburgh and the Linacre Chair in Oxford, a special Chair of animal morphology was created for him at Cambridge. He was regarded as one of the most promising scientific men of the day, when his career was closed by a fatal accident on the Aiguille Blanche de Peuteret (sometimes known as "de la Belle Étoile"), one of the mountain buttresses of Mont Blanc, the ascent of which he had been attempting, with scarcely the experience or the physique for such a holiday feat. During his lifetime he bestowed considerable sums on various scientific projects. One of the steam dredges at the Naples Zoological Station was purchased by him, and bears his name, and by his will he left handsome donations to Cambridge, which have been considerably augmented, in the way of scholarships, by a sum subscribed by scientific men—chiefly in England and America—as a memorial to one not only eminent in science, but held in affectionate remembrance by a host of personal friends. [R. B.]

Balfour, JOHN HUTTON (b. 1808, d. 1884), a celebrated botanist, was the author of numerous works upon botany:—*Class-book of Botany*; *Phyto-theology, or Botany and Religion*; *The Plants of Scripture*; and *Elementary Botany for Schools*. Dr. Balfour was professor of botany in the University of Glasgow from 1841 to 1845, when he migrated to Edinburgh University, and Regius keeper of the Royal Botanic Garden and Queen's Botanist for Scotland. For thirty years (until 1877) he was Dean of the Medical Faculty of the University of Edinburgh, and was afterwards assessor of that university.

* **Ball, JOHN**, an English naturalist and traveller (b. 1818), was educated at St. Mary's College, Oscott, and at Christ's College, Cambridge. Very early in life he developed an interest in physical science, and, after leaving Cambridge, commenced those studies on Alpine subjects with which his name is more particularly associated. In 1845 he was called to the Irish bar, and in the same year made a series of important scientific observations on glaciers. In 1846-7 he was Assistant Poor Law Commissioner in Ireland, and from 1852 to 1857 M.P. for Carlow, during a part of which period he was Under-Secretary for the Colonies. He was elected in 1858 the first president of the then newly formed Alpine Club, and the following year edited and contributed to a work known as *Peaks, Passes, and Glaciers*. During a lengthened residence in Italy he completed his *Alpine Guide*, a standard work, of which several editions have appeared. In 1871 Mr. Ball accompanied Sir Joseph Hooker and Mr. George Maw to Morocco, when the party explored some hitherto unknown portions of the Atlas range of mountains. He afterwards collaborated with his fellow-travellers in the production of a work on the subject. (Hooker and Ball, *A Tour in Morocco*, 1878.) Mr. Ball has contributed numerous important papers and articles to scientific publications, including the *Spicilegium Flora Marocana*, which occupies several parts of the Linnean Society's *Journal* (vol. xvi., *Botany*), and is F.R.S., F.L.S., M.R.I.A., and member of several other scientific bodies. Still more recently, Mr. Ball has voyaged round the coast of South America, investigating the *flora* of the spots at which he halted.

* **Ball, SIR ROBERT STAWELL, F.R.S.** (b. 1840), man of science, was born at Dublin, and after filling various scientific appointments, became Astronomer-Royal of Ireland in 1874. He has published several scientific works, such as a *Theory of Screws*, *Elements of Astronomy*, *Experimental Mathematics*, and *The Story of the Heavens*.

* **Ball, THE RIGHT HON. JOHN THOMAS, M.P., LL.D.** (b. 1815), was born in Dublin, and after long practice at the Irish bar was returned as a Conservative member for Dublin University in 1868, when he was for a short time appointed first Solicitor-General and then Attorney-General for Ireland. He was Lord Chancellor of Ireland from 1875 to 1880, since which year he has been Vice-Chancellor of Dublin University.

* **Ballantine, WILLIAM, Serjeant-at-Law** (b. 1812), is the son of William Ballantine, who was for many years magistrate at the Thames police court. He was called to the bar in 1834, and acquired great celebrity in criminal cases. In 1856 he was created a serjeant-at-law. Among the many important cases in which Serjeant Ballantine was

engaged, may be mentioned the Tichborne trial of 1871, when he was counsel for the Claimant to the baronetcy and estates, and threw up his brief when the imposture became too glaring; and that of the Gaekwar of Baroda, accused in 1875 of an attempt to poison the British Resident, Colonel Phayre. [BARODA.] Serjeant Ballantine is the author of some lively memoirs entitled *Experiences of a Barrister's Life* (1882), and of a continuation of his experiences, *The Old World and the New* (1884).

Ballantyne, JAMES ROBERT (d. 1864), was educated at the Scottish Naval and Military Academy, and went to India in 1845 to assist in the reconstruction of the Sanscrit College at Benares. He very soon became intimate with the native pundits, and, with a view to effect a mutual understanding between the two races, began to publish numerous treatises on Hindoo philosophy, and, on the other hand, works in Sanscrit explanatory of English science. Of the former his edition of the *Mahābhāshya*, and of the latter his *Synopsis of Science in Sanskrit and English*, are the best known. He also published grammars of Hindoo, Mahratta, Persian, and Sanscrit, and many other useful books, including a series of *Reprints for the Pundits*, which comprised, among many scientific treatises, a Sanscrit version of the *Novum Organon*, which reached a second edition. Dr. Ballantyne retired from his post of principal and professor of moral philosophy at the Benares College in 1861, and on returning to England in broken health was appointed librarian to the India Office, a post he was able to hold only for a couple of years.

Ballantyne, THOMAS (b. 1806, d. 1871), journalist, was a native of Paisley, where he was educated. While comparatively a young man, he devoted himself to journalism, and edited successively Liberal journals in Bolton, Liverpool, and Manchester. In the last-named town he was projector, along with John Bright and others, of the *Manchester Examiner*. Leaving the North in 1850, he came to London, where he was first engaged on the *Leader*; afterwards he became sub-editor of the *Illustrated London News*. He founded and conducted the *Statesman*, *Public Opinion*, and the *British Press*. Ballantyne was a frequent guest of Lord Palmerston, who held him in high esteem. He was, moreover, one of Thomas Carlyle's most intimate friends, and the first English journalist, as the sage frequently said, to call attention to his writings. He became alienated from the Liberal party several years before his death.

Balzac, HONORÉ DE (b. 1799, d. 1851), a central figure in the French literature of the nineteenth century, was a native of Tours. He was sent to the college of Vendôme, and

he tells us that there he daily managed to get himself punished and confined to the school prison in order to devour in peace the books which he concealed about his person. A course of lectures on law at the Sorbonne followed; but Balzac could not be a mere lawyer, and in spite of every discouragement, he retired to a garret in the Rue Leaskiguières, Paris, to write and starve. Publishers were shy of him. No one even in his own family would admit that he had, or ever would have, any talent. "Whatever you do, don't take to literature," said one old friend to him when he was seventeen or eighteen; and young Honoré laughed his pleasant laugh and went on writing continuously, during the day and through the night, and so drudged on for years, on the small annual pittance allowed him by his parents: without fire in winter, without sufficient food, although a refined gourmand by nature, without a shadow of encouragement, and scarcely any gains, and absolutely deprived of any enjoyment or relaxation of even the most ordinary kind—but believing in himself, and taking cognisance of the whole future *Comédie Humaine*, which he knew was latent within him. At thirty, Balzac had published the *Peau de Chagrin*, *Eugénie Grandet*, *L'Histoire des Treize*, *Père Goriot*, and many other works; not yet the *Scènes de la Vie de Province*, the *Recherche de l'Absolu*, or the *Parents Pauvres*: these were the masterpieces of his mature genius. But so long as the French tongue endures, and as the anatomy of the human heart is a study for the thinker, *Eugénie Grandet*, the story of a miser's daughter, who dies of a broken heart, will be recurred to by succeeding generations, even as has been, and is, the *Clarissa Harlowe* of Richardson. *Eugénie Grandet* is the simplest of stories, if anything in humanity is simple, but it is such a silent tragedy, in its uneventful every-day incidents, that it casts a shadow for ever over the memory of those who read it. From the *Père Goriot* all the numerous *Lears* of private life have since been taken. The *Père Goriot* is a usurer, sordid and hardened as Shylock, but with a touch of Shylock's love for Jessica about him, and he has bought for his two daughters a pair of husbands of a superior station, which to a certain degree gratifies his *amour propre* at first, but, as in *Lear*, Goneril and Regan make him pay, and he has no Cordelia to comfort him. As often as the two harpies suck his substance he yields, nor murmurs inconveniently, but is always hidden somewhere out of sight—in all manner of queer refuges, never allowed to witness the enjoyments he procures; and, gradually sinking in the social scale, in the end he passes away with the least possible attention being paid to him. After *Eugénie Grandet*, fame, though not money, came. In those days books were read and valued by such as could appreciate them, by a public of real critics, but they were not paid for as they are now, and it was difficult for a man

to live by his pen. But from 1828-30 Balzac grew into a celebrity, and was thenceforward a lion in the great world of Paris. Then, as he has himself remarked, the work of transformation began. He lived in those around him, and they one and all lived in him. "Society was the historian," says he. "I was a mere secretary, writing under dictation." And so true was this that he could never *invent* what he had not witnessed. In vain did he ever make an attempt to go out of his time. His time held him fast, and he was inexorably bound to modern life—to the life that France lived from 1825 to 1848. The three years from 1848 to 1851, when he died, took him by surprise. It was the dawn of a day he was unprepared for, and it perplexed him. He had just married; and all his material troubles in life were apparently ended. Complete happiness and comfort were achieved—and then he died; bearing out in his death the theories of the imperfection of life which he had always upheld, of the fatal incompleteness of every human destiny. What he did believe in was the power of human will so long as life endured. He never ceased regretting a *Traité de la Volonté*, which he wrote at school when about twelve years old, and which was burnt by the head-master, who asked contemptuously whether it was for such "trash" that his studies were neglected. But that "trash" foreshadowed the man. Balzac's memory was one of his wonderful gifts: he *could* not forget. From this faculty resulted the strange duality of his nature. He is probably the only writer who combines in an equal degree idealism of the very highest kind with what has been sometimes called a fatiguing habit of too minute observation. It is in that, from his inferior qualities, that the present crowd of *Realistic* and *Naturalistic* novel-writers of France may claim to be the descendants of Balzac. It suffices to read a few pages of any one of them to perceive that had he not written, not one of them could have been; but not one of them all possesses even the merest shadow of his gifts. They are framers of inventories, describers, nothing more; and he would have blushed at the thought of descending to the low devices and mischievous tricks to which they one and all resort to win the favour of a worn-out, vicious-minded public. No poem ever soared to loftier spheres than *La Recherche de l'Absolu*, and yet how humanly true does it remain! The dreamer who sacrifices all, even unto the wife he idolises, for the passion of his dream, is yet Balthazar Claës, a living man, and the vision he pursues is but that sovereign ideal, whose votaries in our own age have been men like George Stephenson or Schliemann, or any of the glorious host who have held undying faith in what they could never wholly grasp or realise. To have produced *La Recherche de l'Absolu* and *Les Parents Pauvres*, which is the *Æros* of poverty, and of the political genius it

may evoke in a clever woman—to attain to utter truth in two such opposite directions, has been given but to one master in French literature. Balzac stands alone—the origin from which all other prose writers of fiction proceed. Rightly did Honoré de Balzac entitle his complete works *La Comédie Humaine*, to which he should only have added the words *en France*; for it is *French* humanity he photographs. But it is that humanity whole and entire, without the smallest detail omitted. There is a good deal of Molière in Balzac, and far less of Rabelais than has been usually supposed; but even Molière himself, with far higher literary qualities than Balzac, does not possess the latter's absolute identity of life with his people. In this respect Dickens resembles Balzac more than, perhaps, does any one else. Both see their personages first as positive existent figures and facts, and then infusing their own into the other's life, live double.

Correspondance de H. de Balzac; T. Gautier, H. de Balzac; Georges Sand, Notice Biographique sur H. de Balzac. See also her Autobiography.
[Y. B. de B.]

Bamford, SAMUEL (b. 1788, d. 1872), Radical and poet, began life as a silk-weaver at Middleton, near Manchester. He derived his political opinions for the most part from Cobbett's writings, and early became secretary to one of the so-called "Hampden Clubs" in Middleton. In spite of his law-abiding disposition, and strenuous efforts for the cause of order as well as of freedom, he was frequently imprisoned, both in Lancashire and London. He refused to take part in any violent plots, such as the proposal to "make a Moscow of Manchester," but, after having narrowly escaped death at the "massacre" of Peterloo, was next year sentenced to imprisonment in Lincoln Castle, though the only evidence against him was that he had exhorted the people to keep the peace. In later life he abandoned weaving, became reporter for the press, and for seven years was employed on the Home Civil Service in London; but he returned to spend his old age in Lancashire. He was a true poet, though his chief strength lay in rhymed political satire or defiance. His best poems are:—*A Winter's Day and Night*, *The Landowner*, *God help the Poor*, *The Arrest*, and *La Lyonnaise*, a translation from Béranger. He was also a great authority on the Lancashire dialect, which he often freely employs.

Passages from the Life of a Radical, by S. B., being an account of his own life from 1816 to 1821, are invaluable for the history of that period.

* **Bancroft, GEORGE**, the distinguished American historian and statesman (b. 1800), is a native of Worcester, Massachusetts. He was educated at Exeter, New Hampshire, and Harvard College, graduating at the latter place before he had completed his seventeenth year. Proceeding to Europe, he studied at

various German universities, and received the degree of Doctor of Philosophy at Göttingen in 1820. At Berlin he became acquainted with Humboldt, Lappenberg, Schleiermacher, and other eminent men. Bancroft made a tour of England, Switzerland, Germany, and Italy in 1821-2; and possessing intellectual capabilities of a high order, and a powerfully retentive memory, he returned to America with his mind richly stored with the treasures of ancient and modern history, literature, and philosophy. He devoted himself assiduously to literary work, and published a considerable number of poems, essays, and reviews, and likewise issued a translation of Heeren's *Politics of Ancient Greece*. A democrat in politics, Bancroft early expounded his views in an oration delivered at Northampton. He was elected to the Massachusetts Legislature in 1830, but declined to serve, and he also refused a nomination to the senate of his native state. The first volume of his *History of the United States*, for which he had long been collecting materials, appeared in 1834. Bancroft was appointed by President Van Buren Collector of Boston, and when Polk became President of the United States, in 1845, the historian entered his Cabinet as Secretary of the Navy. In this capacity he initiated many useful reforms, and it was during his tenure of office that the order was given to take possession of California. While acting temporarily as Secretary for War, he directed General Taylor to march into Texas—a step which resulted in the first occupation of Texas by the United States. During this period the second and third volumes of his *History* were published. Bancroft came over to England as minister plenipotentiary to Great Britain in 1846, and he held this important position for three years. His conduct was marked by firmness and judgment. He did not neglect the pursuit of letters. The Prime Minister of England and his colleagues placed at his disposal the voluminous records of the State Paper Office and the records of the Treasury. Returning to the United States, Bancroft was engaged from 1849 to 1852 in the preparation of the fourth and fifth volumes of his *History*, which appeared in the latter year. Other volumes were published at intervals, the ninth appearing in 1866. Bancroft was appointed minister to Prussia in 1867; the year following he was accredited to the North German Confederation; and from 1871 to 1874 to the German Empire. Several important treaties were concluded during his mission to Germany. The same year was published the tenth volume of his *History*, which brought the narrative down to the close of the Revolutionary War, and completed the body of this valuable work. Two supplementary volumes, however, entitled *History of the Foundation of the Constitution*

of the United States, appeared in 1882, and these will be followed by others. Bancroft has delivered many speeches, and he has also engaged in much miscellaneous literary work. His *History*, which is universally regarded as a standard authority, has been translated into several European languages. It is, and will probably long continue, an authoritative work, both from its careful research and breadth of judgment. In parts, however, particularly in the account of the causes of the War of American Independence, it is decidedly one-sided, and should be read in conjunction with other authorities: for instance, Mr. Lecky's *History of England*. Bancroft received the degree of D.C.L. from the University of Oxford in 1849, and he is a member of many of the learned societies of Europe and America. [G. B. S.]

• **Bancroft, MARIE EFFIE, née WILTON** (b. circa 1845), actress, is a native of Doncaster. After some engagements in the provinces, she first appeared in London at the Lyceum, in 1856. Her parts were chiefly in burlesque, until she became manageress of the Prince of Wales's theatre, in 1865. Having acquired popularity, partly through the encouragement of Dickens, she turned her attention to the "drawing-room comedy" of T. W. Robertson's plays. Two years afterwards she married Mr. S. B. Bancroft, and together they continued to conduct the Prince of Wales's with uninterrupted success for thirteen years. In 1880 they migrated to the Haymarket, which they rebuilt internally, the principal change being the entire elimination of the pit, which naturally created deep dissatisfaction amongst regular playgoers. They retired from their management in 1885. Mrs. Bancroft's chief characters were Polly Eccles and Naomi Tighe, in *Caste and School*, Peg Woffington in *Masks and Faces*, Lady Franklin, and Lady Teazle.

• **Bancroft, SQUIRE BANCROFT** (b. 1841), actor, first appeared on the stage at the Theatre Royal, Birmingham, 1861. After taking various parts in the provinces, he appeared in London at the Prince of Wales's in 1865, soon after it was opened by Mr. Byron and Miss Marie Wilton, the latter of whom he married two years later. He soon won high reputation for his creation of the leading parts in Robertson's comedies, such as Sydney Daryl in *Society* (1865) and Captain Hawtree in *Caste* (1867). These were followed by Sir Frederick Blount in *Money*, Triplet in *Masks and Faces*, Sir George Ormond in *Peril*, and Count Orloff in *Diplomacy*. After the removal to the Haymarket in 1880, Mr. Bancroft took leading parts in *Odette* and *Fédora*, besides several revivals.

Banim, JOHN (b. 1798, d. 1842), and **MICHAEL** (b. 1796, d. 1854), Irish novelists, were natives of Kilkenny. The latter brother

acquired the larger reputation, but by general consent the former was the writer of most power. John intended at first to follow art, and to that end studied in Dublin. A lady to whom he was to be married died, and the illness that proved fatal in his own case was caught by exposure on the night of her funeral. He wrote a little, with some success, for the stage, and published a poem entitled *The Celt's Paradise*. His best work was a series of stories illustrative of Irish life, written in conjunction with his brother. The most successful of these stories were the *Tales of the O'Hara Family*, published in 1825. Michael wrote *The Ghost Hunter*, a weird and powerful piece of dramatic narrative. John failed in health, and fell into straitened circumstances. Sterling started a subscription for him in the *Times*, and the Government supplemented this public tribute with a pension of £150. The Irish stories of the Banims have little or nothing in common with those of Lover. With less play of humour, they are more weird and sombre. Though strong and virile, their defect is that they are too often rather close imitations of the Scottish novels of Scott.

The Life of John Banim was written by P. J. Murray (1857). [T. H. C.]

* **Banks**, MRS. GEORGE LINNÆUS (b. 1821) (Miss Isabella Varley), lived at Manchester, her native place, until her marriage with Mr. G. L. Banks in 1846. Miss Varley at a very early age had contributed verses to papers and periodicals, and in 1844 had published her first volume of poems, *Ivy Leaves*, but it was not till 1861 that she turned to literature as a profession. Her novel, *The Manchester Man* (1876), was very well received, and has passed through several editions. The story is based upon history, "recorded and unrecorded," and deals "with absolute people, events, and places," containing a clear and faithful picture of old Manchester and the riots of 1819. Mrs. Banks has written, besides, *God's Providence House* (1865), *Stung to the Quick* (1867), *Glory* (1877), *Caleb Booth's Clerk* (1878), *Wooers and Winners* (1880), *Forbidden to Marry* (1883), and *In His Own Hand* (1885). She has also published two volumes of poems, *Daisies in the Grass* (1865), written jointly with her husband, and *Ripples and Breakers* (1878).

Baraguay-d'Hilliers, LOUIS (b. 1795, d. 1878), Marshal of France, was the son of one of Napoleon's generals of the same name who died in disgrace after the Russian campaign. The son also accompanied the Emperor to Moscow, and was present at the field of Borodino. During the varied fortunes of the next three years he did good service at Champaubert, Brienne, and Quatre Bras. In 1833 he became governor of the military school of St. Cyr. In 1841 he proceeded to Africa, and took active part in the Algerian

campaign. After the revolution of 1848 he adopted the Republican cause, and next year took command of the French army in the Papal States, where he remained for a year. Under Louis Napoleon he became a member and Vice-President of the Senate, and was for a time ambassador at Constantinople (1853-4). In 1854 he took command of a French corps that co-operated with the allied fleets in the Baltic, and succeeded in capturing Bomarsund. For this service he was created marshal. In 1864 he became life senator. After the early disasters to the French arms in 1870, he was appointed commander of Paris under the state of siege, but requested to be relieved of the charge. At a later time he was president of the commission to inquire into the capitulations during the war, with special reference to the supposed treason of Marshal Bazaine.

Barante, AIMABLE GUILLAUME PROSPER BRUGÈRE (b. 1787, d. 1866), French politician and historian, was engaged in diplomatic missions as auditor of the Council of State in 1806. In 1809 he published his *Tableau de la Littérature Française pendant le XVIII^e Siècle*, which was the foundation of his celebrity. He was chosen a member of the Academy in 1828, and was ambassador successively to Turin and St. Petersburg, 1830-40. He published several translations from the German, especially of Schiller's works; also a *Histoire des Ducs de Bourgogne de la Maison de Valois*, 1364-1477, a standard work of great learning and accuracy; *Questions Constitutionnelles* (1848), a *Histoire de la Convention Nationale*, in 6 vols., and several other essays and historical sketches.

Barbauld, ANNA LETITIA (Miss Aikin) (b. 1743, d. 1825), an English authoress, was born at Kibworth-Harcourt, in Leicestershire. From her father, a schoolmaster in that village, and afterwards professor at the Dissenting Academy of Warrington, she received a sound classical education, and when quite a young girl had at her father's house the advantage of meeting constantly such men as Dr. Priestley, John Howard, Dr. Taylor, Roscoe, Pennant, and Currie. In 1773 a volume of Miss Aikin's poems was published by her brother, and, encouraged by the success of the poems, they wrote conjointly *Miscellaneous Pieces in Prose*. In 1774 Miss Aikin married the Rev. Rochemont Barbauld, a dissenting minister, a man of high moral character, ability, and culture, but unhappily afflicted with an hereditary taint of insanity. Mrs. Barbauld bore her terrible trial in heroic and uncomplaining silence. It was only after thirty years of married life, when his insanity became clearly evident, and his violence exposed her to constant danger, that she reluctantly agreed to have him placed under restraint. Shortly after their marriage they opened a school for boys at Palgrave, Suffolk;

many of their pupils became distinguished men, and in after-life spoke always enthusiastically of their early teacher, Mrs. Barbauld. It was at this time that Mrs. Barbauld wrote, for the use of her young pupils, *Hymns in Prose for Children, Early Lessons, and Devotional Pieces*. In 1787 Mr. Barbauld received a call to the Dissenting chapel at Hampstead, then a quiet little village, very difficult of access from the metropolis; here they lived for many years, enjoying the society of the sisters Agnes and Joanna Baillie, the Hoares, Dr. Priestley, and Gilbert Wakefield. In 1802 the Barbaulds removed to Newington Green, where Mrs. Barbauld continued to reside after the tragical death of her husband by drowning. The latter years of her life were very productive; she wrote a *Life of Richardson*, with a selection from his letters. She also prepared a series of selections from the *Spectator*, *Tatler*, and *Guardian*, with a very brilliant preliminary essay, and edited a *Collection of the British Novelists*, and the well-known *Enfield Speaker*. Mrs. Barbauld's name will, however, be remembered chiefly by her books for children, which are excellent of their kind, though it is perhaps to be feared that the *Hymns* and the charming stories of *Evenings at Home* belong rather to a past age. In 1811 a very hostile article from the pen of the poet Southey, bitterly attacking some of her latter poems, very much distressed the venerable lady, who, after this abusive criticism, never printed anything again. Coleridge, Lamb, Godwin, and others have also written much in a hostile spirit against Mrs. Barbauld; on the other hand, she had warm admirers in Sir Walter Scott, Charles James Fox, Wordsworth, and many other excellent critics of her day.

Life of Mrs. Barbauld, prefixed to her works by Lucy Aikin; Eric S. Robertson, *English Pedagogues*.

Barbier, HENRI AUGUSTE (b. 1805, d. 1882), French poet, was born in Paris, and was early engaged in literature, but did not discover the true direction of his powers till the revolution of 1830 supplied him with subjects for his first series of satires, which appeared separately in the magazines, and were afterwards published as *Iambes*. In these the poet draws a gloomy and almost despairing picture of the insincerity, melancholy, and immorality that were choking the wholesome breath of honour and cheerfulness, not only in France, but in England too; for some of his bitterest satires, published in 1837 as *Lazare*, are inspired by the misery of England, e.g., *Le Minotaure*, in which he compares the London streets to the labyrinth of Crete. The *Iambes* had a wide circulation, and have passed through fifteen or sixteen editions. The rest of his works did not contribute much to his fame. He aided Léon de Wailly in the libretto of Berlioz's *Benvenuto Cellini*, and wrote the *Hymn of France* for Berlioz's music.

But his *Chants Civils et Religieux* (1841), his *Rimes Héroïques* (1844), and a volume of satires (1865) did not attract much attention. He also translated Shakespeare's *Julius Caesar*, and was elected to the Academy in 1869.

A small prose volume of his *Reminiscences (Souvenirs Personnels)* was published in 1883, after his death.

Barclay de Tolly, MICHEL (b. 1750, d. 1818), Russian general, was descended from a Scottish family settled in Livonia. He took part in the Polish campaign of 1806, and was wounded at the battle of Eylau. In 1809, after two days' march across the ice of the Gulf of Bothnia, he surprised the Swedes at Umea, and was appointed Governor of Finland. In 1812 he took command of the first army of the West, and was the originator of the strategy to draw Napoleon into the interior and cut off his supplies. Seeing that Napoleon was tending towards Moscow, he effected a junction with Prince Bagration, who commanded the second army of the West. But differences soon arose, for Bagration was eager for a pitched battle, and Barclay's policy was the far greater one of delay and retreat. He became so unpopular with the army that, by the Czar's order, he was superseded by Kutusoff, under whom he served loyally till after Borodino. Early in 1813 he issued his famous proclamation to the German troops in the French army, and soon afterwards was appointed commander-in-chief of the Russian and Prussian troops. As such he was present at Leipzig, and on the entry of the Allies into Paris was created field-marshal. When Napoleon re-appeared, Barclay hastened with the Russian army to the Rhine, and in 1817 was received by the Czar with great honour at St. Petersburg. He died whilst travelling in Russia.

Barère (or **Barrère**) **de Vieusac**, BERTRAND (b. 1755, d. 1841), French journalist and revolutionist, was born at Tarbes, in Gascony, and displayed throughout his life all the worst features of the traditional Gascon character. Having attained some distinction as a lawyer in his native province, he was sent to Paris in 1789 as deputy to the States-General, and published a journal, called *Daybreak (Point du Jour)*, in which he reported the proceedings of the Assembly. His proposals at this time were in accordance with the ordinary views of the advanced, but still constitutional, party. On the formation of the Legislative Assembly, in 1791, he became a Judge in the High Court of Appeal, and a member of convention in the following year, when he also presided at the trial of the king. Declaring in his accustomed style that "the tree of liberty could only grow if watered by the blood of kings," he voted for death without appeal. In 1793 he was elected member of the Committee of Public Safety, and soon became its mouthpiece, publishing

reports of its proceedings and official bulletins on political questions and the conditions of the army and navy. The picturesque, but vulgar, magniloquence of these announcements, abounding as they do with classic allusions to tyrants and heroes, gained for them the nickname of "Carmagnoles," and revolutionary literature has never yet succeeded in freeing itself from the taint of their fustian style. Burke named him the "Anacreon of the guillotine." The description in Macaulay's incisive essay is well known. Carlyle says: "Ingenious, almost genial; quick-sighted, supple, graceful. In the great art of varnish he may be said to seek a fellow." For a time after joining the Committee Barère tried to act as peacemaker between the Mountain and the Girondists, unable to decide which was the stronger party. On the triumph of the Mountain he turned savagely upon his former associates, and henceforward, as long as power lasted, his one fixed policy was to save his life by proving his loyalty to the extremists through the increasing atrocity of his proposals. Having clamoured for the blood of the Girondists, he proposed the execution of the Queen. He ordained the destruction of Toulon and Lyons. He raised a revolutionary army by a universal levy of all France, and decreed that "terror was the order of the day," and that the soldiers of England and Hanover should receive no quarter. He regretted that the guillotine would not work fast enough, for "only the dead do not return." But his depth of infamy was reached by his treachery to Robespierre, who he voted should be executed without trial. This cowardice, however, did not long protect him, for in the spring of 1795 he was banished and imprisoned on the island of Oléron. Being removed to the mainland, he made his escape to Bordeaux. He was even again returned by his province to the Assembly of 500, but his election was declared void, and he lived in hiding till he was included in Napoleon's amnesty. Napoleon employed him for some ten years in the humblest walks of journalism and espionage, and admitted in later years that at one time he rated Barère's powers of writing far above their worth. Amongst other things Barère translated Ossian by Napoleon's order, and edited a *Mémorial Antiribritannique*. This connection ended in 1807, and he lived in obscurity till 1814, when he joined the Bourbons, but having sat as member of the Chamber of Representatives during the Hundred Days, was obliged to live in exile in Belgium till 1830, when he returned to Paris, was pensioned by Louis Philippe, and spent the rest of his life in reviling his patron. He was successful in preserving his worthless existence for eighty-six years.

See M. Carnot's *Notice Historique sur Barère*; Macaulay's, *Barère*; Carlyle, *French Revolution*.

Barghash-bin-Seiyid. [ZANZIBAR.]

Barham, RICHARD HARRIS (b. 1788, d. 1845), author of the *Ingoldsby Legends*, was born at Canterbury, and studied life, if not learning, at Oxford, where he soon became known for his wild humour and ready wit. After occupying a country living in Kent for some years, he was appointed minor canon of St. Paul's by a fortunate accident, and became vicar of the City churches of St. Augustine and St. Faith. He resided at Amen Corner, and soon became intimate with Theodore Hook, Sydney Smith, and other notable wits of the period. In theology he belonged to the old-fashioned "High Church" party, and his love of social merriment, punch, and good stories, combined with suspicions of all practices savouring of Popery, precluded all sympathy with the earnest revolutions of the "lank-haired Puseyites," as he called them. When *Bentley's Miscellany* first appeared, in 1837, Barham contributed to the number the first of the *Ingoldsby Legends*, and the greater part of the series was published in that periodical. Several of the stories were suggested by Mrs. Hughes, the mother of Thomas Hughes. The inexhaustible facility of the rhyme, the nature of the subjects, at once intelligible and unusual, the quaint admixture of antiquarian lore with street advertisement and the commonest slang, all contributed to their immediate success; and with some their popularity was no doubt much increased at the time by the ridicule cast upon the superstitions of the Romanising party in such stories as the *Jackdaw of Rheims*. At the same time the apparent flippancy of parts excited amongst many great opposition to the whole of the series, and it is only now that the whole controversy is gradually dying away that the *Legends* can be judged on their own merits. Of poetry there is hardly a trace, even in the often admired lines in the "Execution," or in the ballad, *As I lay a-thynkinge*, the author's nearest approach to art; but we are led forward with continual delight by the weird absurdity of the stories, and the continual surprise and happiness of the rhymes. This extreme facility of wit and language was indeed fatal to higher achievement, for the author was too easily satisfied with the first form that came, and the ready applause of his companion wits. Besides the *Ingoldsby Legends*, he wrote many papers for the magazines, and a story of college life, called *My Cousin Nicholas*.

Recollections of R. H. Barham, by his son.

* **Baring, SIR EVELYN, K.C.S.I. and C.I.E.** (b. 1841), the grandson of the first baronet, entered the Royal Artillery in 1858, and retired as major in 1879. His first experience of official work was in 1872, when he became private secretary to the Viceroy of India, his cousin, Lord Northbrook. From 1877 to 1879 Major Baring was Commissioner of the Egyptian Public Debt, and in the last year, when the celebrated "dual control" was estab-

lished, he represented England, having M. de Blignières (q.v.) as his French colleague. In the following year, however, he was replaced by Sir A. Colvin (q.v.), and appointed Financial Member of the Council of the Viceroy of India, Lord Ripon. In that capacity he was successful in rectifying the errors in the budget of his predecessor, Sir John Strachey. Sir Evelyn returned to Egypt in 1883 as agent and consul-general, and dealt, with much ability, but with little success, with the complications arising from the rebellion of Araby Pasha, the appearance of the Mahdi, and General Gordon's mission to Khartoum.

Baring, SIR FRANCIS, BART. (b. 1740, d. 1810), the founder of the London branch of the Baring family, was of Hanoverian descent. He was born at Larkbeer, near Exeter, and went to London (circa 1760), where he founded the great banking house of Baring and Co. He was a director of the East India Company from 1779, and its chairman in 1792. He was first returned for Grampound in 1784, and sat until 1806. He was created a baronet in 1793. Of his numerous progeny, the second son, Arthur, was created Baron Ashburton (q.v.). One of his grandsons was the first Lord Northbrook, and the present head of the firm, Thomas, son of the Bishop of Durham, and great-grandson of the first baronet, was in 1835 raised to the peerage under the title of Baron Revelstoke.

***Baring-Gould, THE REV. SABINE** (b. 1834), theologian, was educated at Cambridge, appointed incumbent of Dalton, Thirsk, in 1869, and rector of East Mersea, Colchester, 1871. He removed to his living of Lew-Trenchard in 1881. He has written largely on many subjects connected with religious thought and modern criticism, and is one of the foremost representatives of neo-Hegelian Christianity, as well as of the party that fearlessly welcomes any new light thrown on religious questions by natural science and historical research. Of his very numerous works the following may be mentioned:—*Iceland, its Scenes and Sagas* (1861), *Curious Myths of the Middle Ages* (1866-7), *In Exitu Israel: an Historical Novel* (1870), *Lives of the Saints*, 15 vols. (1872-7), *Some Modern Difficulties* (1874-5), *Germany, Present and Past* (1879), his important theoretical work, the *Origin and Development of Religious Belief* (1869-70), *The Village Pulpit* (1881), *Seven Last Words* (1884), and several remarkable novels.

***Barker, MARY ANN LADY**, popular authoress, born in Jamaica, is the daughter of the late Hon. W. J. Stewart, at that time Island Secretary for Jamaica. In 1852 she married Captain Barker, who was afterwards knighted for his brave services in the field. Five years after the death of her first husband Lady Barker married Mr. Frederick Napier Broom, with whom she spent many years abroad;

an account of her experiences of life in the colonies is to be found in *Station Life in New Zealand* (1870), and *A Year's Housekeeping in South Africa* (1877). Amongst her numerous books for children we may mention *Stories About Sybil's Book*, and *Ribbon Stories*. Their charm lies in the freshness which is generally to be found in actual experience, and Lady Barker has experienced many things during years spent in almost every quarter of the globe. Her little book, *First Lessons in Cooking* (1874), had a very large circulation; shortly after its publication she was made Lady Superintendent of the Kensington School of Cookery. Lady Barker was the first editor of *Evening Hours*, a family magazine.

***Barkly, SIR HENRY, K.C.B., G.C.M.G.** (b. 1815), Colonial Governor, represented Leominster from 1845 to 1849, when he was appointed Governor of British Guiana, where he was very successful in furthering the advancement of the colony. From 1853 to 1856, he was Governor of Jamaica, and was then appointed to the important governorship of Victoria. In 1863 he became Governor of Mauritius, and in 1870 Governor of the Cape, where he remained for six years. During his first year of office he was also high commissioner for the settling of the affairs adjacent to the eastern frontier of the Cape of Good Hope.

***Barlow, THOMAS OLDHAM, R.A.**, engraver (b. 1824), was a native of Oldham, and his father gratified his artistic proclivities by placing him with the firm of Stephenson and Royston, engravers, of Manchester. He became a student in the School of Design there, and soon distinguished himself by gaining the first prize, with a design entitled *Cuttings from Nature*. His first entrance into London art circles was through his engraving a small picture of *Courtship* by the late John Phillip, R.A., who became his warm friend. Mr. Barlow's engravings after Millais are *The Huguenot*, *My First Sermon*, *My Second Sermon*, *Awake, Asleep*, *John Fowler, C.E.*, and *Sir James Paget, Bart.* Mr. Barlow first appears as full Academician in 1882.

Barnard, LADY ANNE (b. 1750, d. 1825), poetess, was born in Fifeshire, and was the daughter of the Earl of Balcarres; her maiden name being Lindsay. She became one of the many minor Scottish poets of the time, whose names are only remembered by a single great poem or song, her assurance of immortality being the beautiful ballad of *Auld Robin Gray*, written in early youth.

Barnes, THE REV. WILLIAM, D.D. (b. 1820, d. 1886), poet and philologist, was born in the vale of Blackmore, Dorset, and for a time kept a school at Dorchester, but was appointed curate of Whitcombe in 1847, and rector of Winterbourne Came in 1862. He devoted his life to the study of the Dorsetshire dialect

and Early English history and language. He was also an Oriental linguist. As a poet he is known by his *Poems of Rural Life in the Dorset Dialect*, three volumes of which have been published, admirable for poetry as well as curious for language. He has also written similar poems in common English. As a philologist he has published several important works, such as *A Philological Grammar*, formed from a comparison of more than sixty languages, *Tiw; or, a View of the Roots and Stems of the English as a Teutonic Tongue*, *An Anglo-Saxon Delectus*, and *An Outline of English Speechcraft*. His researches into early history have also led to several works, such as *Notes on Ancient Britain and the Britons*, *Early England and the Saxon English*, and *Studies in Early British History*.

Barnes, THOMAS, editor of the *Times* (b. 1786, d. 1841), was educated at Christ's Hospital and at Pembroke College, Cambridge. At first a reporter to the *Times*, he attracted attention by a series of brilliant sketches of public men, which appeared in the *Examiner*, and on the removal of Dr. Stoddart in 1815 was chosen to succeed him as editor. The paper gained vastly in influence under Barnes's superintendence; not only was he himself a brilliant leader-writer, but he was always on the look-out for any signs of talent in the periodicals and newspapers. His last years were full of suffering, and he carried on his duties with great difficulty.

J. Grant, *The Newspaper Press*.

* **Barnett, JOHN** (b. 1802), musical composer, was born near Bedford. His talent showed itself very early; at the age of ten he was articulated as singer to S. J. Arnold, proprietor of the Lyceum theatre, and after his voice had broken he devoted himself to the study of the piano and harmony under Mr. Ferdinand Ries. Mr. Barnett has composed a vast number of operas, vaudevilles, and songs. All his music is of a highly dramatic character, and he has the gift of writing melodies. His most celebrated work, *The Mountain Sylph*, was brought out at the Lyceum in 1834. Besides this we must not omit to mention his historical opera *Fair Rosamond* (1837), and *Farinelli* (1838), and the once popular vaudeville *The Pet of the Petticoats*. Mr. Barnett was for several years director of the Olympic theatre under Madame Vestris.

* **Barnett, JOHN FRANCIS** (b. 1838), nephew of the preceding, and the son of Joseph Barnett, who was a musician of some excellence, was a Queen's scholar at the Royal Academy of Music, and subsequently at Leipzig he studied under Haugstmann and Rietz. As a composer he first became famous through his symphony in A minor (produced in 1864). In 1867 his cantata, *The Ancient Mariner*, was produced with great success at Birmingham, and it was

followed by *Paradise and the Peri* in 1870. Even more ambitious, and forming in itself a landmark in the history of modern English music, was his oratorio the *Raising of Lazarus*, produced in 1870. In 1871 came the cantata, *The Lay of the Last Minstrel*, produced for the Liverpool Festival; and in 1876 *The Good Shepherd*. He is also the author of numerous songs and descriptive pieces for the piano.

* **Barnett, THE REV. SAMUEL AUGUSTUS** (b. 1844), clergyman and social reformer, was educated at Wadham College, Oxford, and, after taking pupils at Winchester, and visiting America, was ordained to a curacy at St. Mary's, Bryanston Square. In 1873 he was appointed to St. Jude's, Whitechapel, and in the course of laborious years has successfully carried out several suggestive and far-reaching reforms in the Church, the society, education, and sanitary arrangements of his district. He aims at averting disestablishment by rendering the Church democratic. He was the first to throw open a church for the performance of oratorios and works of religious art. Of his numerous other undertakings we can here only mention the prohibition of outdoor relief, the annual picture exhibition at Easter, and the establishment of the University Settlement at Toynbee Hall, of which he is the warden. The cause of his success seems to lie in the magnificence of his aims and the simplicity of his means, for, whilst possessed of extraordinary powers of organisation, he trusts for his results almost entirely to individual endeavour.

Baroda, THE GAËKWARS OF, are of Mahratta race, and ruled over a branch of that great confederacy whose nominal head was the Peshawar of Poonah. In the year 1800 Anand Rao (d. 1819) succeeded his father, Gorind Rao. Of weak intellect, he was compelled to ask for British aid against his able half brother, Kanajé Rao, and in consequence a treaty was signed in 1802 by which his independence of the Peshawar and dependence on our Government was recognised. In 1803 the Mahratta War broke out, but the Gaëkwar carefully preserved neutrality. In 1817 the relations of Baroda to the British power were further regulated by a treaty on the subsidiary system, by which the Gaëkwar, in return for a subsidised force of British troops, and freedom of action on internal affairs, placed his foreign policy in the hands of our Government, and promised to aid it in war. A succession of feeble princes takes us down to *Khandi Rao* (d. 1870), who began to reign in 1856. He was a faithful ally of the Government during the Mutiny, and in consequence was allowed to discontinue the payment of three lakhs of rupees due for the maintenance of the Gujerat Irregular Horse. In 1863 he arrested his younger brother, *Malhar Rao*, on a charge of conspiring against him, and thrust

him into prison. Malhar Rao was, however, in default of any direct issue, installed as his brother's successor. Frequent complaints of his maladministration soon reached the British Government through the Resident at Baroda, and in 1873 a commission of inquiry investigated the charges, with the result that he was given a term of seventeen months in which to reform. Before that period had elapsed, an attempt was made in November, 1874, to poison the Resident, Colonel Phayre. Early in 1875 the Gaekwar was tried by a mixed commission of British officers and eminent natives. A division of opinion ensued, the English members unanimously regarding the Gaekwar as guilty, and the natives returning a verdict of not proven. Lord Northbrook, the Viceroy, was in consequence of this unsatisfactory result compelled to depose the Gaekwar on the ground of gross misgovernment. After some delay a new Sovereign was chosen in the person of **Syaji Rao* (b. 1863), the representative of a younger branch of the race, who was thereupon adopted by Jamnabar, the widow of Khandi Rao. He was installed as Gaekwar in 1875. During his minority the kingdom was governed by a council of regency; but in 1881 he assumed the direction of affairs, and under the guidance of his Prime Minister, Sir Maddava Rao, has proved an able ruler.

Annual Register, 1875; Hunter, *Imperial Gazetteer of India*. [L. C. S.]

***Barral, JEAN AUGUSTIN** (b. 1819), French chemist, was early engaged in the department of administration of tobacco, and became celebrated as the first who extracted nicotine from the leaf and proved its poisonous nature. He has also published papers on the composition of rain at different seasons, on drainage and agriculture, and on some observations during a balloon ascent in 1850.

Barrot, CAMILLE HYACINTHE ODILON (b. 1791, d. 1873), distinguished French politician, was the son of J. A. Barrot, one of the Girondist deputies during the first revolution, and one of the most persistent opponents of the first Napoleon. The son adopted his father's policy, entered the service of the Bourbons immediately on their restoration, resigned office during the Hundred Days, and eagerly welcomed the King and Charter. But, disappointed by the reactionary course of the Restoration, he soon found himself one of the most prominent leaders of the opposition with Dupont and La Fayette. In 1818 he succeeded, with the aid of Benjamin Constant, in defending Wilfrid Regnault, and about the same time undertook the defence of the Protestants accused of dishonouring the *Fête Dieu*. On this occasion he established the celebrated position that the law is "atheist," in so far as it does not recognise any distinction in the forms of religion. After the publication of the *Ordonnances* of July, 1830, he took an active part in the Revolution,

conducted a Provisional Government as Secretary of the Municipal Commission, and joined in the demand for a citizen king and republican institutions. It is said that through his influence La Fayette refused to declare himself President of the Republic. He courteously conducted the ex-king on his way to Cherbourg. On his return he was appointed Prefect of the Seine. But he soon found his views thwarted by the "doctrinaire" ministers of Louis Philippe, and Guizot's efforts to secure his dismissal were the beginning of his prolonged contest with that statesman. Returned, towards the end of the year, by the electors of the department of Eure, he distinguished himself by his democratic opposition to the "doctrinaires" in general, especially to their narrow limitation of the property franchise. Having resigned his prefecture at the fall of the Lafitte ministry in 1831, he made common cause with the Extreme Left in protesting against an hereditary peerage. After the unsuccessful insurrection of June, 1832, caused by the *Compte Rendu*, of which Odilon Barrot had been one of the originators, he was a member of the deputation that waited on Louis Philippe at Versailles, and undertook the defence of several of the accused; but henceforward was more moderate in opposition, attaching himself gradually to M. Thiers, and trusting to advance his cause by a constitutional extension of the franchise. After the return of Guizot to power with a compact Conservative majority in 1840, Odilon Barrot regained popularity with Liberals of every shade by his eloquent and untiring opposition to the ministry during the next seven years. He became the hero of the "Reform banquets," and about 1847 his influence reached its height. Nevertheless, like so many of the Reformers, the revolution of 1848 took him by surprise. When the fall of Guizot was followed by the flight of Louis Philippe, Barrot endeavoured to establish the Duchess of Orleans on the throne; but, yielding to events, he was elected to the Assembly, and in December entered the first ministry of Louis Napoleon as President of the Council. But his term of office was brief and inglorious, in spite of the honesty of his intentions. He was responsible for the crime of the siege of Rome, and unpopularity quickly gathered round him from every side. To the last he struggled for reform; but, disgusted and overwhelmed by the sudden dissolution of the Assembly in Dec., 1851, he retired into private life, from which he only emerged towards the close of the Empire, early in 1870, when he was appointed president of the Decentralisation Commission. In 1872 M. Thiers appointed him Vice-President of the Council. He died in the next year, leaving part of his large fortune for the encouragement of social and political investigation.

His *Mémoires Posthumes* (1875-6) were widely read.

Barrot, VICTORIN FERDINAND (*b.* 1806, *d.* 1883), politician, and brother of the preceding, was a member of the Chamber of Deputies in 1845, and paid special attention to the affairs of Algeria, and was returned to the Constituent Assembly in 1848 by that colony. He acted as counsel for Louis Napoleon before the peers on the question of the attempts on Strasburg and Boulogne. As reward he received a post in Napoleon's second ministry, and continued to hold subordinate positions in the state till the overthrow of the Empire. He was chosen life-senator in 1877.

Barrow, SIR JOHN (*b.* 1764, *d.* 1848), a traveller and author, was born at Draleybeck, near Ulverston, Lancashire. He may almost be regarded as a self-educated man, mathematics being one of his early studies. While young, he wrote on land-surveying, superintended a Liverpool iron foundry, made a voyage to the Greenland Seas, and taught mathematics at a Greenwich school. While there he obtained, through the interest of Sir George Staunton, a place under Lord Macartney in the first British embassy to China, and is said to have acquired a practical knowledge of the Chinese language in a few months. Barrow subsequently served under Lord Macartney on his mission to settle the government of Cape Colony, and was himself entrusted with the first communication of the Government to the Kaffirs—a task which he performed with tact and delicacy. This service marked him for promotion, and in 1804 he was appointed second secretary to the Admiralty. This connection lasted for over forty years, during which time he was enabled to be of considerable service to various Arctic expeditions, and to geographical science in general. He may be regarded as principal founder of the Royal Geographical Society, of which he originated the plan. He was a prolific writer, contributing, at different periods, nearly two hundred essays to the *Quarterly Review*; he also published accounts of his travels, *Lives of Macartney, Howe, Anson, and Drake: histories of Arctic and Antarctic voyages; an Autobiographical Memoir, and Sketches of the Royal Society*. Barrow was created a baronet in 1835, though, on retiring from the Admiralty, he asked no favours except that Dr. Richardson should be knighted and Fitzjames made a captain. Both were early companions of Franklin. One of his sons, John Barrow, has, to some extent, followed in his footsteps, and is known as a supporter of all geographical enterprises, while his eldest (Sir George), among other works, published *Ceylon, Past and Present*. There was another John Barrow (*circa* 1756), of some note in his day as a geographical compiler, though it does not appear that he was related to the subject of this notice.

Sir J. Barrow, *Autobiographical Memoir*.

Barry, SIR CHARLES, KNT., R.A. (*b.* 1795, *d.* 1860), architect, was the son of a stationer in Bridge Street, Westminster. He was articled to a surveyor and architect in Lambeth, and his father dying about the expiration of his articles, and leaving him some property, he resolved upon travel, with the view of improving himself in his profession, and visited Greece, Palestine, and Egypt. In 1822 he commenced the practice of his profession, and, while yet unknown, he obtained by competition the erection of St. Peter's church at Brighton. He was appointed architect to Dulwich College; and in 1832 completed his first notable work in London, the 'Travellers' Club. At the competition which followed the destruction of the Houses of Parliament by fire, he was successful, and in 1837 commenced the new legislative palace; at the same time he commenced the erection of the Reform Club and the College of Surgeons. In 1840 he was elected an Associate, and in 1842 a full member, of the Royal Academy. To the Houses of Parliament, however, was devoted the greater portion of his active life, and he had the satisfaction of seeing the House of Lords completed and occupied in the session of 1847, and the House of Commons in the session of 1852, when he received the honour of knighthood. With labours so arduous and unrelenting, carried on, too, under much vexation and meaningless obstruction, it is not to be wondered that his life came to a sudden termination. He was seized with paralysis, and died almost immediately. Sir Charles was buried in Westminster Abbey. Although his life's labours are summed up in the quasi-Gothic of the Houses of Parliament, he had a fine feeling for Italian art, as Bridgewater House and the Travellers' Club bear witness. [J. F. R.]

Barry, EDWARD MIDDLETON, R.A. (*b.* 1830, *d.* 1880), architect, was the third son of Sir Charles Barry. He was educated at King's College School, London, and studied architecture under Professor Donaldson at University College, London, also in the office of T. H. Wyatt, and afterwards under his father, whom he succeeded in 1860 as architect of the Houses of Parliament. In that capacity he finished the building, curtailing somewhat the original design, which, if carried out, would have run a wing from the clock tower along the street, so as to convert the space in front of the entrance to Westminster Hall into a quadrangle. The present Covent Garden Theatre was built from his designs in 1857, in the short space of eight months. In 1867, Mr. Barry's design for the New National Gallery was adjudged the first; and in the competition for the New Law Courts, in the same year, his design, and that of the late G. E. Street, were deemed the best. Ultimately Mr. Barry was appointed to execute the National Gallery. Mr. Barry was a fellow

and vice-president of the Royal Institute of British Architects. He was elected an Associate of the Royal Academy in 1861, and a full Academician in 1870. He was appointed by the Royal Academy professor of architecture in 1873, and treasurer in 1874.

Barry, MARTIN (b. 1802, d. 1855), an eminent physiologist, was born at Frutton, Hampshire. After studying in the London hospitals, he proceeded to the University of Edinburgh, where, in 1833, he took his degree of M.D. His special studies were animal development and embryology, on which subjects he was acknowledged a master. Several technical details of physiology were brought to light by him. He discovered, for example, the fact that the spermatozoon penetrates within the ovum; his communications in the *Physiological Transactions* of the Royal Society, 1840-3, were the earliest intimations on the subject given to the scientific world. In his private capacity Barry was very philanthropic, giving his professional services largely to the poor.

Barth, HEINRICH (b. 1821, d. 1865), a distinguished explorer, born at Hamburg (where his father was a master-butcher), commenced his travels at the age of twenty-four, visiting Northern Africa, Egypt, Palestine, Asia Minor, and Greece. During this journey he was attacked by wandering Arabs, severely wounded, and robbed of his papers. In Dec., 1849, he set out for Central Africa, having been, along with Dr. Overweg, appointed by the British Government to accompany Mr. James Richardson, then charged by the Foreign Office with a commercial and political mission. After exploring Tripoli, the travellers joined the great semi-annual caravan for Bornou, and proceeded through the territory of Air, or Asben, which had never before been visited by Europeans. When Barth returned to Tripoli, in September, 1855, his explorations had extended over 24 degrees of latitude and 20 of longitude, and he had travelled 12,000 miles. The results of his researches were embodied in his *Travels and Discoveries in Central Africa*. He subsequently made several less important journeys in countries bordering the Mediterranean, and was professor-extraordinary of geography in the University of Berlin at the date of his death. As a scientific traveller, he stood almost alone until the recent revival of African exploration brought into the field so many of his countrymen, though his literary dullness and prolixity have prevented him attaining that popularity so fully accorded to far less meritorious men.

* **Barthelemy-Saint-Hilaire, JULES** (b. 1805), scholar and politician, was born in Paris, and began life as a journalist, taking considerable part in the revolution of 1830. In 1833 he retired from politics and began his translation of Aristotle, for which he was

appointed to the Chair of Greek and Latin philosophy in the College of France in 1838. Two years later he began the study of Sanscrit. At the revolution of 1848 he came forward again in support of Odilon Barrot, but resigned his professorship after the *Coup d'Etat*, and was not reinstated till 1862, spending the meantime in independent research and a journey to Egypt with M. de Lesseps to explore the Isthmus of Suez. He remained in Paris during the siege till summoned as deputy to the National Assembly, in which he gave valuable support to his old friend M. Thiers. After the fall of Thiers he continued to vote with the moderate Republicans, and joined the Republican minority in the senate when he was elected life-senator in 1875. In 1880 he accepted the portfolio of Foreign Affairs under Jules Ferry, and in that capacity was identified with the occupation of Tunis by the French, which was followed by insurrections and the consequent downfall of the cabinet (1881). He was literary executor to Victor Cousin and M. Thiers. As an author he is most celebrated for his translations of Aristotle, and his works on Oriental literature and religion, such as *Des Védas* (1854), *Du Bouddhisme* (1855), *Mahomet et le Coran* (1865).

Bartolini, LORENZO (b. circa 1778, d. 1850), a celebrated Florentine sculptor, is considered by his countrymen as second only to Canova. Napoleon was one of his most ardent admirers, and charged him with the execution of a number of works. Among the masterpieces of Bartolini may be mentioned his bust of Napoleon, the monument of Lady Stratford Canning at Lausanne, the bas-relief representing *Cleobis and Biton* and the group of *Hercules and Lycas*.

Bartolozzi, FRANCESCO (b. 1730, d. 1813), a famous designer and engraver, was born at Florence, and acquired the art of engraving from Joseph Wagner at Venice. There he engraved several plates, but the theatre destined for the display of his talents was England, where he arrived in 1764. He practised with great success every kind of engraving, and infused fire and spirit into every plate he touched. He was indefatigable in the exercise of his art, and he left, perhaps, a larger number of plates than any other engraver of his time. The range of painters after whom he worked extended from Michael Angelo, and the other great masters of the Renaissance, down to Cipriani and Angelica Kauffmann. A large collection of his works was exhibited a few years ago at the gallery in Savile Row. He was the father of Madame Vestris (q.v.). He died at Lisbon.

Barton, BERNARD (b. 1784, d. 1849), commonly known as "the Quaker Poet," born in London, was educated at a well-known Quaker school in Ipswich, and at the age of fourteen was apprenticed to a shopkeeper at Halstead. In 1806 he removed to Wood-

bridge, Suffolk, where he married shortly afterwards, and was left a widower the following year with one little daughter. Unable to bear the scene of his lost happiness, he removed for a year to Liverpool; returned, however, to Woodbridge, and became a clerk in Messrs. Alexander's bank, working at his desk for forty years, until within two days of his death. He wrote a great number of poems and verses—*Napoleon, Devotional Verses, Poetic Vigils, A Widow's Tale, The Reliquary*, etc. His poetry is mostly of a religious order, and often shows much grace and tenderness. He was a great lover of nature, and some of his verses have the true pastoral tone. At one time Barton entertained the idea of leaving the bank and trusting to literature for daily bread. From this he was fortunately deterred by his friends; Charles Lamb, who wrote to him most earnestly upon the subject, "retracting all his complaints of mercantile employment, and looking upon them as lovers' quarrels." Shortly before his death, during the premiership of Sir Robert Peel, the Queen conferred an annual pension of £100 upon the Quaker Poet.

Memoirs and Letters of Bernard Barton, edited by his daughter.

Barye, ANTOINE LOUIS (b. 1795, d. 1875), French sculptor, began to study art early as an engraver and worker in metals, but did not exhibit any statuary till his thirty-third year, after which he continued to exhibit in the salons till 1836, when several of his works were rejected, and he refused to contribute again till 1850. From 1848 to 1851 he was superintendent of the casts in the Louvre by the appointment of Ledru-Rollin. His most important works are representations of animals, such as the *Jaguar devouring a Hare* (1850), and the *Lion of the Column of July*. He also executed several busts of portraits, and decorated the pavilion of the Louvre with his four groups of *Peace, War, Power, and Order*. He was a member of the jury on art for the Exhibition of 1861.

* **Bastian, HENRY CHARLTON** (b. 1837), a noted physician and biologist, was born at Truro, and graduated at London University, where, a little later, from 1860 to 1863, he was assistant curator in anatomy and pathology in the museum attached to that institution. He was assistant medical officer of Broadmoor Criminal Lunatic Asylum from 1864 to 1866. In 1868 he was appointed assistant-physician to the Hospital for Paralytics and Epileptics, and in 1871 professor of pathological anatomy in University College. Dr. Bastian is an advocate of the doctrine of the spontaneous generation of living organisms, and has written extensively on the subject. Three of his best known works are, *The Modes of Origin of Lowest Organisms, The Beginnings of Life, and Evolution and the Origin of Life*. He is a fellow of

the Royal and Linnean Societies, and, in addition to the works quoted, and many scientific and medical papers, has published *Clinical Lectures on the Common Forms of Paralysis, and The Brain as an Organ of Mind* (1880).

Bastiat, FRÉDÉRIC (b. 1801, d. 1850), French political economist, was a native of Bayonne. Entering upon a commercial career, he made his first appearance in print as an authority on tariffs in the *Journal des Économistes* (1844). A visit to England inspired him with a strong admiration for the doctrines of Free Trade, and in 1845 he published a translation of the addresses of the Free Traders, with an introduction entitled *Cobden et la Ligue*. During the remainder of his life he advocated the cause in the columns of the *Libre Échange*, and in various works, among which may be named *Sophismes Économiques* and *Harmonies Économiques*.

Bastide, JULES (b. 1800, d. 1879), French politician, early distinguished himself as a Liberal opponent of the Bourbon Restoration, and took an active part in the revolution of 1830. Having afterwards joined the Radical opposition to the Orleans dynasty, he was condemned to death for his share in the outbreak of June, 1832, but escaped to London. Having returned to Paris after two years, he became a journalist, and was a prominent leader in the movement which strove to unite Christianity with extreme democracy. After the revolution of 1848 he became Secretary, and afterwards Minister, of Foreign Affairs, in conjunction with Lamartine, and retained power under General Cavaignac till the December elections. After this he took but little part in public life, but edited several important works on French history.

Bastien-Lepage, JULES (b. 1848, d. 1885), French painter, was born at Damvillers (Meuse) on Nov. 1st, 1848. He entered at first a public office, but his love of art soon made him abandon it. He became a student at the *École des Beaux-Arts*, and the pupil of Cabanel. During this period his means were very limited; but soon he rose rapidly in his profession, and after exhibiting successively *Au Printemps* (1873), *La Chanson du Printemps, et le Portrait de mon Grand-Père* (1874), he was regarded as one having a future. In 1880 his *Jeanne d'Arc Brooding in the Garden* attracted much attention, and from that time forward he was famous. In 1881 appeared *Un Mendiant*; in 1882, *Le Père Jacques*; in 1883, *L'Amour du Village*; and in 1884, *La Forge*. His art was of the impressionist kind, and in this special walk he was undoubtedly a master.

* **Bathie, ANSELME POLYCARPE** (b. 1828), French jurist, economist, and politician, was born at Seissan (Gers), became auditor of the Council of State in 1849, and Doctor of Law in 1850. After the *Coup d'État* he was

appointed professor of law at Toulouse and Dijon, and in 1857 assistant-professor in Paris. Three years later he visited the universities of Holland, Belgium, and Germany to investigate the methods of teaching law. In the same year he gained a prize from the Academy of Moral and Political Sciences for his work on *Turgot as Philosopher, Economist, and Administrator*. The events of 1870 unfortunately enticed him from law to active political life, and when he appeared as a champion of monarchy, the records of his early Republicanism exposed him to the charge of inconsistency. Returned to the National Assembly in 1871 by his native province, he took his seat in the Right Centre, and soon became one of the most conspicuous opponents of M. Thiers, being in June, 1872, one of the delegates to present to him the ultimatum of the majority. In November of that year, as reporter to the Kerdrel commission to answer the Republican manifesto, he employed the famous phrase, so often turned against him afterwards, that "revolutionary barbarity" must be resisted by "le gouvernement de combat." During the six months' administration of the Duc de Broglie in 1873, M. Batbie was Minister of Public Instruction and Public Worship, but his proposals were too often at variance with the principles laid down in his own legal works. Elected senator of four years in 1875, he still continued to favour the monarchical cause, and Marshal MacMahon's opposition to the popular will in 1877 was generally supposed to be due to his influence. Before 1870 he published several legal and economic works.

* **Bate, CHARLES SPENCE, F.R.S. (b. 1819)**, English zoologist, was born at Frenick (near Truro), Cornwall, and is descended from one of the Foundation Fellows of the Royal Society. He adopted the profession of dental surgeon, and in due time received the diploma of L.D.S. from the R.C.S. Eng. He then settled in Plymouth, and engaged in active practice, while devoting all his leisure time to abstruse researches into the structure and classification of the obscurer forms of animal life, more particularly the order of Crustacea, in the knowledge of which he is regarded as the highest living authority. In addition to a number of papers and reports in the *Transactions* of the British Association, the *Annals of Natural History*, the *Proceedings* of the Zoological Society, the *Annales des Sciences Naturelles*, the medical and dental journals, Mr. Bate is the author of a memoir on the development of the common crab in the *Philosophical Transactions* (1884), of a *Catalogue of the Amphipodous Crustacea in the British Museum*, illustrated by sixty plates, and, in partnership with Professor Westwood, of a *History of the British Sessile-Eyed Crustacea*, which has long been a classic on the subject. He is F.R.S., president of the Odontological Asso-

ciation of England (1885), was vice-president of the Biological Section of the British Association (1869), and vice-president of the British Association (1877). Mr. Bate also took an active part, as far as a provincial residence would admit, in securing for the dental profession the present legal position. Though now at a period of life when one expects a little ease, he is actively engaged in preparing a work on the Crustacea of the *Challenger Expedition*, with 120 quarto plates. Personally, he is a type of *savant* far rarer on the Continent than in this country—who, while neither holding nor desiring any official appointment, and actively engaged in the duties of his calling, finds time to contribute important works to the literature of science.

* **Bateman, KATE JOSEPHINE (b. 1842)**, tragic actress, was a native of Baltimore, and, belonging to a theatrical family, she appeared on the stage in very early life. Her first success was in the character of Evangeline in 1859, but before she came to England in 1863 she had also played as Julia in the *Hunchback*, Pauline in the *Lady of Lyons*, Juliet, and Lady Macbeth. She was very well received on her appearance at the Adelphi as Leah in *Deborah*. In 1866 she married Mr. George Crowe, but returned to the stage under her maiden name in 1868. In 1872 she was very successful in the play of *Medea*, and from 1875 to 1878 she took the heroines' parts in several Shakespearean revivals at the Lyceum, such as Lady Macbeth, and Anne in *Richard III.*; she also acted Queen Mary in Tennyson's play. Afterwards she became lessee of Sadler's Wells theatre.

* **Bates, HENRY WALTER, F.R.S. (b. 1825)**, English naturalist and traveller, is a native of Leicester. Originally intended for commercial life, he had begun a business career, when the whole course of his pursuit was changed by attending the lectures of the Rev. W. Drake and Mr. W. Harley at the Leicester Mechanics' Institute. The taste for natural history which these lectures inspired was further strengthened by making the acquaintance of Mr. Alfred Russel Wallace, during his residence in Leicester in 1847, and debating with him the then unsolved problems of "the origin of species." The result was that Mr. Bates resolved to throw up all other business, in order to pursue the glimpses of truth which these debates opened up to him and his friend. At first the two planned to range the southern States of North America; but subsequently they decided to devote their attention to the Amazon valley. Hither, therefore, on April 26th, 1848, Messrs. Wallace and Bates proceeded, with the intention of studying and collecting, in order, by the sale of their specimens, to defray the expenses of the expedition. This attempt was in those days a bolder one than it would be now, and it is questionable whether, without the encouragement of Mr.

Edward Doubleday, of the Zoological Department, British Museum, it could have been successfully carried out. Mr. Wallace returned after a comparatively short stay; but Mr. Bates worked on until June, 1859, before he set out on his return. By this time he had reaped a rich harvest in the shape of note-books filled with observations, and collections so valuable and extensive that they have never been exceeded. In March, 1863, he published his *Naturalist on the River Amazons*, which contains an outline of his eleven years' labours, and has gone through many editions in English and foreign languages. In April, 1864, through the introduction of Mr. John Murray to Sir Roderick Murchison, he was appointed assistant-secretary to the Royal Geographical Society, a position which he has ever since occupied. He has seen the members of the Society almost doubled in number; and ever since the *Proceedings* were replaced by a monthly journal, Mr. Bates has edited this record. His leisure time has been occupied in publishing the results of his Amazonian researches, and though much still remains undescribed, the list of these memoirs from 1862, when his paper on *Mimetic Analogues* appeared in the *Journal of the Linnean Society*, would occupy a large space. He has also written the volumes on the *Geodephagous Coleoptera and Longicornia*, in Godman's and Salvin's magnificent *Biologia Centrali-Americana*, still in course of publication. Mr. Bates is F.L.S., F.R.S., and, in addition to being an honorary member of many British and foreign societies, has presided over the Entomological Society.

Batthyani, CHARLES PRINCE (b. 1809, d. 1849), Hungarian patriot and statesman, became chief minister of the Government after the struggle for religious liberty in 1848, but resigned shortly afterwards on account of the hostility showed towards him by Jellachich, Ban of Croatia, who was supported by the Imperial Court. Civil war ensued, the supporters of Batthyani were defeated, and he, after being tried by court-martial, was sentenced to be shot.

• **Baudry, PAUL JACQUES AIMÉ** (b. 1828), French painter, was the pupil of Drolling and Sartoris, and attended the *École des Beaux-Arts*, where he carried off the *Grand Prix de Rome*, in 1850, with his *Zénobie trouvée sur les Bords de l'Araxe*. During his sojourn at the Villa Médicis he made many important studies and pictures, some of which were exhibited at the Salon of 1857, and were enthusiastically received both by the critics and by the public. Returning to Rome the same year, he produced, in 1859, *La Madeleine Pénitente* and *La Toilette de Vénus*; in 1861, *Charlotte Corday* and *Amphitrite*; in 1863, *La Perle et la Vague*; and in 1865, *Diane*. He was commissioned to paint the boxes and galleries of the Grand Opera, and consecrated nearly ten years of his

life to carrying that great task to a triumphant issue. He reappeared at the Salon in 1882, with his *La Vérité*, a nude figure, chastely designed and exquisitely painted.

Bavaria, KINGS OF:—(1) **MAXIMILIAN JOSEPH I.** (b. 1756, d. 1825), became Elector of Bavaria in 1799, on the death of his cousin, Charles Theodore, the last of the Sulzbach line. He had succeeded his brother as Duke of Zweibrücken in 1799. He found his country in an evil plight in consequence of having espoused the cause of the Allies against Napoleon in the war of 1796; and although Bavaria had, during the war begun in 1799, observed neutrality, she was compelled by the Treaty of Luneville, which concluded it in 1801, to surrender all her possessions on the right bank of the Rhine, not, however, without some compensation. Taught by adversity, the Elector Maximilian, on the renewal of the European struggle in 1805, turned a deaf ear to the overtures of Austria, and was rewarded with the title of king and large accessions of territory. He continued to support the Emperor with much energy until the tide began to turn decisively, when he judiciously changed sides. By the Treaty of Ried (1813) he was confirmed in his acquisitions, and thereupon fought with zeal against his former benefactor. In the same spirit he granted his subjects, in 1818, a carefully balanced constitution, which appeared far more liberal than it really was. Serfdom was, however, abolished shortly afterwards. During his later years, the king observed a separatist attitude towards Germany, and showed a desire to annex the Duchy of Baden.

(2) **LOUIS I.** (b. 1786, d. 1868), during his troubled childhood, developed considerable love for literature and art, and became a tasteful collector, an indifferent poet, an honest advocate of Greek independence. He showed much repugnance towards the French régime, and apparently was sorely desirous of playing a prominent part in the war of liberation, but was restrained by his parents. Louis succeeded his father in 1825, and at first posed as the enlightened despot, setting finance in order, embellishing his capital, and patronising new inventions. He was, however, frightened by the July revolution of 1830 into a narrowly reactionary policy, and became the ardent supporter of Ultramontanism. The influence of his mistress, Lola Montes, caused him to change the last part of his programme, but her insolence infuriated his subjects, and finding himself the object of general odium, Maximilian abdicated in 1848. The remainder of his life was spent in literary retirement.

(3) **MAXIMILIAN II.** (b. 1811, d. 1864) succeeded his father, on his abdication in 1848. Inheriting much of the former king's difficulties, he displayed much of his disposition

in contending with them, coupled with a considerably greater amount of resolution. The democratic revolution in Westphalia was ruthlessly stamped out, and a sternly reactionary policy inaugurated, which swept away much of the recent Liberal advance. Later on, however, Maximilian relaxed his iron discipline, and from the first he was a discriminating patron of philosophers and artists. With regard to Germany, he adopted a firmly separatist or "particularist" attitude, hoping to hold the balance between Austria and Prussia. Hence in 1848 he opposed the reconstruction of the Empire in the interests of Prussia, and endeavoured in 1859 to bolster up Austria by calling Germany to her aid against Napoleon III. and the insurgent Italians.

(4) **LOUIS II.** (b. 1845, d. 1886), succeeded his father, Maximilian II., in 1864. Unused to public affairs, the young king took little personal part in the contest between Prussia and Austria for the leadership of Germany, and allowed his ministers to drag Bavaria into war on the weaker side, with the result that the peace of Sadowa (1866) was decidedly unfavourable to his country. After this lesson, King Louis disappointed the calculations of Napoleon III. by acquiescing in a Prussian hegemony; and in the Franco-German War of 1870, his troops, despite a "Particularist" majority in the parliament, fought on the side of United Germany. He was chosen to urge upon the King of Prussia the acceptance of the Imperial title. In November the treaty was concluded between Bavaria and North Germany, recognising the King of Prussia as the head of the new empire, by which the Bavarians retained the important privileges of a separate postal system and a separate army, together with a freedom from interference in internal affairs. The "Particularist" and Clerical parties being practically identical, King Louis was, on the whole, opposed to Ultramontane pretensions, and in favour of the Old Catholic movement; he was also compelled to grant many concessions to the Liberals, who were, as a rule, in a strong majority, which would otherwise have been withheld. The chief characteristics of King Louis's remarkable personality were a love of solitude, a passion for building, and a devotion to music. He was one of the first to recognise the genius of Richard Wagner, and continued throughout his life a staunch supporter of the great musician. Unfortunately his peculiarities became very strongly developed, and he eventually refused all access to his ministers. In June, 1886, accordingly, he was deposed on the ground of insanity, and his uncle, ***PRINCE LUITPOLD** (b. 1821), appointed Regent. He was removed to the castle of Berg, and there on June 12th succeeded in drowning himself and his attendant, Dr. Gadden. ***KING OTTO** (b. 1848), his brother and successor, has long been insane.

* **Bayer, ROBERT** (b. 1835), novelist, was born at Bregenz, in the Tyrol, and having entered the Austrian army, served on the general staff during the Italian campaign of 1859-60. In the latter year he published his *Sketches of Barrack Life* (*Kantonierungsbildern*), and in 1862 he retired from service and settled in his native town, devoting himself entirely to literature, and producing the series of works, chiefly dealing with military life, which have made him celebrated as a novelist. In 1866 he wrote an historical romance on the German War of Independence (*Anno Neun und Dreizehn*). *Ein deutsches Grafenhaus*, a story of life in a remote German country seat, appeared the year after, and has been succeeded by the *Struggle for Existence* (*Der Kampf ums Dasein*, 1869); *Spirits* (*Larven*, 1876); *Sesame* (1880), and several other tales. Most of the novels are inspired by the author's enthusiasm for democracy and freedom.

Bayley, SIR EDWARD CLIVE, K.C.S.I. (b. 1821, d. 1884), son of Mr. E. Clive Bayley, of Manchester, was born at St. Petersburg, and educated at Haileybury, whence he entered the Indian Civil Service in 1842. He held posts successively at Allahabad, Meerut, Bulandshahr, Rohtak, and Gujerat, and was promoted in 1849 to be Under-Secretary for Foreign Affairs in the Indian Government. During a furlough in England (1854-7), after serving in the Kangra district (1851-4), he was called to the bar. At the time of the mutiny he was at Allahabad, and held an under-secretary's office in the provisional government of Sir J. P. Grant. After serving in a judicial capacity in various districts, he was summoned to Calcutta in 1861, to be Foreign Secretary to Lord Canning's Government, and in the following year was transferred to the Home Department, which he managed for ten years. In 1873 he became a member of the Supreme Council, and after thirty-six years of service, retired in 1878. Besides his official work, which was marked by a kindly, vigorous interest in the progress of the people of India, he devoted considerable attention to archaeological research. His articles on various branches of Indian antiquities, coins, inscriptions, etc., in the *Journal of the Bengal Asiatic Society*, the *Numismatic Chronicle*, and other learned periodicals, were often of great value; and just before his death he was engaged in editing the ninth volume of his friend Sir H. Elliot's *History of India told by its own Historians*. He was chancellor of Calcutta University, president of the London, and also of the Bengal Asiatic Society, at various periods, and was decorated with the K.S.C.I. in 1877.

Ann. Report, R. Asiatic Society, 1884.

Bayly, THOMAS HAYNES (b. 1797, d. 1839), writer of songs, light dramas, and tales, was

born at Bath, the only child of a solicitor of good position. He was educated at Winchester, and at seventeen entered his father's office, where he neglected his law to contribute humorous articles to the local newspapers. He published *Rough Sketches of Bath*, a poem of some 400 lines in heroic couplets. Turning his mind to the Church, he spent three years at St. Mary Hall, Oxford. An untoward love affair sent him travelling in Scotland and the North of Ireland, where his successes in private theatricals and ballad writing prompted him to drop the Church and set up for lyric poet. He returned to Bath early in 1824, and his versatile pen achieved considerable success. In 1826 he married Helena, the daughter of Mr. Benjamin Hayes, of County Cork. In 1827 he published *The Aylmers*, a novel; *A Legend of Killarney*, a tale; and this year and the next he issued three modest bouquets of songs and ballads. In 1829 he removed to London, with a view to dramatic writing. In the next ten years (and especially in 1831-2) he produced thirty-six light dramatic pieces, one of them—some think the best—*Perfection*, having been scrawled down in his note-book in the course of a journey by stage-coach from Eastbourne to London. In 1831-2 he lived at Boulogne, "a gent in diffs," to use the title of one of his songs. In 1833 he went to Paris, and in 1836 he returned to London. During all those years his muse was singing placidly and pleasantly, and small collections of his songs and ballads were from time to time given to the world. *Kindness in Women*, a series of tales, was interrupted by his death. His lyrics are characterised by felicitous selection of topics, mild appreciation of the humours of society, lightness and ease of expression, sure taste, and gentle placidity of manner. There is no bitterness, no intensity. It is sufficient here to mention the *Mistletoe Bough* and *She wore a wreath of roses*. [A. F. M.]

***Bayne**, PETER, LL.D. (b. 1830), journalist, critic, and historian, was born in Ross-shire, and educated at Aberdeen. He was for a time editor of various Scottish and London journals, and became known by his biographical sketches and a work on *The Christian Life in the Present Time*. He has contributed frequently to most of the leading magazines, and has published several works on the Puritan period, of which he has made a special study. In 1871 he published the *Life and Letters of Hugh Miller*, the modern Puritan; and in 1878, *The Chief Actors in the Puritan Revolution*. As a critic he is best known by his work entitled, *Lessons from my Masters*, containing criticisms on Carlyle, Tennyson, and Ruskin (1879), and his account of the works of Mrs. Browning and Charlotte Brontë, called *Two Great Englishwomen, with an Essay on Poetry*. Whilst he gives a very qualified allegiance to Mr. Matthew Arnold, he is notorious for a

sharp contest with Mr. Swinburne on a point of poetical criticism.

***Baynes**, THOMAS SPENCER (b. 1823), journalist and logician, was born in Somerset, and in 1851 became assistant to Sir William Hamilton, in Edinburgh. In 1857 he was appointed examiner in logic and mental philosophy in London University, and assistant-editor of the *Daily News*, to which he contributed very many important articles on the American War. In 1864 he was made professor of logic, rhetoric, and metaphysics at St. Andrews. He translated the *Port Royal Logic* in 1851, and is editor-in-chief of the ninth edition of the *Encyclopædia Britannica*.

***Bazaine**, FRANÇOIS ACHILLE (b. 1811), Marshal of France, entered the army from the École Polytechnique in 1832, and the following year saw service in Algeria, being rewarded for his gallantry there with the Cross of the Legion of Honour. In 1837 he was employed in Spain against the Carlists, but returned to Africa in 1839, to take part in the expeditions of Milianah, Kabylia, and Morocco. He commanded a brigade in the Crimea in 1853, and was frequently mentioned in despatches during the siege of Sebastopol; and finally commanded a division in the Kinburn Expedition. He next commanded the 3rd division of the 1st Corps in the Italian War of 1859. In 1862 he served with the expedition to Mexico, and next year succeeded Marshal Forey in supreme command. The early part of the campaign was successful. President Juarez was driven far back into the interior, the fortified town of Oajaca was captured, and the Republican partisan bands were checked by a guerilla war, in which Colonel Dupin made himself notorious. But in 1866 the force was withdrawn, the retreat and embarkation at Vera Cruz being skilfully conducted. For his services he had been created Marshal of France and Grand Cross of the Legion of Honour, and in 1869 was given the command of the Imperial Guard. When war broke out, he commanded the army of the Rhine, though the Emperor was for a time present, and was engaged at the battles of Borny, Mars-la-Tour, and Gravelotte, after which he was invested in Metz by the German army. He surrendered to Prince Frederick Charles, after a siege of about three months, when 173,000 men became prisoners of war. In 1871 he was summoned to appear before the military commission appointed by the National Assembly to inquire into the surrender of the fortresses during the war, and the following year was tried by a court martial presided over by the Duc d'Aumale, which found him guilty of military incapacity, but returned an open verdict to the charge of treason to the Republic. He was sentenced to death and degradation, both of which were commuted,

the former to imprisonment for life and the latter to a formal sentence, and he was, further, dismissed the army, and deprived of all his dignities. While undergoing the imprisonment in the Île Sainte-Marguerite, he, aided by his wife and his aide-de-camp, Colonel Vilette, contrived to effect his escape on Aug. 9th, 1874, and reached Italy in safety. Thence he proceeded to Cologne and England, and finally to Madrid, where he wrote a long explanation of his conduct to the *New York Herald*, and published a book, dedicated to Queen Isabella II., in which he gave an account of that portion of the Franco-German War in which he had taken a leading part. Before this he had written the *Armée du Rhin*, describing the military operations up to the date of the fall of Metz.

• **Baralgette**, SIR JOSEPH WILLIAM (b. 1819), engineer, was born at Enfield, but is of French origin. He was a pupil of Sir John MacNeill. He was much occupied in the great railway extensions of 1846-7, but his health, having broken down, he accepted the position of assistant engineer to the Metropolitan Commission of Sewers, succeeding as chief engineer in 1852. Four years later he became engineer to the Metropolitan Board of Works on its establishment, and devised a scheme for the drainage of London, which was carried out between 1858 and 1865. His system was entirely original, and has been adopted in several large towns, such as Pesth, Glasgow, Dublin, and Oxford. He also designed the Victoria, the Albert, and the Chelsea embankments, executed between 1863 and 1874, besides numerous street improvements, subways, and artisans' dwellings. He has published a book of instructions on the construction of bridges and alteration of streets.

• **Basley**, SIR THOMAS (b. 1797, d. 1885), manufacturer and economist, was born near Bolton, where he started in the cotton-spinning business in 1818, but removed to Manchester in 1826. He became sole proprietor of the largest factory then in the trade, and was conspicuous for his attention to the needs and education of his "hands." Having been one of the earliest members of the Manchester Anti-Corn-Law Association, he opened the Free-Trade campaign in Liverpool with Richard Cobden and John Bright in 1837. From 1845 to 1859 he was president of the Manchester Chamber of Commerce, and was one of the Royal Commissioners for the Exhibition of 1851. Having been returned M.P. for Manchester in 1858 and 1859, he retired from business in 1862, and devoted himself entirely to Parliamentary work, which he abandoned only in 1880.

• **Beach**, THE RIGHT HON. SIR MICHAEL EDWARD HICKS, BART. (b. 1837), son of Sir Michael Hicks Beach, eighth baronet, was born in Portugal Street, London, educated at

Eton and Christ Church, and returned M.P. for East Gloucestershire in 1864, in the Conservative interest. He was Parliamentary Secretary to the Poor Law Board during 1868, and a member of the Royal Commission on Friendly Societies. On the return of the Conservatives to power in 1874, he was appointed Chief Secretary for Ireland, and was admitted to the Cabinet in 1877. In the following year he became Secretary of State for the Colonies in the place of Lord Carnarvon, but went out with his party in 1880, his tenure of office having been marked by the Zulu War, to which the Government gave its consent despite a despatch severely censuring the conduct of the High Commissioner, Sir Bartle Frere (q.v.). During the Liberal administration that followed, he distinguished himself as one of the most prominent members of the Opposition, and on the formation of a Conservative Government in May, 1885, he became Chancellor of the Exchequer, and leader of the House of Commons. In 1886 he was appointed Chief Secretary to the Lord Lieutenant of Ireland.

• **Beaconsfield**, THE RIGHT HON. BENJAMIN DISRAELI, 1ST EARL OF, K.G., statesman (b. 1805, d. 1881), was born in Bloomsbury Square on the 21st of December, 1805. He received a private education, and was at first designed for the law, but early manifesting a taste for literature, was permitted by his father, himself a distinguished man of letters, to follow the bent of his genius. In 1827 he published the novel of *Vivian Grey*, which took the town by storm, and immediately afterwards set out upon a tour through Eastern Europe and the Levant, in company with Mr. Meredith, a young man of great promise, who was engaged to be married to his sister, but who died suddenly at Cairo in 1829. A volume of letters addressed to his sister and his father during his absence from this country, give the best account of his adventures and the impressions derived from what he saw during these four years of travel. Returning to England in 1832, he decided on a political career, and appeared upon the hustings at High Wycombe in the character of a popular Tory, who took his stand on the original principles professed by Bolingbroke and Wyndham. As these, however, included vote by ballot and triennial Parliaments, he was naturally denounced as a Radical, both by the Whigs and the old-fashioned Conservatives, though it is necessary only to read his early speeches to see that he repudiated Radical theories in the clearest and most emphatic terms. He did not succeed in obtaining a seat in Parliament till 1837, the interval being occupied in literary labours, of which *The Young Duke*, *Venetia*, *Henrietta Temple*, *The Letters of Runnymede*, *The Crisis Examined*, and *The Vindication of the British Constitution* were

the principal results. *Contarini Fleming*, *The Revolutionary Epic*, and *The Wondrous Tale of Atroy*, are works of less merit. In 1837 he was returned for the borough of Maidstone, and laid aside his pen for some years. His maiden speech, delivered on the 7th of December, will be remembered probably while Parliamentary institutions endure. He spoke in an eccentric style; his appearance was unusual; and his singular dress and his abundant ringlets were not regarded with favour by the fastidious critics who listened to him. He was forced to resume his seat amid a torrent of ridicule. But he pronounced as he sat down the ever-memorable words, "The time will come when you *will* hear me;" and amply was the prophecy fulfilled. During the first ten years of his parliamentary career he was chiefly known for his efforts to direct the attention of the Tory party to its original founders, and to the principles professed by Mr. Pitt at the outset of his career, when Toryism was, as he declared, "the popular political confederacy of this country." The Young England Party was one result of his exertions, which, whatever its little follies or extravagances, did, undoubtedly, to some extent sweeten the tone of English public life, and introduce a new spirit into the high and dry Toryism which had survived the Reform Bill. To enforce his political and social theories, he published in 1844 and 1845 *Coningsby* and *Sybil*; the first intended to show how widely the Conservative party, as founded by Sir Robert Peel, had wandered from the popular doctrines of primitive Toryism; the second an exposure of the degradation of the English people, especially in our manufacturing towns, and the neglect of her duties by the Church of England, combined with an intimation that even then, however, a change for the better had begun, and that the next generation of the aristocracy of England would not be like the last. These two novels produced a wonderful effect on English society, and at once placed the author at the head of political literature. The freshness, the daring, the knowledge, and the wit of these two celebrated novels extinguished for ever the older types of Tory controversy, and exercised a powerful influence on the whole political press of the country. As a disciple of the school of statesmanship which flourished in the last years of the reign of Anne, Mr. Disraeli was in principle a Free Trader. But he thought that Free Trade should have been the work of free legislation: of men, that is, whose hands were not tied by the clearest and most binding pledges in favour of Protection, and who had not been returned to power almost expressly for the maintenance of the Corn Laws. His own views on the subject of a duty on foreign corn he explained to his constituents in a speech delivered at Shrewsbury in 1843. His defence of it was neither

commercial nor social, but exclusively political. He attacked Sir Robert Peel, not so much for repealing the Corn Laws as for betraying those whose support he had secured by reiterated promises to maintain them. On the rupture of the Tory party in 1846, Mr. Disraeli at once came to the front as the life and soul of the Opposition. For two years longer its nominal leader in the House of Commons was Lord George Bentinck, but on his death, in the autumn of 1848, Mr. Disraeli, by general consent, assumed the vacant place, which, if we deduct the years he was in office, he filled with such marvellous ability for nearly a quarter of a century. On the 28th of August, 1839, Mr. Disraeli married Mary Anne, widow of Mr. Wyndham Lewis, who had been Mr. Disraeli's colleague at Maidstone. With this lady's fortune he was enabled to purchase the estate of Hughenden, in Buckinghamshire, and after representing Shrewsbury in the Parliament of 1841, was returned for a division of this county in 1847. He in turn now became the leader "of the country gentlemen of England," in place of Sir Robert Peel, deposed, and his first efforts were directed to the reconstruction of the party which in 1846 could muster, on a critical division, but 150 votes. Three years afterwards he was followed into the lobby by 267 members, including a large number of reclaimed Peelites, who had returned to their original connection. Shortly afterwards the resignation of Lord John Russell brought the Conservatives into power, with the late Lord Derby as Prime Minister. A general election in the summer of 1852, though the party gained some twenty seats, did not give them a majority; and, defeated on the Budget, Lord Derby gave way to the Coalition Government, at the head of which was placed Lord Aberdeen. Mr. Disraeli never forgave the Coalition, and his principal speeches in the House of Commons during the next few years were on occasions which enabled him to launch all the vigour of his sarcasm against the reactionary members of it. In 1854 came the Crimean War, which induced Mr. Cobden to express publicly his regret at having helped to turn out the Government of Lord Derby, which he believed would have saved us from the calamity. Some years afterwards Mr. Disraeli stated in the House of Commons that he was in possession of information which made this a certainty. On the resignation of Lord Aberdeen, in 1855, the Queen sent for Lord Derby, who, declining to take office without either Lord Palmerston or Mr. Gladstone, left the opportunity to the former, who at once seized the prize, and kept it, with a very brief interval, for the remainder of his life. Mr. Disraeli was much disappointed at his chief's decision, and looking back upon a vista of thirty years, we can see that Lord Derby was mistaken. In 1858 Lord Derby and Mr. Disraeli were summoned to power a second time, and Mr. Disraeli became again,

as he had been in 1852, Chancellor of the Exchequer. The two Tory leaders now made up their minds to try to settle the Reform Question, which the Whigs had re-opened, and introduced a Bill for placing the town and county franchise at the same level, namely, a £10 qualification. The Bill was lost, mainly on the ground that it proposed to bar the freeholders in towns who voted as £10 householders from voting for the county also. This was a point which Lord Grey had been willing to concede in 1832. Lord John Russell accordingly led the opposition to the Bill mainly upon this point, and the Government were defeated on the second reading by a majority of thirty-five. They dissolved Parliament, and in the House of Commons Mr. Disraeli found himself at the head of three hundred followers. He had to retire, however, before a vote of want of confidence, which was moved by Lord Hartington, and carried by a majority of thirteen; and again he became leader of the Opposition. He remained at his old post till after the death of Lord Palmerston, in 1865, when the accession of Lord Russell, with Mr. Gladstone for leader in the House of Commons, broke up the Palmerstonian party, and drove its more Conservative members into the "Cave of Adullam." With the assistance of these gentlemen the Conservative party once more defeated the Liberals, and were installed in office for a third time. Lord Derby and his lieutenant once more made up their minds that they would settle the Reform question, or perish in the attempt; and after various preliminary skirmishes, extremely interesting in themselves, but too long to be discussed here, the Government brought in a Bill, and, what is more, carried it, for extending the franchise in towns to all the ratepayers, and in the counties to £12 occupiers. Mr. Disraeli had educated his party more successfully than Sir Robert Peel, and they stood by him manfully in the development of popular Toryism. But it was all of no avail; once more the elections went against him, and Mr. Gladstone became Prime Minister, with a majority of 120. It was useless to fight against these overwhelming odds, and though Mr. Disraeli opposed the Irish measures of Mr. Gladstone, he did not show much energy in the House of Commons till some unlucky mishaps which occurred to his opponents furnished him with a better opportunity. When, however, Mr. Gladstone resigned on the Dublin University Bill, in 1873, Mr. Disraeli declined to take office, and waited the event of a dissolution, which occurred the following year, and gave the Conservative party a clear majority of fifty. Mr. Disraeli was now for the first time Prime Minister in reality as well as in name. *Punch* designated him as the Peri who had succeeded at last in passing the gates of Paradise. But promotion had come to him too late, when, like Dr. Johnson, "he was old and could not enjoy it, was solitary and could

not impart it;" for his wife, who had been created Lady Beaconsfield, died in the month of December, 1871; and it is pretty certain that he did not make the same use of his power as he would have done had he been ten years younger than he was. As it was, his Government passed a series of social measures of great practical utility: Prisons Bills, Railway Bills, Commons Bills, an Educational Act Amendment Bill, and Bills for settling the disputes between employers and employed, which earned him the thanks of the working-classes. But the work of the House of Commons had now become too heavy for him, and at the end of the session of 1877 he was content to accept a peerage, and to retire to the Upper House as Earl of Beaconsfield. His domestic policy while in office was of an eminently practical and beneficent character, but he made one great mistake in consenting to become a patron of the Public Worship Regulation Act, and in calling it a Bill "to put down Ritualism." By this single expression he lost the support of a large section of the clergy, who, at the election of 1880, either voted against him or abstained from voting altogether. His foreign policy was the most striking feature of his administration. It was bold, but at the same time eminently skilful and sagacious; and his scheme for "a scientific frontier" in India, and the securities for the freedom of the Mediterranean which he extracted from Russia, will remain for ever as monuments of his political wisdom and his iron will. A new departure was made in the purchase of the Suez Canal shares in 1875; a culminating point was reached in the Treaty of Berlin, and the acquisition of Cyprus (1878). Despite an agricultural depression of unprecedented severity at home, and the unfortunate reverses which we experienced in the South African War, he had risen to such a height of popularity by his successful diplomacy, and the ability which he had shown in "bringing back peace with honour," that a renewed lease of power was generally anticipated for him at the first appeal to the people. The event was astounding. The constituencies swung round as if influenced by some political tornado, and the Liberal party obtained a majority, including the Home Rulers, of something like a hundred and sixty. Lord Beaconsfield bore this reverse of fortune with remarkable dignity, which won the admiration of both friend and foe, and the popularity which he had lost during the last few months of office returned to him as soon as he quitted it. When, in the early spring of 1881, it was known that he was seriously ill, the public anxiety was universal, and it grew every day in intensity to the moment of his death, on April 19th, a day ever since commemorated by his friends and disciples as a solemn anniversary, and distinguished by the name of his favourite flower, the primrose, which will probably continue to be celebrated

long after its meaning is forgotten. That Lord Beaconsfield succeeded in making Toryism popular is beyond dispute. Whether he paid too high a price for it or not our children will decide. But he recognised the necessity of adjusting Conservatism to progress, and had his party understood his genius at an earlier period of his life, their fortunes might have been widely different.

Of Mr. Disraeli's three later novels, *Tancred, Lothair*, and *Endymion*, the first in point of literary ability is fully equal to *Coningsby* and *Sybil*, and his descriptions of Continental scenery and manners are among the finest in the language. The two last show marks of haste, but *Lothair* is deeply interesting, and full of the author's rare humour. One of his ablest political works, the *Life of Lord George Bentinck*, is well known by politicians, but deserves to be better known than it is to the world outside. Mr. Disraeli's eloquence was of a very peculiar character. His strength lay rather in epigram than in rounded periods, and even his declamation was sententious. Now and then he rose to a great height of noble and dignified remonstrance; but what won him his place, and kept it, was his wit, his satire, and his irony, which cut through an opponent like a scimitar, and was prodigiously effective against the smug respectability which marked a large section of his enemies.

Novels and Tales by the Earl of Beaconsfield (ed. 1881); *Selected Speeches of the Earl of Beaconsfield*, edited by T. E. Kebbel; G. Brandes, Lord Beaconsfield. [T. E. K.]

Beattie, WILLIAM (b. 1793, d. 1875), physician and traveller, was born in Dumfriesshire, and studied medicine abroad. He was appointed physician to the Duke of Clarence, afterwards William IV., and travelled with him in Germany. He published several books of travel, chiefly on Switzerland, North Italy, and the Danube, but they are more remarkable for the illustrations by Bartlett than for the writing. Having been a great friend of Thomas Campbell, the poet, he published his *Life and Letters* in 1849. He was also very intimate with Samuel Rogers. In his medical capacity he wrote a treatise on *Consumption*, and one on the *Home Climates*; also a poem entitled, *Heliotrope; or the Pilgrim in Pursuit of Health*.

Beaumont, WILLIAM, M.D. (b. 1796, d. 1853), was educated for the medical profession, and became a surgeon in the United States navy. A fortunate accident made his professional skill known. While stationed at Michilimackinac, in 1822, a man was brought to him with a portion of his stomach shot away. The wound was cured by Beaumont, leaving an aperture of two and a half inches in diameter, through which the process of digestion could be observed. A number of invaluable investigations and experiments were thereupon made by the

doctor, which in 1833 he gave to the world, under the title of *The Physiology of Digestion, with Experiments on the Gastric Juice*.

Beaumont-Vassy, EDWARD FERDINAND DE LA BONNINIERE, VISCOMTE DE (b. 1816, d. 1875), French historian, novelist, and politician, appeared before the public, in 1838, with a novel entitled, *Une Marquise d'Autrefois*, which was followed by two or three other romances of the same kind. Being afterwards sent on a mission to Sweden by Guizot, he turned his attention to Swedish history, and produced several important works on the subject, such as *Les Suédois depuis Charles XII. jusqu'à Oscar Ier*, *Suedenborg ou Stockholm en 1766*, and a large unfinished history of northern Europe since the Congress of Vienna. As a determined Conservative, he strongly opposed the revolution of 1848, and accepted various offices under Napoleon III., but having been convicted of peculation was imprisoned and disgraced. In later life he returned to novel writing, and published *Une Intrigue dans le Grand Monde* (1867), and *L'Amour Diplomate* (1869), besides several political and social reminiscences of the second Empire, and a history of the Commune.

* **Beauregard, PIERRE GUSTAVE TOUTANT** (b. 1818), general in the army of the United States of America, was a Southerner by birth, his parents belonging to New Orleans, and he was educated for the military profession at the Academy at West Point, which he left in 1838 to receive a commission in the Artillery. He was first employed in the campaigns in Mexico, where he was twice wounded, and was transferred to the Corps of Engineers in 1853. He was superintendent of the West Point Academy when the civil war of 1861 broke out, and threw in his lot with his Southern brethren. He took a prominent share in the great struggle. He was in command at the bombardment of Fort Sumter in April, 1861, and again at the battle of Bull Run, in the same year, receiving his promotion to brigadier for that action. He shared in the battle of Shiloh, April 6th, 1862, under General A. S. Johnston, and in 1863 successfully defended Charleston against General Gilmore. He next served in North Carolina, under General J. E. Johnston, until the surrender of the army in 1865, when hostilities ceased, at which time he had attained the rank of general. After the war, Beauregard returned to the Southern States, and became President of the New Orleans, Jackson, and Mississippi Railway.

* **Becher, LADY ELIZABETH** (b. circa 1791, d. 1872), tragic actress, daughter of the late Mr. John O'Neil, made her *début* under her own name, in London, in 1814, and soon obtained a very high reputation on the English stage. In 1819 she married W. Becher, Esq., M.P., afterwards created a baronet.

Becker, CHARLES FERDINAND (b. 1804, d. 1877), organist and composer, was born at Leipzig, where he studied music under Schicht and Schneider, and became organist, at fourteen, of the church of St. Nicholas. He has written a vast number of works, amongst which we may mention : — *The Trios, Choral Melodies, On the Choral Collections of various Christian Churches, The Choral Compositions of the Sixteenth and Seventeenth Centuries, and The Composers of the Nineteenth Century*. In 1843 he was appointed professor of the organ in the Conservatorium of Leipzig, and had many distinguished pupils.

Becker, NICHOLAUS (b. 1816, d. 1845), German poet, was author of the popular national song : *Sie sollen ihn nicht haben, den freien deutschen Rhein* (*The Watch on the Rhine*). The great favour with which this song was received is to be attributed more to the national excitement of the year 1840 than to any intrinsic beauty of the words. A volume of poems published the following year was a signal failure.

Becker, WILHELM ADOLF (b. 1796, d. 1846), classical scholar, born at Dresden, devoted his life to the study of Greek and Roman antiquities, topography, and the classical writings, especially as illustrating the private life of the ancients. He embodied the results of his researches in several works, especially in the *Gallus* (1838) and *Charikles* (1840), in which the intimate private life of Rome and Greece respectively is vividly represented in the form of a story. Both works are still widely read by students.

* **Beckett, SIR EDMUND** (b. 1816), a well-known English lawyer, and writer on horology and architecture, is the eldest son of the late Sir Edmund Beckett. He was born at Carlton Hall, Notts, and married, in 1845, Mary, daughter of Dr. Lonsdale, Bishop of Lichfield. Educated at Trinity College, Cambridge, he graduated M.A. and LL.D., and in 1841 was called to the bar of Lincoln's Inn, of which, on being made Q.C., he was constituted a Bench. In 1874 he succeeded his father as fifth baronet, when he dropped the name of Denison, which his father had assumed in 1816; and in 1877 he was appointed Chancellor of York. Sir Edmund Beckett for many years enjoyed a large practice as a barrister. But he is even better known as an author on horology, bells, and ecclesiastical architecture, on all of which subjects he has written extensively, and on one occasion, at least, has figured in hot controversies. His acquaintance with these departments of knowledge is so profound that he has frequently been consulted by Government, and has more than once presided over societies charged with their advancement. In 1886 he was raised to the peerage as Baron Grimthorpe.

Beckford, WILLIAM, of Fonthill Abbey (b. 1761, d. 1844), wrote one romance of great

power and rich imagination. On *Vathek*, an Arabian romance, his reputation as an author must chiefly rest, though *The Amber Witch*, found among his papers, has some claims to attention. He was a son of Alderman Beckford, of London. Inheriting a large fortune, he travelled much on the Continent of Europe. Returning to England, he spent in eighteen years no less than £273,000 on Fonthill. Then he sold it, and soon afterwards one of its huge towers fell, and did great damage. His great work was first published in French in 1784. It appeared in English in 1787, under the title of *The History of the Caliph Vathek*. In 1834 he published his *Italy with Sketches of Spain and Portugal*, and in 1835 *Recollections of a Tour in Portugal*. But for the *Vathek* (his other works were comparatively unimportant), he is almost without a place in the annals of English fiction. The readers of a bygone generation were accustomed to depreciate the works equally of an earlier and later time by coupling the *Vathek* of Beckford and the *Caleb Williams* of Godwin as examples of what fiction might be at its best. But *Vathek*, at least, has practically disappeared.

A memoir was written by C. Redding (1859); a brief memoir was also written by W. North (1849).

[T. H. C.]

* **Beckx, PETER JOHN** (b. 1795), general of the Jesuits, born at Sichem, in Belgium, was admitted into the Society of Jesus in 1819, and soon became conspicuous for diplomacy and tact. For several years he was confessor to Duke Ferdinand of Anhalt-Köthen, and after his death to his widow. In 1847 he was appointed Procurator of Austria, but when, in the following year, the Jesuits were expelled, he returned to Belgium as rector of the college at Louvain. When the Austrian Government recalled the Jesuits he encouraged it in this ecclesiastical reaction, giving special support to the Hungarian Primate, Cardinal Szeitowsky. In 1853 he was chosen General of the Order at Rome, as successor to Father Roothan, and the success of the Jesuits since then, especially in Protestant countries, has been largely due to his skilful policy. On the suppression of the Jesuit convents in Rome he retired to Florence, but continued to direct the journal *Civiltà Cattolica*. In 1843 he published a *Month of Mary*, which has a wide circulation throughout Europe.

Becquerel, ANTOINE CÉSAR (b. 1788, d. 1878), French electrician, began life as an officer of Engineers, and served in the Peninsular War. After the peace he quitted the army, and having turned his attention to science, was appointed professor of physics in the Museum of Natural History. He occupied himself almost entirely with experiments and observations in heat, magnetism and electricity, though in conjunction with his son, Alex-

andre Edmond (b. 1820) he wrote a work on *Elementary Physics and Meteorology*. His principal works are *Recherches sur la Chaleur Animale*, and *Traité de l'Électricité et du Magnétisme* (1834 and 1856).

***Beddoe**, JOHN, M.D., F.R.S. (b. 1826), physician and anthropologist, served on the civil medical staff during the Crimean War, was president of the Anthropological Society in 1869-70, and has written several works and papers on medical and anthropological subjects, such as *Stature and Bulk of Man in the British Isles*, *Relations of Temperament and Complexion to Disease*, and *Comparison of Mortality in England and Australia*.

Beddoes, THOMAS LOVELL (b. 1803, d. 1849), poet and dramatist, was born at Clifton; his father was the well-known physician, Dr. Thomas Beddoes, and his mother a younger sister of Maria Edgeworth. He was educated at the Charterhouse and at Oxford, and subsequently studied medicine in Germany and Switzerland, being banished several times by these respective governments for his democratic principles. He published, while yet at college, *The Improvisatore* (1821), and *The Bride's Tragedy* (1822); but his greatest work, *Death's Jest-Book*, did not appear until after his death. It is a tragedy in the style of the sixteenth century, full of grim and ghostly fancies; the blank verse is sonorous and musical, and some of the lyrics bear often the stamp of true genius. He speaks of his own poetry as "entertaining, very unamiable, and utterly unpopular." Beddoes died somewhat mysteriously in the hospital at Basle. A volume of his *Poems* was published shortly after his death by his friend Mr. Kelsall, with some of his letters and a memoir.

***Bede**, CUTHBERT (pseudonym of the Rev. Edward Bradley) (b. 1827), author of *Verdant Green*, born at Kidderminster, and educated at Durham University, was for many years rector of Denton, in Huntingdonshire, and in 1871 was appointed rector of Stretton, near Oakham. His first and most celebrated work was *The Adventures of Verdant Green at Oxford*, which appeared in three parts between 1853 and 1857. It is a laughable account of a certain phase of Oxford life, and though the characters represented are not of a high type, and its common use as a handbook to Oxford has been misleading, it has nevertheless acquired permanent popularity amongst those who appreciate rollicking spirits as highly as delicacy of humour. Of the author's subsequent numerous works, the following may be mentioned:—*The Shilling Book of Beauty* (1856), *Fairy Fables* (1858), *Tales of College Life* (1862), *Little Mr. Bouncer and his Friend Verdant Green* (1873); besides a few novels, such as *Glencraggan*, a description of Cantire (1861). He has also given public lectures on English humourists.

Bedford, THE BISHOP OF. [How.]

***Beecher**, HENRY WARD (b. 1813), American preacher and moralist, is the fourth son of Dr. Lyman Beecher, under whom he studied theology at the Lane Seminary, near Cincinnati, after graduating at Amherst College, Massachusetts, in 1834. After acting as Presbyterian minister in Laurenceburg and Indianapolis, he was appointed to the Plymouth Church of orthodox Congregationalists at Brooklyn in 1847, and having freed himself from the narrow bonds of Calvinism, he succeeded in gathering round him the largest congregation in the States. He at once took a prominent part in all political questions, especially in the cause of the Abolitionists, for which he delivered a course of lectures in England in 1863, and has acquired a high reputation as orator and lecturer through his vigorous humour and acute delineation of characteristics. In politics he is a strong Republican, but gave his support to President Cleveland during the campaign of 1894. He was a constant contributor to the *Independent* for many years, and chief editor from 1861 to 1863, and for about ten years after 1870 he edited the *Christian Union*. His moral and theological works are extremely numerous; his weekly sermons have been printed since 1859; his *Lectures to Young Men*, and *Life Thoughts*, have gone through several editions. The only volume of his *Life of Christ* yet published (1871), was received with great enthusiasm. In 1868 he wrote a novel called *Norwood*. His work, as a whole, is marked by freshness and originality of form, a good mastery of simple English, and vivid representations of the concrete world and typical saints and sinners, but too often it falls into self consciousness, and it sometimes smells of the lamp. In 1874, when a serious charge was brought against him, the jury separated without being able to agree. In 1882 he withdrew from the Association of Congregational Churches owing to divergence of doctrine, especially on the question of future punishment. He visited England in 1886.

***Beecher-Stowe**, HARRIET ELIZABETH (b. 1812), the American novelist, is sister of the above, and wife of the Rev. Calvin Stowe, D.D., sometime professor of natural and revealed religion in Bowdoin College, Brunswick, Maine. She is a native of Connecticut. She lost her mother early in her youth, and not the least touching of her many pathetic writings is that in which she recounts the incidents of the daily life of her motherless brothers and sisters. Her literary career began after her marriage, in 1836, and was for many years confined to the production of short tales and sketches. These fugitive works were afterwards collected, under the title of *The May Flower*. It was not until about 1850 that Mrs. Beecher made her first material success. The agitation for negro

emancipation was then at its height, and in that year she contributed to an anti-slavery paper, *The National Era*, the celebrated story, *Uncle Tom's Cabin*. Not, however, at first, was any special attention given to this remarkable production. After it had run its course in the newspaper, the author sought for a publisher long, and in vain. At length a Boston publisher, of no particular pretensions, accepted the novel in 1852. Its success was then swift, and almost beyond precedent in the history of fiction. Nearly half a million of copies were soon sold in the United States alone, and in England the sale was no less extraordinary. Translations in German, French, Russian, Armenian, and even Japanese, Chinese, Arabic, and Welsh, were quickly produced. The remarkable popularity of the book was no doubt due in large measure to the circumstances which made the agitation the question of the hour. *Uncle Tom's Cabin* was just the book needed to heighten the imagination and elevate the sentiment of the hundreds of thousands to whom the slave-trade of a great and Christian country was just then peculiarly odious. The book was a voice from within the ranks of the enslaved, and it gave truthful, not erroneous or dubious, views of a condition of life which called aloud for remedy. But as a piece of fiction it had claims no less high than as the literature of a social movement. It had force and pathos, character and incident, and, above all, it had a great hold of reality. Its popularity was no marvel, but it is also a matter for no surprise that the hand that wrote it has written no companion to it. *Uncle Tom* has never had a brother. After sundry explanatory, defensive, and other supplementary publications, such as *A Peep into Uncle Tom's Cabin for Children* (1853), *A Key to Uncle Tom's Cabin* (1853), *The Christian Slave, a Drama founded on Uncle Tom's Cabin* (1855), Mrs. Beecher-Stowe produced in 1856 a second anti-slavery novel, entitled, *Dred: a Tale of the Dismal Swamp*. Her subsequent works have been numerous, the best known being, perhaps, *The Chimney Corner* (1868) and *My Wife and I* (1872). In 1870 Mrs. Beecher-Stowe published a small volume entitled *Lady Byron Vindicated*. The substance of this work had previously appeared in *Macmillan's Magazine* and the *Atlantic Monthly*, and was in its essence a reply to the *Recollections of Lord Byron*, by the Countess Guiccioli. The substance of Mrs. Beecher-Stowe's volume was a charge of incest against the poet. This excited a storm of indignation, and it is not certain that the reputation of Mrs. Beecher-Stowe has even yet survived the odium aroused by the imputation. The grounds for the serious charge were not sufficient to afford it even a show of public sympathy. Mrs. Beecher-Stowe had visited Europe in 1853, and there formed the friendship of Lady Byron, on whose authority the

allegations were understood to be made. She was for some years the editor of *Heart and Home*. Mrs. Stowe has written very little since *Women in Sacred History* (1874), and *Paganus People* (1879).

Beechey, FREDERICK WILLIAM (b. 1796, d. 1856), traveller and naturalist, was the son of Sir William Beechey, who, in his day, had a great reputation as a portrait painter. He entered the navy, and in 1818 accompanied Franklin on his first Arctic voyage, and in the following year was a member of the expedition commanded by Sir Edward Parry. In 1821, in conjunction with his brother, H. W. Beechey, he was commissioned to survey the coast of North Africa from Tripoli eastward, of which he published an account in 1828. In 1825 he was placed in command of the *Blossom*, and sent to the Arctic seas. He returned in 1828, having reached lat. 71° 23' N., discovered two new harbours south-east of Cape Prince of Wales, and collected valuable notes on the botany and zoology of the Arctic regions. His narrative of the voyage appeared in 1831, followed by volumes on his observations in natural history. He became Rear-admiral of the Blue in 1854.

* **Beesly, EDWARD SPENCER** (b. 1831), was educated at Wadham College, Oxford, like most of the other prominent English Positivists of that date. He became assistant-master of Marlborough College in 1854, and professor of history in University College, London, in 1860. He is also professor of Latin at Bedford College for Ladies. Besides several review articles and pamphlets on a Positivist basis, he has long taken part in a translation of Comte's works; but his reputation rests on his published lectures on Catiline, Clodius, and Tiberius. In politics he is accounted an advanced Radical and Republican, and was an original member of the Democratic Federation, but withdrew from the society early in its existence. At the general elections of 1885 and 1886 he came forward as a Radical candidate, but without success.

Beethoven, LUDWIG VAN (b. 1770, d. 1827), was of Belgian extraction, and his father and grandfather were both of them musicians in the Court band of the Elector of Cologne, at Bonn. His father was his first instructor in music, and appears to have been a stern, and even cruel, teacher—for assuredly the boy's strong musical taste did not require the severe treatment he received. His next master was Pfeiffer, a tenor singer in Bonn, and he also received organ lessons, first from Van den Eeden, and then from Neefe. In 1784 Beethoven was appointed second organist in the establishment of the Elector Max Franz, still under Neefe, on a small salary of £15 a year. The first real incident of importance in the early life of the

master was his journey to Vienna in 1787, from whence he was summoned, after a few months, by the illness and death of his mother. It was about this time that he became intimate with the family of the Von Breunings, and also with Count Waldstein, and these friends were of great value to him in his subsequent career. In 1792 the Elector sent the youthful composer to Vienna at his own expense, that he might study his art under the valuable guidance of Haydn, whose pupil he became. Although the old master had not leisure to do full justice to young Beethoven, yet it was not till Haydn's departure for England, in 1794, that their connection came to an end. Beethoven then became a pupil of Albrechtsberger for counterpoint, also of Salieri for vocal composition, and of Aloys Förster for chamber-music and quartet-writing. It was in 1792 that Beethoven's father died at Bonn. It appears that his son was now permanently settled at Vienna, which was to be his home for the rest of his life. Patronised by Prince Lichnowsky, Beethoven soon became known as a pianist, and especially as an extemporiser. In spite of his rough manners and ungovernable temper, he attracted many, mostly of the upper classes, to himself by his characteristic simplicity and goodness of heart, as well as by his wonderful genius. With his brother musicians he did not get on so well. Some musical encounters which he had with rival extemporisers have furnished most amusing anecdotes, especially the story of his crushing victory over the famous pianist and composer Steibelt. Although Beethoven was in comparatively comfortable circumstances at Vienna, and was already looked up to as the greatest genius of the period, troubles of various kinds were beginning to attack him, of sufficient bitterness to lay the foundation of that habitual gloom which clouded the remainder of his life. It was in 1798 that he first suffered from that terrible affliction of deafness which pursued him with ever-increasing intensity till it ultimately became total. No greater misfortune than this can be imagined for a musical genius like Beethoven; and, in addition to this, the death of the Elector of Cologne in 1801, and the troubled state of the country, deprived Beethoven of the pension he had hitherto enjoyed. It does not appear, however, that these afflictions and discouragements in any degree interfered with his marvellous powers of composition. New works were produced in rapid succession, and with ever-increasing success, which soon established his fame as a composer of the highest order, despite the efforts of rivals and enemies. Perhaps the most brilliantly productive period of his life was between the years 1803 and 1808. It was during these years that he produced his opera of *Fidelio*, his oratorio of the *Mount of Olives*, his grand

symphonies, Nos. 3 (*Eroica*), 4 (*B flat*), 5 (*C minor*), and 6 (*Pastorale*); his concertos for the pianoforte in *G*, *E flat*, and *C minor*, and probably his *Mass in C*, besides many of his finest sonatas. In 1810, also, Beethoven published an astonishing number of new works, and continued to compose in spite of the siege and occupation of Vienna by the French. His brothers were a continual source of annoyance to the composer, and not only took unfair advantage of his unbusiness-like habits, but fomented quarrels between him and some of his best friends. But it was on the death of his brother, Caspar Carl, that a worse family trouble came on him, for he felt called upon to undertake the guardianship of his orphan nephew, who only repaid his care by the grossest ingratitude and misconduct. But although all these trials naturally increased Beethoven's gloomy moroseness and obstinate melancholy, they did not obstruct the march of his prolific intellect nor impede the continued production of new and wonderful works of genius. In 1814, after the publication of some of his grandest works, he was called upon to write some special music for the Congress of Vienna. For this he set a poem by Weissenbach, entitled *Die glorreiche Augenblick*, and had it performed in Vienna in grand style. But hardly had the work been published when the Congress was broken up by the news of Bonaparte's escape from Elba. Beethoven had also some family troubles to plague him at this time, and, consequently, neither composed nor published much in the year 1815. He was much gratified by the presentation to him of a fine "grand" pianoforte by Messrs. J. Broadwood and Co., in 1817, and about that time he sold some of his copyrights and scores to the London Philharmonic Society, and also contemplated a visit to England, which was never accomplished. Soon after this he began the composition of his gigantic *Mass in D*, a work which was intended for the installation of the Archbishop of Olmütz, in 1820, but which was not completed till two years later. Beethoven's last great work was his colossal *Ninth Symphony*, which winds up with a choral setting of Schiller's *Ode to Joy*—a work so original in style and form, and of such enormous dimensions, as to form a fitting climax to the musical career of an immortal genius. Beethoven's death took place on March 26th, 1827, after quite half a life's suffering, and his end was hastened on, no doubt, by the conduct of his nephew. It was then that the universal appreciation of his merits and genius was seen fully revealed. His funeral was attended by a vast concourse of people, including all the musicians of Vienna. The procession to the Minorite Church consisted of representative men of every rank, and a choir of sixteen men with trombones performed compositions of Beethoven's, adapted to sacred words by

Seyfried. The requiems by Mozart and Cherubini were sung for him in the principal churches on subsequent days, and, in short, no pains were spared to do him honour. Beethoven's music has been divided by Von Lenz and others into three distinct styles. It is not a very accurate division, but it is convenient for purposes of classification. The first style is strongly impregnated with that of Mozart, of whom Beethoven was an enthusiastic admirer. Yet, even in these early works the composer's originality shines forth unmistakably. The second style may be said to begin with the *Third Symphony (Eroica)*, and shows the master-mind in its greatest vigour. No reminiscences can be found now of the styles of earlier composers. It is Beethoven, and Beethoven only, in every instance, down to the smallest details. The depth of thought which characterised even his earliest published works now develops into true sublimity. The more this music is studied the more jewels do its unfathomable mines disclose; and often that which to a superficial listener may seem incomprehensible is found, on further acquaintance, to be irresistibly beautiful and grand. This is particularly the case with the pianoforte sonatas and orchestral works. His latest works, which belong to his third and last style, possess this same depth and sublimity to a much greater degree, but they differ from his earlier compositions in that they are the offsprings of melancholy, akin sometimes to despair; they are also the product of total deafness; the composer could only realise them in his mind's ear. Hence they are much less popular, less easy to understand, often less genial also. Moreover, the greater part of these last works are of great length, and, consequently, wearisome to all but those who have been educated to comprehend them. Grand, noble, magnificent as they undoubtedly are, it is probable that they would have been finer and grander still had the composer been able to hear them rehearsed. On the whole, we may sum up our observations by asserting our conviction that Beethoven was, in most respects, by far the greatest musical genius the world has yet seen.

Behnes, WILLIAM (b. 1794, d. 1864), English sculptor, was the son of a Hanoverian pianoforte maker, who had settled in London. He was taken to Dublin by his family in 1795, and entering the schools of the Dublin Academy, he soon showed strong art instincts. He returned with his father to London, and while working with him began to draw portraits on vellum, and by-and-by made a profession of portraiture. He first exhibited at the Royal Academy, in 1815. Sculpture, however, was his final choice, and he very

soon found himself in large and remunerative practice, but he dissipated his income, and died in want. He was happy in the treatment of children, and one of his statues at least, viz. that of *Dr. Babington* in St. Paul's, is of the highest order of merit; but his *General Havelock*, in Trafalgar Square, was executed when his creative vigour had ceased. It is altogether unworthy of his reputation. *Sir William Follett* and *Dr. Bell*, in Westminster Abbey, are good examples of his art.

Beke, CHARLES TILSTONE (b. 1800, d. 1874), an English traveller and scholar, born in London, where he was educated for commercial pursuits, but finally studying law, was called to the bar of Lincoln's Inn. His time, however, was mainly devoted to philological, historical, and ethnological researches, the results of which appeared in 1834, under the name of *Origines Biblicæ, and Researches in Primeval History*. Fifty years ago the world was not quite ripe for an attempt to reconstruct the early chronicles of the human race from the discoveries of geology, and consequently Mr. Beke had for a time to endure a perfect storm of ridicule and animadversion from the orthodox school, which he had endeavoured to overthrow. The learning displayed, however, recommended him not only for a Doctor's degree from Tübingen, but for the post of British Consul in Saxony, which he held from 1836-8. But the desire to confirm, by actual research, the theories which he had formed, induced him, in 1838, to set off on a journey to Abyssinia, in company with Major Harris. Supported solely by private individuals, Beke managed, between 1840 and 1843, to explore Godshem and other countries to the south, hitherto almost unknown to Europeans, and on his return he published the results in *Abyssinia: a Statement of Facts* (1845). These labours procured for him the founder's medal of the Royal Geographical Society (1845), and a similar distinction from the French Geographical Society. An essay on *The Nile and its Tributaries* followed in 1847; *The Sources of the Nile*, the narrative of an unsuccessful journey the previous year, in 1849; and about the same period his *Mémoire Justificatif en Réhabilitation des Pères Puez et Lobo*. In 1866 he was despatched to Abyssinia, to obtain the release of the captives held by Theodore. But though he succeeded in extracting a promise from the Emperor, his efforts proved futile, owing to the crazy tyrant suddenly changing his mind. Four years before, Beke, accompanied by his wife, had made a journey to Harran, and in 1874, conceiving that Mount Sinai was on the eastern side of the Gulf of Akabah, he made another journey in this direction, though the "confirmation" of his views was almost entirely limited to himself. On July 31st, 1874, he died at Bromley, in Kent, while engaged in an account of his Sinaitic researches. Beke

was a man of great industry, much learning, and no small acuteness. But he laboured under the defect of first forming a theory, and then seeking for facts in support of it, with the usual results. Yet those who knew him best cannot but respect the perseverance of the scholar, who, with the smallest means, and often under the chill of undeserved neglect, continued to the last, labours which, even under the most favourable circumstances, could result in little material profit to himself. The Consulate in 1836, and a pension on the Civil List in 1870, were all the public recognition his many journeyings and much midnight oil received. [E. B.]

Bekker, EMANUEL (b. 1785, d. 1871), German philologist, studied at Halle under the celebrated Wolff. He was appointed, in 1807, professor of Greek literature in the University of Berlin, and subsequently undertook extensive travels in France, Italy, Holland, and England, in order to study the manuscripts in the various libraries of those countries. Professor Bekker has published excellent editions of various Greek authors, took part in the *Corpus Scriptorum Historiæ Byzantinæ*, and was a great authority upon the mediæval dialects of Provence and Venice.

Belcher, SIR EDWARD (b. 1800, d. 1877), was an English hydrographer and Arctic explorer. Entering the navy at an early age, he brought himself prominently into notice when he sailed with Beechey, as lieutenant and surveyor, in the *Blossom*, on her voyage to the Pacific and Behring Straits. During the four years of this cruise he fixed many of the then unknown geographical positions in the Pacific, from the Gambier Isles to Kotzebue Sound, and from California to the Loo Choo Islands. In 1829, on the return of the *Blossom* to England, Belcher was promoted to the rank of commander, and in 1830 was engaged in surveying the west coast of Africa and the Mediterranean. In 1833, after some active service off the Douro river, he was employed on the survey of the coasts of the United Kingdom, principally in the Irish Channel. Again, in 1836-42, he was employed in the command of a surveying expedition, composed of the *Sulphur* and *Starling*, in charting portions of the coast and ocean from the southern to the northern points of America, the Sandwich Isles, the Society Islands, the Friendly group, the Fijis, the New Hebrides, New Ireland, and the Straits of Macassar. For these services Commander Belcher obtained his post rank, was nominated C.B., and shortly afterwards received the honour of knighthood. In 1842 he was engaged in the *Samarang* in surveying the coasts of China and Borneo, with the groups in the vicinity, and some portion of Japan and Corea. In 1852 he sailed in

command of a squadron sent in search of Sir John Franklin's vessels. One division proceeded westward to Melville Island, while Sir Edward, with two out of the five ships, ascended Wellington Channel, and wintered at its head in Northumberland Sound. In the spring of 1853 he personally explored by sledges to the north, discovering North Cornwall and the strait which bears his name, leading eastward into Jones' Sound. Other parties from his ships discovered the north shores of Bathurst Island and Melville Island, and crossed the latter. A second winter was passed in Wellington Channel, and in the autumn of 1854, believing that the vessels could never be extricated, four of them were abandoned, the crew returning over the ice to Beechey Island, whence they were forwarded to England. Sir Edward, soon after this, received admiral's rank, but obtained no further employment. He, however, still continued his literary activity. Belcher was not only a surveyor, but an accomplished observer, his collections of natural history objects adding materially to our knowledge of the zoology, botany, and geology of the regions visited by him; and had he been less of a martinet, and therefore more popular with his subordinates, he might have succeeded in making himself even more useful than he did. His chief works are:—*Treatise on Nautical Surveying* (1835), *Direction of the River Douro* (1847), *Direction of the River Gambia* (1848), *Narrative of a Voyage round the World performed in H.M.S. Sulphur* (2 vols., 1843), *Narrative of the Voyage of H.M.S. Samarang* (2 vols., 1848), *The Last of the Arctic Voyages* (2 vols., 1855), and, in conjunction with Captain Bate, *The China Pilot* (1859).

Journal of the Royal Geographical Society, 1877.

Belgians, THE KINGS OF THE, date from the year 1831 only. By the arrangements following upon Waterloo, the country formed, with Holland, part of the kingdom of the Netherlands under the House of Orange, and it was not until the influence of the July revolution of 1830 had spread through Europe that a revolution against that unpopular yoke began at Antwerp. A conference of the Allied Powers was thereupon held at London, and the separation of Belgium from the Netherlands was recognised. After the crown had been offered to the Duc de Nemours, and declined for him by Louis Philippe, Leopold, the Duke of Saxe-Coburg (b. 1790, d. 1865), was elected by the National Congress, and took the title of LEOPOLD I. (1831). The facts of his previous career are that he had seen military service with the Russians, that in 1816 he had married the Princess Charlotte of England, who had died in the following year, and that in 1830 he declined the crown of Greece. Saved only by French intervention from being promptly driven out of Belgium by the Dutch, Leopold was forced

to consent to the loss of some of the territory that had previously been guaranteed to him. Nevertheless, it was declared by the final treaty—the Twenty-four Articles (1832)—that what remained of Belgium should form a “free and neutral state.” Even so, Holland refused to surrender Antwerp, and the place was besieged and taken by the French and English. After protracted negotiations, a convention was signed in 1833. Leopold now applied himself to the development of the resources of his country; in 1834 he sanctioned the first Continental railway, and this was followed by a Municipal Reform Act. A prosperous state of affairs was interrupted by the sudden declaration of Holland that she would accept the Treaty of 1832, by which she would be entitled to Luxembourg and Limburg, and, in spite of much national indignation, Leopold was forced to yield to the representations of the Powers. Party conflicts were numerous and animated in the years before 1848, but in that year a firm Liberal majority was in power, and thus the country passed unharmed through the crisis, Leopold’s offer of resignation being made only to be refused, and the bogus invasion from France coming to nothing. The remainder of his reign was marked by much development of commerce by means of treaties—for instance, that with England of 1851, and that with France of 1861—and by squabbles between the Liberals and Roman Catholics. Abroad, Leopold was highly regarded, and was frequently chosen as arbitrator in international disputes.

Théodore Juste, *Mémoires de Leopold I., Histoire de la Belgique, and La Revolution Belge*, by the same author; Sir Theodores Martin, *Life of the Prince Consort*.

* **LEOPOLD II.** (b. 1835), the son of Leopold I., married the Archduchess Maria of Austria in 1853, and succeeded his father in 1865. The first part of his reign was uneventful, but in 1870, on the outbreak of the Franco-German War, the position of Belgium was naturally one of great anxiety. The English Government, however, declared its intention of maintaining the integrity of Belgium, and induced both Germany and France to sign treaties to that effect. Since that time the animosity between Liberal and Catholic has shown no signs of abating, and has been the cause of more than one serious riot. In 1874 a conference of representatives of the Powers was held at Brussels, with the object of introducing certain changes in the usages of war, but it separated without any positive result. Among King Leopold’s many philanthropic efforts is the International African Association for opening up the Congo to trade, of which he is the leading spirit, and Mr. H. M. Stanley (q.v.) the executive.

[L. C. S.]

Belgiojoso, CHRISTINA TRIVULZIO, PRINCESS OF (b. 1808, d. 1871), born in Milan, the

daughter of the Marquis of Trivulzio, married, in 1824, to the Prince of Belgiojoso. The Princess was a passionate lover of Italy and liberty, and would not live in Milan under the yoke of Austria. She took up her residence in Paris, where her *salon* became the resort of politicians, artists, and men of learning and culture. In 1847, when Italy made an attempt to free herself from her foreign oppressors, the Princess raised and equipped a force of 200 men, at her own expense, to aid her country. For this she was banished, and her property was confiscated. She then withdrew to a farm in Asia Minor, bestowed upon her by the Sultan, and resided there until the revocation of the decree of banishment. She contributed to various French and American journals, and has left interesting accounts of her life in Asia and Syria.

Bell, ANDREW (b. 1752, d. 1832), educationist, born at St. Andrews, was appointed chaplain of Fort St. George, Madras, in 1789, and in that capacity originated his monitorial system, also known as the “Madras system.” Soon after his return to England, John Lancaster established a school on the same method, and the success of the experiment caused the system soon to be universally adopted. Dr. Bell bequeathed large endowments for the furtherance of his scheme.

R. and C. C. Southey, *Life of Andrew Bell*.

* **Bell, ISAAC LOWTHIAN, F.R.S., D.C.L.** (b. 1816), the founder of the Clarence Iron Works on the river Tees, has been elected a member of the American Philosophical Institution in recognition of his services as juror at the Philadelphia and Paris Exhibitions of 1876 and 1878. He has contributed to various scientific journals upon the subject of the metallurgy of iron, and has lately completed a research on the chemical phenomena of the blast furnace. He represented the borough of Hartlepool from 1875 to 1880.

* **Bell, JOHN** (b. 1811), sculptor, exhibited in the Academy in 1832, and in 1841 became well known for his figure of *Dorothea*. This was succeeded by a large number of poetic works, such as *The Babes in the Wood*, now in South Kensington Museum; *Andromeda*, a bronze exhibited at the first exhibition, and bought by the Queen; *The Cross of Prayer*, *Una and the Lion*, *Cromwell*, etc. He also executed the *Wellington* monument in the Guildhall, the marble statue of *Armed Science* at Woolwich, the *Guards’ Memorial* in Waterloo Place, and the *Crimean Memorial* on the Parade at Woolwich. He was also engaged on the colossal group of the *United States* on the Albert Memorial. He has executed several portrait statues of political, local, and historic celebrities, such as *Lord Falkland* in the Houses of Parliament, and the *Earl of Clarendon* in Downing Street. The fashion of wooden

trenchers and bread-knives, which has given employment to thousands of artisans, was also due to him; and in 1859 he received a prize from the Society of Arts for a treatise on the *Proportions of the Obelisk*.

Bell, Sir Charles (b. 1774, d. 1842), surgeon and anatomist, was a native of Edinburgh. He began his education in the high-school and university of his native city, and pursued his professional studies under his elder brother John. He was admitted in 1799 to the College of Surgeons, becoming at the same time one of the surgeons to the Royal Infirmary, and while still a youth delivered lectures on anatomy before 100 pupils. He removed, in 1806, to London, and soon after published his celebrated works on *The Anatomy of Expression*, and a *System of Operative Surgery*. In 1814 he was appointed surgeon to the Middlesex Hospital, an institution with which he remained connected for twenty-two years, and where his admirable manner of lecturing, and his dexterity as an operator, brought him great reputation. In 1821 he astonished the scientific world with the results of his investigations on the nerves. One leading point of his discoveries is that there are distinct nerves of sensation and of motion, or volition, one set bearing messages from the body to the brain, and the other from the brain to the body. Bell received a gold medal from the Royal Society in 1829 for these researches, and was knighted (K.T.) on the accession of William IV. He was also made professor of anatomy, physiology, and surgery to the College of Surgeons, where his discourses attracted crowds. Among his works not previously mentioned are essays on *The Nervous Circle* and *The Eye*, a treatise on *Animal Mechanics*, and the Bridgewater treatise on *The Hand*. It is said—so jealous is the public of any professional man wandering outside of his own groove, and so sceptical are the “Philistines” of omniscience—that after the publication of the latter volume, his practice for a time fell off. In 1836 he accepted the Chair of Surgery in the University of Edinburgh, where, however, he did not earn great reputation. Sir Charles died at Hallow Park, near Worcester.

A. Shaw, *Narrative of the Discoveries of Sir C. Bell*; *Quarterly Review*, May, 1843; Bell, *Familiar Letters* (1882).

Bell, Thomas, a distinguished zoologist (b. 1792, d. 1880), was a native of Poole, Dorsetshire. He was educated as a surgeon-dentist, and on his establishment in London soon gained a high professional standing. From an early period of life he devoted his leisure hours to zoological studies, and the fruits of his careful and conscientious labours are preserved in his numerous contributions to the *Transactions and Proceedings* of the Linnean, Geological, and Zoological Societies,

and in his well-known manuals on *British Quadrupeds*, *Reptiles*, and *Stalk-eyed Crustacea*. A more ambitious undertaking, a folio *Monograph of the Testudinata*, was never completed. Professor Bell rendered other services to science as one of the secretaries of the Royal Society from 1848 to 1853, and as president of the Linnean Society, of which he has been called “the second founder,” as he was able, very much by his own unaided efforts, to rescue that distinguished society from a condition of listlessness and straitened circumstances into which it had fallen, and to place it in the front rank of the great scientific bodies. In 1866 Mr. Bell purchased the residence at Selborne so long associated with the name of Gilbert White, and retiring from professional life, gave himself up to peaceful studies in the woods and fields. In his eighty-fifth year he published a new annotated edition of the *Natural History of Selborne*, and, with the aid of some of his younger colleagues, a revised edition of *British Quadrupeds*.

Bellini, Vincenzo (b. 1802, d. 1835), was, like Donizetti, one of the immediate followers of Rossini. He was the son of a Sicilian organist, and received from his father his first lessons in music. But a Sicilian nobleman offered to pay his expenses at the Royal Music School of Naples, directed at the time by Zingarelli. Here one of Bellini's fellow pupils was Mercadante. Bellini's first work for the stage was produced while he was still a student. *Barbaja*, the celebrated manager, heard it, and at once commissioned the young composer to write a work for the San Carlo. It was not, however, until Bellini produced *Il Pirata* at Milan, under Barbaja's management, that he made a striking success. *Il Pirata*, in which the principal part had been composed specially for Rubini, made its way from Milan to Paris and London, and it was in due time heard in all the capitals of Europe. In 1828 *La Straniera* was brought out at Milan; and it was not until 1831 that the work by which Bellini has become most widely known, *La Sonnambula*, was produced. Originally represented at the Scala of Milan, *La Sonnambula* made without delay the tour of Europe; and, received with enthusiasm wherever it was played, it met nowhere with greater success than in London. This success may be explained partly by the simple, intelligible, and, in its way, highly dramatic story, but principally by the beauty of the melodies in which the work is so rich. The parts, too, of Amina, the heroine, and of Elvino, the hero, have had the advantage of being sung by artists of the first order. From Malibran and Grisi to Patti and Albani, almost every prima donna who has attained great popularity in England has appeared as Amina; and no character has served so often to introduce to the public an operatic *débutante*. The

genius of Bellini was above all things lyrical; and he has been reproached by severe critics with neglecting harmony and dramatic effect for the sake of mere tune. The learned Cherubini, however, went to the heart of the matter when, some one having observed in his presence that Bellini's harmonies were slight and familiar, he replied, "What accompaniments could enhance the beauty of such melodies?" About a year after the production of the idyllic *Sonnambula*, Bellini brought out the tragic opera of *Norma*, which, differing much in character from its immediate predecessor, resembles it in being a work of genius. Bellini possessed pre-eminently the gift of melody, which no composer by means of application and study can acquire. In *I Puritani*, his latest work (produced at Paris, 1835), Bellini, by the advice, it is said, of Rossini, paid more attention than in his previous works to orchestration, while, without having a very dramatic subject to deal with, he at the same time aimed at dramatic effect. Bellini, however, has really written more elaborate concerted music in *I Puritani* than in any of his other works. Apart from this, *I Puritani*, full of graceful, flowing, sometimes very expressive melodies, presents the same general characteristics as *Norma* and *La Sonnambula*; and it is by these three works that Bellini is now generally known. He may be said to have become during the last few years of his life a *protégé* of Rossini's. It was at the Théâtre des Italiens that *I Puritani* was played for the first time, the four leading parts having the advantage on that occasion of being sung by Grisi, Rubini, Tamburini, and Lablache. This opera was played throughout one season. A few months afterwards (Sept. 23rd, 1835), the young composer died, and on the very day of his funeral the Théâtre des Italiens re-opened with *I Puritani*. The performance must have been a sad one; for not many hours after its conclusion the artists who had taken part in it were repeating the composer's last melodies, not to the words of the Italian libretto, but to those of the Catholic service for the dead.

Rossini and his School, in the *Great Musicians*, by H. Sutherland Edwards.

[H. S. E.]

* **Belmontet**, Louis (b. 1799), Democratic and Bonapartist poet, born at Montauban, was banished from Toulouse in 1817 for exciting the people by his verses against the reactionary government. Settling in Paris, he turned to journalism, and joined the "romantic school" with Victor Hugo and Sainte-Beuve. Inspired with enthusiasm at once for Napoleon's memory and for Democratic freedom, he took part in every revolutionary movement, whether against Bourbon or Orleanist. He became one of the editors of the *Tribune*, was on intimate terms with Hortense and Louis Napoleon, and was re-

warded with favour under the second Empire, though it would be interesting to know how he reconciled the government with his Democratic principles. His great mistake was his idealised and unhistorical view of the whole race of Napoleon. His numerous odes and poems are chiefly devoted to their praises or satires on their opponents, but he also wrote some dramas and a volume of philosophic poems (*Nombres d'Or*), highly praised by Béranger.

Belzoni, GIOVANNI BATTISTA (b. 1778, d. 1823), explorer in Egypt, was the son of a Roman barber, but born at Padua. He was educated for the monastery, but preferring a more adventurous career came to England in 1803 to seek his fortune. His appearance at this time has been recorded: a stature of six feet seven inches was relieved by a pleasant, well-cut face, and there is no doubt that Belzoni owed a good deal to his charm of manner—*inter alia*, a wife of corresponding proportions, but English born. The fortune which he had come to seek was somewhat coy, and Belzoni exhibited feats of strength in the streets and at fairs with his Amazonian wife, until he at last attracted the notice of the manager of Astley's Amphitheatre, who saw in him the fit representative of Hercules in the comic drama. He was also something of an engineer, especially in water-works, and made some money by exhibiting his hydraulic inventions about the country. In 1815, after visiting Spain, where he personated Samson with success, he went to Egypt, where either his address or his feats of strength attracted the notice of the Pasha Mohammed 'Ally, and he was requested to set up his hydraulic machines in the Shubra Gardens, where they did not effect any great results. Belzoni, however, had also won the ear of the British Consul, Mr. Salt, who employed him in excavations in the Nile Valley. He removed the granite bust of the "Young Memnon" (Rameses II.) from Thebes (1816), and sent it home to the British Museum, together with many other important monuments. Belzoni's physical superiority secured the admiration and submission of the peasants, and he was thus able to travel as far south as the Second Cataract, and open (1816) the great Temple of Ipsamboul, or Abû Simbel. In the same year he unearthed the famous tomb of Seti I. at Thebes, known to the present day as "Belzoni's Tomb," and discovered the beautiful alabaster sarcophagus now in the Soane Museum. Belzoni, like Mariette, had the instinct of the explorer, and this genius of discovery enabled him to light upon the entrance of the Second Pyramid at Ghizeh, which had always been supposed to have no entrance, and to consist of a solid block. Belzoni, however, discovered the chamber containing King Chephren's sarcophagus. He also explored the

desert to the Red Sea, and identified the Roman port of Berenice. He returned to Italy in 1819, and his native city struck a medal in his honour. In England and France he exhibited a model of Seti's tomb, and published his *Narrative of Discoveries within the Pyramids, Temples, Tombs, and Excavations in Egypt and Nubia* (1820), a work which ran to several editions. In 1823 he started on a voyage of exploration to the Niger, but died at Gato, in Benin, in December of that year. As a discoverer Belzoni holds a very high rank, and personally, in spite of his jealous and suspicious disposition, he was of a brave, enthusiastic, winning character. [S. L.-P.]

* **Bendemann**, EDWARD (b. 1811), German painter, studied at Düsseldorf under Schadow, and at one-and-twenty exhibited *The Grief of the Jews*, now in Cologne Museum. In 1837 he exhibited his picture of *Jeremiah among the Ruins of Jerusalem* in Paris, but afterwards turned to the representation of idyllic scenes. Appointed professor in the Academy of Arts in Dresden, he undertook the frescoes for the new decoration of the royal palace, but was interrupted by disease of the eyes. In 1860 he succeeded his father-in-law (Schadow) as director of the Academy of Arts in Düsseldorf.

Benedek, LUDWIG VON (b. 1804, d. 1881), Austrian general, was a native of Odenburg, in Hungary. He entered the Austrian army in 1822, and attained the rank of colonel in 1848. After gaining some easy laurels over the insurgent Galicians, he fought with some distinction in the Italian campaigns of 1848 and the following years, and from thence was sent against the Hungarian patriots. During the war of Italian independence, he was one of the few Austrian generals who displayed any capacity, and his division fought with stubborn resolution at Solferino. His reputation was therefore high when, in 1866, he was summoned to command the Austrian army against Prussia. It was soon, however, to be completely dissipated. He lay idly on the Moravian frontier, while Von Moltke, by a series of masterly movements, hurled his armies across the frontier, and effected their junction under the Austrian's nose. Benedek had barely time to telegraph to the Emperor, "Sire, you must make peace!" when he was fallen upon on July 3rd at Sadowa, and his troops, armed with muzzle-loading rifles against needle-guns, suffered an utter defeat. He was promptly superseded, but the battle decided the war.

A good account of Sadowa or Königgratz is given in the *Annual Register* for 1866.

* **Benedetti**, VINCENT (b. 1815), diplomatist, born in Corsica, was French consul at Palermo in 1848, and became director of political affairs to the Foreign Minister in 1859 or 1860. After being minister plenipotentiary of France at Turin in 1861, he was

appointed ambassador at Berlin in 1864. It was Benedetti whose abrupt demands as representative of France were answered with a curt negative by the King of Prussia in the gardens of Ems in July, 1870, thus destroying the last hope of peaceful settlement. But his reputation rests chiefly on a draft of a proposed secret treaty between France and Prussia published in the *Times* soon after the declaration of war in 1870. There was no doubt at the time that Bismarck had himself caused the publication of this draft—the MS. of which he got into his own hands by a clever bit of diplomacy—in order to obtain the active alliance of England, for the main stipulation of the treaty was that Prussia should assist France in the acquisition of Luxemburg, and, if necessary, in the conquest of Belgium. The document had certainly been drawn up by Benedetti, perhaps at the instigation of Napoleon III., but was rejected by the King of Prussia and disowned by Bismarck. The perfidy that lurked in this secret treaty was soon forgotten in the disasters that so quickly followed its publication, until the Count, in 1871, chose unwisely to revive recollection of it by a feeble attempt to fix the guilt on Prince Bismarck, when the German Chancellor utterly crushed his opponent by a sweeping reply.

Charles Lowe, Prince Bismarck.

Benedict, SIR JULIUS (b. 1804, d. 1885), musician and composer, was born of Jewish parentage at Stuttgart, and in 1819 was sent to study music under Hummel at Weimar, and in the following year was recommended to Weber, who received him into his own house at Dresden, where he became the favourite, indeed, almost the only pupil. In 1824–5 he conducted a series of operatic performances at Vienna by Weber's recommendation, and in 1825 undertook the direction of the San Carlo theatre in Naples, where he produced his first opera, *Ernesto e Giacinta*. Neither it nor *I Portoghesi a Goa*, produced in Stuttgart (1830), was very successful at the time, and in 1835 Benedict, being then in Paris, was advised by Malibran to settle in England. Soon after arriving in London he was appointed director of the Opera Buffa at the Lyceum theatre, brought out a little work called *Un Anno ed un Giorno*, and in 1838 his first English opera—*The Gypsy's Warning*. Afterwards, whilst orchestral conductor of Drury Lane at the time of Balfe's greatest success, he produced on the same stage his own greatest operas, *The Brides of Venice* and *The Crusaders*. In 1850 he accompanied Jenny Lind on her famous tour through the United States, and soon after his return was again conductor of Drury Lane under Mapleson, for whom he wrote the recitatives to the Italianised form of Weber's *Oberon*. His cantata of *Undine*, produced at the Norwich Festival in 1860, was rendered more memorable by the last appearance of Clara

Novello. In 1862 he produced the *Lily of Killarney*, the most celebrated of all his works, the libretto, written by Mr. Oxenford, being based on Dion Bouicault's *Colleen Bawn*. His remaining most important compositions, *Richard Cœur de Lion*, the *Bride of Song*, *St. Cecilia*, and *St. Peter*, were produced during the next few years up to 1870, either in London, Norwich, or Birmingham. He was knighted in 1871, and received similar honours from most Continental courts. For versatility and variety of effort he was almost unequalled amongst composers, his works including not only operas and cantatas, but symphonies, oratorios, and piano fantasias. Time can only show whether his work is marked by sufficient depth of thought and inimitable originality to secure a permanent place in music. As conductor and musical director he was justly celebrated, and conducted the Monday Popular Concerts for several years.

Benfey, THEODORE (b. 1809, d. 1881), Oriental scholar, was born at Göttingen, where he afterwards became professor of Sanscrit and comparative grammar. His most important works are a *Lexicon of Greek Roots* (1839-42), *Connection between the Egyptian Language and Semitic Roots* (1844), *The Cuneiform Inscriptions of Persia* (1847), *The Hymns of Sama-Veda, with Translations* (1848), *Handbook of the Sanscrit Tongue* (1852-4), and *The History of Oriental Philosophy in Germany since the Beginning of the Nineteenth Century* (1869).

Benjamin, JUDAH PHILIP (b. 1811, d. 1884), American politician and English barrister, born at St. Croix, West Indies, of Anglo-Jewish parentage, was admitted to the New Orleans bar in 1832, and obtained a law practice. In politics he was originally a Whig, but on the union of that party with the "Know Nothing" or Native American party, he joined the Democratic section, and sat in the Senate from 1852 to 1860, when, having announced his approval of the secession of Louisiana, he withdrew and returned to New Orleans. When Jefferson Davis was elected President of the Southern Confederacy, Benjamin acted as Attorney-General under him, and afterwards as Secretary of State, a position which he held till the overthrow of the Confederacy and the capture of Davis in 1865. As he had been one of the very foremost supporters of the rebellion, he escaped with some difficulty to England, and through the influence of Lord Cairns was called to the bar in the following year. He at once obtained a large practice, especially in Liverpool. In 1872 he became Q.C., and till 1883, when he retired, was engaged in almost every important case, though latterly refusing any briefs except in cases of appeal. His services were especially valuable from his knowledge of general jurisprudence and international

law. He published a *Treatise on the Law of Sale of Personal Property*.

Benjamin, PARK (b. 1809, d. 1864), American poet and journalist, born at Demerara, studied at Harvard, and having lost the greater part of his fortune, undertook the management of the *American Monthly Magazine* in 1837. Afterwards he was connected with several of the most important American magazines and journals, especially the *New Yorker*. His poems are very numerous, but for the most part short, carelessly composed, and commonplace in idea. His longest printed poem was *On the Contemplation of Nature*, but his real strength, such as it was, lay in gentle comedy and harmless satire. Some of his numerous sonnets, however, approach very near to excellence.

• **Bennet, JAMES HENRY** (b. 1816), an eminent physician, was educated in Paris, where he first began to practise as *interne des hôpitaux*, or house-surgeon. In 1843 he settled in London as consulting physician, choosing midwifery and gynecology as his speciality, and soon acquired an enormous practice in that branch of medicine. In 1869 ill-health brought on by over-work obliged him to give up practice. He retired to Italy, and after some years regained his strength, though he has never undertaken regular practice since. He is the author of several important works on female diseases, *Nutrition in Health and Disease*, *On the Treatment of Pulmonary Consumption by Hygiene, Climate, and Medicine*, and also of several books upon the winter resorts of the South.

Bennett, JAMES GORDON (b. 1800, d. 1872), American journalist, was born in Banffshire, Scotland, but in 1819 emigrated to the States, where he began life as a school-teacher. A few years afterwards he went to New York, and entered upon politics and journalism as a supporter of General Jackson. In 1835 he founded the celebrated *New York Herald*, the first number of which appeared on May 5th of that year. He conducted the journal with great ability and pecuniary success for nearly forty years, and was succeeded by his son, under whom the paper was conducted in the most enterprising fashion, and by whom some of the most important expeditions of Mr. H. M. Stanley (q.v.) have been subsidised.

Bennett, JOHN HUGHES (b. 1812, d. 1875), was a Scottish physician and physiologist. After the usual preliminary education at Exeter, where his father was manager of a theatre, he was articled to a surgeon in Maidstone. In 1833 he began his medical studies in the University of Edinburgh, and there, in 1837, he took the degree of M.D. with the highest distinction. The next four years of his life were, for the most part, passed in Paris and Germany, and on his return to Scotland he at

once attained distinction by the publication of his well-known treatise on cod-liver oil as a curative agent in consumption. After lecturing for some time as an extra-academical teacher, he obtained the Chair of the Institute of Medicine (physiology) in the University, as the successor of Adison. For the first time in the history of physiological teaching, in Scotland at least, he introduced the use of the microscope, and latterly established a laboratory, in which the students were taught the use of the many instruments of precision, which hitherto had been seen on the Continent alone. To opponents he displayed little mercy, and the anathemas he yearly poured on Virchow for a fancied plagiarism of his discovery of white cell blood, and of the opponents of his own theory of inflammation, became, in time, more amusing than instructive. In 1871 his health gave way, and in 1874, finding that he was never likely to recover, he resigned, but was sufficiently well to appear next year at the meeting of the British Medical Association in Edinburgh, where he received the degree of LL.D. from the University. The fatigue and excitement of the gathering brought on a relapse, and he sank rapidly and died soon after. Bennett's reputation is mainly that of a teacher through whose hands passed a long succession of physicians and physiologists. But his medical and scientific publications also are numerous, and of no small merit. The chief of these are the treatise on cod-liver oil already referred to, his *Clinical Lectures*, and *Text-book of Physiology*. His weakness as a theorist was the dogmatism with which he took up a position, and his unwillingness to desert it, no matter what forces were brought against him. Some of his medical views were thus tinged with a touch of charlatanism; though as a diagnostician, and a teacher of diagnosis, he had few superiors.

* **Bennett**, SIR JAMES RISDON, M.D., F.R.S. (b. 1809), ex-president of the Royal College of Physicians, was born at Romsey, and studied in Paris and Edinburgh. In 1843 he was appointed assistant-physician to St. Thomas's Hospital, and elected president of the Royal College of Physicians in 1876. He is a fellow of various scientific and medical societies, and received the honour of knighthood in 1881. Sir Risdon Bennett has translated Kramer's work on *The Diseases of the Ear*, and has also published *An Essay on Acute Hydrocephalus*, and the *Lumleian Lectures on Cancerous and other Intra-Thoracic Growths*. He has been a contributor to various medical journals.

Bennett, SIR WILLIAM STERNDAL, Mus. Doc. (b. 1816, d. 1875), composer, was born at Sheffield, where his father, Robert Bennett, an able musician and thorough student of Handel and Mozart, was organist to the principal church. Having lost both his parents, he became in 1824 a chorister in King's College,

Cambridge, under the care of his grandfather, one of the lay-clerks of the University. Two years later he was sent to the Royal Academy of Music in London, where he studied the piano under Holmes and Cypriani Potter, and composition under Dr. Crotch. The first of his public works was a symphony in E flat, produced at the Royal Academy, and this was soon followed by five piano concertos, four of which were performed by the Philharmonic Society. At the performance of the D minor in 1833 in the prize concert of the Academy, Mendelssohn was present, and heartily encouraged the young musician. He soon became well known both as pianist and composer, and after the production of the F minor concerto and the *Naiades* overture, the Broadwood firm sent him to Leipzig for a year, where he had again the opportunity of enjoying Mendelssohn's society and advice. By the grace and originality of his genius, he soon established a high reputation even among Germans, and won for himself the enthusiastic friendship of Robert Schumann. In Germany, indeed, he received more genuine admiration than in England, where the ignorant public, having heard of his friendship with Mendelssohn, long insisted on regarding him as a mere imitator. Several of his works were performed under Mendelssohn's direction at the Leipzig Gewandhaus, and in 1853 he was offered the conductorship of those celebrated concerts. For some years he alternated between London and Leipzig, till, in 1856, he was appointed professor of music at Cambridge, and permanent conductor of the Philharmonic Society. In the meantime he had produced several of his best-known works, the published *F Minor Concerto*, the *Caprice in E*, and the *Wood Nymphs' Overture*. In 1849 he had also founded the Bach Society, and in 1854 introduced the *St. Matthew Passion* music for the first time into England. In 1858 his well-known cantata of *The May Queen* was first performed at the Leeds Musical Festival. This was followed in 1862 by the overture of *Paradise and the Peri*, and in 1867 by *The Woman of Samaria*, first performed at the Birmingham Festival, these three being on the whole the most celebrated of his works. At the opening of the Exhibition in 1862, he was chosen to represent English music, as Meyerbeer, Auber, and Verdi represented the music of their several nations, and for the occasion he set Tennyson's ode *Uplift a thousand voices*. He was knighted in 1871, and next year a scholarship was founded in his honour at the Royal Academy of Music. He was the only English composer since Purcell who had won for himself a place among the great musicians of the world. His natural reserve, the continual claims on his attention, the ignorant abuse of certain critics, and the exhausting life of London celebrity, no doubt all contributed to diminish the quantity of excellent work

that might have been expected of such high promise. But, nevertheless, the delicate originality, calm conscientiousness, and faultless elaborations of all that he has left behind will always secure for him grateful recognition and remembrance from true musicians. In spite of temptations of every kind, he never stooped to write a note to charm the vulgar, and his high ideal of a musician's aim was never lost sight of nor reduced. His few published songs, hardly twenty in all, such as *May Dew*, *To Chloe in Sickness*, etc., number amongst them the most beautiful songs ever written by an English composer.

[H. W. N.]

***Bennigsen**, RUDOLPH VON (b. 1824), German politician, born at Luneberg, began life as a barrister, and rose to the position of judge in Göttingen, but having resigned his judgeship in order to enter upon political life, took his seat in the Hanoverian Parliament as leader of the Opposition in 1856. The main principle of his policy was the unity of Germany under the leadership of Prussia, and to attain this end he organised the "National Verein," of which he was chosen President (1859), the place of assembly being fixed at Coburg. The movement spread rapidly; and at the time of its dissolution in 1866, when its object had been practically assured by the formation of the North German Bund, the Verein included 30,000 members. After the annexation of Hanover by Prussia, Bennigsen became a member of the Prussian Lower Chamber and of the North German Reichstag. In 1870 and 1871 he undertook two important missions, one to South Germany and the other to Versailles, in order to conclude the negotiations for German unity. In 1873 he was elected President of the Prussian House of Deputies.

***Benson**, THE MOST REV. EDWARD WHITE, D.D. (b. 1829), Archbishop of Canterbury, born near Birmingham, and educated there and at Trinity College, Cambridge, of which he became scholar and fellow, was for some years an assistant-master at Rugby, and was appointed first head-master of Wellington College in 1858, continuing to hold the position till 1872, when he became Chancellor of Lincoln Cathedral. Towards the end of 1876, at the recommendation of Lord Beaconsfield, he was appointed to the newly created Bishopric of Truro, where he displayed great energy of organisation, and in collecting subscriptions for the proposed new cathedral. In Dec., 1882, at Mr. Gladstone's recommendation, he was appointed Archbishop of Canterbury after the death of Dr. Tait. He has published several volumes of sermons preached in Wellington College and elsewhere. His ecclesiastical policy has been marked rather by energy of social reform and general conciliation than by controversial theology, the Archbishop being himself attached to the Liberal High-Church party.

Bentham, GEORGE (b. 1779, d. 1884), a distinguished botanist, was born at Stoke, then a village near (and now absorbed into) Portsmouth. He was one of a precocious family, and is said to have studied Latin before he was five years old. His father, General Bentham, having been entrusted by the Admiralty, in 1805, with a mission to St. Petersburg, took his family with him, and there he learnt to converse in Russian, French, and German. After Waterloo, the family spent some years in France, where Humboldt took great notice of young Bentham. It was the perusal of De Candolle's works in particular that first led him to study scientific botany. On his return to England, in 1826, he, in addition to botanical studies, entered Lincoln's Inn for the purpose of studying law, and assisted his uncle Jeremy, the famous writer on jurisprudence, in the production of several works. He published, in 1827, *Outlines of a New System of Logic*, but from 1828 gave himself up to botany almost exclusively, and his labours in classifying and systematising that science are attested in a long series of publications. In 1854 he presented his collections and books, valued at £6,000, to the Royal Gardens at Kew, and was subsequently allotted a room there, where he classified the *flora* of Hong-Kong and Australia. He was almost daily at the Gardens for more than twenty years, earnestly engaged in his self-imposed tasks. From 1863 to 1874 he was president of the Linnean Society. In addition to his *Floras* of Hong-Kong, Australia, the British Isles, etc., his notes on various orders of plants, such as the Composite, would sometimes occupy whole parts of the Linnean Society's *Proceedings*, the amount of labour and knowledge comprised in these voluminous yet closely packed memoirs being appreciable only by the specialists to whom they appealed. But the work by which his reputation will be longest preserved is the *Genera Plantarum* (1862-76), which he wrote in collaboration with Sir Joseph Hooker. Though a man of high general culture, he laboured for science alone, the only public honour he ever received being a Companionship of St. Michael and St. George. Yet when the first systematic botanist of the age—De Candolle scarcely excepted—died, his death was scarcely noticed in the daily newspapers: the world, not having known of his existence, could not appreciate the loss it suffered. To those who had not penetrated the crust of his reserve he was regarded as cold, yet peppery, and prone to take offence at any criticism which ran counter to his autocratic temperament. This, indeed, led to his resignation of the presidency of the Linnean Society, and the comparative coldness which he maintained towards it until the close of his life.

[R. B.]

Bentham, JEREMY (b. 1748, d. 1832), writer on jurisprudence and ethics, was born in Red Lion Street, Houndsditch, London. His father was a prosperous solicitor; his mother the daughter of a shopkeeper at Andover. In 1755-60 he attended Westminster School. In 1760 he was admitted at Queen's College, Oxford, where he graduated B.A. in 1763, and M.A. in 1766. In the studies and ways of Oxford he took but little pleasure; and the signing of the Thirty-nine Articles, which he did most reluctantly, remained with him a keenly painful memory. In 1772 he was called to the bar at Lincoln's Inn, but promptly dashed the expectations of his father and his friends. Bentham's father believed that "pushing was the one thing needful," and Bentham deliberately refused to "push." Already his mind had long been actuated by the passion for improvement. In 1769, "Montesquieu, Barrington, Beccaria, and Helvetius, but most of all Helvetius, set me on the principle of utility;" and in the phrase, "the greatest happiness of the greatest number," used by Beccaria, "I saw delineated for the first time a plain as well as a true standard for whatever is right or wrong." Bentham at length, in 1776, gave shape to some of his ideas in *A Fragment on Government; or, a Comment on the Commentaries*. The object of the *Fragment* is to point out some of the capital blemishes of Blackstone's work, "particularly this grand and fundamental one, the antipathy to reformation." While bringing down upon the anonymous author much violent censure, the *Fragment* was so highly appreciated that "more than one father was found for it," Lord Mansfield, Lord Camden, and (by Dr. Johnson) Mr. Dunning (Lord Ashburton). In 1781 it brought Lord Shelburne to see Bentham. "Lord Shelburne," he said, "made me feel that I was something." And again, "amongst the friendships his affection gave me was Dumont's; one that it helped to form was Romilly's." Meantime Bentham had been busily producing materials for *An Introduction to the Principles of Morals and Legislation*, which was printed in 1780, and published, with additions, in 1789. Here, perhaps, more than anywhere else, Bentham sets forth his principles with clearness and precision. "The principle of utility is the foundation of the present work," he writes. "This is probably the greatest single work of Bentham. When Dumont published the *Théorie des Peines et des Récompenses* (Paris, 1811), he stated that "the manuscripts from which I have extracted *La Théorie des Peines* were written in 1775; those which have supplied me with *La Théorie des Récompenses* are a little later;" and Dumont's volumes formed the ground-work of the English edition of 1825—*The Rationale of Punishment* and *The Rationale of Reward*. These writings, with Bentham's *View of the*

Hard Labour Bill (1778), were the chief means of suggesting and popularising a rational theory of punishments. In 1785-8 Bentham went to Russia, on a visit to his brother, Colonel (afterwards General Sir) Samuel Bentham. In letters home he wrote a *Defence of Usury* (1787, printed 1816), and *Panopticon; or, the Inspection House*, containing the idea of a new principle of construction (1787, printed 1791). The architectural part of the scheme was invented by his brother. It was named *Panopticon* because, "to an eye stationed towards the centre, it exhibits everything that passes within it at a view." The special application, the Panopticon penitentiary, Bentham described as "a mill for grinding rogues honest, and idle men industrious." The plan was widely received with approval, but in the end was abandoned, Bentham obtaining compensation. He blamed the King; for in 1789 Bentham had opposed George III. in his endeavour to engage the country in war with Russia, in three letters, signed "Anti-Machiavel," in the *Public Advertiser*. The *Principles of International Law*, published in 1839, was edited from MSS. bearing date 1786 to 1789; the curious appendix of *Proposals for the Junction of the Atlantic and the Pacific* (by the route of the interoceanic ship-canal, now in process of execution) was taken from MSS. dated 1822. By a law of Aug. 26th, 1792, Bentham had conferred upon him the title of French Citizen. In March, 1792, Bentham's father had died, leaving him, in addition to the estate of Queen Square Place, in Westminster, freehold and leasehold property worth more than £500 a year, which established him in easy independence for the rest of his life. In 1797 Bentham was deeply interested in the Poor Laws, which were threatening to prove a serious political danger. He wrote *Observations on the Poor Bill introduced by Mr. Pitt* in that year, which, however, were not printed till 1838; and in 1797-8 he drew up in minute detail an outline of a work entitled *Pauper Management Improved*, which first appeared in Arthur Young's *Annals of Agriculture*. The practical sagacity of Bentham's proposals (many of which anticipated the Act of 1834) contrasts markedly with the ill-based notions of contemporary statesmen and their advisers. In 1802 Dumont was busy publishing Bentham's *Principles of the Civil Code and of the Penal Code* in French. In the following summer Dumont was at St. Petersburg, surprised at selling there as many copies of his *Bentham* as in London, and the Russian progressists were looking to Bentham for a Russian code. Now, and for many years to come, Bentham was deep in the study of Evidence. In 1806 the question of the reform of the judicial system in Scotland attracted a large share of public attention, and Bentham discussed the whole subject (including Lord

Eldon's Bill, 1807) in a series of letters addressed to Lord Granville in 1806-7. He followed up in 1808 with a summary view of the *Plan of a Judiciary*, under the name of *The Lords' Delegates*, "a plan for enabling the House [of Lords] to render justice to suitors of all the three Kingdoms. In 1811, Bentham, in conjunction with James Mill, put forward various suggestions for the application of a jury system to British India. Meanwhile, in 1808, Bentham had become acquainted with Aaron Burr (q.v.), and had intentions of going to Mexico; later on he desired to go to Spain and Venezuela. From 1809 to 1813 Bentham lived during the summer at Barrow Green, in the Surrey hills, and here the Mills visited him some weeks in every year (except 1810); the intimacy between Bentham and James Mill dating not later than 1808. From 1814 to 1818 he lived *en grand seigneur* during summer at Ford Abbey, in Devonshire, and there composed his *Civil and Criminal Codes*. But Bentham's chief work during the first year at Ford Abbey was the *Chrestomathia*, a classification of all knowledge, with methods of tuition and principles of school management and discipline. Language should yield room for the physical sciences, and useful knowledge should be communicated to the children of the very lowest of the people. Bentham's principles of punishment are also very remarkable, and University College School was soon to demonstrate the justice of his view that corporal punishment could be dispensed with. By the establishment of the *Westminster Review* in 1823, Bentham gave an enormous impulse to advanced views in all other subjects as well as politics; although he is not known to have actually written more than a single article—that on Humphrey's Real Property Code (October, 1826)—a subject to which he returned in 1831, when he drew up an *Outline of a Plan of a General Register of Real Property*. Bentham's very great work, *The Constitutional Code*, was written in 1818-32, and published in 1827-30-41. From 1820 to 1827 were chiefly written the papers out of which Mr. Doane constructed, in 1837, the *Principles of Judicial Procedure*. In 1827 was first published *The Rationale of Judicial Evidence*; the papers from which it was compiled (by J. S. Mill) had been written between 1802 and 1812. In 1831 Bentham took an active part in forming the Parliamentary Candidate Society, to direct attention to the men most likely to forward popular interests, including a Hindoo, a half-caste, and a negro. After his peaceful death, in 1832, in accordance with his directions his body was dissected, with a view to the advancement of anatomy; and his skeleton, clothed in his usual dress, is still preserved in University College, London. Here also are many of his unpublished MSS. The collected edition of his works (by Bowring), with memoir, etc., fills eleven compact volumes.

Bentham received large assistance from many of his disciples—Dumont, J. S. Mill, Bowring, and others—in shaping his works for publication. Bentham ever kept before his mind his mission as "a friend to mankind," and grudged every moment that seemed to be diverted from that sacred end. His allegiance to truth was unswerving. In jurisprudence his work is of inestimable value; he set aside the notion of "the law of nature" and the fiction of social contract, and based the principles of law upon the good of society and natural affection. He applied the methods of physical science to legislation; and he required every institution and established arrangement to justify its existence by proving its utility. "He found the philosophy of law a chaos; he left it a science" (J. S. Mill). A remarkable characteristic of Bentham was that he did not content himself with throwing out a large principle, but investigated it down to the minutest details. His earlier style is simple, clear, and pointed; his later style is burdened with ill-placed qualifying clauses, and somewhat hampered by abundant coinage of words. But many of these words have been fully adopted into the language. If codification is not quite so simple or so universally applicable an affair as he held out, if the legal system was not quite so hopelessly corrupt as he asserted, yet Bentham's shortcomings are hardly as dust in the balance in view of his incomparable achievements and his ardent aspirations for human happiness. He faced without prejudice the facts of society, and resolutely applied to them a calm and vigorous common sense. Talleyrand's remark concerning his wealth of ideas still remains true:—"Pillé de tout le monde, il est toujours riche."

Bowring's *Memoirs of Bentham* (Works, vols. x., xi.); Bain's *James Mill and John S. Mill*; J. S. Mill's *Autobiography*; *Edinburgh Review*, vol. lxxviii.; *London and Westminster Review*, Aug., 1838. [A. F. M.]

Bentinck, LORD GEORGE (b. 1802, d. 1848), political leader and sportsman, was born on the 27th of February, 1802, the third son of the fourth Duke of Portland by Miss Scott, whose sister married Canning. Thus Lord George Bentinck was the statesman's nephew, and at an early age became his private secretary. He entered parliament for the borough of Lynn in 1826 as what may be called a Canningite Whig, as distinct from a Canningite Tory. His family, till the French Revolution, had always been leading members of the great Whig confederacy, and he seems early to have given his entire confidence to Mr. Stanley (the late Lord Derby), who belonged to the same party. In 1835, when Lord Stanley, Sir James Graham, and the Duke of Richmond seceded from the Whigs, Lord George followed their example, and gradually, like them, ripened into a thorough Conservative. On the repeal of the Corn Laws, in

1846, Lord George, in common with the bulk of the Conservative party, renounced the leadership of Sir Robert Peel, and became the leader of the Protectionists in the House of Commons. With what indefatigable energy and unexpected ability he fulfilled the duty which he had conferred upon himself is told by his friend and biographer, the late Lord Beaconsfield, in a work which is an English classic. Lord George Bentinck, though not professing to have thought deeply on political questions, still less to be a brilliant speaker, had an excellent head for figures, and possessed powers of calculation which he had often proved upon the turf. These qualities ensured him the respectful attention even of those who differed from him. It was felt that he was one of those men who have to be answered; and it is perhaps a moot point at this moment whether he ever really was. His death was terribly sudden. He was staying at Welbeck, in Nottinghamshire, and had gone out for a walk in the afternoon in his usual health and spirits. He never returned alive, being found lying dead upon the footpath near a stile which he had just crossed. His death was considered a heavy blow at the time to the Protectionist party, but it had the effect of bringing Mr. Disraeli to the front, which was more than a compensation for the loss which the party had sustained. Lord George was a great patron of the racecourse, leaving behind him a name, not only for consummate judgment in everything relating to horses, but for the most stainless honour and straightforwardness. For many years he hunted with Mr. Assheton Smith's hounds in Hampshire, and frequently went down to the meet after a night spent in the House of Commons, returning in time for the next, and sitting out the debate just as he had got off his horse, a light paler being thrown over his scarlet coat. His name will long be remembered, not at Westminster and at Newmarket, but in the pages of our political literature, as the orator who first gave point and bodily shape to the report that Sir Robert Peel, when he refused to join Canning because he was in favour of Roman Catholic emancipation, had already begun to entertain the idea of Roman Catholic emancipation himself. The charge was made in a speech in the House of Commons, and provoked a very long controversy, of which it is sufficient to say in this place that it was never satisfactorily settled, and probably never will be.

B. Disraeli, *Lord G. Bentinck: a Political Biography.* [T. E. K.]

Bentinck, LORD WILLIAM HENRY CAVENISH (b. 1774, d. 1839), Governor-General of India, was the second son of the third Duke of Portland. In 1791 he entered the army, and saw some service. In 1796 he was returned

member of parliament for Camelford. He was attached to Suvaroff's headquarters during the campaigns of 1799-1801. In 1803 he was made Governor of Madras, and in many ways ruled successfully, but his want of sympathy with the prejudices of the native soldiery culminated in the mutiny of the Sepoys at Vellore, rather than accept a uniform turban that suggested the European hat, and led to his recall by the directors, with some marks of displeasure (Jan., 1808). Returning home, he joined Burrard's staff in Portugal, was present at Corunna, and for several years was British envoy and commander-in-chief in Sicily. In 1813 he attempted to excite Catalonia, in 1814 Tuscany, to throw off the French yoke. After the peace he again sat in parliament, but made little mark, and in 1827 gladly accepted, as reparation for his former dismissal, the appointment as Governor-General of India. His rule, which lasted from July 18th, 1827, to March 20th, 1835, though less brilliant than that of many other governors, has an importance of its own in the internal development of British India. On his arrival, in July, 1828, he found the finances of the country exhausted by the Burmese War, and instituted a series of economies, which reduced the expenditure by a million and a half a year. Among them may be mentioned the abolition of the separate Government of Penang; the imposition of licence duties, which enabled Government to extract a revenue from opium grown in Malwa, while abandoning the invidious task of coercing autonomous States in their internal policy; the abolition of "double *datta*," as the extra war allowance to officers in the field outside the frontiers was termed, and the taxation of land that, through fraud of the zemindars and the collusion of officials, had hitherto escaped assessment. The last two measures excited great indignation among the English officers and the zemindars respectively. Bentinck's government was an epoch in administrative reform, and in the intellectual and moral progress of India. To the great indignation of the covenanted Civil Service, places under Government were opened up to natives. The education of the natives was encouraged, although Bentinck's unfortunate plan of making English the medium of instruction neutralised his best plans. Steam communication was opened out. Further liberty for the expression of public opinion was allowed. In 1829 suttee was abolished, and a series of drastic measures of repression practically put an end to Thuggism. In 1833 the renewal of the Company's charter led to complete freedom of trade with India, and partly contributed to end the panic in Calcutta at the beginning of that year. It also added a legal member to the Council. Macaulay was the first to fill that office. During Bentinck's rule there were few wars and few annexa-

tions, though the misgovernment of the native princes necessitated the establishment of English rule in Coorg and Mysore. Bentinck, after his return to England, was elected M.P. for Glasgow in 1837. He took, however, no very prominent part in home politics, and died in 1839.

James Mill, *History of British India*, vol. ix., chaps. vi. and vii. [T. F. T.]

Béranger, **PIERRE JEAN** (b. 1780, d. 1857), was born in the Rue Montorgueil, Paris. His mother was a tailor's daughter, and his father, who assumed—as did his son after him—the aristocratic “de,” without having the slightest claim to it, was at first a grocer's boy, and about 1789 became factotum to the Duchesse d'Estissac. Pierre Jean was placed at a small school held by the Abbé Chantereau, but his real education was the taking of the Bastille. To the end he remained “a man of '89,” *avec des distractions*, as Talleyrand once said of him, his early worship of Napoleon coming simply from the mistaken belief that the First Consul was the devoted champion of the Republic. His creative life divides itself into two distinct periods: that from the age of ten or twelve, when he began to rhyme, to 1815; and from the first years of the Restoration, and onwards, culminating with the reign of Charles X. He was no poet, in the lofty Greek sense of the word, although the genuine love of verse was strong in him, and it should always be remembered that his real importance was not literary, but political, his song being only a means to an end. The first period is that of the “drum and trumpet.” His earliest verses, very mediocre effusions, were published in an obscure periodical. In his “twenties,” like most Frenchmen, he aspired to be classical, but so inferior were his productions, that, when he addressed them to Lucien Bonaparte (in 1803), spite of their fulsome flattery to the hero of the family, Lucien told him to learn grammar, and study the art of versifying according to rule. The young “printer's devil,” as he then was, avowed his complete lack of education, and the prince, who was a man of science and letters, became his patron during life, giving him about £40 a year from his own pension as a member of the Institute, but doing him, at the same time, the extremely bad service of bidding him cultivate *le style noble* and write “heroics,” which were the direct reverse of anything suited to the *bourgeois* muse of Béranger. Till 1809, when the elder Béranger died, his son had to support three persons, his father, grandmother, and his sister, who worked as a seamstress until 1811, when she became a nun. He gained a most precarious livelihood till, in 1806, at the foundation of the University of France, a small post was secured for him, which gave him another £40. But at this period the future *chansonnier* began to obey his real vocation. Between 1808 and 1812

were written and recited *Les Gueux*, *Le Bœuf Gras*, *Le Déroutteur de la Cour*, and the world-renowned *Petit Homme Gris*. Written copies of the songs above named and of *Le Sénateur* passed from hand to hand, till in 1813 the *Roi d'Yvetot* caused a perfect furor. Though the satire on the Emperor's warlike excesses was plain enough, Béranger was not prosecuted, and continued to compose. Still there was no collection of his works published. It was not till 1815, after the second and definitive Restoration, that Béranger decided to give forth an edition of his writings. The well-known *Requête des Chiens de Qualité* and *Plus de Politique* had shown Béranger as a champion of the ideas of 1789, and in the small volume (of about forty pieces) which now saw the light, his opposition tendencies were distinct and clear. From this period Béranger became the constant associate and companion of all the leading Liberals. In 1817, *Le Dieu des Bonnes Gens* created a strong alarm amongst the ultra *dévots*, and it was easy to see what would happen. This is the culminating point of Béranger's literary celebrity, and the dawn of his political importance. The song-writer had grown into an enemy; he was feared; the customary fault was committed of a legal attack and condemnation. He was imprisoned in 1821 for three months, and so became a popular idol. From 1821, through the nine ensuing years, Béranger's atmosphere was one of politics absorbingly. And now came out the fundamental force whereby the man was to predominate over all who surrounded him. “He was a father to Mignet and me,” never ceased to repeat M. Thiers, and till after the first year of the Orleans Monarchy, Béranger was the unseen chief who excited to attack and forbade every defection, who ruled by the sheer sovereignty of disinterestedness. From the famous *procès* of the end of 1828, when Béranger was sentenced to a fine of 10,000 francs and imprisonment in the prison of La Force, the Government of Charles X. had marked out for itself the enemy who could do whatever he chose with the masses, and eighteen months later, in July, 1830, the elder Bourbons were driven from France for ever. No one, at the time, imagined what had been the power of the far-famed *chansonnier*, though at the outset of the new *régime*, offers of place and honours poured in upon him. But he quietly refused all, saying what was obvious, namely, that he was a staunch republican of the “Great Revolution.” The part of the Ideal in Béranger's life was absorbed by patriotism, and the memory of the mighty movement his childhood and youth had witnessed. His admirable conduct was inspired by an innate rectitude of purpose, and a strength of homely, practical, *bourgeois* good sense seldom equalled. He died in the midst of the worst and most disastrous reign that ever debased an

exhausted country—stricken to the heart with shame at sight of the miserable imitation of the wicked and warlike splendour of the First Empire, but assisted to his last hour by the few valiant survivors of France's last attempt at freedom. Béranger's form of literary production was the most essentially national that exists, and he was the last to produce it. The pomp of Louis XIV., the vice of Louis XV., the fierceness of the Revolutionary period, banished poetry, and there cropped up in its stead *La Chanson*, full of "malice" and licence, pungent, convivial, sometimes—but not always—witty. A few only of Béranger's more famous pieces will endure. What *will* last is the remembrance of the citizen whose verses were the heralds of his deeds, and whose example came from his being a man of innate nobility and completeness of soul.

Béranger, *Ma Biographie*. [Y. B de B.]

Berchet, GIOVANNI (b. 1790, d. 1851), Italian patriot and poet, born at Milan, removed to Genoa after the suppression of the *Conciliatore*, a Liberal newspaper. In 1841 he published a volume of patriotic songs that aroused great enthusiasm, and became widely popular, in spite of the efforts of the Government to suppress them.

***Beresford**, LORD WILLIAM CHARLES DELAPOER, generally known as LORD CHARLES (b. 1846), second son of the Rev. John Beresford, fourth Marquis of Waterford, born at Philpottown, County Dublin, entered the navy at thirteen, was appointed lieutenant in 1868, and commander in 1875, in which year he accompanied the Prince of Wales to India as naval aide-de-camp. He has won two medals from humane societies for saving life at sea, but his name first came prominently before the public in connection with the bombardment of Alexandria in 1882, on which occasion he was in command of the gunboat *Condor*. Early in the engagement the *Condor* succeeded in rescuing the *Téméraire*, which had gone aground, and afterwards in silencing the Marabout batteries, which formed the second strongest defences of the port. She was then ordered in shore to hold in check the Egyptian troops whilst the Khedive escaped. In hopes of putting a stop to the plunder of the city, Lord Charles Beresford also organised a regular police, which displayed the utmost rigour. For these services he was promoted to the rank of captain. From 1874 to 1880 he sat in parliament as Conservative member for Waterford, and in 1885 was returned for East Marylebone. In 1884 he accompanied Lord Wolsley's Nile expedition, and rescued the expedition which made a last effort to relieve Gordon at Khartoum. He was created C.B. in 1885, and a Lord of the Admiralty in 1886.

Beresford, WILLIAM CARR, VISCOUNT (b. 1770, d. 1854), was a natural son of the

first Marquis of Waterford. He entered the army in 1785, and had attained the rank of captain when, in 1793, he occupied Toulon. He served under Sir David Baird (q.v.) in Egypt, and was commandant of Alexandria until its evacuation. After service in Ireland and at the Cape, he was placed in command of the successful expeditions against Buenos Ayres (1806) and Madeira (1807). In 1808 he joined the British army in Portugal with the rank of major-general, and in 1809 was placed in chief command of the Portuguese troops, with the rank of marshal. His greatest exploit was the battle of Albuera on May 16th, 1811. It was a victory, but a victory dearly bought, for Beresford, with superior forces, was out-generalled at every point by Marshal Soult; he could gain little or no assistance from his Spanish troops, and it was not until after the most hideous carnage that, as Napier says, "1,800 unwounded men, the remnant of 6,000 unconquerable British soldiers, stood triumphant on that fatal hill." Beresford fought through the war until its termination at Toulouse, after which he became Governor of Jersey, and in 1828 Master-General of the Ordnance during the Premiership of the Duke of Wellington. He was created a peer in 1814, and a viscount in 1822, besides receiving several titles from the Spanish and Portuguese courts. Beresford was a general of the dare-devil order, and in hard fighting had no superior, but his dispositions were frequently of the faultiest nature.

See the account of the battle of Albuera in Napier's *Peninsular War*.

***Berghaus**, HEINRICH (b. 1797), geographer, is a native of Cleve, and was educated at the Gymnasium of Münster. After acting as conductor of the road and bridge corps in the department of the Lippe, and afterwards serving in the Prussian army, he was, in 1816, made geographical engineer in the war department at Berlin, and was employed on the trigonometrical survey of Prussia. In 1824 he was appointed professor of mathematics in the Architectural Academy of Berlin, and in 1836 director of the Geographical School in Potsdam. We owe to Berghaus a vast number of admirable maps, embracing all departments, meteorological, hydrographical, geological, magnetic, anthropological, ethnological, the geographical distribution of plants and animals, etc., in addition to others purely topographical. The best known of his chartographical works is his *Physical Atlas*, which forms the basis of Johnston's. His *Geog. Jahrbuch* has been published annually since 1848, and at various times he has edited several geographical periodicals. He has also published *Physikalische Erdbeschreibung*; *Ethnographie*; and *Was man von der Erde weiss*.

Berlioz, HECTOR (b. 1803, d. 1869), one of the most original composers of the century, little appreciated during his lifetime, but now universally admired, was born near Grenoble. His father, a physician, wished him to follow the same profession, and sent him, at the age of eighteen, much against his will, to study medicine at Paris. Nothing, however, interested him but music; and after quarrelling with his parents, he passed the entrance examination at the Conservatoire, where instruction is given gratuitously. All supplies from home having been stopped, he was forced to earn his own living, and did so, more or less satisfactorily, by singing in the chorus at the Gymnase. From the professors of the Conservatoire he met with but little favour. They considered him over-confident, and culpably careless of classical traditions, while he, on his side, regarded them as pedants. He passed much of his time studying the orchestral scores in the Conservatoire library, and while still a student he composed two important works, the overture to *Les Francs Juges* and the *Symphonie Fantastique*. In spite of his musical genius, he was repeatedly plucked—and probably with perfect justice—at formal examinations. At last, however, on his fourth trial, he took a prize for composition. In 1828 he gained the second prize, and in 1830 the first: the so-called *prix de Rome*, to which is attached a pension, enabling the recipient to pursue his studies for three years at Rome. Returning to Paris, and finding it impossible to live by composition, Berlioz became a contributor to the *Journal des Débats*, in which paper he wrote the musical *feuilleton* for many years. To bring his works before the public, he gave from time to time orchestral concerts. But though his music made a powerful impression, it failed to please, and only gained for him the undesirable reputation of being eccentric. How he fell violently in love with Miss Smithson, an English actress, who had come to Paris to play in Shakespeare's tragedies, and who made a great sensation as Ophelia and Juliet, has been told by Berlioz himself in his *Memoirs*. He has in the same book informed the world of the misery she caused him, after she had become his wife, by her bad temper and her jealousy. But though Berlioz could not agree with his wife, he did not neglect her in the misfortunes which ultimately fell upon her, through theatrical speculations and a serious accident. Berlioz, himself in receipt of a very small income, gained chiefly by his contributions to the *Débats*, supplied her wants to the last. Although not generally appreciated, the composer inspired some genuine enthusiasm; and Paganini, after hearing the *Symphonie Fantastique*, fell on his knees before Berlioz, and the next morning sent him an order for 20,000 francs. This generosity on the part of a man who, with all his genius, was both penurious and avaricious, has ap-

peared to some friends of Berlioz so incredible that they have explained the gift by making it come from M. Armand Bertin, proprietor of the *Débats*, Paganini appearing only as a willing intermediary. It is certain that about this time Berlioz orchestrated for Mlle. Louise Bertin, daughter of M. Armand Bertin, her opera of *Esmeralda*, for which Victor Hugo had himself written the libretto, founded on his novel of *Notre Dame de Paris*; and it is known also that Berlioz refused to accept any remuneration for his work. The money, whoever it came from, enabled him to undertake a musical tour in Germany and Russia. In both these countries Berlioz's works were received with an applause which they had failed to obtain in France. In 1852 Berlioz came to London, where he conducted the first series of the new Philharmonic Concerts, founded by Dr. Wyld. The year afterwards he produced at the Royal Italian Opera with much success his *Benvenuto Cellini*. He acted, too, as musical conductor at Covent Garden. His best known works are the before-mentioned *Symphonie Fantastique*, with its sequel, *Lélio, Roméo et Juliette*, and, above all, *La Damnation de Faust*. Berlioz's musical version in cantata form of the *Faust* story has been given repeatedly in London.

Voyage Musical; À Travers Chants; Mémoires;
all by Berlioz. [H. S. E.]

Bernadotte. [SWEDEN.]

Bernard, CLAUDE (b. 1813, d. 1878), a French physiologist, was born at Saint-Julien, department of the Rhône. His parents were so poor that he had some difficulty in obtaining the education necessary for any liberal profession. Abandoning some early aspirations in regard to the drama, he became an earnest student in medicine, and in 1843 was appointed assistant to Magendie, at the Collège of France. In the same year he obtained his degree as Doctor of Medicine. Up to 1853 he studied surgery, but in 1854 he became incumbent of the newly established Chair of general physiology, in the Faculty of Sciences, and member of the Institute; in 1855 professor of experimental physiology at the Collège de France, and in 1868 professor of general physiology at the Museum. His most important studies and observations relate to the gastric juice, the saliva, the functions of the liver, and the nervous system. He established a great reputation by his *Recherches sur les Usages du Pancréas*, to which the Institute awarded the grand prize in 1849; and his treatise *De la Physiologie Générale* is a recognised text-book in France, and has been honoured by the Academy prize. In addition, he has published *Leçons sur les Anesthésiques et sur Asphyxie; Leçons de Physiologie Opératoire; Leçons de Pathologie Expérimentale*, etc. Thrice was he awarded the grand prize

of the Institute. In 1868 Dr. Bernard succeeded Flourens in the French Academy, and in 1869 was appointed a member of the Senate.

* **Bernhardt, SARAH** (b. 1844), is the daughter of a French lawyer and a Dutch Jewess. She was entered as a pupil at the Conservatoire, Paris, admitted to the classes of Provost and Samson, and in 1861 gained the second prize in tragedy, which she followed up by the second prize in comedy. Signs of her genius were very early recognised by Auber. Her first appearance at the Théâtre Français, in the *Iphigénie* of Racine, was by no means a success, and at the Gymnase, where she next went on the boards, her reception was even worse, and for a time she retired altogether from the stage. It was not until 1869, when she obtained an engagement at the Odéon, that her merits began to be recognised; in 1868 her appearance as Anna Danby in *Kean* was favourably noticed, and it was followed by Cordelia in a French version of *King Lear*. Perhaps her first real triumph was in 1869, in the character of the Queen of Spain in *Ruy Blas*; it gained a warm tribute of praise from Victor Hugo, and has always been recognised as one of the greatest of her creations. The outbreak of the Franco-German War, just as she had been offered an engagement at the Comédie Française, interrupted her career, but it gave Madame Bernhardt an opportunity for distinguishing herself in another walk—as nurse during the siege of Paris. She made her second appearance at the Comédie Française in Nov., 1872, in *Madame de Belle Isle*. This was followed by a number of great creations in *Britannicus*, *Phèdre*, *Le Mariage de Figaro*, *Le Sphinx*, *L'Étrangère*, until her rendering of the rôle of Dôna Sol, in *Hernani*, stamped her as the greatest of living actresses. Her first visit to London was in 1879, when, in company with other members of the Comédie Française, she appeared in some of her greatest impersonations at the Gaiety theatre, and the visit has been frequently repeated; in 1881 she toured in the United States. In France her most notable creations of late have been in Sardou's dramas *Fédora* and *Théodora*. Her connection with the Française was severed in 1880. Madame Bernhardt is above all things a tragic actress, and conquers by sheer force of passion. She is her characters, and though seldom aiming directly at studied effect, she can command at will an extraordinary variety of voice and gesture. Great in repose, she is greatest of all in the storm of action, whether it be in the classic of *Phèdre* or the modern realism of *Fédora*. Madame Bernhardt is also a sculptor of much excellence, and a painter of skill. Conspicuous among her works that have been exhibited at the Salon have been a marble

group, *Après la Tempête*, and a bust of Girardin. She was commissioned by the French Government to execute a bust of Félicien David. Madame Bernhardt is also an art critic. After a few appearances at Her Majesty's Theatre in 1886, she started on a prolonged tour in South America.

Bernstorff, ALBRECHT, COUNT (b. 1809, d. 1873), Prussian ambassador, having served a diplomatic apprenticeship at most of the great European courts, was sent on a delicate mission to Vienna in 1848, was elected to the first Prussian Chamber in 1851, and despatched on a special mission to London in 1854. In 1861-2 he was Minister of Foreign Affairs at Berlin, and it was under his administration that the kingdom of Italy was recognised. After this he returned to London as ambassador, and did much to maintain Prussian interests during the conference on the Danish question in 1864. He retained his position as ambassador, representing the North German Confederation after 1867, and the German Empire after 1871.

Lives of Bernstorff by M. Hübner and G. L. Ahlemann.

Berry, CAROLINE FERDINANDE LOUISE, DUCHESS DE (b. 1798, d. 1870), daughter of Ferdinand I., King of the Two Sicilies, married in 1816 the Duc de Berry, mentioned below. The Legitimists supported the claims of her infant son to the throne of France, and in 1832 a rising of the people in her favour took place in Brittany. She was, however, betrayed by the treachery of a pretended friend, and taken by the enemy. She was imprisoned for a short time in the Château de Blaye, where it was discovered that she had previously been privately married to Count Lucchesi-Palli, an alliance which caused such offence to her party that she was deprived of the guardianship of her son.

Berry, CHARLES FERDINAND D'ARTOIS, DUC DE (b. 1778, d. 1820), French prince, a son of Charles X., emigrated at the time of the French Revolution, and served in the army under the Prince of Condé. He was assassinated in Paris by Louvet, an Orleanist partisan, in 1820. His son played a prominent part in recent French history as the Comte de Chambord.

Berryer, PIERRE ANTOINE (b. 1790, d. 1868), French barrister and politician, enthusiastically supported the Bourbon cause in 1814 and during the Hundred Days, but in the years that followed showed himself a strenuous opponent to despotism and reactionary policy. He was one of the defenders of Marshal Ney. After the fall of the Bourbons he remained in Paris to watch their interests, and after the revolution of 1848 confined himself entirely to questions of finance and administration. Being a faithful adherent to parliamentary principles, he refused to take

further part in political life after the *Coup d'État*; but devoting his attention mainly to the bar, he became the first advocate in France. His most celebrated cases were the defence of Montalembert (1858) for his eulogy of English liberty, and the case of Patterson v. Bonaparte (1860). In 1861 he, with M. Thiers, having consented to take the oaths of allegiance, was elected to the *Corps Législatif*, in which his influence was profoundly felt. In 1864, whilst on a visit to Lord Brougham, he was entertained by the English bar in the Temple.

De la Haye Commelin, *Biographie Parlementaire de M. Berryer*.

Bert, PAUL (b. 1833, d. 1886), physiologist and statesman, was born at Auxerre, in the Yonne. After qualifying as an *avocat*, he turned his attention to medicine, obtaining his doctor's degree in 1863, with a thesis on *La Greffe Animal*. For the next three years he was assistant to Claude Bernard, at the College of France, at the end of which period he received the degree of Doctor of Natural Sciences. In 1867 and 1869 respectively, he filled the Chairs of physiology to the faculties of sciences in Bordeaux and Paris. On the downfall of Napoleon III., in September, 1870, he entered political life as an ardent Republican, and was for a short period, after acting as secretary to the Prefect of the Yonne, Prefect of the North. From Oct., 1877, to 1879, he represented the Canton of Aillant at the council-general of the Yonne. In June, 1874, he was elected to the Chamber of Deputies, and soon became prominent in all questions concerning public instruction. By his influence a pension of 12,000 francs was bestowed on M. Pasteur for his discoveries in physiological science. M. Bert was re-elected in 1876 and 1877 by large majorities, in 1881 without opposition, and in 1885 after a second ballotage. He introduced laws relating to higher education in Algiers and to primary instruction in France, removing it from the control of the religious orders, and making it compulsory. He was Minister of Public Instruction and of Worship under Gambetta. During this period he still worked ardently as a physiologist, and made a series of experiments on barometric pressure and its effects on the phenomena of life. In 1886 he was appointed Governor of Tonquin and Annam, but died in November. A less agreeable impression has been created by his notoriety as a vivisectionist, while his violent action towards the religious orders has deprived him of the esteem which his efforts in other directions have obtained. He was elected a member of the Academy of Sciences in 1882. He has written numerous works on anatomy, physiology, zoology, etc., and his political and educational writings include:—*La Morale des Jésuites*; *La Législation de l'Enseignement Primaire*; *La Première Année d'Enseignement Scientifique*; *L'Instruction Civile à l'École*; and *L'Instruction Religieuse à l'École*.

M.W.—6

Berthaut, JEAN AUGUSTE (b. 1817, d. 1881), French general, received the command of the Garde Mobile of the Seine soon after the outbreak of war in 1870, and rendered great service by conciliating the mutinous spirit amongst his troops, who were chiefly Parisians, and at enmity with their general, Marshal Canrobert, one of the perpetrators of the *Coup d'État*. Berthaut also served with distinction during the siege. In 1876 he was Minister of War in the Dufaure Cabinet, and retained office under Jules Simon, and even after the decrees of May, 1877. In the next few months he may be said to have saved the Republic, by repressing Conservative agitation in the army and holding the troops to their allegiance to the established government; but before the crisis was over he was obliged to resign.

Berthier, LOUIS ALEXANDRE (b. 1753, d. 1815), Prince of Wagram, French general, served under Lafayette in the United States (1778–82), and acted as chief of staff in the Italian campaign of 1796. He attracted the attention of Bonaparte, who confided to him all his projects and strategy, and, after the overthrow of the Directory, appointed him Minister of War. After Napoleon had become Emperor, Berthier was created Marshal of the Empire and Prince of Neuchâtel, receiving also the King of Bavaria's daughter in marriage. He distinguished himself in the Austrian campaign of 1805, and was created Prince of Wagram for his services on that field in 1809. He also shared in the fatal expedition to Russia. When on active service, he generally rode in Napoleon's own carriage, his power of digesting plans and despatches making him an admirable chief of the staff, though he wanted the genius of a great commander. On the first return of the Bourbons he attached himself to Louis XVIII., and was raised to the peerage; but on the escape of Napoleon, who could hardly credit such ingratitude, Berthier, only anxious to preserve neutrality, retired to Bamberg, where he was one morning found dead in the streets—hurled from his window by assassins, so the current rumour reported.

Mémoires de Berthier (1826).

Bertin, EDOUARD FRANÇOIS (b. 1797, d. 1871), French landscape painter and man of letters, son of Louis François Bertin, became inspector of fine arts under Louis Philippe. His masterpieces are:—*The Forest of Fontainebleau*, now in the Luxembourg; the *View of the Apennines*, now at Montpellier; and a *Temptation of Christ* (1842). After the death of his brother, Louis Marie, in 1854, he succeeded to the management of the *Journal des Débats*, founded by his father.

Bertin, LOUIS FRANÇOIS (b. 1766, d. 1841). French journalist, founded his well-known paper, the *Journal des Débats*, in 1800, Chateaubriand and other celebrated writers becoming

contributors. The circulation amounted to over 20,000 when it was suppressed by Napoleon, in 1811, for favouring the Royalists; but in 1814 publication was resumed, and the high character of the paper is still maintained.

Bertini, HENRY JÉRÔME (b. 1798, d. 1876), pianist, born in London of French parentage, began to give public concerts at twelve years old, and was received with great applause in Holland, and afterwards in a tour through England and Scotland. He at length settled in France, where he increased his high reputation as a performer, and published several books of studies, trios, fantasias, and some church music.

Bertrand, HENRI GRATIEN, COMTE DE (b. 1773, d. 1844), a French general, who, after having served under Napoleon in Egypt, Austria, and Russia, accompanied the exiled Emperor to St. Helena, wrote, at the dictation of Napoleon, the *Memoirs of the Campaigns of Egypt and Syria*, published in 1847. On his return to France the Count was elected a member of the Chamber of Deputies.

Berzelius, JÖNS JACOB (b. 1779, d. 1848), a Swedish chemist of the first eminence, was born near Linköping in a village where his father was Government schoolmaster. The family was very poor, and it was only through the assistance of friends that he was enabled to study medicine at the University of Upsala. He very early turned his attention to the subject of chemical analysis, then in its infancy, and in 1800 published his first papers, one on the analysis of a mineral water, which brought him some local notice. In 1802 he became adjunct-professor of medicine in Stockholm, and next year published an important paper on the action of electric currents on solutions of salts. In 1806 Berzelius was made teacher of chemistry at the military school of Carlberg, and in the following year professor of medicine and pharmacy at the medical institute in Stockholm. During this time he constructed a new battery, and when he was only twenty-three years of age discovered the metal cerium. While thus engaged his professional earnings were so small that he had to practise medicine for his support, and he even established a mineral water factory in order to add to his income. Much of the apparatus now in common use in laboratories was invented or introduced by him—such as the lamp with double draft (named after him), glass funnels, beakers, Swedish filter paper, etc. For a long time he used himself to distil from brandy the alcohol used in his experiments. In 1818 he was prepared to publish a list of two thousand simple and compound bodies, of which he could give the exact chemical composition. He acquired great skill in the use of the blow-pipe, and

published a work on the subject, which was long a standard authority. Honours of all sorts were showered on him early in life, and soon after his marriage, in 1833, the directors of the Swedish Iron Works conferred a pension on him for life. But he never attained baronial rank, the peerage intended for him having, through the ignorance of the officials, been conferred on a military officer of the same name.

* **Besant**, WALTER (b. 1838), novelist, was born at Portsmouth, and educated first at King's College, London, and afterwards at Christ's College, Cambridge, being intended for the Church. His first work was published in 1868, under the title of *Studies in Early French Poetry*. He acted as secretary to the Palestine Exploration Fund, and in 1871 wrote, in conjunction with Professor Palmer, a *History of Jerusalem*. In 1883 he published a sympathetic memoir of his collaborateur. He edited the series of books of biography entitled *The New Plutarch*, and wrote some of them. In 1871 the well-known literary partnership with James Rice began. They wrote two plays, and one of these, a dramatic version of *Ready-Money Mortiboy*, was produced at the Court Theatre. The novels they wrote in conjunction were eleven, the most popular, perhaps, being *The Golden Butterfly* and *Ready-Money Mortiboy*. They are full of rich humour, which is never far removed from caricature, and an extensive knowledge of the seamy side of life; they are, however, sometimes faulty in construction, and hinge on some improbable incident. *All Sorts and Conditions of Men* appeared under Mr. Besant's own name soon after the death of Mr. Rice, and it was followed in 1882 by *The Revolt of Man*, at first published anonymously. *Dorothy Forster* (1884), a story of the days of the Pretender, was accepted as one of the best historical novels since *Esmond*.

Bessborough, JOHN WILLIAM PONSOMBY, 4TH EARL OF (b. 1781, d. 1847), better known as Lord Duncannon, entered Parliament for Knaresborough in 1805. He was an active member of the Whig party for many years, and had an active share in drafting the Reform Bill. In 1831 he was made Chief Commissioner of Woods and Forests; in 1834 he received the seals of the Home Office, and in 1835 the Privy Seal. In 1846 the Earl of Bessborough was appointed Lord-Lieutenant of Ireland by Lord John Russell. His accession was very popular, as he was a resident Irish landlord, and had always displayed a liberal interest in Irish affairs. His vicerealty, which was cut short by his death, extended over the period of the great famine, and his efforts were earnestly and—as far as could be—successfully devoted to the alleviation of that calamity. His son and successor (d. 1880) was president of the important Irish Land

Commission, the report of which was one of the bases of the Irish Land Act of 1882.

Bessel, FRIEDRICH WILHELM (b. 1784, d. 1846), a German astronomer, commenced his studies as a young man in Bremen, while employed in a merchant's office, where nautical subjects were constantly brought before his notice. Having acquired some proficiency in astronomy, he next received an appointment as assistant in the Observatory of Lilienthal, and in 1810 was called to Königsberg, where, under his direction, an observatory was constructed, which soon became famous, and with which he remained connected to the day of his death. In 1818 he published *Fundamenta Astronomiæ*, a discussion of the observations made upon the fixed stars by Bradley, at Greenwich, sixty years before, but including original observations of great value. He afterwards published regularly his own observations, and soon became regarded as one of the foremost astronomers in the world.

Sir John Herschel, *Brief Notice of the Life of F. W. Bessel*; C. T. Anger, *Erinnerung an F. W. Bessel's Labour*.

* **Bessemer, SIR HENRY** (b. 1813), an inventor of distinction, was born at Charlton, Herts. His father was an artist, and member of the French Academy of Sciences, the family being of Breton extraction. He early developed a talent for mechanical invention, and contrived an apparatus for preventing the fraudulent transfer of stamps from old documents to new ones, which might have saved the Government an immense sum of money, and earned corresponding profit for himself, had he not, just when his machine was completed, suggested that dating the obliterated stamp would do just as well. The Government adopted his suggestion, without, however, making him any acknowledgment. Among other discoveries and inventions, that in connection with the manufacture of steel is particularly associated with his name and reputation. By this method, first introduced in 1856-8, iron is purified from carbon by the direct introduction of oxygen. This discovery revolutionised the steel trade, so greatly did it reduce the cost of production. Until 1870, the inventor's annual income from his patent is said to have amounted to nearly £100,000, but the royalty has since been reduced. He has received testimonials of honour and medals from nearly all the nations of Europe. He was elected president of the Iron and Steel Institute in 1871, and F.R.S. in 1879, receiving the honour of knighthood the same year. His process is largely used in America and on the Continent, one of the leading effects of its introduction being the almost universal substitution of steel for iron rails in railway building. Many other patents are associated with his name, that of "Bessemer's gold

paint" being perhaps the most familiar, as it was the earliest, and the one by which he gained the means to continue his costly experiments for the production of steel.

Bessières, JEAN BAPTISTE (b. 1768, d. 1813), French general, was born near Cahors, and served in the Guards of Louis XVI., and in the army of the Moselle till 1794, when he joined the army of Italy, and so distinguished himself in the campaign, especially at the battle of Rivoli, that he won the special regard and admiration of Napoleon. His career was indeed a succession of brilliant achievements that make him one of the most conspicuous of all Napoleon's generals for bravery and skill. He headed the memorable charge that decided the day of Marengo; at Olmütz he completely routed Kutusoff's rear-guard; at Austerlitz he annihilated the Grand Duke Constantine's regiment. After similar exploits at Jena, Friedland, and Eylau, he was summoned to Spain, where he gained the victory of Medina del Rio Seco, over the Spanish general Cuesta. Created Duke of Istria in 1809, he returned to the army of Germany, and was present at Wagram. Having afterwards commanded the army of the North, and recovered Flushing from the English, he accompanied Napoleon on the Russian campaign, and at least on one occasion was the means of saving his life. In April, 1813, he was struck down by a cannon-ball as he was reconnoitring on the field, at the beginning of the battle of Lützen.

* **Best, WILLIAM THOMAS** (b. 1826), organist, born at Carlisle, became organist of the Panopticon, Leicester Square, in 1853, and, two years later, organist of St. George's Hall, Liverpool, a position which he still occupies. In 1871 he was also appointed organist of the Albert Hall, Kensington. His greatest service to music has been the introduction into England of the separate pedal board on Bach's system, by which he has completely revolutionised the construction of English organs and the performance of organ music, the bass being now given up to the pedals instead of to the left hand. He has written several instruction books for the organ, and some compositions, especially for festivals.

Bethell, SIR R. [WESTBURY, BARON.]

Bettina, assumed name of ANNA ELISABETH VON ARNIM (b. 1785, d. 1859), the friend of Goethe, was the sister of Clemens Brentano, and granddaughter, through her mother, of Sophie de Laroche. Born in Frankfurt, and brought up in a convent at Fritzlar, she was early introduced, through her brother, into the new Romantic school, then rising into notoriety. She took some share in the collection of ballads for the *Wunderhorn*, became acquainted with the Arnims, and, having been for some time very intimate with Goethe's mother, who imparted to her most of the particulars of her son's childhood that have

come down to us, she determined, in 1807, to visit Goethe himself in Weimar. The meeting, of which she has left a well-known account, led to the *Briefwechsel mit einem Kinde*, the "Correspondence with a Child," which lasted for about four years, and was published by Bettina herself in 1837. The authenticity of the letters has often been questioned, though without sufficient cause. In Germany they are now generally accepted. The internal evidence is, indeed, strongly in their favour. The tone of quiet self-restraint in the few and generally brief replies from Goethe, interspersed amongst the passionate outpourings of her wild romanticism, is in itself sufficient vindication of their trustworthiness. The whole correspondence, though valuable as throwing light on a somewhat obscure period of Goethe's life, and furnishing another proof of his irresistible personal influence, is still more valuable as presenting us with a picture of Bettina herself, a typical as well as the most beautiful figure of the extreme Romantic school, with its joy in art, its passionate unrestraint, and intensity of sentimentalism and introspection. At this time she also counted amongst her friends Schelling, Jacobi, and Beethoven himself, and, later in life, nearly all the greatest men of Germany, such as Grimm, Humboldt, Liszt, Tieck, and Joachim. In 1811 she married LUDWIG JOACHIM VON ARNIM (b. 1781, d. 1831), himself one of the leading Romantic poets and novelists, and joint-editor of *Des Knaben Wunderhorn*. After this she wrote only a few more letters to Goethe, at intervals of several years. She resided generally, and after her husband's death entirely, in Berlin, where she took enthusiastic interest, not only in the War of Independence, but in the unsettled national hopes and ambitions of Friedrich Wilhelm IV.'s reign. Her house became the centre of idealists and reformers, and to forward their aims she began a series of social and political writings, recommending certain proposals to the king's own notice in the *Königsbuch* (1843), and continuing her endeavour in the *Gespräche mit Dämonen* ("Talks with Spirits") in 1853. The works are in the dialogue form, Goethe's mother being introduced in the former as chief speaker. Her most important remaining work was *Günderode*, a collection of her correspondence with a romantic school-girl friend, who drowned herself for love.

Bettina's Schriften (1848); her letters, dispersed in several collections; *Siegfried's Epistel (gegen Leves)*, 1858. [H. W. N.]

Beulé, CHARLES ERNEST (b. 1826, d. 1874), French archaeologist, became professor of rhetoric at Moulins, and was afterwards sent to the French school at Athens, where he began a series of excavations on the Acropolis that excited the greatest interest in the world of learning, and served to maintain the school, the abandonment of which had been contemplated. Having returned to Paris, he

was, in 1854, appointed professor of archaeology in the Bibliothèque Impériale. As such he undertook important excavations on the site of Carthage. After occupying himself for many years diligently with the study of art and its history, he was unfortunately elected to the National Assembly in February, 1871, and took his seat on the Right Centre. Having taken a prominent part in the overthrow of M. Thiers, as well as in other questions, he received the portfolio of the Interior in May, 1873, but after about a year and a half of power his position became so difficult, owing to Gambetta's opposition and the publication of a secret circular to which he was supposed to have been party, that he felt himself compelled to resign. Early next year he committed suicide. He wrote several important works on ancient art, such as *L'Acropole d'Athènes* (1854), *Les Temples de Syracuse* (1856), and some historic works on the Roman Empire—*Auguste, sa Famille et ses Amis* (1867), etc., collected under the title of *Proci des Césars*.

Beust, FREDERICK FERDINAND, COUNT VON (b. 1809, d. 1886), statesman and diplomatist, born at Dresden, but descended from a Brandenburg family, early entered the Saxon diplomatic service, and having represented his country in minor appointments at the courts of London, Paris, and other European cities, he was recalled to Dresden early in 1849, as Minister of Foreign Affairs, and took a prominent part in the suppression of revolutionary disorders. His policy during the next few years was marked by reactionary Conservatism. But after his elevation to the presidency of the Cabinet in 1853, and the succession of King John in 1854, the rising enthusiasm of national spirit forced him to modify his repressive measures, especially against the press and freedom of election, and at the re-opening of the Schleswig-Holstein question in 1863, he earnestly defended the rights of the smaller German States against the ambition of Austria and Prussia, the aim of his diplomacy being to raise them into a third power as a counterpoise to the other two. At the end of the war, in conjunction with Hanover, Bavaria, and other members of the Diet, he urged the claims of the Prince of Augustenburg, and after these were overlooked, he continued to protest against the forcible appropriations of the victorious Powers. At the first signs of a rupture between Austria and Prussia in 1866, Count von Beust began to augment the Saxon army, putting it on a war footing, and refusing to comply with the Prussian demand for its reduction; but when the overwhelming defeat of Sadowa had reduced Saxony to impotence, and severed Austria from the German Confederation, the Count was obliged to resign his office, and a few weeks afterwards was summoned to Vienna

by the Emperor Francis Joseph as Minister of Foreign Affairs. He at once undertook the entire reorganisation of the Austrian Empire, at that time apparently on the verge of collapse and dismemberment. His proposals were characterised by an enlightened Liberalism and moderation in sharp contrast with his policy of sixteen years before. The opposition of former ministers was overcome, and the Count was appointed President of the Ministry, and Chancellor of the Empire. His first object, the conciliation of Hungary, was ensured by large concessions, and consummated by the coronation of the Emperor as King of Hungary in June, 1867. He next turned upon the Ultramontanes, and by a series of vigorous measures succeeded in uprooting the ancient political power of the Church. Jews were admitted to all political rights. The Church was separated from the State, and all forms of religion were declared equal before the law. The *concordat* with Rome of 1855 was reversed, and civil marriage declared binding. The Count next ordered the finances, and reconstructed the army, raising the active army to 800,000, and the *Landwehr* to 200,000, making a million troops in all, in case of a renewal of the war by Prussia, or to oppose the danger which he supposed to be imminent from the Russian frontier. All these important reforms were carried out within three years. Having vainly endeavoured to maintain the European peace in 1870, Count von Beust contented himself during the war with preserving Austrian neutrality, though the sympathy both of the Emperor and himself with France was no secret. He attempted to avert Russia's repudiation of the Black Sea treaty, but refused to interfere in Italian politics for defence of Rome. After the proclamation of the German Empire in 1871, he refused to establish any more intimate alliance between the two nations, but demanded a further increase of military power. In the autumn of the same year he was sent as ambassador to London, where he remained seven years, and then proceeded to Paris in the same capacity.

Bewick, THOMAS (b. 1753, d. 1828), wood engraver, was born at Cherryburn, in the parish of Ovingham, Northumberland, where his father held a colliery for many years. His chalk scribbles on barn doors, and the like, attracted the attention of Ralph Beilby, an engraver, of Newcastle, and he became his apprentice. He came to London in 1776, and remained there about a year with a wood engraver; but he longed for his native air, and returning to Newcastle, he became the partner of his former master. After sundry preliminary essays in illustrating Gay's *Fables*, and after gaining from the Society of Arts a premium for *The Old Hound*, he addressed himself to his famous work, his *History of Quadrupeds*. In conjunction with his partner,

he published the first edition in 1790, but the drawings and engravings were entirely by his own hand. So popular did the work become, with its touches of humour, satire, and fun, that two more editions were called for within the following two years. In 1795 he and his brother John executed a series of cuts for Goldsmith's *Traveller* and *Deserted Village*, and Parnell's *Hermit*, and their success led to Somerville's *Chase*. In 1791 he began the cuts for *The History of British Birds*, and in 1797 published the first volume, which is thought the finest example of his work. His partner contributed the letterpress. Owing to some misunderstanding, he produced, in 1804, the second volume by himself. In 1818 he published *Æsop's Fables*, the fruit of six years' labour. Later, assisted by his son, he worked on the *British Fishes*, but it was never finished. His observation was keen, his industry immense, and, as a man, he was frank and genial. Among the more distinguished of his pupils must be reckoned Robert Johnson and Luke Clennell. The lines laid down by Thomas Bewick must be followed by all those who would adopt the orthodox practice of English wood engraving; but he was more than a mere wood engraver: he was an artist of rare invention and the most genial humour. He left an only son, Robert Elliott Bewick, who followed his father's profession in a limited way and at a most respectful distance. [J. F. R.]

Bey of Tunis. [TUNIS.]

Beyle, MARIE HENRI (b. 1783, d. 1842), a French writer, was born at Grenoble. He studied at L'École Polytechnique in Paris, and after trying politics, art, business, and the army, he finally devoted himself exclusively to literature as a profession. His principal works are:—*Lives of Haydn, Mozart, and Metastasio* (1817), *History of Painting in Italy* (1817); in this volume Leonardo da Vinci and Michael Angelo are, however, about the only painters mentioned; *Rome, Naples, and Florence in 1817*, *Life of Rossini* (1824), *Mémoires d'un Touriste* (1838). His two romances are *Le Rouge et le Noir*, and *The Carthusian Nun of Parma*. The latter contains a good description of life at a small Italian court. Beyle resided for many years in Italy, and was appointed French consul at Civita Vecchia in 1830. He wrote generally under the assumed name of Stendhal.

Coulomb, *Notice sur la Vie de Beyle*; Honoré de Balzac, *Études sur Beyle*.

* **Biard, AUGUSTE FRANÇOIS** (b. 1798), French painter, having early travelled in the East, became known for his sketches of Oriental scenery and character. He next turned to humorous representations of ordinary life, by which he obtained great popularity. Later in life he visited the snowy regions of northern Europe and Spitzbergen. On this journey he was accompanied

by his wife, and two of his best known pictures, the *Aurora Borealis* and the *Fight with Polar Bears*, were the result of the enterprise. The engravings of several of his pictures are very popular, especially in England.

Bibesco. [WALLACHIA.]

Bichat, MARIE FRANÇOIS XAVIER (b. 1771, d. 1802), a French anatomist and physiologist, was born at Thoirette-en-Bresse, department of the Ain. He commenced his studies at St. Irénée, at Lyons, and continued them with his father, a physician, at Poncin. In 1793 he went to Paris to study surgery under Desault, at the Hôtel Dieu, who became so attached to him that he adopted him as his son, and designated him his successor. Bichat was full of zeal and energy, and on the death of Desault, in 1795, arranged and published the works of his master, and helped to support his family by opening a school of anatomy, physiology, and surgery. He also undertook a series of experiments and observations on the systematic analysis of the tissues, and was one of the first to ascertain their chemical, physical, and vital properties. During a severe attack of illness, caused by over-work, his restless spirit would not allow him to desist, and while quite unfit for it, he insisted on spending several hours a day in a damp cellar, in order to prosecute his researches. In a short time he was seized with typhoid fever, which proved fatal. Although he was under thirty-one years of age at the time of his death, he had revolutionised some branches of physiological science. His principal works are his *Anatomie Générale; Anatomie Descriptive* (left unfinished, but completed according to his directions by his friends and disciples); and *Recherches sur la Vie et la Mort*.

* **Bickersteth, THE RIGHT REV. EDWARD HENRY, D.D.** (b. 1825), Bishop of Exeter, son of the late Edward Bickersteth, author of the *Christian Psalmody*, took his degree at Trinity College, Cambridge, in 1847. Having entered the Church, he held the curacies of Benningham, Norfolk, and of Christ Church, Tunbridge Wells; in 1852 he became rector of Hinton Martell, Dorset, and vicar of Christ Church, Hampstead, in 1855. He had published some poems in 1848, but his most celebrated poetical work did not appear till 1866. It is entitled *Yesterday, To-day, and For Ever*, and is a poem of blank verse in twelve books. Owing chiefly to its expression of popular Evangelical doctrines, the poem has been widely read amongst certain classes of English people, and has already passed through fifteen editions. It is a description of the death of a Christian and his translation to the world above, the appearance and eternity of which is depicted with much wealth of imagery and richness of idea. This was

followed, in 1870, by the popular collection of hymns known as *The Hymnal Companion to the Book of Common Prayer*, the edition with tunes being published six years later. The author has also published several other works of religious poetry:—*The Master's Home-Call, The Shadowed Land and the Light Beyond*, etc. Early in 1885 Mr. Bickersteth was appointed to the Deanery of Gloucester, and a few weeks later, at Mr. Gladstone's recommendation, he was created Bishop of Exeter as successor to Dr. Temple.

Bidder, GEORGE PARKES (b. 1800, d. 1878), engineer, exhibited his powers of calculating in early life in several places throughout the country, and became known as the "Calculating Boy." Afterwards he became acquainted with George Stephenson, whom he assisted in passing railway bills through parliament. He was one of the engineers of the Blackwall Railway, and of several other lines, and a promoter of the Telegraph Company at its establishment. He was elected F.R.S., and was president of the Institute of Civil Engineers for 1860-1.

Biddlecombe, SIR GEORGE (b. 1807, d. 1878), naval surveyor, began life in the merchant service, but having passed into the navy was employed in surveying various coasts, especially of Spain, Africa, and South America. In the *Actæon* he navigated and surveyed a group of islands discovered by himself in the Pacific. He afterwards surveyed the anchorages in the Eastern Mediterranean and the Bay of Acre, before the bombardment. As master of the Baltic fleet in 1854, he surveyed the anchorage of Sveaborg and the coast of Bomarsund. In 1855 he was appointed assistant master-attendant at Keyham Yard, Devonport, and was knighted in 1873. He was the author of several technical works, such as *The Art of Rigging*, and *Steam Fleet Tactics*.

Bilderdyk, WILLEM (b. 1756, d. 1831), a celebrated Dutch poet, born at Amsterdam, studied at Leyden, applying himself to almost every branch of learning and science with equal ardour and success. In 1795, at the time of the invasion of Holland by the French, Bilderdyk, who had been practising as a lawyer at the Hague, found himself very much hated by the *Patriots* on account of the attachment he had always shown towards the House of Orange. He was obliged to quit Holland, and spent many years in exile, chiefly in England and Germany, gaining a precarious livelihood by teaching, and enduring many hardships, which warped his whole nature. In 1806, on his return to Amsterdam, he was chosen by King Louis Bonaparte as his teacher of the Dutch language, and elected one of the members of the Institute lately founded at Amsterdam. After the abdication of this monarch Bilderdyk's misfortunes were again renewed; his

numerous writings had not realised money enough to provide for his daily wants; a professorship at the University of Leyden, for which he had applied, was refused him; and in addition to all this he lost his second wife, Catherina Wilhelmina, a very gifted lady. To mention all Bilderdyk's works would be no easy task: he has left upwards of ninety volumes, including his original poems, translations from no less than two hundred poets of ancient and modern times, and treatises upon science, philosophy, and philology. His most celebrated epic poem, *The Destruction of the First World*, he unfortunately left unfinished; in his poem, *Maladies of Literary Men*, he describes in a witty and humorous style the troubles of those who toil with their pen and brain. He writes, particularly in his latter years, in a bitter and sarcastic vein. His translations are full of genius and brilliancy, with much of the grace and freedom of original writings. His version of Oesian was made from the original Gaelic text, and not, as was generally the case, from the English of Macpherson. Bilderdyk has been called the Samuel Johnson of Dutch literature.

Lives, in Dutch, by Van Walré, and Da Costa; *Fraser's Magazine*, vol. I.

Billault, AUGUSTE ADOLPHE MARIE (b. 1805, d. 1863), was French politician and jurist. Elected to the Chamber of Deputies in 1837, he distinguished himself by the zeal with which he applied himself to remedy the defective state of the internal communication of France. During the revolution of 1848 he voted with the Republican party, but in 1851 he gave his adhesion to the policy of Napoleon, and became president of the legislative body. He held the office of Minister of the Interior from 1854 to 1858, and was appointed Minister of State in June, 1863, but died in October of the same year.

Biot, JEAN BAPTISTE (b. 1774, d. 1862), a French mathematician and physicist, was a native of Paris, and entered the artillery soon after leaving school; but abandoning a military for a civil life, he was appointed professor of mathematics in the College of Beauvais. By the influence of Laplace he was recalled to Paris as professor of physics, and three years later—in 1803—was elected a member of the Academy of Sciences. His future work was, to a great extent, undertaken in co-partnership with Arago (q.v.), or with Gay-Lussac. His labours in measuring an arc of the meridian in Spain being finished, he was occupied during the years 1817–18 in measuring the length of the pendulum's seconds along an arc extending to the northern isles of Shetland. The rest of his life was spent in investigating almost every branch of physical science, though optics, and mainly the polarisation of light, claimed most of his attention.

These researches are contained in a great number of memoirs, selections of which were reprinted in 1858; and in his *Traité Élémentaire d'Astronomie Physique*, 6 vols.; *Traité de Physique*, 4 vols.; *Recherches sur l'Ancienne Astronomie Chinoise*; *Études sur l'Astronomie Indienne*; and *Précis Élémentaire de Physique Experimentale*, 3 vols. Biot attained most of the honours open to the man of science. He was a member of the Academy, and of the Academy of Inscriptions and Belles-Lettres, and of many of the foreign societies. In 1840 he was voted the Rumford medal by the Royal Society of London, and as early as 1814 received from the hands of Napoleon I. the Legion of Honour—an honour the more remarkable since it was solely through him that the Institute voted against making the First Consul Emperor in 1804.

* **Birch**, CHARLES BELL, R.A. (b. 1832), sculptor, is the only surviving son of the late Jonathan Birch, translator of *Faust* and the *Nibelungen Lied*. In 1844 he went to study at the Somerset House School of Design, but in 1845, the King of Prussia having offered his father a residence in Berlin, Charles at once became a student of the Royal Academy there. He remained at the Berlin Academy till 1852. On his return to England, Mr. Birch passed through the schools of the Royal Academy. He then entered the studio of the late J. H. Foley, R.A., as assistant. In 1864 he carried off, with his *Wood Nymph*, the £600 prize given by the Art Union of London for the best original piece of sculpture. Amongst Mr. Birch's ideal creations are:—*The Good Samaritan*, *Marguerite with the Jewel Casket*, *Ruth, Retaliation*, and *The Wounded Trumpeter*, the last being a distinct advance, and an admirable example of the possibility of expressing rapid motion in colossal bronze. It was followed up in the following year (1880) by *Lieutenant Hamilton, V.C.*, as he stood at bay before the Cabul Residency (Sept. 3rd, 1879). In this year Mr. Birch was elected an Associate of the Royal Academy, where he exhibited a fine *Lady Godiva* in 1884. In portraiture Mr. Birch has, until recent years, chiefly confined himself to busts; but in 1881 he exhibited a fine full-length statue of the *Maharajah of Bultrampore* in the Academy, and his colossal figure of *Lord Beaconsfield*, now adorning Liverpool, is full of life and regulated force. Mr. Birch was created a full Academician in 1881.

Birch, SAMUEL, LL.D. (b. 1813, d. 1885), son of a rector of St. Mary Woolnoth, London, was born in London, and educated at Greenwich, Blackheath, and Merchant Taylors' Schools. He was employed by the Commissioners of Public Records in 1834, and in 1836 entered the Department of An-

tiquities in the British Museum, without first securing the training supplied by a university curriculum. On the disintegration of the department in 1861, when it was resolved into the separate departments of Greek and Roman Antiquities, Coins and Medals, Mediæval Antiquities, and Oriental Antiquities, the last fell to Dr. Birch's share, and of this he was the keeper for twenty-five years. His chief works are his philological contributions to the fifth volume of Bunsen's *Egypt's Place in Universal History*; *Gallery of Antiquities* (1842); *Introduction to the Study of Hieroglyphics* (1857); *History of Ancient Pottery* (1858); *Select Hieratic Papyri* (1844); *Catalogue of the Egyptian Antiquities at Alnwick Castle* (1880); and he was also editor of Wilkinson's *Ancient Egyptians*, Ebers' *Egypt*, and the useful series entitled *Records of the Past*. As a hieroglyphic scholar, Dr. Birch stood in the first rank, but he laboured under the disadvantage of never having visited Egypt, and was thus deprived of the added knowledge which is gained by a study of the monuments *in situ*. Dr. Birch's active and useful labours, however, in the Society of Biblical Archaeology and elsewhere must not be and have not been forgotten. He was a correspondent of the *Institute of France*, hon. LL.D. of Cambridge and St. Andrews, hon. D.C.L. of Oxford (where he was also hon. fellow of Queen's College); and he was honoured by various foreign societies, and received the Order of the Crown from the German Emperor. He was an excellent president of the Oriental Congress of London in 1874, and Reid lecturer at Cambridge in 1876.

* **Birdwood, Sir George Christopher** Molesworth, M.D., C.S.I., eldest son of the late General Christopher Birdwood, was born in 1832 at Belgaum, Bombay, educated at Plymouth New Grammar School, took his M.D. at the University of Edinburgh, and was appointed to the Bombay branch of the Indian Medical Service in 1854; representing the fourth generation of his family that was connected with the East India Company. He served in various posts, and was present at the siege and capture of Mohammarah, in the Persian Gulf, in 1856, for which he received the Persian War medal and clasp. In 1857 he became acting-professor of anatomy and physiology (and later of botany and materia medica) at the Grant Medical College, and was also curator of the Government Museum at Bombay. To his initiative was due in that city the establishment of the Victoria and Albert Museum, and he was then sent, at the desire of the Bombay merchants, as special commissioner to the Paris Exhibition of 1867. His numerous services were recognised by his election as Sheriff of Bombay in 1864; as registrar of the Bombay University, and secretary to the Asiatic Society,

into which he put new life and energy, but he was compelled by permanently broken health to leave India in 1868. Since his return to England, where he holds the post of special assistant in the revenue and commerce department of the India Office, Dr. Birdwood has devoted himself chiefly to the organisation of the India Museum, and the history and description of Indian arts, of which he published an admirable handbook (in the series of South Kensington Museum Art Handbooks) in 1880, based on his earlier guide to the Indian courts at the Paris Exhibition of 1878; and the French Government acknowledged the value of the work by the ribbon of the Legion of Honour. He was for some time editor of the *Bombay Saturday Review*, and has always been an active and graphic contributor to the press. Among his special studies botany has held a favourite place, and no one knows the economic vegetable products of India better than he, as is shown by his admirable *Catalogue of the Economic Products of the Presidency of Bombay* (1862), which went to a second edition in 1868. He is also the identifier of the frankincense trees, which he described in his paper *On the Genus Boswellia* (Linn. Soc. Trans., 1869). But Sir G. Birdwood's work has not been confined to purely scientific and artistic research, or the exercise of the various functions connected with his profession. He has a name in Western India which he values above all scientific renown—a name for his goodwill and sympathy towards the natives. The opium traffic was among the subjects upon which he took a prominent position, and his letters to the *Times* in 1881 and 1882 did much to revolutionise public opinion on this matter. He was knighted in 1881, after being decorated with the Companionship of the Star of India on the occasion of the proclamation, in 1877, of the Queen's title of Empress of India.

Birkbeck, George (b. 1776, d. 1841), an English physician and philanthropist, was a native of Yorkshire. He evinced as a boy a strong inclination for mechanical pursuits, but his friends having decided that he should embrace the medical profession, he graduated in 1799 as Doctor of Medicine. In the same year he was appointed to the Chair of natural philosophy at the Andersonian Institution of Glasgow. His success with working men there in courses of gratuitous lectures induced him, on his removal to London in 1804, to project a mechanics' institute. After much disappointment, he succeeded, with the aid of Bentham, Wilkie, and Cobbett, in founding the Mechanics' Institute in Chancery Lane, which he endowed with £3,700. He was appointed its director, and held that office until his death. The idea has been carried out with marked success in most of our large

towns. A new wing of the "Birkbeck Institution," as it is generally called, was opened in 1883, and entirely new buildings in the summer of 1885.

H. Clutterbuck, *A Brief Memoir of Dr. Birkbeck.*

Birks, THE REV. THOMAS RAWSON (b. 1810, d. 1883), theologian and ethical philosopher, graduated as second wrangler in 1834, and having been appointed to the rectory of Kelshall, Herts, took a prominent part in the Evangelical movement, being one of the secretaries to the Alliance from 1850 to 1871. In 1865 he was appointed vicar of Holy Trinity, Cambridge, was theological examiner and select preacher, and in 1872 was appointed Knightbridge professor of moral theology, casuistical divinity, and moral philosophy. His theological works are extremely numerous, and though decidedly Evangelical in their tendency, are marked by great candour of mind, and sympathetic knowledge of opposite theories and beliefs. We may mention *Modern Rationalism, The Bible and Modern Thought, The Difficulties of Belief, and An Essay on the Right Estimation of Manuscript Evidence in the Text of the New Testament.* He also published three important philosophic treatises:—*First Principles of Moral Science, Modern Physical Fatalism, and Modern Utilitarianism*, being a full account of the history of the Utilitarian philosophy during this century, its various phases and contradictions. He also wrote the memoirs of his father-in-law, E. Bickersteth.

Birney, JAMES G. (b. 1792, d. 1857), American philanthropist, began to advocate the abolition of slavery in 1834, liberated his own slaves, and founded an anti-slavery paper called the *Philanthropist* at Cincinnati, but his office was wrecked and the press thrown into the river. In 1836 he became secretary to the American Anti-Slavery Society, and was one of the chief organisers of the "Liberty party," by whom he was nominated as candidate for the Presidency in 1840. He attacked the American Churches as "the bulwarks of American slavery."

* **Bischoff,** THEODOR LUDWIG WILHELM VON (b. 1807), a German anatomist and physiologist, son of an eminent physician and professor, was born in Hanover. He studied in Düsseldorf, Heidelberg, Bonn, and Berlin, receiving his Doctor's degree from the University of Bonn in 1832. He continued his studies of anatomy and physiology under Ehrenberg and Johann Müller; in 1836 became professor of comparative and pathological anatomy, and in 1843 of physiology, at Bonn, and in 1844 of anatomy at Giessen, where he founded a physiological institute and an anatomical museum. In 1855 he accepted the Chair of human anatomy and physiology at Munich. In the trial of Count Görlich, in 1850, he demonstrated the im-

possibility of spontaneous combustion. His most important work on embryology is concerned with the periodic ripening and detachment of the ova in the mammalia independently of generation. His papers are, for the most part, the records of his own laborious observations, and are valuable either as records of facts or as milestones in the history of embryology.

Bishop, SIR HENRY ROWLEY (b. 1786, d. 1855), English composer, born in London, received his musical instruction from Francesco Bianchi, and early showed a talent for composition of dramatic music. He had written some short pieces for Drury Lane and other theatres, when his *Circassian Bride* was received with much applause in 1809; but on the following night the theatre was burnt and the score destroyed. In 1810 Bishop was engaged at Covent Garden as composer and musical director for a period of three years, and afterwards of five, and during the first year he produced *The Knight of Snowdon*, a version of *The Lady of the Lake*, one of his best-known pieces. The period was also marked by *The Virgin of the Sun, The Renegade, The Miller and his Men*, and other operettas. In 1817, *Guy Mannering*, a joint work with Whittaker, and *The Slave* appeared. These were followed by *The Law of Java, Clari*, in which occurs the familiar air of *Home, Sweet Home*, and *Maid Marian*. In 1825 Bishop accepted an engagement at Drury Lane, and in the following year produced his carefully composed but unsuccessful opera of *Aladdin*, in rivalry to Weber's *Oberon*, recently performed at Covent Garden. His last dramatic composition was *The Fortunate Isles*, produced in 1840 by Madame Vestris at Covent Garden in honour of the Queen's wedding. He was knighted in 1842, and in 1848 was appointed professor of music in Oxford, on the death of Dr. Crotch. He wrote one sacred cantata, called *The Seventh Day* (1833) and an oratorio, *The Fallen Angel*, which has never been performed. The works of his that will really live and be remembered are his glees and songs, such as *Bid me discourse, Should he upbraid*, and *My pretty Jane*.

Grove's Dictionary of Music and Musicians.

* **Bismarck,** OTTO EDWARD LEOPOLD, PRINCE VON (b. April 1st, 1815), is the son of Karl Wilhelm von Bismarck, a member of an old Prussian family long settled in Pomerania and the Mark of Brandenburg, and of Louisa Wilhelmina von Menken. Bismarck was born at his father's estate of Schönhausen. To distinguish himself from other branches of his numerous family, he called himself (after 1845) "Bismarck-Schönhausen." In 1821 he was sent to school at the Plamann Academy in Berlin, and in 1827 entered the Frederick William Gymnasium. In the spring of 1832 he went to the University of Göttingen, where it was intended that he should study

jurisprudence. But neither at school nor at the university did he display much aptitude for any study but that of history. For the rest, he was chiefly remarkable in these early years for his good temper, his delight in amusements of all kinds, and his physical strength and courage. It is recorded of him that in three "semesters" at Göttingen he fought and conquered in seven-and-twenty duels. In 1835 he entered the public service as "auscultator" at Berlin, and in the following year obtained a small appointment (that of "referendarius") in the civil administration of the Aix-la-Chapelle district. In 1837 he was transferred to Potsdam. In the beginning of 1839 he was called upon to take the management of his father's Pomeranian estates. He passed some years in the congenial situation of a country gentleman, and enjoyed himself thoroughly in all the sports and pleasures of Prussian junkerdom. He shot, hunted, drank mightily, and organised practical jokes. He became known in the neighbourhood as "the mad Bismarck," and when in the summer of 1846 he sought the hand of Johanna von Puttkammer, a young lady of good family, beauty, and accomplishments, to whom he was greatly attached, he met with much opposition. The lady's parents objected to the mad Bismarck as a son-in-law; but their objections were overcome, and in July, 1847, the marriage was celebrated. Previous to this (in 1845) Bismarck had come into possession, by his father's death, of Schönhausen, which now became his favourite residence. In the early part of 1847 he was elected a member of the newly constituted Prussian Landtag. He had been suspected of some leaning towards "liberalismus" in earlier years; but he speedily came into prominence as an opponent of the Parliamentary Liberals, who were seeking to transform the Prussian monarchy into a strictly constitutional régime. The Berlin Revolution of February, 1848, awoke in Bismarck sentiments of extreme indignation; and during the remaining months of this eventful year he was one of the most active leaders of the Conservative party, which was seeking by means of the press, public meetings, and representations to the king, to oppose the further progress of the revolutionists. In 1849 he took his seat in the parliament summoned by the king on the dissolution of the "National Assembly" of 1848. The boldness with which he denounced the "rebels," and the ability he displayed in supporting the crown in the struggle with the Liberals, soon made him one of the most conspicuous figures in Prussian politics. In his view the contest was one between the principles of order and disorder—a contest which was not to be decided by debates and majorities. "Sooner or later the God of Battles must cast the die." The principles which Bismarck enounced at this stage of his career are substantially those which have guided him

throughout. Prussia was to be strengthened and purified by good administration conducted on the traditional lines of religion and military discipline. The centre of the State was the Hohenzollern monarchy, which represented the people more truly than a newly invented and artificial parliament. The royal prerogative must therefore be held intact. A free and united Germany, under the presidency of the great German State, Prussia, instead of the half alien and wholly anomalous Empire of Austria, was Bismarck's ideal. The feeble and cumbrous confederation was to be dissolved; an end put to the constant interference of foreign States in German affairs; and Germany was to be placed in such a military and commercial position that it could be thoroughly independent. Holding these opinions, he was altogether opposed to the projects for reconstructing the German Constitution brought forward in the Frankfurt Assembly of 1849, and the so-called "German" parliament of 1850; seeing in them nothing but an attempt to deprive Prussia of her rightful position among the Germanic States. In the second session of the Prussian Landtag (Nov. 20th, 1850–May 9th, 1851) he was recognised as the leader of the Conservatives. At its close he was appointed Prussian Minister Plenipotentiary in the Frankfurt Diet. Here he showed himself the firm opponent of Austrian pretensions. But a brief experience at Frankfurt convinced him that little was to be hoped for under the existing constitution. Already he perceived that the malady of his country could be healed only "by fire and sword." The tedium of his post at Frankfurt was interrupted by diplomatic missions to Vienna and Pesth (1852), to some of the South German courts, and (1855) to the Emperor Napoleon at Paris. In January, 1859, he was appointed ambassador at St. Petersburg. Here he remained three years, and ingratiated himself with many leading personages in Prussian society. In May, 1862, he went to Paris as ambassador; from which post he was recalled in September to become Prussian minister-president and chief adviser to King William II. Both as regards domestic and foreign affairs, his position at first was one of extreme difficulty. At home he found himself engaged in constant conflict with the Liberal majority (*Fortschrittpartei*) of the Landtag, bent as it was on developing the constitutional system, and assuming control over the military budget, which Bismarck was determined to retain in the hands of the crown. Abroad he found himself menaced by Austria, which was striving to obtain the hegemony of Germany, and by the Emperor Napoleon, whose eyes were fixed on Belgium and the Rhine provinces. The skilful diplomacy by which he averted the latter dangers was unknown to the public; and his open defiance of the parliamentary majority made him ex-

trremely unpopular in Prussia. The tide began to turn when he brought the Schleswig-Holstein question (1863-4) to a successful conclusion. By extraordinary firmness and adroit diplomacy he succeeded in excluding the interference of neutral powers, and in securing the Duchies for Germany. After the Danes had been driven from these States, he asserted that they must be annexed to Prussia, and refused to allow the creation of a new semi-independent principality on the northern frontier of the kingdom. The dispute with Austria over this question became so violent, that it was plain it must eventually end in war. Bismarck's greatest anxiety during this period was to secure the neutrality of France, without buying it by the cession of German territory. In this he was completely successful, chiefly owing to Napoleon's mistaken belief that the war would end in the humiliation and defeat of Prussia. On May 7th, 1866, an attempt was made on Bismarck's life by a youth named Lionel Cohen, who hoped to avert the coming struggle in Germany by the assassination of the unpopular minister. Bismarck escaped with a trifling wound. On June 14th, the Federal Council, by a majority of nine votes to six, declared war against Prussia. Among the States which supported Austria were Hanover, Saxony, and Hesse. Within the next few days the three States were overrun and disarmed by Prussia. Before the end of June the Prussian armies had crossed into Bohemia; and on the third of the following month the Austrians were beaten in one of the decisive battles of the world—that of Sadowa or Königgratz. Bismarck was by King William's side throughout the combat. At its close the resistance of Austria was over; but all Bismarck's diplomatic skill was required to prevent the fruits of victory being snatched from his grasp by the Emperor Napoleon. After prolonged conferences at Nikolsburg, the definite treaty of peace was concluded at Prague (Aug., 1866). By this treaty the German Bund was dissolved, a North German confederation, under the presidency of Prussia, was erected, and Hanover, Schleswig-Holstein, Hesse, and a large part of Saxony, were annexed to Prussia. The supremacy of Austria in Germany was at an end, and that of Prussia established. The war of 1866 left Bismarck the most popular man (after the king) in Prussia. He still had his difficulties with the Parliament; for the Liberals and the Radicals continued their efforts to establish a constitutional régime on the English model, and Bismarck was equally determined not to weaken the position of the crown or to resign its control over the military organisation. He knew well that a greater conflict than that of 1866 lay before the country. In 1867 he became Chancellor of the North German Confederation. For three years he was engaged in preparing for the

struggle with France, which, as he foresaw, was inevitable. Deeply mortified by the results of the Sadowa campaign and the Nikolsburg conferences, and knowing that his position in France was becoming daily more uncertain, Napoleon was only awaiting an opportunity to attack Prussia, relying on the assistance of Austria, or at least of the South German States. After ineffectual attempts to make a *casse belli* of the Luxemburg question, and even of that of the St. Gothard Railway, Louis Napoleon found one in the candidature of Prince Leopold of Hohenzollern for the throne of Spain. In Berlin there was little reluctance towards a war, for which Prussia was infinitely better prepared than France; but Bismarck's astute diplomacy put Napoleon III. completely in the wrong, and compelled him to force on hostilities by a series of insults to the Prussian nation and its popular sovereign. The wanton and apparently unprovoked aggression of the French Emperor roused the spirit of the whole German people, and Bavaria and Wurtemberg entered into the war with alacrity. A master-stroke of Bismarck's policy diverted the sympathy of the neutral powers, and especially that of England, from the French. On July 25th he published in the *Times* a draft treaty drawn up by the French Ambassador, Benedetti (q.v.), according to which Prussia and France were to arrange for the annexation of Belgium by the latter Power. Bismarck had received the draft in Benedetti's handwriting as far back as 1867, but had adroitly contrived to avoid committing himself to a decisive reply. The effect on European and English public opinion was instantaneous. On July 19th Bismarck announced in the Reichstag that France had declared war. On July 31st Bismarck left Berlin with the king and the headquarters staff of the German army. He was present in the earlier battles of the eventful campaign that followed. On the night of Sept. 2nd he arranged with the Emperor Napoleon the preliminaries which led to the capitulation of Sedan. In October he moved with the king to Versailles, and took up his quarters in a house in the Rue de Provence, whence he directed the foreign policy of the Federation, and received and repulsed the attempts of the French Provisional Government to make peace on easy terms, and the efforts of neutral States at mediation. Meanwhile he was busily employed in transforming the North German Bund into the German Empire. On Jan. 18th, 1871, the great work of his life was accomplished. At noon on that day, the assembled German princes, with the King of Bavaria at their head, acclaimed King William as "Deutsche Kaiser," and the Chancellor read the solemn proclamation which the Emperor addressed to the united peoples of Germany. Ten days later, after several conferences between Bismarck and the

French foreign minister, Jules Favre, a truce was concluded, and the Parisian forts were handed over to the Prussians. On Feb. 21st the negotiations were resumed by M. Thiers on the part of France; and on the 26th the French statesman was forced to agree to the hard conditions laid down by the conquerors. These included the cession of Alsace and German-Lorraine, and the payment of a war indemnity of five milliards of francs. On the first day of the following month Bismarck accompanied the German detachment which marched into Paris. On the 21st he was created a prince. He had already (Jan. 19th) been nominated the first Chancellor of the reconstituted Empire. On May 10th he signed the definitive treaty with France at Frankfurt. On June 16th, arrayed in the uniform of his regiment, the Magdeburg Cuirassiers, he rode in the grand procession which celebrated the return of the victorious troops to Berlin. On either side of him rode Count von Moltke and the War Minister, Von Roon; and close behind them came the Emperor William. Since the Franco-Prussian War Prince Bismarck has held a position almost unique among European statesmen. He has been the controlling force in international politics, and the arbiter of peace and war. His chief aim has been to avoid the conflicts between the great Powers which have more than once threatened, and to preserve the peace of Europe. With this object he exerted himself to prevent war between England and Russia, which seemed likely to arise out of the events in the Balkan Peninsula in 1877. It was chiefly through his efforts that the great Congress of Berlin (June, 1878) for the settlement of the Eastern question was held, and brought to a satisfactory conclusion by the treaty which settled, for the time at least, the relations of the States of South-Eastern Europe to Turkey and each other. In the summer of 1879 Prince Bismarck held prolonged conferences with Count Andrassy, the Austrian Foreign Minister, the result of which has been the establishment of a close and intimate alliance between the two great States of Central Europe. Subsequently Russia has been admitted to a partial share in the friendship of the allies. Since 1883 he has striven to improve the relations between the victor and vanquished in the war of 1870. A guarded support has been given to France in her conflict with England over the Egyptian question; and in the London conference of 1884 the French and German representatives acted together in bringing the negotiations to an abrupt conclusion. The long-standing friendship between England and Germany has been slightly weakened of late years; and the efforts of Prince Bismarck to found German colonies in Africa and the far East brought him into somewhat unpleasant collision with this country in 1884 and 1885. In the summer of the latter year the attempted

German occupation of the Caroline Islands caused a slight quarrel between the Governments of Berlin and Madrid. At home, Bismarck's supremacy has hardly been disputed since the war. He has been recognised as the one man indispensable to the successful conduct of German politics. The condition of parties in the Reichstag, in which no single section has yet obtained a commanding majority, has hindered the successful working of the parliamentary system, and prevented the establishment of the principle of ministerial responsibility. Allying himself now with one and now with another group, the Chancellor has partly succeeded in carrying out a programme of economic and financial reform, too elaborate to be reproduced here. A contest with the Papacy has occupied much of his attention. On July 18th, 1870, the dogma of Papal Infallibility was proclaimed by Pius IX. As one of its results the Prussian bishops were brought into collision with the State. In 1871 a new code of laws for the regulation of the Catholic Church in Prussia [FALK] was promulgated, and in 1872 the Jesuits were expelled the kingdom. The bishops who refused obedience to the laws were driven from their sees, fined, or imprisoned. The Vatican responded by urging the Prussian Catholics to persist in their defiance. In June, 1872, Bismarck ordered all relations with the Papacy to be suspended. One result of the conflict was the creation of a strong clerical party in the Reichstag, which has generally strengthened the opposition against the Chancellor. In July, 1874, a Catholic fanatic named Kuhlmann made an unsuccessful attempt on the life of Prince Bismarck. On the accession of Pope Leo XIII., attempts at conciliation were made on both sides. A compromise on the question of the Ecclesiastical Laws was arrived at in March, 1880, and two years later diplomatic intercourse with the Papacy was resumed. The activity of Prince Bismarck in home affairs has been largely directed to economic questions. The Social Democratic propaganda, which grew to formidable proportions between 1871 and 1878, were met by him in the latter year with severe repressive legislation. At the same time he has attempted to remove social discontent partly by protectionist measures intended to foster native industry, and partly by State Socialistic Legislation for the benefit of the working classes. In 1884 he succeeded, after prolonged opposition, in passing a law providing for the compulsory insurance of artisans and labourers. Concerning the wisdom of this domestic legislation there is much difference of opinion, even in Germany. But the general verdict of the German people on the career of Prince Bismarck is unanimous. The national demonstration with which his seventieth birthday was celebrated in April, 1885, was a striking testimony to the gratitude and admiration

which his genius, patriotism, and unequalled services have aroused in the minds of his countrymen.

Busch; trans. of the foregoing, entitled, Our Chancellor, by Wm. Beatty-Kingston; Bismarck und Seine Leute, by M. Busch, 1879; W. Goerlach, Prince Bismarck (trans. by Miss M. E. von Glehn); Hahn, Fürst Bismarck; J. Klaczko, Deux Chanceliers; G. Quade, Fürst Bismarck und die Nationale Bewegung; J. G. L. Heseckel, Bismarck (trans. by K. R. H. Mackenzie, New York, 1877); Lowe, Prince Bismarck: an Historical Biography (1885). [S. J. L.]

* **Björnson**, BJÖRNSTJERNE (b. 1832), the first national Norwegian poet, is the son of a Lutheran clergyman, and was born in the parish of Quickne, in Northern Norway. He was sent to the State Gymnasium at Molde, and after several years of unprofitable study, was admitted to the University. His first literary effort was an historical drama entitled *Valborg*, but conscious of its imperfections, he withdrew it from the Royal theatre, where it had been accepted. In 1856 his mind received a great impulse from the International Students' Reunion at Upsala, which widened his intellectual horizon. He resolved to create a national drama, free from Danish and French influences, and a national literature. His first effort was *Synnöve Solbakken* ("Synnöve Sunny-Hill"), an idyllic story of peasant life, an entirely new departure, for two reasons: first, in that it reproduced for the first time that part of the national life which had remained uncorrupted by foreign influences, as it really existed; and secondly, because its style, compressed to the verge of obscurity, was a half-conscious reproduction of the old Sagas, a revolt against modern facility. It has been translated into English under the title of *Love and Life in Norway*, and was followed in 1858 by *Arne*, perhaps his most popular story. Others are *Ovind*, *The Fisher Maiden*, *The Happy Boy*, *The Newly Married Couple*, *Giuseppe Monsana*, and the *Bridal March*, all of which have been translated into English. In 1858 he assumed the directorship of the theatre at Bergen, and made his *début* as a dramatist with two plays, *Mellem Slagene* ("Between the Battles") and *Halte Hulda* ("Limping Hulda"), both—like all his subsequent plays, with the exception of *Marie Stuart*—on national subjects. His masterpiece is *Sigurd Slenbe* ("Sigurd the Bastard"). In it, as in his other plays, the central problem is the intensifying of life under a grand thought: it aims at no graces of dialogue, and should be seen rather than read. Björnson has attempted to counteract the prevailing taste for French comedies and opera-bouffes by publishing *Folk Plays* on national subjects. He is, besides, a lyric poet

of great excellence, and has written an epic, *Arnjot Gelline*, full of faults of construction, but instinct with graceful sensibility. His later works, e.g. the novel *Magubeld*, show a tendency to be over-didactic; and, although in receipt of a pension from the Government, he is a zealous preacher of Republicanism. Björnson has also suffered opprobrium on account of his theological tenets, and has, for these two reasons, thought it desirable to live abroad.

See an admirable article by Borjesen in *Scribner's Monthly*, vol. xx.

Black, ADAM (b. 1784, d. 1874), publisher, the son of a builder, was born and educated in Edinburgh, the city with which his name became intimately connected. By judgment and perseverance he raised himself to a high position as a bookseller and publisher. He was the originator of the *Encyclopædia Britannica*, and after the failure of the Constable firm, the *Edinburgh Review* passed into his hands. He also purchased the copyright of the *Waterley Novels*, all the later editions of which were issued by his firm. In politics he was a strong Liberal, and having been twice Lord Provost of the city, was returned as member for Edinburgh on Macaulay's retirement in 1856, continuing to sit for nearly ten years, during which he advocated all the advanced Liberal theories, especially complete religious toleration and equality.

A. Nicholson, *Memoirs of Adam Black*.

* **Black**, WILLIAM (b. 1841), novelist, is a native of Glasgow. He is said to have had no regular education, but he has never been found deficient in such scholarship as his walk in literature requires. His early ambition was to become a landscape painter, and with this end in view he studied two years at the Government School of Art in Glasgow. "As an artist," he says, "I was a complete failure, and so qualified myself for a time in after-life as art critic." Amusing stories of his beginnings in art criticism he has more than once told against himself. There can hardly be a doubt that if Mr. Black lacked the technical dexterity required for success in the pictorial arts, he was not at all wanting in the feeling for nature which alone suffices to lift the landscape painter above the rank of a mere painter of the portrait of a scene. Nature he knows in most of her many changeable moods, whether on the sea or on the moor, in the wood or on the hills. His descriptive writing has rarely been excelled for picturesqueness and fidelity, though these very qualities have sometimes made a sensible deduction from the vigour and directness of his dramatic narratives. His first novel was *Love or Marriage*, in 1867. In 1868 he published *In Silk Attire*, and in 1871 the first of his successes appeared in *A Daughter of Ethel*. Two years later two of his best as well as most popular novels appeared, *The Strange*

Adventures of a Phaeton, and A Princess of Thule. Since then he has produced many volumes, the best known among them being *Macleod of Dare, Sunrise, Shandon Bells, and Madcap Violet.* Mr. Black's knowledge and love of the Highlands of Scotland is perhaps the distinguishing feature of his work. As to this, it is told of Carlyle that in the course of conversation with Mr. Black he observed, "Ay, ay, ye ken our Scotland weel, but tell me, mon, when are ye gaun to do some wark?" A vein of sweetness and idyllic purity runs through Mr. Black's writing. He brings us the scent of the heather in his primitive characters as well as in his landscape. Little of the dust and noise of the great cities finds place in his healthy creations. He touches few or none of the "problems of life," and hence, in the view of serious critics, he has done but little "wark." Not conspicuous in invention, not strong in incident and situation, not subtle in analysis, he is nevertheless a novelist of distinct mark. Picturesqueness, purity, and humour, with powers of close observation, are his good gifts, and with these he finds his way to the hearts of a large circle of delighted readers. Mr. Black was for four years assistant editor of the *Daily News*, but he has finally renounced journalism.

* **Blackburn, THE RIGHT HON. COLIN, BARON** (b. 1813), barrister and legal authority, was educated at Eton, and at Trinity College, Cambridge, where he graduated as a high wrangler. He was called to the bar in 1838, and conducted the reports in the Court of Queen's Bench, in conjunction with Mr. Ellis, for about eight years, and published a work of high authority, *On Sales.* In 1859 he was made a puisne judge of Queen's Bench, and in 1876 was appointed Lord of Appeal, and created a peer for life.

Black Hawk (b. circa 1768, d. 1838), a celebrated Red-Indian chief, made war against the United States in 1832, and was completely defeated by General Atkinson at the river Bad Axe. Black Hawk, his two sons, and seven other leading chiefs were taken and detained as hostages, being confined for nearly a year in Fortress Monroe before they were allowed to return to their own tribe. Mr. J. B. Paterson has published an account of the life of Black Hawk, as related by himself.

* **Blackie, JOHN STUART, LL.D.** (b. 1809), professor of classics and miscellaneous writer, the son of an Aberdeen banker, was educated at Aberdeen and Edinburgh, and spent two years (1829-30) in Germany and Italy. In 1834 he published a metrical translation of Goethe's *Faust*, and, although called to the Scottish bar in the same year, he gave his best attention to literary work. In 1841-52 he occupied the Chair of Humanity

in Marischal College, Aberdeen, and in 1852-82 the Chair of Greek in Edinburgh University. In 1850 he published a metrical translation of *Æschylus*, and in 1852 an essay on the *Pronunciation of Greek, Accent and Quantity.* Having visited Greece in 1853, he urged, on his return, the study of modern Greek. Numerous classical works followed:—*Songs and Legends of Ancient Greece* (1857); a *Discourse on Beauty, with an Exposition of the Theory of Beauty according to Plato* appended (1858); *Homer and the Iliad*, in 4 vols., including a translation of the *Iliad* in ballad measure, critical dissertations, and philological and archæological notes (1866); *Horæ Hellenicæ*, essays and discussions on important points of Greek philology and antiquity (1874). Professor Blackie also wrote largely on points of moral, religious, and political philosophy:—*The Wise Men of Greece*, being dramatic dialogues on ancient Greek philosophy from Thales to Plato (1877); *Four Phases of Morals*, as represented by Socrates, Aristotle, Christianity, and Utilitarianism; *The Natural History of Atheism*, a defence of theism against modern atheistic and agnostic tendencies (1877); *Songs of Religion and Life* (1876); *Lay Sermons* (1881). In 1877, in *Self-Culture, Intellectual, Physical, and Moral*, he addressed practical advice to young men, which has been circulated all over the world. Professor Blackie has always displayed a keen interest in the great questions of his time. He took an active part in the agitation for University Reform, which issued in the Parliamentary Commission of 1858, and in procuring the abolition of the Test Act, which required the professors of the Scottish University to be members of the Established Church—a matter that had caused him not a little personal trouble on his own appointments. He has also been a warm politician, especially in the discussions preceding the Reform Act of 1867, and of late he has advocated the cause of the Crofters. His sympathy with the joyous side of student life was manifested in the publication of *Musa Burschicosa* in 1869. In 1870 he issued *War Songs of the Germans*, with historical sketches, in which he supported the Germans against the French with characteristic ardour; and in 1883 *The Wisdom of Goethe.* His enthusiasm for the Highlands has been unbounded. He published *Lays of the Highlands and Islands* (1872); *The Language and Literature of the Highlands of Scotland* (1875); *Altarona; or, Fact and Fiction from my Life in the Highlands* (1882). By his advocacy he raised in a few years £12,000 for the foundation of a Celtic Chair in Edinburgh University (1882).

* **Blackmore, RICHARD DODDRIDGE** (b. 1825), eminent as a novelist, and also known as a poet and scholar, is the son of a Berkshire clergyman, and descended on the mother's side from Dr. Doddridge. He was

educated at Tiverton School, and afterwards at Exeter College, Oxford, where he graduated B.A. in 1847. He was called to the bar at Middle Temple in 1852, and practised for a short time. His first notable appearance as an author was in 1860, when he published a poem on *The Fate of Franklin*. Two years later he produced translations of the first and second Georgics of Virgil. In 1864 he made his earliest appearance in that walk of literature which he was afterwards so conspicuously to adorn. *Clara Vaughan* (1864) was followed by *Craddock Nowel* (1866), *Lorna Doone* (1869), *Eréma* (1874), *Cripps the Carrier* (1876), *Christowell* (1882), and *Tommy Upmore* (1884). Mr. Blackmore's other novels are only less popular than these. Without striking a vein of singular originality, Mr. Blackmore has secured for himself a distinct place in fiction. Towards his remarkable success his great naturalness of delineation must have largely contributed. With the hot-house fiction that has really very little to do with actual life, Mr. Blackmore's works have nothing in common. Pages of *Cripps the Carrier* and *Lorna Doone* may be fittingly described as sheer slices out of life, so real are they, so full of knowledge of men and the world. The success of *Lorna Doone* has probably been as great as that of any novel produced in the second half of the century. Yet there is the curious fact that the first edition of the book fell flat. A lucky accident drew attention to it at a moment when it might have fallen out of sight, at least for a time, and the result was the speedy publication of many successive editions. The novel deserves all its good fortune; it does honour to English fiction. Simple in its heroic characters, clear in its story, noble in its aim, it is a fine story finely told. Some of Mr. Blackmore's subsequent novels have not been favourably received, *Tommy Upmore* being censured on all hands. It must not be forgotten that prominent among Mr. Blackmore's qualifications for delineation of rustic character is his masterly power of handling the Devonshire dialect.

* **Blackwell, ELIZABETH** (b. 1821), physician, was born in Bristol, but her family removed in 1832 to the United States, where she supported them after the father's death by teaching, at the same time studying medicine at Charleston, and afterwards at Philadelphia. After being refused admission at several medical schools, she matriculated at New York, and graduated in 1849, being the first woman to whom a degree was granted in America. She afterwards visited the Maternité Hospital in Paris, and St. Bartholomew's in London, and in 1851 established herself in New York as a physician, founding an infirmary for women and children a few years later. She published *The Laws of Life* in 1852, and a work on the *Moral Education of Children* in 1879.

Blackwood, JOHN, publisher (b. 1818, d. 1879), was a son of William Blackwood (q.v.), and a native of Edinburgh. On the death of his brother Alexander, who, after his father, became the editor of *Blackwood*, and left the impress of his literary ability and taste on the magazine, John became the conductor of *Blackwood*, which for thirty-three years he managed with distinguished success. Under his editorship the magazine more than maintained its previous reputation, and his fine literary taste and high culture secured for him the contributions of many of the leading writers, whom his genial disposition united with him in lasting friendship. A remarkable example of his literary instinct was his discovery of George Eliot's genius in *Scenes of Clerical Life*, and his introduction of her to the world was not the least remarkable incident of his editorship.

Blackwood, WILLIAM (b. 1776, d. 1834), publisher, was first led by his boyish devotion to literature to become a bookseller. He was soon distinguished by his knowledge of classical and antiquarian works, and he issued a catalogue which is still prized as the most complete list of Scottish historical and antiquarian books. In 1816 he gave up bookselling to become a publisher; and in the following year projected and issued the magazine which made his name so well known, and which, by his exertions and the aid of the distinguished band of writers who gathered round him—notably John Lockhart and "Christopher North"—speedily took a foremost place in periodical literature.

* **Blades, WILLIAM** (b. 1824), a well-known London printer, is the author of *The Life of William Caxton* (1861-3), a work which established the study of early English printing on a sure basis for the first time. Mr. Blades is a great authority upon the history of printing and palæotypography, and has contributed numerous articles upon these subjects to different periodicals. He edited *The Gouvernaille of Helike*, and has published another work entitled *The Enemies of Books* (1880).

* **Blaine, JAMES GILLESPIE** (b. 1830), American politician, after being educated at Washington College, was for a time professor of mathematics in Kentucky, but having removed to Augusta, in Maine, became a journalist, and edited the *Kennebec Journal* in 1854 and the *Portland Daily Advertiser* in 1857. Turning his attention to politics, he organised the Republican party in Maine, and in 1862 was elected a representative in Congress, and continued to be re-elected till 1876, when he was appointed Senator from Maine, having been Speaker of the House of Representatives from 1869 to 1874. In 1876 he was a candidate for the Republican nomination for the Presidency, but was defeated by Mr. Hayes; and again in 1880 he was

defeated by Mr. Garfield. In 1881 he became Secretary of State, till President Garfield's death, and distinguished himself by the threatening, "spread-eagle" tone of his despatches against England and Chili. In 1884 he again offered himself for nomination to the Republican National Convention at Chicago, and was nominated, but at the cost of his party's final defeat. As soon as his nomination was known, a large body of Republicans, under the name of Independent Republicans, "Bolters," or "Mugwumps," passed over to the support of Mr. Cleveland and the Democratic party, refusing to vote for a candidate whose past history, according to their representation, was stained by peculation and political corruption, especially in the matter of the "Mulligan Letters," now first brought to light. Nevertheless it was greatly to the general surprise that the Democratic party succeeded in carrying the election for the first time for more than twenty years, though General Butler tried to effect a "split" in Mr. Blaine's favour, and the majority was small. The result was declared by his opponents of both parties to be a defeat of jobbery and public dishonesty, but this is a matter of opinion. Mr. Blaine is said to be the original of Silas P. Ratcliffe in the novel *Democracy*.

Blake, WILLIAM (b. 1757, d. 1827), the seer, most genuinely spiritual of artists and poets, was the son of a respectable London hosier, dwelling over his shop near Golden Square. The course of his life in this world was uneventful, and is easily traced; for, as his wife used to complain, he was always away in paradise. From 1800 to 1803 he took a cottage at Felpham, near Bognor, to be close to his condescending patron, Hayley, the reputed poet. With the exception of this short break, Blake appears to have lived uninterruptedly in various dingy quarters of the west-central district of London, so entirely engrossed in his work that for two years, it is said, he never left his room, except to fetch his porter. For the rest, his external life was only marked by his dealings with dishonest booksellers such as Cromek, serviceable patrons such as Mr. Butts; by his friendships with a few fellow-artists, and in later years, admirers; and by his marriage, in 1782, with Catherine Sophia Boucher, the faithful wife, who learnt from him to colour his designs, and to design with her own hand so that sometimes her work is hardly distinguishable from his. Of education in the ordinary sense of the word Blake received little indeed. It is true that he studied the elements and technicalities of engraving under Basire, from whom he derived something of the fearless outline and stern magnificence of his own method. He also taught himself sufficient Latin, a certain amount of Greek, and when over sixty learnt enough Italian to study Dante for his designs to the *Divine*

Comedy. But his true education came to him from the corners and shafts of Westminster Abbey, from earnest though heretical study of the Bible, from the early poets of England, and the few genuine specimens of early Italian and German art that fell in his way; from Macpherson's *Ossian*, to him a doubtful advantage; from Lavater, from cabalistic writings, perhaps of Paracelsus; and from the mystic utterances of Jacob Böhme, and, above all, of Swedenborg. Apart from the inestimable intrinsic value of much of his work that will now never fail of honour, Blake's victorious rebellion against the false ideals of nearly two centuries is his claim to high place in the history of art and of thought; and even in the lesser and more definite spheres of political, social, and religious reformation, Blake was among the prophets and leaders of the future. He was amongst the very first to proclaim that, in his own words, "the wretched state of the arts originates in the wretched state of political science (which is the science of sciences)." Blake's first recorded vision appeared to him at the early age of four. He never for a moment asserted or believed the material existence of these visions. They had no kinship with the vulgar spirits of spiritualism. In the realm of vision he wrote much of his poetry and composed many of his designs, especially in the prophetic books. They are written dreams, the reflection of visions uncontrolled by will. In most cases the first editions of his poems and prophetic books were prepared and published literally by his own hand, the text being engraved equally with the design that acts as music to the words. Sometimes the pages are printed off in a uniform tint, black or blue or rich brown. More often they were illuminated by his own hand with the colours of the spring and the rainbow, of fairyland, and hell-fire. The designs seldom illustrate the words in the ordinary way of illustrated books, but, like the highest music, aim not at imitation, but at raising kindred emotions with the poem. The following is a list of his most important works, in their order:—*Poetical Sketches*, by W. B. (1783), containing such songs as *My silks and fine array, I love the jocund dance*, and *How sweet I roamed from field to field*; *Songs of Innocence* (1789), deservedly the best known of all his works, and the most perfectly right in form; *The Book of Thiel* (1789), the first and most comprehensible of the prophetic books; *The Marriage of Heaven and Hell* (1790), including the profoundly humorous *Proverbs of Hell*, and curiously foreshadowing in imaginative poetry Schopenhauer's system of the union of *Wille and Vorstellung*; *Ideas of Good and Evil*, poems of no fixed date, collected by D. G. Rossetti from a MS. note-book; *Visions of the Daughters of Albion*; and *America* (1793), the latter containing the highest designs of all

the Prophetic Books: *Songs of Experience* (1794), being sad antiphones to the *Songs of Innocence*, inferior to them, but only to them, and having the *Tiger* in their number; *Europe* (1794), containing the best design of Blake's favourite conception, *The Ancient of Days*; *The Song of Los* (1795); the five hundred and thirty-seven designs to Young's *Night Thoughts*, only forty-three of which have been published (1796); *Jerusalem* (published 1804, but written at Felpham); *Milton* (1804); the great series of designs to Blair's *Grave* (1804-5); the picture of Chaucer's *Canterbury Pilgrims* (1807); *Inventions to the Book of Job* (published 1826), the masterpiece of his genius, culminating in the design of the Sons of God singing together. Blake was engaged on designs for Dante's *Inferno* when he died at 3, Fountain Court, Strand.

The Life of William Blake, written by Alexander Gilchrist (q.v.), and edited after his death by his widow and the two Rossettis, is likely to remain the highest authority on all connected with Blake, excepting only the Prophetic Books, the secrets of which have been revealed by Mr. Swinburne in his *Critical Essay on Blake*. Mr. W. M. Rossetti's introduction to his edition of *Blake's Lyrical Poems* is also of high value.

[H. W. N.]

Blakey, ROBERT (b. 1795, d. 1878), philosopher and angler, born at Morpeth, Northumberland, devoted his life to the study of philosophy in many branches, but especially of logic and metaphysics. His most important works are a *History of Moral Science* (1833), highly spoken of by Sir W. Hamilton; *The History of the Philosophy of Mind* (1848), being an account of all metaphysical writers and their works from the earliest times—a work of fine arrangement and wide learning, but inevitably rendered superficial by the vastness of its scope; and a *History of Political Literature* (1855). In 1835 he was appointed professor of logic and metaphysics in Belfast. He also wrote several books of good authority on angling, such as *The Rivers of England and Wales*. He was created Doctor of Philosophy by the University of Jena, in recognition of his philosophic researches.

Blanc, AUGUSTE ALEXANDRE PHILIPPE CHARLES (b. 1813, d. 1882), art critic, elder brother of Louis Blanc, began life as an engraver, but soon turned to journalism and art literature. After the revolution of 1848 he was appointed Director of Fine Arts, and held the position till 1852. In 1859 he became editor of the *Gazette des Beaux Arts*, and in the revolution of 1870 was again appointed Director of Fine Arts, in which capacity he introduced several reforms into the Salons; but, being denounced by the Conservatives, he shared the fall of M. Thiers in 1873. In 1876 he was elected member of the Academy. Out of his numerous works on art we may mention: *Les Trésors de l'Art à Manchester* (1857), *Grammaire des Arts du Dessin* (1867), and *Voyage de la Haute-*

Égypte, with observations on Egyptian and Arabian art.

Blanc, JEAN JOSEPH LOUIS, always known as LOUIS BLANC (b. 1811, d. 1882), French revolutionist and historian, was born at Madrid, and, on his mother's side, sprang from a Corsican family. At the fall of the Empire the Blanc family returned to France, and, after being educated at the College of Rodez, Louis found himself, in 1830, obliged to support himself by giving mathematical lessons in Paris. In 1832 he went to Arras for two years as private tutor, and there first began to discover his literary power. Returning to Paris, he succeeded, after several disappointments, in obtaining work on the *National*, in which he published his essay on the Eighteenth Century, to prove the superiority of Rousseau to Voltaire as a man and a friend of the people. He also joined the staff of the *Revue Republicaine* till its suppression in 1835, after which he edited the *Bons Sens*, and two years later founded the *Revue du Progrès Politique, Social et Littéraire*. It was in the columns of this paper that he first attracted general notice by the articles afterwards published under the title, *Organisation du Travail*. The work was an eloquent assault upon the laws of competition, individualism, and all the other catchwords of the modern industrial school. In many ways it is a French forerunner of Marx's *Kapital*, though, being an appeal or suggestion, rather than a theory, it makes no pretence to scientific form. It may, however, be regarded as one of the very earliest definite manifestoes of State Socialism as opposed to individual organisation. Louis Blanc was also one of the first to recognise that the mere right to get on if one could, which had been gained by the first revolution, too often meant merely the right to starve. The book has become the storehouse of Socialistic phrase. A short time before the completion of this work Louis Blanc was the victim of the celebrated murderous assault of which his brother had a distinct presentiment, though at the time far distant from the spot. The incident, which suggested to Dumas the plot of the *Corsican Brothers*, was probably due to political enmity aroused by his pamphlet on *Idées Napoléoniennes* (1839). In 1841 he took the Republican world of Paris by storm with his *Histoire de dix Ans* (namely, from 1831 to 1840). It was not a history, but an indictment. It shook the monarchy of July. Every fact that would tell against Louis Philippe and his ministers was sorted out, skilfully grouped, and animated with eloquence. After this Louis Blanc began his *Histoire de la Révolution Française*, the two first volumes of which were published in 1847. But the work was interrupted by the events of the following February. His immense popularity among the working classes at once secured Louis Blanc a place in the Provisional Government. Some expected

that he would at once save society by his organisation of labour, but he contented himself with proposing universal suffrage, abolishing slavery and capital punishment for political crimes, and causing himself to be appointed president of a Government commission for labourers, which held its sittings in the Luxembourg. Here the little man of dwarfish stature and dainty habit, his child-like face glowing with enthusiasm, was listened to by throngs of the working classes of every grade—excited almost past reason by his magnificent, though melodramatic, eloquence. In the middle of March a procession of 200,000 workmen, organised by Blanqui, offered him the Dictatorship in the name of the proletariat and socialism. He refused; but his popularity raised the apprehension of his colleagues and of all owners of property. He was also, perhaps—even then, as so constantly since—identified with the establishment of the National Workshops (*ateliers*), which offered two francs a day to workmen in their employ, and one franc to all who were willing for work but could find none. After four months' trial, the workshops, being found a failure and a public nuisance, were abolished by Cavaignac; but, though the idea was probably derived from Louis Blanc's works, it is certain that he protested against their method, and with Victor Hugo demanded their abolition. Though elected a representative for Paris, his influence was at an end. In the struggle of May between the Communists and the Assembly he was distrusted by both parties, narrowly escaped death, was accused before the Assembly in June for complicity in the outbreak, and again in August, and, being condemned by a large majority on the latter occasion, he fled to Belgium, and thence to England, where he continued to live for more than twenty years. During his exile he was occupied chiefly on his *Histoire de la Révolution Française* (1852–1862), his *Histoire de la Révolution de 1848* (1870) and a large correspondence to the French press, especially to the *Temps*, on English affairs, afterwards collected as *Lettres sur l'Angleterre*. But when, in 1870, he returned to Paris, he was still what Victor Hugo called him, "an apostle of the ideal." Present during the siege, he continued to urge the citizens to unity and to vigorous prosecution of the war to the uttermost. After the capitulation he opposed M. Thiers, and condemned the conclusion of peace with loss of territory. Till the time of his death he was re-elected Deputy for Paris at every election, always voted with the extreme Left, resolutely opposed every attempt to tamper with the Republic, and generally exerted his eloquence on the side of extreme toleration, as in 1879, when he proposed in the Second Chamber the general amnesty brought forward in the Senate by Victor Hugo.

C. Edmond, Louis Blanc.

[H. W. N.]

***Blanchard, EDWARD LAMAN** (b. 1820), journalist and dramatist, has been engaged in literature of several branches from a very early age. Outside the ordinary walks of journalism, his work may be divided into descriptive guides, of which he has published several to various visiting-places of England and Wales; novels, such as *Temple Bar*, and *A Man Without a Destiny*; and dramas, especially the pantomimes at Drury Lane, the texts of which he supplied for several years in succession. Since 1863 he has been on the staff of the *Daily Telegraph*.

Blanchet, ALEXANDRE LOUIS PAUL (b. 1819, d. 1867), French specialist on the treatment of the deaf and dumb, devoted himself almost entirely to the study of the organs of sense, and, having induced the Government not to abandon the hope of educating the deaf and dumb and the blind, was appointed Surgeon-in-Chief to the Institution for Deaf Mutes in 1846. He was the author of several works on this subject, such as *La Musique employée chez le Sourd-muet au développement de l'Appareil vocal et de l'Audition*; *Sur la Théorie des Ondes Sonores*, and treatises on the system of education for deaf mutes and the blind.

Blanqui, JÉRÔME ADOLPHE (b. 1798, d. 1854), political economist, born at Nice, studied economy under T. B. Say, and in 1833 was appointed as his successor at the Conservatory of Arts and Trades in Paris. His greatest work was the *History of Political Economy in Europe from the Ancients to the Present Time* (1837). He also wrote a *Summary of the History of Commerce and Industry*, and a *Journey to England* (1824). He was the brother of the revolutionist.

Blanqui, LOUIS AUGUSTE (b. 1805; d. Jan. 1st, 1881), French revolutionist, born at Nice, studied law and medicine in Paris, where he early became implicated in the revolutionary secret societies, and was wounded at the barricade in the outbreak of the Rue St. Denis, in 1827. Three years later, he was decorated for his services in the revolution of July. During the next few years he was engaged in several minor conspiracies, and about 1835 suffered the first of his thirty-seven years of imprisonment. In 1837 he was again in prison for the illegal manufacture of gunpowder, but was released by the amnesty. Having with the help of Barbès and others organised the societies of the *Saisons* and the *Montagnards*, he was captured after the attempted revolution of May, 1839, and condemned to death, but his sentence having been commuted to imprisonment for life, he was subjected to brutal treatment in the dungeons of Mount St. Michel, and had only just been removed to Tours, when the revolution of 1848 set him again at liberty. Hastening to Paris he soon became the most prominent leader of the Socialistic party that opposed

the Provisional Government. In March he organised the demonstration of 200,000 workmen in support of Louis Blanc; in April he led another popular movement, frustrated by Ledru Rollin, and in May headed the mob that burst into the Chamber to demand the restoration of Poland. A fortnight after he was tried for his share in the communistic movements and sentenced to ten years' imprisonment. Released by the amnesty of 1859, he became again engaged in a secret conspiracy, and in 1861 was once more sentenced for four years, but transferred to a hospital. Early in the war of 1870 he founded his paper of *La Patrie en Danger*, advocating the establishment of communal government, secularisation of churches, community of property, and other kindred measures. After the news of the fall of Metz, he became one of the prime movers in the conspiracy against the Government of Defence that culminated in the outbreak of Oct. 31. Though arrested next day he succeeded in making his escape, and continued his paper till December, when it failed for want of funds. On the capitulation he quitted Paris, but was returned as member of the Commune in March, being at that time under sentence of death by default. Arrested by order of M. Thiers during his absence from Paris, whilst the power of the Commune was at its height, he was imprisoned for four months on the coast of Brittany, and at length brought to trial at Versailles. The trial began in February, 1872, and though Blanqui conducted his defence with great skill and resolution, he was sentenced to imprisonment for life. Saved by ill-health from transportation to New Caledonia, he was finally confined at Clairvaux, and about this time published his fantastic speculations on *Eternité dans les Astres*. During his imprisonment his name was often proposed to the electors of Paris and Marseilles, but without success, though there was a strong feeling against the Government amongst Radical sections for his exclusion from the amnesty. At length in 1879 he was returned by a division of Bordeaux, but the election was annulled, and though released from prison a short time afterwards he was still ineligible for the Chamber, and was in fact defeated on a second attempt in Bordeaux. Though his power and voice had failed, and his influence belonged to the past, he still continued to agitate for his ideal, and it was on leaving a Socialist meeting that he was seized by the apoplexy that three days later left him dead in the obscure and lonely lodgings where the typical revolutionist of this century's movement for the redemption of the Fourth Estate had hidden even from his friends.

L. Combes, *Portraits Révolutionnaires*.

Bleek, WILHELM (d. 1875), philologist, of German origin, and cousin to Professor

Haeckel, began to apply himself to the study of South African languages about the year 1848, and had published two German works on their comparative philology, when, in 1854, he sought an opportunity of visiting the most primitive nations, by accompanying an English expedition to Jehadda and the Niger, but was obliged to turn back from ill-health. Next year he accompanied Colenso to Natal, and was with him eighteen months, when he went to Cape Town, where Sir George Grey had begun his celebrated ethnological collections. On Sir George's removal to New Zealand, in 1861, Dr. Bleek was appointed keeper of the Grey Library, and continued his investigations of the human races most nearly allied to the apes in language and expression. His most important works are: *The Languages of Western and Southern Africa* (1856); *The Library of Sir George Grey* (1858-59); *Reynard the Fox in South Africa*; *Hottentot Fables and Tales* (1864); and *A Comparative Grammar of South African Languages*; *Phonology* (1862.)

Haeckel's Preface to Bleek, *Ueber den Ursprung der Sprache* (1868.)

Blessington, MARGARET, COUNTESS OF (b. 1789, d. 1849), novelist and writer, was the author of *The Idler in France*, *The Idler in Italy*, *Conversations with Lord Byron*, *Victims of Society*, *The Lottery of Life*, etc. Lady Blessington's novels are essentially *romans de société*, and she describes with grace and truth the characters of the men and women of the world in which she moved. Her books show much keenness of observation, and have a vein of quiet satire; she does not aim at any startling originality of plot, nor attempt to describe the deeper and more stormy passions of human nature. Lady Blessington was an intimate friend of Lord Byron, who has addressed several poems to her, and in his *Diary and Letters*, alludes often to her charms both of mind and person. Her house at Kensington Gate was the constant resort of the distinguished men of every country. She was twice married, being left a widow for the second time by the death of Lord Blessington in 1829.

Bligh, WILLIAM (b. 1753, d. 1817), English naval officer, was commander of the ship *Bounty*. During a voyage to Jamaica the crew mutinied, and turned their captain and eighteen other men adrift upon a launch (1789). They reached the island of Timor, after three months of terrible suffering, and landed in England in the following year. Bligh's *Narrative of the Mutiny on Board H.M.S. Bounty* excited much interest at the time of its publication, and was the origin of Lord Byron's *Island*. He was afterwards appointed Governor of New South Wales, but continued in office only two years, being sent back to England on account of his tyrannical government.

* **Blind, KARL** (b. 1826), German revolutionist and journalist, born at Mannheim, began to circulate revolutionary propaganda and organise revolutionary societies whilst still a student at Heidelberg and Bonn. In 1847 he underwent a short imprisonment for a pamphlet entitled *German Hunger and German Princes*, but the case was not allowed to come to trial. In 1848 he played a prominent part in the revolutionary movements in several of the Rhenish towns, beginning with Karlsruhe, where he was arrested for high treason, but liberated owing to the popular success. After making eloquent speeches at Frankfurt, and being wounded in street riots, he was proscribed for his share in Hecker's rising, and took refuge in Alsace, whence he was sent in chains to Switzerland by General Cavaignac, on the false charge of participation in the Paris Insurrection of June. He next co-operated with Struve in organising the second revolution of the Black Forest, but after fighting on the barricades at Staufen, was captured and sentenced to eight years' imprisonment, narrowly escaping execution. Next year he was liberated by another popular rising, and sent on a diplomatic mission to Louis Napoleon, but was unlawfully arrested, and being banished from France and unable to return to Germany, he retired to Belgium with his wife, who had also suffered in the revolutionary cause. After a time he was forced to remove to England, and has since occupied himself almost entirely in promoting the freedom and unity of the German people, by articles in journals and magazines, pamphlets, biographies of leading Republicans such as Freiligrath, Ledru Rollin, and Deak, works on German legends and mythology such as *Fire-burial among our Germanic Forefathers*, *The Siegfried Tale*, etc., and propaganda of all kinds. In opposition both to anarchists and internationalists, he aims at a national socialism and German unity, and strongly supported the movements of 1864 and 1870, though never relenting in his denunciations of the Emperor, his ministers, and their whole policy. His son-in-law, Lionel Cohen, committed suicide in prison, having been arrested in Berlin for the attempt on Bismarck in May, 1866.

Blomfield, CHARLES JAMES, D.D., Bishop of London (b. 1786, d. 1857), was a native of Bury St. Edmunds, and after a brilliant career at Trinity College, Cambridge, was elected a fellow of that establishment in 1809. During the next few years he published editions of several of the plays of *Æschylus*, and an edition of *Callimachus*, and in conjunction with Monk published the *Post-humous Tracts of Porson* and the *Adversaria Porsoni*, and at the same time worked actively as a parish priest. In 1819 he became rector of St. Botolph's, Bishopsgate, and in 1822

Archdeacon of Colchester. In 1824 he was appointed Bishop of Chester, and in 1828 he was raised to the Bishopric of London, an appointment he resigned in the year before his death. During the later years of his office he was perhaps the most prominent of the English bishops, and devoted himself especially to the extension of the Church in the colonies. He was also extremely energetic in the agitation for the erection of new churches, and under his episcopacy more churches were built in London than under any bishop since the Reformation.

A. Blomfield, *Memoirs of C. J. Blomfield, D.D.*

* **Blomfield, ARTHUR WILLIAM** (b. 1829), architect, the fourth son of Dr. Blomfield, Bishop of London, was born at Fulham Palace, and educated at Rugby, under Dr. Tait, and at Trinity College, Cambridge. As an architect he is well known, as well for the excellence of his restorations as for the originality of his designs. Of his more important undertakings we may mention the following: the church at Privett; St. Saviour's, Oxford Street (1871); the Whitgift Hospital School, Croydon; the new buildings for Shrewsbury School (1881); the chapel at Haileybury College; the restoration of Wilton Road Church; and of St. Peter's, Eaton Square, which is justly regarded as his masterpiece.

Blücher, GERHARD LEBERRECHT VON, Field-Marshal of Prussia (b. at Rostock, in Sweden, 1742, d. 1819), entered the Swedish service in 1756, and eventually that of Prussia, but, dissatisfied with it, he retired to Silesia, where he became a farmer. He rejoined the army, as major in the Black Hussars, on the accession of Frederick William III., and after being present in many general actions, became major-general in 1793. He commanded the cavalry at the action of Jena, in 1802, and made a brilliant retreat with the remains of his force to Lübeck, where he surrendered from want of provisions and ammunition. On being exchanged, he was again employed at Berlin and Königsberg. Blücher was profoundly moved by the uprising of Spain against Napoleon. "What those Spaniards can do" he wrote, "we can do," and set himself to work with Scharnhorst to reform the Prussian military system. When hostilities recommenced in 1813, he obtained the independent command of the army in Silesia. He defeated Marshal Macdonald at the Katzbach, on Aug. 26th, 1813, commanded the centre at Leipzig, and directed the pursuit of the French until they crossed the Rhine, and fought through the campaign of 1814. He was more than once out-generalled by Napoleon, but was not slow to profit by the Emperor's great blunder in leaving open the road to Paris. He entered the capital in command of the right of the allied armies,

and was with difficulty prevented from retaliating on the French by blowing up the bridge of Jena. The story of his looking down upon London from the dome of St. Paul's, and sighing, "It would make good plunder," is fairly authentic. In 1815 he commanded the Prussian army in chief, and formed with it the left of the allied cantonments along the Sambre, when Napoleon advanced from Paris. He fought a stubborn action at Ligny on the 16th June, and retreated in good order to Wavre, whence, leaving a rear guard to detain and check Grouchy, who was sent in pursuit, he moved to the assistance of Wellington at Waterloo. His troops were in presence of the French at an early hour in the day, but the bulk of the Prussian army did not debouch from Fricheumont until late in the afternoon, when they developed their entire strength on the right and right rear of the enemy. Nevertheless, his untiring energy throughout the day had detained the mass of the French reserves to keep his gradually increasing strength back, and at the crucial moment of the battle and his advance, compelled the rout of the enemy. Blücher met Wellington at the Maison du Roi, a farm on the Genappes road, and continued the pursuit of the French to the Sambre. He again entered Paris with the allied armies, but soon retired to his Silesian estate at Kirschowitz, where he died in 1819. He had been created Prince of Wahlstadt for his services. "Marshal Forwards" was not himself a great tactician; he won his victories, as he said, by his own rashness, the prudence of his staff, and by the grace of God. For the rest, he was a man of rough-hewn integrity, faithful in her darkest hour to the country of his adoption.

There are *Lives* of Blücher by Forster, Pixton, Varnhagen von Ense, and W. Burckhardt. See also C. A. Fyffe, *Modern Europe*, Vol. I. [C. C. K.]

Blumenbach, JOHANN FRIEDRICH (b. 1752, d. 1840), a German ethnologist, was born at Gotha. His love of science is said to have been kindled, at the age of ten, by the sight of a human skeleton in the house of a physician, the friend of his father. He obtained his degree of Doctor of Medicine at Göttingen in 1775, and next year was appointed assistant professor of medicine, and keeper of the cabinet of natural history, and, in 1778, full professor. Blumenbach became extensively known through his *Handbuch der vergleichenden Anatomie und Physiologie* (which has been translated into English and other languages), and was the first to place comparative anatomy on a truly scientific base. He made a wonderfully complete collection of human skulls, which was purchased before his death by the Government, and is now in the Museum of Göttingen. The ethnological division of mankind into five races was first proposed by him, and among his more im-

portant works is the *Collectio Craniorum*, fully illustrated. Blumenbach counted among his pupils Hufeland and the two Humboldts. He was made physician to the royal family of Hanover in 1816, and in 1821 Knight Commander of the Guelphic Order.

C. F. Marx, *Zum Andenken an J. F. Blumenbach*.

***Blumenthal, JACOB** (b. 1829), the celebrated pianist, a pupil of Herz, came to London in 1848, and was appointed pianist to the Queen, and soon obtained a large and influential connection as a teacher of music. He has composed a great number of brilliant and pretty drawing-room pieces, and many songs, among which *The Message*; *My Queen*; and *The Requital*, have attained wide popularity. His pianoforte trio Op. 26, composed for one of his annual concerts in London, is perhaps his greatest work, showing more depth of musical feeling than is generally to be met with in his compositions.

***Blumenthal, LEONARD VON** (b. 1810), Prussian general, born at Schwedt-on-Oder, was educated from childhood in the Prussian military schools, and having served in the Rhine Provinces, joined the topographical division of the general staff in 1846. Having taken part in repressing the Berlin riots of 1848, he was, in the following year, elevated to the rank of captain in the general staff, and as such, served with great distinction in the Schleswig-Holstein campaign, and at the end of the war was sent on two special missions to England in 1850, an office for which he was again chosen on several other occasions, as in 1861, when he accompanied General von Bonin. Meantime, he had risen to the rank of colonel, and on the outbreak of the Danish war in 1863, was appointed chief of the general staff, and in the following year created major-general, for his splendid services in the war, especially at Missunde, and the celebrated passage to the island of Alsens. During the Austrian war he was chief of the general staff of the Second Army, under command of the Crown Prince, and was decorated with the "Oak Leaf" for his services at Sadowa, and during the manoeuvres that followed. During the Franco-German war he was again chief of the general staff under the Crown Prince, now in command of the Third Army, and contributed largely to the victory of Sedan, and to the successful investment of Paris and the operations against the army of the Loire. In 1871 he came to England as German representative to witness the manoeuvres at Cobham. He is in command of the Fourth Army Corps at Magdeburg.

Böckh, AUGUST (b. 1785, d. 1867), a distinguished archaeologist and philologist, was born at Karlsruhe. He studied at Halle under the celebrated Wolf, Schleiermacher, and others, and was appointed, in 1811,

professor of eloquence and the Greek language in the University of Berlin. Böckh's lectures and written works marked a new era in the history of archaeology and philology; his aim was to reproduce, by these studies, the whole social and political condition of the peoples of the past, and to breathe life into the dry bones. His edition of Pindar shows deep learning and careful research; Greek metres interested him especially, and after spending the day examining manuscripts he would sit at the piano till late at night working out the musical rhythm of the Pindaric lines. His work on the *Political Economy of the Athenians* ranks in its kind as high as Winckelmann's *History of Ancient Art*. He wrote besides *Metrological Investigations Concerning the Weights, Coins, and Measures of Antiquity*; *Dissertation on the Silver Mines of Laurium in Attica*, and many other treatises. His *Corpus Inscriptionum Græcarum* he left unfinished.

***Böcklin**, ARNOLD (b. 1827), Swiss artist, born at Basel, began first to study art in Düsseldorf, 1846, but escaping from the sentimentality of the Düsseldorf school, went for a time to Belgium and next to Paris, where he was present during the revolution of 1848, the events of which perhaps increased in him a natural tendency to the strange and horrible. After a short sojourn at Basel, he reached Rome in 1850, and for some years continued to study the nature of Italian landscape as well as the masters of antiquity, but was at length driven back to Germany by want. About 1857 he was introduced by Paul Heyse to Count Schack, in whose gallery at Munich some of the best of Böcklin's work is now to be seen. In 1858 he was summoned to Weimar as one of the directors of the School of Art, and during this period he produced the *Castle by the Sea*, *Surprised by Pirates*, and *Diana's Chase*, now in Basel. In 1861 he returned to Rome, and though in many ways this was the time of his highest productivity, he so alarmed the self-complacency of the public by his originality and occasional extravagance, that his increasing reputation for genius again could not save him from destitution. Commissioned to paint the frescoes in the museum at Basel, he returned to his native city, but only to find fresh disappointment and ignorant opposition. During this period he produced his great picture of the murderer, for whom three Furies are lurking at the corner of the bridge by which he must cross. Leaving Basel in 1871 he settled for a time in Munich, where he painted a portrait of himself listening to Death, who plays a viol. In 1876 he again went to Italy, and has resided for some years in Florence. He has undoubtedly the most original and forcible genius that German art of this century has produced. As one of the highest examples of the romantic spirit

playing on classic subject, of tragedy made more terrible by humour, and delight overshadowed by fear and longing, at one time he seems to approach Blake in his poetry of allegory, at another Rossetti, and again he borders on the utmost realism of the modern schools.

For an elaborate criticism of Böcklin's great picture, *Die Gefilde der Seligen*, see Hauck; and for the painter's personal history compare Pecht, *Deutsche Künstler des neunzehnten Jahrhunderts*, vol. ii. [H. W. N.]

Bode, JOHANN ELERT (b. 1747, d. 1826), a distinguished astronomer, was born in Hamburg. At the early age of twenty-one he published his *Introduction to the Knowledge of the Starry Heavens*, and shortly after discovered a comet, the first one having a short period. He is credited with having discovered a law of the planetary system concerning the distances of the planets from each other, called *Bode's Law*. He was invited to Berlin by Frederick the Great, and became a member of the Academy of Science, and the editor of the *Astronomical Annual of Berlin*. Among his chief works is *Uranographia*, or the *Great Celestial Atlas*, in which twelve thousand stars were added to those catalogued previously.

Bodenstedt, FREDERICK MARTIN (b. 1819), poet and author, was born in the kingdom of Hanover. He was destined by his father to commercial pursuits and passed some years in a merchant's office. In 1840, however, he went to Moscow as tutor in the family of Prince Galitzin. He remained about four years with the prince, studying the Russian language and literature, and translating into German the poems of Kaslow, Puschkkin, and Lermontow, which he published in 1843. He subsequently resided as a schoolmaster in Tiflis, and having undertaken extensive travels in Turkey, Greece, and Asia Minor, he wrote an account of his experience in these countries in *A Thousand and One Days in the East* (1850), a book which was received with great enthusiasm, owing much of its popularity to the Oriental songs, which are interwoven with the descriptions of the people and countries of the East. The following year he published his *Songs of Mirza-Schaffy*, which he gave out to be translations, though there can be little doubt that the songs were written, not by the Sage of Tartary, but issued fresh from the heart of the German poet, impregnated with the fire and passion of the East. His translations from the Russian of Puschkkin and Lermontow, and of Shakespeare's sonnets and *King Lear*, are worthy of praise. He has also written some epic poems, *Ada die Leaghierin*, *Andreas und Marfa*, *Der Edelfalke*, and *Nino*, several volumes of lyrical poetry and some novels. Bodenstedt was appointed by King Maximilian II. of Bavaria, professor of the Slav languages and literature in the University of Munich.

* **Bodichon**, BARBARA, water - colour painter (b. 1827), whose maiden name was Leigh Smith, the eldest daughter of the late Benjamin Smith, who was many years M.P. for Norwich, in 1855-6 commenced a movement which ultimately secured to married women their own property and earnings, under the Married Women's Property Act. She also established at Paddington a school for the education of the daughters of artisans of the middle class. In 1857 she married Eugène Bodichon, M.D., Republican and able writer, and removed with him to Algeria, where she resided many years. Madame Bodichon, by her gift of £1,000, was mainly instrumental in founding Girton College, Cambridge. She is best known, however, to the world by her water-colour paintings, which are varied in subject and remarkably bold, and even original in treatment. Her *Cornfield after a Storm* was praised by Mr. Ruskin. Her works have been frequently exhibited both in London and Paris.

* **Boehm**, JOSEPH EDGAR, R.A., sculptor (b. 1834), was born in Vienna, of Hungarian parents. His father was Director of the Austrian Mint. The son's education commenced in Vienna, and was continued in England from 1848 to 1851. Since 1862 he has been settled in England. He carried off the first Imperial prize at Vienna in 1856, and he was elected a member of the Academy of Florence in 1875, and an Associate of the Royal Academy of London in 1878; in 1881 Sculptor in Ordinary to the Queen; and a full Academician in 1882. In the same year he was awarded the gold medal at the Vienna Art Exhibition, and among his numerous works may be mentioned that of the *Queen*, for Windsor Castle (1869), of *John Bunyan* (1872), of *Sir John Burgoyne*, in Waterloo Place (1875). The statue of *Lord John Russell* in Westminster Hall is by him; as are those of the *Princess Alice* at Frogmore, of the *Prince Imperial* in St. George's Chapel, Windsor, and of *Lord Lawrence* in Waterloo Place. In the gardens of the Thames Embankment is his statue of *William Tyndal*; in that of the Chelsea Embankment, his statue of *Thomas Carlyle*. The Devonshire Hero, *Sir Thomas Drake*, was perpetuated by him in 1883, and the monument is erected at Tavistock. He was selected by Government to execute the new equestrian statue of the *Duke of Wellington* for Hyde Park Corner. Their choice was justified by the admirable spirit of Mr. Boehm's equestrian subjects, notably his *St. George* and the *Dragon* in the Academy of 1885.

Bogardus, JAMES (b. 1800, d. 1874), mechanician, born in Catskill, New York, began life as a watchmaker and engraver on metal, and in early manhood invented two new descriptions of clock, but his first really important invention was the "Ring Flyer," for cotton-spinning, in 1828. After this,

various inventions, in almost every department of mechanics, succeeded each other with rapidity. The following may be mentioned: the eccentric mill in 1829; the dry gas-meter, invented in 1832 and greatly improved in 1836; several engraving machines, and machines for transferring bank-note plates, between 1831 and 1840; a machine for pressing glass, and another for cutting india-rubber into fine shreds; a dynamometer for measuring the speed of machines in motion, 1848; and a pyrometer that measures heat with the utmost exactitude. In 1847 he constructed his factory in New York, entirely of iron, this being the first cast-iron building erected in the States.

Bohn, HENRY GEORGE, F.S.A. (d. 1884), bookseller and publisher, was of German extraction. He was early engaged in the book trade, as traveller to his father, whose business he developed. He is chiefly known as the publisher of translations: for instance, those of the classics, few of which are of real merit, of French memoirs, and of old English chronicles. His *Standard Library* consists of one hundred and thirty volumes, and, together with his *Scientific Library*, made accessible many works that were before extremely difficult to obtain. His *Guinea Catalogue* describes 300,000 volumes. Bohn's sincere attempt to popularise the works of established worth of every age has met with much greater success now than his business has passed into other hands than it did at first. He was also the author of some translations from the German, and of a dictionary of quotations and collected works of art.

Boieldieu, FRANÇOIS ADRIEN (b. 1776, d. 1834), French composer, born at Rouen, received his first musical instruction from Broche, the organist of the cathedral. The history of his early life is obscure and uncertain, though it is known that he produced one or two comic operas whilst still in Rouen, besides several of his best ballads and songs, and that he arrived in Paris in or before 1796, in which year he produced his first marked success, a one-act opera entitled, *La Dot de Suzette*. This was followed in 1798 by *Zoraimé et Zulnare*, a still further advance, and in 1800 by *Le Calife de Bagdad*, the crowning effort of this period in his artistic development. It was received with enthusiastic applause, was repeated seven hundred times, and is still occasionally seen in smaller theatres, the overture being also popular in concert programmes. After this the composer is said to have taken a long course of lessons from Cherubini, and his next work, *Ma Tante Aurore* (1803) marks a distinct epoch, not only in the composer's art, but in the history of comic opera. Soon after its production the composer suddenly quitted Paris for St. Petersburg. The following eight years of Russian exile are a blank as far as his art is

concerned. In 1811 he returned to Paris, and in the following year *Jean de Paris*, the second in greatness of all his compositions, saw the light. Its wealth of melody, its humour, and delicacy of tone have secured it a permanent place on the operatic stage. It was followed by a number of minor works, of which *Le Chaperon Rouge* (1818) alone deserves mention; till at length, in 1825, his masterpiece, *La Dame Blanche*, took the musicians and public of Paris by storm. This opera has been called the French *Freischütz*. The plot is founded on a mixture of *The Monastery* and *Guy Rannier*, but all that is Scotch in the music has been adapted to the French ear till it almost escapes recognition. With melancholy resignation the composer recognised that he had in this opera reached the height of his power, and that any further effort could only show decline; and so it proved. His next and last opera, *Les Deux Nuits* (1829), was a failure, partly owing to the dulness of the libretto. He produced no more. The revolution of 1830 deprived him of his pension, and he was only saved from penury by the generous recommendation of M. Thiers. His son, ADRIEN BOIELDIEU (b. 1816), by his second wife, Philis, a singer, was born eleven years before their marriage, and has attained considerable reputation as an operatic composer, though heavily weighted by his father's fame. Of his works may be mentioned *Le Bouquet de l'Infante* (1847), *La Fille Invisible* (1854), and *La Haine du Roi* (1875).

* **Boker**, GEORGE HENRY (b. 1824), American poet, born in Philadelphia, studied law, but early devoted himself to literature, his first published volume being *The Lesson of Life, and other Poems* (1847), followed next year by *Calaynos*, a tragedy treating of the hostility between the Spaniards and Moorish races. Though in blank verse, it was written with a view to the modern stage, and was even produced with some success at Sadler's Wells, in London (1849). A second tragedy of *Anne Boleyn* shortly afterwards was also acted in public. In 1856 he published his collected *Plays and Poems*, containing, besides the above, a tragedy on *Francesca da Rimini*, some comedies, ballads, sonnets, etc. After 1861 he was for ten years secretary to the Union League, Philadelphia, and did much to uphold the cause of union during the Civil War, especially by his volume of *Poems of the War* (1864), containing many of his most justly popular verses. The poems are chiefly rough ballads, recounting various incidents in the war, but they contain also the *Ode to America* (1862), the opening stanza of which is perhaps the truest poetry that the author has written. *Königsmark, and other Poems*, appeared in 1869, and two years later Mr. Boker was sent as minister to Constantinople, but returned to Philadelphia in 1879. In 1882 he published the *Book of the Dead*, an

elegy in a hundred and seven cantos, closely following the manner of Tennyson's *In Memoriam*.

Bolívar, SIMÓN (b. 1783, d. 1830), the "Liberator of South America," was born at Caracas, Venezuela, but spent much of his youth in Madrid, Paris, and other cities of Southern Europe. In 1809 he visited the United States, and on his return to Venezuela attached himself to the party of independence. The war began in 1812 with the advance of the Spanish general, Monteverde, and continued with varying fortune for many years. In 1814 Bolívar was for a time compelled to seek refuge in Jamaica, but in 1819, by a series of skilful manœuvres, and the decisive victory of Boyacá, he obtained possession of Bogotá and all New Granada. In the same year he combined New Granada and Venezuela into one republic of Colombia, and in 1821 he finally broke the power of Spain in these regions by the great victory of Carabobo. He next determined to effect the independence of Peru and Ecuador, and, after an almost uninterrupted series of triumphs, the war of liberation was successfully terminated in 1825, Upper Peru being created a separate Republic under the title of Bolivia. The remaining years of Bolívar's life were embittered by the envious suspicions of theoretic Republicans and others, who had no belief in the possibility of honour and virtue. His position as President of Colombia exposed him to the charge of seeking to establish a tyranny. His ambition was compared to Napoleon's; yet his offer to retire into private life was not accepted. In 1828 the supreme power in Colombia was confirmed to him, and he retained it to the end. Since his death the States that distrusted him have learnt to honour his memory as that of a patriot above corruption, the founder of liberty, and the administrator of justice.

Ducoudray-Holstein, *Mémoires de Bolívar*.

Bonald, LOUIS GABRIEL AMBROISE, VICOMTE DE (b. 1754, d. 1840), politician and social philosopher, began life in the army, but at the outbreak of the revolution retired to Heidelberg, where he published his first important work, *Théorie du Pouvoir Politique et Religieux*, in which his characteristic or reactionary views are so pronounced, that the Directory forbade the sale of the book in France. At the coronation of Napoleon he returned to Paris, and was associated with Châteaubriand in the *Mercur* (1806). In 1802 he had published his only work of permanent importance, the *Législation Primitive*. After enjoying a Government appointment under the Empire, he was returned to the Chamber on the Bourbon restoration, and became a strenuous supporter of the most reactionary proposals of the extreme Right. Created a peer of France, he was deprived of the title at the revolution of 1830,

and retired into private life. His so-called philosophic system, as set forth in numerous works, depending, as it does, on strange theories as to the divine origin and importance of language, and the mystic universality of cause, means, and effect, is rather fantastic than profound.

Bonald, Louis Jacques Maurice de (b. 1787, d. 1870), Cardinal-Archbishop of Lyons, fourth son of the above, was ordained in 1811, and after the Bourbon restoration was employed on a difficult mission to Rome. In 1817 he became Grand Vicar and Archdeacon of Chartres, by nomination of the bishop, and attained a high reputation for eloquence, which in 1823 caused his elevation to the Bishopric of Puy. After holding this position till 1839, he was transferred to the Archbishopric of Lyons, and created Cardinal in 1841. Jealous above all for the rights of the Church, he made her advancement the one leading principle in his numerous polemics and apparent inconsistencies. Having protested vehemently against M. Dupin's *Manual of Ecclesiastical Right*, as subversive of the ancient Church government and true liberties, and having opposed the projected law of secondary education in 1847, he nevertheless was one of the first to welcome the revolution of 1848, ordaining a solemn form of service for the fallen liberators, and instructing his clergy that "the republican flag is the true champion of religion." Immediately afterwards he found himself brought into collision with the Government by Arago's decree for the dissolution of religious communities. After Dec., 1851, he sat in the senate by his right as cardinal.

Bonapartes, THE, the brothers of the great Napoleon, were the children of Carlo Maria Bonaparte (b. 1746, d. 1785), a Corsican lawyer, and adherent of Paoli, and of Letizia Ramolino (b. 1750, d. 1836). The mother was celebrated for her beauty, and shared with her husband the dangers of Paoli's rebellion. Napoleon always paid high honour to her character and elevation of soul. After he became Emperor, she received the title of Madame Mère, and resided at Paris until Waterloo, when she retired to end her days at Rome. Of her children, the following figure prominently in history:—

(1) **JOSEPH** (b. 1768, d. 1844), the eldest son, was educated with his brother Napoleon at Autun, and after studying law at the University of Paris, practised as an advocate in Bastia. Expelled with his family by the ungrateful partisans of Paoli, he emigrated to Marseilles, and there married Julie Clary, the daughter of a merchant. When his brother became general of the army of Italy, Joseph was commissary-general, and in 1797 was sent as ambassador to the Pope. His diplomatic skill, which was very great, was of service in

negotiating the treaties of Luneville in 1801, and of Amiens in 1803. From 1806 and onwards, however, he was compelled by the inexorable ambition of Napoleon to cut a somewhat ludicrous figure, despite sound common sense and generous sympathies. Ordered, much against his will, to accept the throne of Naples, he found himself thwarted at every turn by his brother in his efforts to introduce reforms, and confronted also by numerous insurrections. Joseph was still worse off when, in 1808, he was compelled to accept the throne of Spain. A mere non-entity in the hands of the great marshals, he was opposed to the first really national resistance that the Continent was able to offer to the Napoleonic Empire. Thrice driven from Madrid, he attempted in vain to abdicate, and lingered in Spain until the battle of Vittoria, in 1813, put an end to his phantom royalty. During the great struggle of 1814, he acted as lieutenant-general of the Empire, and when Napoleon, by a false move, allowed the Allies to march upon Paris, it was his painful duty to order Marmont to surrender, and to suffer, in consequence, much opprobrium. He emigrated to America, and lived near Philadelphia for many years, under the title of Count de Survilliers. In 1832 he visited England, and in 1841 went to Florence, where he spent the remainder of his life.

Du Cassé, *Mémoires et Correspondance du Roi Joseph*.

(2) **NAPOLEON**. [NAPOLEON I.]

(3) **LUCIEN** (b. 1775, d. 1840), the ablest of Napoleon's brothers, after the emigration of the family to France, obtained employment in the commissariat at S. Maximin, where he married a poor girl, Christine Boyer. In 1795 he was made commissary to the Army of the North. Elected to the Council of the Five Hundred in 1798, he soon became conspicuous for his abilities, and on the return of Napoleon from Egypt, as president of the Five Hundred, Lucien aided him in the revolution of the 18th Brumaire, which destroyed the Directory. Soon afterwards, however, he fell under Napoleon's displeasure, and was sent into honourable exile as ambassador to Spain. His marriage with the beautiful Mme. Joubertson still further offended the First Consul, and he retired to Italy, where he lived in literary ease. After the peace of Tilsit, Napoleon offered him a kingdom, but he refused, and withdrew from Rome to Canino, where he resided, with the title of Prince of Canino. He embarked for the United States in 1810, was captured during the voyage by an English cruiser, and detained in England until 1814. During the Hundred Days he was reconciled to his brother, and ably assisted him in that last great struggle. It was by his advice that Napoleon abdicated in favour of his son. He passed the remainder of his life in Italy, surrounded by his family. His

great epic, *Charlemagne*, is not of any literary excellence; nevertheless, he was a man of much culture.

Mémoires de Lucien Bonaparte (incomplete); Forchhammer, *Denkrede auf den Fürsten von Canino*.

(4) MARIE ANNE ELISA (b. 1777, d. 1820) married in 1797 Felix Baccioli, a captain in the French army. In 1805 Lucca and Piombino were erected into a principality by Napoleon, and bestowed on Elisa, who administered them with great ability. In 1809 she became Grand-Duchess of Tuscany. She died near Trieste.

(5) LOUIS, the father of Napoleon III. (b. 1778, d. 1846), received a military education, and fought under his brother in the Italian and Egyptian campaigns. In 1802 he was compelled to marry Hortense Beauharnais, the daughter of Josephine, but the union proved extremely unhappy. In 1806 he was forced by the Emperor to assume the title of King of Holland, and made an earnest attempt to rule as a national sovereign. This, of course, brought him into collision with his brother, and his attempts to evade the Continental system, together with a lukewarmness in military support, resulted in a bitter quarrel between the two in 1809, and Louis' temporary imprisonment. In 1810 he abdicated in favour of his eldest son, Napoleon Louis, but the arrangement was disregarded, and Holland was annexed to France. During the remainder of his life he lived chiefly at Rome. The death of his elder son, Napoleon Louis, in 1831, and the ignominious failures of Louis Napoleon's first attempts to grasp the Imperial crown, were severe blows to him. He was the author of several works, among which may be noticed *Documents Historiques et Réflexions sur le Gouvernement de la Hollande*.

Mémoires de la Cour de Louis Napoléon (1848), and Wouters' *Les Bonapartes depuis 1815*, which may be consulted for all the brothers.

(6) MARIE PAULINE (b. 1780, d. 1861) is chiefly memorable as being Napoleon's favourite sister, as sharing his exile at Elba, and offering to join him at St. Helena. She hated the Empress Maria Louisa, and was banished from court in consequence, in 1810. With her husband, Prince Borghese, her relations were not happy. Her beauty was immortalised by the chisel of Canova as *Venus Victrix*.

(7) CAROLINE MARIE ANNONCIADÉ (b. 1782, d. 1839) married Murat in 1800, and shared that adventurer's numerous vicissitudes. [MURAT.]

(8) JÉRÔME (b. 1784, d. 1860) entered the army, and served in the West Indies. The English cruisers making a return to France a hazardous experiment, he went to the United States, and married the beautiful Elizabeth Patterson, the daughter of a Baltimore merchant. Napoleon, in high dudgeon, annulled the marriage, and Jérôme basely put away his wife. In 1806 he was made King of West-

phalia, and married a daughter of the King of Württemberg. During the Russian campaign his want of success brought him under the displeasure of the Emperor; nevertheless, he commanded a division at Waterloo. He resided as an exile at Trieste and Rome until 1847, when he returned to France. In 1850 he became Marshal of France and Governor of the Invalides.

Du Casse, *Mémoires du Roi Jérôme*.

Of the second generation, Napoleon III., the son of Louis, and Prince Napoleon, the son of Jérôme, are treated under NAPOLEON. It remains, therefore, to notice the sons of Lucien.

(1) CHARLES LUCIEN JULES (b. 1803, d. 1857), an eminent naturalist, was born in Paris. In 1822 he married his cousin Zenaïde, the daughter of Joseph, and soon afterwards went to America, where he lived near Philadelphia, and devoted himself to ornithology. His valuable work, *American Ornithology* (1825-33), was complementary to Wilson's monumental work on birds. A fine *Iconografia della Fauna Italica* ("Illustrations of the Italian Fauna"), published 1832-41, added to his reputation. In 1840 he succeeded to his father's title, and after some spasmodic attempts to interfere in politics, notably at Rome in 1848 on behalf of the Republican cause, he settled quietly at Paris. One of his sons, *Lucien (b. 1828), is a cardinal in the Church of Rome.

(2) *LOUIS LUCIEN (b. 1813), also of a studious disposition, made an ineffectual attempt in 1848 to take part in French political life as deputy for Corsica, and after 1852 he sat for some time as a senator. In 1860 he was created Grand Officer of the Legion of Honour. A distinguished philologist, he has amused himself with translating the *Song of Solomon* into various English and Italian dialects, and has studied especially the Basque language. His works are, as a rule, privately printed, and embrace nearly all the European languages. In 1884 he was given a pension from the English Civil List.

(3) PIERRE (b. 1815, d. 1881), the *mauvais sujet* of the family, spent his turbulent career chiefly in Italy, America, and France. The scandals connected with his name were a great source of annoyance to his cousin, Napoleon III., during the last years of the Second Empire. They culminated in the death of a journalist, Victor Noir, in 1870, shot by the prince while the preliminaries of a duel were under discussion. Pierre was acquitted, but ordered to pay a large fine to the Noir family. The rest of his life was spent in England.

See also Bingham's *Marriages of the Bonapartes*. [L. C. S.]

* BOND, EDWARD AUGUSTUS, LL.D. (b. 1815), the principal librarian of the British Museum, the son of a clergyman at Hanwell, was educated partly at home, and afterwards at the Merchant Taylors' School. In 1832 he was appointed to a post under

the Record Commissioners, and in 1838 entered the department of manuscripts in the British Museum, of which he became assistant keeper in 1854, and keeper in 1866. During his twelve years' reign over the MSS., Mr. Bond brought his department into a very high state of efficiency, published numerous catalogues of additions to the collections, designed and partly carried out a class catalogue of the highest utility, and worked his staff with a firm, just hand that educed excellent results. He also, associated with his assistant-keeper, Mr. E. M. Thompson, founded the Palæographical Society, and edited its valuable series of *Facsimiles of Ancient Manuscripts*. Mr. Bond has also edited Giles Fletcher's *Russia* for the Hakluyt Society (1856), the *Speeches in the Trial of Warren Hastings* for the Government (1859-61), and the *Chronica Monasterii de Melsá* for the Rolls Series (1858), and he has contributed various papers to antiquarian societies. His report on the age of the MS. called the *Utrecht Psalter* is a classical authority. In 1878 he was appointed principal librarian of the British Museum, in succession to Mr. J. Winter Jones, and in the following year he was presented with the honorary degree of LL.D. at Cambridge. As principal librarian, Mr. Bond has inaugurated various reforms: opened the closed portions of the Museum, encouraged lectures by outsiders of all kinds, transferred the natural history collections to South Kensington, built new and commodious rooms for the manuscripts, developed the usefulness and convenience of the reading-room, removed the restrictions on "infant" visitors to the Museum, and introduced various changes into the system of promotion and salaries.

Bond, WILLIAM CRANCH (b. 1789, d. 1859), American astronomer, born at Portland, Maine, began life as a watchmaker, but turned his attention to astronomy, after an eclipse in 1806. In 1838 he was appointed by the Government to undertake the astronomical observations in connection with the exploring expedition to the South Seas, under Captain Wilkes. Two years later, he was made director of the observatory at Harvard University. He is chiefly notable for his observations on Saturn, his discovery of a satellite to Neptune, and as being perhaps the very first astronomer to attempt the experiment of celestial photography.

* **Bonheur, ROSA** (b. 1822), French animal painter, is a native of Bordeaux. All the elements of her art she derived from her father, who was a painter of some note. The family came to Paris, and as her art-nature developed itself she was sent to study at the Louvre. Her first original picture, *Rabbits*, was exhibited in the Salon of 1840, and her first great success was in the following

year, with *Sheep and Goats*. These were followed by a succession of clever compositions, one of which, *Labourage Nivernais*, exhibited in 1850, was added to the collection in the Luxembourg. In the previous year her fine *Cantal Oxen* took the gold medal. Horses, cattle, deer, and sheep are the chosen subjects of her pencil. Her house—or, rather, château—in Fontainebleau, during the Franco-Prussian War was respected by special order of the Crown Prince of Prussia. *A Foraging Party* of wild boars, and deer *On the Alert*, were exhibited at Antwerp in 1879, and in London in 1881, and *The Lion at Home* the year following. The picture, however, which first made her fame in England was the *Horse Fair* (1855), which, like all the rest of her works, has been engraved. The original is in the National Gallery. Her style of painting is exceedingly spirited and virile, and no female artist has ever gained so many marks of distinction, or had so many honours showered on her. Other members of her family are also artists. Her brother François Auguste, also a painter, was born at Bordeaux, 1824; her other brother, Jules Isidore, who is a sculptor, was born at Bordeaux, 1827; and her sister Juliette, who is a painter, was born at Paris, 1830.

Bonomi, JOSEPH (b. 1796, d. 1878), was a Roman and a sculptor. His father was architect at St. Peter's, and his godmothers were Angelica Kauffmann and Maria Cosway. Joseph was trained at the Royal Academy of London, and distinguished himself in drawing and sculpture. In 1823 he went to Rome, and thence proceeded to Egypt and Nubia, in company with such early travellers as Hay, Lane, and Wilkinson. Bonomi was almost unrivalled as a hieroglyphic draughtsman, and his services, no less than his personal charm and gaiety, were indispensable to the other travellers. In 1833 he accompanied Arundell and Catherwood to Sinai and the Holy Land. On his return to England, his delicate pencil was immediately utilised by Wilkinson and Birch for the illustration of their works on Egyptology, and in 1842 he returned to Egypt as draughtsman to the Prussian Expedition under Lepsius. When again in England, he assisted Owen Jones in constructing the Egyptian Court at the Crystal Palace. His works include a popular account of Nineveh, illustrations to various papers in the *Transactions* of the Syro-Egyptian Society and the Royal Society of Literature, and a charming volume of sketches of Egypt, Nubia, and Ethiopia, for which S. Sharpe wrote the letterpress. He was appointed in 1861 curator of Sir John Soane's Museum, in Lincoln's Inn Fields, and there he remained until his death. He was, after Wilkinson, the best Egyptian draughtsman in the world, and did good service to archæology by his illustrations.

[S. L.-P.]

Bonpland, Aimé (b. 1773, d. 1858), a French botanist, born at La Rochelle, was in early life a naval surgeon. Having left the service, he went to Paris, where he made the acquaintance of Alexander von Humboldt. They soon became bosom friends, and in 1799 went together on what is now their world-famous expedition to America. They travelled about five years, mostly in Mexico, Central America, and the Andes, during which time Bonpland collected 6,000 plants, a large part of which were previously unknown in Europe, and which were deposited in the Museum of Natural History at Paris. In 1804 he was appointed director of the gardens at Navarre and Malmaison, and for some years afterwards busied himself in the production of several great botanical works, including the *Plantes Équinoxiales Recueillies au Mexique*, and a *Monographie des Mélastomies*. He also collaborated in several of Humboldt's great works. In 1816 he conveyed a collection of European trees and plants to Buenos Ayres, was favourably received by the Government, and appointed professor of natural history. Five years afterwards he undertook an expedition up the Parana, with the view of exploring the Gran Chaco desert to the Andes, but the Dictator of Paraguay arrested him, and kept him prisoner for about nine years, during which time he acted as physician to a garrison. When, in 1831, he obtained his liberty, he settled on the banks of the Uruguay, but in 1853 removed to a larger estate at Santa Anna. In 1857, in a correspondence with Humboldt, he expressed his intention of bringing his collections and MS. to Paris, and of then returning to Santa Anna. These purposes were, however, never consummated.

* **Booth, Edwin** (b. 1833), actor, the son of Junius Brutus Booth (q.v.), was born near Baltimore, Maryland. His first success on the stage was in 1851, when, during his father's illness, he took the part of Richard III. at a New York theatre. After professional tours in Australia and the Pacific, he visited England in 1861, and on his return to America, established his reputation by a series of Shakespearean revivals. In 1869 he opened a large new theatre in New York, but, though it still bears his name, the management passed from his hands owing to pecuniary losses. After this, he almost retired from the stage till 1877, when he enacted another brilliant series of revivals of Shakespeare's greatest plays. In 1880 he visited England, performing with a special company in the Princess's theatre, and in 1881 Mr. Irving and he acted Othello and Iago on alternate nights, for several weeks. Mr. Booth has since been well received in Berlin and other principal cities of Germany. Though deficient in genius, courage, and passion, his acting is remarkable for graceful

refinement and carefully poetic enunciation of the verse, in which he is considered by many the highest living master.

Booth, John Wilkes (b. 1839, d. 1865), the assassin of President Lincoln, third son of Junius Brutus Booth, was born in Baltimore, and went on the stage in early life, being there remarkable for his beauty, strength, and dissipation. During the Civil War he sympathised strongly with the South, and withdrawing from the stage in 1864, he began to plot the destruction of Lincoln and his ministers. His accomplices having failed, he himself shot the president in a theatre box, shortly after the conclusion of the war, April 14th, 1865, and leaping on to the stage he flourished a knife, shouting in his melodramatic way, "Sic semper tyrannis." Though he had broken his leg in the descent, he escaped on horseback to a farm near Fredericksburg, where, refusing to surrender, he was shot some days after.

Booth, Junius Brutus (b. 1796, d. 1852), the greatest American tragedian, was born in London of English parents, and having joined a strolling company, acted in the suburbs till 1814, when he appeared as Richard III. at Covent Garden. His remarkable success raised him at once to rivalry with Edmund Kean, and when, after acting with him for some nights at Drury Lane, he again appeared by himself at Covent Garden, a theatrical riot ensued that drove him from the stage for some time. Having emigrated to America in 1821, he at once won the highest reputation throughout the States by his performance of Richard III. In 1824 he bought a farm in Belair, near Baltimore, and continued to live there in great simplicity, visiting England only twice again, in 1825 and 1836. Though his range of characters was somewhat limited, he was admitted by the great majority of his contemporaries to be one of the greatest actors that ever lived. In private life he was a strange mixture of simple enthusiasms, religious devotion, and irregularity. An account of his life was published by his daughter in 1866.

* **Booth, The Rev. William** (b. 1829), "general" of the Salvation Army, born at Nottingham and educated there in a private school, became a minister of the Methodist New Connexion in 1850, being engaged from the first in holding evangelistic services. Declining to undertake the regular circuit work, he resigned his connection with the Methodist Conference in 1861, and, having studied the lower classes in the East End of London, he started, in 1865, "The Christian Mission," an organisation on more or less military lines. The movement attracted comparatively little notice till 1878, when it received the name of the "Salvation Army," under which title its growth and development in almost every country of Europe, and every

quarter of the globe, has surpassed all calculation. The military idea and uniforms, the parading bands of tambourine and trumpet, the ecstatic conviction, the persecution in the street, the freedom from all formulæ and convention, the fervid oratory broken by applause of tears and groans, the stirring battle songs of religion set to well-known airs, the absence of whatever was abstruse or might drive to difficult reflection—all these things combined to excite the sympathies and enthusiasm of vast masses of the populace, notably among the urban artisans. The growth of the Army is still so rapid, that it is impossible to give numerical statistics that would be trustworthy from month to month. The number of services held weekly may be conjectured to be something between fifteen and twenty thousand, and the number of "officers" at something under three thousand. The whole movement is still under the general's supreme direction, and is a model of perfect organisation on the largest scale. The general's eldest son manages the finances of the society, and his wife and daughters have also served with the highest distinction in England and on the Continent, especially in Switzerland, where the movement has been persecuted by the Government. The principal centres of the Army are the great hall in Clapton, the Eagle Tavern in the City Road, and the offices in Queen Victoria Street. The organs of the movement, the *War Cry* (established 1880), and the *Little Soldier*, a children's paper, have attained an enormous circulation, the two weekly editions of the former being issued, it is said, to the number of more than half a million together. Editions are also published in France, Germany, and Bombay. The general and Mrs. Booth have published several collections of hymns and other religious works, expounding the views and objects of the movement, such as *Salvation Soldiers, Orders and Regulations for the Salvation Army, Practical Religion, Godliness, etc.* General Booth also contributed an article on the subject to the *Contemporary Review* of August, 1882.

Bopp, FRANZ (b. 1791, d. 1867), philologist, Sanscrit scholar, and founder of comparative philology and scientific grammar, born at Maine, but educated at Aschaffenburg, in Bavaria, received his first impulse towards his life-study from the lectures of the Oriental scholar Windischmann, and Friedrich Schlegel's book on the *Language and Wisdom of India*. Devoting himself to the study of Sanscrit, under the guidance of the English authorities Hamilton, Wilkins, W. Jones, and Colebrooke, he went to Paris in 1812, and remained there for four years, enjoying the society of De Lacy, August Schlegel, and other scholars. The publication of his first work, *On the System of Con-*

jugation in Sanscrit compared with that of the Greek, Latin, Persian, and German Languages, to which were attached some translations from the Sanscrit books, marks the beginning of philology as a scientific system, as opposed to the fantastic guesses and dilettante literary scholarship of earlier Germany and modern England. Bopp was not the discoverer of the kinship between Sanscrit and the Indo-Germanic languages. That had been already suspected, if not established, and Bopp's merit lay in his scientific method, especially in tracing connections of grammatical forms, such as tense termination, by which he has supplied the key to the scientific study of all language whatever. His remaining works, except his large series of translations and editions of Sanscrit classics, are chiefly examples and amplifications of his method in practical application. In 1817 he visited London, became acquainted with W. von Humboldt, then Prussian ambassador, and edited several Sanscrit texts. In 1821, by Humboldt's recommendation, he obtained the professorship of Sanscrit and comparative grammar at Berlin, a position which he held to his death. His greatest and most permanent work, *Comparative Grammar of Sanscrit, Zend, Greek, Latin, Lithuanian, Old Slav, Gothic, and German*, was published in six parts, between the years 1833 and 1852. His other works, including treatises on nearly every ancient European dialect and several Asiatic, are too numerous to mention. In private life he was modest and extremely generous; in religion, though brought up as a Catholic, he afterwards became as liberal as in politics.

Adalbert Kuhn, in *Unsere Zeit* (1868); Benfey, *Geschichte der Sprachwissenschaft* (1868).

Börne, LUDWIG (b. 1786, d. 1837), "a good writer and a great patriot," as Heine said of him, was born in Frankfurt-on-Main, of Jewish parents, his true name before his pretended conversion to deistic Christianity being Lob Baruch. Having gathered his education from intercourse with some of the highest minds in Berlin and Halle, he began in 1818 to contribute his celebrated theatrical criticisms to the Frankfurt press. They mark a distinct epoch in German history, the beginning of the transition from literary to political interest. Börne's whole career was indeed but a reflection, or rather, a foreshadowing of this transition. Already in these early writings the political revolutionist may be traced. In 1825 he held his well-known discourse on Jean Paul, to whose style Börne's peculiar and sometimes brilliant humour has often been falsely compared. At the outbreak of the revolution of 1830 he hastened to Paris, and from there wrote the remarkable series of *Briefe aus Paris*, which form perhaps the most complete, as well as the most humorous, picture of the French upheaval and its results. The fame and popularity of these letters

raised him at once to the place of leader among the most advanced German revolutionists, especially of the section that was somewhat curiously entitled "Young Germany." It was thus that for a time he came in contact with Heine, whose "Hellenism" soon wearied of Börne's "Hebraic" zeal, and turned with disgust from the dirty hands and coarse aims of the exiles and refugees that swarmed round Börne's house. Börne's dying effort to break down the stubborn barriers of the Conservative Germanism of the Germans was his impassioned onslaught upon Menzel in a pamphlet called *Menzel der Franzosenfresser*. It is his masterpiece in style as well as in thought.

Heine's book, *Ueber Ludwig Börne* (1840), contains the most subtle analysis of his character, as well as the most brilliant account of his times. Gutzkow also published a *Life of Börne* in the same year.

Borrow, GEORGE (b. 1803, d. 1881), philologist and chief authority on gipsy life and language, was born in Norfolk, of Cornish parents. Though articled to a solicitor in Norwich, he turned his attention chiefly to philology, especially the dialects of Northern Europe. His literary life began with a volume of *Romantic Ballads* translated from the Danish, and a translation of the *Life of Faust* (1826). Abandoning the law, he came to London, and edited the *Newgate Calendar*. About this time he was also intimately acquainted with Benjamin Disraeli. In 1833 he was sent by the Bible Society to St. Petersburg, where he published a New Testament in Manchu, the language of Chinese Tartary. After this, as agent of the society, he paid two visits to Spain, associating chiefly with the Zincoli or Gitanos, in whose language he found close affinity with the Romany of the English gipsies, which he had acquired on the Norfolk heaths. Having edited a New Testament in Spanish, and one of the Gospels in Zincoli, he quitted the service of the society, and returning to England in 1839, published his first important work, *The Zincoli*, in 1841. It had a large circulation at home and abroad, and was the means of attracting scientific attention to the gipsy languages. It was followed in 1843 by *The Bible in Spain*, a vivacious account of his adventures amongst a priest-ridden people. On the whole it has been the most popular of all his works, though it cannot compare in style, delicacy of observation, and richness of tradition, with his two greatest works, *Lavengro* (1851) and *The Romany Rye* (1857). They form a fantastic kind of autobiography, and were written after the author's return from a long journey amongst the gipsies in Central Europe. In 1862 he published *Wild Wales*, and in 1874 his most important philological work, *Romano Lavo Lil*, being a vocabulary of the English gipsy language. To a certain extent Borrow outlived his general popularity, but to students and adventurers of kindred spirit,

his courage, his great personality, and thorough knowledge of old English country, will long be of strong attraction.

Borthwick, PETER (b. 1804, d. 1852), Tory politician, born in Scotland, advocated in 1833 the gradual instead of immediate emancipation of slaves, and was for many years M.P. for Evesham, and manager of the *Morning Post*.

*** Borthwick, SIR ALGERNON** (b. 1830), journalist, son of Peter Borthwick, was born at Cambridge and educated in Paris and at King's College, London. About 1864 he became editor of the *Morning Post*, of which he is now both editor and proprietor. In politics he is an uncompromising Conservative, and also holds a prominent place in the fashionable society of London. He received the honour of knighthood in 1880 for his services to Lord Beaconsfield and his Government. At the general election of 1886 he was returned for South Kensington.

Bory de Saint-Vincent, JEAN BAPTISTE GEORGES MARIE (b. 1780, d. 1846), a French naturalist and soldier, born at Agen. In 1800 he accompanied Captain Baudin's expedition to the Australian coasts as naturalist. Detained at the Isle of France by sickness, he afterwards visited a number of islands, publishing, on his return, his *Essais sur les Iles Fortunées et l'Antique Atlantide*, and his *Voyage en Afrique*, a work which earned him the title of Correspondent of the Institute. He then embraced a military career, and served with distinction on the staff of Davoust, Ney, and Soult. Proscribed and a fugitive from 1815 to 1820, he took an active part in editing the *Nain Jaune*, printed in Brussels; then, again forced to fly, hid himself in the quarries near Maestricht, of which he gave an account in his *Voyage Souterrain*. Allowed at last to reside in Brussels, he collaborated with others in the *Annales Générales des Sciences Physiques*. In 1828 he was permitted to return to France, and was soon afterwards given the command of a scientific expedition to the Morca. Some time shortly after 1830, he was named chief of the Historical Bureau, and promoted to the rank of major-general of Engineers. In addition to the works already cited, he wrote an *Essai sur la Matière; Traité des Animaux Microscopiques; an Essai Zoologique sur le Genre Humain*, etc.

He wrote a *Justification of his Conduct* in 1816. See also Héricart de Thury, *Notice sur le Baron Bory de Saint-Vincent*.

Bosworth, THE REV. JOSEPH (b. 1790, d. 1876), English philologist, educated at Aberdeen, was ordained in 1814, and became British chaplain at Amsterdam and Rotterdam (1829 to 1841). During this period he acquired a high reputation as a scholar in early English and the Low German dialects. He received degrees from Leyden and Cambridge, and in 1857 was elected professor of

Anglo-Saxon in Oxford. Of his numerous publications connected with his special subject of research, we may mention :—*A Compendious Grammar of Primitive English or Anglo-Saxon*, and *A Dictionary of the Anglo-Saxon Language* (1838), *Scandinavian Literature* (1839), and *The Origin of the English, Germanic, and Scandinavian Languages and Nations* (1848). The *Anglo-Saxon Dictionary*, edited for the Clarendon Press by Mr. Toller, is based on Bosworth's manuscript collection.

Botta, CARLO GIUSEPPE GUGLIELMO (b. 1766, d. 1837), Italian historian, born in Piedmont, studied medicine and natural science, and being imprisoned in 1792 for his advanced political ideas, he entered Italy with the French army as military surgeon, and played an important part under Napoleon in the government of Piedmont. But his free criticism and love of liberty lost him the Emperor's favour, and shortly before the Bourbon restoration he retired from public life, devoting himself entirely to literature, one of his chief aims being the restoration of Italian in its purity of three centuries ago. In 1809 he had published a *History of the American War of Independence*, but his greatest work was the *History of Italy between 1793 and 1814* (published in 1834), a period of which he had full opportunity to speak from personal knowledge, though unavoidably he writes in the spirit of a partisan.

Botta, PAUL ÉMILE (b. 1805, d. 1870), son of the Italian historian, was Layard's contemporary in Assyrian discovery; he was French Consul at Mosul, and, being an archaeologist and an enthusiast, seized the opportunity to excavate the mounds at Khorsabad (1843), and was thus instrumental in furnishing the Louvre with some of the finest Assyrian monuments in existence. He laid bare 2,000 mètres of wall covered with inscriptions and sculptures, and, in company with M. Flandin, copied 130 sculptures and 200 inscriptions, besides sending many of the best preserved home to Paris. The results of his excavations were published in his huge book, *Le Monument de Ninive*, the bulk of which has debarred him from that general popularity which he merited as the equal and contemporary, if not actually the forerunner, of Layard in Assyrian discovery.

Mohl, *Vingt-sept Ans de l'Histoire des Études Orientales*. [S. L. P.]

* **Bouchardat**, APOLLINAIRE (b. 1806), French chemist and physiologist, was pharmacist-in-chief at the Hôtel Dieu from 1834 to 1855, and has written several important works on chemistry and therapeutics, such as :—*Cours de Chimie Élémentaire* (1834), *Cours des Sciences Physiques* (1841), *L'Annuaire de Thérapeutique*, since 1841. He has also devoted much attention to vines, and has written a treatise on the influence of drinking waters on goitre and cretinism.

* **Boucicault**, DION (b. 1820 or 1822), was born in Dublin. His first work for the stage, the comedy of *London Assurance*, was produced with great success in 1841. It was followed by several works of the same class, with which Mr. Boucicault was less fortunate. Then finding that there was no demand for original plays—managers preferring to purchase for small sums adaptations of works which had already proved successful in Paris—the author of *London Assurance* became a translator. His translations, however (among which, *Used Up* for Charles Mathews, *Louis XI.* for Charles Kean, and the *Corsican Brothers* for Charles Kean and Walter Lacy, may in particular be mentioned), were admirable of their kind. At the earliest opportunity he returned to original authorship, and in 1860 (after a five years' absence in America) achieved a remarkable success with his *Colleen Bawn*, produced at the Adelphi, and afterwards reproduced in operatic form (with music by Benedict) at Covent Garden. Mr. Boucicault claims to have invented the term "sensational scene" and to have used it for the first time in connection with the central, and certainly very striking, situation in the *Colleen Bawn*. In a second drama of Irish life, *Arrah-na-Pogue*, Mr. Boucicault obtained another great success, and he now brought out a whole series of new plays, which all made their mark. After a time, however, he returned to America, but in 1886 reappeared in England in a new play called *The Jilt*. He has appeared with success as an actor, especially in those Irish parts which he chiefly affects.

* **Boughton**, GEORGE HENRY, A.R.A., painter (b. 1833), was born in Norfolk, England. About three years after his birth he went with his family to America, and passed his youth in Albany, New York. In 1853 he came to London, and spent several months in the systematic study of art, and returning to New York, soon became known as a landscape painter. He went to Paris in 1859, and spent two years in the further prosecution of his art. He then came back to London, and settled in the practice of his profession. He was elected a member of the National Academy of New York, where he was a frequent exhibitor, and in 1879 an Associate of the Royal Academy of London. Among his better-known earlier works are :—*The Lake of the Dis-mal Swamp*, *The Scarlet Letter*, *The Return of the Mayflower*. Among his later pictures in the Academy may be noticed *A Resting Place* and *Priscilla* (1879), *Evangeline* (1880), *A Dead City of the Zuyder Zee* (1881), *A Dutch Seaside Resort* (1882), *Suspected of Witchcraft* (1883), *A Field Handmaiden*—*Brabant* (1884), *Milton Visited by Andrew Marvell* (1885). Mr. Boughton has successfully handled subjects of the most varied nature, and in these latter days his paintings are conspicuous for

delicacy of colour and a pre-eminent sense of harmony.

* **Bouguereau** (b. 1825), ADOLPHE WILLIAM, French painter, was born at Rochelle. He followed the regular course at the Ecole des Beaux Arts from 1843 to 1850, and became a pupil of Picot. He divided the honours of the Grand Prix de Rome with P. J. A. Baudry at the competition of 1850, the subject being *Zénobie Trouvée sur les Bords de l'Araxe*. On his return to Paris, in 1855, he exhibited his *Triomphe du Martyre*, showing the body of St. Cecilia being borne to the catacombs, which was purchased by the State. Since then he has been a constant exhibitor at the Salon, and whether his subject be taken from the Scriptures or from heathen mythology, he is equally happy. Two of his latest pictures, *The Youth of Bacchus* (1884), and *The Adoration of the Magi* in one compartment, and *The Adoration of the Shepherds* in another (1885), illustrate admirably the varied nature of his themes, and the ripe knowledge and exquisite taste with which he treats them. His colouring is perfectly harmonious, without anything suggestive of self-assertion; his modelling is delicate and highly finished, and his draughtsmanship perfection. His honours commence, as we have seen, with the Prix de Rome in 1850, after which he took, in 1857, a first-class medal.

* **Bourbaki**, CHARLES DENIS SAUTER (b. 1816), general of the French army, entered the service as sub-lieutenant in the Zouaves in 1836, and served in that regiment, the "Foreign Legion," the "Native Skirmishers," and the 7th Regiment, until 1854, when he took part in the Crimean campaign as general of brigade. He displayed distinguished gallantry during the war. In 1859 he commanded a division in the 3rd French Corps, under Canrobert, and was present at many of the engagements; nominated aide-de-camp to the Emperor in 1870, and commanded the Garde-du-Corps during the early part of the war, sharing in the defence of Metz until its surrender, on Oct. 27th, before which he was permitted to pass the German lines to confer with the Imperial authorities. In December of the same year he was appointed by the delegate Government at Tours to the command of the army that was formed to relieve Belfort, and after the battle of Villersexel, and a series of ineffectual attempts to drive the German investing army, under Werder, from its strong covering position along the Lisaine, he fell back to Besançon, and thence into Switzerland, where the army was interned. Bourbaki attempted to commit suicide, but the pistol-shot did not prove fatal, and he recovered to return to France, when he was appointed to the command of the Lyons district, and successfully suppressed the Communistic disturbance of the winter of 1871. Eventually he was made

general commanding the 14th Corps, a post he retained until 1879, since which time he has seen no further military employment.

Bourne, HUGH (b. 1772, d. 1852), founder of the Primitive Methodists, was born at Fordhay Farm, near Stoke-on-Trent, and was a millwright and carpenter by trade. Brought up as a Methodist, he began in 1801 to hold open-air meetings for the colliers on Mow Cop, a hill between Staffordshire and Cheshire; but he was regarded with suspicion by the Wesleyan Methodist body, and at length formally excluded from their sect (1808). His great "camp-meeting" on Mow Cop in July of that year marks the beginning of the Primitive Methodist Society. In 1818 Bourne began the publication of the *Primitive Methodist Magazine*. Having visited Ireland and Scotland, he made a tour through Canada and the States (1844), and it is in America that the success of his preaching has shown the most abiding results, though even before his death his adherents in England numbered nearly a hundred and ten thousand.

Memoirs of Hugh Bourne, by John Walford (up to 1816).

Bourqueney, FRANÇOIS ADOLPHE, BARON (b. 1800, d. 1869), French diplomatist, having held minor diplomatic posts in various European Courts under Charles X. and Louis Philippe, was in 1853 appointed ambassador at Vienna by Napoleon III., and conducted the negotiations that led to the important treaty of December of the following year, which detached Austria from the Russian alliance. In 1855 he represented France at the Conference of Vienna, which assembled in hopes of bringing the Crimean War to a close.

Bourrienne, LOUIS ANTOINE FAUVELLET DE (b. 1769, d. 1834), Napoleon's private secretary, and author of his memoirs, was born at Sens, and was a schoolfellow of Bonaparte at Brienne. They swore eternal friendship, and when they met again in Paris, in 1792, Bonaparte was the means of preserving Bourrienne's life from the guillotine, and during the Italian campaign summoned him to Italy as his private secretary, a position which he held till 1804, when, owing, it is said, to charges of embezzlement, he was removed to Hamburg as minister. Dismissed on a similar charge in 1813, he occupied subordinate posts in Paris till the Restoration, when, having forsaken his old friend, he attached himself to Louis XVIII., and was created Minister of State. After the revolution of 1830 he lost his mind, and died in a mad-house. His *Mémoires sur Napoléon*, etc., in 10 vols., though by far the most important of his works, are now generally discredited as inaccurate, if not intentionally misleading.

* **Bowen**, SIR GEORGE FERGUSON (b. 1821), Colonial Governor, was elected to a fellowship at Brasenose College, Oxford, in 1844, and was

appointed President of the University of Corfu in 1847, and Government Secretary of the Ionian Islands in 1854. He thus acquired the knowledge of modern Greece that is displayed in his treatises on the subject, such as *Ithaca* in 1850, and *Murray's Handbook of Greece*. In 1859 he was nominated Governor of Queensland, then a young colony, and showed such capacity in the office that in 1867 he was chosen Governor of New Zealand, and in 1873 Governor of Victoria. In 1878 he was transferred to Mauritius.

Bowerbank, JAMES SCOTT (b. 1797, d. 1877), microscopist and naturalist, was born in London, and received his education at a private school. At the age of fifteen he entered his father's distillery, in which he became a partner, but when a mere boy evinced a strong leaning towards scientific pursuits. He early associated himself with several learned societies, and was one of the founders and most active members of the Zoological, Palæontographical, Microscopical, and Ray Societies. The microscope was his especial delight. It was in his museum at Highbury Grove that the first idea of an aquarium was started. He is best known, however, in connection with his *Monograph of the British Spongiadæ* (1st vol., 1864). In 1841, a storm at Brighton had thrown upon the beach vast quantities of seaweed and sponges, and from that time he devoted himself to the especial study of the Spongiadæ. Agents and friends in various parts of the world forwarded him numerous specimens, which accumulation of many years is now preserved in the British Museum. Dr. Bowerbank, whilst working to complete his fourth volume on the sponges, was seized with a fatal illness. For many years, during his residence in London, his house was the centre of the social life in which students of natural history indulged, and his kindness to many young men, who without his hospitality would have been friendless in a great city, is still most gratefully remembered. In addition to being a Fellow of the Royal, Linnean, Geological, and other societies, Dr. Bowerbank received the honorary degree of LL.D. from the University of St. Andrews.

Bowles, SIR GEORGE (b. 1787, d. 1876), British general, entered the Coldstream Guards in 1804, and was present at the siege of Copenhagen, in 1807. He served throughout the greater part of the Peninsular War, and was also present at Quatre-Bras and Waterloo. In 1818 he visited Canada as secretary to the Duke of Richmond, then Governor. He returned to Canada in 1837, and was in command of the Lower Province during the rebellion of the following year. In 1851, after being for some years Master of the Household to the Queen, he was appointed Lieutenant of the Tower, and attained the rank of general in 1862.

M.W.—6

* **Bowman, SIR WILLIAM, BART., F.R.S.** etc. (b. 1816), the son of a banker, a native of Droitwich, was educated at King's College, London. In 1842 he gained the Royal medal in physiology, and rapidly acquired a reputation as one of the greatest of oculists. He was professor of physiology and morbid anatomy at King's College from 1845–56, and vice-president of the Royal Society. In 1877 he became consulting surgeon and vice-president of the Royal Ophthalmic Hospital. He is on the council of King's College, and is a corresponding member of many foreign scientific societies and academies. In 1884 he was created baronet, and Fellow of the Royal College of Surgeons. In 1880 he was made Hon. LL.D. of Cambridge University. Among Sir William's important medical works may be mentioned *Lectures on the Parts concerned in the Operations of the Eye and Observations on the Artificial Pupil*, and a notable work in conjunction with Dr. Todd, *The Physiological Anatomy and Physiology of Man* (2nd ed., 1866), and some important papers in Todd's *Cyclopædia of Anatomy and Physiology* (1836–59).

Bowring, SIR JOHN (b. 1792, d. 1872), linguist and social politician, was a pupil of Jeremy Bentham, whose collected works he published, with a biography. He was for some years editor of the *Westminster Review*, at that time the organ of the earlier Utilitarians. By his versions of the songs and ballads of nearly all European races, especially the Russian, he early gained a reputation for great linguistic powers. He also wrote several treatises and pamphlets on social and political questions, such as *Remunerative Prison Labour* and *African Slavery* (in Spanish); and as a result of his special knowledge on commercial subjects, he acted as English Commissioner to France, Belgium, and other European states, and also to the Zoll-Verein. He was Member for Clyde from 1835 to 1837, and for Bolton from 1841 to 1849. Under Lord Melbourne's Government he carried, in spite of much opposition, a resolution that the revenues of all taxes should be paid, without reduction, into the Exchequer; and, aided by Prince Albert, gained the assent of Government to the issue of florins. In 1849 he began his important connection with China as British Consul at Canton; was appointed Plenipotentiary of China and Governor of Hong Kong, a position which he held till his retirement from public life, in 1859. In 1855 he successfully negotiated a commercial treaty with the King of Siam, and afterwards published an account of his journey. His eldest son, SIR JOHN C. BOWRING, presented the "Bowringian Collection" of Coleoptera to the British Museum; and his younger son, EDGAR ALFRED BOWRING (b. 1826), sometime M.P. for Exeter, is known for his metrical translations, chiefly from the German. As secre-

tary to the Commissioner for the Exhibition of 1851 he was highly esteemed by Prince Albert.

Bowyer, SIR GEORGE (b. 1811, d. 1883), barrister and Papal apologist, was admitted to the Middle Temple in 1839. On his conversion to Roman Catholicism, in 1850, he at once attested the sincerity of his convictions by coming forward as the authorised defender of the Pope's distribution of England into Catholic sees. His views on the Papal claims were set forth in a pamphlet entitled, *The Cardinal Archbishop of Westminster and the New Hierarchy*. From 1852 to 1868 he represented Dundalk in Parliament, and the county of Wexford from 1874 to 1880 as a Home-Ruler. He was a high authority on constitutional law and legal questions generally.

Boxall, SIR WILLIAM (b. 1800, d. 1879), director of the National Gallery, began to exhibit in the Royal Academy about 1826. His earlier paintings dealt with historical or dramatic subjects, or scenes from the *Waverley Novels*, but in later life he devoted himself almost entirely to portrait painting. He became R.A. in 1863, and in 1865 succeeded Sir Charles Eastlake as director of the National Gallery, but retired in 1874, when he was succeeded by Sir F. Burton.

Boycott, CAPTAIN CHARLES C., from whose name is derived the term "boycotting," was agent for Lord Erne, and lived in Lough Mask House, County Mayo. In the *Times* of Oct. 12th, 1880, a letter from him appeared, in which he complained that through the action of the Land League he was deserted by his servants and labourers, was unable to gather in his crops, could make no purchases in the neighbourhood, could not even receive letters nor telegrams—was, in short, under a ban. About a month later a relief party of some fifty Ulstermen came to his assistance from the North, much to the anxiety of the Government. The expedition, on its arrival, and during the harvesting of the remaining crops, was guarded by strong detachments of troops, amounting in all to about 900 men. When the work was finished Captain Boycott and his family retired with the Ulstermen. The success of the manœuvre, from the Irish point of view, gave an enormous impulse to the Land League movement. When Mr. Parnell could boast with justice that it had required 7,000 men in all to gather in the produce of a single farm, and that every pound of potatoes and turnips had cost the Government a shilling, it was evident that a far subtler weapon than murder, outrage, and maiming of cattle had been discovered ready to hand. Captain Boycott's claim for compensation from Government for losses was denied by Mr. Gladstone.

***Boyd, THE REV. ANDREW KENNEDY HUTCHISON** (b. 1826), essayist, was born in

Ayrshire, educated in London and Glasgow, and became incumbent of various Lowland towns before he was appointed to St. Andrews. About the middle of the fifties he became known, under his signature of "A. K. H. B.," as a contributor to *Fraser's Magazine*. Most of these essays, together with lectures and articles in other periodicals, have been collected and republished under such titles as *The Recreations of a Country Parson* (two series, from 1859 to 1866); *The Common-place Philosopher in Town and Country* (1862); *Changed Aspects of Unchanged Truths* (1869); *Present Day Thoughts* (1881); *Our Little Life* (1882); *Towards the Sunset* (1883); and *A Young Man, his Home and Friends* (1884). The names of the books indicate their character fairly closely. They are the work of a man whose peaceful life has given time for quiet reflection, saved from paradox by the simplicity of his surroundings, and from commonplace by innocent humour and breadth of literary culture. They are a monument of a leisurely kind of thought, dead and buried under the pressure of a civilisation that does not rest nor pause.

Boyer, JEAN PIERRE (b. 1776, d. 1850), President of Hayti, a mulatto, born at Port-au-Prince, first distinguished himself in the Slave Revolution of 1792. After the division between the negroes and mulattoes, and the victory of Toussaint-l'Ouverture, he escaped to France with Pétion and other leaders of his party. With the commission of captain in the army sent by Napoleon to reduce Toussaint, he returned to Hayti in 1802, and after Toussaint had been conveyed to France, and the French expedition driven from the island by insurrection, he at length attached himself again to Pétion in the third war with the negroes (1806). On Pétion's death (1818) he was elected President. By 1822 he had made himself master of the whole island of San Domingo. It was soon found, however, that he had completely overriden the forms of the recognised constitution; he offended the European nations, was obliged to incur a vast national debt as indemnity to France (1826), and at last allowed government to sink into anarchy. In 1842 he was forced to escape to Jamaica by the outbreak of a general revolution. In 1848 he removed to Paris, where he died.

***Brabourne, THE RIGHT HON. EDWARD HUGESSEN KNATCHBULL - HUGESSEN, LORD** (b. 1829), politician and author of children's books, was educated at Eton and Magdalen College, Oxford, and, having been returned as Liberal M.P. for Sandwich in 1857, continued to sit for that constituency till 1880, when he was raised to the peerage. In the meantime he had occupied various subordinate positions in Liberal ministries, and in 1873 was sworn Privy Councillor, being at that

time Under-Secretary for the Colonies. He had also served on some commissions, notably the commission of inquiry into the Irish Constabulary Force (1866). Soon after his elevation to the peerage, Lord Brabourne showed a strong tendency to unite with the Opposition against his former colleagues, and he has since definitely joined the Conservative party. His original fairy tales and moral stories have a wide popularity amongst children. The first series, *Stories for my Children*, appeared in 1869, and was rapidly succeeded by *Crackers for Christmas* (1870), *Moonshine* (1871), *Queer Folk* (1873), *Ferdinand's Adventure* (1883), and yet another collection in 1885. In 1877 he published a lecture on Oliver Cromwell, and in 1884 an edition of Jane Austen's letters.

* **Brackenbury, HENRY, C.B.**, British officer (b. 1837), descended from an ancient Lincolnshire family, and the son of an old Peninsula officer, was educated at Eton, and obtained a commission in the Royal Artillery in 1856. He served with General Whitlock's column during the Indian Mutiny, and was present at the capture of Banda Kirwee, receiving the war medal. He was successively adjutant of the dépôt at Woolwich, discipline officer at the Royal Military Academy, and afterwards instructor of artillery, and subsequently professor of military history at that institution. In 1870 he was sent as representative of the British National Society for Aid to the Sick and Wounded to the Franco-German War, and served in that capacity during the campaign. At its conclusion he was decorated with the Legion of Honour, the Bavarian Order of St. Michael, and the Iron Cross of Germany. He next served as assistant military secretary to Sir Garnet Wolseley in the Ashantee Expedition of 1874, was mentioned in despatches, and received the medal, with clasp, and the brevet of lieutenant-colonel. On his return, he wrote the *Narrative of the Ashantee War*. He served in Natal as assistant military secretary to Sir Garnet Wolseley in 1875, and remained there, after the conclusion of that campaign, to become chief of staff during the operations against Sekukuni. For these services he received the medal, with clasp, and the C.B. He acted as assistant adjutant-general to the Cyprus Expedition in 1878, and organised the Cyprus Military Police, afterwards becoming successively secretary to Lord Lytton, when Viceroy of India, Military Attaché at Paris, and Secretary for the Repression of Crime in Ireland, under the Lord-Lieutenant. His next employment was in the Nile Expedition of 1884-5, when he first acted as deputy assistant adjutant-general, then as brigadier-general and staff officer to General Earle in the advance from Korti to Abuhamed, and when his chief fell at Kerbikan, took command of the column, and

fell back with it to Dongola. He now commands a brigade of the English force in Egypt. He has written *Fantee and Ashantee*, a *Narrative of the Ashantee War*, and *The Nile Column* (1885).

* **Braddon, MARY ELIZABETH**, well known as a novelist (b. 1837), the daughter of a solicitor, was born in Soho Square, London. She made her first appearances in print at Brighton, under the auspices of the friend of her youth, the late William Sawyer, who was connected with the editor's department of a newspaper published in Brighton. This was when she was still very young, and Sawyer himself was in his teens. The young lady wrote verses, squibs, and parodies chiefly in those early days. After a time Miss Braddon and Mr. Sawyer were inspired by a desire to try their fortunes in the larger sphere of London, and they set out for the metropolis together. The relations of the young aspirants were purely literary, and they agreed together that the first of the two to achieve success was to share its material fruits with the other. Luck favoured the lady. In 1860 the management of the Strand Theatre produced her comedietta, *Loves of Arcadia*. Miss Braddon produced in 1861 a volume of poems, entitled *Garibaldi, and other Poems*. Sawyer also published poetry, but their lines fell apart: the young man became immersed in journalism, the young lady in fiction; their intellectual interests ceased to have much in common, but the two writers who thus set out together remained warm friends until the death of Sawyer, in 1882. Miss Braddon did not follow up her exercises in the dramatic art, though in 1873 a drama in four acts, dealing with the struggles of the patient Griselda, was produced at the Princess's Theatre. Her early successes in fiction were *Lady Lisle* (1861), *Lady Audley's Secret* (1862), *Aurora Floyd* (1863), and *Henry Dunbar* (1864). The merit of these books lay chiefly in the direction of incident. What Mrs. Radcliffe was to the romance of the eighteenth century, Miss Braddon has been to the fiction of the nineteenth century. Yet these two writers have nothing more in common than a love of startling, vivid, and picturesque incident. Miss Braddon is not deficient in character, but her first quest is plot. Among the best of her later novels are *Ismail* (1884) and *Wyllard's Weird* (1885). The list of her acknowledged works is too long to be given here, and, long as it is, it represents only a part of the fruits of her industry. Anonymously and pseudonymously, Miss Braddon has written a vast quantity of fiction. The best of this work is not, however, discreditable to her powers. She has been, perhaps, the most popular novelist of her era. *Lady Audley's Secret* and *Aurora Floyd* have probably sold more largely in the cheap editions than any books by a contemporary novelist. Her readers belong

to the class that does not seek metaphysical subtleties and philosophical intentions, but is content with a frank story of sensation. As a "sensational novelist," Miss Braddon is not perhaps of the highest class. She fails in the art of uniting the dramatic effects of a powerful situation with the force of impassioned and perfected character. Deficient in humour, and lacking some of the graces of style and presentment, she is, nevertheless, a powerful writer. Miss Braddon edited *Belgravia* for a few years, and contributed largely to *Temple Bar*, *St. James's Magazine*, and other periodicals. She is married to Mr. Maxwell, the well-known publisher.

* **Bradlaugh, CHARLES** (b. 1833), political and social reformer, the son of a poor solicitor's clerk, was born in Bacchus Walk, and received the elements of education in Bethnal Green and Hackney. Driven into dogmatic unbelief, he became separated from his family in early youth owing to their religious convictions, and lived for some years in extreme poverty, being in turn errand-boy, small coal-merchant, pamphleteer, and private in the Dragoon Guards, then quartered in Dublin. Returning to London in 1853, he became office-boy and afterwards clerk to a solicitor, from whom he gathered the rudiments of his vast legal knowledge. Meantime, by means of anti-theological pamphlets, discussions, and addresses throughout the country, he advocated the Secularist and advanced Radical cause, writing and speaking under the name of "Iconoclast" till 1868. He played a prominent, and in some cases the leading, part in most of the popular movements of the time, such as the opposition to the Sunday Trading Acts (1855), and to the Second Empire of Louis Napoleon; the movements in favour of the independence of Italy, and of the Northern cause during the American War; the great Reform League agitation of 1866, in which he partially succeeded in pacifying the rioters; and the reform of the Irish Church and Land Laws. His organ, *The National Reformer*, was started in 1860 or the preceding year, and in 1868-9 was visited by a futile Government prosecution that led to the repeal of almost the last statutes that controlled the full liberty of the press. In 1870, Lord Chief Justice Cockburn decided in Bradlaugh's favour the trial on the Oaths question in courts of justice, thus finally admitting all citizens, of whatever religious opinion, to equal rights of legal protection and redress. These expensive trials reduced Bradlaugh to bankruptcy. In 1870, also, he did such good service for the young French Republic, that he was publicly thanked by Léon Gambetta and other members of the Republican Government; whilst in the next year the moderation of his proposals and his exhortations for respect of the law drew upon him the hatred and abuse of the

Communists. In 1872 he published the *Impeachment of the House of Brunswick*, perhaps his most widely read political pamphlet. In 1873 he visited Señor Castelar in Madrid as a representative from the Republican Conference at Birmingham to congratulate the rising Spanish Republic. In this year and the next he also undertook two lecturing tours in America. In 1875, having become associated in the Press with Mrs. Annie Besant, herself a copious writer on social and theological problems, he republished, as a challenge on a point of law, an old pamphlet, *The Fruits of Philosophy*, that had been included in a recent prosecution. In the trial that ensued the defendants, though "exonerated from all corrupt motive," were sentenced to six months' imprisonment and a fine of £200. The sentence was, however, reversed on appeal. At the general election in 1880 Mr. Bradlaugh was returned for Northampton, where on three previous occasions he had been defeated (1868, and twice in 1874). Having refused to take the Parliamentary Oath, and not being allowed to sit on affirmation, he was re-elected in 1881. Elected for the third time in 1882, and for the fourth in 1884, he was still excluded from his seat. In the general election of 1885 he was again returned by the same constituency, and was at last allowed to take his seat in the House of Commons.

The Biography of Charles Bradlaugh, by A. S. Headingley (1883), and Bradlaugh's short *Autobiography* (1873).

* **Bradley, THE VERY REV. GEORGE GRANVILLE, D.D.** (b. 1821), Dean of Westminster, was educated under Dr. Arnold at Rugby, and at University College, Oxford, where he was a pupil of the late Dean Stanley. In 1845 he obtained the Chancellor's prize for the Latin essay, and after being assistant master at Rugby for about ten years he was in 1858 appointed head-master of Marlborough, being ordained in the same year. During his tenure of this position he used his influence for the widening and reform of public school education by the encouragement of the natural sciences, modern languages, and the other branches of modern study that have since become fashionable in theory. He has published some sermons, *Recollections of A. P. Stanley* (1883), and *Aids to Writing Latin Prose* (1884), though in the last subject his brother's work, *Lessons in Latin Prose*, by W. Windham Bradley (1863), is better known. In 1870 he was elected master of University College, Oxford, and in 1881 was appointed by the Crown to succeed Stanley as Dean of Westminster.

* **Brady, HENRY BOWMAN** (b. 1835), an English zoologist, was born at Gateshead-on-Tyne. After attending private schools, he adopted the business of a pharmaceutical chemist, which he followed for many years in

Newcastle-on-Tyne with such distinction that he has been repeatedly elected on the council and board of examiners of the Pharmaceutical Society of Great Britain. Mr. Brady's reputation in the scientific world is, however, mainly connected with his researches on the Rhizopoda, and other minute forms of invertebrate life, on which he has published many memoirs, a list of which may be found in the Royal Society's *Catalogue of Scientific Papers*, in D'Arcy Thompson's *Bibliography*, and in the bibliography appended to the *Report on the "Challenger" Foraminifera*, published in 1884. The principal of these are the *Monograph of Carboniferous and Permian Foraminifera* (Palæontographical Society), and the two great volumes on the *Foraminifera of the "Challenger" Expedition*. Mr. Brady is a Fellow of the Royal, Linnean, and Geological Societies, and corresponding member of several foreign scientific bodies. He has also travelled extensively, having, among other countries, visited Fez and the interior of Morocco, in 1878.

Brahm, JOHN (originally ABRAHAM), (b. 1774, d. 1856), one of the greatest of English opera singers, and composer of the *Death of Nelson*, was born in London of Jewish parents, and brought up by the singer Leoni. At the age of ten he was received with great applause on the stage, and, his voice having developed into a rich tenor, he was able, in 1796, to take the leading parts at Drury Lane and the Italian Opera. After a tour in Italy he settled permanently in Covent Garden, and "created" the part of Hübner in Weber's *Oberon* (1826) to the high satisfaction of the composer. Besides the *Death of Nelson*, by far his greatest achievement as composer, he wrote a few English operas, such as *The Cabinet*, *The English Fleet*, etc. He continued to sing into extreme old age, the charm of his manner delighting the audience long after all powers of voice had left him. Sir Walter Scott said of him that he was "a beast of an actor, but an angel of a singer." His daughter, Lady Waldegrave, who inherited all her father's grace of manner, reigned over the celebrated Salon at Strawberry Hill.

* **Brahms, JOHANNES** (b. 1833), who, after the death of Wagner, was looked upon as the greatest living composer in Germany, and in the department of choral music quite without a rival, was born at Hamburg. He began his musical education at a very early age, and studied with success under Marxsen at Altona. At twenty years of age he was introduced at Düsseldorf to Schumann, who made him the subject of an article in the *Neue Zeitschrift für Musik*, in which he confidently named him as the coming musician of Germany. This praise had for the moment but a doubtful effect on Brahms' career. He became an object of general attention, but was regarded at the same time with mistrust. Nor

did a tour which he undertook with the view of making his works known reconcile the musical public to Schumann's declared opinion. His works—chiefly chamber compositions—were not generally admired. Nor did he meet with any great success as a pianist. On his return to Hamburg, he remained for several years in retirement. But in 1861 he visited Vienna, where he found such ready appreciation that he established himself there. In this famous musical city he has held several important posts. Thus, in 1863 and 1864 he was director of the "Sing-Akademie," while from 1873 to 1875 he conducted the famous concerts of the *Gesellschaft der Musikfreunde*, where the great choral works of Handel and Bach form an important feature in the programmes. Brahms' *Deutsches Requiem*, composed in 1868, was, after the Franco-German war of 1870, performed in various German cities as a musical funeral service for the fallen soldiers; and since this time the production of a new work by Brahms has been looked upon as an event in the musical life of the country. His first symphony was produced at Karlsruhe, Nov. 4th, 1876, and his second at Vienna, Dec. 24th, 1877. Brahms' symphonies, his *Deutsches Requiem*, and many specimens of his chamber music have been performed in London. He may be looked upon as a follower of Schumann, whom he surpasses in force. No comparison between him and Wagner seems possible; for though Wagner's music has found its way to the concert-room, the fame of that composer rests entirely on his dramatic works, whereas Brahms has composed nothing for the stage, but has confined himself exclusively to concert music.

* **Bramwell, SIR FREDERICK JOSEPH**, F.R.S. (b. 1818), an English engineer, the third son of George Bramwell, of London, and brother of Lord Bramwell the distinguished juriconsult, strongly developed at an early age his taste for his future profession. For, as he mentioned at the dinner of the Institute of Civil Engineers in 1885, though he was unable to read at the age of nine, before he was six he understood the construction of a steam-engine, and could make the model of one. For many years his name has been associated with the principal undertakings connected with his profession, in which he bears a high reputation as a consultant. He has also taken a prominent part in the efforts made to improve the technical education of workmen, in consideration of which he received the honour of knighthood in 1881. He is president of the Institute of Civil Engineers, and a Fellow of the Royal Society, in the publications of which and those of the British Association and Institution of Civil Engineers, several of his researches on strength and strain, on "Amaler's planometer," etc., have appeared.

Brand, SIR H. [HAMPTON.]

* **Brand, Sir John Henry**, President of the Orange Free State (b. 1823), son of Sir Henry Christofel Brand, a man of Dutch descent, formerly Speaker of the Cape House of Assembly, was born in Cape Town, but educated in England. After practising as a barrister in the Cape, he was, in 1863, elected President by the citizens of the Orange Free State, and since then has been re-elected four or five times, holding his position uninterruptedly. Under his direction the State has advanced to a condition of internal order and prosperity unexampled in South African history, in spite of the unjust confiscation of the diamond fields and the exorbitant customs charges of Port Elizabeth. At the beginning of the contention between Great Britain and the Transvaal in December, 1880, President Brand not only exerted himself to maintain the strict neutrality of his own State, but telegraphed to Sir George Strahan suggesting a commission of inquiry into the justice of the annexation. After the defeat of Majuba Hill and the armistice of March, 1881, President Brand hastened to the Transvaal, and was present as mediator at the Conference of March 21, that led to the final arrangement of peace. The other representatives present were Sir E. Wood, Colonel Buller, Joubert, Kruger, and Pretorius.

* **Brassey, Thomas, Baron** (b. 1836), high authority on marine questions, son of Thomas Brassey (q.v.), was called to the bar in 1866, was elected member for Hastings in the same year, and has continued to sit for the same constituency as a moderate Liberal. He became a Civil Lord of the Admiralty in 1880, Secretary to the Admiralty in 1884, and has sat on the Commissions on Unseaworthy Ships and Colonial Defence. In 1876 he and Lady Brassey undertook a voyage round the world in their yacht the *Sunbeam*. The account of the expedition, published in 1878, by Lady Brassey, has attained wide popularity. Sir Thomas is the author of numerous works on seamanship and naval affairs, *British Seamen*, *The British Navy*, etc.: and also on the labour question, *Co-operation*, and *Work and Wages* (1872). He became a peer in 1886.

Brassey, Thomas (b. 1805, d. 1870), engineer and railway contractor, undertook the construction of several of the most important railways in Great Britain, such as the South-Western, the Severn Valley, the Caledonian and Grand Junction; also the Western Railway in France, and several in Spain. He was one of the partners in the construction of the Canadian Grand Trunk Railway.

Bravo-Murillo, Don Juan (b. 1803, d. 1873), Spanish politician, entered the bar at Seville in 1826, and soon became known as a strong *Modorato* (Conservative) in politics. Going to Madrid in 1835 he published a law journal, and, after the revolution of La Granja,

in the following year became a leading member of the Conservative Opposition. Being charged with a share in a conspiracy against the regent Espartero (1840) he fled to France, where he remained till the fall of the dictator in 1843. In 1847 he joined the ministry of Narvaez, and remained as head of the Government after the latter's resignation. The two years of his power were marked by every measure of reactionary tyranny. In 1852, having lost the support of the queen, he was obliged to resign, but his policy had already prepared the way for the revolution of 1854, after which he retired from public life for a time, but continued to fulfil diplomatic missions till the ejection of Isabella.

Bray, Anna Eliza (b. circa 1800, d. 1883), authoress, was the daughter of John Kempe, and in 1818 married Thomas Stothard, son of the artist, in conjunction with whom she published two books of travels. After his violent death in 1821, she collected his memoirs and finished his work on the *Monuments of Great Britain*. In 1825 she married the Rev. E. A. Bray of Tavistock, and in the following year published her first historical novel, *De Foir*, a tale of the fourteenth century. Of the numerous works of the same class that rapidly succeeded this we may mention: *The White Hoods* (1828), *The Protestant* (1829), and *The Talba*, a story of the Moors of Spain (1834). In another branch of fiction that deals with local customs and traditions, she published *Fitz of Fitzford* (1830), and *Trelawney of Trelawne* (1837). Besides a book of travels in Switzerland, she wrote a *Life of Handel* (1857), a memoir of Mr. Bray (1860), and in old age some historical sketches, such as *The Good St. Louis and his Times* (1870), *Joan of Arc* (1873).

Autobiography, edited by J. A. Kempe (1884).

Brazil, Emperors of:—(1) **Pedro I., De Alcantara** (b. 1798, d. 1834), eldest son of John VI. of Portugal, born at Queluz, was taken to Brazil by his father on the invasion of Portugal by the French in 1807. In 1817 he married Leopoldina, Archduchess of Austria, and on his father's return to Portugal, in 1821, was left as Regent of Brazil. Disturbances having arisen owing to national feuds between the natives and the Portuguese, the prince was summoned to Europe, but refused to comply, and was declared Emperor of an independent Brazil in the following year. His reign was a series of disturbances and intrigues. He had not succeeded in silencing the strong Republican party at home when his father died, 1826, and the Emperor assumed the title of Pedro IV. of Portugal, in opposition to his sister the Infanta; but soon afterwards abdicated in favour of his daughter, Maria da Gloria. A period of anarchical confusion followed. The court and the chamber were at open feud; the enmity of the Brazilians toward foreigners was increased by the Emperor's marriage with

Marie Amélie, daughter of Prince Eugène Duke of Leuchtenberg, and a suspicion of a secret council prevailed. Revolution at length broke into flame in 1831, and Dom Pedro abdicated in favour of his son and sailed for Europe, where he spent the rest of his life in successfully vindicating his daughter's claims against his brother Dom Miguel, who had usurped the sovereign power of Portugal.

Edouard Grosse, *Dom Pedro I., oder Geschichte der neuesten Revolution in Brasilien und Portugal* (1838).

(2) * PEDRO II., DE ALCANTARA (b. 1825), son of the above, born at Rio Janeiro, was proclaimed Emperor of Brazil on his father's abdication in 1831, the Government being conducted under a regency till 1840, when he was declared of age. From childhood he was very popular with the Brazilians, and the policy of his mature years has confirmed their good opinion. In 1843 he married Theresa Christina Maria, daughter of the King of the Two Sicilies. In foreign affairs his reign has been marked by two grave difficulties, both of which have been successfully overcome. The quarrel with England, which lasted from 1861 to 1865, was due to reprisals taken by the British for the plunder of a British ship wrecked on the coast of Brazil. Diplomatic intercourse having been broken off in 1863, the dispute was referred to the King of the Belgians, who decided in favour of Brazil; but, nevertheless, amicable relations were not restored till two years later. In the same year (1865) Brazil joined the alliance against Lopez of Paraguay. The war lingered on with varying fortunes till the defeat and death of Lopez near the Aquidaban in 1870. In 1871 and 1876 the Emperor and Empress visited Europe, Dom Pedro creating a very favourable impression by his high culture, literary taste, and extreme simplicity of habits. In 1872 he succeeded in passing a bill through the senate for the gradual but complete emancipation of slaves in Brazil and the abolition of slavery. He has also done much for the internal improvement and development of his country.

BREMER, FREDRIKA (b. 1801, d. 1865), Swedish novelist, was born near Åbo, in Finland, her father being of ancient German origin. Shortly before the cession of Finland to Russia the family removed to Stockholm (1804), and settled at Arsta, about twenty miles from the city. Driven to the study of literature by the monotony of her life, she early found relief for her wasting activity in the production of poems and short essays. Before she was thirty she had become known in Sweden as the authoress of some series of *Sketches of Every-day Life* and of other tales, especially *The H— Family* (1829). In 1842 English readers were enabled to recognise her merit through a translation by Mary Howitt of *The Neighbours*. Several of her other tales

were afterwards translated by the same hand, and have become widely popular in England and America. The novels or stories are generally minute accounts of simple Swedish life, described with an original naïveté, and sometimes, as in *The H— Family*, with a peculiar sentimental humour that reminds us of Jean Paul. The influence of German literature, indeed, appears in much of her work. At the same time, as in *Hertha* (1856), there is often a distinct attempt to deal with some of the great questions of social reform that so profoundly occupied her thoughts throughout life. Of her other works we may mention *The Home* (1843), *Nina*, *The Midnight Sun*, and *The Diary*. She also published accounts of her travels in Europe and America (visited in 1849), such as *The Homes of the New World*, *England in 1861* (both in 1853), and *Two Years in Switzerland and Italy* (1860).

Life, Letters, and Posthumous Works of Fredrika Bremer, edited by her sister, Charlotte Bremer (New York, 1868).

BRENTANO, CLEMENS (b. 1778, d. 1842), one of the most typical poets of the so-called "Romantic School," born near Ehrenbreitstein, was the son of a merchant, P. A. Brentano, of Italian origin, and Maximiliane Delaroche, the early friend of Goethe, and was, therefore, brother of Bettina (q.v.), with whose character he had much in common. Going to Jena under the pretence of studying in 1797, he attached himself to the young "romantic" circle of Schlegel and Tieck, and his satires, novels, and comedies of this period, published under the pseudonym of *Maria*, reach the utmost bounds of the sentimental ideal. Having eloped with Professor Mereau's wife, Sophie, also an admired authoress (b. 1761, d. 1806), he settled in Heidelberg (1803), and it was here that he became associated with Achim von Arnim in *Des Knaben Wunderhorn*, a collection of old German songs and ballads, by which his name will be longest remembered, though the work is wanting in careful selection and scholarship. During the next few years he continued to wander from one town of Germany to another, leading an aimless life, pouring out romance after romance, when suddenly, about 1812, he was converted by a girl's influence and the reactionary religious tendency of the time into the most bigoted and ascetic of Catholics. It is true that in 1817 he wrote his most beautiful tale, *The Story of True Kaspar and the Lovely Annerl*, but after that the disease of mysticism grew rapidly. He wasted six years (1818–1824) in taking notes of the hysterical ravings of the idiot nun, Katharina Emmerich, afterwards published in fourteen volumes. The rest of his life he spent in theological writings and the composition of hymns. In youth Brentano undoubtedly possessed the touch of poetry, and was amongst the first to recover the genuine tone

of the *Volkslieder*. His students' song, *Da sind wir Musikanten wieder*, has the right melody. But excitement, want of restraint, and uncertainty of aim, converted him into what Goethe called "a forced talent." His brother, CHRISTIAN (b. 1784, d. 1851), who also became a fervent Catholic about 1815, was at one time famous for his treatises on mystic religion and pamphlets in defence of Rome.

For opposite views of Brentano's character see Heine's *Romantische Schule* and Brentano's *Ausgewählte Schriften*, with introduction by the Jesuit, J. B. Diel (1873). [H. W. N.]

* **Brett, JOHN, A.R.A.** (b. circa 1830), landscape painter, was in early life strongly influenced by the writings of Mr. Ruskin and the whole "Pre-Raphaelite" movement, as is shown in some of his earliest exhibited paintings, as the *Stonebreaker* (in the Royal Academy of 1858) and the *Val d'Aosta* of the following year. Since about 1870 he has turned his attention almost entirely to the luminous reproductions of calm seas and sunny skies encircling the rocks and cliffs of the English coast, especially of Cornwall and the south. The following is a list of his more important recent works, with the date of their exhibition at the Academy:—*Spires and Steeples of the Channel Islands* (1875); *Sir Thomas's Tower* (1876); *Mount's Bay* (1877); *Cornish Lions* (1878); *Caernarvon: Stronghold of the Season and Camp of the Kittywake* (1879); *Britannia's Realm* (1880, bought by the Academy); *Golden Prospects: St. Catherine's Well* (1881); *The Grey of the Morning* (1882); *These Yellow Sands* (1883); *MacLeod's Maidens, Skye* (1884); and *The Norman Archipelago* (1885). He became A.R.A. in 1882.

Brett, SIR W. B. [ESHER, BARON.]

* **Brewer, THE REV. EDWARD COBHAM, I.L.D.** (b. 1810), is chiefly known as the editor of some admirable books of reference. The most in request of these are the *Guide to Science* (1850), the *Dictionary of Phrase and Fable* (1868), which has run through some fourteen editions, and the *Reader's Handbook* (1881).

Brewer, THE REV. JOHN SHERREN (b. 1810, d. 1879), historian, was educated at Queen's College, Oxford, where he took his degree in 1833. He subsequently took holy orders. In 1841 he was appointed professor of English literature in King's College, London, an appointment he held until 1877, when he was appointed Rector of Toppesfield, in Essex. He was also, until his death, preacher at the Rolls' Chapel. His uneventful life was only broken by the publication of the various historical works on which his reputation is based. So early as 1845 he published in six volumes an edition of Fuller's *Church History of Britain*. It is by his work in connection with the public records that he will be best remembered. In 1858 the first volume of the *Monumenta Franciscana*, edited

by him for the Master of the Rolls, was one of the first of the celebrated series which is gradually making accessible the chief authorities for mediæval English history. Its preface throws a flood of light on the early history of the Mendicant orders in England. Next year followed an edition of Roger Bacon's *Opus Tertium* and *Opus Minus* in the same series; while from 1861 onwards appeared, under his editing, the first four volumes of the voluminous works of Giraldus Cambrensis. But about this time his energies were directed into a somewhat different, though analogous task, the "calendar" of the State papers of the reign of Henry VIII. This was the chief work of his life. Between 1862 and his death there appeared four volumes, consisting of nine parts, each in itself a thick volume, of this *Calendar of Letters and Papers, Foreign and Domestic, of the Reign of Henry VIII.*, the last going down to the end of 1530. In these volumes summaries of every paper and letter of the times are arranged in chronological order, so that the whole work includes whatever original materials for history the editor could lay his hands on. The elaborate introductions which he has prefixed to each volume contain the only full and authoritative survey of the history of the first half of Henry VIII.'s reign. The limitations imposed by the conditions of composition prevent it being quite a regular history, but it has superseded all the regular histories attempted of the period. In it the character and policy of Wolsey are for the first time satisfactorily explained, and though the excesses of a hero-worshipper sometimes mar the portrait, his view of the great cardinal must be generally accepted as correct. A tendency to exaggeration, springing from strong views or prejudices, a certain want of proportion, hard to avoid under the circumstances, and a somewhat diffuse style are the worse blemishes of this great work, which, from the point of view of scientific history, must rank with one of the first of the age. In addition to the above, Mr. Brewer published in 1864 a joint report on the Carte and Carew Papers relating to Ireland, which was followed by an edition of the latter in the years succeeding 1867, for which he was largely responsible. He also published a variety of other works, among which a recent volume of essays, partly reprinted from the *Quarterly Review*, may be specially mentioned. They are always interesting and suggestive, though strong Tory and Church prejudices are apparent in such essays as those on Land. An edition of the *Student's Hume* and the supervision of the series of English classics published by the Clarendon Press, for which he wrote the introduction, may be also mentioned among his many literary undertakings. So much activity met with but a tardy and inadequate reward, so far as preferment goes. After his death, his introductions to the State papers

were collected in a form more accessible to general readers, under the title of *The Reign of Henry VIII.* [T. F. T.]

Brewster, Sir David, LL.D. (b. 1781, d. 1868), eminent physicist, was born at Jedburgh. He was educated at the University of Edinburgh, where his attention was early directed to natural science. After becoming a "probationer" of the Scottish Church, he devoted himself to literary and scientific work, translating and writing many volumes on scientific and other subjects. In 1807 he received the degree of LL.D. from the Marischal College, Aberdeen, and next year became the editor of the *Edinburgh Cyclopaedia*, a position he held till its completion, in 1830. His investigations into the phenomena and composition of light early brought him a considerable amount of fame, and his name must remain permanently associated with the invention and the improvement of many optical instruments. The kaleidoscope was invented by him in 1816; he made many improvements in the microscope and telescope, brought the stereoscope into scientific and artistic use, introduced the Bude light, and demonstrated the value of polygonal lenses in lighthouses. In addition to numerous other distinctions received from all parts of Europe, he was awarded the Rumford gold and silver medals from the Royal Society, in 1819, for his discoveries on the polarisation of light, and in 1849 he was elected one of the eight Foreign Associates of the Institute of France, in succession to Berzelius. In 1831 he may be said to have founded the British Association, over which he presided in 1850; in the course of the same year he was knighted (K.T.). In 1838 he was appointed principal of the United Colleges of St. Salvator, St. Leonards, and St. Andrews, and in 1859 was chosen principal of Edinburgh University. In addition to numerous contributions to periodicals and cyclopaedias, Brewster wrote a *Life of Newton*, first published in 1828, and afterwards enlarged in 1856; *Letters on Natural Magic*; *Treatise on Optics*; *Martyrs of Science*; and *More Worlds than One*; in addition to several more technical works. He may, therefore, be regarded, apart from his other claims to distinction, as one of those who did much to popularise physical science. But, as his successor in St. Andrews so justly remarked, if "his scientific glory is different in kind from that of Young and Fresnel, as the discoverer of the law of polarisation of biaxial crystals, of optical mineralogy, and of double refraction by compression, he will always occupy a foremost rank in the intellectual history of the age."

The *Home Life of Sir David Brewster*, by his daughter, Mrs. Gordon. [R. B.]

***Bright, The Rev. James Franck, D.D.** (b. 1832), was educated at University College, Oxford, obtaining a first-class in law and modern history in 1854. He was for some time assistant-master at Marlborough College,

but returned to University College as lecturer on modern history. In 1876, and again in 1880, he was examiner in the history schools. In 1881 he became master of University College. Dr. Bright is the author of *The Marlborough French Grammar* (6th ed., 1871), and an *English History for the use of Public Schools* (1st ed., 1875), an excellent text-book for advanced pupils.

***Bright, John**, orator and statesman (b. 1811), was born at Greenbank, near Rochdale. The family originally came from Wiltshire, migrating first to Coventry, in Warwickshire, and afterwards into Lancashire. Mr. Bright's father entered upon the cotton-spinning trade, and the business which he established has grown to large dimensions in the hands of his sons. For generations the Brights were members of the Society of Friends, and Mr. Bright was educated at a Friends' school at Ackworth, and subsequently at York and Newton. When in his sixteenth year, Mr. Bright joined his father in the factory, and while diligent in business, he took a great interest in the questions of the day. At a very early period he spoke upon such subjects as temperance, capital punishment, church rates, and parliamentary reform. He was deeply moved by the Reform struggle of 1831-2. In 1833 he travelled abroad, visiting Greece, Egypt, and Palestine. The national education question first brought Mr. Bright and his friend Richard Cobden together, but they were destined to be still more closely associated in a movement which directly concerned the poorer classes of the population. In 1839 the National Anti-Corn-Law League sprang out of a previously constituted body, called the Anti-Corn-Law Association, and Mr. Bright's name appeared second on the list of the provisional committee of the League. In 1841 Mr. Bright sustained a severe loss by the death of his wife, to whom he had been married only two years before. This lady was the eldest daughter of Mr. Jonathan Priestman, of Newcastle-upon-Tyne. On the day after her death, Cobden went to console his friend, and exhorted him, after the first paroxysm of his grief was over, to devote himself heart and soul to the movement for the repeal of the Corn Laws. From that time forward the two friends laboured together assiduously in the cause. Mr. Bright's argumentative and eloquent speeches pointed him out as a suitable candidate for parliamentary honours, and in 1843 he was returned for Durham. His first speech in the House of Commons, delivered on Aug. 7th, was in support of a motion calling for the reduction or repeal of the duties which pressed upon manufactures. During the next three years he was ceaseless in his advocacy of free trade, and when at length Sir Robert Peel yielded to the demands of the com-

munity and the exigencies of the time, and abolished the Corn Laws, it was felt that the main credit for this legislation was due to the unwearied exertions of Cobden and Bright. Upon this agitation followed another, led by Lord Ashley (afterwards Earl of Shaftesbury) and Mr. Fielden, for a reduction of the daily labour of operatives in factories to ten hours. Mr. Bright opposed the movement, on the ground that workmen and employers should be left entirely free to regulate their mutual relations. He incurred considerable unpopularity, however, for his attitude on this question. A Ten Hours Bill was passed in 1847, and legislation on the subject was completed by the passing of a second Bill in 1850. About this time Mr. Bright advocated remedial legislation for Ireland, including the disestablishment of the Irish Church, and the application of the principles of free trade to the land question. He also turned his attention to India, with the view of obtaining from that country a supply of cotton. In June, 1849, he married Miss Leatham, daughter of a Wakefield banker, and by her had a family of seven children. Together with Cobden, Mr. Bright assailed the system of large armaments, and recommended arbitration for the settlement of international disputes. When England drifted into the Crimean War, Mr. Bright strongly opposed the Ministerial policy, and condemned the war in numerous speeches in the House of Commons and in the country. One of his finest addresses in opposition to the war was delivered in Parliament on Feb. 23rd, 1855, when, in a memorable passage, he said, "The Angel of Death has been abroad throughout the land; you may almost hear the beating of his wings." Owing to a severe attack of illness Mr. Bright went abroad early in 1857, and while in Rome the news reached him of the defeat of the Palmerston Government upon Mr. Cobden's motion relating to the Canton question and the affair of the *lorcha Arrow*. Mr. Bright entirely sympathised with the vote of censure, but at the ensuing election he lost his seat for Manchester, owing to his attitude on the Crimean and Chinese questions, and to the great popularity of Lord Palmerston with the country. He had sat for the city since 1847, and, previously to the election of 1857, had expressed a wish to retire, on the ground of ill-health, but his supporters nominated him in his absence. He was elected for Birmingham, however, in Aug., 1857, and has ever since remained one of the representatives of that city. In the session of 1858 Mr. Bright seconded a vote of censure upon Lord Palmerston's Ministry, in connection with the Conspiracy to Murder Bill, which was alleged to have been introduced at the instigation of the Emperor of the French. Lord Palmerston was defeated, and resigned. During the ensuing

session Lord Derby's Government brought in a Bill for the abolition of the East India Company, and the transfer of the Government of India to the Crown. This and other Indian reforms had long been advocated by Mr. Bright, and he now assisted in carrying the Ministerial measure. In the year 1859 he led an arduous campaign in connection with Parliamentary Reform, and when the Civil War in America broke out he energetically supported the cause of the North, although his own business, and the whole of the Lancashire cotton district, suffered severely from the scarcity of cotton that resulted from the war. The death of Cobden, in April, 1865, caused Mr. Bright poignant grief, and he was unable, owing to deep emotion, to add more than a few sentences to the tributes paid to that distinguished man by Lord Palmerston and Mr. Disraeli in the House of Commons. The agitation for Reform was renewed at the close of 1865, and in the following session Mr. Gladstone introduced the Government measure dealing with this subject. The Bill was lost, owing to the defection of a number of Ministerialists, and the Government resigned. Mr. Bright now appeared at Birmingham, Leeds, Glasgow, and other towns, demanding a new Reform Bill. He also visited Ireland, and was entertained at a banquet in Dublin, Oct. 30th, 1866. In the ensuing session Mr. Disraeli unfolded the Conservative Reform scheme, and the measure that ultimately passed embodied many of the principles for which Mr. Bright had long contended, while the whole basis of the electoral representation was considerably widened at his instigation. Irish questions now occupied the attention of Parliament, and Mr. Bright advocated a scheme of Land Reform and the Disestablishment of the Irish Church in speeches of great power and eloquence. It was his advocacy which hastened the Disestablishment measure and other legislative schemes affecting Ireland introduced by Mr. Gladstone. Mr. Bright, who was reluctant to take office, at length consented to accept the Presidency of the Board of Trade in Mr. Gladstone's Administration of 1868, and he speedily saw his principles carried out in the Act for the Disestablishment of the Irish Church, the Irish Land Act (in which the Bright clauses were introduced with the object of establishing a peasant proprietary), the Elementary Education Act of 1870, and other measures. In consequence of ill-health, he resigned office in Dec., 1870, and did not appear again in Parliament until April, 1872. In August, 1873, however, being then partially restored to health, he was appointed Chancellor of the Duchy of Lancaster, in succession to Mr. Childers, and this post he held until the resignation of the Gladstone Ministry, in Feb., 1874. Great sympathy was expressed for Mr. Bright when his wife died suddenly,

in May, 1878. In the following year he declined an invitation from President Hayes to visit the United States, where his name is held in high regard by all classes of the people. On the return of the Liberals to power, in May, 1880, Mr. Bright again became Chancellor of the Duchy of Lancaster, but on July 17th, 1882, he resigned this office, and retired from the Cabinet, on the ground that he was unable to support the policy of his colleagues in Egypt—a policy which led to the bombardment of Alexandria. Since then Mr. Bright has seldom spoken in the House of Commons; but in the session of 1883 he replied to a charge of breach of privilege brought against him in connection with certain speeches delivered at Birmingham, when he was supported by a majority of the House; and in the session of 1885 he defended himself from an attack made upon him by the Irish members for his support of the policy of Lord Spencer. In 1886 he opposed the Home Rule for Ireland Bill introduced by Mr. Gladstone. Mr. Bright is generally regarded as one of the greatest orators who have ever adorned the House of Commons. His great merit is that by the force of his potent example he abolished the stilted style of speaking, and showed that eloquence was possible without rounded periods and tetra-syllabic words.

[G. B. S.]

Bright, RICHARD (b. 1789, d. 1858), an English doctor, was a native of Bristol, and set up a practice in London, becoming physician of Guy's Hospital. He was the first to describe the affection of the kidney generally known as "Bright's Disease," originally defined as a granular disease of the cortical part of the kidney, but now including all diseases productive of albuminuria. His discoveries were embodied in a work entitled *Original Researches into the Pathology of Diseases of the Kidney*.

Brisbane, SIR THOMAS MACDOUGALL, K.C.B., D.C.L. (b. 1773, d. 1860), astronomer, was born at Brisbane, Ayrshire. He entered the army in 1789, and served in Flanders, the West Indies, the Peninsula, and North America. From 1818 to 1821 he was military commander in the south of Ireland, and in the latter year was appointed Governor of New South Wales, a position he held for four years. He inaugurated many wise reforms, including tickets-of-leave for good conduct among the convicts; introduced, at his own expense, good breeds of horses; encouraged the reclamation of waste lands, and the cultivation of the vine, sugar-cane, and cotton. Brisbane, the capital of Queensland, is named after him. He holds a high place as an astronomer. While in Australia he founded a

large observatory, and catalogued 7,385 stars, for which service the Royal Society awarded him the Copley medal. On his return home he erected an observatory at his residence at Makerston, in Roxburghshire, and devoted himself to scientific pursuits. In 1836 he was made a baronet and K.C.B., and in 1841 he became general. He received the degree of D.C.L. from Oxford, and was Sir Walter Scott's successor in the Presidency of the Royal Society of Edinburgh. He founded two gold medals for the encouragement of scientific research in the award of the Royal Society and Society of Arts respectively.

* **Brisson, HENRI**, French statesman (b. 1835), is the son of a lawyer of Bourges, and was called to the French bar in 1859. Bad health compelled him to travel, and on his return to France, in 1864, he distinguished himself in the columns of *Le Temps* as one of the leading political writers of France, and a downright opponent of the Second Empire. On the downfall of Bonapartism, Brisson became Deputy Mayor of Paris, but he showed a want of resolution in dealing with the Communist outbreak, and resigned, together with the Mayor Étienne Arago (q.v.), on the 1st of November. Elected in 1871 as a Deputy for Paris, he became known as a politician of the highest order, and in 1879 was chosen Speaker, a position which he filled with very great credit. In 1885, on the downfall of M. Ferry, M. Brisson, sorely against his will, undertook the premiership, and formed a stop-gap administration out of the materials at his disposal, which lived on without much incident until the general elections of October. They resulted in a considerable and unexpected increase of the Monarchists (Conservatives), but M. Brisson secured his own return for Paris. In January, 1886, he resigned and was succeeded by M. de Freycinet.

* **Bristow, HENRY WILLIAM, F.R.S.** (b. 1817), English geologist, was educated at Fortescue House, Twickenham, under the Rev. Drs. David Lewis and Nicholson, and in the Senior Department of King's College. After obtaining certificates of honour in the department of engineering, he received the degree of Associate K.C. in 1841, twenty-two years later being elected to an honorary fellowship in the same college. In 1842 he entered the Geological Survey of England, and since 1872 has been senior director. He was elected F.R.S. in 1862, and F.G.S. in 1843, and, in addition to memberships in learned societies, became an officer of the Italian Order of SS. Maurice and Lazare in 1880. He was appointed examiner in geology and mineralogy under the Council of Military Education, Oct., 1865. Mr. Bristow's writings are not numerous, his official duties absorbing most of his time. The chief memoirs associated with his name are on the *Geology of the*

Isle of Wight (1862), a *Glossary of Mineralogy* (1861), several contributions to *Ure's Dictionary of Arts, Manufactures, and Mines*, and to *Brande's Dictionary of Science, Literature, and Art*, fourth edition. He has also edited Cassell's edition of *Figuiet's World before the Deluge* (1869), and *Simonin's Underground Life* (1869), and, in conjunction with Mr. Etheridge, has published *British Sedimentary and Fossiliferous Strata* (1872).

Britton, JOHN, antiquarian (b. 1771, d. 1857), was born near Chippenham, and educated at village schools. He went to London, and was apprenticed to a wine-merchant, but being compelled to abandon that calling from ill-health, he was compelled to pick up his living as best he could. By slow degrees he became known in literary circles, and in 1801 produced, in conjunction with his friend, E. W. Brayley, F.S.A., the first two volumes of *The Beauties of Wiltshire*, the first work on popular topography ever published. To them were added other volumes, until the *Beauties of England and Wales* was completed. Other works, of a more purely antiquarian character, are the *Architectural Antiquities of Great Britain* (1805); *Cathedral Antiquities of England*, completed in 1825; *Antiquities of Normandy*, 1827; and *History of the Houses of Parliament*, written in conjunction with Brayley, and published in parts between 1834 and 1836.

* **Broadhurst, HENRY, M.P.** (b. 1840), the son of a journeyman stonemason, was born near Littlemore, in Oxfordshire. He worked at his father's occupation until 1872, when he became secretary to a political organisation. In 1875 he was elected Secretary to the Parliamentary Committee of the Trades Union Congress, an office he still holds. In 1880 he was elected M.P. for Stoke-upon-Trent, and in 1885 was returned for the Bordesley division of Birmingham. He has sat on two royal commissions: the Reformatory and Industrial Schools, and the Housing of the Working Classes. In 1886 Mr. Broadhurst was appointed Under-Secretary of State for Home Affairs, and at the general election was returned for Nottingham (West).

* **Brock, THOMAS, A.R.A.**, sculptor (b. 1847), studied first at the Government School of Design at Worcester, and then came to London, and entered the school of the Royal Academy, where he carried off the highest honours. He then entered the studio of the late J. H. Foley, R.A., first as a pupil, and afterwards as an assistant. After the death of the master, Mr. Brock was entrusted with the finishing of the various works left uncompleted: the chief of these being the O'Connell Monument in Dublin. Among Mr. Brock's portrait statues may be named Richard Baxter, Robert Raikes, Sir Rowland Hill, Sir Richard Temple, the poet Longfellow in

Westminster Abbey, and Sir Erasmus Wilson; while among his ideal works may be mentioned *Heracles Strangling Antaeus*, and a large equestrian group, *A Moment of Peril*, purchased for the nation by the Royal Academy. Mr. Brock was elected an Associate of the Royal Academy in 1883.

Broglie, ACHILLE LÉONCE VICTOR, DUC DE (b. 1785, d. 1870), was the son of a politician, who perished under the guillotine. He inherited his father's Liberal opinions, and when, after the restoration of 1815, he was summoned to the Chamber of Peers, he distinguished himself both by his opposition to the court as a member of the Doctrinaire party, led by his friend Guizot, and by his advocacy of the abolition of slavery and of the theory of constitutional monarchy. After the July revolution, he became Louis Philippe's Foreign Secretary (1832). During his two years' tenure of office, he succeeded in establishing a good understanding with England, in obtaining the sanction of the new Greek monarchy from the Powers, and in bringing to a successful issue the efforts for Belgian independence. Out of office until March, 1835, he became Prime Minister in 1836, but was beaten shortly afterwards on a financial question, and resigned, greatly to the relief of the king, who disliked him on account of his dictatorial manner. It was observed that he was much more Conservative in office than when in opposition, notably with regard to the gagging of the Press. He was, however, true to the cause of the negro slave. After the revolution of 1848 he struggled, but in vain, to check the ambitious schemes of Louis Napoleon, and continued until the end of his days a bitter enemy of the Second Empire, the ruin of which he just failed to see. He became a member of the French Academy in 1856, and among his works may be mentioned *Écrits et Discours* (1863); *Le Livre Échange et l'Impôt*, an economical treatise published by his son.

Guizot, *Le Duc de Broglie*.

* **Broglie, ALBERT, DUC DE** (b. 1821), the eldest son of the above-mentioned minister of Louis Philippe, at first became known as a publicist, and advocated the cause of constitutional monarchy and of the Established Church in the *Correspondent*. Under the Second Empire he held aloof from politics, and devoted himself to literature until just before its fall, when, in 1869, he stood for the department of the Eure, but without success. During that period he produced a volume of essays (1853); a brilliantly paradoxical history of *The Church and the Roman Empire in the Fourth Century* (1856); an important pamphlet on *The Maladministration of Algeria* (1860); two religious works, *La Souveraineté Pontificale et la Liberté*, and *La Liberté Divine et la Liberté Humaine* (1861 and 1865). He was elected an Academician in 1862. After

the establishment of the Republic, the Duke was returned for Eure (1871), and shortly afterwards nominated French Ambassador to London. His Free Trade principles, however, gave his enemies a handle for attack; and in consequence of the strictures passed upon his conduct when he was the unwilling instrument in the abrogation of the Anglo-French commercial treaty of 1860, he sent in his resignation (1872). From that time, as leader of the Conservative Right Centre, which held the balance in the Chamber, his main object was to force a monarchical form of government upon France; and when, in May, 1873, he had forced the President of the Republic, M. Thiers, to resign on a question of a ministerial appointment, and had persuaded Marshal MacMahon to fill the vacancy, victory seemed to be within his grasp. He became Minister of Foreign Affairs and President of the Council. The thin end of the wedge was the displacement throughout France of the Republican functionaries, and the law placing the nomination of mayors in the hands of the Government. All depended upon the contemplated fusion of the Orleanist and Legitimist lines, and to give it time, the Prime Minister carried the prolongation of the Marshal's presidency for seven years—the Septennate. The arrangement, however, broke down before the inflexible devotion to obsolete principles of the Comte de Chambord; the fiery denunciations of Gambetta sounded the tocsin throughout France; and in May, 1874, the Duc de Broglie, beaten on a question of procedure, chiefly through the defection of the Legitimists (the Extreme Right), resigned. Elected by the department of the Eure to the Senate, in 1876, he again, on the resignation of M. Jules Simon (May, 1877), undertook to form a Royalist and Imperial Cabinet, in which he became President of the Council and Minister of Justice. Again he attempted to overthrow the Republic, by packing the magistracies, gagging the press, and making use of the personal popularity of Marshal MacMahon. Once more, however, Gambetta stood in the gap: the President was informed that the only alternatives before him were "submission or resignation"; and the general elections of May returned a crushing Republican majority. The Duke was speedily defeated in the Chamber of Deputies, and resigned on Nov. 15th, 1877. Subsequent revelations were not greatly to his credit, and in the following year a vote of censure was passed upon him by the Chamber. In Oct., 1885, he failed, in spite of the Conservative reaction, to secure his re-election to the Chamber of Deputies. The Duke's later works are *Le Secret du Roi*, a valuable collection of State papers relating to the reign of Louis XV. (1878), and *Frédéric II. et Marie Thérèse* (1882), both of which have been translated into English.

Broke, SIR PHILIP VERE, English admiral (b. 1776, d. 1841), entered the navy in 1792, and became post-captain in 1801. His chief exploit was the capture of the U.S. frigate *Chesapeake*, with forty-nine guns, when in command of the *Shannon*, of thirty-nine guns, in June, 1813. This victory, gained at a period of national depression, was hailed with enthusiasm, but the rest of its hero's career was uneventful.

Brighton and Middleton, *Memoirs of Admiral Broke*.

Brongniart, ALEXANDRE (b. 1770, d. 1847), a French mineralogist and geologist, born in Paris. From early youth he studied scientific subjects, and at the age of twenty published a work on the art of enamelling. He served successively in the army as druggist, as a mining engineer, and as professor of natural history at the Ecole Centrale des Quatre-Nations (1796), and in 1800 was appointed director of the Sèvres manufactory, where he revived the nearly lost art of painting on glass. In 1815 he was nominated member of the Academy of Sciences. He published, among other works, an *Essai d'une Classification Naturelle des Reptiles*; an elementary treatise on mineralogy, adopted by the University; *Description Géologique des Environs de Paris*; and a *Traité des Arts Céramiques*, in which he has embodied the results of his practical studies on pottery. He has been regarded in France as the founder of systematic geology. His son, Adolphe Théodore (b. 1801, d. 1876), was the author of an important *Histoire des Végétaux Fossiles*.

Brontës, THE. The name of the Brontë family is sufficiently assured of a high place in the annals of English literature on the claims of Charlotte Brontë alone, but the sisters Emily and Anne are also deserving of recognition. The father, the Rev. Patrick Brontë, appears to have been a native of County Down; the mother, Maria Branwell, came of a Cornish family. In 1812 the family removed to Hartshead, Yorkshire, and three years later to Thornton, where Charlotte was born in 1816, Patrick in 1817, Emily probably in 1818, and Anne in the following year. Two daughters were born prior to this removal. In 1820 the family removed from Thornton to Haworth. If Mrs. Gaskell is to be trusted as to the early domestic life of the Brontë sisters, the father was a crazy clergyman, who was liable to such outbursts of passion as resulted in driving his wife from her home. It has been said that he was accustomed to carry pistols about his person, and in moments of frenzy to discharge them into space for the relief of his pent-up feelings. Some doubt has, however, been cast upon these facts since Mrs. Gaskell gave them the authority of her name. For a time the father was deprived of sight,

and became a serious charge on his household. Only towards the end, and in some feeble way peculiar to himself, did he become conscious of the literary greatness of the children who had dwelt so long as strangers under his roof. His wife died at Haworth, and then the eldest daughter, Maria, assumed the functions of mother to her younger sisters. In 1824 Charlotte and Emily were sent to a school for the daughters of clergymen at Cowan's Bridge, near Haworth. This establishment appears to have been the original of the Lowood depicted with such intensity of power and fidelity of realism in *Jane Eyre*. The girls returned in 1825, remained at home six years, and were then sent to a school at Roe Head. To this school Charlotte returned as teacher in 1835. After a short experience as governess, Charlotte, with Emily, went to Brussels, there to teach English and be taught French. In 1846 the three sisters, Charlotte, Emily, and Anne, printed a small volume of poems, under the names of Currer, Ellis, and Acton Bell. The book was hardly recognised by press or public. About the same period all three sisters engaged in the writing of novels. Charlotte wrote *The Professor*, Emily wrote *Wuthering Heights*, and Anne wrote *Agnes Grey*. Charlotte's story was at first rejected by the publishers, and was published after her death. The stories of Emily and Anne were accepted. A second story undertaken by Charlotte appeared in 1847, and this was *Jane Eyre*. Its success was instantaneous and complete. Curiosity as to the author's identity was soon very great. Of course, adverse criticism was not slow in making itself felt. The most memorable thing said respecting the morality inspiring the book was that it was impregnated with a heathenish doctrine of religion. The book was said to teach that strong passion was the one really good thing in life, and that all human conventions that oppose it were to be disregarded. Nay, to come to closer quarters, the favourite theory of certain caustic reviewers was that Jane Eyre and Becky Sharp were different portraits of the same person, and that their original in both cases was a discarded mistress of Thackeray, who, by way of revenge for the infamy of being compelled to sit as a model for the heroine of *Vanity Fair*, had painted him as Rochester. "If," said the *Quarterly Review*, "we ascribe the book to a woman at all, we have no alternative but to ascribe it to one who has, for some sufficient reason, long forfeited the society of her sex." The question of authorship was hotly disputed, and this helped to keep up the excitement respecting the book. Charlotte Brontë had concealed her identity even from her publishers, but when the rumour reached her that she had satirised Thackeray under the name of Rochester, she was so much shocked by the supposition that she went up to London at

once by the night train, accompanied by one of her sisters. Next morning they walked to the publishing house of Mr. Smith, of Cornhill. Charlotte was a little woman, with a face far from beautiful, and she wore the simplest of Quaker costumes. Due, perhaps, to these personal disadvantages, she had much difficulty in penetrating to the head of the house, having refused her name to the messenger. At last the principal came into the shop saying, "Young woman, what can you want with me?"—"Sir," she answered, "we have come up from Yorkshire. I wish to speak to you privately. I wrote *Jane Eyre*."—"You wrote *Jane Eyre*!" exclaimed the incredulous publisher. It was even so; and very soon the plain little woman was in the midst of a preface, in which Thackeray was spoken of as the first social regenerator of the day, the very master of that working corps who would restore to rectitude the warped system of things. Having thus lifted above suspicion of covert malice a piece of typical portraiture, the brave woman made no reply to the charges of personal impurity. She was accused of coarseness, of vulgarity, and obscenity, and the charges were not such as a pure woman could refute. It has been fitly said that her coarseness was no more than the simplicity and sincerity, the straightforwardness of an unspotted heart. The year after the publication of *Jane Eyre*, Charlotte's brother, Patrick Branwell Brontë, died. He was something of a genius, and something of a character too. He was a small-sized youth, with flashing eyes and a great shock of red hair. According to Mrs. Gaskell (once more open to question), people told prodigious stories of Branwell's powers. It was said that he could write two different letters at the same moment—one with each hand. The village of Haworth rang with praises of his bravery, too. When he grew to be a man, he was sent as tutor to a place at some distance, and there the curse of his life came upon him. The old story of the deceiver and deceived was reversed, and Branwell became the victim of a heartless woman. Discovery resulted in his dismissal, and he returned to the home of his father and his sisters, took first to drink, and then to opium, and finally—shattered in mind and wrecked in body—died a miserable death. His betrayer lived to be for a time a conspicuous figure in fashionable circles in London. On Dec. 19th, in the year of Branwell's death (1848), Emily also died. Her *Wuthering Heights* is a book full of wild excess, and betraying no real experience of life, but, nevertheless, instinct with imagination. A critic has said that her genius moved as a wind upon the tragic and perilous waters of passion. Long before her death she knew that she had received her death-warrant, but it did not appal her. She was brave, and without a touch of her brother's braggadocio.

One day a dog came panting to the door, and she went out and offered it water in a bowl. The dog was mad, and bit her savagely. She went into the house, and taking up an iron that was heating at the fire, she burnt out the bite from her arm—never saying a word about the event for months afterwards. Her death was as stoically heroic as her life. Her sisters saw her fading before their eyes, yet they dared not to offer her the simplest attentions due to an invalid. Her resolute spirit knew no bending. She refused to own that she was even ill, declined medicine, and compelled her hands to labour as of old. "At last," says Mrs. Gaskell, "came that bitter morning in December when she arose, dressed herself as usual, making many a pause, but doing everything for herself." In two hours more she had passed quietly away. "Yes," says Charlotte, "there is no Emily in time or on earth now; yesterday we put her wasted mortal frame quietly under the church pavement." In less than half a year more, May 28th, 1849, the younger sister, Anne, died, and then the author of *Jane Eyre* was left almost as much alone in the world as the simple heroine of her own story. Anne was not in any sense a writer of genius. Her *Agnes Grey* was succeeded by *The Tenant of Wildfell Hall*, but neither of these stories exhibits special powers. Charlotte Brontë published her second story, *Shirley*, in 1849, and in 1853 her third and last story, *Villette*. In June, 1854, she married the Rev. Mr. Nicholls, who had been for a time her father's curate. But soon after her marriage the fell disease consumption, which had carried off her sisters and brother, began to settle on herself. She died March 31st, 1855, in her fortieth year. With so many causes of sorrow her life could not be a happy one. It was, indeed, full of labour and pain. Mr. Leslie Stephen says that, as a moralist, Charlotte Brontë seems to say that the intense and spontaneous affection of kindred and noble natures is the one really precious thing in life, but that such happiness is chimerical. Yield to your feelings, and the chances are enormously great that you are trampled upon by the selfish. The only safe plan is that of the lady in the ballad, to "lock your heart in a case of gold, and pin it with a silver pin." Perhaps the analysis is more subtle than satisfying. As a novelist, Charlotte Brontë's faults were, as George Henry Lewes said, on the side of vigour, but her beauties were original. She painted inanimate nature with as much force and fidelity as her sister Emily, and human nature with far more knowledge. Perhaps the grand secret of her first success was that out of her own sorrowing experience she spoke, as a critic said, to the experience of thousands. She was a great delineator of female character. She once told her sisters that they were wrong in making their heroines beautiful as a matter of course, and in reply to

their objection that it was impossible to make a heroine interesting on any other terms, she answered, "I will show you a heroine as plain and as small as myself, who shall be as interesting as any of yours." Hence *Jane Eyre*. In that book she has compelled us by force of magnetic passion to love a little plain creature in a Quakerish cotton dress. With the reader under the spell of her genius, it is even as with *Jane Eyre* herself under the charm of Rochester: the first feeling is one of violent resistance. Some one has said that Charlotte Brontë was the first to make the warfare between man and woman the sole scheme of a novel. If this is so, she must be accepted as the originator of a school of fiction which is larger both as to the number of its products and the influence of its producers than any other.

Mrs. Gaskell's *Life*; Charlotte Brontë on her sisters in an edition of their works; Mr. Wemyss Reid's *Memoir*; Mary F. Robinson's *Emily Brontë* (Eminent Women Series); A. C. Swinburne's *A Note on Charlotte Brontë*; Lehmann, *Emily, Anne, and Patrick Brontë* (1885). [T. H. C.]

Brooke, SIR JAMES, RAJAH OF SARAWAK (b. 1803, d. 1868), was a native of Bath. At the age of twenty-two he entered the service of the East India Company, and took part in the first Burmese War, in which he was wounded. He left the Company, and in 1830 made a voyage to China, in the course of which he conceived the idea of rescuing the Indian Archipelago from pirates. The attempt was made in the yacht *Royalist* in 1838; he went to Borneo, and aided the Sultan to reduce the Dyak tribes of Sarawak. For his services he was made Rajah of the province in 1841. He drew up a code of laws, and in order to develop commerce, exterminated piracy without mercy, English officers being allowed to co-operate with him. In 1847 he returned to England, was received with acclamation, and made Governor of the Island of Labuan, which had been purchased from Borneo. His subsequent repression of the pirates, however, was so severe, that he was attacked in the House of Commons in 1851; and, though acquitted by a Royal Commission at Singapore, was deprived of his governorship. In Sarawak he had to encounter several rebellions, all of which were overcome. He died at Burrator, in Devonshire, an estate purchased for him by public subscription. He, if any one, is entitled to the tyrant's plea, necessity.

Temple, *Private Letters of Sir J. Brooke*; Mundy and Keppel, *Journal*.

• **Brooke, THE REV. STOPFORD AUGUSTUS** (b. 1832), was born at Dublin. He was educated at Trinity College, Dublin, where he gained the Downe prize and the Vice-Chancellor's prize for English verse. He graduated B.A. in 1856, and took his M.A. degree in 1858. In 1857 he became curate of St. Matthew's, Marylebone, and from 1860 to 1863 was curate of the pariah church, Ken-

sington. He then held the ministry of St. James's Chapel, York Street, St. James's Square, from 1866 to 1875, and afterwards that of Bedford Chapel, Bloomsbury, where the literary finish of his sermons made him one of the most popular of London preachers. In 1872 he was appointed Chaplain-in-Ordinary to the Queen. In 1880 Mr. Brooke seceded from the Church of England, expressing his inability to believe in miracles. Some of his published works are *Life and Letters of the late F. W. Robertson* (1865), followed by *Theology in the English Poets*, an admirable *Primer of English Literature* (1876), *Riquet of the Tuft* (1880), and several collections of sermons.

Brooks, CHARLES SHIRLEY (b. 1815, d. 1874), was the son of an architect, and was destined for the law. Turning aside, however, to literature, he first became known as a writer of burlesque, in which he had an ephemeral success. He also became attached to the *Morning Chronicle*, for which he wrote the parliamentary summary; and in 1856 he undertook a journey of investigation to South Russia, and his letters on the condition of the peasantry were published in volume form, under the title of *The Russians of the South* (1856). For many years he contributed weekly articles, *Nothing in the Papers and By the Way*, to the *Illustrated London News*. In 1854 he became connected with *Punch*, and contributed to it the admirably pointed *Essence of Parliament*. On the death of Mark Lemon, in 1870, he succeeded him as editor, and continued to occupy that post until his death. To his friends he was also known as a rare conversationalist and letter-writer, and to the public at large as the author of several novels, *Aspen Court* (1855), *The Gordian Knot* (1860), *The Silver Chord* (1861), and *Sooner or Later* (1868). These are clumsily constructed, but are full of a refined vein of humour, and show an admirable grasp of the vanities of the cockney world.

Brougham and Vaux, HENRY BROUGHAM, LORD (b. 1778, d. 1868), was born at Brougham Hall, in Westmoreland, and was the eldest son of Henry Brougham. Educated at the High School and University of Edinburgh, he became in 1800 a member of the Scotch bar. He soon became conspicuous as the most energetic and vigorous of the group of brilliant young Whigs then resident in Edinburgh, who included Jeffrey, Horner, Sydney Smith, Murray, and Cockburn. Their desire to find a literary organ to protest against the dominant Toryism of the anti-revolutionary school led to the establishment of the *Edinburgh Review*, the first number of which appeared in Oct., 1802. To this Brougham was from the first, and for many years continued to be, one of the largest contributors, his extraordinary versatility and varied knowledge, no less than his unwearied

industry and vigorous style, peculiarly fitting him for periodical literature. He soon became well known, and, abandoning Edinburgh for a wider sphere, was called to the English bar, and began to practise in 1808 in London and on the northern circuit. As a lawyer, and still more as a politician, his advance was extremely rapid. In 1809 he was returned to Parliament by the small Cornish borough of Camelford, and became at once a leading orator of the Whigs, and the special rival and opponent of Canning himself, against whom he fought a very famous election contest at Liverpool in 1811. His failure led to his being shut out of Parliament until 1816, when he was returned as member for Winchelsea. The greatest achievement in his early parliamentary career was carrying through the Bill which, by making the slave trade felony, made effectual Fox's Act for its abolition. In 1811 his successful defence of Leigh Hunt for re-publishing an article in a country paper on flogging in the army brought him into the first rank of political advocates. (*State Trials*, xxxi.) But his boundless activity was by no means confined to law and politics. He had scarcely returned to Parliament, in 1816, when he advocated with much ability the education of the poor and the restoration of misappropriated educational endowments. In 1820 he suggested a systematic plan of popular education that was received with indifference or repugnance. Hopeless of State aid, he joined Mr. Birkbeck in 1823 in founding mechanics' institutes, and in 1826 co-operated with Charles Knight in starting the Society for the Diffusion of Useful Knowledge, a cause which he supported by writing a number of popular treatises. He was one of the most prominent among those who established the unsectarian London University. His political importance continued to increase. In 1820 he made political capital out of the wrongs of Queen Caroline, and his conduct of her case as her Attorney-General raised him to the highest pitch of influence and popularity. His attacks on the Tory Government became still more vigorous and potent. He denounced the Holy Alliance and the complicity of England in its deeds. He proposed inquiry into the burdens the nation was suffering from; advocated every motion for Parliamentary Reform, and on June 24th, 1822, brought forward an attack on the influence of the Crown very similar to Dunning's famous resolution in 1780, which, though of course negatived, produced a great effect in the country. In 1827 he sank his personal rivalry to support the liberal measures of his old opponent, Canning. In 1828 his famous six hours' speech, exposing the defects of the common law courts and of the law of real property, brought him into prominence as a law reformer. In 1830 the fall of the Wellington Ministry was precipitated by his announcement that he would introduce a

Reform Bill on Nov. 16th. In Grey's Whig ministry, he became Lord Chancellor and a peer. Some of his most famous speeches were devoted to impressing on the unwilling Lords the necessity for the Reform Bill, and with characteristic audacity he urged on William the duty of creating a sufficient number of new peers to secure the passage of the Bill through the Upper House. This is the culminating point of Brougham's career. Success soon developed eccentricities and irregularities that had been hitherto thrown into the background by his wonderful ability and energy. He proved a failure as Lord Chancellor, disgusting lawyers by his ignorance of the details of equity law, and all who came before his court by his overbearing manners; while his anxiety to carry out, as Chancellor, the reforms he had so long advocated, set vested interests against him. But his marvellous capacity for work enabled him to overtake the arrears of the slowest and most cumbrous of English courts of justice. Meanwhile, he was even less successful as a statesman. He took a prominent share in the abolition of negro slavery, and in 1834 persuaded the king to make Melbourne Grey's successor as Prime Minister. But in the Cabinet his inordinate vanity and reckless inconsistency made it quite impossible for his colleagues to work with him, and his extraordinary speeches during the recess of 1834 in Scotland involved both himself and the declining ministry in ridicule. On Sept. 15th he quarrelled fiercely with the Radical Lord Durham at a public dinner at Edinburgh on the question of the rate at which the reformed party should progress, and, madened by the latter's attack, denounced him in the *Edinburgh Review* as publishing to the world the secrets of the Cabinet. In such ways Brougham made himself hated by his political allies (see in Trevelyan's *Life of Macaulay* illustrations of this). The dismissal of the ministry by the king in November deprived both men of office; but when, after Peel's failure, the Whigs returned to power, Melbourne found a safer, if less brilliant, Chancellor in Lord Cottenham. Thus thrown over by his party, Brougham's political career was practically ended. He plunged into furious and factious opposition, made advances to the Tories, and did his best to turn the ministry out of office. But he was not a safe ally for any party, and exercised henceforth an insignificant influence on affairs. He still found useful scope for his untiring energy as a law reformer, as a judge of appeals brought before the Lords, in literature, and in other public work. For many years he made himself conspicuous, sometimes in good, sometimes in foolish causes. The latter part of his life was largely passed at Cannes, which he almost created as a health resort. He attained extreme old age, dying in 1868, in his ninetieth year. Brougham was a man of very great, though hardly of original

capacity, of portentous industry, of extraordinary vigour, activity, and versatility. It is as a statesman that he must finally be judged. In his early years he rendered services almost unique to the cause of liberty, at a time when Whig principles could hardly be professed without danger. His eloquence, dazzling if ill-regulated, was constantly directed to maintain the cause of progress, of truth, and of justice. These characteristics he maintained to the end: but with an increase of responsibility he displayed a want of tact and temper, an outrageous vanity and eccentricity. Yet, as the eloquent advocate of reform and abolition, the champion of law reform and of popular education, he stood conspicuous among the best of his countrymen. His literary labours can hardly be estimated highly. He attempted too much to be more than superficial. Yet, in the absence of more authoritative works, his *History of the House of Lancaster* is still useful, and his *Sketches of the Statesmen of the Time of George III.* have a more permanent value as covering ground with which he was familiar. His *Speeches*, collected in 1838, are powerful, though hardly of the highest rank. With energies less dissipated and temper more controlled, Brougham's place in history, and even in literature, must have been very high. As it was, his life was a splendid failure.

Brougham's *Autobiography*, not always very trustworthy; Campbell's *Life in Lives of the Chancellors*, inaccurate, and not very fair; Harwood, *Memoir of Lord Brougham*; Spencer Walpole, *History of England*; Koebuck, *History of the Whig Ministry*; Martineau, *Thirty Years' Peace*; Molesworth, *History of England*; Hansard; Brougham's *Speeches*. [T. F. T.]

Broughton, JOHN CAM HORHOUSE, LORD (b. 1786, d. 1869), English statesman, was educated at Westminster School and Trinity College, Cambridge. He was a friend of Lord Byron, and in 1809, and again in 1816, he visited Southern Europe in company with the poet. An extreme Liberal, he was in 1819 brought into trouble by his opinions. In 1816 he had published anonymously a pamphlet on the Hundred Days, in which he attacked the English Government, and advocated the lost cause with such vehemence that he was arrested by the Speaker's warrant, and committed to Newgate. After unsuccessfully contesting Westminster in 1818, he was returned by a large majority in 1820. His sturdy advocacy of Whig measures was rewarded by Earl Grey with the Chief Secretaryship for Ireland (1833), but he lost his seat at the general election. In the following year he was returned for Nottingham, and made First Commissioner of Woods and Forests. From 1835 to 1841 he was President of the Board of Control, and again from 1846 to 1852. His views became moderate with advancing years, and after being raised to the peerage in 1851, his chief interests were literary. His *Journey through Albania with Lord Byron* appeared in

1813, and the *Historical Illustrations of the Fourth Canto of Childe Harold* in 1818.

* **Broughton, Rhoda** (b. 1837), novelist, is the daughter of a clergyman. Her principal works are:—*Cometh up as a Flower* (1867); *Red as a Rose as She* (1870); *Nancy* (1873); *Joan* (1876). Her first novel was *Not Wisely but Too Well*; and among her other works, all of which are exceedingly popular, may be mentioned *Good-bye, Sweetheart* (1872); *Twilight Stories* (1879); *Belinda* (1883). She has the power of interesting her readers in a certain type of female character which she depicts with force.

* **Brown, Ford Madox** (b. 1821), painter, of Scottish descent, being grandson of Dr. John Brown, of Edinburgh, the founder of the Brunonian Theory of Medicine, received his early education on the Continent. Showing strong art proclivities, he in due time entered the studio of Baron Wappers, of Belgium. He first exhibited in England in 1844, when he sent two cartoons to the Westminster Hall Exhibition, and he competed again the following year, but without success on either occasion. Shortly after this he visited Italy. In 1849, the first definite year of Pre-Raphaelitism, he exhibited *King Lear* and *The Young Mother*, the former being a work of great vigour and originality. Another work of high art merit was his *Chaucer Reciting his Poetry at the Court of Edward the Third*. This was exhibited at the Royal Academy in 1851. It received the Liverpool prize of £50, and it afterwards appeared in the Paris Exhibition of 1855. This large and important work now decorates the gallery at Sydney. *Christ Washing Peter's Feet* was exhibited at the Royal Academy in 1852. It gained the Liverpool Academy prize in 1856, and in 1857 was exhibited at Manchester. At both these last towns, as well as at Edinburgh and elsewhere, Madox Brown was a frequent exhibitor; but he made no public appearances in London till 1865, when he opened an exhibition of his works in Piccadilly. Among these were *The Last of England* and *Work*. Since then he has produced *The Coat of Many Colours*, *Cordelia's Portion*, *Romeo and Juliet*, *The Entombment*, *Jacopo Foscari*, and *Cromwell*. They are all of them in private collections. Madox Brown may, in a certain sense, be regarded as the master of Dante Gabriel Rossetti, who for a considerable time enjoyed the privilege of working in his studio. They acted and re-acted on each other, and it was after this intercourse that the paintings of Madox Brown assumed that character which some people call Pre-Raphaelite. By many he was looked up to as the father and leading spirit of the whole school, though he was not the first to adopt its method. Later in life he spent many years in Manchester, decorating the town hall of

that city with a series of brilliant designs illustrative of its history. On these compositions the painter may be well satisfied to rest his fame.

Brown, John, D.D. (b. 1784, d. 1847), a Scottish divine, was ordained minister of the "Burgher" branch of the Secession Church at Biggar in 1801. In 1822 he went to Edinburgh, and there became remarkable as a master of the exegetical or explanatory style of preaching. He set himself against the doctrine of interpretation "according to the analogy of faith," and in 1845 he was indicted by his enemies before the synod, but acquitted. During his last years he was regarded as the leader of the United Presbyterian Church.

Brown, John (b. 1800, d. 1859), is known as the originator of the Harper's Ferry insurrection. He was intended for the Church, but was compelled by ill-health to abandon it, and tried several mercantile pursuits, but without success. In 1855 he emigrated to Kansas, and played a prominent part in the border warfare with Missouri. In 1859 he conceived the idea of effecting the abolition of slavery by a general negro rising; but, though he seized the arsenal of Harper's Ferry (Oct. 10th), the negroes refused to stir, and he was taken and hanged.

R. D. Webb, *Brown's Life and Letters*.

Brown, John, M.D. and LL.D. (b. 1810, d. 1882), miscellaneous writer, was the son of the minister above mentioned. He was educated at the High School and at Edinburgh University, and at an early age took the degree of M.D., and soon obtained a remunerative practice. His pleasant essays and sketches appeared separately, and were collected in three volumes, under the title of *Horæ Subsecivæ*, in 1882. The first volume is entitled *Locke, Sydenham, and other Papers*; the second contains the immortal *Rab and his Friends* (which was first issued in 1858, and which has reached its tenth edition); and the third *John Leech, and other Papers*. In 1876 a Civil List pension of £100 was awarded to him, in recognition of his literary services.

Brown, Oliver Madox (b. 1855, d. 1874), the son of the historical painter, Ford Madox Brown, was a boy of extraordinary promise. As early as 1869 he exhibited in the Dudley Gallery, and in the following year contributed a water-colour to the Academy. Soon afterwards he turned his attention to fiction, and *Gabriel Denver* appeared in 1873. Two unfinished novels were *The Ducale Bluth* and *The Yelt Hounds*. His literary remains have been edited by W. M. Rossetti and F. Hueffer.

Brown, Robert, F.R.S., D.C.L., LL.D. (b. 1773, d. 1858), founder of the modern science of vegetable physiology, and the most eminent botanist of his age, was born in Montrose,

Scotland, where his father was an Episcopal minister. After attending the grammar-school of his native town, he entered Marischal College, Aberdeen, and on his father quitting Montrose for Edinburgh, continued his studies in the university of that city. After qualifying as surgeon, he obtained, in 1795, a commission as "ensign and assistant-surgeon" in the Forfarshire Regiment of Fencible Infantry, and served for some time in the north of Ireland. His taste for botany had, however, always been marked, and during his student days he had collected several plants new to Scotland; and now the discovery of a rare moss obtained for him the notice of Sir Joseph Banks, P.R.S. This acquaintance ripened into friendship, and, as the result, Brown left the army to join Captain Flinders on his voyage to the almost unexplored shores of Australia. In 1805 the expedition returned to England; and, in order to give Brown leisure to work out the scientific results of the journey, he was appointed librarian of the Linnean Society. In 1810 appeared the first volume of the *Prodromus Floræ Novæ Hollandiæ*. Almost immediately it became a botanical canon, not only for the vast number of new species and genera which it described, but for the new views of classification and affinities which for the first time were given to the world. It struck the knell of the Linnean system. But, with the exception of a supplement, published in 1830, no more of the work ever appeared, and it is best known by a reprint issued in Germany. In 1816 Brown became librarian to Sir Joseph Banks, who in 1820 bequeathed to him his house and the use of his library and collection for life; but in 1827, by an arrangement with Government, the books and specimens were transferred to the British Museum, with Brown as the keeper of the new botanical department. In 1849, having resigned the librarianship of the Linnean Society, he was elected president for four years. His subsequent career was devoted to botany, and may be read in the history of the science. Long before his death he was recognised as the greatest botanist of the age. Humboldt styles him, in *Kosmos*, "facile princeps botanicorum," and dedicates his work on the plants of the New World to "Roberto Brownio, Britanniarum gloriæ atque ornaménto, totam Botaniæ Scientiam ingenio mirifico complectanti." All the honours which usually fall to men of his science were his. As early as 1833 he was chosen one of the five Foreign Associates of the Institute of France, and in 1839 he received the Copley medal. He was LL.D. of Edinburgh and D.C.L. of Oxford, and sat in the "Academia Cæsarea Naturæ Curiosorum," under the name of "Ray." He was also a knight of the Prussian order "pour le mérite." Modest and retiring, he was, moreover, so little known in general society that Humboldt notes

his amazement at finding that a man who in Germany would have received a patent of nobility, and a place at Court, was quite unknown to the fashionable world. His great fame rests on the two volumes of his papers, reprinted by the Ray Society, and on his *Prodromus*. Indeed, as early as 1825 Nees von Esenbeck began to collect and translate his writings, under the title of *Vermischte Botanische Schriften* (1825-34). But so scrupulously careful was he of every fact, that time has done little to lessen the value of any of his discoveries. Indeed, by his will he ordered that if any of his writings were republished they should be printed exactly as they originally appeared. [R. B.]

Browne, CHARLES FARRER. [WARD, ARTEMUS.]

Browne, HABLOT KNIGHT. [PHIL.]

* **Browne, SIR SAMUEL JAMES, K.C.B., K.C.S.I.** (b. 1824), officer, entered the Bengal Staff Corps as an officer in the 46th Bengal Native Infantry in 1840. He first saw service in the Punjaub campaign of 1848-9, receiving the war medal, with two clasps. During the disturbances on the North-West Frontier in 1852 and 1857 he was engaged in the operations against the Omarzais, in the Bizdar Hills, and at Neringhi, again obtaining the medal and clasp. In 1858 he shared in the campaigns of the Indian Mutiny, took part in the battles of Lucknow, Kooree, Rooyah, Ali-gunge, Mohunpoor, and Seerporah, being twice severely wounded, and losing an arm at the last battle. He was mentioned in despatches for his services, and was rewarded with the medal and clasp, the brevet of lieutenant-colonel, the Victoria Cross, and the C.B. He commanded the first division of the Peshawur Field Force in the Afghan War of 1878-9, and opened the campaign by the capture of the fortress of Ali Musjid, in the Khyber Pass. He received the thanks of the House of Commons and of the Government of India, the war medal and clasp, and the K.C.B. In 1876 he was made K.C.S.I., and became lieutenant-general the following year.

* **Browne, SIR THOMAS GORE** (b. 1804), entered the army in 1824, and fought through the Afghan campaign of 1842. In 1851 he was made Governor of St. Helena, and from thence went, in 1854, to New Zealand, where he dealt with vigour with the outbreak of the Maori War. In 1861, on the completion of his term of office, he became Governor of Tasmania, and afterwards of Bermuda, which last appointment he resigned in 1872.

* **Browne, THE RIGHT REV. EDWARD HAROLD** (b. 1811), the youngest son of the late Colonel Robert Browne, of Morton House, Bucks, received his education at Eton and at Emmanuel College, Cambridge, where he graduated as a wrangler in 1832. He

gained the Crosse theological scholarship in 1833, the first Hebrew scholarship in 1834, and the Norrisian prize for a theological essay in 1835. He became a fellow and tutor of his college, and incumbent of St. James', Exeter, which he left, in 1841, for St. Sidwell's. From 1843 to 1849 he was vice-principal and professor of Hebrew at St. David's College, Lampeter. He next became vicar of Kenwyn, Cornwall, and prebendary of Exeter. He received the living of Heavitree in 1857, and in the same year was appointed Norrisian professor of divinity at the University of Cambridge, and canon residentiary of Exeter Cathedral. He was made Bishop of Ely in 1864, and in 1873, when Bishop Wilberforce died, was translated to the see of Winchester, and appointed Prelate to the Order of the Garter. Dr. Browne has published a large number of works, chiefly on theological subjects. He took a great interest in the Old Catholic movement in Germany, having written on the subject, and attended the Congress of the Old Catholics at Cologne in 1872. Some of his best-known works are: —an *Exposition of the Thirty-nine Articles* (1850–3), which is a text-book for candidates for Episcopal ordination: *The Messiah, as Foretold and Expected* (1862); a volume on the *Pentateuch and Elohistic Psalms* (being a reply to Dr. Colenso), 1863; besides a number of addresses and sermons.

* **Brown-Séguard**, EDOUARD (b. 1818), a physician and physiologist, is a native of the island of Mauritius. His father was Edward Brown, a native of Philadelphia, and his mother a French lady, named Séguard. Adopting medicine as a profession, he completed his studies in Paris, and obtained his degree of M.D. in 1840. He then devoted himself to a series of investigations in physiology, including the composition of the blood, animal heat, the spinal column and its maladies, the muscular system, and especially the nervous system, on which latter subject he is a medical specialist. He has visited England and America several times, and has delivered lectures and instructed classes of physicians in both countries. In 1864 he was appointed professor of the physiology and pathology of the nervous system at Harvard. Returning to Paris from America in 1869, he was appointed professor to the Faculty of Medicine. In 1873 he went to New York, established a medical journal, and commenced practice there; and in 1878, once more returning to France, succeeded Claude Bernard in the Chair of experimental medicine at the College of France. He has been awarded several prizes by the Academy of Sciences, the latest of which is the Institute's biennial prize of 20,000 francs. He has published, in addition to many essays and memoirs, two important series of lectures on *Paralysis of*

the Lower Extremities and on *Functional Affections*.

Browning, ELIZABETH BARRETT (b. 1809, d. 1861), the greatest poetess whom the world has yet seen, was the daughter of Mr. Moulton, a wealthy Jamaica planter, who afterwards added the name of Barrett to his own, making it Moulton-Barrett. He was a man of much cultivation, but possessed by the mistaken idea that during his life he ought to be the sole object of his children's care, and that none of them should marry. His daughter Elizabeth developed extraordinary powers of reading and composition at a very early age. Early and late she was at "books, books, books," history, literature, philosophy, classics, and when "the time was ripe" she "chanced upon the poet" (*Aurora Leigh*). She began to write poetry at ten; and in her nineteenth year (1827) published anonymously her first volume of verses, an *Essay on Mind*, in two books, and fourteen smaller poems; one to her father, full of her beautiful young love to him, so ill requited later on, and two others on Byron, in which she fixed on his noble side, his love for Greece, and made an old patriot say of him, what an Italian might in after years have said of her—

"His voice resounded through our land
Like the voice of liberty;
As when the war-trump of the wind
Upstirs our dark blue sea."

Greek poetry and philosophy were her special delight; and to, and with, her blind and learned friend, Hugh Stuart Boyd, she read, not only all the great writers on these subjects, but also the Greek Christian bishops, Chrysostom, Basil, Nazianzen. In 1833, her twenty-fourth year, she put forth her *Prometheus Bound* and *Miscellaneous Poems*.^{*} These poems of 1826 and 1833, less the *Prometheus*, were reprinted by Mr. Shepherd in 1878. Her Englishing of *Æschylus'* tragedy she afterwards called "an early failure," "a sin of my youth," and she recast it "with the increased application of my maturer mind." Her preface of sixteen pages she did not reprint. Of the *Miscellaneous Poems* two at least are noteworthy, with respect to her after life—the *Appeal to England* to "Shout aloud the words that free, over the perpetual sea," and *Weariness*, "Would I were at rest!" So is *The Picture Gallery at Penshurst*. Miss Mitford describes her as, in 1836, "of a slight delicate figure, with a shower of dark curls falling on either side of a most expressive face, large tender eyes, richly fringed by dark eyelashes, a smile like a sunbeam, such a look of youthfulness that I had some difficulty in persuading a friend that the translator of the *Prometheus* was out." *Recollections of a Literary Life* (1852), vol. i., p. 268. In 1837, when twenty-eight,

* Written for Finden's *Tableaux*. Two ballads had appeared in the *New Monthly Magazine*, and other short poems in the *Athenæum*.

she broke a blood-vessel upon the lungs, and after more than a year at her father's house in Gloucester Place she was ordered to winter at Torquay. In 1838 appeared, with her name, *The Seraphim, and other Poems*, thirty-seven altogether. Of them *Isobel's Child*, *The Romance of Margaret*, *A Romance of the Ganges*, *The Sea-Mew*, and *The Virgin to the Child Jesus*, have become best known. The sonnet *Consolation* is characteristic of her. In the summer of 1839, when she had partly recovered her strength, her favourite brother and two friends were drowned in sight of her window, their boat upsetting as they were crossing the bar at Torquay. This tragedy nearly killed her. It was not till 1840 that she could be moved back to Gloucester Place, and there, in a darkened room, she lived confined for six long years, seeing only her own family and a few warm friends, but always at work, having her *Plato* bound like a novel to deceive her doctor, reading and annotating her Greek and Italian books, her Hebrew Bible, and writing her poems. In 1842 she sent the *Athenaeum* some papers on *The Greek Christian Poets and the English Poets*; these were published separately in 1863. In 1844 appeared the first collected edition of her poems, in two volumes; and in her forewords to this she told the public, more fully than she had done in her preface of 1838, what these poems were: "They have my heart and life in them; they are not empty shells. Poetry has been to me as serious a thing as life itself; and life has been a very serious thing. I never mistook pleasure for the final cause of poetry, nor leisure for the hour of the poet. I have done my work, not as mere hand and head work apart from the personal being, but as the completest expression of that being to which I could attain—feeling its shortcomings more deeply than any of my readers—but feeling also that the reverence and sincerity with which the work was done should give it some protection with the reverent and sincere." A graceful mention of Robert Browning in her *Lady Geraldine's Courtship* led to their common friend, Mr. Kenyon, bringing the poet to see her in Wimpole Street in the spring of 1845. What followed she has herself told us in those glorious *Sonnets from the Portuguese*—printed in 1850, in the second collected edition of her poems—which her husband found by chance upon her dressing-table, nearly three years after they had been married. (A casual quotation of his that folk "should not wear their hearts on their sleeves for daws to peck at," had prevented her showing them to him before.) She had lived those long sad years expecting death; but "the silver answer rang 'Not Death, but Love.'" "The face of all the world [was] changed" to her, and she gave up her "near sweet view of Heaven, for earth" with the noble man and poet whom with her whole being she loved. On Sept. 12th,

1846, they were married at St. Marylebone parish church, the bride thirty-seven, her groom thirty-four, and speeded to the Continent to Pisa, and then settled at Florence. Mr. Barrett never forgave his daughter's preference of her lover and husband to him, notwithstanding her appeals to him. Naught but monomania can excuse him. At Casa Guidi in this city, her son, her "own young Florentine," now the painter and sculptor, Robert Barrett Browning, was born on March 9th, 1849, two and a half years after her marriage. In 1850 appeared the second edition of her collected poems, including several fresh ones, and in 1851 her *Casa Guidi*, a noble poem, in whose first part she poured forth her joy and hope in the prospect of Italy's freedom from the Austrian yoke—a joy and hope vivified by her own new life with her husband and her boy—and in whose second part, though clouded by Louis Napoleon's desertion of the cause, she bated no jot of assurance that Italy would soon be free and one, mistress of her fate. In 1853 came the third edition of her poems, still in two volumes, and in 1856 the fourth, in three volumes. In the autumn of 1856 she issued her longest poem, *Aurora Leigh* (dated 1857 on the title), "a novel in verse," in which she expressed her opinions on the main social questions of the time. It dealt also with her own art of poetry. This poem was written amid innumerable interruptions as she sat in her drawing-room, attending there all her little boy's wants, and chance callers, and is full of insight and generous feeling. Her *Poems before Congress* appeared in 1860—the best of them, *A Court Lady* (nursing the wounded in a Milan hospital), and *A Curse for a Nation: America for her Slavery*; and on the 29th of June, 1861, at the age of fifty-two, the most noble and beautiful soul that the world held, left its earthly dwelling-place. In 1862 her sorrowing husband put forth her *Last Poems*, and has since, in divers of his works, broken through his wonted reserve, and striven to say, in heartfelt words, what his reverence and love were, and are, to her, who was, and is still, the light of his life, and the most sacred object of his desire. The notes of Mrs. Browning's poetry are emotion, purity, pathos, intense earnestness, sympathy with every form of suffering, with everything great and good, hatred of everything evil, specially of all oppression. Her want of humour, a few rough and careless rhymes, an occasional forcing of sense and phrase, have made some critics of word and style complain; but students may rely on it, that to know Mrs. Browning as she reveals herself in her works is a liberal education, and to enter into her spirit one of the most ennobling pursuits that a man can undertake.

Poems, especially *Aurora Leigh*: *Letters of E. B. Browning to E. H. Horne*; *E. C. Steadman, E. B. Browning*. [F. J. F.]

* **Browning, ROBERT** (b. 1812), the chief contemporary and rival of Tennyson among Victorian poets, was born at Camberwell, then a village to the south of London, on May 7th. His father was a clerk in the Bank, and a good classic, his mother a Scotchwoman. Their son began to write verse as a child, went to the Rev. Thomas Ready's school at Peckham till he was near fourteen, then had a private tutor at home, and attended lectures at University College, after which he went for a tour abroad, and on returning mixed with the literary society of his day, Dickens, Talfourd, etc., among whom he was known as a musician and modeller, as well as poet. His first poem was published in 1833, when he was twenty-one, *Pauline: a Fragment of a Confession*, and reprinted with reluctance and an apology in his *Poetical Works*, 1868, only because it was to be republished abroad. In 1834 the poet spent some time in Russia, and in 1835 issued his *Paracelsus*, a dramatic poem of over 4,000 lines, in five parts, in which he traced the moods of his hero's mind, and showed how his errors flowed from the pursuit of power only, divorced from love. In 1835-6 he printed four short poems in W. J. Fox's *Monthly Repository*, and in 1837 he wrote for Macready (who produced it at Covent Garden on May 1st) his first tragedy, *Strafford*, and published it the same year. His next poem, *Sordello*, was then "nearly ready," but was not printed till 1840. It is the history, in nearly 6,000 lines, of the imaginary development of an Italian poet named by Dante, from his world of dreams into the realities of life, and it culminates in the sacrifice of the hero's ambition and his death. The poem is very involved and difficult to follow, and injured its writer's reputation. From 1841 to 1846 Browning brought out, in cheap double-columned form and in yellow paper covers, in Moxon's series, his *Bells and Pomegranates*, in eight numbers or parts. These contained three plays, four tragedies, and thirty fresh dramatic lyrics, besides eight published in *Hood's Magazine* in 1844 and 1845, and the four short poems of 1835-6. The plays were *Pippa Passes* (a working-girl at a silk-mill passes four sets of folk, and determines unknowingly the crises of their lives); *King Victor and King Charles* (in which a bad king, who has abdicated, seeks to regain his crown from his son); and *Colombe's Birthday* (in which a duchess gives up power for a poor advocate's love, instead of sharing a future Emperor's throne without love).^{*} The tragedies were the *Return of the Druses*, *A Blot on the Scutcheon* (produced by Macready at Drury Lane on Feb. 11th, 1843, with Phelps in the principal part); *Luria*, and *Saul's Tragedy* (both in 1846). Of the thirty-

four *Dramatic Lyrics* three have proved to be the most popular of all Browning's works. *The Pied Piper of Hamelin* (an old story retold in a hurry for young Will Macready, the actor's son, to illustrate); *How They Brought the Good News from Ghent to Aix*, and *The Lost Leader* (suggested by Wordsworth's abandoning his support of the French Revolution and Liberalism for Ecclesiasticism and Toryism). Of the other lyrics, *Saul* is the finest, while of the *Hood's Magazine* set, *Sibrandus Schafnaburgensis* and *The Tomb at St. Praxed's* stand highest. These showed a great development of the poet's humour and power. They close the first period of his work. On Sept. 12th, 1846, as stated in Mrs. Browning's life, he married the beautiful-souled poetess, Elizabeth Barrett, and at once took her abroad, and settled with her at Florence, which, with occasional visits to England, was their home for their (nearly) fifteen years of happy married life, during which the husband tended her frail health with untiring and loving care. In 1849 Browning's poems—*Paracelsus* and nearly all of the *Bells*—were published in two volumes; and in 1850 he opened the second period of his work with *Christmas Eve and Easter Day*, the first an assertion of the good in Dissent, in Romanism, and Rationalism, the second a vision of what true religion is. In 1852 he published a prose introduction to twenty-five spurious *Letters of Shelley*, and in it treated of the poet objective and subjective, the latter's aim, and Shelley as man and poet. (This essay was reprinted as the first of the Browning Society's *Papers* in 1881.) In 1854, to help his sister-in-law's poor school, Browning and his wife printed two short poems for sale at a bazaar. In 1855 appeared his *Men and Women* (written in London and Florence), fifty-one fresh poems (save *Saul*, part 1, and *The Twins*). On these, as on some of Shakespeare's second-period plays, one may say that many of the poet's admirers always look back with the greatest affection and delight. *Andrea del Sarto*, *Fra Lippo*, *Karshish*, the completed *Saul*, *Childe Roland*, *Evelyn Hope*, *One Word More*, *A Woman's Last Word*, *Up at a Villa*, and *Holy Cross Day*, are dearer to most Browningites than any of the poet's later works. Two short poems were in the *Keepsakes* of 1856 and 1857. On June 29, 1861, he lost the chief treasure of his life, and after burying her in Florence, "the white-rose garland at her feet, the crown of laurel at her head," he brought his boy to London, and settled in the little house he still lives in, 19, Warwick Crescent, W., close to his wife's sister, Miss Arabella Barrett, in order that his child might have the benefit of her care. In 1863 his *Poetical Works* were published in three volumes, but without any fresh poems; and in 1864 he opened the third period of his work with his *Dramatis Personæ*, seventeen new poems. Of these, *Rabbi ben*

* It is a beautiful play, and was produced for the Browning Society at St. George's Hall, London, on Nov. 19th, 1885.

Ezra (the philosophy of life), *Prospice* (how to meet death), *Abt Vogler* (the supremacy of music), *Caliban* (against anthropomorphism), and *A Death* (St. John's) in the *Desert*, are the most widely admired and liked. In 1867 Browning was elected an honorary fellow of Balliol, and on June 25th was made M.A. of Oxford. In 1868 his *Poetical Works* (with one new stanza of eight lines) were issued in 6 vols. In 1868-9 appeared his most important work, *The Ring and the Book*, in 4 vols., 21,116 lines—the story of a count murdering his wife, told ten times over by the different actors in the tragedy; and in March, 1871, to help the fund for the relief of Paris, Browning printed his *Hervé Riel*, a fine poem of 140 lines (written in 1867), on a forgotten French sailor hero. In 1871, too, he opened the fourth period of his work with the first of his Greek poems, *Balaustion's Adventure*, including a translation of Euripides' *Alceste*; and also issued his *Prince Hohenstiel-Schwangau: Saviour of Society*, an imaginary justification by Louis Napoleon of his own policy. *Fifine at the Fair* followed in 1872, discussing the relations between men and women and the religion of the future. In 1873 came *Red-Cotton Night-Cap Country*, the true story of a Frenchman's concubinage, penitence, and ecstatic suicide; in 1875, first, *Aristophanes' Apology*, with an Englishing of Euripides' *Heracles Mainomenos* (mad Hercules), a very difficult poem; and second, *The Inn Album*, an alteration of the story of Lord de Ros's trying to cancel a gambling debt by handing over to his creditor the lady he had in earlier life seduced. In 1876 appeared *Pacchiarotto*, and *How He Worked in Dis-temper*, and seventeen fresh ones, with other poems, of which the most interesting are the three on Shakespeare, and Browning's relation of himself to his art and the public, *At the Mermaid, House, Shop*. In 1877 came out his Englishing of *The Agamemnon of Eschylus*, and in 1878 *La Saisiaz, The Two Poets of Croisic*, in the former of which (*La Saisiaz*), on the sudden death of his friend, Miss A. E. Smith, he discussed the future life, and proclaimed (as often before) his own strong belief in it. His first set of *Dramatic Idylls* appeared in 1879—the year that Cambridge made him LL.D.—and his second in 1880, half a dozen in each volume, with a poem and epilogue to the second set. Of the first set, *Martin Relph*, *Pheidippides* (the Greek runner), and *Ivan Ivanovitch* (the Russian mother who threw her children to the wolves to save herself); of the second, *Echelos* (great deeds last, but the doers' names die), and *Mulkykeh* (the Arab who so loves his mare that he loses her rather than see her beaten) are the favourites. In 1881 the "Browning Society" was founded to promote the study and influence of Browning's works, the sole instance of such a society being founded for a like purpose during any poet's life. It has fulfilled its

purpose thus far, now numbers over two hundred members, and has given rise to at least twenty other Browning Societies and clubs in Great Britain, the United States, and Australia. A volume containing ten poems, and named *Jocoseria*, appeared in 1883. Of these *Ixion* is the finest, *Donald* (a protest against the brutality of sport) the most pathetic, and the love-poem, *Never the Time and the Place*, the freshest and most interesting. In 1884 was published *Ferishtah's Fancies*, a series of twelve poems (besides Prologue and Epilogue) on prayer, the existence of suffering, the relation of man to God, and with intervening songs of great delicacy and freshness. In October, 1885, he bought the Byzantine Palazzo Manzoni, on the Grand Canal at Venice, where he, his sister (Miss M. Browning), and his son will henceforth live during part of the year. Shortly afterwards appeared a fine sonnet, *Why I am a Liberal*. Browning is the strongest man who has written verse since Milton. His chief topic is the mind and soul of man and woman; the individual is to him above the race. His subjects are mainly taken from far-off times and places; he deals often with sinners and culprits, beings of complex natures, whose motives and self-screenings it delights him to lay bare. His "notes" are analysis, introspection, vivisection. He is also specially the poet of painting, sculpture, and music. He loves animals; his gift of humour is large, his tenderness and manliness great. He is a Theist to the backbone, a firm believer in the future life; God and the soul are his realities; and stoutly does he battle for his faith. His verse is often difficult from its inability to express his quick variety of thought. His rhymes are sometimes forced. It is as man, thinker and leader, that he is valued rather than as a technical artist: if once a man gets hold of such poems as *Prospice*, *Rabbi ben Ezra*, *Andrea del Sarto*, and *Karshish*, he will wear them with him as treasures to his grave.

Bruce, SIR FREDERICK W. A. W. (b. 1814, d. 1867), was the fourth son of the seventh Lord Elgin. He entered the diplomatic service, and was attached to Lord Ashburton's mission to the United States in 1842, and to his brother Lord Elgin's mission to China in 1857. For his services he was made a C.B. In December, 1858, he was appointed envoy extraordinary to the Emperor of China, but he was stopped on his way by river to Peking, and war broke out, which was brought to a conclusion by the convention of 1859, after which Bruce established the mission at Peking in 1861. In 1864 he arbitrated between the United States and the Republic of Columbia. In

1865 he succeeded Lord Lyons as ambassador to the United States. [CHINA.]

***Brugsch, HEINRICH KARL, PASHA** (b. 1827), one of the leading Egyptologists of Germany, was born at Berlin, and showed his talent for Egyptian learning before leaving the Gymnasium by an essay on Demotic writing (published 1850). The King of Prussia took an interest in his studies, and helped him to visit and examine the Egyptian monuments of London, Paris, and Turin. In 1853 he went to Egypt, and assisted at some of Mariette's excavations. On his return, he was made curator of the Egyptian Museum at Berlin, of which he published an account in 1857. His next journey was to Persia, in 1860, with Baron Minutoli, after which he became professor of Oriental languages at Göttingen University. In 1869 he again visited Egypt, where he resided many years, and had the titles of Bey and Pasha successively conferred upon him. In 1883 he returned to Berlin. His chief works are his *History of Egypt under the Pharaohs*, certainly the best work of its scope on the subject, which has been translated by Mr. Philip Smith, and has reached a second edition; his *Dictionnaire Géographique de l'Ancienne Égypte* (1877), which is an invaluable authority for the ancient geography of Egypt; his *Travels in Egypt, Demotic Grammar, and Demotic and Hieroglyphic Dictionary*; besides which he has written many useful works. In 1874 he attended the Congress of Orientalists in London, and propounded his novel theory of the route of the Exodus by Lake Serbonis; but the discovery of Pithom by M. Naville, the agent of the Egypt Exploration Fund, finally overthrew the hypothesis, and Brugsch Pasha was among the first to admit his error.

Brummel, GEORGE BRYAN (b. 1778, d. 1840), inherited a fair fortune. After a useless career at Oxford, "Beau" Brummel launched himself in London society, and managed to acquire a reputation as a man about town of exquisite taste. He was one of the dissolute intimates of the Prince of Wales, and was to be seen reigning supreme in the Pump Room during the Bath season. About 1815 he dissipated his fortune and retired to France, where he died in poverty.

Jesse, Life of Beau Brummel.

Brunel, ISAMBARD KINGDOM, F.R.S., D.C.L. (b. 1806, d. 1859), engineer, son of Sir Marc Brunel, was educated in France, and assisted his father in his two great undertakings, the block machinery and the Thames Tunnel, and superintended the efforts made to frustrate the irruption of the river. Upon his own account he constructed Monkwearmouth Docks, the first of many. In 1836 his plans for the contemplated suspension bridge over the Avon at Clifton were accepted; funds, however, fell

short, and the work was suspended, to be completed after his death. Three years previously he had been appointed engineer to the Great Western Railway, and after a considerable controversy, succeeded in persuading the directors to use the broad gauge. In connection with this railway he constructed the Box Tunnel, and on its extension, the Cornish Railway, the wonderful bridge at Saltash, completed in 1859. Brunel also conceived the possibility of a line of steamers making regular trips across the Atlantic, and persuaded the Great Western Railway to adopt the idea. The result was the *Great Western*, double the tonnage of any ship then existing, which was launched in 1838. The *Great Britain* followed in 1845, remarkable as the first large iron ship, and the first large ship to use the screw propeller instead of the paddle-wheel. His last great work was the *Great Eastern*, undertaken for the Great Eastern Steam Navigation Company (1853-8). The anxieties inseparable from such a great achievement wearied out the great engineer, and he died shortly after his great undertaking had been launched. He became an F.R.S. in 1830, and D.C.L. of Oxford, *honoris causa*, in 1857.

Life of I. K. Brunel, by his son, Isidore Brunel.

Brunel, SIR MARC ISAMBARD (b. 1769, d. 1849), engineer, was the son of a Norman farmer. He entered thenavy, but being compelled during the revolution to leave France on account of his Royalist opinions, he went to the United States, where he found occupation in engineering work. In 1799 he came to England, and there induced the Admiralty authorities to accept his ingeniously simple designs for making ship-blocks by machinery—a work completed in 1806. Minor inventions due to him were a machine for winding cotton and a nail-making machine. When the Czar Alexander visited England, in 1814, Brunel submitted to him a plan for tunnelling the bed of the Neva, but it was not received with favour. He was more successful with the Duke of Wellington, who in 1824 accepted his plan for the construction of a tunnel beneath the bed of the Thames. This work, begun in 1824, was completed in 1843, with the assistance of his son. The anxiety and toil connected with it were the main causes which brought his honourable and virtuous life to a close. He was knighted in 1841, and was a frequent contributor to the discussions of the Royal Society, and the Society for Civil Engineers.

Beamish, Memoirs of Sir Marc Brunel.

Brunswick, DUKES OF:—(1) **FREDERICK WILLIAM OF BRUNSWICK-WOLFENBÜTTEL** (b. 1771, d. 1815), was the fourth son of Charles William Ferdinand, who died in 1806, and commanded the Allies in their first attack on revolutionary France. His reign

dates from 1813, his elder brother, being blind, having abdicated, and the duchy having been until then incorporated in the kingdom of Westphalia by the Treaty of Tilait. He joined the army in 1789, and was invested with the Order of the Black Eagle in 1790. He accompanied the Prussian army on the outbreak of hostilities in 1792, displaying great gallantry in the field, and being twice wounded at Elseh. He was promoted major-general in 1800, and married, in 1802, Wilhelmina, the granddaughter of the Grand Duke of Baden. In 1805 he served under Blücher in the Jena campaign. On the rupture of peaceful relations between Austria and France in 1809, he took service with the former Power, but with the battle of Wagram all hope of resistance terminated, and after many vicissitudes he reached Leipzig with but 1,900 men, the relics of his command, and after several skirmishes, arrived at his native city of Brunswick. Again pressed by the Dutch, Danish, and Westphalian troops, he retreated by Hanover to Friesland, and embarking at Elsfleth, sailed for Heligoland, and thence to England, after a retreat almost unparalleled for hardship and difficulty. On the general uprising against Napoleon in 1813, he returned to his dominion, and when Napoleon came back from Elba he was the first of the German princes to join the Allies. He commanded the Brunswick troops at Quatre Bras on June 16th, 1815, and fell mortally wounded by a musket ball early in the action.

Gifford, *War of the French Revolution*.

(2) CHARLES (*b.* 1801, *d.* 1873), the eldest son of Duke William Frederick, was educated in England with his brother, but displayed such frivolity of character, that his guardian, the Prince Regent, delayed putting the government of Brunswick into his hands until more than a year after he had attained his majority. In 1830 his subjects, weary of his extravagances, rose against him; he fled, and in the following year was deposed by the German Diet. During the remainder of his life he resided chiefly at Paris and Geneva, immersed in pleasure, and on his death bequeathed his immense property to the latter city.

(3) WILLIAM (*b.* 1806, *d.* 1884), the younger brother of the above, was educated in England by his grandmother, the Princess Augusta, the sister of George III. He was reigning over his inheritance, the principality of Oels, in Silesia, when, in 1830, the misconduct of his brother Charles (*q.v.*) drove the Brunswickers to rebellion, and William was elected in his stead. It is an open secret that he aspired to the hand of Queen Victoria, but eventually he remained single, in order that after his death the duchy might be incorporated in the kingdom of Hanover—a political scheme which broke down hopelessly. He was a strictly honest ruler. When com-

pelled to grant a charter to his subjects during the excitement of 1848, he never revoked that charter when it was in his power to do so.

* **Bryce**, PROFESSOR JAMES, M.P. (*b.* 1838), was educated at the High School, Glasgow, Glasgow University, and Trinity College, Oxford, where he graduated B.A. with double first-class honours in 1862. He also obtained no less than two law scholarships and four University prizes, the essay for one of which was expanded into a volume, *The Holy Roman Empire*, a work of much suggestiveness and grasp. In 1870 he was appointed Regius professor of civil law at Oxford. After being defeated for the Wick district in 1874, he was returned for Tower Hamlets in 1880, and in 1885 for Aberdeen (South). In 1886 he became Under-Secretary for Foreign Affairs.

Buch, LEOPOLD VON (*b.* 1774, *d.* 1853), a German geographer and geologist, was born at Stolpe, in Pomerania. After studying under Werner at the famous Mining Academy of Freiberg, he published his *Attempts* at the mineralogical and geognostic descriptions of Landeck and Silesia, in which he stoutly championed the views of his master. With Alexander von Humboldt, who had been his fellow-student at Freiberg, he explored Styria and the Styrian Alps, and in 1798 travelled in Italy. After this, he no longer advocated the aqueous origin of basalt, and when he had an opportunity of studying Vesuvius, in company with Humboldt and Gay-Lussac, and the extinct volcanoes of Auvergne, he ceased to advocate the Wernerian faith. In his *Geographical Observations during Travels through Germany and Italy* (1802-9) may be found the principal results of these researches, and in his *Travels through Norway and Lapland* (1810), the conclusions at which he arrived from an expedition of two years' duration in Scandinavia. With Christian Smith, the Norwegian botanist, he visited the Canary Islands, of which he published a description in 1825. The Hebrides and the coasts of Scotland and Ireland next engaged his attention, and, in brief, up to a short period from his death (on March 4th, 1853), this indefatigable geologist continued his surveys, his last paper being one on the Jurassic formation. Nor was palæontology, in which the Wernerians took little interest, neglected, as his memoirs on the Ammonites and other families testify. Amply provided with private means, unmarried, and of a singularly frugal disposition, Von Buch was well fitted for the task. His excursions were always taken on foot, and his personal appearance would have little prepared any one for guessing that this was the man whom Humboldt regarded as the greatest geologist of the age. His geological map of Germany, in forty-two sheets, has been superseded by a later and more detailed survey. But for the time it was like that of England by

William Smith, a marvel of accurate industry. Considering the varied character of his attainments, and the revolution which his works created, it is not too much to say—as has been said—that Von Buch was “the only geologist who has attained an equal fame in the physical, the descriptive, and the natural history departments of his science.”

H. von Decken, *Leopold von Buch; Smithsonian Report for 1862.*

Buchanan, JAMES, fifteenth President of the United States (b. 1791, d. 1868), was of Irish origin, and the son of a Pennsylvanian farmer. He was educated at Dickinson College, and called to the bar in 1812, at which he soon became well known. Elected a member of the State Legislature in 1814, he distinguished himself by his support of the war with England. In 1820 he became a member of Congress, and made a great impression by a speech recommending the annexation of Cuba. On returning from Congress, in 1851, he was appointed envoy-extraordinary to St. Petersburg, and succeeded in concluding a most advantageous commercial treaty between the United States and Russia. Elected a senator in 1833, he supported the administrations of Jackson and Van Buren, and favoured the annexation of Texas by the United States. From 1845 to 1849 he was Secretary of State to President Polk, after which he passed into private life. His next appointment was as Minister of the United States at the Court of St. James's (1853-6); and in the course of his tenure of that office he organised the Ostend Conference, for the purpose of inquiring into the propriety of the acquisition of Cuba by the United States, a policy which he warmly but unsuccessfully advocated. In 1856 he, as the Democratic and pro-slavery candidate, was elected President of the United States by 303 to 174 votes over his Republican opponent, John C. Fremont. A “Northerner with Southern principles,” he surrounded himself with a disunionist Cabinet, and upon the question of making Kansas a slave State, he supported the pro-slavery party, but was defeated by Congress. During the last years of his administration events were ripening for the war that broke out under his successor, President Lincoln; but Buchanan looked quietly on at the military preparations in the South, and threw the blame for the disruption upon the Northerners. After his retirement, in 1860, he took no further part in public life. Buchanan was a man of ability, but utterly unable to look beyond party interests.

He published his defence in *Mr. Buchanan's Administration* (1863); see also Greeley, *American Conflict*.

* **Buchanan, ROBERT** (b. 1841), poet, dramatist, and novelist, is a native of Warwickshire. His father was a well-known socialist lecturer and editor. Mr. Buchanan was educated at Glasgow University, and had

for his college companion and intimate friend the ill-fated David Gray. Together the friends and literary aspirants concocted the scheme of leaving Glasgow for London. Gray was to carry with him the inevitable poem (the *Luggie*) which was to take the world by storm. Buchanan's masterpiece was still in embryo. They set out for the metropolis, without giving warning to their friends, on the same evening, but, owing to a *contretemps*, by different lines of railway, and arriving at opposite sides of London about the same hour next morning their companionship was for the time interrupted. They shared a bankrupt garret in the New Cut until the consumption to which Gray at last succumbed made his return to Scotland a necessity. He did not live to witness the recognition of his juvenile work. Mr. Buchanan's first book, *Undertones*, was published in 1860, and achieved a fair success. It was dedicated to the friend of his youth in a touching poem entitled, *To David in Heaven*. In 1865 a volume of *Idylls and Legends of Inverburn* appeared, and a year later Mr. Buchanan scored his first distinct success with *London Poems*. The humble life of the great city has rarely been so vividly, so humorously, and so pathetically delineated as in the lyrics of which this volume was composed. Being now fairly and fully launched in the literary life, Mr. Buchanan was producing books with great rapidity. A translation of Danish ballads and a collection of *Wayside Poems* was followed, in 1871, by a lyrical drama, entitled *Napoleon Fallen*, a volume of prose essays and sketches brought together from magazines under the title of *The Land of Lorne*, and *The Drama of Kings*. Mr. Buchanan contributed largely at this time to periodical literature, and one of his essays in the *Contemporary Review* acquired some notoriety. This was the essay entitled *The Fleshly School of Poetry*. It was of the nature of an attack on the *Poems* of Dante G. Rossetti, published in 1870. Apart from the justice or injustice of the strictures, a bitter controversy arose out of the identity of the critic, who appeared (at his publisher's suggestion) under the pseudonym of “Thomas Maitland.” The quarrel, in which Mr. Swinburne became involved, was very protracted, and Mr. Buchanan subsequently retracted some of his charges. Mr. Buchanan had by this time become celebrated as a novelist. His best novels, *The Shadow of the Sword*, *God and the Man*, *The New Abelard*, and *Forglone Manor* are distinguished by rare picturesqueness and vigorous dramatic narrative. As a dramatist, Mr. Buchanan has had some distinct successes, the best of his plays being *A Nine Days' Queen*, and the most popular *Lady Clare*, *Storm-beaten*, and *Sophia*. He visited America in 1884-5.

* **Büchner, FRIEDRICH KARL CHRISTIAN LUDWIG** (b. 1824), materialistic philosopher,

was born at Darmstadt, and studied philosophy and medicine at Giessen and Strasburg. He was afterwards appointed assistant clinical professor at Tübingen, but after the publication of his work on *Force and Matter* (*Kraft und Stoff*, 1855) was deprived of his professorship, and returned to Darmstadt to practise as a physician. As an exposition of extreme materialistic views, the above-mentioned work created great excitement throughout Europe, and in spite of much opposition, had passed through fifteen editions before 1883. Of Büchner's numerous minor writings we may mention:—*Nature and Spirit* (1859), *Nature and Science* (1862), *Man in the Past, the Present, and the Future* (1872), *Light and Life* (1882), and *The Power of Heredity* (1882). His popular expositions of the ultimate theories of Darwin, Haeckel, and Huxley have profoundly influenced not only the scientific and religious opinions, but the social and political development of the century. It will be remembered that the first "Nihilist," Basedoff, in Tourgenieff's *Fathers and Sons*, acknowledged himself Büchner's disciple.

• **Buckingham and Chandos**, RICHARD PLANTAGENET DUKE OF (b. 1823), was educated at Eton and at Christ Church, Oxford. From 1846 to 1857 he sat as M.P. for Buckingham in the Conservative interest: and was Lord of the Treasury in 1852, Lord President of the Council (1866-7), and Secretary of State for the Colonies (1867-8), after the resignation of Lord Carnarvon. In 1875 he was appointed Governor of Madras, and held that post until 1880. During his term of office he had grappled with energy with the famine of 1876 and 1877, and requested the Lord Mayor of London to organise a relief fund. He was succeeded by Mr. W. P. Adam (q.v.).

Buckland, FRANK TREVELYAN (b. 1826, d. 1880), eldest son of Dean Buckland (q.v.), was born at Christ Church, Oxford, of which his father was at that time canon. He was educated at Winchester and Christ Church, where he graduated B.A. and M.A., and, after studying chemistry under Liebig at Giessen, entered St. George's Hospital Medical School, and in due time became M.R.C.S. After serving for some time as house-surgeon in the hospital, he was appointed assistant-surgeon to the 2nd Life Guards (1854). Soon after his marriage, in 1863, he retired from the army, with the intention of devoting himself to literary and scientific pursuits, and in 1866 was appointed Inspector of Fisheries for England and Wales. He had now every opportunity for gratifying his intense love of animals and their habits, by studying them at all times and places. The result may be found in innumerable notes and short papers in various magazines and newspapers, more particularly in the *Field* and *Land and Water* (which, for a time, he

edited), and in his *Curiosities of Natural History* (three series), *Fish Hatching*, *History of British Fishes*, and the new edition of his father's *Bridgewater Treatise*. In his official capacity he visited nearly every part of the coast and all the salmon rivers; held inquiries into the oyster, the herring, and the crab and lobster fisheries, and published, year by year, reports, containing, in addition to the customary contents of Blue Books, a vast amount of curious information, sometimes rather remotely connected with the theme in hand, but always expressed in an interesting, and sometimes an eccentric manner. He strove vigorously to acclimatise foreign animals suitable for food or sport in this country, and during the brief life of the Acclimatisation Society was its principal support. Everything connected with animal life was of interest to Buckland. His house was full of crawling, creeping, barking, flying, swimming, and squeaking things, and on his table appeared dishes which might have repelled the most catholic stomach. In brief, No. 34, Albany Street, Regent's Park, was a museum and menagerie in one. Fish-culture attracted much of his attention, and by his will the bulk of his property is to go, after the death of his wife, to found a Chair of pisciculture in South Kensington, while his museum of fishes, casts, specimens, and fishing apparatus was left to the nation. In 1867 he was appointed to the additional office of Inspector of Salmon Fisheries for England and Wales, and in 1870 special commissioner to inquire into the effects of recent legislation on the salmon fisheries of Scotland. His labours in these various duties and his endless private work were incessant. Never careful of his health, a constitution naturally strong soon broke down, after repeated illnesses. As a writer, Buckland was lively and graphic, and as an observer, acute without being always accurate. His knowledge was more extensive than deep, and though not a great naturalist or a great author, he was a genial, kindly man, who "loved all things, both great and small," and was himself loved in return. His enthusiasm was, moreover, infectious, and hence, by stimulating others to pursue the study of nature more scientifically than he did himself, he exerted a greater influence on the scientific world in which he moved than many more distinguished labourers.

George Bompas, *Life of Frank Buckland* (1885). [R. B.]

Buckland, WILLIAM, F.R.S. (b. 1784, d. 1866), founder of English geology, and a dignitary of the Church of England, was born at Axminster, in Devonshire. His father was a clergyman. After attending Tiverton Grammar School, he was elected a scholar of Corpus Christi College, Oxford. In 1805 he graduated B.A., and in 1806 was elected a fellow of his college, a post which he held

until, in 1825, he was presented to the college living of Stoke Charity, near Whitchurch, Hants, and in the same year was appointed a canon of Christ Church, Oxford. Very soon, however, after entering Corpus Christi, his attention had been directed to natural science by the lectures of Dr. Kidd on mineralogy and chemistry, and from the year 1806 he may be said to have devoted all his leisure time to the then new science of geology. He roamed over the greater part of the kingdom, and, after the Continent was open to English travellers, over a considerable part of Italy and Germany, examining the lay of the rocks, and the nature of the fossils which they contained. In 1813 he succeeded to the readership in mineralogy in Oxford, and in the same year joined the Geological Society, of which he was twice president. In 1819 the newly founded readership in geology fell to his share, and in the same year he was elected F.R.S. In 1822 he received the Copley medal for his account of the fossil bones in Kirkdale Cave, Yorkshire, and in 1823 he published *Reliquiæ Deluvianæ; or, Observations on Organic Remains attesting the Action of an Universal Deluge*, a theory which, though at that time in keeping with the state of knowledge, he afterwards saw fit to abandon. The structure of the Alps, the palæontology of the Reading beds, the megalosaurus, the cycads of the Isle of Portland, the coprolites of Lyme Regis, the traces of old glaciers in Scotland (in partnership with Mr. Conybeare), the south-western coal district of England, and (in partnership with Sir Henry De la Beche) the geology of the Devon coast, all engaged his attention. Nor was he insensible to the interests of agriculture, sanitary science, and the Church, and he accumulated that fine "Buckland Museum" which is now the property of his University. In 1845 he was appointed Dean of Westminster, and soon afterwards a trustee of the British Museum, and for five years his house was the centre of the best literary society of London. The menu of his dinner parties was about as eccentric as the personnel of the establishment, of which curious glimpses are afforded in Mr. Bompas's *Life of Frank Buckland* (1885). Previous to his settling in London, Dr. Buckland had been selected to write the Bridgewater Treatise on *Geology and Mineralogy considered with reference to Natural Theology*, and in 1832 he was elected president of the British association, in the foundation of which he had taken an active part. But in 1849, the long mental strain of an unintermittingly laborious life began to tell on his health, and from that date till the period of death, on Aug. 24th, 1856, he was compelled to live in strict retirement. His labours, with those of Smith, Phillips, Conybeare, Sedgwick, and Murchison, may be regarded as having laid the foundation of English geology, and though the Bridgewater

Treatise is not quite in accord with the teachings of latter-day geologists, it has gone through several editions, and is still read, and has done much to popularise a science which, in the minds of many devout people, was at first regarded as inimical to revealed religion.

[R. B.]

• **Buckle, GEORGE EARLE** (b. 1854), was a scholar of Winchester College, and of New College, Oxford. He obtained the Newdigate prize for English verse, a first-class in classics (1876) and in history (1877). He was then elected a fellow of All Souls. Adopting journalism as a profession, he joined the staff of the *Manchester Guardian*, and afterwards wrote for the *Times*. In 1884, on the death of Professor Chenery (q.v.), Mr. Buckle became editor of the *Times*.

Buckle, HENRY THOMAS (b. 1821, d. 1862), historian, was the son of a wealthy London merchant, and born at Lee on Nov. 24th, 1821. A delicate yet precocious child, he was never sent to school, but he early manifested an avidity for reading that ultimately rendered him in some directions a man of wide culture, though it should always be remembered that he was practically self-educated. Before he was twenty he won a great reputation as a chess player. He soon devoted his main energies to history, or rather, history viewed from the point of view of a particular philosophy. Before he was thirty he had concentrated his strength on the task which was to make his name famous. In 1857 the first volume of the *History of Civilization in Europe* appeared, and was very well received. Buckle became a literary lion, and the second volume, issued in 1861, found an appreciative public. But the author's health had always been delicate, and in 1862 death overtook him before he had made further progress. In 1872 Miss Helen Taylor published his *Miscellaneous and Posthumous Works*, including a lecture, some essays, and some of the commonplace books used in preparing for his *History*. The importance of Buckle's *History of Civilization* depends rather on the view of history and human nature which it contains than in the historical facts presented or the style in which they are conveyed, though the former involved much careful research, and the latter has received high praise for its precision and clearness. In Buckle's philosophy of history, which, as he thought, the complexity of the phenomena and their own intellectual shortcomings or prejudices had prevented all previous historians from grasping, man was regarded as governed by fixed laws, both natural and moral. Climate, soil, food, and similar natural agents, were the chief causes of progress. In the civilised world men have triumphed over their surroundings because stronger than nature; in barbarous countries nature triumphs over man

because it is the stronger. With the advance of society physical laws become less potent agents of development than mental laws. Such laws can only be discovered by a method of averages, as all metaphysical methods are necessarily delusive. Great men are but creatures of the age and of circumstances. Human progress is the result of intellectual rather than moral activity. It increases directly in proportion as scepticism, or the habit of inquiry, takes the place of "credulity." A large part of the *History* is devoted to the proof of this last proposition. The rest of it traces the growth of the "protective spirit" in France, Spain, and Scotland, and at much length endeavours to explain what the author regards as the most crucial problem in Scottish history: the causes of the antithesis between the political liberality and religious intolerance that characterises that nation. Thus crudely and shortly stated, Buckle's pre-suppositions seem a very incomplete basis for the construction of a theory of the history of civilisation. The great principle that human action is governed by laws is put on the same plane as the fantastical doctrine of averages, and the paradox that exalts intellect over morality as an element in progress. Buckle constantly used terms without inquiring into their meaning, and built his whole system on fancied contradictions which really involved no necessary antagonism. He constantly forgets some of his principles when absorbed in the working out of others, and is often led by his method of abstraction into very singular results, at once contradicted by experience and by his own axioms. A writer who thinks the French Revolution is explained when he tells us it is a reaction against the "protective spirit" of the *Ancien Régime* must shut his eyes very closely to the infinite complexity of history. But apart from its personal deficiencies, Buckle's book has an importance of its own as a brilliant, if not very successful, attempt at establishing a scientific view of history, at least in harmony with many of the tendencies of his own generation. Yet even those who hold most strongly the philosophy that inspired Buckle can hardly look on his attempt as adequate. Those reared in other schools of thought will carry their criticism still further, and deny that the physical fatalism which Buckle taught is the necessary result of all things being ordered, or that the external and mechanical theory of causation, which he advocated, is the result of a complete analysis of the laws and motives of human action.

Encyclopædia Britannica; *Edinburgh Review*, April, 1858; Professor Masson in *Macmillan's Magazine*, July—September, 1861; Mr. J. Hutchinson Stirling, *Buckle: His Problem and his Metaphysics*, in *North American Review*, 1872.

[T. F. T.]

Buckstone, JOHN BALDWIN (b. 1802, d. 1879), wished in his early days, like so

many boys of his time—that of our last great war against France—to be a sailor. His parents, however, preferred to make him a lawyer. This profession did not suit him at all, and he was now as anxious to appear on the stage as he formerly had been to figure at sea. An opportunity of displaying in public the talent which he had for some time past cultivated in secret was afforded to him when he was in his twentieth year at Wokingham, where, at a moment's notice, an actor was needed to play the part of Gabriel in *The Children in the Wood*. In what was doubtless, on the whole, an indifferent performance, young Buckstone is said to have played exceptionally well. He at least proved himself to be an actor, and capable of supporting himself by acting; and from this moment he forsook the law, never again to return to it. After performing with constantly increasing success at various provincial theatres, he obtained, in 1824, an engagement in London, and appearing at the Surrey, made a very favourable impression on the audience. Five years later he joined the company of the Adelphi, where he produced a number of plays, original and adapted, each of which contained, as a matter of course, a part for the author. To the period of Mr. Buckstone's engagement at the Adelphi belong the dramas of *The Wreck Ashore* and *Victorine*, both from his hand; and for many years afterwards, when he had now become a member of Mr. Webster's company at the Haymarket, he still wrote for the Adelphi theatre plays of the then well-known Adelphi type, such as the picturesque *Green Bushes* and the highly dramatic *Flowers of the Forest*. Mr. Buckstone, too, is the author of a great number of farces and of some excellent "genre pieces," as they might be called. Of this latter class, *Good for Nothing* and *The Rough Diamond* are excellent specimens. Mr. Buckstone succeeded Mr. Webster in the management of the Haymarket theatre, where, in a financial point of view, he obtained but little success. Touchstone, Tony Lumpkin, Bob Acres, and Sir Andrew Aguecheek may be mentioned among his best impersonations. [H. S. E.]

* **Buffet, LOUIS JOSEPH** (b. 1818), a native of the department of the Vosges, practised as an advocate until 1848, when he was returned by his department. He accepted the Republican constitution, and became Louis Napoleon's Minister of Commerce, but resigned in the following year. After the *Coup d'Etat* of Dec., 1851, had placed Napoleon on the throne, he was absent from public life until 1864, when he was re-elected, and took up a middle position, advocating liberal reforms on the one hand, and the continuance of the Napoleonic régime on the other. In 1870 his views won the day, and Émile Olivier formed a ministry, in which M. Buffet became Minister of Finance; but the proposal

of the *plébiscite* alarmed him, and he resigned. After the establishment of the Republic, M. Buffet was re-elected, but refused a portfolio, on account of his connection with the Second Empire, and displayed marked hostility to M. Thiers. In 1873 he was elected by the monarchical majority President of the Assembly, in place of M. Grévy, and again in 1874 and 1875. In March of that year he was commissioned by the President, Marshal MacMahon, to form a Cabinet, in which he became Minister of the Interior and Vice-President of the Council. His monarchical leanings were at times emphatically displayed, especially with regard to measures directed against the press. In consequence, he had to withdraw his candidature as a life senator, and at the elections of 1876 he was defeated at four places. He therefore resigned, and shortly afterwards was elected a life-senator.

Bugeaud de la Piconnerie, THOMAS ROBERT, DUKE OF ISLY AND MARSHAL OF FRANCE (b. 1784, d. 1849), belonged to an Irish family, but joined the army of France under Napoleon, and was promoted corporal at Austerlitz. He became general in 1832; in 1833 he was appointed Commandant of Blaye, where the Duchess of Berry was imprisoned. His conduct in this capacity was called in question by M. Dulong, a member of the Opposition, and resulted in a duel, in which the latter fell. Bugeaud served with gallantry and success in Algeria from 1837, and effected the defeat and capture of Abdel-Kader. For this, and for his victory over the Moors in 1844, he was created duke and field-marshal. He wrote, among other military works, some *Maximes, Conseils, et Instructions sur l'Art de la Guerre*, a treatise on the colonisation of Algeria, and some interesting *Memoirs*. After his return to France, he was appointed commander of the National Guard, and just survived the fall of the Orleans dynasty.

Memoirs of Marshal Bugeaud, edited by C. M. Yonge; *Lives by Besancenes and C. Fitou.*

[C. C. K.]

Bulgaria, ALEXANDER I., PRINCE OF (b. 1857), the son of Prince Alexander of Battenberg (Hesse), and therefore nephew of the late Empress of Russia, was educated for the military profession at Berlin. He served in the Russian army during the Russo-Turkish War. After the war he returned to Germany, and was transferred from the Hessian Dragoons to the Prussian Life Guards. Early in 1879 the Assembly of Notables, gathered at Tirnova, in accordance with the stipulations of the Treaty of Berlin, elected him hereditary Prince of Bulgaria. He spent the next three months in a tour to the principal European Courts. In Bulgaria he was received with enthusiasm, but his popularity soon waned. Owing to the race-

enmity of Bulgarians, Greeks, and Mohammedans, disturbances broke out in various parts. Russia felt slighted by supposed ingratitude. The Ministry was openly condemned by the populace. The Liberals, who formed the majority of the Assembly, failed to establish a working government. In December the Prince dissolved the Assembly. But next year a still greater Nationalist majority was returned, and, besides frequent changes of ministry, the country was further disturbed by persecutions of the Greeks, the growth of the so-called "gymnastic" or volunteer societies, and a quarrel with Roumania that almost ended in open rupture. In the spring of 1881, the Prince, probably acting under Russian inspiration, declared that with the present Constitution he could no longer accept the responsibilities of his position. He demanded extraordinary powers for seven years, and the suspension of the Assembly, otherwise he should resign. At the same time, he was willing to associate a council of twelve in the government, and to summon an Assembly once a year. To give some colour of popular support to this *Coup d'État*, he appealed to a *plébiscite*. The elections were held under every circumstance of intimidation, violence, and corruption. A large Conservative majority was in consequence returned, and the Prince's proposals were accepted by acclamation (July, 1881). The Liberal leaders had in vain appealed to Mr. Gladstone. They continued to agitate for the revival of the constitution throughout 1882, and, strangely enough, were now supported by the Russian officers, who were only kept in check by the Prince's application to the Czar in person. In 1883 Prince Alexander visited Berlin and Vienna, and on his return adopted an independent attitude towards Russia, which, being supported by both Liberals and Conservatives, who made common cause against foreign intervention, resulted in the withdrawal of the Russian members from the Cabinet, and a general decline of Russian influence. In the middle of September, 1885, Europe was startled by a sudden and bloodless revolution in Eastern Roumelia. The leaders deposed the Turkish representative, proclaimed a United Bulgaria, and invited Alexander to assume the title of Prince over the whole State north and south of the Balkans. The Prince at once hastened from Varna to Philippopolis, where he was received in triumph. Nevertheless it soon became evident that the Great Powers, especially Russia, regarded the movement with suspicion, and in November a conference began to sit at Constantinople with the proposed object of re-establishing the *status quo*. Alexander's position was further complicated by the undisguised hostility of Servia. War was declared by the latter, probably at the instigation of Austria, on Nov. 13th; but Prince Alexander bravely placed himself at

the head of his troops, and by the 26th had driven the enemy across the frontier. The capture of Pirot, however, was followed by Austrian intervention, and he was compelled to conclude an armistice on the 28th. On Aug. 21st an infamous attempt to kidnap the prince was made by the philo-Russian party. He was released at Reni-Russi, and returned in triumph to Sophia; but soon abdicated owing to the hopelessness of the situation.

Buller, THE RIGHT HON. CHARLES (b. 1806, d. 1848), politician, was born at Calcutta, and educated at Harrow, Edinburgh, and Trinity College, Cambridge. He was at one time a pupil of Carlyle. In 1830 he entered Parliament as member for West Looe, and after the passing of the Reform Bill became member for Liskeard. In 1838 he accompanied Lord Durham to Canada as chief secretary. He was secretary to the Board of Control in 1841, became Judge-Advocate General in 1846, and Chief Poor Law Commissioner in the following year. He was one of the most brilliant talkers of his time.

* **Buller, SIR RIVERS H., C.B., K.C.M.G.** (b. 1839), entered the army in 1858 as ensign. He first saw active service in the China War of 1860, and was present at the actions of Sinho, the Taku Forts, and the capture of Pekin, receiving the medal with clasp. In 1870 he accompanied Colonel Garnet Wolseley on the Red River Expedition, and in 1874 served as deputy assistant adjutant-general in the Ashantee War. He was slightly wounded at the skirmish of Ordahan, was mentioned in despatches, and received the brevet of major, the war medal and clasp, and a C.B. On his return to England he became deputy assistant adjutant-general at head-quarters, and in 1879 was sent on special service to the Cape. In the Kaffir War of 1878-9 he held command of the Frontier Light Horse; and in the Zulu campaign served with Sir Evelyn Wood's column, and took part in the battles at Intombe, Inhlobane, Kambula (where he behaved with reckless valour), and Ulundi. For these services, and for gallantry in the field, he was thanked by the general in general orders, was mentioned in despatches, and received the V.C., the C.M.G., the brevet of lieutenant-colonel, the war medal with clasp, and was appointed A.D.C. to the Queen. After again serving on the staff in North Britain and at Aldershot for a short time, he returned to South Africa as brigadier-general, but saw no further active service there. When the Egyptian expedition of 1882 was formed, he was appointed to the Intelligence Department of the force, and was present at the battle of Tell-el-Kebir. Again mentioned in despatches, he was made a K.C.M.G., received the medal with clasp, the Khedive's star, and the decoration of the Osmanieh. In Sir Gerald Graham's ex-

pedition to relieve the Egyptian garrisons in Eastern Soudan, he was chief of staff, and commanded the 1st Infantry Brigade as brigadier. After the battles of El-Tebe and Tamai he was mentioned in despatches, and was specially promoted major-general for distinguished service in the field. He finally accompanied the Nile Expedition of 1884, and commanded the remains of the column which had crossed the desert from Korti to Metamneh. In Nov., 1886, after holding a military appointment in Kerry, he became Under-Secretary for Ireland.

* **Bülw, HANS GUIDO VON** (b. 1830), one of the foremost pianists of our time, also well known as a conductor, composer, and transcriber, in early childhood showed no particular aptitude for music; but at the age of ten he was placed under Friedrich Wieck, father of the future Mme. Schumann. He at the same time studied harmony and counterpoint. Music had now marked him for her own. But this did not accord with the views of his parents, who intended him for a legal career, and with that view sent him to the University of Leipzig, which he entered in 1848. Here he took the degree to which he owes the title of Doctor. Here, too, he continued his study of music. He had not yet, however, decided to adopt music as a profession, and towards the end of 1849 he was at Berlin, following the lectures at the University and contributing articles to a Democratic journal. In this newspaper, apart from politics, he defended the new musical doctrines of Wagner and Liszt; and a performance of *Lohengrin*, given in 1850 at Weimar under Liszt's direction, moved him so deeply that he abandoned the law, and going to Wagner, then at Zurich, placed himself under his guidance. Soon afterwards, at Wagner's recommendation, he went to Weimar to study pianoforte-playing under Liszt; and in 1853 he made his first concert tour, visiting Vienna, Pesth, Dresden, and the principal cities of Germany. In 1864, after he had travelled much, played much, and written much on behalf of Wagner and the Wagnerian view of opera, he was offered at Munich the posts of conductor at the Royal Opera-house and director of the Conservatorium. Under his personal superintendence admirable performances were given of *Tristan und Isolde* and the *Meistersinger*, two of Wagner's operas, until that time unknown to the public. He left Munich in 1869, and since then has given concerts with remarkable success in all parts of Europe and in the United States. In 1878 he was appointed musical conductor at the Royal Opera-house of Hanover, and he has since become director of the music at the Ducal theatre of Saxe-Meiningen. Of his own compositions we may mention in particular the great symphony *Nirwana* (Op. 20). He has besides written

incidental music to Shakespeare's *Julius Cæsar*, a *ballade* for orchestra, several "character pieces" for orchestra, besides a *nocturne*, a funeral march, and other works for pianoforte, including one very brilliant production, called *Il Carnevale di Milano*. But more remarkable than his original compositions are his transcriptions and reductions of Wagner's scores. His pianoforte version of *Tristan und Isolde* is indeed quite a marvel of this form of reproduction. To the general public, however, it is as an executant that Hans von Bülow is chiefly known; and although his style, formed on that of Liszt, has been severely criticised by the partisans of a more reserved school of pianoforte playing, it must be admitted that he interprets his music with high intelligence, and executes it with a power which belongs to great artists alone.

***Bulwer, SIR HENRY ERNEST GASCORNE, G.C.M.G.** (b. 1836), was educated at Trinity College, Cambridge. After serving as private secretary to the Lieutenant-Governor of Prince Edward's Island, he became an official resident of the Ionian Islands (1860-4), treasurer and receiver-general of Trinidad (1866), Administrator of Dominica in 1867, and Governor of Labuan and consul-general at Borneo (1871-5). In the last year he was appointed Lieutenant-Governor of Natal, and for a while succeeded in averting hostilities with Cetewayo [ZULULAND], and in keeping the Boers quiet. He protested against the annexation of the Transvaal, and was frequently at variance with the Lord High Commissioner, Sir Bartle Frere, as to the necessity of coercing the Zulu king. In spite of his pacific representations, war was declared against Cetewayo in 1879, and during the campaign he gave valuable aid to our general, Lord Chelmsford. His appointment came to an end in 1880, before the outbreak of the Boer War, and he was succeeded by Sir George Colley; but in 1882 he was re-appointed Governor of Natal, and special commissioner of Zulu affairs. He was created G.C.M.G. in 1883, and in 1885 was appointed Lord High Commissioner of Cyprus.

Bulwer-Lytton. [LYTTON.]

Bunsen, CHRISTIAN CHARLES JOSIAS, BARON VON (b. 1791, d. 1860), was a native of Corbach, in the principality of Waldeck, where his father subsisted on a meagre pension as a retired soldier. Christian was educated at the local school, and then spent a year of divinity studies at Marburg University, whence he proceeded to Göttingen, then the most distinguished of the German seats of learning. Here he was the centre of an admiring and sympathetic group of students, whom he inspired with something of his own enthusiasm for great ideas. Having been selected as private tutor to Mr. Astor, a Göttingen student

from New York, he had now the opportunity of travelling. In 1813 the pair wandered in South Germany, and rejoiced together over the news of Napoleon's defeat at Leipzig. Mr. Astor now returned to America, with a promise to join in further travels in two years' time, and Bunsen resumed his boldly comprehensive studies. His was a mind of boundless reach and intellectual ambition, and he lived when men still dreamed of subduing all things knowable. He had gone with Schopenhauer to see and talk with Goethe; and now, in 1815, he went to Berlin, and laid his portentous scheme of work before the great Niebuhr, who gave him warm encouragement, and sought to induce the young student to enter official life, as there seemed little chance of pecuniary support from the Prussian Government in any other career. But Bunsen continued his life of study, and examined libraries in France and Italy, where, in the English colony at Rome, he met the English lady, Miss Waddington, whom he married in 1817. Niebuhr was then Prussian envoy at the Eternal City, and here he at last obtained the appointment of secretary of legation for his scholarly young friend. Bunsen devoted himself with zeal to the difficult task of keeping peace and maintaining tolerance between Protestants and Catholics in his own country, while firmly and justly withstanding the insidious encroachments which the revived Papal policy was then attempting. With so much tact did he carry on this delicate branch of diplomacy, as secretary, and afterwards as envoy, that he was received with every mark of esteem and favour, both by the Pope and by the King of Prussia, who took a personal liking for the young diplomatist. He failed in his efforts to restrain religious divisions, however, and the question of mixed marriages was the fuse that set Catholic feeling ablaze in Germany. The Prussian Government did not adequately support its envoy at Rome during this difficult period, and Bunsen resigned his post in bitter disappointment in 1838. Rome had been his home for twenty years, and in the brilliant circle of artists and musicians, scholars and divines, who make Rome still the Eternal City, the Chevalier Bunsen held an honoured and beloved position. Speaking Italian admirably, believing in the Italians and their reintegration when few yet dared to hope, he was very popular with the people; and, with such foreigners as Thorwaldsen, Felix Mendelssohn, Overbeck, Tourgenieff, Ampère, Champollion, to give national variety, Roman society was very enjoyable during Bunsen's residence. He came to England in 1838, and with us he stayed for the rest of his official life, save for a temporary mission to Switzerland in 1839-41. The new King of Prussia, Frederick William IV., had as Crown Prince been Bunsen's intimate friend, and one of his first steps on succeeding to the

throne was to charge the Chevalier with the task of negotiating at London the establishment of an Anglo-Prussian bishopric at Jerusalem; and, after having accomplished this commission, he was selected by Queen Victoria, out of three names submitted to her by the King of Prussia, for the post of ambassador in London. He was very popular in English society, where he moved for thirteen years, and his strong religious feeling suited well the tone of some of the leading minds of the day, among others of Dr. Arnold. Bunsen was frequently consulted by the King of Prussia on matters political, but they did not always agree, especially on Church organisation (on which the former published his views in *The Church of the Future*). Bunsen was next specially employed as commissioner to settle the dispute with Denmark about Schleswig-Holstein. No man more zealously worked for the cause of German unity than Bunsen, and this in spite of the vacillation and helplessness of his friend the king. Bunsen also laboured hard for a closer union between Germany and England, in place of the traditional alliance with Russia and Austria, but the *vis inertia* was too much for him. Prussia adopted a neutral policy at the time of the Crimean War, and Bunsen resigned the embassy at St. James's in 1854, and retired to private life near Heidelberg, and, later on, at Bonn. He was elected for Magdeburg, but on the score of health declined to enter the Prussian Lower House; but his *Signs of the Times* (1856) showed that his keen interest in politics had not decreased, and that he was as broad and liberal in his views as ever. Indeed, he sat in silence in the Upper House for a brief session, at the request of the Regent William (1856). Literature had now become his profession, and during his quiet years of retirement he brought out his most mature work, *God in History*; his excellent, though now obsolete, reconstruction of Egyptian history, *Egypt's Place in Universal History*; and his *Bibelwerk*. He also wrote an admirable life of Luther for the *Encyclopædia Britannica*. But health failed him at last. His constant energy was still overflowing, but the end was at hand. Cannes was tried, but it did him little good, and in 1860 he settled at Bonn, and died Nov. 28th of the same year.

His *Memoirs* were published by the Baroness Bunsen in 1868, and Ranke edited his correspondence with King Frederick William IV. His son, the Rev. George von Bunsen, contributed a thoughtful memoir of his father to the *Encyclopædia Britannica*. [S. L.-P.]

* **Bunsen, ROBERT WILHELM, Ph.D.** (b. 1811), eminent German chemist, was born at Göttingen. After completing his preliminary education at the Gymnasium, he entered the University, and devoted himself to the study of chemistry and physics. Taking his degree of Ph.D. in 1831, he afterwards studied in Paris, Berlin, and Vienna, and obtained the *venia docendi*. In 1834 he pub-

lished, in conjunction with Berthold, his researches upon the hydrated oxide of iron as an antidote to arsenic. In 1836 he was appointed professor of chemistry at the Polytechnic School in Cassel; in 1838 professor extraordinarius, and in 1841 professor ordinarius at Marburg; in 1851 at Breslau; and in 1852 accepted a call to Heidelberg, where he constructed a grand laboratory, and founded one of the most celebrated schools of chemistry in Europe. In 1846 he went to Iceland, where he devoted special attention to the geysers, analysing the waters, sediments, and mixtures of gases issuing from the springs, and formulating a new theory of geyser action. Among the most important of his numerous scientific papers are those on the cyanogen compounds, gases of blast furnaces, improvements in galvanic batteries, researches upon kakodyle, magnesium, aluminium, chromium, and lithium, photo-chemical researches, and the discovery of the new metals cesium and rubidium. He has also invented many special forms of apparatus; a battery, burner, photometer, and pump being known under his name. Three of his more important publications are:—*On a New Volumetric Method, A Treatise on Gas Analysis, and Chemical Analysis by the Spectroscope*. Professor Bunsen has received all the most distinguished honours which usually fall to the lot of a scientific career. On the fifteenth anniversary of his acquiring the degree of Ph.D., the Grand Duke of Baden conferred on him the rank of Privy Councillor, and in 1882 the French Academy of Sciences elected him one of its eight Foreign Associates. His lectures are clear, polished, thorough, and suggestive, and illustrated by that brilliant power of experimentalism in which he stands almost alone among German physicists. The last of the famous trio—which comprised Wöhler and Liebig—he surpasses even the last-named, by reason of his more general education enabling him to take cognisance of a wider range of research. In his investigations, no important point is neglected, and often, by following up a remark considered by others of little moment, he has been enabled to make important additions to our knowledge. His antidote to arsenical poisoning, which he introduced in 1834 jointly with Berthold, has saved many lives, and was rewarded by a gold medal granted by the Provence Government. It consists in the freshly precipitated ferric-hydroxide. From that day until the present—unmarried and living for science alone—he has been unwearied in investigation and publication, the mere list of his papers forming a large catalogue.

Burckhardt, JOHN LEWIS (b. 1784, d. 1817), the famous Eastern traveller, was Swiss by birth, German by education, and English by adoption and grace, not to say Egyptian by habit and language: for he was

born at Lausanne, educated (after school-days at Neuchâtel) at the Universities of Leipzig and Göttingen, and arrived in England in 1806, with a letter of introduction to Sir Joseph Banks, who was then a guiding spirit of the "Association for Promoting the Discovery of the Interior Parts of Africa," and who soon converted the Teutonised Swiss into an English explorer. Burckhardt's adventurous turn induced him speedily to volunteer to go on with the work which Mungo Park had begun, and it was arranged that he should travel as the envoy of the Association. What time remained before he started was employed in studying medicine and chemistry, and other sciences useful to travellers, and in accustoming himself to privations and exposure. He sailed for Malta in 1809, and there he stayed some weeks to improve his Arabic, which he had begun to pick up in London and Cambridge, and to furnish himself with the clothes and baggage of an Indian merchant, in which character he proposed to carry out his explorations. This disguise was not long necessary, for a couple of years at Aleppo made him so perfect a master of Arabic, that the *ulema*, or learned men, were wont to consult him on difficult points of interpretation in the law. In 1810-11 he felt himself sufficiently prepared to make a journey through Syria, Lebanon, and the Hauran, to Palmyra, during which he underwent no little peril from the disturbed state of the country, which was then excited by the Wahhâby movement; and in 1812 he journeyed through Palestine to Petra, and then crossed the desert to Cairo, arriving there in September. Having now finished his apprenticeship in Arabic, and learned how to associate with the Arabs without danger of discovery, he prepared for the main object of his mission, the exploration of the interior of Africa, and especially of the sources of the Niger, which he proposed to effect by joining a caravan from Egypt to Fezzan. The desert was, however, in so turbulent a condition, owing partly, no doubt, to the sectarian excitement aroused by the Wahhâby insurrection, that no caravan was able to start, and Burckhardt was fated never to reach the Niger. Whilst waiting for his opportunity, he resolved to pass the interval in ascending the Nile, and went as far south as Dongola in 1813; and finding, on his return, that there was still no caravan going west, he made another tour of discovery, traversing the desert of the Sûdan, by way of Berber and Shendy, entering Abyssinia, and emerging at Suakim. Hence he crossed to Jedda, and the Pasha of Egypt, the famous Mohammed 'Ally, who was in the neighbourhood of Mekka, prosecuting his Wahhâby war, hearing of the traveller's arrival, and also of his accidental want of money and clothes, summoned him to his presence, and supplied him with what he required. Burckhardt informed the Pasha

of his ardent desire to visit Mekka, which was death to an unbeliever; and Mohammed 'Ally, although he was aware that Burckhardt was a European, consented, on the condition that the daring traveller should satisfy a committee of Mohammedan judges. The result of their examination was that they decided that Burckhardt was an excellent Muslim, and worthy to be one of the *ulema* himself; and in fine, he not only performed all the rites of the pilgrimage at the Kaaba with all the punctilious accuracy of a Mohammedan, but dined with the Kady, or chief judge, of Mekka, and recited the Koran to him. He was the first European that ever penetrated into the sacred precincts of the Kaaba, and he did it at the risk of his life. He subsequently visited the tomb of the prophet at Medina, where he had a bad attack of fever, and then returned to Cairo in June, 1815. There was still no promise of a caravan towards the Niger, so he set about revising his journals for the Association which had sent him out, and in assisting in the explorations of Belzoni and Salt. In 1816, in consequence of the plague in Egypt, he went for a tour through the peninsula of Sinai. This was his last journey; for on his return to Cairo, where he filled the months of waiting for the realisation of his long-cherished Niger expedition in finishing his journals and letters, he was seized by the scourge of the East, dysentery, and died Oct. 15th, 1817. His tomb may still be seen in the Muslim cemetery on the north of Cairo, with his Eastern name "Hajji (or pilgrim) Ibrahim." His travels were published after his death:—*Travels in Nubia*, 1819 (2nd ed., 1822); *Travels in Syria and the Holy Land* (1822); *Travels in Arabia* (1829); *Notes on the Bedouins and Wahâbys* (1831). His valuable *Arabic Proverbs* appeared in 1830 (reprinted 1875). Burckhardt was a close and accurate observer, as well as an intrepid explorer, and his journals, noted down under great difficulties, as their discovery would at once have betrayed his true character to the Arabs, are replete with valuable information, and are, moreover, written in excellent English. He was a zealous student, and a generous, affectionate man; and on personal as well as scientific grounds he deserves a foremost place among the band of early Eastern travellers. [S. L.-P.]

Burdett, Sir Francis (b. 1770, d. 1844), was educated at Westminster School and at Oxford University. A friend of Horne Tooke, he entered Parliament in 1796, and distinguished himself by his advanced views and vigorous opposition to the Government. Defeated at the hustings, he was absent from parliament between 1804 and 1807, when he was returned for Westminster by a vast majority. In 1810 his letter to his constituents, commenting on the right of Parliament to commit for libel, resulted in the issue

of a warrant by the Speaker for his arrest. He, however, barricaded himself in his house, and a riot ensued, in which a man was killed. He was imprisoned until the prorogation. Again, in 1819, his warm heart led him to condemn the proceedings of the authorities at the Peterloo riot, and he was sentenced to three months' imprisonment and a fine of £1,000. From 1837 he sat for Wiltshire, and continued to support the cause of parliamentary reform: although towards the end of his life his radicalism, which had never included republicanism, sensibly diminished.

• **Burdett-Coutts**, THE RIGHT HONOURABLE ANGELA GEORGINA, BARONESS (b. 1814), the daughter of Sir Francis Burdett (q.v.), succeeded in 1837 to the great wealth of her grandfather, Mr. Thomas Coutts, through his widow, who had been Miss Mellon, an actress, and who died Duchess of St. Alban's. Miss Coutts spent a great part of her wealth in charitable works; she built and endowed St. Stephen's Church, Westminster, besides greatly assisting many others. She handsomely endowed the three colonial bishoprics of Adelaide, Cape Town, and British Columbia. Her scheme for the inspection of primary schools by travelling inspectors has been adopted by Government. She gave the money for Sir Henry James's Topographical Survey of Jerusalem. She helped Sir James Brooke in his work in Sarawak, and got up the Turkish Compassionate Fund to help the peasantry during the Russo-Turkish War (1877). Miss Coutts always took the warmest interest in the welfare of the poor of London, helping them in numerous ways at home, and especially by her assistance to emigration; in 1859 the Shoeblack Brigade was organised; during the distress in Spitalfields, sewing-schools were arranged, where the women were taught, and work was found for them; a Reformatory Home was founded in Shepherd's Bush, whence women were sent to the colonies. During the severe winter of 1861, the East-end poor were assisted by the formation of the East London Weavers' Aid Association. Nor have the Irish fishermen of Cape Clear less cause to be grateful to her. Miss Coutts built some fine drinking-fountains in London, and has had several of the City churchyards planted and opened as recreation grounds for the people. On the site of one of the slums of London (Nova Scotia Gardens) she has built model lodging-houses, and, close by them, the Columbia Market. Among her latest schemes was that of a Central Fish Market for London, to break down the monopoly of Billingsgate (1881). In 1871 the Queen made Miss Coutts a peeress; in 1872 she was presented with the freedom of the City of London, and that of Edinburgh in 1874. In 1881 the Baroness married Mr. William Lehmann Ashmead-Bartlett, who obtained the royal licence to use

the name of Burdett-Coutts, and became M.P. for Westminster (Abbey division) in 1885.

Buren, VAN. [VAN BUREN.]

Burgers, F. (b. 1834, d. 1881), President of the Transvaal Republic, was ordained minister of the Dutch Reformed Church. In 1864 he was suspended by the Church courts, but appealed against their decision with success. In 1872 he was elected President by the Transvaal Boers, and induced the Raad to declare war against Secocoeni, chief of a Kaffir tribe. The failure of the war aided to bring about the annexation of the Transvaal by England in 1876, and Burgers retired upon a pension from our Government.

Burges, WILLIAM, A.R.A. (b. 1827, d. 1881), architect, was a native of London, and educated at King's College. His knowledge of Gothic architecture was of the fullest kind, and it was his recognised supremacy in this walk which gave rise to the outcry against his designs for the finishing of the interior of St. Paul's Cathedral—a Classic edifice—and finally led to the abandonment of the whole scheme. The rebuilding of Cork Cathedral, the speech-room at Harrow, and churches at Studley and Skelton, were after his designs.

• **Burgess**, JOHN BAGNOLD, A.R.A. (b. 1830), was educated at the schools of the Royal Academy. After gaining great popularity as a subject painter—mainly of Spanish themes—he was elected an associate in 1877. The following are the names of a few of his more important works, which have, with few exceptions, been exhibited:—*Bravo Toro*, in the Royal Academy (1874); *The Barber's Prodigy* (1875); *A Spanish Gipsy* (1876); *Licensing the Beggars* (1877); *Childhood in Eastern Life* (1878); *Zulina, The Student in Diagrace*, and *The Content Garden* (1879); *Zehra and The Professor and his Pupil* (1880); *The Genius of the Family, Guarding the Hostages* (1881); *The Letter Writer, Zara* (1882); *The Meal at the Fountain, Spanish Medical Students* (1883); *The Scramble at the Wedding* (1884); and *Una Limosuita por el Amor de Dios* (1885). Mr. Burgess is particularly happy in his treatment of subjects drawn from Southern and Eastern lands. He is a brilliant colourist, manages his groups with boldness and effect, and is at the same time by no means destitute of a certain *vis comica*.

Burgess, THOMAS (b. 1756, d. 1837), divine, was educated at Winchester College and at Corpus Christi College, Oxford, and soon became known as a man of great learning. His first important publication was a scholarly edition of Dawes's *Miscellanea Critica*, and it was followed by an *Essay on the Study of Antiquities, The First Principles of Christian Knowledge, and Emendationes in Suidam et Hesychium*. On account of his learning he became prebendary of Durham, and

in 1803 Bishop of St. David's, where he founded and liberally endowed the college of Lampeter. In 1805 he was translated to the bishopric of Salisbury; in 1821 he became the first president of the Society of Literature.

• **Burgon**, THE VERY REV. JOHN WILLIAM, B.D. (b. 1819), took his degree from Worcester College, Oxford, in 1848. He gained the Newdigate prize (for English verse) in 1845, and a fellowship at Oriel in 1848. He was vicar of St. Mary the Virgin, Oxford, from 1863 to 1876; professor of divinity at Gresham College, London, 1868-75; Dean of Chichester, 1876. He wrote from an early age; his first work (in 1833), was a translation of the Chevalier Brönsted's *Memorandum on Pan-athenæic Vases*; in 1839 he wrote *Life and Times of Sir Thomas Gresham*; in 1854, *Oxford Reformers*; in 1857, *Historical Notice of the Colleges of Oxford*; in 1861, *Inspiration and Interpretation*, being an answer to *Essays and Reviews*; in 1864, *Treatises on the Pastoral Office*; in 1867, *Ninety-one Short Sermons*; in 1868, *Disestablishment the Nation's Formal Rejection of God and Denial of the Faith*; 1870, *The Protests of the Bishops against Dr. Temple's Consecration*; 1872, *The Athanasian Creed to be Retained in its Entirety; and Why?*; 1875, *A Plea for the Study of Divinity at Oxford*; 1876, *The Prayer-Book a Devotional Guide and Manual*; 1881, *Divergent Ritual*; 1883, *The Revision Revised*. It may be inferred from the above list that Dean Burgon upon ecclesiastical questions is emphatically a conservative of the Low Church type. He warmly supported the Public Worship Regulation Act of 1874.

• **Burgoyne**, SIR JOHN FOX (b. 1782, d. 1871), was the son of General Burgoyne, who in the War of American Independence capitulated to the enemy at Saratoga. He entered the army in 1798 as lieutenant in the Royal Engineers, and in 1800 took part in Sir R. Abercrombie's expedition to the Mediterranean. In 1805 he became captain, and in the following year took part in the capture of Alexandria. He served with distinction throughout the Peninsular War, and was then sent on the disastrous expedition to New Orleans, under Sir E. Pakenham. In 1830 he became colonel, and was appointed Chairman of Public Works in Ireland, where he displayed considerable activity. In 1837 he was created K.C.B., and became major-general in 1838. In 1845 he was appointed inspector-general of the fortifications, and addressed a letter to the Duke of Wellington on the state of our national defences, which attracted much attention. He was honourably distinguished as a member of the Irish Famine Commission of 1847. When the war with Russia became inevitable, Sir John Burgoyne was sent to Constantinople to report on the measures necessary for the defence of the Ottoman Empire, and recommended the expedition to the Crimea, the landing of

which he directed. He was present at the battles of the Alma, Balaklava, and Inkermann, and conducted the siege operations before Sebastopol until March, 1855, when he was recalled to England as a victim to the popular impatience, although highly estimated by Lord Raglan. After the fall of Sebastopol had proved the justice of his prognostications, he was created a baronet, colonel commandant of the Royal Engineers, and afterwards field-marshal. On the death of Lord Combermere, in 1865, Sir John Burgoyne was appointed Constable of the Tower. The death of his only son, Captain Hugh Burgoyne, R.N., who was drowned in the ill-fated *Captain*, Sept., 1870, was a blow from which the fine warrior and irreproachable gentleman never recovered.

G. Wrottesley, *Life and Correspondence of Sir J. Burgoyne*, n.s.

• **Burke**, SIR JOHN BERNARD, C.B. (b. 1815), antiquarian, was called to the bar at the Middle Temple in 1839. In 1853 he succeeded Sir William Bentham as Ulster King of Arms, was knighted in 1854, was created C.B. in 1868. He is also Governor of the National Gallery of Ireland. Sir Bernard Burke is well known as the author of antiquarian works of great research. Among them are his *Peerage*, edited at first by his father, John Burke (b. 1786, d. 1848) (first edition 1826), *General Armoury* (1841), *Landed Gentry* (1846), *Extinct Peerages* (1846), *The Royal Families of England* (1846), *The Vicissitudes of Great Families* (1859), *The Rise of Great Families* (1873), most of which have passed through numerous editions.

• **Burke**, THOMAS (b. 1829, d. 1882), Irish official, was born in Galway, and educated abroad. He became private secretary to Sir Thomas Redington, and from 1847 continued till his death in Dublin Castle as permanent under-secretary to the Chief Secretaries since 1868. He was a Roman Catholic, and much respected for his courage, firmness, and punctual fulfilment of duty. On May 6th, 1882, he was assassinated in company with the newly appointed Chief Secretary, Lord F. Cavendish, by a band of men calling themselves "the Invincibles," led by Joe Brady, and hounded on by James Carey, who, by turning informer, secured their conviction. At the trial of the assassins it appeared that he was the victim at whom they principally aimed.

• **Burmah**, THE KINGS OF:—(1) MENTARAGYI (d. 1819) succeeded a bloodthirsty nephew, whom he put to death in 1781. His reign is remarkable for a war with Siam, terminated by a peace in 1793, and for the first dispute between Burmah and the British, which was concerning some fugitive criminals. It was amicably settled by General Erskine.

(2) PHAGYI-DAU (dethroned 1837) was involved in war with England in 1824 through

the violation by his troops of British territory. Hostilities began in February, and Rangoon fell on May 11th, and was shortly followed by Syriam. In the following year the province of Aracan was conquered, and after a short armistice the war was brought to a conclusion by Sir A. Campbell in the Irawadi. Peace was purchased by the Burmese at the price of the cession of Aracan.

(3) **KOUNBOUG-MEN** (d. 1846), the brother of the last king, usurped the throne in 1837. He was violently anti-English, and in consequence relations between the two governments were exceedingly strained.

(4) **PAGAN-MEN**, his son (dethroned 1853), walked in his father's steps, and in consequence the second Burmese War began (1852). It resulted in the annexation of Pegu by England, and shortly afterwards a revolution brought the king's abominable rule to a close.

MENDON-MEN (d. 1878), the Prince of Mendon, took up arms against his predecessor, in self-defence, and effected his overthrow (1853). At first disposed to adopt an attitude of sullen hostility towards the Indian Government, he gradually relaxed his animosity, and in 1862 consented to a treaty, which was renewed in 1867. In virtue of these conventions English travellers were allowed to penetrate into the interior, one of these expeditions being that of 1874 to West China, which resulted in the murder of Margary (q.v.) by the Chinese. Owing to the refusal of the king to allow British troops to pass through his territory in the not improbable event of a war of revenge with China, and disputes about the Karen boundary, our relations with Burmah became again uneasy; but Sir D. Forsyth succeeded in smoothing over the difficulties, and in 1878 it was announced that Mendon-men had accepted the English demands.

* **THEEBAW** (b. 1859, deposed 1885) signalled his accession to the throne (1878), by the massacre of eighty-six of his relations. He was also a confirmed drunkard, and the condition of affairs at Mandalay soon became so insufferable that the British Resident and most of the European population left in Oct., 1879. As a rebuke the Viceroy of India refused to allow a Burmese mission to cross our frontier, and throughout 1880 war seemed imminent. A pretender, Prince Nyoungyan, after an unsuccessful rebellion, sought refuge in British territory. In 1882 Theebaw made an attempt to negotiate a treaty to supply the place of that of 1867, which had expired; but the negotiations, which were protracted through the following year, were bootless, and he began coquetting with France. Menaced by the rebellion of the Shán States on the one side, and by the intrigues of the pretender on the other, and weakened by the extensive exodus of his subjects, Theebaw's position was most insecure; nevertheless, he brought 1884 to a close by a massacre of some two hundred

persons. Towards the end of Sept., 1885, he brought British vengeance upon him by imposing arbitrary fines on the Bombay and Burmah Trading Company, and threatening to seize their property. He further sent a defiant reply to Lord Dufferin's ultimatum, despatched Oct. 22nd, ordering him to receive a British Resident at his court as an equal (with his boots on). An expedition was accordingly sent against him under General Prendergast. Mandalay surrendered Nov. 28th; Theebaw was deposed and deported to India.

* **Burmeister, KARL HERMANN KONRAD** (b. 1807), a German naturalist, was born at Stralsund. He studied medicine at Greifswald and Halle, and obtained his degree of M.D. at Halle in 1829. The bent of his mind, however, was evidently towards zoological subjects, and his first appearance as an author was in a *Treatise on Natural History*, published in 1830. He was soon after appointed an instructor in the Gymnasium at Joachimsthal, and at a later date at Cologne, and in 1837 became professor of zoology in the University of Halle. In 1848 he took an active share in the revolution, and was a delegate from Halle to the National Assembly of Frankfurt, and afterwards a representative from Liegnitz in the first Prussian Chamber. In 1850, worn out with his political labours, he resigned his Chair, and made a scientific journey in Brazil, and afterwards published a work on the animals of that country. Upon his return to Europe, after visiting Italy, he resumed his professorship at Halle, again travelling in the Argentine provinces from 1856 to 1860. After another brief sojourn at Halle, he finally resigned his Chair in 1861, and became director of the Museum of Natural History established by him at Buenos Ayres. In 1870 he was appointed curator of the newly instituted University of Cordova. In addition to several works relating to his travels and studies in South America, are his *Grundriss der Naturgeschichte*, which has passed through a number of editions; *Handbuch der Entomologie*; *Zoologischer Handatlas*; *Genera Insectorum*; *Systematische Übersicht der Thiere Brasiliens* (1856); *Description Physique de la République Argentine* (1876), and endless papers in the *Anales del Museo Publico de Buenos Aires* (1864-74), and other scientific journals.

* **Burnaby, FREDERICK GUSTAVUS** (b. 1842, d. 1885), British officer, entered the Royal Horse Guards Blue in 1859, becoming lieutenant-colonel of the regiment in 1881. He was an enterprising and daring traveller, visiting some of the more difficult parts of South America and Central Africa; and in 1875 he attempted to reach Khiva on horseback, in which he succeeded, though his further intention of reaching Bokhara was frustrated by the Russian authorities. *A Ride to Khiva* is a capital account of his

adventures. In 1876 he travelled through Asia Minor and Persia, and joined the army of Don Carlos in Spain, as correspondent of the *Times*. When the expedition to the Eastern Soudan, under General Graham, was despatched, Colonel Burnaby was attached to the Intelligence Department, and was severely wounded in the battle of El Teb. For this he received the war medal with clasp and the Khedive's bronze star. He was not permitted to join the Nile expeditionary force when it started in 1884, but succeeded in getting to the front at the end of that year, and joined the column under Sir Herbert Stewart which crossed the Bayuda Desert from Korti to Metannah. In the first battle, that of Abu Klea, this gallant and fearless officer was killed by an Arab spear. He was an intrepid aeronaut, having made many ascents, some of them alone; and in 1882 he crossed the English Channel in the balloon "Eclipse," and landed in Normandy. Besides *A Ride to Khiva*, he wrote *On Horseback through Asia Minor* (1877), and *A Ride Across the Channel* (1882). In politics, Burnaby was an ardent Conservative, and in 1880 he contested Birmingham without success, although he received nearly 16,000 votes.

Besides his works, see R. K. Mann, *Life of Burnaby*. [C. C. K.]

***Burnand**, FRANCIS COWLEY (b. 1837), was educated at Eton and at Trinity College, Cambridge. He was called to the bar in 1862, but instead of occupying himself with briefs, turned his attention to farce writing. His earliest attempt in this line was made in collaboration with another barrister, Mr. Montague Williams. Mr. Burnand began his connection with comic journalism in the pages of *Fun*, then edited by Mr. H. J. Byron. After a time he passed to *Punch*, and has contributed regularly to its columns ever since. When, in 1880, Mr. Tom Taylor died, Mr. Burnand succeeded to the editorship of our leading satirical paper, previously directed in succession by Mr. Mark Lemon, Mr. Shirley Brooks, and Mr. Taylor. It was for *Punch* that Mr. Burnand wrote his *Happy Thoughts*—an original idea, admirably worked out in connection with constantly varied personages and scenes; and some admirable skits on our leading novelists, of which *Strapmore* is perhaps the best known. As a dramatist, Mr. Burnand has been chiefly successful as a writer of burlesques, his happiest efforts in this line being *Ixion* and *Black-eyed Susan*. Among his latest ventures, besides one or two burlesques produced at the Gaiety Theatre, are *Stage-Dora*, *Paw Claudian*, and *The O'Dora*, all produced under Mr. Toole. He is also the author of the highly successful plays *Artful Cards* and *Betsy*, the plots of which are borrowed from the French.

***Burne-Jones**, EDWARD, A.R.A. (b. 1833), received part of his education at Exeter Col-

lege, Oxford. Having turned to the practice of art comparatively late in life, he escaped the regular and systematic training that sometimes procures perfect correctness of form at the cost of poverty of idea. As he fell under the strong influence of the Pre-Raphaelite Brotherhood, especially of Rossetti, his earlier works are marked by something of the realism, the gorgeousness of colour, the occasional mediævalism, and occasional ascetic saintliness that were at first among the characteristics of the school. Examples of this, especially of the mediævalism, are to be seen in *The Story of St. Frideswide*, on a window in Christ Church Cathedral, in several of his early pictures from the legends of the saints, as *The Death of St. Dorothy*, and in his perfect mastery of early Christian symbolism, as displayed chiefly in the great designs for church decoration and stained windows exhibited at the Grosvenor Gallery in the winter of 1881. Truth, which was the watchword of the school, has also been the watchword of his art, as is seen in the perfection of his outline drawings, the faultless folds of his drapery, and the faithful accuracy of every flower round the well of Perseus, and every pebble at the foot of Venus's throne. But in his choice of subject he has followed rather the eternal truths of idea and emotion than the phenomenal truths of represented realism. Having studied the profound myths of Greece and the Northern lands with unwearied scholarship and the intuition of a poet, he has made them a medium for the expression of thoughts and passions and inexorable sequences that are as much modern as antique, being in the strictest sense romantic, classic, or eternal. It is by this sovereignty of the idea in his works that he differs from the schools of modern or classical realism; and it was his choice of mythology and symbolism, with their necessary strangeness and apparent unreality as a medium for the truths of life, its joys, and mystery, and sorrows, that made him for a time a stumbling-block to imitators, and a vexation to a public that prided itself on the uniform common sense and unreflecting "healthiness" of shop and law-court. As for the mere execution and technicalities of his art, he will be remembered amongst artists chiefly for the consummate purity of his outlines and the magnificent harmonies of his colouring. Though many of his greatest pictures are in oil, he is much given to the use of tempera, and up to about 1870 was known almost entirely by his water-colours. The following is a list of his more recent productions:—*The Days of Creation*, *Merlin and Vivien*, and *The Mirror of Venus* (1877); *Day and Night* and *The Four Seasons*, *Laus Veneris*, *Le Chant d'Amour*, and *Pan and Psyche* (1878); *The Annunciation*, and *The Story of Pygmalion* (1879); *The Golden Stairs* (1880), *Phyllis and Demophoön*, or *The First Blossoming of the Almond Tree*

(1831); *The Wheel of Fortune* (1832); *Cephetus and the Beggar Maid* (1834). The great series of inventions to the myth of Perseus is to be seen in Mr. Burne-Jones's studio; and the series of finished designs for the legend of the *Sleeping Beauty* was also formerly open to view in his house. Mr. Burne-Jones was elected an Associate of the Royal Academy in 1885, where he exhibited *The Depths of the Sea* in 1886.

Ruskin's second Oxford lecture for 1863, *Mythic Schools of Painting*; Colvin's review in the *Portfolio* of 1870.

Burnes, SIR ALEXANDER (b. 1805, d. 1841), explorer of Central Asia, was a native of Montrose, and entered the East India Company's service at the age of sixteen. After studying Persian and Hindustani, he was appointed interpreter at Surat in 1822, and transferred to Cutch in 1826, where he began to investigate the history and geography of the north-west frontier. In 1831 and the two following years he travelled in the unexplored regions of Northern India, Afghanistan, Bactria and Parthia, Bokhara and Persia; and his *Narrative of Travels* (1834) was at once a delightful book and a real gain to geographical science. The geographical societies of London and Paris were not slow to pay honour to the young hero, and it was regarded as a remarkable phenomenon that 900 copies of his work were sold in a single day. On his return to India he was appointed to negotiate a navigation treaty in Scinde, and in 1836 undertook a mission to Kabul (of which his *Personal Narrative* (1838) gives a graphic account), where, when Shah Shujā was set up in the stead of Doet Mohammed in 1839, Burnes became political agent at Kabul, and remained at his post till assassinated in the insurrection of 1841. At the age of thirty-six he died with the coolness and courage of a hero.

Burnet, JOHN, F.R.S. (b. 1784, d. 1868), engraver and painter, was the son of the Surveyor-General of Excise for Scotland. He was apprenticed to Robert Scott, a landscape engraver in Edinburgh, and attended the Trustees' Academy, where he had Wilkie for a fellow-student. Stimulated by his example, he applied himself diligently to the study of his art, and followed him to London in 1806, where he arrived with only a few shillings in his pocket. His first employment was on Britton and Brayley's *England and Wales*, Mrs. Theobald's *British Theatre*, and Cooke's *Novelists*. But the foundation of his fame was his plate of Wilkie's *Jew's Harp*, which was followed by the same painter's *Blind Fiddler*. At the peace of 1815 he visited Paris, and spent five months studying in the Louvre. On his return, he joined the Association of Engravers, and executed many plates for the Association. But his old friend Wilkie was the artist after whom he loved

best to work, and most of the engravings of his well-known pictures are by Burnet. For all his painstaking and industry, his work is black and heavy, and he never attained to the beauty and purity of line of his countryman, Sir Robert Strange. Burnet was a painter as well as an engraver, and wrote most intelligently on the art he practised. Among his paintings are *The Draught Players*, *The Humorous Ballad*, *A Windy Day*: all exhibited at the Royal Academy during the first quarter of the present century. His *Greenwich Hospital and Naval Heroes*, exhibited at the British Institution in 1837, was a commission from the Duke of Wellington, as a companion for Wilkie's *Chester Pensioners*. This daring attempt proved perfectly successful, and is regarded by judges as Burnet's best work. He was a Fellow of the Royal Society; and although his writings on art are now looked upon by some as rather antiquated, he had a keenly critical eye for whatever is excellent. His *Practical Treatise on Painting, in Three Parts: Composition, Chiaroscuro, and Colouring*, was published in 1827.

[J. F. R.]

* **Burnett**, MRS. FRANCES HODGSON (b. 1849), is perhaps better known under her maiden name of Hodgson. She was born in Lancashire, and her parents emigrating after the civil war, she settled in Tennessee. She married Dr. Burnett in 1873. As a contributor to the leading American magazines, she obtained a high reputation, and her novels have been nearly all republished. Among them are *Surly Tim* (1872), *That Lass o' Loure's* (1877), which has been successfully dramatised under the title of *Liz*. Then followed *Theo* (1877), *Lindsay's Luck* and *Kathleen* (1878), *Jael's Daughter* and *Haworth's* (1879), *The Tide of Moany Bar* (1879), *Louisiana* (1880), *A Fair Barbarian* (1881), *Through One Administration* (1883), *L'agabondia* (1884).

Burney, FRANCES. [D'ARBLAY.]

Burnouf, EUGÈNE (b. 1801, d. 1852), an eminent Orientalist, was the son of Jean Louis Burnouf, the translator of Tacitus and Cicero, and the author of a celebrated Greek grammar. The younger Burnouf devoted himself at an early age to the exclusive study of the Oriental languages, and his name will ever be remembered for the zeal and energy with which he applied himself to the deciphering of the original manuscripts in the Zend language, the key to which had been lost, by which he threw a flood of light upon comparative mythology, and made possible the deciphering of many Persian inscriptions, which will in time lead to the unravelling of the history of the Mesopotamian kingdoms. He published in the *Journal Asiatique* an account of his work and the results obtained, and was shortly afterwards appointed professor of Sanscrit in the Collège de France. He is the author of

Notes upon the Yacna (one of the religious books of the Parsees), *The Bhāgarata-Purana*, or *Poetical History of Krishna*, and *An Introduction to the History of Buddhism*, a brilliant and learned work, which occupied him for about six years, and *Le Lotus de la bonne Loi*, a translation, with notes, of one of the canonical books of the Buddhists. Burnouf's death was hastened by over-study.

Mohl, *Vingt-sept Ans d'Histoire des Études Orientales*.

Burnside, AMBROSE EVERETT (b. 1824, d. 1881), general, U.S., went to West Point in 1847, and on first entering the army, marched in Patterson's column to Mexico; in 1849 he went to New Mexico in charge of a squadron of cavalry, and distinguished himself in a fight with the Apaches. In 1850 he was appointed quartermaster to the Mexican Boundary Commission, and in 1851 became first lieutenant. In 1853 he left the army, and built a manufactory for a breech-loading rifle that he had invented. As this did not succeed, he went to Chicago, and became cashier in the office of the Illinois Central Railroad; he rose to be treasurer, and transferred the office to New York, where he became colonel of the 1st Rhode Island Volunteers. During the civil war he commanded a brigade for the North in the Battle of Bull Run (1861), and was highly commended by General McDowell. He next assisted General McClellan to organise the army; in 1862 he headed a successful expedition to capture the island of Roanoke. The legislature voted him a sword, and gave him the rank of major-general. He took Newburn, Beaufort, and Fort Macon, and when the Confederates invaded Maryland he helped McClellan to defeat them at South Mountain. At Antietam, where he commanded the left wing, he highly distinguished himself. He was assigned to the 9th Army Corps, and commanded one of the three great divisions of the army of the Potomac, and finally the whole army, from which he was transferred to the army of the Ohio. Being defeated by the Confederates in front of St. Petersburg, he was relieved of the command in 1863, but he took command of the 9th Corps under Grant, remaining in active service until Lee's surrender. He was Governor of Rhode Island from 1866 to 1871.

Burr, AARON (b. 1756, d. 1836), Vice-President of the United States, entered the army, and having distinguished himself in the War of Independence, retired in 1779 with the rank of lieutenant-colonel. He then took to the law, and in 1800 was candidate for the presidency in the Democratic interest against Jefferson, but had to put up with the vice-presidency. His official career was brought to a close by the mortal wound he inflicted on General Hamilton in a duel (1804). In 1807 he was arrested on a charge of conspiracy; his supposed aims being to separate the West-

ern States from the Union, and to annex to them Mexico. After his acquittal he retired to England, and interested several prominent men, among them Jeremy Bentham, in new filibustering designs on Mexico. At length the English Government ordered him to leave the country, and Napoleon gave him no encouragement. He returned to America in 1812, and spent the remainder of his life in retirement.

M. L. Dare's *Memoirs of Aaron Burr*.

* **Burr**, JOHN (b. 1834), painter, was born in Edinburgh. At nineteen he entered, along with his brother Alexander Burr (b. 1832), who has many of the former's excellencies, the Trustees' School in Edinburgh, then under the direction of the late R. S. Lauder, R.S.A., and John Ballantyne, R.S.A. In the second year of his studentship he exhibited *Preparing Dinner* and *The Amazon*, and their success decided him to turn his attention permanently, though by no means exclusively, to *genre* subjects. In 1857 *The Housewife*, and in 1859 *The Strolling Musician*, were purchased by the Association for the Promotion of the Fine Arts in Scotland. Towards the close of 1861, John Burr and his brother, Alexander, came to London, where they have since resided. *Domestic Troubles*, when on the walls of the Royal Academy, was favourably noticed by John Ruskin. *Home Shadows*, *The Pedlar*, *Bed Time*, *Caught Napping*, *The Boat Builder*, and *The Target*, are among a few of his many domestic subjects. In 1866, John Burr, again accompanied by his brother, went to Paris, and worked some time in the studio of M. Herbert, whose style looks somewhat affected and sentimental alongside the direct, vigorous brushwork, powerful colouring, and humorous characterisation of the brothers Burr. Of the Society of British Artists, who for some years had claimed him as a member, he was in 1881 elected president, and his election into the Royal Society of Painters in Water Colours took place in 1883.

* **Burrows**, SIR GEORGE (b. 1800), a distinguished physician, was educated at Caius College, Cambridge, where he graduated as B.A. in 1825, being immediately afterwards elected fellow and mathematical tutor of his college. He took the degree of M.D. in 1831, and the following year became fellow of the Royal College of Physicians, of which institution he has been subsequently elected president on five occasions. He was long its representative in the General Medical Council of Great Britain. In 1834 he was appointed physician to St. Bartholomew's Hospital. In 1870 he was appointed one of the physicians extraordinary, and in 1873 one of the physicians in ordinary to the Queen. He was created a baronet in 1874. Sir George's principal contribution to medical literature is a

work entitled, *The Cerebral Circulation, and the Connection of Diseases of the Heart and Brain*; he was also the author of several papers in the medical journals, and in the *Transactions of the Medico-Chirurgical Society*, of which institution he was formerly president.

***Burt, THOMAS, M.P.** (b. 1837), is the son of a Northumberland miner, and himself worked at that occupation for many years. He is chiefly self-educated. In 1865 he was appointed secretary of the Northumberland Miners' Mutual Confidence Association, a post he still holds. He was first elected for Morpeth in 1876, and presided over the Miners' Conference held at Manchester in 1882. In 1885 he was returned for Morpeth unopposed.

BURTON, JOHN HILL (b. 1809, d. 1882), historian, was the son of an officer in the army, who died when he was still young. He was born at Aberdeen, and educated at Marischal College. Apprenticed to a writer in his native town, he subsequently devoted himself to the higher branch of his profession, and was in 1831 admitted an advocate. As a lawyer he never had much practice, and though he wrote several law books, he soon directed his best energies to historical and antiquarian study. From 1833 onwards he wrote for the *Westminster and Edinburgh Reviews*, and soon became a large contributor to *Blackwood's Magazine*, from which were subsequently republished his most popular works, *The Bookhunter* and *Scots Abroad*. The former work, the result of much enthusiasm and industry, possesses a special attraction to lovers of old books. In 1846 appeared his first independent work, the *Life and Correspondence of David Hume*, which contains the most authoritative account of the great historian and philosopher. In 1847 appeared the *Lives of Simon, Lord Lovat, and Duncan Forbes of Culloden*, in 1849 a treatise on *Political and Social Economy*, and a little later an *Introduction to the Works of Jeremy Bentham*. In 1853 he published a *History of Scotland from 1688 to 1746*, which was the prelude to the main work of his life, *The History of Scotland, from the Invasion of Agricola to the Revolution of 1688*, of which the earlier part appeared in 1867 and the latter in 1870. Shortly before his death appeared his last important work, the *History of the Reign of Queen Anne*. Mr. Burton had also some share in official life. Between 1854 and 1860 he was secretary of the Prisons Board of Scotland, and when the management of Scottish prisons was transferred to the Home Secretary, retained, under a different title, similar functions of management. In 1877 he was made a commissioner under the Prisons Act. In 1878 he was appointed "Historiographer Royal for Scotland." Burton's numerous and learned historical works are all of considerable value. In the best known of them, the *History of Scotland*,

M.W.—7*

he covers too wide a field to make it possible for any single man to write on all periods with equal authority. But though the writings of Skene and Robertson have in no way been replaced by the early part of Burton's book, it remains the most useful general authority for Scottish history, and the latter portions, especially those treating of the seventeenth and eighteenth centuries, are still the most important and accurate works on the subject. Of his *History of Queen Anne*, it can only be said that though quite equal in merit to the other special books on that reign, the final and authoritative history of that period is still to be written.

Memoir by Katharine Burton, in the edition of the *Bookhunter* published in 1882.

[T. F. T.]

***BURTON, SIR RICHARD FRANCIS** (b. 1821), traveller, linguist, and author, of Irish descent, was born at Barham House, Hertfordshire. At first intended for the Church, he matriculated at Oxford, but in 1842 entered the East India Company's service, and speedily commenced to earn the character he has acquired as one of the most remarkable and intrepid of modern travellers. While in India he explored the Neilgherry Hills, and afterwards served five years in Scinde under Sir C. J. Napier. During this period he published several works on Indian subjects, and acquired a thorough knowledge of the Arabic, Afghan, Persian, Hindostanee, and Moul-tanese languages. In 1851 he returned to England, and having been granted a furlough, started for Mecca and Medina, cities which no Christian had reached since Burckhardt in 1814-15. At Alexandria he assumed the character of a wandering dervish, and, though sometimes suspected, succeeded in penetrating to the holy shrines. His work, *A Pilgrimage to El Medinah and Mecca*, records the journey. A little later he visited Eastern Africa, and during the Crimean War served as chief of staff to General Beatson. In 1856 he, with Captain Speke, starting from Zanzibar, penetrated to the lake regions of Central Africa, and in 1858 discovered Lake Tanganyika. He published, in 1861, in his *City of the Saints*, one of the earliest and best accounts of the Mormon settlements in Utah, and of the route since taken by the first trans-continental railroad. The same year he was made consul at Fernando Po, among the results of his stay there being two works on African subjects. In 1864 he was appointed consul at Santos, Brazil, and wrote *Explorations of the Highlands of Brazil*. In 1868 he was appointed Consul at Damascus; travelled afterwards in the Holy Land, and wrote *Unexplored Palestine*. In 1872 he became consul at Trieste. In parts of 1876, 1877, and 1878 Burton paid two visits to Medina, the second of which, in particular, bore important results. Tons of ore and geological specimens, valuable ethnological collections, collections of ancient coins,

pottery, and glass, were brought home. In 1882 Captain Burton and Commander Cameron visited, and to some extent explored, the country at the back of the Gold Coast Colony. In addition to the numerous volumes which describe his travels, Burton has published *Camoens: his Life and his Lusiads*, *The Book of the Sword*, etc., in all, nearly fifty works. He is gold medallist of both the English and French Geographical Societies, and has, it is said, acquired thirty-five languages and dialects, and in his later literary labours has been assisted by his wife, who is also the author of several works on the East. His latest publication is an entirely fresh translation of *The Thousand Nights and a Night* (better known as the *Arabian Nights Entertainment*), with ample notes, in 10 vols., for subscribers only, the "naturalism" of that celebrated work not admitting of its being issued through the usual channels. Burton's knowledge of vernacular Arabic is so perfect, that when he used to read the tales to the Arabs who gathered round his tent-door, they would roll on the ground in fits of laughter.

* **Burton, Sir Frederick William** (b. 1816), is the son of Samuel Burton, of Mongret, county Limerick. He was educated in Dublin, and having acquired a reputation as a water-colour painter of much delicacy and finish, was elected in 1839 an associate of the Royal Hibernian Academy of Arts. In 1856 he became a member of the Society of Painters in Water Colours of London, and in 1874 was appointed director of the National Gallery, a post which he still holds. He was knighted in 1884.

* **Butler, Benjamin Franklin** (b. 1818), is an American soldier and politician, of Irish descent. He was called to the bar in 1840. In 1853 he was elected to the Massachusetts House of Representatives as a member of the Democratic party, and he was a delegate to the National Convention at Charleston in 1860, which split up after adjourning to Baltimore. On the outbreak of the Civil War in 1861, he took command of a brigade, and was placed in command of the important Fortress Monroe. There, when requested to give up some fugitive slaves, he refused to surrender them, using the famous expression that they were "contraband of war." In 1862 he, as commander of the land forces, assisted Farragut in his attack on New Orleans (May 1st), and governed the town with much sternness until November, when he was recalled. In 1863 he was appointed to command the Virginia and North Carolina department, and in co-operation with General Grant made an unsuccessful attempt on Richmond, on the south side of the James river. A failure to take Fort Fisher in December, 1864, was followed by his removal from his command, on the ground that he had exceeded his instructions. He was elected a member of Congress by the

Republicans of Massachusetts in 1868, but failed to obtain the Governorship of Massachusetts, both in 1871 and 1873. About 1877 he returned to his old party, the Democratic, and defended his change of views on the ground that "he had belonged to the Democratic party until it had attempted to destroy the union, and to the Republican until it had deserted its founders, the labouring men." He also advocated the greenback currency. Nevertheless, although a candidate for Governor of Massachusetts in 1878 and 1879, it was not until 1882 that he was successful. In 1884 he made a futile attempt to split the Democratic party by offering himself as "labour candidate" for the presidency.

* **Butler, Colonel Sir William Francis**, C.B. (b. 1838), was educated at Dublin. He entered the army in 1858, and became captain in 1872. He served in the Red River Expedition, and was sent on a special mission to the Saskatchewan in 1871; and in the Ashantee campaign of 1873 commanded the attempted diversion of the Akim tribe, an account of which he has published, *In Akimfoo* (1875). He became a major in 1874, and in the same year was created a C.B. and placed on half-pay. In 1879 he was sent to Natal as staff officer at the port of the disembarkation of the forces for the Zulu War. He became a lieutenant-colonel in 1880. Colonel Butler is also the author of *The Great Lone Land* (1872), *The Wild North Land* (1873), besides a narrative of the 69th Regiment (1870), *Far Out* (1881), and *Red Cloud, the Solitary Sioux* (1882).

* **Butler, Elizabeth, Lady** (b. circa 1843), artist, received her artistic education at Florence, and in the Government School of Art, Kensington. As Miss Thompson she became known as the painter of military subjects, executed with much force and fidelity of detail. Her first picture at the Royal Academy was *Missing* (1873), and it was followed by the admirable *Roll Call* (1874), which was purchased by the Queen. Her next important productions were:—*The 28th at Quatre Bras* (1875), *Balaclava and Inkermann* (1876-77), *The Defence of Rorke's Drift* and *Dr. Brydon at Jellalabad* (1881), *Floreat Etona*, an incident in the battle of Laing's Nek, and *The Charge of the Scots Greys at Waterloo* (1882). She married Colonel Sir W. F. Butler (q.v.) in 1877.

* **Butt, Isaac, Q.C., M.P.** (b. 1812, d. 1879), was the son of a Protestant clergyman, of Donegal. He entered Dublin University, and in 1836, after having graduated with distinction, he was appointed professor of political economy. Three years before he had founded the *University Magazine*, which he afterwards edited, and in 1838 he started the *Protestant Guardian*. As a politician of emphatically Conservative opinions, he was elected

in 1843 a member of the Dublin Corporation, and crossed swords with O'Connell, not without credit. Meanwhile he became one of the most prominent members of the Irish bar, and took silk in 1844. He was one of the counsel who defended Smith O'Brien and the other leaders of the Young Ireland party. From 1852 to 1865 he was member for Youghal, but he made no mark in Parliament, and in the last year he retired from public life, owing to private reasons of a compromising character. In 1871, however, he reappeared as member for Limerick, and during the interval the conversion which O'Connell had prophesied had taken place. He was chosen to lead the knot of Protestants, angry at the disestablishment of the Irish Church, who started the Home Rule movement; and when, in 1872, the Home Rule League was founded, he propounded its programme, a federal union with Great Britain, which he used to support in Parliament in language that was a model of polished oratory. Otherwise, however, he proved a supine leader, and soon became out of harmony with his party, from which the Protestant element was rapidly eliminated. A more determined section, headed by Mr. Parnell, began to repudiate his leadership, and to treat him with personal contempt. So closed in complete humiliation a career which had been a splendid failure. It was full of inconsistencies, but it would be unjust to question the purity of Butt's political motives.

* **Butterfield, WILLIAM** (b. 1814), architect, was educated chiefly for his profession. He is the creator of some buildings of considerable importance: for instance, All Saints' Church, Margaret Street; Keble College, Oxford (1868-76), and the new chapel at Balliol College, Oxford (1876). He also restored the Church of St. Cross at Winchester, and the college buildings and chapel. Concerning Mr. Butterfield's merits as an architect there is much diversity of opinion. He is very fond of colour, and hence his creations can hardly be properly judged until softened by time.

Buxton, SIR THOMAS FOWELL (b. 1786, d. 1845), was educated at Trinity College, Dublin, where he won the University gold medal. In 1811 he joined Messrs. Truman, Hanbury, and Buxton's brewing establishment, and for some years devoted himself to business. His work, being in the district of Spitalfields, gave him an opportunity to see and pity the condition of the poor, in whose favour he made his first public speech. In 1816 he got up a system of relief for them, and next became associated with his sister-in-law, Mrs. Fry, and his brother-in-law, Mr. Hoare, in an inquiry into the state of prisons, of which he published the result in a pamphlet, which led to the "Prison Discipline Society," and ultimately to all the great modern im-

provements in gaol management. In 1818 Mr. Buxton became member for Weymouth, which he continued to represent till 1837. In 1833 he became the successor of Wilberforce as champion of the slaves of the West Indies, whom he lived to see emancipated. His book, *The Slave Trade and its Remedy*, caused a great sensation. He was created a baronet in 1840. Besides the abolition of slavery, Sir Fowell Buxton took interest in many philanthropic subjects, especially the abolition of "suttee" in India, the reform of our criminal code, the civilisation of Africa by commercial, agricultural, and missionary enterprises, and in all general schemes for the improvement and education of the poor.

Byron, GEORGE NOEL GORDON, LORD (b. 1788, d. 1824), poet, formerly regarded as "the greatest literary power of this century," was born in Holles Street, London, on Jan. 22nd, the only son of Captain John Byron, a profligate officer of the Guards, and Catherine Gordon, heiress of Gight, in Aberdeenshire, a woman of capricious and violent temper, ever in extremes. His father soon "squandered the lands o' Gight awa'," and died at Valenciennes in 1791; and Mrs. Byron, with a remnant of her fortune (about £150 a year), settled in Aberdeen, where her "lame brat" was educated, first privately, and afterwards at the Grammar School. In May, 1798, they went to Newstead Abbey, near Nottingham, on Byron's succeeding his grand-uncle, the "wicked Lord Byron." After spending two years in Dr. Glennie's school at Dulwich, Byron went to Harrow in 1801, "a wild northern colt," not overlaid with Latin and Greek, but not inconsiderably furnished with miscellaneous information, which he now sedulously extended. In 1803 he met Miss Chaworth, the daughter of a neighbouring proprietor, who had been killed in a duel by Byron's grand-uncle; and he fell in love with her more deeply even than he had already done with Mary Duff (1796), or with Margaret Parker (1800), who inspired him to make his "first dash into poetry;" but the attachment ended in disappointment. In 1805 Byron entered Trinity College, Cambridge, where he did little work on the academical lines, but engaged in all varieties of active exercise, and proved somewhat trying to the dons through irregularities of conduct. He left Cambridge in 1808, but in 1806-7 he had passed an important year at Southwell, where friends encouraged his poetic attempts. In 1807 he published *Hours of Idleness*, which was savagely attacked by Brougham in the *Edinburgh Review* (1808). Byron replied in 1809, in *English Bards and Scotch Reviewers*, administering a vigorous, but indiscriminate, castigation to all his possible enemies. In June of the same year he left England, carrying with him some wounds from the encounter, and some of the bitterness arising in a keenly

sensitive spirit from pecuniary embarrassment and social and political isolation. He spent two years in wandering through Spain, Albania, Greece, Turkey, and Asia Minor. Returning in a gloomy and distempered frame of mind, he was plunged into darker depths. "In the short space of a month," he wrote, "I have lost her who gave me being, and most of those who made that being tolerable." More keenly still, perhaps, was he touched (Oct. 11th, 1811) by the death of the devoted "Thyrza," that "more than friend, ever loving, lovely, and beloved," commemorated in the closing stanzas of the second canto of *Childe Harold*. In 1812 he published the first two cantos of *Childe Harold*, which had been begun in Albania towards the end of 1809. "I awoke one morning, and found myself famous," he wrote: famous from the fascination of his personality, from his intellectual grasp and the commanding movement of his powerful line, and, above all, from the fact that "the poet's artistic creations were throbbing with the life of his own age." In the next four years he sacrificed a good deal to the inanities of society. He spoke in the Upper House several times, but soon became sick of "parliamentary mummeries." He published in 1813 *The Giaour* and *The Bride of Abydos*; in 1814 *The Corsair* and *Lara*; in 1816 *The Siege of Corinth* and *Parisina*. Meantime, on Jan. 2nd, 1815, Byron married Miss Milbanke, only daughter and heiress of Sir Ralph Milbanke, a wealthy baronet, of Seaham, in the county of Durham—a most unfortunate union. On Dec. 10th, 1815, their only child was born—Augusta Ada, "sole daughter of my house and heart" (afterwards Countess of Lovelace). On Jan. 15th, 1816, Lady Byron visited her father at Kirkby Mallory, and refused to return to her husband, and next month a formal deed of separation was signed. The true causes will never be known; there was extreme incompatibility of temper, certainly, with distressing waywardness and violence on his side, and on her side a hopeless inability, or rather a haughty and perverse declinature, to understand or sympathise with him. In April Byron finally left England, rejoicing in his freedom, but with an "angry sense of injustice, and a spirit of proud and revengeful defiance, alternating hysterically with humble self-reproach and generous forgiveness." Settling at Diodati, near Geneva, he wrote, in 1816, the third canto of *Childe Harold*, *The Prisoner of Chillon*, *The Dream*, and part of *Manfred*. From Nov., 1816, to Dec., 1819, he resided in Venice. In 1817 he finished *Manfred*, and wrote the fourth canto of *Childe Harold* and *The Lament of Tasso*; in 1818 the *Ode to Venice*, the first two cantos of *Don Juan*, and *Mazeppa*; and in 1819 two more cantos of *Don Juan*. In April, 1819, he became acquainted with the Countess Guiccioli, in whose congenial companionship he lived for

more than three years (Jan., 1820, to July, 1823), residing at Ravenna (Dec., 1819, to Oct., 1821), Pisa (to Sept., 1822), and Genoa (to July, 1823). Meantime his muse was active; in 1820 appeared *The Prophecy of Dante*, *Marino Faliero*, the fifth canto of *Don Juan*, *The Blues*; in 1821, *Sardanapalus*, *The Two Foscari*, *Cain*, *The Vision of Judgment* (which appeared first in the *Liberal*, a Radical periodical, which was started by Byron, Shelley, and Leigh Hunt, but which reached the fourth number only), *Heaven and Earth*; in 1822 *Werner*, *The Deformed Transformed*, and cantos vi.—xi. of *Don Juan*; and in 1823 *The Island* and the continuation of *Don Juan*. In July, 1823, Byron sailed from Genoa in an English brig of 120 tons, with arms and ammunition, to aid the Greeks in achieving their independence. He had also raised some £12,000 for the relief of Missolonghi. After long delay in Cephalonia, owing to the unreadiness and the dissensions of the Greeks, Byron at length reached Missolonghi on Jan. 4th, 1824. In the difficulties of the situation he displayed remarkable policy and generalship, and stirred a widespread enthusiasm. But his physical powers were seriously strained, and he was laid down with fever, and died April 19th, 1824. Byron's extraordinary sensitiveness, with his frank and fearless expression of feeling, was the chief source of his personal troubles and of his poetical influence. He attempted no originality of versification; he even had (according to Mr. Swinburne) "a feeble and faulty sense of metre." It is little by the form, and almost wholly by the matter, of his writings that he compels attention; and there is ever present his passionate and impressive personality. Professor Minto has justly described him as "the greatest modern preacher of 'liberty, equality, and fraternity.'"

Byron's Works; *Letters and Journals of Lord Byron*, with *Notices of his Life*, by T. Moore (1830); *Macaulay's Essay on Byron*; *Art. "Byron,"* by Professor Minto, in *Encyclopædia Britannica*; *Life of Lady Byron*, by W. Mackay; *The Real Lord Byron*, by J. C. Jeaffreson (1883), a book which created much controversy at the time of its publication; *Wordsworth and Byron*, by Mr. Swinburne, in the *Nineteenth Century* for April and May, 1884. [A. F. M.]

Byron, HENRY JAMES (b. 1837, d. 1884), was the son of the late Mr. Henry Byron, for many years consul-general in the Island of Hayti. He was the first editor of *Pan*, which, under his management, had the advantage of numbering among its contributors Mr. W. S. Gilbert, Mr. F. C. Burnand, Mr. Henry S. Leigh, Mr. Prowse, and Mr. Byron himself. His earliest dramatic effort was a burlesque on *Fra Diavolo*, produced under Miss Swanborough's management at the Strand theatre in 1858. This was the first of a long series of very amusing pieces of the same kind written by Mr. Byron for the same theatre. After a time he

turned his attention with advantage from burlesque to comedy; and in 1869 it occurred to him to represent the hero in one of his own pieces. This he did with considerable success in *Not such a Fool as he Looks*, represented for the first time in 1869. His most successful piece was *Our Boys*, which, brought out at the Vaudeville by Messrs. James and Thorne, with the two managers in the two leading parts, was played uninterruptedly for upwards of three years. This is without doubt the longest theatrical "run" on record. *Our Boys* has been translated into German and Italian, and in 1885 was given at Moscow in Russian. Mr. Byron's comedies are not strong either in point of structure or of portraiture; but they are all thoroughly amusing, and they generally contain one good part, which in several cases was that of a quiet, observant, seemingly careless, but really thoughtful man, whose function it was to set matters right when everything seemed to have gone hopelessly wrong. For Mr. Toole he wrote several comedies, with a delightful *bourgeois gentilhomme* as the central figure; for instance, *A Fool and his Money*, and *The Upper Crust*. His last appearance on the stage was at the Court theatre, in Mr. W. S. Gilbert's comedy *Engaged*; and his last comedy, *Open House*, produced by Mr. Thorne at the Vaudeville in 1885, was by no means one of his least successful pieces. [H. S. E.]

C

* **Cabanel, ALEXANDRE** (b. 1825), French painter, was born at Montpellier, and began to exhibit in the Salon in 1844. His earlier subjects were almost entirely drawn from Biblical scenes, but in later years he derived his themes generally from mythology or the great poets. He was elected member of the Academy in 1863, and a few months afterwards was appointed professor of painting in the School of Art, in which capacity he proved an excellent instructor, and was consequently much sought after by the young artists who gathered round him in Paris. Of his works, the following may be here mentioned:—*Christ in the Prætorium* (1845), *The Death of Moses* (1852), *Othello Narrating his Battles* (1857), *A Nymph carried off by a Faun* (1861), *Paradise Lost* (1867), *Thamar* (1875), and *Lucrece and Sextus* (1877).

Cabet, ÉTIENNE (b. 1788, d. 1856), founder of the Icarian community, was born at Dijon, and at the revolution of 1830 was appointed *procureur-général* of Corsica, but recalled next year for his violent attacks on the Government. Having entered the chamber as an extreme Radical, he was brought to trial in 1834 for abuse of the king, and took refuge in England, where he produced his Utopian

Voyage en Icarie, describing an imaginary perfect State (published 1842). Though badly written, it had an immense circulation among the French working classes. Having gained a considerable following, he determined to realise his ideal State on the unoccupied plains of Texas. A first detachment was sent off in 1848, but fell into sore difficulties before their leader's arrival in the next year. Happily they discovered the city of Nauvoo, built by the Mormons, but abandoned. Here they settled in 1850, under a regular constitution, but with Cabet as supreme director or dictator. In 1851 he went to Paris, to stand his trial for embezzlement, but was acquitted, and returned to his followers till his death.

Constitution der ikarischen Güter-Gemeinschaft (1854).

Cabrera, RAMON (b. 1810, d. 1877), general in the first Carlist War, Count of Morella and Duke de la Vittoria, was born at Tortosa, and entered the priesthood, till after the death of Ferdinand VII. and the outbreak of the Carlist War in 1833, when he joined a guerilla band, favouring the claims of Don Carlos of Bourbon. He soon rose to high position in the Carlist army, and gained an evil notoriety for his bloodthirsty cruelty to all Christians (or supporters of Christina, the Queen-Regent) who fell into his hands. Though, in 1838 he captured the fortress of Morella, and threatened Madrid itself, he found himself completely overwhelmed by General Espartero in 1840, and was forced to flee to France, where he was imprisoned for a time in the fortress of Ham. He strongly opposed Don Carlos' abdication of his claims in favour of his son, but, nevertheless, made two more efforts for the Carlist cause, in 1846 and in 1848-9. In the last-named year he was severely wounded at Pastoral, and having retired to England took no farther part in the Carlist movements of 1854 and 1873.

Vida de R. Cabrera (1844).

* **Cadell, FRANCIS** (b. 1822), the navigator of the river Murray, was born near Preston Pans, and having entered the merchant service, took part as a midshipman in the first Chinese War. Visiting Adelaide in 1850, he heard that Sir H. Young, Governor of South Australia, had offered a reward for the first steam navigation of the Murray. Accordingly, in 1851 he descended the river for 1,300 miles in a canvas boat, and soon afterwards made his way up stream for 1,500 miles in a steamer, having crossed the dangerous bar, and thus opened out a waterway that has proved of the utmost value to the settlers on the banks, and the colony in general.

Once a Week, June 6th, 1863.

Cadiz, DUKE OF. [ISABELLA.]

Cagnola, LUIGI, MARQUIS (b. 1672, a. 1833), architect, was born at Milan, and studied architecture at Rome under Tarquini,

and afterwards at Vicenza and Venice, where the examples of Palladio's work filled him with enthusiasm for the pseudo-classic style. In 1802 he was commissioned by Napoleon to design the triumphal arch of Marengo, and in 1804 he designed the arch of the Simplon at Milan, generally known as the Arch of the Peace, and reputed to be the finest of modern triumphal arches. It is chiefly in connection with this work that his name is remembered, but he is also responsible for a large share in the so-called restorations of northern Italy; and constructed some important buildings, such as the campanile at Urgano, from original designs.

Caillé, René (b. 1799, d. 1838), French explorer of Western Africa, began his explorations in the train of the English expeditions of 1817 and 1818, but was obliged to return to France for a time. Being again in Senegal in 1824, he made every effort to induce the authorities of the French and English colonies to supply him with means for a projected attempt to visit Timbuctoo, but being refused in every case, he set out by himself in Arab costume, pretending he had been taken by the French from Egypt in childhood, and now wished to return. Starting from Sierra Leone in April, 1827, he made his way through unexplored regions to Timbuctoo, and then to Fez, where he arrived in August, 1828. He was received with great enthusiasm by the Geographical Society of Paris, who bestowed on him the prize of 10,000 francs offered to the first traveller who should visit Timbuctoo.

Journal d'un Voyage à Tombouctou et à Jenné (3 vols., 1830).

Cailliaud, Frédéric (b. 1787, d. circa 1850), French explorer of Upper Egypt, was entrusted in 1815 by Mohammed Ali with an expedition to explore the upper basin of the Nile, and succeeded in penetrating into Nubia, discovering on his way the ancient emerald mines of Mount Zabarah. During his travels of the next four years, Cailliaud made many important observations on the life and government of ancient Egypt, and a large collection of antiquities, afterwards bought by the French Government. The account of his travels in the Thebes Oasis was published in 1821. From 1820 to 1823 he was again in Egypt, and explored the site of the temple of Ammon and of ancient Meroë, under the protection of Ismail Pasha. In 1831 he published a work on the arts, trades, and civil and domestic life of ancient Egypt, Nubia, and Ethiopia, followed by observations on the modern inhabitants.

* **Caird, Sir James, F.R.S.** (b. 1816), a high authority on agricultural and economic questions, born at Stranraer, first attracted attention by his treatise on *High Farming as the Best Substitute for Protection* (1849). Almost immediately afterwards he was sent to Ireland by Sir Robert Peel to report on the prospects of agriculture in the districts

that had been laid waste by the famine. His report was published in 1850, and led to large investments in Irish land, the early promise of which has been somewhat disappointed by recent events. The next two years he spent in studying the agricultural districts of England, the results of his investigations being recorded in letters to the *Times*, since republished. In 1857 he was returned as Liberal member for Dartmouth, and in 1859 for Stirling. In the same year he carried a motion that the Scotch census should include inquiry into the housing of the people, thus bringing to light the significant characteristic of our civilisation that two-thirds of the families live in dwellings of one, or at most two rooms. His other most important service was to secure, in 1864, a return of the agricultural statistics for Great Britain, a most valuable work, that has since continued annually. In 1878 he visited India as one of the Commissioners to inquire into the famine. In 1883 he published an account of his journey, *India: the Land and the People*. He is Senior Land Commissioner for England.

* **Caird, The Rev. John** (b. 1823), principal of Glasgow University, born at Greenock, early became conspicuous as one of the most eloquent and profound preachers in the Scotch Established Church. After being minister in various churches in Edinburgh, Errol, and Glasgow, he was appointed principal of the University in 1873. Besides sermons, etc., Principal Caird has published an important philosophical work, *An Introduction to the Philosophy of Religion* (1880), deeply coloured by the neo-Hegelian cast of thought. He has also written two lectures on the religions of India, Brahminism and Buddhism, for the St. Giles' series. His brother, Edward Caird, professor of moral philosophy in the University of Glasgow, has written several pamphlets on philosophic subjects, and a *Critical Account of the Philosophy of Kant* (1877), the simplest and most complete explanation of Kant's system from the neo-Kantian point of view yet published in the English language.

Cairnes, John Elliott (b. 1824, d. 1875), political economist and political writer, was born at Drogheda, Ireland, and educated at Trinity College, Dublin. In 1856 he was appointed Whately professor in that University; was subsequently appointed to the Chair of political economy at Queen's College, Galway; and finally to the Chair of political Economy at University College, London, which post he resigned on account of ill-health in 1872. Mr. Cairnes was not a popular writer. He saw that popular writing on political economy tended to generate a habit of leaving out difficulties; of saying that which is easy rather than that which is true. He did not therefore make his own writings artificially easy, or attempt to please

his readers by lessening the intricacies of political economy. To all his problems he applied severe and abstract reasoning. Mr. Cairnes always contended that the figures of an instance do not themselves prove anything beyond that instance. They are most valuable in illustrating a distinct argument, but that argument must accompany them. But as the argument is often more difficult than the illustration, it is apt not to be used, and "political economy" is thus in danger of dissolving into "statistics." This constant vigour has given a certain Euclidian precision to all his writings. This is amply set forth in the *Logical Method of Political Economy*, where he defined the exact sort of science which political economy is, the kind of reasoning which it uses, and the nature of the relation which it as an abstract science bears to the concrete world. Similarly, in *Some Leading Principles of Political Economy newly Expounded*, where he discussed trades unions, international trade, international values, and free trade and protection, with special reference to the present economic condition of France and America, he fell foul of some writers on the question of value. In his essays on *Unsettled Questions in Political Economy*, Mr. Cairnes took up the hardest parts of the subject, and discussed them with his usual consistent power. Mr. Cairnes also wrote *Essays in Political Economy, Theoretical and Applied* (1876); *Political Essays* (1873); *The Slave Power* (1862); *University Education in Ireland* (1866); *On Woman Suffrage* (1869).

Economist, July, 1875; Mr. Fawcett in *Fortnightly Review*, Sept., 1875. [W. M.]

CAIRNS, HUGH MACCALMONT, EARL, LL.D., D.C.L. (b. 1819, d. 1885), Lord High Chancellor of Great Britain, was the second son of Mr. Cairns, of Cultra, co. Down, Ireland. Having distinguished himself at Trinity College, Dublin, where he graduated B.A. in 1838, he was called to the bar at the Middle Temple in 1844, and soon obtained a good equity business. In July, 1852, he was elected M.P. for Belfast, and speedily took front rank as a ready debater and eloquent speaker. In 1856 he became Q.C., and was made a Bencher of Lincoln's Inn. In February, 1858, he accepted the Solicitor-Generalship in Lord Derby's administration, and distinguished himself both as a law adviser and as a parliamentary orator. In June, 1859, he went out of office, but in 1866, when Lord Derby again became Prime Minister, Sir Hugh Cairns was made Attorney-General. Seldom has a busy lawyer wielded such influence with his party in the House of Commons. His speeches were characterised by clear statement, vigorous argument, and earnest eloquence. Presently, however, in October, 1866, he was transferred to the Court of Appeal as a Lord Justice, and in February, 1867, he was raised to the

peerage as Baron Cairns of Garmoyle in the county of Antrim. In the debates of 1867 on Mr. Disraeli's Reform Bill, Lord Cairns played a conspicuous part; it may be noted that he succeeded in introducing the provision for cumulative voting. In February, 1868, on Mr. Disraeli's accession to the premiership, Lord Cairns became Lord Chancellor, and he held office till December of the same year, when the ministry resigned. In the debates on the Irish Church he displayed the greatest ability and energy in opposing disestablishment, and in recognition of his pre-eminent services, he was in the following session appointed leader of the Conservative Opposition in the House of Lords. The same year he resigned the leadership, but resumed it in 1870, only, however, to lay it down again under pressure of ill-health. In the character of leader of the Upper House he fell short of his usual success, but he will be remembered as the originator of the great scheme for the fusion of law and equity, which Lord Selborne (q.v.) had the good fortune to carry into effect. During Mr. Disraeli's second administration—Feb., 1874, to April, 1880—Lord Cairns was a second time Lord Chancellor. In September, 1878, he was created Viscount Garmoyle of Garmoyle in County Antrim, and Earl Cairns in the peerage of the United Kingdom. Meantime academical honours had been showered upon him: LL.D., Trinity College, Dublin, 1862; LL.D., Cambridge, 1862; D.C.L., Oxford, 1863; and the Chancellorship of Dublin University, 1867. His last great speech was a scathing indictment of the ministerial weaknesses which led to the crowning disaster of Majuba Hill, and that he was not a mere fossil Conservative he showed by his Conveyancing Bill of 1881, and his Settled Estates Bill of 1882; admirable measures, which have made the transfer of land far easier and cheaper in England than in other countries. Lord Cairns may confidently be ranked as a lawyer with almost the greatest of the Chancellors, and he was probably excelled by none in dexterity of disentangling complications, and in the capacity of lucid reasoning and clear expression. He interested himself deeply in many schemes of benevolent and philanthropic effort. [A. F. M.]

* **CAIROLI, BENEDETTO** (b. 1826), Italian statesman, was born near Pavia, where he was a student at the outbreak of the revolution of 1848, in which he served as a volunteer. After nine years of exile, he returned to take arms against the Austrians in the wars of 1859, 1860, and 1866. Though formerly reputed an uncompromising Republican, and renowned for his hatred of Pope and Church, he was appointed premier in the new ministry of March, 1878, after the accession of King Humbert. In November of the same year

he saved the king from the dagger of Passanante, but was himself severely wounded. Though this act of heroism increased his personal popularity, his Cabinet did not retain the confidence of the people, who attributed this and other outrages to their policy. Signor Cairoli therefore resigned in December, but returned to power eleven months later with Signor Depretis as Minister of the Interior. This administration remained in office till 1881, when it resigned, owing to the French expedition to Tunis. Since that time he has remained one of the leaders of the so-called "Historic" Left.

Caldecott, RANDOLPH (b. 1846, d. Feb., 1886), artist and humorist, was born at Chester, and during his education in the old city, imbibed the spirit of the neighbourhood with its sporting squires and old county families. Having devoted himself to the pursuit of art, he removed to London, and finally settled in Surrey. He early became known as a skilful worker in water-colour, and one of the cleverest illustrators of humorous books. His *Old Christmas* appeared in 1875, *Bracebridge Hall* in 1877, and in the following year the series of picture-books by which his name is chiefly known began with his illustrations to *John Gilpin*, and *The House that Jack Built*. These were followed by the *Song of Sixpence*, *Three Jovial Huntsmen*, *The Mad Dog*, *Some of Æsop's Fables with Modern Instances* (1883); and *The Great Panjandrum* (1885). Mr. Caldecott also illustrated Mrs. Comyns Carr's *North Italian Folk* (1878); Mr. Blackburn's *Breton Folk* (1880); Mrs. Ewing's *Daddy Darwin's Dovecote*, and *Jackanapes* (1884). In 1883 he published a series of the numerous illustrations which he had contributed to the *Graphic* newspaper. He was unrivalled in his special sphere of the representation of the humour in animals and scenes of old-fashioned country life. In 1882 he became a member of the Institute of Painters in Water-Colours, and exhibited occasional works in the Royal Academy; for instance, *There were Three Ravens sat on a Tree* (1876).

* **Calderon, PHILIP HERMOGENES, R.A.** (b. 1833), historical and subject painter, was born at Poitiers, and received his artistic education chiefly in Paris. He began to exhibit at the Royal Academy in 1853, his first picture being *By Babylon's Waters*. From that time till his election as R.A. in 1867 he generally contributed at least one work to the exhibition annually, his subjects during these years being, for the most part, directly historical. Since then he has sent nearly the regulation number of works almost every year, and in almost every department of painting, whether portrait, realistic, historical, or imaginative. Of the more notable of his works in recent years we may mention the following:—*Whither?* (1868); *Sighing his Soul into his Lady's Face*

(1869); *The Virgin's Bower* (1870); *On her way to the Throne* (1871); *In a Palace-Tower* (1872); *The Queen of the Tournaments* (1874); *Les Coquelles, Arles* (1875); *His Reverence*, and *The Bird's Nest* (1876); *Joan of Arc*, and *Home they brought her Warrior Dead* (1877); *Summer Breezes* (1878); *Captives of his Bow and Spear* (1880); *Flowers of the Earth* (1881); *Joyous Summer* (1883); *Night* (1884); and *Morning* (1885).

* **Calderwood, THE REV. HENRY** (b. circa 1830), professor of moral philosophy at the University of Edinburgh, has published several useful works in connection with his special subject from the point of view of theistic ethics and *a priori* psychology, such as *The Philosophy of the Infinite* (1854), *Handbook of Moral Philosophy* (1872), a clear and serviceable analysis of the leading ethical systems, and *The Relations of Mind and Brain*, in which a large amount of valuable material for the examination of mental phenomena is collected, though the conclusions may often be disputed by the physiologist. In 1874 the professor published a work on *Teaching: its Ends and Means*.

Calhoun, JOHN CALDWELL, LL.D. (b. 1782, d. 1850), was the son of Patrick Calhoun, an Irishman, who was for thirty years a member of the American Legislature. He entered Yale in 1802, and having graduated with distinction in 1804, studied law at Litchfield, and began practice in his own district in 1807. He soon gained a high rank in his profession, and entered the field of politics early in life. He served in the State Legislature from 1808–10, became a member of Congress in 1811, and was influential in procuring the declaration of war with England in 1812. He was Secretary of War in Monroe's Cabinet from 1817–25, Vice-President of U.S. 1825–31, U.S. Senator in 1831 and from 1845–50, Secretary of State, 1844–5. In 1828 he competed with Van Buren for the presidency. Calhoun had very great influence in his own State, and was largely followed in his peculiar "Doctrine of State Rights," by which he held that the constitution was a mere treaty, and that any State had a right to separate herself from its conditions. His works are chiefly political pamphlets and speeches, of which one of the most important is a posthumous *Treatise on the Nature of Government*. These works are collected and edited by R. K. Crallé, in 6 vols.

* **Call, WATHEN MARK WILKS** (b. June 7th, 1817), poet, was educated at Cambridge, and, having taken orders, though with great hesitation, remained a curate in the Church of England till 1856, when he felt himself compelled to withdraw from his position. Having long felt a high admiration for Comte, he was gradually led by his speculations to a more or less dogmatic Positivism, which finds continual echo in his poems. The

first collection of these, entitled *Reverberations*, was published in 1849, and, apart from the Positive tendencies already apparent, the poems are of importance for their daring and vigorous treatment of the political and social problems of the age. They were followed in 1871 by a similar collection of maturer work, called *Golden Histories*.

Callcott, SIR AUGUSTUS WALL, R.A. (b. 1779, d. 1844), landscape painter, was born of a musical and artistic family at Kensington Gravel Pits, which continued his home throughout life. After being trained as a choir-boy in Westminster Abbey, he entered the Royal Academy as a student, and for some years made portrait-painting his special study. In 1801, however, he exhibited a *View of Oxford* at the Royal Academy, and after this time his devotion to landscape was constant, but for a few figure-subjects from Shakespeare and poetical history. The development of his art is definitely marked by his visit to Holland in 1819, and his wedding tour in Italy in 1829-30; but throughout he is most successful in the scenery of his native land, his invariable subjects during his best years. In manner he might be described as standing between Cuyt and the earlier period of Turner. As examples of his most characteristic work, we may mention *The Old Pier at Littlehampton* (exhibited in 1812; now in South Kensington Museum), and *The Meadow, a work of uncertain date*, also formerly in the Vernon collection, and now in South Kensington. Of notable works in his later manners we may refer to *Quay at Antwerp during Fair-time* (exhibited 1826); *Entrance to Pisa from Leghorn* (1833); *Dutch Peasants returning from Market*, more generally known as *Crossing the Stream* (1836); and the two large figure subjects of *Raffaello and the Fornarina* (1837), and *Milton dictating to his Daughters* (1840). Callcott became A.R.A. in 1806, R.A. in 1810, and was knighted by the Queen soon after her accession. His brother, JOHN WALL CALLCOTT (b. 1766, d. 1821), has some celebrity as the composer of glees and pieces of vocal harmony, of which *Dull, repining sons of care* (1785), and *Go, idle boy* (1788), are the best known.

Pictures by Sir A. W. Callcott: with descriptions and a biographical sketch of the painter by James Gafforne (1875).

Calomarde, FRANCISCO TADEO (b. 1773, d. 1842), Spanish statesman, attached himself early in life to the Absolutist party in Madrid, and rose gradually with their fortunes, till in 1824 he entered the Cabinet, and for the next eight or nine years remained the most powerful minister in Spain. Having completely gained the confidence of the king, Ferdinand VII., he successfully defied and oppressed all parties alike, whether Moderates, Carlists, or Clericals. Though compelled to resign in 1827, he was recalled by the king after a few hours. He was largely responsible for the repeal of

the Salic Law in Spain, a step which proved so disastrous. During the regency of the queen at the time of Ferdinand's illness and death (1833), Calomarde was suspected of intriguing for the Carlist succession, and was forced to take refuge in France.

Comte de Toreno, *Histoire du Soulèvement, de la Guerre, et de la Révolution d'Espagne*.

Calverley, CHARLES STUART (b. 1833, d. 1884), scholar and versifier, was the son of the Rev. Henry Blydes, who afterwards took the name of Calverley. Though a scholar of Balliol College, Oxford, he migrated to Christ's College, Cambridge, where he graduated as second classic in 1856. With the exception of some well-known stories of his practical humour, his fame rests entirely on two little volumes, *Verses and Translations* (1862), and *Fly Leaves* (1872). In the lighter forms of English verse he had perfect mastery, and a faultless ease of style. His Latin scholarship was displayed in the fluent delicacy of his translations, and the vivacity of his humorous original lines. He also published a *Verse Translation of Theocritus* (1869). His want of seriousness, and perhaps the very facility of his verse, prevented him from ever attaining the heights of true poetry, but his parodies have only been equalled by the *Rejected Addresses*; and the freshness of his humour, and the completeness of his form, make him for scholars and refined humourists one of the most delightful verse-writers in our language. He might have done better work if necessity or love of art had driven him to exertion. At the same time, it is fair to say that his health was impaired by an ice accident in early manhood.

The Literary Remains of C. S. C., with a memoir by W. J. Sendall (1885).

* **Cambray-Digny**, GUGLIELMO CONTE DI (b. 1823), Italian statesman, is the son of Conte Louis di Cambray-Digny, a shoemaker who afterwards became the minister of Ferdinand III., Grand Duke of Tuscany. He was early a favourite of Leopold II., and tried to induce him to make concessions to the Liberals. After the Grand Duke's flight in 1859, the Count was elected deputy for Tuscany, and in 1867 was appointed Minister of Finance in the Italian Government, a position of the greatest difficulty, owing to a deficit of between thirty and forty million pounds sterling. By tact and perseverance he succeeded in placing the exchequer on a surer footing, but his tax on grist and the assumption by the Government of the tobacco monopoly were so unpopular, that the Government fell in December, 1869, the Count being promoted to the Senate.

Cambridge, H.R.H. ADOLPHUS-FREDERICK, DUKE OF (b. 1774, d. 1850), was the seventh and youngest son of George III. Having served under the Duke of York in Flanders, he was in 1803 made a general, and

field-marshal in 1813. His military honours were cheaply gained, but his administration as Viceroy of Hanover from the peace of 1813 to 1837 deserves considerable praise, particularly during the year 1831, when party animosity nearly plunged the kingdom into civil war. On the death of William IV., Hanover went to the Duke of Cumberland [HANOVER], and the Duke of Cambridge returned home. During the remainder of his life he lived in England. As a man his genuine good-nature made him very popular, and he was not without artistic tastes. By his wife, the Princess Wilhelmina of Hesse-Cassel, he was the father of the present Duke.

* **Cambridge, H.R.H. GEORGE WILLIAM FREDERICK, DUKE OF** (b. 1819), Commander-in-Chief, is the son of Adolphus Frederick, Duke of Cambridge, the son of George III. He is therefore first-cousin to Queen Victoria. He succeeded his father in 1850. Having entered the army as a colonel in 1837, he became a major-general in 1845, lieutenant-general in 1854, a general in 1856, and field-marshal in 1862. In 1861 he also received the rank of colonel of the Royal Artillery and Royal Engineers. In 1854 the Duke commanded two brigades of Highlanders and Guards in the army sent to the Crimea. At the battles of Alma and Inkermann he led his troops with conspicuous bravery. After the war he was called on to give the results of his experience in the Crimea before a Committee of the House of Commons. In 1856 he was nominated Commander-in-Chief of the British army. In 1878 the Duke went to Malta to inspect the Indian troops that had been despatched there.

* **Cambridge, THE REV. OCTAVIUS PICKARD** (b. 1835), naturalist, was educated at Dublin University, and in 1868 became rector of Bloxworth and Winterbourne-Tomson, near Wareham. He is the author of several important papers and articles contributed to the *Zoologist* and *Entomologist*, and the records of the Zoological and Linnæan Societies. His work on the *Spiders of Dorset* (1879-81), and his descriptive supplement to Moggridge's *Harvesting Ants and Trap-door Spiders*, have made him known to the scientific world as the highest living authority on the Arachnida.

Camden, JOHN JEFFREYS PRATT, MARQUIS OF (b. 1759, d. 1840), statesman, was the son of the first Earl of Camden, Lord High Chancellor. He entered Parliament for Bath in 1780, and became a follower of his father and Pitt. In the same year he was appointed one of the tellers of the Exchequer, an office which he held for sixty years, though during the last half of the period he surrendered the large emoluments of the office to the nation, a sufficiently rare sacrifice to entitle him to fame. From 1795 to 1798, the years of the Catholic discontent, the threatened invasion from France, and the conspiracy of Lord

Edward Fitzgerald, he was Lord-Lieutenant of Ireland, and was Secretary for the Colonies during 1804 and 1805. In 1834 he was elected chancellor of the University of Cambridge.

Cameron, GEORGE POULETT (b. 1806, d. 1882), colonel, early entered the British army, and in 1824 visited Southern India, in the service of the East India Company. In 1831 he played a conspicuous part in the Portuguese War, having embraced the cause of the Duke of Braganza. From 1836 to 1838 he held command in the Persian army, and afterwards visited the Russian fortresses in the Caucasus. His next appointment came from Lord Elphinstone, who made him guardian of the young Nawab of Chepauk; but this lasted only a short time, and in 1848 Colonel Cameron was present in Italy. In 1855 he was made Governor of the Neilgherries, but four years later he was again in Italy with the Austrian army. He published an account of his travels in Circassia, and an account of his adventurous and romantic life.

The Romance of Military Life, by G. P. C. (1883).

Cameron, JOHN ALEXANDER (b. 1851, d. 1885), war correspondent, was originally trained for mercantile pursuits, but being engaged in commerce in India at the outbreak of the Afghan War of 1875, he became special correspondent to the *Bombay Gazette*. After the British defeat at Maiwand, and the advance of Ayoub Khan, the *Standard* accepted his services, despatching him to Candahar, whence he was the first to bring the news of the victory of General Roberts. At the earliest tidings of the Boer insurrection of 1880 he crossed from Bombay to Natal, and was present at the battles of Laing's Nek and Ingogo, and at the fatal disaster of Majuba Hill, where, refusing to run away, he was knocked down and taken prisoner, but succeeded in sending his famous account of the battle through the enemy's lines. He was next a spectator of the bombardment of Alexandria from on board the *Invincible*; when the British troops reached Cairo, he visited Madagascar, and thence made his way to Tonquin, but being requested to leave by the French authorities, joined Baker Pasha's force at Suakim, and witnessed his first defeat, and the subsequent victories of El Teb and Tamanieb. Having returned to England for a short time, he joined Lord Wolseley's expedition in 1884, and accompanied General Stewart's column on the desert route from Korti to Metemneh. After taking part in the victory at the wells of Abu Klea, he was shot dead as the column was fighting its way down to the Nile, Jan. 19th.

* **Cameron, VERNY LOVETT, COMMANDER, R.N., C.B., D.C.L.** (b. 1844), African explorer, born at Radipole, near Weymouth, was educated at Bruton, Somersetshire, and entered the navy in August, 1857. He

subsequently served in the Mediterranean, the Red Sea, and on the eastern coast of Africa, where he took part in the Abyssinian campaign, and was engaged in efforts to suppress the slave trade. During this service he studied the language of the natives of Zanzibar, and was chosen by the Royal Geographical Society in 1872 to conduct an expedition for the relief of Livingstone, during which two of his companions died. After learning of the death of Livingstone, he determined, by the aid of the Society and private subscriptions, to cross the African continent from the east coast to Benguela on the Atlantic, during which journey he travelled 3,000 miles on foot. He found that a chain of lakes and rivers, discovered by Livingstone, fed the great Congo river, and his journey having been the first across Equatorial Africa, he was received with distinction on his return to England, was made C.B., and awarded the founder's medal of the Royal Geographical Society. He has since been awarded gold medals from the French and Portuguese Geographical Societies, and the hon. degree of D.C.L. from Oxford. In Feb., 1877, he re-entered the Royal Navy, and in 1878 set out upon a journey through Asia Minor and Persia, his object being to determine whether a railroad might not be built from the Mediterranean to India, without following the Euphrates valley. Later he visited the Gold Coast of Africa with Captain Burton. His principal works are a translation of Butakoff's *Nouvelles Bases de Tactique Navale*; *Steam Tactics*; *Across Africa* (2 vols., 1877); *Our Future Highway to India* (2 vols., 1880); and *To the Gold Coast for Gold* (1883); the latter in collaboration with Captain Burton.

Campan, JEANNE LOUISE HENRIETTE (b. 1752, d. 1822), née GENEST, educationalist, and maid of honour to Marie Antoinette, was born in Paris, and entered the Court at Versailles, as reader to the princesses, in 1767. Here she married M. Campan, a relation of the chemist Berthollet. Having attended Marie Antoinette to the time of her imprisonment in the Temple, she succeeded in making her escape to a remote part of France, where she lived for a time in extreme destitution. At length she started a school at St. Germain, which soon attained high celebrity. Napoleon sent his daughter Hortense there, and favoured her in other ways. At the Bourbon restoration she retired to Mantes, and spent the rest of her life in sorrow. Her title to fame is the well-known picture of the old French Court drawn in her *Mémoires sur la Vie Privée de Marie Antoinette* (1823).

Campbell, JOHN, BARON (b. 1781, d. 1861), an eminent English judge, was the second son of the Rev. Dr. George Campbell, (b. 1746, d. 1824), one of the ministers in the collegiate charge of Cupar in Fife. Born in the parish manse, John Campbell received

his early education at the Grammar School of Cupar, and entered the University of St. Andrews at the early age of eleven. In 1796 he entered the Divinity Hall with a view to the ministry of the Church of Scotland. In 1798 Mr. Webster, a wealthy London merchant, applied to one of the professors for a tutor to his son, and John Campbell was appointed. In London he was much impressed by Mrs. Siddons and John Kemble; by Wilberforce, Fox, and Pitt. Robert Spankie, a clever St. Andrews student, afterwards a serjeant-at-law and M.P., was at the time editor of the *Morning Chronicle*, and offered him an engagement as theatrical critic, and afterwards as parliamentary reporter. Campbell began to attend the Law Courts, and was entered of Lincoln's Inn in Michaelmas term, 1800. He was called to the bar in 1806, after completing his studies under Mr. Tidd, the author of the celebrated *Tidd's Practice*, and joined the Home Circuit as being the circuit entailing the least expense. Uncouth in manner, devoid of eloquence, and awkward in person, he laboured under almost every disability. He had, however, patience and dogged resolution, and he devoted himself assiduously to his profession: though, as he avowed in his later years, he at no period of his life was free from a restless craving for an author's fame. But he had resolved to be a barrister. When a client did come, he was always found painstaking and sufficiently informed; and, to gain favour with solicitors and attorneys, he introduced their names into his *Reports of Cases determined at Nisi Prius in the Courts of King's Bench and Common Pleas and on the Home Circuit*, published between 1807 and 1816. In the early part of his professional career he was by no means unknown at the Old Bailey, but gradually withdrew to the Court of King's Bench. By-and-by he changed to the Oxford Circuit, on which there was a better opening; and slowly but surely advanced to position and practice. In 1821 he married Elizabeth, the eldest daughter of Sir James Scarlett, afterwards Attorney-General, and Chief Baron by the title of Lord Abinger. The course was plain now. The silk, which had been previously refused, came in 1827. In 1830 he entered the House of Commons as the Whig member for Stafford, and in 1832 became Solicitor-General, and took his seat as the representative of Dudley. The Attorney-Generalship fell to him in 1834, when he was returned by Edinburgh, which constituency he represented till he entered the House of Lords. This was in 1841, when, after having seen the Mastership of the Rolls conferred successively on Pepys and Bickersteth, "plain John Campbell," as he had called himself, was created Lord Chancellor of Ireland with a peerage. But seventeen days later the Melbourne ministry fell, and Lord Campbell accordingly resigned. For the next five years without profession or

office, his early attraction towards literature sprang up anew, and, yielding to his impulses, he set himself to work on legal biography. He produced the *Lives of the Lord Chancellors* in 1845, and the *Lives of the Chief Justices* in 1849. In 1846, on the formation of Lord John Russell's Cabinet, he became Chancellor of the Duchy of Lancaster; in 1850, when close on seventy years of age, he was appointed Chief Justice of the Queen's Bench; and in 1859, length of days bringing him the prize he had so long desired and struggled for, he took his seat upon the Woolsack. Lord Campbell's career was that of a strenuous, self-reliant man. He fought his way through poverty and obscurity to the highest honours of the State. Yet there was nothing remarkable about him. As an orator, he was far below the average of his profession, and as an advocate he in no case displayed either subtlety or tact of a high order. He achieved a transient success in the House of Commons by his defence of Lord Melbourne, but the applause was on that occasion the expression of political sympathy rather than of critical approval. He did not make a good Chancellor; his knowledge of equity was not profound; but his judgments, it must be admitted, were on the whole satisfactory. As Lord Chief Justice he appeared to best advantage, and compelled even his enemies to admit that he was strong in the common law. His Libel Act, which allowed a person to plead justification, and his Act for the suppression of obscene publications, contributed in no small degree to the freedom of discussion and the purity of the press. They are his best contributions to the statute-book. His chief literary productions were inevitably superficial. His *Shakespeare's Legal Acquirements* was an unsuccessful attempt to prove that Shakespeare spent his youth in an attorney's office. It would appear that in writing his *Lives of the Chancellors* and the *Chief Justices* he consulted few original papers. The views he took were such as he found adopted in the pages of previous writers; and some of the later lives are very unfair. Nevertheless, they are readable, and remain standard authorities in default of better books on their subject. But any faults he had, are in truth more than compensated by the simple fact that he, the son of a poor Presbyterian minister, rose by sheer force of will to be Lord Chancellor.

[W. M.]

* **Campbell, Sir George** (b. 1824), formerly Lieutenant-Governor of Bengal, entered the Indian Civil Service in 1842. Returning to England, he published works on *Modern India* (1852), and *India as it may be* (1853); he was called to the bar in

1854, after which he again proceeded to India, and in 1858 was appointed Judicial and Financial Commissioner in Oude. Nine years later he became Chief Commissioner of the Central Provinces, and in 1871, after two years spent in England, was appointed Lieutenant-Governor of Bengal. In the autumn of 1873 it was clear that a famine in Bengal was inevitable, and Sir George Campbell, guided by his experience of the Orissa famine of 1866, took energetic steps to alleviate the sufferings of the poor. Amongst other measures he proposed that the export of grain should be prohibited for the coming year, but on this point he differed from Lord Northbrook, at that time Viceroy of India. Early in 1874 he accordingly returned to England, and in the following year was elected M.P. for Kirkcaldy in the Liberal interest. In 1876 he gave very active support to Mr. Gladstone in his agitation on the Eastern question. In 1880 he was again returned for Kirkcaldy, and in 1885 for Kirkcaldy district.

Campbell, Thomas (b. 1777, d. 1844), one of the minor poets of this century, was born at Glasgow, and at twelve years old entered the University there, where he remained for six years. At eighteen he wrote the verses *Love and Madness*, and, having acquired some local celebrity as a scholar and versifier, became a student at Edinburgh University. In 1799 he published *The Pleasures of Hope*, a diffuse and almost forgotten poem, composed in couplets of some rhetorical elegance. It was received with extraordinary favour by the mass of old-fashioned poetical readers, who, in the midst of signs of the coming change, could now for a time comfort themselves with a sense of conservative security. The title, in obvious competition with Rogers's *Pleasures of Memory*, also helped to ensure a hearing for the work. In 1800 Campbell visited Germany, saw the aged Klopstock at Hamburg, heard Heyne lecture at Göttingen, and witnessed the effects of the war then raging in Bavaria. The result was the composition of one of his best known poems, *The Battle of Hohenlinden*, though the story that he was a distant spectator of the actual contest appears to be without foundation. On his return through Hamburg to Edinburgh he composed *Ye Mariners of England* and *The Exile of Erin*. In 1803 he removed to London, married, and settled at Sydenham, where he remained for about twenty years, after which he lived in Middle Scotland Yard. In 1806 he received a Government pension of £200 a year, and otherwise he supported himself by new editions of his poems and various pieces of literary work that have not increased his reputation. *Gertrude of Wyoming*, his second extensive poem, a tedious narrative laid in the scenery of a Pennsylvania idealised into tropical luxuriance,

appeared in 1809, and was received with only less favour than its predecessor. In the same volume were included *The Battle of the Baltic* and *Lord Ullin's Daughter*. After giving a series of lectures on poetry in London, Campbell was appointed editor of the *New Monthly Magazine* in 1820, and held the position till 1831, during which years, owing to his reputation and the exertions of his sub-editor, Mr. Redding, the undertaking flourished in spite of the poet's indifference to business. *The Metropolitan Magazine*, which he started as his own organ in 1831, met with inevitable failure. Meantime he had published another poem of some length, *Theodric* (1824), had taken an active interest in the insurrection of Greece and Poland, and had set on foot the scheme of a London University, that, with the assistance of Brougham and the Mills, developed in time into its present form. In 1827 he defeated Scott in the election for the Lord Rectorship of Glasgow University. Between 1830 and 1840 he brought out a series of biographical sketches. His last poem, *The Pilgrim of Glencoe*, appeared in 1842, and in the following year he removed to Boulogne, where he died. Of his other works, which for the most part have the advantage of brevity over poems of higher intrinsic worth, we need only mention *O'Connor's Child*, *Lochiel's Warning*, and *The Ritter Bann*, perhaps the weakest ballad ever written. But, when all is said, the fact remains that Campbell's name will survive in some half-dozen of his pieces, that are better known throughout England than the works of poets considerably his superior. These are the patriotic songs, *The Battle of the Baltic*, and *Ye Mariners of England*; the ballads of *Earl March* and *Lord Ullin's Daughter*; and the military scenes of *Hohenlinden* and *The Soldier's Dream*.

Cyrus Redding, *Literary Reminiscences of T. Campbell* (1860); W. Beattie, *Life and Letters of T. Campbell* (1849); W. M. Rossetti's *Introduction to the Moxon Edition of Campbell's works*; and for his share in London University, James Mull, by Alex. Bain, p. 263 ff.

[H. W. N.]

Campe, JOACHIM HEINRICH (b. 1746, d. 1818), educationalist and man of letters, was born at Deensen, in Brunswick, and after leaving the university became private tutor to the two Humboldts in Berlin. Though ordained to the Church, he was inspired by Rousseau's *Emile* and Basedow's experiments to devote his main attention to education. His most celebrated book, *Robinson the Younger*, a pedagogic imitation of *Robinson Crusoe*, appeared in 1779, and has passed through nearly a hundred editions in German, and been translated into all European languages. Of his other works the following may be mentioned: *Theophrastus*; or, *the Experienced Counsellor to Inexperienced Youth* (1783); *A German Dictionary* (1807-11), an attempt to free the German language from

imported idioms; and his series of enthusiastic letters from Paris (1789 and 1790), well illustrating the high hopes of the time. His nephew, AUGUST CAMPE (b. 1773, d. 1836), was the celebrated publisher of the firm Hoffmann and Campe, in Hamburg, whose half-brother, JULIUS CAMPE (b. 1792, d. 1867), also a member of the firm, was the publisher for Heine, Gutzkow, and others of the "Young Germany" party, and in 1835 was honoured by a prohibition from the reactionary Government.

* **Camphausen**, LUDOLF (b. 1803), Prussian politician, began life as a banker at Cologne, where he did much to introduce the service of steamers on the Rhine. In 1842 he was elected member of the Diet, and became leader of the Opposition in favour of the Constitution and freedom of the press. Thus after the revolution of March, 1848, he naturally became President of the Council for a time, and later in the year was appointed plenipotentiary to the central conference at Frankfurt, where he recommended a Federation under the leadership of Prussia rather than an Empire. Till 1850 he continued to be the mainstay of Moderate Liberalism, but after the tide of reaction had definitely set in he retired into private life, from which he did not emerge again.

* **Camphausen**, OTTO (b. 1812), Prussian politician, and brother of the above, laid the foundation of his wide knowledge of finance whilst clerk in the local Government office at Cologne. As member of the Second Chamber, he supported his brother during the difficulties of 1849, and at the National Assembly of Erfurt (1850). But retaining his seat under the reactionary Government, he became president of the Institute of the Merchant Service (1854), was raised to the Upper House in 1860, and was appointed Minister of Finance in 1869. In consequence the stress of providing ways and means for the war of the following year fell upon his hands, and in recognition of the success of his endeavours he was appointed Vice-President of the Ministry in 1873, on the retirement of Roon, Bismarck himself retaining the presidency. Herr Camphausen continued to direct the Imperial Finances till 1878, when he tendered his resignation in the belief that his proposals for the tobacco duty were not adequately supported by Prince Bismarck. In spite of the latter's remonstrances, the resignation was accepted.

* **Campos**, MARTINEZ (b. circa 1830), Spanish general, did not become prominent in the political world till 1874, though his military capacity displayed in the wars with the Carlists had raised him to the rank of general. On the last day of 1874, acting in concert with the leaders of the Alfonsist party, and supported by a few battalions of troops, he suddenly proclaimed Isabella's son King of Spain, with the title of Alfonso XII. The manoeuvre was well timed, and success secured with almost

ridiculous ease. As soon as the monarchy was firmly established, Campos assumed the command-in-chief against the Carlists, and before the spring of 1876 had quenched the last spark of the rebellion. In October of the same year he was appointed commander-in-chief for the suppression of the insurrection in Cuba, which at one time threatened to involve Spain in war with the United States. In a year's time he had reduced the island to peace, but remained there as military governor till the end of 1878. On landing at Cadiz in February, 1879, he was received with great demonstrations of popular applause, and proceeding to Madrid he dislodged the ministry of Canovas, formerly his political chief, and himself became President of the Council and Minister of War. In December, however, he was compelled to resign, as his Cabinet refused to vote the reform of the tariff, and the immediate abolition of slavery in Cuba. In February, 1881, he became Minister of War under Señor Sagasta, and retained office through the early crisis in 1883, but resigned in October of that year.

Cancrin, GEORG, COUNT OF (b. 1774, d. 1845), Russian statesman, was of German origin, having been born in Hanau. In 1796 he followed his father to St. Petersburg, and by conscientiousness and extraordinary administrative powers, succeeded in attracting the attention of the Government. After occupying some minor official appointments, and publishing some early works on commissariat, he attended the Army of the West as General Superintendent on its march into Germany, 1812. Henceforward, in spite of the jealousy of the Old-Russians, his promotion was rapid and assured, till, in 1823, he became Minister of Finance, and for twenty-one years continued to direct the expenditure of the Imperial Exchequer. By abolishing the deficit, and establishing the national credit, he made himself necessary both to Alexander I. and to Nicholas. The ruthlessness of his oppression, and the rigid accuracy of his exactions, have made him the execration of the Russian poor and the idealised exemplar for the imitation of the Russian aristocracy. By speculation and peculation, he amassed an enormous fortune. He may be regarded as the champion of tyranny, the right hand of Czar Nicholas, and the embodiment of the Russian system. Nevertheless, he solemnly protested that his one thought in life had been the good of mankind and the furtherance of civilisation. Of his numerous works on government and economy, *The Wealth of Nations* (*Weltreichthum*, 1821) and *Economy and Finance* (1845) are the most characteristic.

Roscher, *Geschichte der Deutschen National-Oekonomik* (Munich, 1874).

Candolle, ALPHONSE LOUIS PIERRE PYRAMUS DE (b. 1806, d. 1883), a famous botanist, was born in Paris, being the son of the cele-

brated Augustin de Candolle mentioned below. He was educated at Geneva, and, after studying law for a time, turned his whole attention to botany, and became the assistant and afterwards the successor of his father, continuing his great work, *Introduction to the Natural System of the Vegetable Kingdom*. He is the author of *Monographie des Campanulées* (1830); *Introduction à L'Étude de la Botanique* (1834-5); *Géographie Botanique Raisonnée* (1855); *Constitution dans le Règne Végétal de Groupes Physiologiques applicables à la Géographie Botanique, Ancienne et Moderne* (1874); *La Phytographie* (1880); and *Origine des Plantes Cultivées* (1883). Though a Swiss subject, he was elected a member of the French Institute in 1874.

Candolle, AUGUSTIN PYRAMUS DE (b. 1778, d. 1841), the celebrated botanist, was born at Geneva, and traced his descent from the old nobility of Provence, the family of Candolle having already boasted some illustrious members before his birth. He was educated at the College of Geneva, where he distinguished himself by his love of literature and his extraordinary memory. At the age of eighteen he went to Paris to study science, and became a favourite pupil of the botanist Desfontaines; he also made the acquaintance of such men as Humboldt, Cuvier, Lamarck, etc. At an early age he had distinguished himself by his writings, but his new and revised edition of Lamarck's *Flora of France* soon gained a European reputation for the young botanist. In 1808 he was appointed professor of botany in the Faculty of Medicine at Montpellier, with the care of the botanical gardens. About this time he published his *Elementary Theory of Botany*, in which he developed his new classification of plants according to the natural system, a work which is regarded as his masterpiece. In 1816 De Candolle resigned his Chair at Montpellier, wearied with the quarrels and intrigues of the politicians and religious fanatics in that city, and retired to Geneva, where his fellow-citizens, the following year, founded for him a Chair of natural history. De Candolle had conceived a plan for a great work, which should comprise a description of all known plants, *Natural System of the Vegetable Kingdom*, but after the publication of the second volume he gave up the work, finding it too vast to accomplish. He did not, however, entirely abandon his plan, and his *Introduction to the Natural System of the Vegetable Kingdom* is a modification of his original intention, and contains a classification of all known plants by orders, genera, and species. He did not live to finish the work, which was continued by his son. De Candolle occupies a very high place among the botanists of this century, and has done much to promote the philosophical tendency of botany. It is impossible here to name all his numerous

works; a pamphlet entitled *History of Geneva Botany* contains a complete list.

Canning, THE RIGHT HON. CHARLES JOHN, Viscount (*b.* 1812, *d.* 1862), Governor-General of India, was the third son of George Canning (q.v.). He was sent to Eton, and Christ Church, Oxford, where he had a brilliant career. He married, in 1834, the eldest daughter and co-heiress of Lord Stuart de Rothsay, and in 1836 entered upon public life. He was elected for Warwick in the Conservative interest, but in the course of a few months was removed to the Upper House by the death of his mother, who had been raised to the peerage under the title of Viscountess Canning. In 1841 Lord Canning accepted the appointment of Under Secretary of State for Foreign Affairs, in the ministry of Sir Robert Peel, a post which he held for nearly five years. On the reconstruction of Peel's Government, he became Chief Commissioner of Woods and Forests, with a seat in the Cabinet. Lord Canning was Postmaster-General in the Coalition Government of Lord Aberdeen, and in this capacity he distinguished himself by his administrative talent. Besides other changes effected in this public department, it was due to Lord Canning's initiative that annual reports were henceforth submitted from the Post Office to Parliament. Lord Canning retained the same post in Lord Palmerston's ministry until July, 1855, when, in consequence of the resignation of Lord Dalhousie, he was appointed Governor-General of India. The appointment caused some surprise, for he was a man of shy and reserved habits, a scholar rather than an administrator, a judge with delicate appreciation of both sides of a question rather than a prompt and energetic leader of men. In a successor of Lord Dalhousie the Anglo-Indians were keenly alive to the defects of such a temperament. From the first he inspired no confidence. The ominous signs of coming trouble during his first year of office were disregarded. His refusal to issue a proclamation against the greased cartridges, his delay in punishing the first mutineers of the 34th Native Infantry, his mistaken confidence in the Sepoys, his "Gagging Act" to restrain both native and English press, and his "Clemency Act" of ill-advised mildness, all tended to increase the distrust of the Europeans and the frenzied panic and, afterwards, the contempt of the native troops. But his blindness as to the magnitude of the movement was shared by men of keener insight and longer experience, and, when the storm burst, his dignified courage and calm devotion to the highest interests of the Empire, regardless of individual loss and private resentment, were worthy of all admiration. The management of affairs, however, during the mutiny passed from him to his generals, till in March, 1858, when the end was in sight, he issued his famous Oude

proclamation, announcing the confiscation of the land of the whole province. Outram deprecated the action as too severe, and Lord Ellenborough, then Indian Minister, forwarded a secret despatch to Lord Canning, strongly censuring his conduct. The despatch gave rise to heated debates in Parliament, and led to the resignation of Lord Ellenborough. At the end of the year the East India Company was abolished, and Lord Canning was appointed first Viceroy of India. During the remaining years of his office he devoted himself to the re-organisation of Indian Government and economy, trusting mainly to a resettlement of the Talookdars as responsible landholders in Oude, the general relief of Ryots from taxation, and the establishment of native princes under British influence. In 1859 Lord Canning received the thanks of Parliament for his services in India, was made an extra civil G.C.B., and was advanced to the dignity of an earl. But the anxieties of a terrible period had told upon his constitution, and his health was seriously impaired. He left India for England early in 1862, in the hope that rest and his native air would restore him, but he died in London on June 10th, about two months after landing. Shortly before his death he had been created K.G. He was buried near his father in Westminster Abbey, and his title became extinct.

Sir J. Kaye, *Sepoy War* (1864); T. R. Holmes, *Indian Mutiny* (1883); the Duke of Argyll, *India under Dalhousie and Canning* (1885).
[H. W. N.]

Canning, RIGHT HON. GEORGE (*b.* 1770, *d.* 1827), statesman and *littérateur*, was born in London. His father, the disinherited son of an Irish country gentleman, came to London in 1757, and except a sum of £150 a year, settled on him by his father, had nothing but his literature to depend upon. In 1768 he married Miss Costello, a penniless beauty, but well connected, and of high character and accomplishments. Her husband died three years after their union, and but one year after the birth of their only son, who was adopted by his uncle, Mr. Stratford Canning, a banker in the city, and father of Lord Stratford de Redcliffe. Canning had another uncle, Paul, who succeeded to the property at Garvagh, and whose eldest son was raised to the peerage as Lord Garvagh in 1818. Mrs. Canning, who was only twenty-five when she was first left a widow, adopted the stage as a profession, and was twice married after her first husband's death, first to Mr. Redditch, an actor, and secondly to Mr. Hunn, a retired linen-draper. She did not quit the stage till 1801, when her son's retiring pension as Under-Secretary of State, to the amount of £500, was settled upon her and her daughter, and she died on March 10th, 1827, exactly one month before her son became Prime Minister of England. Young Canning was educated first

at a private school, kept by Mr. Richards, at Hyde Abbey, near Winchester, and afterwards at Eton, where his scholarship and his wit soon rendered him conspicuous. It was here that, in conjunction with some of his school-fellows, he started the *Microcosm*, a school magazine, and one specimen of Canning's composition, written when he was only seventeen, is certainly equal to all but the best humorous papers in the *Spectator*. From Eton Canning went to Christchurch, where he was equally distinguished; and from Christchurch to the Temple, where he had residence chambers, though he had entered himself at Lincoln's Inn. He never cared for the law, and the society which he met at his uncle's house readily gave him a turn for politics, if he did not possess it already. Here he met all the Whig leaders, Fox, Burke, Fitz-Patrick, and Sheridan, and it might have been expected that he should enter Parliament under their auspices. But the French Revolution had changed the state of English parties, and most of the rising young men of the day recognised the man for the crisis in Mr. Pitt. Among them was Canning, and in 1793 he was brought into Parliament for the ministerial borough of Newport, in the Isle of Wight. In 1796 he became Under-Secretary of State for Foreign Affairs; and at the general election of that year exchanged Newport for Wendover. In November, 1797, appeared the first number of *The Anti-Jacobin*, which continued till the following July, immortalised by *The Needy Knife Grinder*, *The Progress of Man*, *The Rovers*, *Mrs. Brownrigg*, *The New Morality*, and other papers which have long ranked as English classics. In 1800 Mr. Canning married Miss Joanna Scott, sister to the Duchess of Portland. In 1801 he retired from office with Mr. Pitt, and during the administration of Mr. Addington, which followed, distinguished himself by constant attacks on that minister, which cannot be said to have been undeserved, but which laid the foundation of the numerous jealousies with which Mr. Canning had to contend in after life. When Pitt returned to power in 1804 Mr. Canning became Treasurer of the Navy, and after his great patron's death he still continued to act with his successors down to the unfortunate quarrel with Lord Castlereagh in 1809. In 1807, after the break-down of the Grenville administration, which Canning, greatly to his credit, had refused to join, he accepted the seals of the Foreign Office under the Duke of Portland, and the seizure of the Danish fleet by Lord Cathcart, a step variously judged both then and afterwards, proved conclusively that the vigour of the Government had not departed with Mr. Pitt. It was, however, the want of vigour displayed by some of his colleagues, the mismanagement of Sir John Moore's expedition, and the diversion to an expedition against Antwerp

of a body of troops originally destined for the Peninsula, which led eventually to Canning's rupture with the Government, and the unfortunate misunderstanding with the then Secretary of War, Lord Castlereagh. A duel was the result, and Canning was wounded. The hurt was trifling; but the quarrel was most mischievous, as it deprived us of the services of Mr. Canning at the Foreign Office for a period of thirteen most momentous years. After his retirement from the ministry, Mr. Canning continued to give an independent support to the ministry of Mr. Perceval, and devoted himself to stimulating the energies of the Government to a vigorous prosecution of the war; and the world best knows how much it is indebted to him for the triumphant termination of the conflict. In the ministerial negotiations which followed the murder of Mr. Perceval, efforts were made to restore Mr. Canning to the Government, but he refused even the Foreign Office unless it were accompanied by the lead of the House of Commons, which Lord Castlereagh was unwilling to surrender; and Mr. Canning accordingly remained out of office—with the exception of a mission extraordinary to Lisbon in 1814—till, in 1816, he became President of the Board of Control. This place again he resigned rather than remain in the Government during the trial of Queen Caroline, and was on the point of sailing for India as Viceroy of our Eastern Empire, when the suicide of Lord Castlereagh in Aug., 1822, placed the Foreign Office and the lead of the House of Commons at his feet. During the remaining five years of his life Canning was the greatest Foreign Minister this country has ever had since Chatham, but his greatness consisted rather in his strength of will, his foresight, his independence, and the oratorical powers, in which, since Pitt's death, he had shone without a rival, than in any original conceptions or new departures in foreign policy, such as have often been attributed to him. From the French Revolution downwards the foreign policy of the Tory party had continued on one unbroken system, and, whether in the hands of Mr. Pitt, Lord Castlereagh, Mr. Canning, the Duke of Wellington, or Mr. Perceval, had been a policy of peace. Mr. Canning was blamed by the Whigs for not going to war in 1824 to prevent the French invasion of Spain, just as Lord Liverpool has been blamed for acquiescing in the partition of Saxony, or the non-restoration of Poland at the Congress. They both preferred peace. Mr. Canning, indeed, "called the new world into existence to redress the balance of the old," which meant that he recognised the independence of the Spanish-American colonies sooner, perhaps, than he otherwise would have done, in order to prevent France from becoming entirely mistress of them. But Lord Castlereagh had warned Spain that the recognition of them

was only a question of time. In the various congresses and conferences which took place during the ten years that followed the peace, it is difficult to discover that Mr. Canning differed from the Duke of Wellington on any great question of principle. Non-intervention in the internal affairs of other countries, a rule to be observed by all the Great Powers of Europe as well as England, was the cardinal principle of English foreign policy during the whole period, and the only difference between Canning and other ministers lay in the greater boldness and peremptoriness with which he condemned the violation of it. But he was unable to do anything more than anybody else. England would not fight in a quarrel to support the despotic Ferdinand of Spain, and France and Austria succeeded in having their own way. Canning was not more an enemy to the "Holy Alliance" than Castlereagh, but having no personal friendships with the courts and ministers of the Continent, such as had been formed by Castlereagh during the great struggle with France, was able to speak his mind more freely. On the Eastern Question his views were identical with Lord Palmerston's:—Turkey must be saved from Russia, *coûte que coûte*—if necessary, in spite of herself; and England must befriend the Greeks to prevent them from falling into the arms of Russia. Mr. Canning had all along been a friend to Roman Catholic emancipation, and on this point, as well as others, represented that section of the Tory party which traced its lineage to Mr. Pitt rather than that which dated from the ministry of Mr. Addington. On the question of the Corn Law both he and Lord Liverpool were Free Traders as Free Trade was then understood, and the defeat of his Corn Bill in the House of Lords in 1827 was one of the severest trials of his life. On Parliamentary Reform alone he sided with the new Tories, whom it is the fashion now to call the old, and refused to recur to the more popular and primitive principles of the Wyndhams and the Pitts. Though, however, Mr. Canning was a Tory of the purest type, he was unable to acquire the confidence of those members of the party whose political education had commenced under Perceval and Liverpool. Lord Castlereagh, who had been greatly in favour of the Roman Catholics, was dead. And Mr. Canning had against him the only other two men in the country to whom the public looked up, namely, Sir Robert Peel and the Duke of Wellington. In the winter of 1826-7, Lord Liverpool had an attack of apoplexy; and in the following spring it became clear that his recovery was hopeless. Then it became necessary that a new administration should be formed, and the king sent for Mr. Canning in the first instance to consult him on the subject. Mr. Canning said that he himself would not consent to serve under an anti-Catholic

premier, but that if a neutral chief could be found able to keep the ministry together on the principles of Lord Liverpool, in whose Cabinet the Catholic question was an open one, he would willingly take part in it. The only other courses open were that either he himself should be appointed, or that a strictly Protestant administration should be constructed, of which the duke or Mr. Peel should be the head, to which he pledged himself to give an independent support. Of these three schemes the first was abandoned because the right man could not be discovered, the third because neither of the two above-mentioned statesmen would undertake the task, and the second was ultimately adopted rather by a process of exhaustion than for any other cause. The ministry was formed in April. It is difficult to see why Canning was more to blame for refusing to serve under Mr. Peel than Mr. Peel himself was for refusing to serve under Mr. Canning. But a powerful party among both the Whig and the Tory aristocracy was opposed to Mr. Canning. It has not, of course, been the business of the Liberal party to defend him. And the consequence is that the history of the period has been written with a bias against his memory. Right or wrong, however, he died a martyr to what he believed to be the fundamental principle of his creed, the freedom of the Crown from the dictation of either branch of the aristocracy—a truth brought out very clearly in the Croker correspondence—and his health, already completely broken down by the constant mortifications and harassing opposition which he encountered, finally succumbed to an illness which overtook him in the month of July, and he died on Aug. 8th, 1827, at the Duke of Devonshire's villa at Chiswick, in the very same room in which, twenty-one years before, Charles Fox had breathed his last.

The best account of his death-bed is to be found in the *Croker Papers*, vol. i., p. 380. His life has been written by Mr. Bell, and his private secretary, Mr. Stapylton, but no complete biography of the greatest pupil of the greatest English statesman of modern times has yet been given to the world. [T. E. K.]

* **Canning**, SIR SAMUEL (b. 1823), telegraphic engineer, began to study the manufacture and submersion of submarine telegraphic cables in 1852. Having become superintendent for the firm of Glass, Elliot, and Co., and afterwards engineer-in-chief of the Telegraphic Construction and Maintenance Company, he has played a responsible part in the laying of several of the most important submarine cables in the world, but his name will always be specially connected with the successful completion of the first Atlantic cable of 1866, and the recovery of the lost cable of the previous year. For these services he was knighted in 1866, and presented with a gold medal by the American Chamber of Commerce in 1867.

Canning, STRATFORD. [STRATFORD DE REDCLIFFE.]

Canova, ANTONIO (b. 1757, d. 1822), the sculptor, was born at Possagno, in the Asolani hills. His father and grandfather were sculptors or stonemasons, and to the latter he owed his bringing up in childhood. At fourteen he was apprenticed to the sculptor Bernardi, known as the younger Torretto, in Venice, and in his seventeenth year he founded his reputation by his design for a group of *Orpheus and Eurydice*. The statue known as *Apollo Crowning Himself* was his first work in marble. In 1779 he went to Rome with a pension from the Venetian Government, and four years later he began the monument to Ganganelli, that at once raised him to the highest position among contemporary sculptors. Henceforward his work was unremitting, and yet he could with difficulty fulfil his numerous commissions. Members of the English aristocracy, especially Sir William Hamilton, were foremost among his earlier patrons; but he also executed the mausoleums for the Popes Clement XIII., Clement XIV., and Pius VI., and during a tour through the principal cities in Germany in 1799 he undertook the designs for the tomb of the Archduchess Christina of Austria in Vienna, that remains his largest work. He paid two visits to Napoleon in Paris (1802 and 1810), and executed statues of Napoleon's mother after the model of the Agrippina; of Pauline, the emperor's sister, as Venus Victrix; and a full-length statue of the emperor himself, afterwards brought to London by the Duke of Wellington. Having been appointed guardian of Roman antiquities by Leo X., he was commissioned after Waterloo to recover the art-treasures removed from Italy by the emperor to Paris, and on executing this task he visited London, where the Elgin marbles almost forced from him the admission that his own method had hitherto been a failure. After this his manner showed some signs of change, but the artist was too old to begin afresh. On his return he was received in triumph, and created Marquis of Ischia by the Pope. He died at Venice, and was buried at his native village in a kind of temple designed by himself. Besides portraits and mausoleums, Canova produced a large number of ideal statues and groups, in which he attempted to rival the sculptors of Greece. These works are now scattered throughout all the public galleries and several private collections of Europe. The subjects are occasionally heroic, as in the *Hercules and Lycas* in Rome, or the *Theseus and Centaur* at Vienna; more seldom religious, as in the *Magdalene* in Paris, and generally of a graceful tenderness approaching effeminacy and triviality, as in the frequent statues of Venus, Cupid, and Psyche, the most celebrated of which is in the Louvre—

the Three Graces, and other classical subjects. These works have no trace of nobleness or grandeur of idea. They are as cold and vapid as they are precise and polished. Nevertheless, though Canova's refinement was exaggerated into unreality, it was a welcome reaction against the coarseness and exuberance of the former century. As a man he was honourable and singularly generous. Unfortunately he introduced the general habit of entrusting the rough execution of his work to other hands.

Count Cicognara, *Biografia di A. Canova*; *The Works of A. Canova*, engraved by H. Moses (1876).

* **Canovas del Castillo, ANTONIO** (b. 1830), Spanish statesman, began life as a Conservative journalist, and in 1854 was elected deputy to the Cortes. In 1864 he entered the ministry, and in the following year became Minister of Finance and the Colonies under O'Donnell, when he earned distinction by drafting the law for the abolition of the negro slave trade. In spite of the revolution of 1868, he still continued to urge the claims of the legitimate and constitutional monarchy, and having been the recognised leader of the Alfonsist party during the short reign of Amadeus and the subsequent republic, he naturally became president of the new ministry on the return of Alfonso XII. in Dec., 1874. He continued in office, directing the course of the State with singular tact and discretion till 1879, when, for some ten months, he yielded to General Campos on his return from Cuba. The end of the same year, however, saw him again in office, but early in 1881 he was once more overthrown by Señor Sagasta's ministry on a question of finance. In Jan., 1884, the "Fusionists" under Sagasta, were defeated in the Cortes, and Señor Canovas del Castillo again undertook the formation of a Conservative ministry, with himself as president. The general elections of April secured for him an enormous Conservative majority, 255 out of 350. The president subsequently declared he was willing to act with any party that was distinctly monarchical. But at the crisis of Nov., 1885, on the question of the occupation of the Caroline Islands by Germany, he was compelled to resign, and was succeeded by Señor Sagasta (q.v.).

* **Canrobert, FRANÇOIS CERTAIN** (b. 1809), Marshal of France, received his military training at Saint Cyr, and first distinguished himself in the Algerian War of 1835. After a short return to France, he was again despatched to Algeria in 1841, and remained there for nearly ten years in active service against the Arab tribes. Recalled in 1850, he attached himself to the fortunes of Louis Napoleon, and aided him in crushing all signs of discontent after the *Coup d'État*. On the outbreak of the Crimean War, he

was appointed to take command of the first division of the Army of the East, and having played a very conspicuous part in the victory of Alma, became commander-in-chief in succession to Saint Arnaud a few days after the battle. After vainly attempting to force the siege of Sebastopol, he completed the lines of investment, and was severely wounded at Inkermann, but, owing to disagreement with Lord Raglan, resigned his command to General Pélissier in May, 1855, and soon afterwards returned to Paris. He again took part in the Italian War of 1859, being present at Magenta and Solferino. At the beginning of the Franco-German War he commanded the Sixth Army Corps, acting under Marshal Bazaine, and shared the overwhelming defeats of Worth and Gravelotte. After the capitulation of Metz, he was for a time a prisoner in Germany, but on his return was well received by M. Thiers, and till 1873 occupied an important position in the army of the republic. Having resigned in that year, he was returned to the Chamber by the department of Lot, nominally as a Bonapartist, but took little part in politics, though reported to have great influence with MacMahon, and failed to retain his seat at the election of 1879.

Canterbury, ARCHBISHOPS OF. [*Proper Names.*]

Canterbury, CHARLES MANNERS SUTTON, VISCOUNT (*b.* 1780, *d.* 1845), Speaker of the House of Commons, was the great-grandson of the third Duke of Bedford, and son of the Most Rev. Charles Manners Sutton, Archbishop of Canterbury, who died in 1828. The future Speaker was educated at Eton, and Trinity College, Cambridge, and having been called to the bar was returned for Scarborough in 1807, in the Tory interest. In 1832 he sat in the Reformed House of Commons for the University of Cambridge, and from 1817 till 1835 continued to occupy the position of Speaker, which he held with great distinction and success. In 1835 he was rejected from the office, after a close election, in favour of Mr. Abercromby, and was raised to the peerage with the title of Viscount Canterbury and Baron Botolph. Throughout a consistent Conservative in politics, and a steady supporter of the Duke of Wellington, he was nevertheless peculiarly fitted for the position of Speaker by his tact, self-possession, and unwearied patience.

Cantù, CESARE (*b.* 1805, *d.* 1881), Italian historian, was born near Milan, and at the early age of eighteen was appointed professor of literature in the College of Sondrio. In 1842 he published *Reflections on the History of Lombardy in the Seventeenth Century*, and having offended the Austrian Government by his liberal views, he was imprisoned for one year. During his captivity, he wrote his

historical romance, *Margherita Pusterla*, which, like so many Italian romances of the time, has patriotism and national history for its motives. His greatest work is the *Universal History*, (20 vols. 1837-42), which has been translated into English, French, and German, though it is remarkable rather for elevated patriotism than historical justice or erudition. The same spirit pervades his *History of Italian Literature*, and his *History of the Last Hundred Years*. He has written besides many popular hymns and poems, an educational work called *Letture Giocanelli*, which has passed through thirty editions, and he has contributed largely to the *Biblioteca Italiana* and the *Indicatore*. His style is regarded as a model of purity and correctness.

Capefigue, JEAN BAPTISTE HONORÉ RAYMOND (*b.* 1802, *d.* 1872), a French historian and journalist, was born at Marseilles, and educated at Aix and in Paris. He had originally intended to study law, but, soon after his arrival in Paris, he abandoned that profession for politics, and became one of the editors of the *Quotidienne*. His writings in this journal attracted the attention of the Government, and a post in the foreign department was given to him, which office he held until the revolution of 1830. After that period he turned his attention wholly to literature and historical research, having, through the influence of M. Guizot, free access to the State archives until the revolution of 1848. M. Capefigue's works are far too numerous to be all mentioned here. Among the best known are:—*Histoire de Philippe Auguste* (1827-9), *L'Europe pendant le Consulat et L'Empire de Napoléon* (1839-41), *L'Europe depuis l'Avènement de Louis-Philippe* (1845-6). He has also published biographical sketches of the celebrated Frenchwomen of the last two centuries. His political theories are strongly tinged with absolutism.

***Capel, THE RIGHT REVEREND MONSIGNOR THOMAS JOHN** (*b.* 1836), was educated by the Rev. T. M. Glennie, and ordained priest in 1860 by Cardinal Wiseman, after which he for a time organised an English Catholic mission at Pau. Having returned to London, he soon attracted attention by the eloquence of his sermons, especially at the Pro-Cathedral, Kensington. In 1868 he was appointed private chamberlain to Pius IX., and in 1873 domestic prelate. In the same year he established his Catholic Public School at Kensington, and from 1874 to 1878 held the position of rector of the rising Catholic University, also in Kensington. His first published work was written in answer to Mr. Gladstone's attack on the Vatican Decrees (1874), and owing to Monsignor Capel's strictures on the anomalous position of the English Ritualist, it gave rise to an acrimonious passage of arms between him and Canon Liddon in a series of letters to the *Times* of that year.

Capodistrias, or **Capo d'Istria**, JOHN (b. 1776, d. 1831), President of Greece, was born at Corfu, and in 1803 began to acquire his experience of government and finance as a private secretary to a Russian official. Having entered the diplomatic service at St. Petersburg in 1809, he was employed on an important mission to Switzerland after the battle of Leipzig, and took part in the Treaty of Paris, where he was instrumental in securing the protection of England for the Ionian Islands. In 1815 he became one of the Secretaries of State to the Czar, and continued his valued servant till 1821, when he tendered his resignation, owing to the Czar's unwillingness openly to espouse the cause of Greece on the field. After this he lived in retirement at Geneva, till summoned in 1827 by the committee of the Philhellenes to receive the Presidency of Greece for a term of seven years. In the following year he began his government with a council of twenty-seven of the most distinguished men of the State, called the Panhellenium. The country was sunk in apparently hopeless confusion, socially, politically, and in finance. Capodistrias at once directed his vast practical knowledge and powers of organisation to the suppression of piracy, the encouragement of industry, and the restoration of credit. Reduced almost to despair by the devastations of the plague, and hampered by the jealous suspicions of England, he nevertheless retained the confidence of the country, till, after a renewal of power in 1829, he ventured to replace the Panhellenium by a senate. In spite of the justice and beneficence of his rule, he was accused of aiming at a perpetual dictatorship, and favouring the cause of Russia and despotism. A rebellion broke out in July, 1831, but was checked, and Capodistrias had announced his purpose of continuing on his way undaunted, when, in September, he was struck down at the church door by two assassins, George and Constantine Mavromikhalis, whose motives are uncertain. Whatever view may be taken of the means by which Capodistrias exercised his power, it is certain that he was a great and disinterested patriot, and a born ruler of men.

Papadopoulos Vretos, *Mémoires biographiques historiques sur le Président de la Grèce* (Paris, 1838).

Carafa, MICHELE (b. 1785, d. 1872), a celebrated musician and composer, was born at Naples, and studied music in Paris under Cherubini. He composed a great number of operas, among which we may mention *Le Solitaire* (1822), *La Violette*, *La Fiancée de Lammermoor*, and *Masaniello*, all produced on the stage in 1827, the last being considered his masterpiece. Carafa enjoyed great popularity during his lifetime; the charm of his music consists in graceful melody, but it lacks depth and originality; and of his thirty-five operas, only a few, as those above-men-

tioned, succeeded in holding the stage even for a few years. He spent his life almost entirely in Paris, and through the influence of Cherubini he was appointed professor of composition in the Conservatoire, a post which he held until his death. At one time his compositions for the pianoforte were very popular.

Cardigan, JAMES THOMAS BRUDENELL, SEVENTH EARL OF (b. 1797, d. 1868), British general, was educated at Christchurch, and represented Marlborough from 1818 to 1839. He entered the 8th Hussars in 1824, became lieutenant-colonel of the 15th Hussars in 1832, but resigned the command when Captain Wathen, whom he had charged with insubordination, was acquitted by court-martial. He successively represented Fowey and Northampton in Parliament, succeeding to the title in 1836, in which year he commanded the 11th Hussars. In 1840 he fought a duel with Captain Tuckett, and, arraigned before the House of Lords for the offence, was acquitted through a legal quibble. He commanded the Light Cavalry Brigade in the Crimean campaign, and led the famous charge of the Six Hundred at Balaklava. He was present also at the battles of the Alma and Inkermann, and the siege of Sebastopol, for which services he was made a K.C.B., a Commander of the Legion of Honour, and received the Crimean medal. He became inspector-general of cavalry in 1859. He was not a popular officer; but as a strict disciplinarian raised the regiments he commanded to a high state of proficiency.

Cardwell, EDWARD, VISCOUNT (b. 1813, d. Feb., 1886), the nephew of Dr. Cardwell, an ecclesiastical historian and antiquarian, formerly Camden professor of ancient history in Oxford, and principal of St. Alban's Hall, was educated at Winchester College, and at Balliol College, Oxford, where he obtained a double first-class, and was elected fellow. Embarking upon a political career, he entered Parliament in 1842 as member for Clitheroe. A consistent Peelite, he was in consequence rejected for Liverpool in 1852, a constituency which had returned him in 1847. In 1853, however, he was returned for Oxford City, and, with a short break only, continued its member until his elevation to the peerage. Mr. Cardwell became a gradual convert to Liberalism. His official career began in 1845, when he was appointed Secretary to the Treasury. From 1852-5 he was President of the Board of Trade in Lord Aberdeen's ministry, and introduced some valuable departmental reforms. His political views enabled him to serve under Lord Palmerston from 1859 to 1861 as Chief Secretary for Ireland, after which he was Chancellor of the Duchy of Lancaster until 1864, with a seat in the Cabinet. Transferred to the post of Secretary of State to the Colonies, he continued to

hold that office under Earl Russell until the defeat of the Government in 1866. After the general election of 1868, Mr. Cardwell's services to his party were rewarded by Mr. Gladstone with the office of Secretary of State for War, and he also became a member of the Committee of Council on Education. At the War Office he had to deal with a system sorely in need of reform; and his measure for the abolition of purchase, although bitterly attacked at the time, and carried by questionable means—by royal warrant—has since been recognised as a sterling benefit to the country. Other efforts in the same direction were the introduction of the "short-service" system, and the formation of local regiments to which the militia were brigaded. These principles have been carried further by subsequent legislation. On the defeat of the Liberal party at the general election of 1874, he was raised to the peerage as Viscount Cardwell, and ceased to play a very prominent part in political life. He was one of the late Sir Robert Peel's literary executors, and edited his memoirs in conjunction with Earl Stanhope.

Carey, HENRY CHARLES (b. 1793, d. 1879), American political economist, was the son of Mathew Carey (b. 1760, d. 1839), a distinguished bookseller, and also a writer on political economy. Having retired from business in 1836, he published his *Essay on the Rate of Wages*, followed next year by his *Principles of Political Economy*, and in 1838 by *The Credit System of France, Great Britain, and the United States. The Past, the Present and the Future*, perhaps his best known work, appeared in 1848; *The Harmony of Interests, Agricultural, Manufacturing, and Commercial*, in 1851; and *The Principle of Social Science*, in 1858. Of his numerous other works we may mention, *The Way to Outdo England without Fighting Her* (1855), *Shall we have Peace?* (1869), and *The Unity of Law* (1873). Carey was a decided opponent to the English School of Political Economists, and devoted much pains to overthrow Ricardo's theory of rent, the doctrines of Free Trade, especially as regards America, and Malthus's law of population. In many respects he may be regarded as the precursor of Mr. Henry George, though the details of their recommendations do not in all cases coincide.

Carey, WILLIAM, D.D. (b. 1761, d. 1834), missionary, was a native of Paulerspury in Northamptonshire, and after an indifferent education was apprenticed to a cobbler. He joined the Baptist connection, and in 1786 was appointed minister and schoolmaster at Moulton. In 1789 he accepted an invitation from a congregation at Leicester. Carey had for some years been desirous to engage in missionary enterprise; he now established a Society for the Conversion of the Heathen, and in 1795, having reached India in spite of the

efforts of the Company to prevent him, began to teach the Gospel at Mudnabutt, and to translate the New Testament into Bengalee. In 1799 he and four friends founded the Baptist mission at Serampore, and he proceeded to print his translations and to make converts. Soon afterwards he received in addition a teachership at Fort William College, Calcutta, and in 1806 was promoted to a professorship. Throughout his life, however, Serampore was the centre of his missionary activity, and when Lord Hastings (q.v.) became Governor-General the opposition of the authorities was converted into benevolent sympathy. To Carey belongs the honour of the awakening of the missionary spirit in India, and he was a distinguished philologist.

Miss Yonge, *Pioneers and Founders*.

* **Carlingford, THE RIGHT HON. CHICHESTER FORTESCUE, LORD** (b. 1823), is the son of Colonel Chichester Fortescue, of Ravensdale, co. Louth. He was educated at Eton and Christchurch, and took his degree as a first-classman and University prizeman in 1844. Three years afterwards he took his seat as Liberal member for Louth, for which place he continued to sit until 1874, when he was defeated by a member of the Parnellite party. His long career of office began in 1854, when he was Junior Lord of the Treasury; he was Under-Secretary for the Colonies in 1857-8, and again in 1859-65, after which he became Chief Secretary for Ireland, a post he held until 1866. Again, after the Liberal victory of 1868, he resumed the latter office, to be transferred, in 1870, to the Board of Trade. Shortly before the general election of 1874, he was raised to the peerage as Baron Carlingford. On the resignation of the Duke of Argyll, in 1881, Lord Carlingford succeeded him in the Cabinet, as Lord Privy Seal, and with much skill steered the Irish Land Bill through the House against the assaults of an angry majority. In 1883 he succeeded Lord Spencer as Lord President of the Council; but resigned office with his party in the spring of 1885. He married, in 1863, Frances Lady Waldegrave, daughter of John Braham (q.v.), celebrated for her social charms, and was left a widower in 1879.

Carlisle, GEORGE WILLIAM HOWARD, EARL OF, AND VISCOUNT MORPETH (b. 1802, d. 1864), was the grandson of the fifth Earl. Educated at Eton and at Christ Church, Lord Morpeth acquired a reputation as the writer of graceful but not particularly original verse. In 1826 he first entered parliament as member for Marlborough, and was, upon the whole, a consistent follower of Earl Grey in the struggle for Reform. In 1835, then member for the West Riding of Yorkshire, he was appointed by Lord Melbourne Chief Secretary for Ireland. The Government being kept in power by the votes of the Irish members, Lord Morpeth was compelled to be on good

terms with O'Connell, and his tact was conspicuously shown in his dealings with his dangerous ally, and in the way he confronted the Repeal movement. On the fall of the Whigs he visited America, and shortly afterwards was called to the Upper House. After holding the office of Commissioner of Woods and Forests, and Chancellor of the Duchy of Lancaster, he was appointed Lord Lieutenant of Ireland by Lord Palmerston, 1855 to 1858, and held that office from 1859 until a few months before his death, when he was compelled to resign from ill-health. During neither period was he called upon to do much more than administer. His Viceregal speeches, edited by J. Gasken, are those of a distinctly able man.

Carlos, DON LUIS MARIA FERNANDO DE BOURBON, COUNT OF MONTEMOLIN (*b.* 1818, *d.* 1861), eldest son of Carlos, Count of Molina, and first-cousin to Isabella II., claimed the title of Carlos VI. of Spain, on his father's abdication in 1845. In 1848, Cabrera and other Carlists carried on a desultory war in his favour, in the northern provinces; but the movement soon died out, though for a time it revived in 1855. In 1860 he and his brother Don Juan made another still more abortive attempt at Tortosa, ending in a ridiculous failure.

* **Carlos, DON MARIA DE LOS DOLORES JUAN ISIDORO JOSEF FRANCESCO, etc.** (*b.* 1848), Duke of Madrid, claiming to be Carlos VII. of Spain, is the son of Don Juan, the brother of Carlos, Count of Montemolin, mentioned above, and is therefore grandson of Don Carlos, called Carlos V. His mother was the Archduchess Maria Teresa of Austria, Princess of Modena. In 1867 he married Margaret of Bourbon, daughter of Charles III., Duke of Parma, and niece of the late Comte de Chambord. His active attempts on the Spanish crown began in 1869, but though supported by the Church, and renewed in the following year, they did not attract much attention. In the summer of 1872, however, the northern provinces were roused to arms by a body of his partisans, led by his brother, Don Alfonso; military operations began, and were continued with greater vigour, on the arrival of Don Carlos himself, in July, 1873. From this time till the beginning of 1876, this desultory but harassing warfare continued to devastate the northern provinces, and tax the resources of the Government to the utmost. Both sides fought with determined courage, though the engagements were rather murderous shooting-parties than battles. The Carlist cause was much discredited by continual breaches of civilised warfare, especially by the Curé Santa Cruz, one of Don Carlos' most barbarous supporters. In June, 1874, the execution of Captain Schmidt, a German correspondent, brought upon the Carlists the wrath of Bismarck, who not only sent gun-boats to watch their movements, but induced

the other European Powers to acknowledge the established Government of Spain. The proclamation of Don Carlos' cousin as Alfonso XII. (Dec., 1874) was in reality the death-blow to the war, though it lingered on for rather more than a year. In Feb., 1876, the last hopes of the Carlists were destroyed by the reduction of their fortresses, Bilbao, Estella, and Tolosa. Don Carlos fled across the country into France, and thence to England, where he was received with merited coldness. In a proclamation to the Spanish nation and his army, he announced that he did not withdraw from any of his claims, but was merely awaiting a more propitious opportunity. After visiting America, he took up his residence on the Continent. His son, Jaime Juan Carlos Alfonso, born 1870, is heir to his pretensions.

Carlos, DON MARIA ISIDOR OF BOURBON, COUNT OF MOLINA (*b.* 1788, *d.* 1855), entitled by his adherents Carlos V. of Spain, was the second son of the King Carlos IV., and brother of Ferdinand VII. During the French supremacy, from 1808 to 1814, he lived in exile at Valençay; but after the restoration of the Bourbons he married the daughter of John IV. of Portugal (1816), and remained at court as the heir-apparent to his brother Ferdinand, then childless. When, in 1830, a daughter, afterwards Isabella II., was born to Ferdinand by his fourth wife, Don Carlos continued to insist on his rights as heir, though the Salic law had been expressly repealed. On the death of Ferdinand, in 1833, the civil war between the Carlists and Christians—or supporters of the Queen Regent, Christina—burst into flame, and for six years ravaged the northern provinces of Spain with pitiless atrocity. In 1839 Don Carlos was at length driven into France, and established the mockery of a court at Bourges. In 1845 he abdicated in favour of his son, in spite of the protests of his ablest adherents, and after 1847 he spent the rest of his life in Austria.

Carlyle, THOMAS (*b.* 1795, *d.* 1881), perhaps the greatest figure in English literature of the present century, and one of the most inspiring and potent of moral teachers, was born at Ecclefechan, a small market-town, situated on the east side of Annandale, six miles inland from the Solway. James Carlyle, his father, was a mason by trade, a man of resolute, strongly marked character, and of the strait theological views of the sect called "Burghers." The family consisted of four sons and five daughters, and Thomas was the eldest. From the village school and the tutoring of the minister, he went to Annan Grammar School in 1805, with a view to the University and the ministry. He always retained a painful memory of the school, and he did not carry away much educational profit. French and Latin, algebra, and a mere smattering of Greek, constituted his scholarly equipment when he set out to

walk, as all Scotch students did, to Edinburgh University in Nov., 1809, before he was quite fourteen years old. The university failed to correct the unscholarly beginning of the school; Carlyle read voraciously, but never became a classical scholar. Nor did he show any liking for philosophy. Mathematics chiefly attracted him, partly because Leslie was the only professor there who seemed to have any "genius in his business." He won no laurels at Edinburgh; the noise of the class-rooms drowned his thoughts, and throughout his life he could never work save in solitude and silence; but his fellow-students and the professors saw that there was "grit" in the lad, and his sarcastic turn and wild wilful humour gained him a reputation among the scholars. He was now to prepare for the ministry, but already was feeling the pressure of dogmatic formulas, and was glad to put off his decision while he took the post of mathematical tutor at Annan School. Teaching was, however, distasteful to him, though he did his work thoroughly; and his life became very solitary and retired. And when in 1816 he became master of the school at Kirkcaldy, the same shy, solitary life continued, with the notable exception of his friendship with the afterwards famous preacher, Edward Irving, in whom he found "a brother to me, and a friend such as I never had again or before in this world." "Prohibitive doubts" still held him back from the ministry, and schoolmastering becoming more and more hateful, he threw up his post and went to Edinburgh (1818). On his slender store of savings, helped by weekly supplies of oatmeal and potatoes from Mainhill, he set himself to study for the law; and the privations of his life began to bear fruit in that dyspepsia which became the bane of his existence. He managed to eke out a bare subsistence by writing for Brewster's *Encyclopædia*, and taking an occasional mathematical pupil, and so earning a couple of pounds a week during session. He soon found law and Hume's lectures "mere denizens of the kingdom of dulness," and threw the study up. He was now at odds with life, uncertain of the future, tormented with doubts, irritable, dyspeptic; and this morbid state lasted till 1821, when he "authentically took the devil by the nose," and "became a man." For a friend had advised him to attack German, and here he began to find satisfaction. Schiller for a while delighted him, but he soon found that the great poet was too placid and superficial for his temper of mind; and it was only when he at length came into contact with the works of Goethe that his eyes were opened to a new world. Goethe had gone through the same inward struggle as Carlyle, and seen all his beliefs uprooted; and had come out of the conflict triumphant. Carlyle was penetrated with Goethe's theory of life, and now began to

sketch out his own doctrine of man's duty in the world, a doctrine in which he thenceforth never wavered. "God was to him the fact of facts. He looked on the whole system of visible or spiritual phenomena as a manifestation of the will of God in constant forces—forces not mechanical but dynamic, interpenetrating and controlling all existing things. God's law was everywhere; man's welfare depended on the faithful reading of it. Human life was like a garden, to which the will was gardener, and the moral fruits and flowers, or the immoral poisonous weeds, grew inevitably, according as the rules already appointed were discovered and obeyed, or slighted, overlooked, or defied. Nothing was indifferent. Every step which man could take was in the right direction or the wrong." (Froude.) In a world that was every day tending more to doctrines of expediency, rights of man, government by majorities, Carlyle held that the laws were already there, and no majorities could alter them: they could only seek to discover and obey them. The rights of man were the right of the wise to rule, and the ignorant to be ruled; for knowledge of the laws of God, of the universe, was the only qualification to govern. The wise, strong man, the Hero, was he who had truly interpreted the eternal laws which governed the facts about him. Such a man became a power, a force in nature, a divine king. Reverence and awe for the gigantic movements of the universe were among Carlyle's strongest emotions; the earth turns, he commented, not the sun and heavenly spheres; and so too we must conform to the laws of the world, not seek to bind the laws to us. "All history is a Bible." This submission to the eternal laws of facts was no cold philosophy, however. Carlyle teemed with religious emotion, though it did not run in dogmatic grooves. Intense and overwhelming reverence for God was warmed by a mystical emotion towards the personal Deity, and Carlyle cherished the impulse to prayer as one of the most precious of human feelings. "Prayer is the turning of one's soul, in heroic reverence, in infinite desire and *endeavour*, towards the Highest, the All-Excellent, Omnipotent, Supreme. No prayer, no religion." But above all, Carlyle denounced insincerity in religion, and protested against the unthinking, meaningless orthodoxy of dull souls. Honesty in faith and word and deed was perhaps the keynote of Carlyle's philosophy; cant was the attitude of mind for which he felt the most utter abhorrence. Carlyle was twenty-seven, and still had won for himself no sort of position in the world; hackwork for Brewster, a translation for the same of Legendre's *Geometry*, for £50, and an engagement to write a series of biographical essays for *Fraser's Magazine*, comprised his achievements so far. He had become in 1822 tutor to the sons of Mr. Buller,

in Edinburgh, at a salary of £200 a year, and this at least removed him from want. He felt now that he had a message for the world; and he determined at all cost to deliver it: *Terrar dum prosum* was his life's motto. But fluent and forcible as were his speech and private letters, he experienced extreme difficulty in expressing himself to the public. At first he hammered at verse, for poetry was considered the only fit vehicle for emotion and spiritual thought: but rhyme and metre were invincible stumbling-blocks to him, and he never wrote verse of the true ring. Prose, therefore, had to be his medium of prophecy. In 1823 he was writing the life of Schiller for Fraser, and had begun the admirable translation of Goethe's *Wilhelm Meister*, a work which had deeply impressed him—"bushels of dust and feathers, with here and there a diamond of the first water." It was published in 1824, and at first it sold rapidly. A visit in that year with the Bulls to London, where the Schiller papers had been well received, and a week in Paris, gave the untravelling Annandale youth new ideas. The *Life of Schiller* now came out in book form, and attracted the admiration of Goethe, who wrote a preface for the German translation. In spite of the favourable reception of this work, and the kindness of the Bulls, who bore patiently with his increasing irritability, moroseness, and dyspepsia, Carlyle did not take to London life; he disliked and despised London men of letters, who seemed to him to be selling their souls for gold to the editors, and to be wanting in the prime virtue of sincerity; and having abruptly severed his connection with the Bulls, he took a farm at Hoddam Hill, near his father's, in 1825. Here he remained a year, within "his own four walls," writing his selections from *German Literature* (published in 1826), and then joined his family at Scotsbrig, a farm they had lately taken in the neighbourhood. On Oct. 17th, 1826, he married Jane Baillie Welsh, the daughter of the laird of Craigenputtock, to whom he had been introduced at Haddington, in 1821, by Edward Irving. She and Irving had already given their hearts to each other, but the gifted orator was engaged to a Miss Martin, and was held to his vow. Jane Welsh married Carlyle with esteem and affection, but not with passionate love; and three lives were irreparably injured by the error of Irving. At first they lived in a small house at Edinburgh; but money was as scarce as ever; the German literature volumes were a failure, financially, and the publishers grew shy of the subject. He tried writing a didactic romance, but it was useless for him to attempt to be a novelist; he stood for the professorship of moral philosophy at St. Andrews, and was rejected. Affairs looked hopeless, and an introduction to Jeffrey, and the commission to write essays for the *Edin-*

burgh Review, were but slight signs of improvement. It was impossible to continue to live in Edinburgh, and in 1828 the Carlyles now removed to Craigenputtock, a small farm belonging to the wife, fourteen miles from Dumfries. Here, "in the dreariest spot in all the British dominions," for six years Carlyle lived the life of a recluse, working out his ideas, laying in stores of wide reading, developing *Sartor*, and writing the essays which are now included in the *Miscellanies*. It was a stern and desolate life. Carlyle was engrossed in his studies and meditations, and could only work in absolute solitude; read, wrote, walked, rode, and even slept alone. To him the apprenticeship of these solitary years was invaluable; he had time to mature; to his wife it was the bitterness of death, and the misery and physical hardships of these six years embittered her spirit, and permanently injured her health. Carlyle himself was ready to write, but people were shy of accepting what he wrote. To Jeffrey he owed the support and constant kindness which really kept him from destitution, and to the *Edinburgh*, under Jeffrey, he contributed from time to time his famous articles on *Jean Paul*, on *Goethe*, and others. But the work he was engaged upon at Craigenputtock, a history of German literature, was too severe for the publishers, and Carlyle had eventually to split it up into magazine articles, and publish portions in the *Westminster* and *Foreign Quarterly*. German mysticism was still *carriere* to the general, and Carlyle did not mend this difficulty by treating the unfamiliar subject with all his "dreadful earnestness," as Jeffrey styled it, which laid bare the hypocrisies and falsehoods of society and religion, with a plain directness that revolted the suave critics of the day. The result was that editors grew frightened of him; they wanted light literature, not prophecy. It was in the autumn of 1830, when he was thirty-five, that Carlyle "set himself down passionately to work" at *Sartor*. He had already written a first draft of the clothes-philosophy, and submitted it to the London editors, only to meet with a firm rejection. He now expanded the Teufelsdröckh idea, using his own experience, treated somewhat mythically, as a framework, and thus pouring out the thoughts, the ideals, the hopes, the scorn and contempt, that had been surging in him all these years. He wrote tumultuously, and the book *Sartor Resartus*, the most inspiring of all his writings, still blazes with the fiery impulse that prompted it. Jeffrey lent him £50 to go up to London with the manuscript, and arrange for its publication, and this was the only occasion on which Carlyle condescended to accept help in money from anyone. Arrived in London, he offered *Sartor* to Murray, Longmans, Fraser, all in vain. The MS. went back to Scotland unsold. But Carlyle had not made the journey altogether in vain. Hitherto his only influential

friend had been Jeffrey; now he had formed a warm attachment for J. S. Mill, had become pleasantly friendly with Macvey Napier, who succeeded Jeffrey on the *Edinburgh*, Leigh Hunt, Hayward, Lytton Bulwer, and others; and had received many invitations to write articles or books, so long as they were not *Sartor*, nor too German. While in London he wrote the well-known essay *Characteristics* for the *Edinburgh* of Dec., 1831, and a review of Croker's *Johnson*, for Fraser, both of which made their impression. But he returned to his exile without a permanent post and still condemned, sorely against his will, to a life of literature. It was a red-letter day at Craigenputtock when the luminous countenance of Emerson, young and unknown, suddenly emerged from a Dumfries vehicle at their gate. The friendship thus strangely begun endured so long as they both lived. Carlyle was not doing much now, save reading voraciously; and idleness made him miserable. Editors were again cooling towards him and his extraordinary style. *Sartor*, indeed, was appearing in Fraser, and was near ruining the magazine: people took the author for a lunatic, and the editor for little better. No more articles were required; the "decease of book-selling" perplexed Carlyle, and he tried once more to escape from literary life by applying, unsuccessfully, for a professorship of astronomy at Edinburgh. It lay in Jeffrey's gift, and his rejection of Carlyle, whose oddity and revolutionary opinions alarmed him, cooled the friendship of the two men. It was now clear to Carlyle that literature was his fate. In the summer of 1834, therefore, he established himself in the house at Chelsea—5, Cheyne Row—which was henceforth to be his home. "His existence hitherto had been a prolonged battle; a man does not carry himself in such conflicts so wisely and warily that he can come out of them unscathed; and Carlyle carried scars from his wounds both on his mind and on his temper. He had stood aloof from parties, he had fought his way alone. He was fierce and uncompromising. To those who saw but the outside of him he appeared scornful, imperious, and arrogant. He was stern in his judgment of others. The sins of passion he could pardon, but the sins of insincerity or half-sincerity he could never pardon. He would not condescend to the conventional politeness which remove friction between man and man. He called things by their right names, "in a dialect edged with sarcasm." He was stubborn, proud, ungovernable in temper; he was unintentionally cruel to his wife, and sacrificed her to his work. Yet he had preserved the great qualities of his nature through all his struggles. "Born in the clouds and struck by the lightning," was Ruskin's comment on the contrasts in Carlyle's character, and the truth of it at once reveals itself. It is enough that Carlyle had a message to deliver, and delivered it

M.W.—8

truthfully, honestly, passionately; and that he never simulated enthusiasm. He had brought the *French Revolution*, in his mind, from his desert to London, and after a delay occasioned by Mill's accidental burning of the MS. of the first volume, this remarkable work was published in 1837. It had cost him even more misery than most of his writings. But at last it was done, and now at the age of forty Carlyle's genius was recognised, if it was not yet understood. The artistic but entirely original construction of this prose-poem gives it the first place among his works in finish, and the *Æschylean* spirit of the drama took the finer minds of the day by storm. The record of his life henceforward is not a tale of struggles and poverty, banishment and neglect, but the story of the writing of great books for a respectful, appreciative, and, at last, an enthusiastic audience. Carlyle became a thing he hated—a "lion;" he lectured for three successive years—*Heroes and Hero-worship* is the fruit of one course—and his rugged eloquence and fiery zeal kept his audiences spell-bound, and melted them to tears. But lecturing was distasteful to him, and he abandoned it. It is impossible to do more than record here the names of the works upon which he laboured, always with intense mental throes, and much corresponding irritability and morbid misery, during the next thirty years—years spent chiefly at Chelsea, with summer wanderings about Annandale, a couple of tours to Ireland, with a view to a book on Irish problems, which was never carried out, and two visits to Germany in quest of materials for *Frederick*. In 1839 he was thinking of a life of Cromwell. Five years he meditated over the subject—publishing meanwhile *Chartism* and *Past and Present* (1843)—collected materials, read through the dusty tracts of the period, visited the battle-fields, and wrote painfully, but at last clearly and triumphantly. The *Letters of Cromwell* came out in 1845, and were received, in spite of the want of order and other faults in the commentary, with enthusiasm. Carlyle had made the great Protector live in his pages; the true man, for good or ill, to be loved or to be hated, was there, and no greater contribution to the authentic history of England had ever been made. After the appearance of the book there followed a long period of idleness, during which Carlyle could not determine what subject to settle upon for his next work. Visits to Ireland, tours in Scotland and Wales, a good deal of society—especially at the house of Lord Ashburton, whose wife, as Lady Harriet Baring, had come to exercise a powerful influence over Carlyle—filled up the interval unprofitably, and with the usual effect of desultoriness on him: irritability and biliousness, the "sulphurous temper," and much domestic misery. The friendship—innocent enough, of course—with Lady Ashburton, cast a shade over his relations with his wife from

which they never wholly recovered, even after Lady Harriet's death. The *Latter-Day Pamphlets* (1850), with their fiery vehemence, and the curiously contrasted stillness and calm of the *Life of Sterling* (1851), belong to this period, and Carlyle also wrote now and then for the *Spectator* and *Examiner*, when his papers were not of such combustible matter as to "blow the bottoms out" of the periodicals. In 1851 he was thinking again of a great subject. Frederick of Prussia, though not personally attractive to him, seemed a fit matter for writing on; the king's honesty and clear-headedness, his uncompromising acceptance of facts, and the greatness of his achievements, commended him to Carlyle; and in 1852 he went to Germany to study the country of Frederick, and consult the libraries. In 1857, after six years of severe seclusion, the two first volumes came out, and at once took their place in Germany, as well as in England, as the one biography of Frederick the Great—the one authority to which even military students must turn for the true and vivid history of his campaigns. The rest of the work was not completed till 1865. It was his last book. He was now an old man of three-score years and ten, and a calamity was at hand which broke down his spirit as no mere age could do. In 1866 he went to Edinburgh to be installed in the office of Lord Rector of the University. He had delivered an inspired address to the students, and had retired to his own Annandale to recover from the effort, when news came of the appallingly sudden death of his wife in London. Carlyle never rallied from the blow. There is no sadder picture in literature than this of the old man, who had spent his life in the pursuit of the highest ideals, looking back over the forty years of his married life, and bewailing his blindness and unknowing selfishness towards the being whom he loved above any mortal thing. The years that remained were but labour and sorrow to him, and he wrote scarcely at all. A letter now and then to the *Times* on some question that stirred his soul—Governor Eyre, or the Franco-German War, a pamphlet on the tendencies of modern politics (*Shooting Niagara*)—were all he published. During his last years he suffered from a nervous affection of the right hand, which precluded any writing save by dictation, which he found unsuited to his turn of composition. So, peacefully, but mournfully, he drew to his end, surrounded by the ministrations of affectionate friends, revered by the whole nation, honoured by statesmen and crowned heads, till, on Feb. 4th, 1881, he fell asleep, and they took him to where he wished to lie, and buried him in the kirkyard of Ecclefechan, in the land of his fathers. "When the Devil's Advocate has said his worst against Carlyle, he leaves a figure still of unblemished integrity, purity, loftiness of purpose, and inflexible resolution to do right, as of a man living con-

sciously under his Maker's eye, and with his thoughts fixed on the account which he would have to render of his talents."

Froude, *Life of Carlyle*, 4 vols., 1882-4; *Reminiscences of Carlyle*; *Letters of Jane Welsh Carlyle*. [S. L.-P.]

* **Carnarvon**, THE RIGHT HON. HENRY H. M. HERBERT, FOURTH EARL OF (b. 1831), was educated at Eton and at Christ Church, Oxford, where he obtained a first-class in classics (1852). His maiden speech in the House of Lords was highly eulogised by Lord Derby, who, in 1859, nominated him High Steward of Oxford University. From 1858-9 he was Under-Secretary of State for the Colonies in Lord Derby's second administration; and in 1866 he became Secretary of State for the Colonies. Shortly after moving the second reading of a most important Bill, that for the Confederation of the British North American Provinces, he was compelled to resign (1867), together with Lord Cranborne, afterwards Marquis of Salisbury, on account of his dislike of the democratic tendencies of Lord Derby's Reform Bill. On the formation of Mr. Disraeli's Cabinet in 1874, he again became Secretary of the Colonies. With much zeal he set himself to work to carry out a scheme for the Confederation of the South African Colonies, and in 1877 carried a permissive Bill to that effect; but it was doomed to fail, partly owing to his agents' want of tact, partly owing to the centrifugal tendencies of the colonists themselves. Lord Carnarvon acquiesced in the annexation of the Transvaal by Sir Theophilus Shepstone. Towards the end of 1877 it became evident that he and Lord Derby (q.v.) were at variance with their colleagues as to the attitude that England should assume towards the Russo-Turkish War. A speech made at Dulverton by the Colonial Secretary, strongly advocating a policy of neutrality, called down upon him at a Cabinet council a strong rebuke from Lord Beaconsfield, but his proffered resignation was refused. On Jan. 24th, 1878, however, when the British fleet was ordered to enter the Dardanelles, he resigned his seat in the Cabinet. During his tenure of office he had carried a valuable measure for regulating the practice of vivisection. After the downfall of the Conservatives at the general election of 1880, he announced at a meeting of the Carlton Club that he intended to give his services to his party; and during the career of the Liberal administration, he was one of the most prominent members of the Opposition, distinguishing himself in particular during the Franchise agitation of the summer of 1884 by a number of speeches full of point and fire. In 1885 he became Lord Lieutenant of Ireland under Lord Salisbury, and at once inaugurated a liberal policy by endeavouring to rule without the help of the Crimes Act, which was allowed to lapse. During a tour made in the west of

Ireland, he had a most enthusiastic reception ; but the prevalence of boycotting and outrages in the south cast some doubt upon the wisdom of his reliance on ordinary law. He retired, owing to ill-health, in Jan., 1886. Lord Carnarvon is an energetic Freemason, and in 1878 was president of the Society of Antiquaries. He is the author of some papers on political subjects, two books of travel, and a scholarly translation of the *Agamemnon* of Æschylus (1879), and of Homer's *Odyssey* (1886).

Carné, Louis de (b. 1843, d. 1870), the explorer of the Cambodia river, son of the Comte de Carné, entered the French Ministry of Foreign Affairs in 1863, and in 1865 was appointed a member of a small expedition despatched by the Government in hopes of discovering a new high-road for commerce, from lower China to the French Colonies in Cochin-China. In spite of difficulties, the little party penetrated up the river Cambodia, through Siam and Anam to the borders of Burmah, after which, bending to the north-east, they crossed the watershed into the upper valley of the Yang-tse-Kiang. Carné returned to France at the end of 1868, but was gradually worn away by Asiatic fever. His account of his travels, with a memoir by his father, has been translated—*Travels in Indo-China and the Chinese Empire* (1872).

• **Carnot, LAZARE HIPPOLYTE** (b. 1801), French politician, is the son of the celebrated LAZARE NICOLAS MARGUERITE CARNOT (b. 1753, d. 1823), of the National Convention, whose history belongs rather to the last century than to this. For though he was War Minister for a short time in 1800, he refused to serve under the Empire, was proscribed at the Bourbon restoration, and spent the rest of his life in exile, so that his political fame rests entirely on his extraordinary services to the Republic as Minister of War between the years 1793 and 1797, when he was for a time proscribed. He also wrote some highly important works on mathematics and mechanical forces, such as his *Essay on Machines* (1783), *Reflections on the Metaphysics of the Infinitesimal Calculus* (1797), and *Geometry of Position* (1803). His son has in some degree inherited his political talent, especially for the investigation of social problems. Having returned to France on his father's death, he became a zealous adherent of the Saint-Simonists, but withdrew from their number when *Enfantin* developed the "organisation of adultery." In 1830 he published an *Exposé de la Doctrine Saint-Simonienne*, which was very widely read. From 1839 to 1848 he sat in the Chamber with the Extreme Left, and after the Revolution was appointed Minister of Education. During his few months of power, he instituted several beneficial reforms in his department. Returned in 1850 to the Legislative Assembly, he was

one of the three Republicans elected again after the *Coup d'État*; but refusing with General Cavaignac to take the oath, he was compelled to retire from politics till 1863, when he took his seat. Though defeated by Gambetta and Rochefort in 1869, he was returned after the revolution of 1870, and continued to vote with the Extreme Left till 1875, when he was elected life-senator. His most important works are the memoirs of his father (1861-4), and *La Révolution Française* (1869-72).

For the elder Carnot, see the Memoirs mentioned above, and D. F. Arago, *Biographie de Carnot*.

Caroline, AMELIA AUGUSTA (b. 1768, d. 1821), the wife of George IV. of Great Britain, was the second daughter of Charles William, Duke of Brunswick-Wolfenbüttel. Her education was not such as would enable her to support with dignity a position of influence; and when in 1795 she was married, from considerations of state, to the Prince of Wales, she promptly inspired her husband with feelings of the utmost aversion. After the birth of their daughter, the Princess Charlotte, they separated, and the Princess resided at Blackheath, where she was the object of much popular sympathy. Reports as to her conduct necessitated the appointment of a Commission which acquitted her of serious faults, but censured her for various improprieties. In 1814 she left England, and passed the ensuing years on the Continent, where she fell into the hands of an Italian family named Bergami, until the accession of her husband, when she returned to London. Infuriated at the insults put upon her, the omission of her name from the Liturgy, and the order that she should not be recognised at any foreign court, she refused all compromise, and demanded her full rights. As a reply, a Bill to dissolve her marriage with the king was introduced in the House of Lords. The evidence was produced on Aug. 17th, 1820, when Brougham and Denham, the Queen's Counsel, with admirable courage, overthrew most of the charges, and, to the immense delight of the nation, vindicated her fair fame. On Nov. 10th, the Bill, which had only passed its third reading by a majority of nine, was withdrawn by Lord Liverpool, "considering the state of public feeling." The queen was allowed her title, and a pension, which naturally caused some change of popular feeling, but on the Coronation Day, July 11th, 1821, she was refused admittance to Westminster Hall. Mortification at this rebuff, and the tension of mind she had long undergone, hastened her death, which took place on Aug. 7th.

Annual Register, 1820 and 1821; *Hansard*, vol. iii.; Martineau, *History of the Peace*, vol. i.; Brougham's Works, vols. ix. and x.; *The Greenville Memoirs*; T. Aske, *Memoirs of Princess Caroline*. [L. C. S.]

* **Carpenter, ALFRED, M.D.** (b. 1825), authority on sanitary science, was born at Rothwell, Northamptonshire, and entered St. Thomas's Hospital in 1847. In 1852 he established himself in practice at Croydon, where he has since resided, becoming medical adviser to Archbishops Sumner, Langley, Tait, and Benson, in turn. Not to mention his useful work in connection with several local societies, he was in 1879 elected president of the Council of the Medical Association, and in 1881 was a member of the commission to inquire into the London small-pox and fever hospitals. Of his numerous and valuable works connected with his special subject of sanitary reform, the following may be noticed:—*Hints on House Drainage* (1866), *Alcoholic Drinks as Diet, as Medicines, and as Poisons*, *The First Principles of Sanitary Work*, *Fogs and London Smoke*, read before the Society of Arts in 1880. He has twice been a candidate for Parliament.

Carpenter, MARY (b. 1807, d. 1877), philanthropist, was the daughter of Dr. Lant Carpenter. In 1817 he moved from Exeter to Bristol, where he took pupils, and Mary studied with them, learning Latin, Greek, mathematics, and a good deal of science. In 1827 she became a governess, and in 1829 helped her mother and sister in keeping a girls' school. In 1833 the visit to Bristol of the Hindoo reformer, the Rajah Rammohun-Roy, of whom she afterwards published a memoir (1866), filled her mind with interest in the regeneration of India, while that of Dr. Zuckermann, of Canada, drew her attention to the care of destitute children, for whom she started a working and visiting society. In 1846 Miss Carpenter opened a ragged-school, which she gradually improved and enlarged, and in 1852 she removed it to Kingswood, where it was a mixed school; but in 1854 the girls were taken to Red Lodge, under her own supervision. In 1851 Miss Carpenter published a book on reformatory schools, suggesting conferences of workers, one of which met in Birmingham the same year. Her exertions and her book on *Juvenile Delinquents* (1853) led in no small degree to the passing of the Youthful Offenders' Bill. Miss Carpenter had long taken a great interest in India, and in 1866 she visited that country, and there instituted schools, especially for women, and also worked at prison reform, and many other philanthropic objects. In 1873 she visited America, where she gave addresses on India, education, reformatories, etc. In 1876 she revisited India, where she confirmed her earlier works and instituted new ones. She lectured in England up to the year of her death, and wrote some poems, and numerous pamphlets and lectures on her favourite topics.

J. Esther Carpenter, *Life and Work of Mary Carpenter* (1885).

Carpenter, THE REV. LANT (b. 1780, d. 1840), Unitarian divine, was minister of

the Unitarian Church at Exeter from 1805 to 1817, and at Bristol from 1817 till he was drowned between Naples and Leghorn. Of his numerous theological works we may mention *The Geography of the New Testament*, *Unitarianism*, *The Doctrine of the Gospel*, and *Apostolical Harmony of the Gospels* (1838). For many years he was one of the most conspicuous figures in the West of England as an enthusiastic philanthropist, an influential schoolmaster, and an enlightened controversialist on behalf of the broad truths of Christianity.

Memoir, edited by his son, E. L. Carpenter (1842).

Carpenter, WILLIAM BENJAMIN (b. 1813, d. 1885), an English biologist, was a native of Exeter, and the son of the Rev. Lant Carpenter (q.v.). He was educated at Bristol. Here also he began the study of medicine, which he afterwards continued in London and Edinburgh. In the latter city he was an active member, and afterwards president of the Royal Physical Society, and in 1837, as president of the Royal Medical Society, delivered the centenary address on the voluntary and instinctive action of living beings, in which were embodied many of those ideas on the nervous system which have since been associated with his name. He also won the students' prize for the essay *On the Difference of the Laws Regulating Vital and Physical Phenomena*. In 1839 he graduated M.D., but for two years previously he had been lecturer on medical jurisprudence in the Bristol Medical School, and in 1838 had published his *General and Comparative Physiology*. In 1844 he was appointed Fullerian professor of physiology to the Royal Institution, and was duly elected a fellow of the Royal Society. In 1845 he began to lecture on physiology at the London Medical School, and was appointed examiner in physiology in the University of London, and Swiney lecturer on geology in the British Museum, a post reserved for medical graduates of Edinburgh University. To these offices he added that of the editorship of the conjoint *British and Foreign Medical Review and the Medico-Chirurgical Review*; in 1849 that of professor of medical jurisprudence in University College, and in 1852 principal of University Hall. Meantime, he was busily occupied in literary work, editing an encyclopædia, and writing so much of it that treatises on physics, clockwork, botany, and zoology, were due to his own pen, while the medical and scientific journals teemed with his papers. Resigning his editorial duties, his Chair, and his examinership, he was elected Registrar of the University of London, to the duties of which he devoted most of his time. Original researches, more especially on the Foraminifera, occupied his leisure, and in 1868 he persuaded the Royal Society, of which he was a vice-president, to apply to the

Government for use of a vessel to take deep-sea dredging, and aid in marine biological investigations. For these purposes three voyages were made to the North Atlantic and Mediterranean by Dr. Carpenter and his colleagues. These investigations proved so valuable, that the *Challenger* expedition was a direct result of the interest awakened by them. In 1871 he was elected president of the British Association for the Bristol meeting, and received the degree of LL.D. from the University of Edinburgh. Four years later he was made C.B. In 1879 he resigned the registrarship of the University of London, visiting and lecturing in the United States in 1882. Dr. Carpenter's works have done much to diffuse a correct knowledge of physiology. Among the chief of them are his *Principles of General and Comparative Physiology*, *Principles of Human Physiology*, *Principles of Mental Physiology*, *The Microscope and its Revelations*, *Introduction to the Study of the Foraminifera*, and numerous papers in the *Cyclopædia of Anatomy and Physiology*, *The Quarterly Journal of the Geological Society*, *The Annals of Natural History*, *The Philosophical Transactions*, *The Reports of the British Association*, etc. Dr. Carpenter was the brother of Miss Mary Carpenter, and two of his sons have followed their father's footsteps. [R. B.]

* **Carpenter**, THE RIGHT REV. WILLIAM BOYD (b. 1842), Bishop of Ripon, educated at St. Catherine's College, Cambridge, after occupying various curacies became vicar of St. James's, Holloway, in 1870, vicar of Christ Church, Lancaster Gate, in 1879, and Canon of Windsor. He was consecrated Bishop of Ripon in July, 1884. He is the author of *The Prophets of Christendom* (1876), *Narcissus, a Tale of Early Christian Times* (1878), *The District Visitor's Companion* (1881), *My Bible* (1884), and *Truth in Tale* (1885). He has shown himself liberal in his ecclesiastical views.

Carrel, NICOLAS ARMAND (b. 1800, d. 1836), French democrat and journalist, entered the army in youth; but having volunteered in the ranks of the Spanish Liberals at the rising of 1823, was taken prisoner, barely escaped capital punishment, and found himself thrown on his own resources. After being secretary to the historian Augustin Thierry for a time, he turned to journalism, and also produced some eloquent historical works of his own, especially a *History of the Counter-Revolution in England* (1828). Shortly before the revolution of July, Carrel, in partnership with M. Thiers, started the *National*, as a free-speaking organ for the Democratic Opposition. Carrel was the leading spirit in the undertaking, Thiers acting only as a check of moderation, and surrendering his share after the revolution, in which Carrel played a leading part, both at the barricades and in the press. Under Louis

Philippe the *National* became the most important organ of the Republican Opposition. Carrel was for a time imprisoned, and was finally killed in a duel with an editor of the opposite party.

Carrera, RAFAEL (b. 1814, d. 1865), President of Guatemala, was of mixed Indian and negro extraction, and, having taken part in the revolution of 1837, came by degrees to be regarded as the leader of the popular movement against the Federal Government. In 1839 he made himself master of Guatemala, and in the next year ended the war by the defeat of General Morasan. In 1847 he declared Guatemala an independent republic, and was elected first president, an office he continued to hold till death, using his power with justice and moderation.

* **Carroll**, LEWIS, is the pseudonym of the REV. CHARLES LUTWIDGE DODGSON (b. circa 1833), humourist, who took his degree in 1854 from Christ Church, Oxford, where he has since become senior student and tutor, giving lectures in mathematics. In 1865 he published *Alice's Adventures in Wonderland*, a humorous fairy story, on the common surroundings of child-life, that is still eagerly read in every nursery and drawing-room of England. This was succeeded, in 1869, by a collection of humorous poems and parodies, called *Phantasmagoria*; and, in 1872, by *Through the Looking-Glass*, a continuation of *Alice*, and equally popular. *The Hunting of the Snark*, the longest of his humorous poems, was published in 1876, and was followed by two further collections, *Doublets* (1879), and *Rhyme ? and Reason ?* (1883). Mr. Dodgson is also the author of several mathematical textbooks, of which *Euclid and his Modern Rivals* (1879) is the most amusing, with the exception of *A Tangled Tale* (1886), his latest production of mingled humour and science.

Cary, HENRY FRANCIS (b. 1772, d. 1844), poet and translator, was born at Birmingham, and educated at Christ Church, Oxford. Shortly after he had taken orders he was presented with the living of Abbot's Bromley, Staffordshire. While at Oxford he had published several sonnets and odes, and had shown himself a devoted student of literature, both ancient and modern. In 1805 appeared his translation of Dante's *Inferno*, and, in 1814, he completed the remaining portions of the *Divina Commedia*. This work, which shows unwearied diligence, deep learning, and admirable taste and skill, remained unregarded for several years, until Coleridge discovered its merits, and it has since taken its place among standard English works. Mr. Cary wrote besides a translation of the *Birds* of Aristophanes and of the odes of Pindar, continued Johnson's *Lives of the English Poets*, and edited the poetical works of Pope, Cowper, Milton, Thompson, and Young. From 1826

to 1838 he held the post of assistant librarian in the British Museum.

Memoir of H. F. Cary, by his son Henry Cary (1847).

* **Caselli**, GIOVANNI (b. 1815), Italian electrician, received the elements of his knowledge of physics from Leopoldo Nobili, whose biography he published in 1837. In 1836 he became a deacon of the church, and afterwards abbé; but having been banished from Parma for his share in the political disturbances of 1848, he retired to Florence, and devoted himself entirely to the study of electricity. In 1856 he made the important invention of autographic telegraphy. His system was adopted on several lines of wire by the French Government in 1863, and the Russian in 1865. He also made discoveries in the use of electricity as a motor force.

Cashmere, THE MAHARAJAS OF:—(1) GHOLAB SINGH (d. 1860) began life as a cavalry soldier, in the service of Runjeet Singh, ruler of the Punjab. For his services he was presented with the principality of Jamu, and proceeded to increase his dominions under the pretence of serving the State of Lahore, until they included the whole of Cashmere. In 1846 he secured his dominions by the treaty of Lahore, under which he surrendered his territories to the British to receive them back again as a tributary sovereign. In virtue of this agreement he sent a contingent of troops to the aid of the British during the mutiny. (2) * Runbeer Singh (b. 1832), on succeeding his father, co-operated zealously with the English in the final suppression of the mutiny, and received in return additional guarantees. At the great durbar held at Delhi on the occasion of the visit of the Prince of Wales to India, he was gazetted an English general, and created G.C.S.I., and Councillor of the Empress. At first he was reported to be an enlightened ruler; but an unfavourable impression was created by his supineness during the famine in Cashmere from 1877-9, which impression was not removed by his subsequent conduct.

Casimir-Périer, AUGUSTE CASIMIR VICTOR LAURENT (b. 1811, d. 1876), French statesman, was the eldest son of the celebrated minister, CASIMIR PÉRIER [PÉRIER], whose Christian name he was permitted in 1874 to attach to his own surname. Having early entered the diplomatic service, and visited several European courts, he was returned to the Legislative Assembly in 1849; but on the establishment of the Second Empire retired into private life, devoting himself principally to the science of agriculture. Having suffered unjust imprisonment in Germany during the war of 1870, he was returned to the Chamber at the election of February, 1871, and gave valuable advice in the preparation of the extraordinary budget of that year. In October he became Minister of the Interior under M. Thiers. He showed himself

a determined opponent to all schemes of imperial or monarchical restoration, giving unqualified support to M. Thiers, though he resigned office in February, 1872. He shared his patron's fall in 1873, but having succeeded in the following year in carrying a formal declaration of Republican Constitution through the Chamber, he was elected life-senator at the end of 1875.

* **Cassagnac**, PAUL ADOLPHE MARIE PROSPER DE GRANIER DE (b. 1843), journalist and Bonapartist politician, is the son of ADOLPHE BERNARD GRANIER DE CASSAGNAC (b. 1808, d. 1880), a redoubtable journalist in the Imperial cause, editor of the *Pays* (1866), and founder of the *Drapeau* after the fall of the Empire. Paul had already distinguished himself by violent Conservatism and skill as a duellist, when his father associated him with himself in the direction of the *Pays* (1866), and he quickly became editor and duellist for that journal, the most celebrated of his encounters at this time being with Gustave Flourens and Henri de Rochefort. These forcible arguments in favour of the reigning dynasty received the hearty support of the emperor and his wife. On the outbreak of the Franco-German War, Paul volunteered in a Zouave regiment, was captured at Sedan, and imprisoned for eight months in Silesia. He did not return to Paris till 1872, when the *Pays* was once more permitted to appear. Acquitted in several prosecutions for his violent abuse of the Government, he was returned to the Chamber in 1876, and at once began to further the interests of his cause by insolence and obstruction. A Government prosecution in 1877 led to a sentence of imprisonment, but the term was shortened by Marshal MacMahon, and at the general election Cassagnac was again returned, declaring that his one object in life was to slay the Republic. During the autumn he vainly urged the marshal to a *coup d'état*. Unseated in the following year, he was again returned in 1879, only to renew his imperialistic manoeuvres with greater turbulence. The Prince Imperial's death seemed likely for a moment to put a happy end to his intrigues, but after some hesitation he gave his support to Prince Jérôme, in spite of the pitiless abuse of earlier years. He has since transferred his allegiance to Jérôme's son, Victor. In 1875 he announced his intention of abandoning the duel as a political instrument; but at the re-election of M. Grévy to the presidency in the last week of 1885 his language still breathed slaughter.

Cassell, JOHN (b. 1817, d. 1865), temperance reformer and publisher, was a native of Manchester, and came of parents in a very humble position. When little more than a child he was compelled, in consequence of the ill-health of his father, to toil in one of the

Manchester tape factories. He afterwards, when "in his teens," obtained employment in a carpenter's shop, and from this circumstance when he began his temperance work he was known as the "Manchester Carpenter." John Cassell, when about eighteen years of age, took the pledge. He came to London, and it was not long before he obtained an appointment as travelling lecturer for one of the temperance organisations. On marrying—he married a Miss Abbot, of Alford, in Lincolnshire, who was possessed of a small fortune—Mr. Cassell commenced business as a tea and coffee merchant, but though he abandoned the career of professional temperance lecturer, he remained to the end a warm friend of temperance. His zeal led him to commence publishing. He got temperance tracts printed, and at length he started a paper called the *Tetotal Times*. Thus began John Cassell's career as a publisher, and thus were laid the foundations of the house in La Belle Sauvage Yard, Ludgate Hill. Mr. Cassell was a great projector, and publication now followed on publication; such as the *Tetotal Essayist*, the *Standard of Freedom*, the *Working Man's Friend*, the *Popular Educator*, the *Popular Biblical Educator*, *Cassell's Illustrated Family Paper*, etc., etc. But of the many works which Mr. Cassell projected and published, that which he himself always regarded as the most important was *Cassell's Illustrated Family Bible*. Of the *Popular Educator*, which was first published in 1852, more than 1,000,000 copies have been sold. In 1855 Mr. Cassell entered into partnership with Messrs. Petter and Galpin. More than once he visited America, and wrote a series of papers on *America as it is*, which appeared in the *Family Paper* in 1861. Mr. Cassell took an active part in the agitation for the repeal of the duty on paper. He was a friend of Lord Brougham. [S. A. S.]

* **Castelar**, EMILIO (b. 1832), Spanish statesman, is the son of an exchange broker, who was frequently persecuted by the Spanish Government for his Liberal sympathies. After the father's death in 1839, Castelar went to Madrid, and there began to try his strength in newspapers and reviews. A novel called *Ernesto* (1855) was his most successful production. In the previous year he became known for the first time as an orator of wonderful eloquence and impact by a speech in the Teatro del Oriente against the corruption of the court and the succession of military dictatorships. As professor of history and philosophy in the University of Madrid, he delivered a series of lectures which have been republished under the title of *Civilisation During the First Five Centuries of Christendom*. Written from a Liberal Catholic standpoint, they are not particularly deep, but contain much splendid rhetoric. *La Formula del Progreso* contains a sketch of democratic

principles on the usual lines of continental radicalism. As director of the *Democracia* he continued to thunder against the Government, and was in consequence suspended from his professorship. His articles were republished as *Questiones Politicas y Sociales*, and it is easy to understand why the Government, after the outbreak of the abortive insurrection of 1868, should have condemned him to death. He fled to Paris, and there supported himself as a publicist. Among his works of this time are some *Likenesses*, including a bad sketch of Lord Byron, *A Year in Paris*, and some splendid descriptions of a visit to Italy, *Recuerdos de Italia*. On the outbreak of the revolution of 1868, he returned to Spain, and advocated the cause of the Federal, as opposed to the Unitary Republic in a series of magnificent orations (published in 1871). It was, however, of no avail, and the Spanish crown, after having set the French and German War ablaze, was presented to Amadeus of Savoy. "Glass, with care," was Castelar's verdict on the new dynasty, and though he was a bitter opponent of the wilder extravagances of the Socialist International Society, he nevertheless dragged down an extremely reasonable form of monarchy without having anything to put up in its stead. In February, 1873, Amadeus announced his resignation, and it was received by Castelar in dignified terms. Having triumphed with the aid of the *Intransigentes*, the first months of the Republican ministry were full of incredible confusion. Castelar drew up a Constitution, but it was not accepted by the Cortes. In the north the Carlist War was raging; elsewhere, particularly in Valencia, there were Socialist outbreaks. The fall of the Figueras ministry, in which Castelar held the portfolio for Foreign Affairs, was followed by that of two others, until in September, 1873, the Cortes conferred the dictatorship on Castelar. Until Feb. 2nd of the following year he struggled vigorously with the impossible, with the "red demagogy of Socialism and the white demagogy of Carlism," and an insurrection in Cuba. But Carthage, the stronghold of the Reds, did not fall, and no headway was made against the generals of Don Carlos. Having resigned his dictatorship, he demanded a vote of confidence, which was rejected. General Pavia, as captain-general of Madrid, immediately issued a pronunciamiento, and he followed up this act of decision by dissolving the Cortes, and establishing a provisional Government, with Serrano at its head. Castelar retired to France, and there occupied himself with literature. To this period of exile belong some novels, a treatise on the Eastern Question, a pamphlet against Caesarism, *El Ocaso de la Libertad*, and a *History of the Republican Movement in Europe* (9 vols.). This last is, like all of Castelar's writings, very

diffuse, and was hastily republished from the American periodical in which it first appeared. It abounds, however, in passages of rare suggestiveness, and in powerful epigram. In 1876 he returned to Spain, by the permission of King Alfonso, whom, indeed, his own failure had made the "inevitable," and succeeded in obtaining a seat in the Cortes. No attempt was made by him to conceal his opinions, and in 1883 and 1884 he delivered important speeches in favour of the Constitution of 1869 and non-hereditary monarchy. Nevertheless, conscious of the weakness of the Republican cause, he refrained from putting himself forward during the crisis which in 1885 ensued upon the death of the King Alfonso.

Mr. Grant Duff's articles on Emilio Castelar in the *Fortnightly Review*, vols. xxiii. and xxiv.

Castlereagh. ROBERT STEWART, VISCOUNT, Second Marquis of Londonderry (b. 1769, d. 1822), statesman, was the son of Robert, First Marquis of Londonderry, was born at Mount Stewart, Co. Down, was educated at Armagh, and St. John's College, Cambridge, and entered political life as Chief Secretary for Ireland, 1796. His name has always been connected with the Irish Rebellion of 1798, and he has been made answerable for many of the atrocities which unhappily accompanied the suppression of it. But in reality Lord Castlereagh, so far from being answerable for them, did all in his power to prevent them, and had his advice been listened to they would not have occurred. The English Government—or rather the English people—would not believe for a long time that Ireland was in real danger. The Irish Protestants wished to have the restoration of order left entirely in their own hands. The natural result of these combined causes was, that the native yeomanry and militia were left to do the work which should have been confided to regular soldiers, with the consequences which may easily be imagined, and with which we are only too familiar. After the Act of Union, which was greatly assisted by Lord Castlereagh, who shared the opinions of Mr. Pitt on the Roman Catholic question, the Irish Secretary became President of the Board of Control, and from 1805 to the death of Pitt, and from April, 1807, to September, 1809, was Secretary for War, an office which he did not fill to the satisfaction of Mr. Canning, who was now Foreign Secretary, and which he finally quitted in consequence of a difference of opinion with that statesman regarding the Walcheren Expedition, ending in a duel on Putney Heath, and the retirement of Mr. Canning from official life for a period of seven years. In 1812 Lord Castlereagh became Foreign Secretary, a post which he filled to his death, during the whole of which time he was the representative of British and foreign policy on the

Continent. The Duke of Wellington was in France, and Mr. Canning, though he disapproved of the Vienna settlement, does not seem to have differed materially from Lord Castlereagh on the various negotiations which followed it. The foreign policy of Lord Castlereagh was based on what had been the traditional foreign policy of England since the Revolution of 1688—a system of German alliances against our natural enemies, the French. The Tories had several times, in the course of the eighteenth century, protested against it, but the French Revolution compelled Mr. Pitt to resume it; and Lord Castlereagh only carried out during the twelve years he was at the Foreign Office the system which he found already a custom, and which had been originally created by the Whigs. With the new doctrine, and with the monarchical league formed by the military Powers for suppressing popular movements, he would have nothing to do. At the three congresses of Troppau, Layback and Verona, in 1820-1-2, he protested against it more temperately perhaps, but not less firmly, than Mr. Canning; and though it has been said that he stated one thing to the English Parliament, and another in his confidential communications with the Allied Sovereigns, no evidence has ever been adduced to prove it. Lord Castlereagh, when he became Foreign Minister in 1812, became also the leader of the House of Commons, a post which he declined to give up to Mr. Canning, though he would have allowed him to take the Foreign Office. In this position he became more immediately answerable for the domestic policy of the Government; and the repressive measures introduced by Lord Liverpool for the protection of order were represented by the Whigs as only another branch of the Continental conspiracy against liberty, in which Lord Castlereagh was supposed to be an accomplice. These responsibilities, and the grief which he felt at the severance of England from her old allies, the necessary consequence of the retrograde policy which they had adopted, preyed upon his mind so heavily as to unhinge his reason. His manner became strange, and he was closely watched. But on Aug. 12th, 1822, he obtained possession of a penknife, with which he cut his throat, and almost immediately expired. Lord Castlereagh, by the death of his father, had become Marquis of Londonderry a little while before his death, but he will always be best known by the second title, which he bore so long in the House of Commons. Lord Castlereagh was a man of great sense and courage, of a remarkably fine presence, and commanding manner. He was not a very good speaker, and his mind, no doubt, was cast in an anti-popular mould. But he was not illiberal. He was in favour of Roman Catholic Emancipation. And he was certainly one among the ablest of the knot of statesmen who governed

England between the death of Mr. Pitt and the death of George IV.

Memoir and Correspondence of Viscount Castlereagh, edited by his brother, 12 vols. (1848-53).
[T. E. K.]

Catalani, ANGELICA (b. 1782, d. 1849), a famous Italian singer, was the daughter of a goldsmith. In 1794 she was sent to a convent near Rome for education, where her fine voice attracted many listeners to the services. In 1797, her father being ruined, she studied music professionally, and made a successful *début* at La Scala, in Milan, in 1801. The success was repeated at Rome in 1802, and in the chief Italian cities. She appeared in London in 1807, and stayed seven years in England, after which she became directress of the Italian Opera in Paris. But in this capacity she was not successful, and in 1815 she began her tours through the principal cities of Europe, arousing the utmost enthusiasm wherever she appeared. Her voice possessed extraordinary volume, compass, and flexibility; but it had been ill-trained, and she began to lose it as early as 1817, though she continued to sing till 1830, when she retired to Florence, where she founded a school of music for the instruction of young girls on her own estate. Mlle. Catalani married a Frenchman called Valabrégue, but was always known by her maiden name.

Cathcart, HON. SIR GEORGE (b. 1790, d. 1854), a distinguished English general, was the third son of the first Earl of Cathcart. He entered the army in 1810, and two years later accompanied his father to St. Petersburg as aide-de-camp. He served in the campaigns of 1813 and 1814, and was present at the battles of Lützen, Dresden, and Leipzig. Sir George Cathcart afterwards published a volume of commentaries on these campaigns. After the escape of Napoleon from the Isle of Elba, Sir George was appointed aide-de-camp to the Duke of Wellington, whom he attended at Quatre-Bras and Waterloo. He subsequently served in Bermuda, Jamaica, and Canada, and in 1852 was appointed governor at the Cape. Upon the outbreak of the Crimean War the command of the fourth division was given to him. At the battle of Inkermann he led a band of soldiers into the valley, thinking he saw a favourable opportunity for attacking the Russians in flank. But the enormous forces of the enemy closed around him, and before he could withdraw his men he was mortally wounded. His eldest brother, Charles Murray, second Earl Cathcart, was also a brave and distinguished soldier. He fought at Salamanca and Vittoria, and commanded a cavalry regiment at Waterloo. He was Governor of Canada in 1845 and 1846.

Cathcart, WILLIAM SHAW, FIRST EARL OF (b. 1755, d. 1843), an English general, took
M.W.—8*

part in the American War of Independence, during which he acted as Quartermaster-General (1779), and after serving with considerable distinction in Germany and the Netherlands during the earlier years of the French War, was entrusted with the command of the expedition to the Baltic in 1807. In September he ordered the bombardment of Copenhagen, and after the capitulation of the city and the surrender of the Danish fleet he was raised to the peerage, and having acted as commander of the forces in Scotland, became an earl in 1814. He was for many years English ambassador in St. Petersburg.

Cattermole, GEORGE (b. 1800, d. 1868), historical painter in water colours, was born at Dickleburgh, near Diss, and became a member of the Water Colour Society in 1833, from which, however, he withdrew in 1856, after contributing several historical paintings to the exhibitions. But it is probably as an illustrator of books, annals, and descriptive guides, that his name is now best remembered. He illustrated the *Calendar of Nature* (1837); *Scotland Delimited* (1847); *The Baronial Halls of England* (1848); *Evenings at Haddon Hall* (1849); and *The Art Album* (1861). His *Waverley* designs were also much admired at one time.

Cauchy, AUGUSTIN LOUIS (b. 1789, d. 1857), French mathematician, was educated at the École Polytechnique, and practised for a time as an engineer. In 1815 he published his essay *Sur la Théorie des Ondes*, which afterwards gave rise to the undulatory theory of light. Between 1820 and 1830 he published a series of highly important works, as well as several excellent text-books for his pupils in the Academy of Sciences. We may mention, *Sur l'Application du Calcul des Résidus à la Solution des Problèmes de Physique mathématique* (1827); and *Sur la Théorie des Nombres* (1830). Refusing to serve under an Orleanist dynasty, he accepted an appointment in Turin from the King of Sardinia, and afterwards lived in Prague as tutor to the son of Charles X. In 1837 he published his *Mémoire sur la Dispersion de la Lumière*. In the following year he returned to Paris, and, though debarred from official position, continued his work there with uninterrupted earnestness, embracing every branch of mathematics, but devoting especial attention to the integral calculus.

Cavagnari, MAJOR SIR PIERRE LOUIS NAPOLEON, K.C.B., C.S.I. (b. 1841, d. 1879), was a native of Stenay, department of the Meuse, France. His father had served under the Emperor Napoleon. In 1851 he was entered at Christ's Hospital, and after six years there he passed through the course at Addiscombe, from whence he passed direct as cadet into the H.E.I.C.S. In 1858 he joined the 1st Bengal Fusiliers, and served with them throughout the Oude campaign, gaining the Indian Mutiny medal. He was appointed to

the Staff Corps in 1861, and gazetted assistant-commissioner in the Punjab. He held political charge of the Kohat district from 1866 to 1877. He was appointed deputy commissioner of Peshawur, and served as chief political officer in several hill expeditions from 1869 to 1878. In 1878 he was appointed to accompany Sir N. Chamberlain's mission to the Ameers Shere Ali, and took a prominent part in all the Afghan negotiations, showing much tact, courage, and knowledge of the Oriental character. This mission not being allowed to pass to the Ameers, military operations began. In July, 1879, the new Ameers, Yakub Khan, having agreed, under the treaty of Gundamak, to receive a British Resident, Sir L. Cavagnari was sent on an embassy to Cabul, with a very small escort. From the first his position was one of great danger, but Cavagnari hoped for the best. Suddenly, on Sept. 3rd, the British Residency was surrounded by a mob, consisting partly of mutinous soldiers, but chiefly of religious fanatics, and after a brave resistance Cavagnari and all his companions were massacred.

Kally Prosona Dey, *Life and Career of Major Sir L. Cavagnari*.

Cavaignac, LOUIS EUGÈNE (b. 1802, d. 1857), French politician, was sprung of a republican stock. His military reputation was acquired in Algeria, where, in 1844, he was appointed general of brigade. On the outbreak of the revolution of 1848, he was appointed by the Provisional Government Governor-General of Algeria; but, having been elected to the National Assembly, returned to Paris, and was called upon to crush the socialist movement that was rapidly developing itself. First as Minister of War, then as Dictator, he slowly collected a body of regulars, and then drove the insurgents from the barricades in a series of bloody encounters, between June 23rd and the 26th. He saved the state for a further decline. In the election for President of the Republic, Louis Napoleon (q.v.) triumphed over Cavaignac by over four million votes; he was a helpless spectator of the *Coup d'Etat* of Dec. 2nd, 1851, and afterwards retired into private life.

Cave, THE RIGHT HON. STEPHEN (b. 1820, d. 1880), was educated at Harrow and at Balliol College, Oxford, taking his B.A. degree in 1843. In 1859 he was elected for Shoreham, which borough he represented as a Conservative until his death. He was interested in commercial enterprises, and was at one time director of the Bank of England. An energetic member of the House of Commons, he took part in various questions of philanthropic and legal reform, particularly in the abolition of the slave trade. From 1866 to 1868 he was Vice-President of the Board of Trade, and in 1874 was appointed Judge-Advocate-General and Paymaster-General. In 1875 he

was sent by the Government on a mission to Cairo, to investigate the condition of Egyptian finance. His able report, published in the following year, was to the effect that, with rigorous retrenchment, the case of Egypt was not absolutely hopeless; but it made little or no impression upon the Khedive Ismail, and cannot be said to have solved the chronic difficulty. Mr. Cave was the author of several brochures on questions of international law and prison reform.

Cavendish, HENRY (b. 1731, d. 1810), a distinguished chemist and philosopher, son of Lord Charles Cavendish, and nephew of the third Duke of Devonshire, was born at Nice. He studied at Cambridge, and subsequently devoted his whole life to scientific investigation. He was a man of great wealth, but lived in the utmost seclusion, his servants being ordered to keep out of his sight. He may be regarded almost as the founder of pneumatic chemistry. In 1760 he discovered the extreme levity of hydrogen—then known as inflammable air—and thus paved the way for balloon experiments. He was the discoverer of the composition of water—though it is right here to state that a similar claim is made on behalf of Watt—and of nitric acid; he also proved that the electric spark will generate nitric acid from common air. He measured the density of the earth by direct comparison with balls of lead, and improved the modes of dividing astronomical instruments. Cavendish was remarkable for the accuracy and precision of his experimental discoveries, though the apparatus he employed was of the simplest and least expensive character. His shyness amounted almost to a disease. He, however, attended the meetings of the Royal Society, but at Sir Joseph Banks's *soirées* he would stand on the landing afraid to open the door and face the people within; nor, it is said, could he open it until he heard someone ascending the stairs, when, to escape the terror behind, he was compelled to face that in front. His orders to his housekeeper were left on the hall table. If he had friends to dinner the invariable dish was a boiled leg of mutton; if one leg was insufficient for the guests, there were two. When his banker waited upon him to say that £80,000 had accumulated to his credit, he was abruptly told that if the money incommenced his man of business it would be removed. He would never allow his portrait to be taken, and was so punctilious in his habits, that he would drive from Clapham to borrow a volume from his own large library in his London house, and leave the librarian a receipt for it, just as if he had been one of the scientific men to whom he gave the use of his collection. Any attempt to draw him into conversation was useless. "The way to talk to Cavendish," Dr. Wollaston declared, "is never to look at him, but

to talk as it were into vacancy, and then it is not unlikely you may set him going." He died possessed of more than £1,157,000, which he left to the heir whom he would only see at stated intervals. To the chagrin of the learned world, the richest *savant* of the age, who had spent his life among retorts and batteries, never even mentioned science in his will. He has sometimes been called the "Newton of Chemistry." But with the exception of a few exquisitely finished papers in the *Philosophical Transactions*, between 1766 and 1809, there is not much literary support for this title. "There was nothing earnest, enthusiastic, heroic, or chivalrous in the nature of Cavendish," writes his biographer, Dr. George Wilson, "and as little was there anything mean, grovelling, or ignoble. He was almost passionless. All that needed for its apprehension more than pure intellect, or required the exercise of fancy, imagination, affection, or faith, was distasteful to Cavendish. An intellectual head thinking, a pair of wonderfully acute eyes observing, and a pair of very skilful hands experimenting, or recording, are all that I realise in reading his memorials." The "Cavendish Society" bears his name.

G. Wilson, *The Life of the Hon. H. Cavendish* (1848). [R. B.]

Cavendish, LORD FREDERICK CHARLES (b. 1836, d. 1882), was the second son of the Duke of Devonshire, and was educated at Trinity College, Cambridge. He became in 1859 private secretary to Lord Granville, and in 1865 was returned for the West Riding of Yorkshire, a constituency which he represented up to his death. He was Lord of the Treasury (1873-4), and in 1880 was nominated Financial Secretary of the Treasury. On the resignation of Mr. W. E. Forster, he was appointed Chief Secretary for Ireland, but a few days afterwards, on May 6th, 1882, was murdered in Phoenix Park, together with Mr. Burke, the Under-Secretary (q.v.), by a band of assassins calling themselves "the Invincibles." Lord Frederick was not a frequent speaker, but his invariable courtesy, and the spotless probity of his character, caused him to be held in very high regard.

Cavour, COUNT CAMILLO BENSO DI (b. 1810, d. 1861), the regenerator of Italy, and one of the greatest modern statesmen, was born at Turin. He was the second son of the Marquis Michael Joseph, who was descended from the very ancient and illustrious family of the Bensos, which since 1150 possessed the fief of Santena, near Chieri, in Piedmont. His mother was a Genevese, daughter of the Comte de Sellon. The Bensos were raised to the dignity of marquises in the middle of the last century, and took their title from the little town of Cavour, twenty-five miles distant from Turin. Camillo was so called in

honour of the Prince Camillo Borghesi, husband of Paolina Bonaparte, the beautiful sister of Napoleon I., who in those days was governor of Piedmont, the princess herself presenting the future unifier of Italy at the font. After receiving at home the rudiments of education, he was admitted into the Royal Academy of Turin in 1820, where the officers for the army were brought up at that time, when every member of the Piedmontese aristocracy held himself bound to pass some years in the military service of the state. He was so successful a student in the subjects taught in the academy, and particularly in mathematics, that when only sixteen he was appointed sub-lieutenant in the Engineers. The best part of his military career was passed at Genoa, where the Liberal element was very strong at the time; and when the shock of the French revolution of 1830 encouraged the Italians to express freely their opinions on the state of their country, young Cavour could not refrain from manifesting his ideas of liberty, and having thus incurred the displeasure of the authorities, was ordered to the solitary garrison of the Fort du Bard, in the Valle d'Aosta. He endured this secluded life for six months, but in the following summer sent in his resignation. At that time Austria held her sway either directly or indirectly over the whole of Italy, and the prospects of Italian liberty were darker than ever. Charles Albert, the new King of Sardinia, himself, who had in 1821 led the rising in Piedmont, was, up till the year 1847, only the nominal ruler of his kingdom, compelled by force and threats to obey the instructions sent to him from the Austrian Government. Cavour's noble and ardent soul not being able to tolerate the despotic policy of the clerical and Austrian party, and entirely disapproving the machinations of the Carbonari and *Giovane Italia* (Young Italy), he decided to wait in private life for better times, and acquire that ripe and profound experience which alone would enable him to fight with success for the freedom of his country. During these years of patient expectation we find him promoting the material interest of Italy, principally as regards agriculture; travelling abroad, and above all in England, France, and Switzerland, keenly observing and deeply studying every social, agricultural, and financial subject, and publishing pamphlets and reviews on all these points, showing great talents as a writer. It was always with a continual reference to the good of Italy that he observed and meditated, and under the combined influence of practical experience in the conduct of business, and of philosophical insight into the principles of free government, as exhibited especially in England, he grew into a man capable of elevating Italy to the honourable post which she now occupies. The years of mere aspiration came at length to an end,

and when, in 1846, Pope Pius IX. rose to the Pontifical throne, a new light seemed to shine for Italy, and in a moment all the country was in a blaze. Cavour, deeming that the time for more direct action had come, started in Turin the *Risorgimento*, a paper of moderate and constitutional views. This gave him very considerable influence, and he was the first to suggest to the king the grant of a Constitution to his people, and directly after its publication he took his seat in the New Chamber as one of the representatives of the Capitol. In Parliament he opposed in the firmest way the irregular fervour of the Revolution; but when the people of Milan and Venice rose against Austria, he, with all his ardour, sounded the call to arms. When Charles Albert, abandoned, or rather betrayed, by the Pope and the King of Naples, was defeated by Radetsky at Custoza, Cavour was convinced that no hope of success remained, and advocated peace; nevertheless, in the alarming interval between the defeat and the armistice, he volunteered to serve in the ranks. His main object in the beginning of 1849 was to prevent further bloodshed, and for some time he was one of the most unpopular men in Turin; but, after the sad battle of Novara, he gradually rose to occupy that eminent position which he so worthily acquired. From 1850 to 1852, Cavour, as Minister of Agriculture and Commerce, was an active member of D'Azeglio's administration; from 1852 to his death, with the exception of a short time, he was the first minister and ruler of his country. He endeavoured to establish a free Church and a free State; and to secure a decent and independent living to the lower class of clergy, he made a more equitable distribution of the Church property. On the question of the immunity of the clergy from the civil jurisdiction, he asserted the principle that both State and Church should be absolutely masters in their respective domain, neither interfering with the rights of the other. He introduced as far as possible the principles of free trade, and established a system of a more judicious and equitable taxation. Manzoni said of him that "he was every inch a statesman, with all a statesman's prudence and even imprudence." It was looked upon as imprudence, and it seemed very much like it, to engage in the Crimean War at a time when Sardinia, though still overburdened, was just beginning to raise her head; but this bold step enabled him to confront Austria in a European congress of Paris, and a Prussian diplomatist, Count de Usedom, declared it a pistol-shot fired at the head of Austria. The battle of Traktir Bridge, Aug., 1855, restored the prestige of the Sardinian army, and Cavour rose higher in the national esteem. Then followed the peace, and he took part at the Congress of Paris, where

his profound knowledge and rare tact secured him a prominent part, and he was considered one of the ablest diplomatists living. He brought the grievances of Italy before the Congress, and notwithstanding the protests of the Austrian representative, Count Buol, he had time to plead the cause of his country. He afterwards followed up the advantage he had gained by a memorandum to the same effect, addressed to the Cabinets of London and Paris. His countrymen felt that they had found a wise statesman, capable of commanding at once the confidence of Italy and the respect of all Europe. Napoleon became interested in Italy, and the hostility of Austria towards Piedmont became every day more apparent and more provoking. In the autumn of 1858 the programme of the war of 1859 was arranged between the French Emperor and Cavour at Piombières. Few passages in contemporary history are more familiar than the Italian campaign of 1859. The Austrian invasion of Piedmont, the patriotism of the Italians, the arrival of the French, and the battles which led to the rapid liberation of Lombardy, have been often described. Cavour, entrusted with the ministries of war, marine, home and foreign affairs, and with the presidency of the council, accomplished all his duties perfectly. But his exultation at the news of victory after victory was suddenly converted into the deepest sorrow, when the rumour of the disappointing armistice of Villafranca reached him in Turin. He instantly started for the camp, but all his exertions were fruitless, being already too late. Broken-hearted, on the conclusion of the peace, the terms of which left Italy a confederation under the presidency of the Pope, abandoned Venetia once more to Austrian rule, and rendered even the tenure of Lombardy insecure, he sent in his resignation. He, however, returned to his post in January, 1860, and resumed under different conditions the work which had been so abruptly interrupted at Villafranca. He had now to manage the course of events so as to prevent a collision with France or Austria, and to gain time in order that public opinion of central and southern Italy should declare itself in favour of their union under Victor Emmanuel. Tuscany and Emilia were the first in early spring unanimously to vote their annexation to the new kingdom, but this happy event was saddened by the cession of Nice and Savoy, claimed peremptorily by Napoleon as a compensation and security. Cavour was severely reproached by many, and particularly by Garibaldi and his party, for this cession. But the sacrifice was undoubtedly an absolute necessity. In the meantime Garibaldi, at the head of a thousand heroes, had occupied the island of Sicily, and then followed his triumphal entry into Naples. Cavour ordered that the Piedmontese army should take possession of the Marches and

Umbria, and, crossing the Apennines, join the volunteers of Garibaldi. Victor Emmanuel was then proclaimed King of Italy, and in the following spring the first Italian Parliament met at Turin, and Cavour saw the dream of his youth, a united Italy, accomplished, although much still remained to be done. But the immense work and fatigue of the last year, the disappointment for the unexpected termination of the war at Villafranca, and above all the debates with Garibaldi and his party concerning the necessary cession of Nice and Savoy, so deeply affected his health, that he had several apoplectic fits, and after a few days' illness, during which he always spoke of Italy and her future greatness, he died on the 6th of June, 1861. It is impossible to describe how deeply his loss was felt by every enlightened Italian. Both chambers of the Parliament decreed that his image should be placed in the hall of its assembly, and his speeches were ordered to be collected and printed at the expense of the State. All the great Italian towns and many small ones erected statues and monuments to his memory. The king offered a resting-place for his body in the Royal Chapel of Superga, where the kings and princes of the House of Savoy are entombed; but as Cavour had expressed a desire to be buried in the family vault at Santena, that spot had the preference, and there a simple stone with his name points out to all the world the last abode of the man who, after so many centuries of servitude and foreign subjection, recalled to life and liberty his native country, and whose last words were: "Non temete; l'Italia è fatta!" ("Fear not; Italy is made!")

[A. O.]

***Cayley, ARTHUR** (b. 1821), pure mathematician, fellow of Trinity College, Cambridge, graduated as senior wrangler and Smith's prizeman in 1842. In 1863 he was appointed first Sadlerian professor of pure mathematics in Cambridge. He is also member of several scientific societies, such as the Royal, the Astronomical, and the Mathematical, and is correspondent to the astronomical section of the French Institute. Among his published works is an *Elementary Treatise on Elliptical Functions*. In 1883 he was president of the British Association, in its meeting at Southport, and delivered an address on the possibilities and present limitations of mathematics that attracted much attention.

Celeste, MARIE, or MADAME CELESTE-ELLIOT (b. 1815, d. 1882), was a celebrated

actress and ballet dancer, born in Paris. At the age of fourteen she accepted a professional engagement in the United States, and there married a Mr. Elliot, who died shortly afterwards. She first appeared in England at Liverpool, as Fenella, in *Masaniello*, and subsequently danced with great success in the London theatres. On her return to America the people received her with wild enthusiasm, yoking themselves to her carriage, and proclaiming her a citizen of the Union. In 1837 she came back to England, and accepted an engagement at Drury Lane. She played Miami in *Green Bushes*, and was for many years one of the Adelphi company, and took farewell of the stage in 1870.

***Cesnola, COUNT LUIGI PALMA DI** (b. 1832), the explorer of Cyprus, was born at Turin, and having served in the Crimean War, went to New York in 1860, and took part in the Civil War. Appointed consul at Larnaca, in Cyprus, in 1865, he began the series of excavations that he continued for about ten years with the most enviable success. At Larnaca, Dali, the ancient site of Idalium, and at Golgoi, he opened several thousand tombs, and discovered hundreds of statuettes, vases, and coins. In 1872, the ship containing the coins was burnt on its way to London, and the rest of the collection—having been refused by the British Museum on account of its price—was bought for the Museum of Art, in New York. His later discoveries were even more successful, including the celebrated "Curium Treasures," also in the above-mentioned museum, of which he was appointed director in 1879. In the previous year he published an account of his labours, *Cyprus: its Ancient Cities, Tombs, and Temples*.

Cetewayo. [ZULULAND.]

***Chabaud-Latour, FRANÇOIS ERNEST HENRI, BARON DE** (b. 1804), French military engineer and politician, was born at Nîmes, and entered the army at an early age. During the siege of Paris he held the post of commander of the Engineers. He was elected a member of the National Assembly in 1871, and took his place on the Right, with which party he always voted. He was one of the judges of Marshal Bazaine, and in 1874 entered the Cabinet as Minister of the Interior.

***Chailla, PAUL BELLONI DU** (b. 1835), a Franco-American traveller, a native of Paris, early went to live in the French settlement at the Gaboon, on the west coast of Africa, where his father was a merchant. In 1852 he went to the United States—of which he afterwards became a naturalised citizen, under the name of "Chaylion"—and published a series of articles on the Gaboon country, which elicited much interest. In Oct., 1855, he left New York for the west coast of Africa, where he remained nearly four years, travelling

on foot and in canoes, unaccompanied by any white man, upwards of 8,000 miles. During this time he shot and preserved the skins of over 2,000 birds, and more than 1,000 quadrupeds. The greatest novelties in the collections he made were several gorillas, never before hunted, and rarely, if ever, before seen by any European. The results of his expedition were given to the world in his *Explorations and Adventures in Equatorial Africa* (1861), a work which provoked considerable controversy, though time has vindicated the general correctness of his statements, if not of the dates, which the literary assistants whom he employed had hopelessly confused. In the autumn of 1863, Du Chailu left England on a second expedition, reaching the mouth of the Ogobai, Western Africa, on Oct. 10th. Here he lost his scientific apparatus by the swamping of a canoe, and was obliged to send to England for a fresh supply, occupying himself meanwhile in hunting excursions, during which he again had an opportunity of studying the gorilla. He subsequently traversed large portions of previously unknown country, but was, in Sept., 1865, obliged to return to the coast, in consequence of a conflict with the natives, during which he had to abandon everything but his journals. He published an account of this expedition under the title *A Journey to Ashango Land* (1867), a work of superior value (though of less sensational interest) to the former one. After spending some years in the United States, where he appeared as a lecturer, he made, in 1872-3, a tour in northern Europe, which resulted in the publication of *The Land of the Midnight Sun* (1881), which has enjoyed a considerable success. He has also written a number of minor works, based on his travels, and intended for young people, some more or less scientific papers, and various notes to the papers descriptive of his collections.

* **Challemel-Lacour**, PAUL AMAND (b. 1827), French politician, after a distinguished career in the Ecole Normale, Paris, was appointed, in 1851, professor at the lycée of Limoges. Expelled from France for his Republican opinions after the *Coup d'Etat* of 1851, he withdrew to Switzerland, and lectured on French literature at Zurich. After the amnesty he returned, and contributed freely to periodical literature, and in 1868, in conjunction with Gambetta and M. Brisson, founded the important *Revue Politique*. As its manager, he was prosecuted by the French Government and fined. On the downfall of Napoleon III. he was nominated prefect of the Rhone, and had to deal with the turbulence of Lyons. In that capacity he was not altogether successful. The Commune gained head, and, before it was finally suppressed, disgraced itself by the murder of Commander Arnaud, a Napoleonist partisan. M. Chal-

lemel-Lacour resigned in January, 1872, and was promptly elected to the National Assembly for the Bouches-du-Rhône, and took his seat on the extreme Left. In 1871 he aided Gambetta in establishing the important newspaper the *République Française*, and became its editor-in-chief. His proceedings as prefect of the Rhone were vehemently attacked in the Chamber, but he defended himself with much ability, and established a reputation as one of the greatest of the Radical orators, particularly by his attack on the Duc de Broglie's attempt to pack the magistracy. In 1876 he was elected a member of the Senate, and in 1880 was sent to Berne as ambassador to the Swiss Confederation, whence in June he was transferred to London. Some accusations brought against him by Mr. O'Donnell, M.P., in connection with his administration of Lyons, were provocative of a violent scene in the House of Commons. Recalled in 1882, at his own request, M. Challemel-Lacour became Secretary for Foreign Affairs in M. Ferry's Cabinet (February, 1883), but resigned in December on the plea of ill-health, having been previously identified in the unfortunate advance of the French arms in Tonquin. M. Challemel-Lacour has edited the works of Madame d'Épinay, and is the author of some philosophical works of minor importance.

Chalmers, THOMAS (b. 1780, d. 1847), Scottish divine, was educated at the University of St. Andrews, and in January, 1799, was licensed as a preacher by the presbytery of St. Andrews. In May, 1803, he was ordained as minister of Kilmany, and taught mathematics at St. Andrews, first as assistant lecturer, then in opposition to the authorities. Domestic sorrows and the preparation of an article on Christianity for the *Encyclopædia Britannica* turned his thoughts to religion, and when in 1815 he was admitted as minister of the Tron Church, Glasgow, he at once became enormously popular, and a volume of his sermons commanded the unprecedented sale of 20,000 copies in a twelve-month. At the same time he zealously supported the movement for the erection of additional churches, and he was admitted to St. John's, which he had persuaded the town council to build in 1819. Some treatises on *The Christian and Civic Economy of Large Towns* were the result of his parochial experiences, notably in the direction of the reduction and organisation of the poor law expenditure. In 1823 he accepted the Chair of moral philosophy in the University of St. Andrews, whence in 1828 he was transferred to that of theology at Edinburgh, where he succeeded in inspiring many of his pupils with his own Calvinistic fervour. Meanwhile, his industrious pen was engaged in producing such works as a clever treatise in defence of

literary and ecclesiastical endowments, and a *Political Economy*, in one or two points a distinct advance on previous speculation. The greater part of the thirty and odd volumes of his writings originated during this period. The second period of Chalmers's career began in 1834, when through the influence of the Evangelical party in the General Assembly, deprived by death of its leader, Andrew Thomson, he was placed at the head of a committee for the promotion of church extension. Through his exertions over two hundred churches were founded in about seven years by public subscriptions. Meanwhile affairs were ripening for the great secession and foundation of the Free Church, the leadership in which movement is by far Dr. Chalmers's greatest achievement. The Veto Act of 1834, by which the General Assembly asserted the right of the majority of a congregation to settle their minister, brought matters to a crisis, and the Auchterarder case, in which that freedom was traversed by the Court of Session, a decision confirmed by the House of Lords, made schism inevitable. After numerous collisions between the General Assembly and the Court of Session had brought matters to a dead-lock, and Sir Robert Peel, with the full approval of the House of Commons, had refused to interfere, Chalmers and his friends resolved that the time for action had come. In May, 1843, 470 clergymen withdrew from the General Assembly, and formed the Free Church of Scotland. Dr. Chalmers was their first moderator, and by his great powers of organisation maintained them during the first few years when their fortunes seemed overcast. This great leader of men, so singularly free from theological rancour, so distinctly combining enthusiasm and caution, died as principal of the Free Church College. Of his publications the following also may be mentioned here:—*The Application of Christianity to the Commercial and Ordinary Affairs of Life* (1820); *The Evidence and Authority of the Christian Revelation* (1824); *Lectures on the Establishment and Extension of Local Churches* (1838); *The Efficacy of Prayer consistent with the Uniformity of Nature* (1849); and *Hore Biblicæ Quotidianæ* (1853).

W. Hanna, *Memoirs of the Life and Writings of Chalmers*. [L. C. S.]

Cham was the pseudonym of **AMÉDÉE DE NOË** (b. 1819, d. 1879), caricaturist and humourist, who was the son of the Comte de Noë by an English mother, and was born in Paris. He studied art under Delaroche, and soon became conspicuous in the Parisian illustrated press for the brilliancy of his caricatures and his power of seizing the humorous side of current social and political events. About 1843 he began his connection with *Charivari*, and for more than thirty years continued to delight the Parisian public. He

may be described as a French John Leech. He ridiculed every phase of modern life—politics, the stage, the Salon, the exhibitions, peasants, princes, nursemaids, and generals; but his ridicule was always kindly, and he revealed to the Parisians a world of humour lying outside the range of the common sexual relations. Probably his best political satire was *L'Assemblée Nationale de 1848*, published in that year. The following are the names of other celebrated skits:—*Revue comique du Salon* (1851–3); *P. J. Prudhon en Voyage*; *Baigneurs et Buveurs d'Eau*; *Souvenirs de Garçon*; and *L'Exposition de Londres*. Since his death some excellent collections of his contributions to comic journals have been published, such as *Douze Années Comiques* (1880); and *Les Folies Parisiennes* (1883).

* **Chamberlain**, SIR NAVILLE BOWLES, K.C.B., G.C.B., G.C.S.I. (b. 1820), British general, entered the Bengal army in 1837, and early distinguished himself in the first Afghan War and in Scinde. In 1848 he commanded a regiment of the Punjab irregular force, and in 1855 became military secretary to the Chief Commissioner, then Sir John Lawrence. Having served with the highest distinction throughout the mutiny, especially at Delhi, he was created C.B. in 1857, and aide-de-camp to the Queen. He rose by successive stages to be commander-in-chief of the army of Madras (1875–81), was created general in 1877, and in the following year was despatched on the celebrated mission to Shere Ali that was the occasion of the Afghan War, his agent, Major Cavagnari, having been refused a passage at the fort Ali Masjid, in the Khyber Pass. He was then general of Her Majesty's Indian Local Forces, and retired in 1886.

* **Chamberlain**, THE RIGHT HON. JOSEPH, M.P. (b. 1836), is the eldest son of the late Mr. Joseph Chamberlain, a manufacturer of wood-screws. He was educated at University College School, London, and entered his father's business, from which, however, he retired in 1874. Mr. Chamberlain acquired local celebrity as a fluent exponent of Radical views tinged with Republicanism, and became chairman of the Birmingham Education League, a member of the Town Council in 1868, and in 1870 a member of the Birmingham School Board, of which he became chairman in 1873. During the last and the two following years he was mayor of Birmingham, and displayed great energy in putting into force the Artisans' Dwellings Act. His first attempt to gain a seat in Parliament was in 1874, when he was defeated by Mr. Roebuck, for Sheffield, in spite of his cry, "Free land, free schools, and free labour." In an article in the *Fortnightly Review*, "The Next Page in the Liberal Programme," he endeavoured to induce the leaders of the party to adopt his "Radical platform." In June, 1876, he was

returned for Birmingham without opposition, on the resignation of Mr. George Dixon, and at first confined himself to topics like the Education Act and the liquor traffic. In 1877, however, he made a striking speech on Mr. Gladstone's resolutions on the Eastern Question. At the general election of 1880, thanks to the perfection of the "caucus system," Mr. Chamberlain and his Liberal colleagues, Mr. Muntz and Mr. John Bright, gained a crushing victory over their Conservative opponents for Birmingham. In consequence he was appointed President of the Board of Trade, with a seat in the Cabinet, Sir Charles Dilke having waived his claims in favour of his friend. Mr. Chamberlain, during the career of Mr. Gladstone's ministry, was successful in steering some complicated measures through the House of Commons, including the Bankruptcy Bill (1883), the Married Women's Property Bill (1882), and the Patent Law Amendment Bill (1883); but his efforts to amend the Merchants' Shipping Acts failed in the face of pressure of public business and determined opposition. Outside Parliament Mr. Chamberlain kept up his reputation as a hard hitter, both in print and on the platform; notably in his controversy with Lord Salisbury on the question of Housing of the Poor, waged chiefly in the pages of the *Reviews*. Above all things a popular orator, he has never failed to attract marked attention by his speeches. During the franchise agitation he helped to make conciliation possible by a speech at Hanley (Oct. 7th, 1884). In the course of the autumn session Lord R. Churchill attempted to convict him of complicity in some riots at Aston Villa, at which the Conservative speakers had been mobbed; but the House decided in Mr. Chamberlain's favour by 214 votes to 178. Mr. Chamberlain's political programme was developed during the year 1883 and onwards with startling rapidity. One of his most noteworthy speeches was that made at the Bright celebration of June 13th, 1883, in which he declared himself in favour of manhood suffrage, equal electoral districts, and paid members. During 1886 he frequently advocated schemes akin to State socialism, his views having rapidly advanced since the autumn of 1883, when he borrowed the phrase "unearned increment" from Mr. Henry George. Starting from the old doctrine of "natural rights," Mr. Chamberlain urged "restitution" of land, and that the rich should be "ransomed" before they were allowed to enter the congregation. The ransom was apparently to be extracted in the form of a progressive income-tax. The practical measures founded upon this system were discussed in detail in his speech at Warrington, Sept. 8th, 1885, and in a work published by the Liberal Federation, entitled *The Radical Programme*, to which he contributed a preface. During the last hours of

the Liberal Government he and Sir Charles Dilke were understood to be at variance with their colleagues, on the question of renewing the Irish Crimes Act. At the general election of 1885 Mr. Chamberlain was returned free of expense by a large majority for the West district of Birmingham. During the contest he displayed distinct antagonism towards the Moderate Liberals—"the Rip Van Winkles of politics," and announced that he would not take office in a ministry that was not pledged to the re-arrangement of taxation, free schools, and the compulsory purchase of land by local authorities. On Feb. 1st, 1886, he became President of the Local Government Board, but resigned on March 26th because he disagreed with Mr. Gladstone on Home Rule.

* **Chambers, GEORGE FREDERICK** (b. 1841), an English astronomer and author, after being educated at the "Old School" of Eastbourne, at All Souls, and St. Marylebone Grammar School, and at King's College, London, was called to the bar by the Middle Temple in 1866; and in 1872 appointed an assistant inspector of the Local Government Board. Mr. Chambers's best known work is his *Handbook of Astronomy*, first published in 1881, but which has subsequently gone through several editions, and his *Cycle of Celestial Objects* (1881). But his more professional writings comprise a *Digest of the Law of Public Health* (1872), a *Handbook of Public Meetings* (1878), and a number of other volumes on general literature, law, church music, and political questions, on which he is well known as a public speaker. He has also compiled a *Practical and Conversational Dictionary of the English, French, and German Languages* (1883). *The Tourist's Pocket-Book* (1884), most of which have gone through several, and some through sixteen, editions. He practises at the common law and parliamentary bar, and besides being a warm adherent of the Conservative side of politics, is an active fellow of the Royal Astronomical Society.

Chambers, WILLIAM (b. 1800, d. 1883), and **ROBERT**, (b. 1802, d. 1871), well-known Scotch publishers, were born in Peebles, and were children of middle-class parents. Subsequently the family removed to Edinburgh, where the two boys made various small ventures. William was apprenticed to a bookseller, and Robert started a bookstall on his own account in Leith Walk. Gradually the two brothers improved their circumstances, William developing editorial capacities, while Robert wrote freely—for instance, *Traditions of Edinburgh* (1823-4). In 1832 William published the first number of *Chambers's Edinburgh Journal*, which soon became deservedly popular, chiefly through the contributions of Robert, who speedily became its co-editor. After this their career as a publishing firm was one of great prosperity, and among their numerous works for the popularisation of

knowledge may be mentioned the *Penny Magazine*, the *Cyclopedia of English Literature*, *Information for the People*, their *Encyclopædia*, and *Papers for the People*. Robert Chambers was a writer of some quality, as his *Life of Burns* and *Book of Days* prove. Whether or no he was the author of the celebrated *Vestiges of the Creation* will probably never be decided. In 1865 William Chambers was elected Lord Provost of Edinburgh, and a few days before his death he was offered, and accepted, the honour of knighthood. Both were simple-minded men, and as popular pioneers of education must take a high place, particularly from their grasp of the idea that trash is not an essential in cheap literature.

Memoir of Robert Chambers: with autobiographic Reminiscences of William Chambers.

Chambord, HENRI CHARLES DIEUDONNÉ, COMTE DE (b. 1820, d. Aug., 1883), "the child of the miracle," was the posthumous son of the unfortunate Duc de Berry, and grandson of the Comte d'Artois, afterwards Charles X. The representative of the elder line of the Bourbons, the child, known as the Duc de Bordeaux, was educated—or rather left to grow up uneducated—under his grandfather's care, and it was in his favour that Charles X. abdicated when the July revolution had evidently become too serious to be trifled with. He fled with his grandfather to England, and his education, after his mother had fallen into disgrace through her escapades, was confided to the Duchesse d'Angoulême, "the only man among the Bourbons," as Napoleon called her. After the death of his grandfather in 1836, he continued to reside at Goritz, and there his tutor, the Duc de Damas, apparently as a political speculation, impressed upon him those ideas of rigid clericalism, and of the divine right of kings, which so effectually stopped his pupil's advent to the throne of France. The Revolution of 48, which drove the Orleanist branch from France, found "Henry V." in London, busily intriguing for the throne; but he could only intrigue, and from simple want of nerve, and simple want of straightforwardness, he refused to strike by publishing the charter of liberties, which he had so frequently promised. A far cleverer man was in the field; and in a very short space of time Prince Napoleon had caused himself to be elected President of the Republic, and, after the necessary massacre, proclaimed himself Emperor of the French. The Comte de Chambord retired to Frohsdorf, where he spent his time in devotion, shooting, and in issuing manifestoes about the "flag of Joan of Arc and of Henri IV." Once more the result of the Franco-German War placed the crown of France within grasping distance if the Legitimist claimant had only been gifted with some slight degree of courage. But he deliberately threw away his opportunity by the old game of promises and retractions;

pledges of a charter alternating with declarations against the tricolour. One more chance was given him. This was in 1873, when Thiers had been overthrown, and MacMahon had taken his place; it was understood among the sanguine royalists that the Comte de Chambord would accept the crown and proclaim the Comte de Paris his heir. But the interview between the heads of the royal houses at Frohsdorf in August was absolutely without result. A few weeks afterwards "Henry V." came *incognito* to Versailles, and it seemed as if he really was going to act with decision at last. Everything, said his friends, was ready; he had only to proclaim himself. He deemed it more prudent, however, to retire to Frohsdorf. As a last resource, M.M. Chesnelong and Lucien Brun waited upon him at Salzburg, and offered him the crown in the name of the Parliamentary majority. Once again he promised a charter; once again he followed up his promise by announcing that he would never be "the king of the Revolution," or "renounce the white flag of Ivry." The rest of his life was spent in placid resignation; and it is to be regretted, for his good reputation, that he did not down to the last abandon pretensions to which in all probability he throughout was signally indifferent, with the indifference of stupidity. His claims descended to the Comte de Paris.

The Times Obituary, Aug. 25th, 1883.

[L. C. S.]

Chamisso, ADELBERT VON (b. 1781, d. 1838), the German poet and botanist, was of French descent, his original name being Louis Charles Adelbert Chamisso de Boncourt, and his ancestral home being the Château Boncourt, in Champagne. After the destruction of the castle in 1790, the family took refuge in Germany, and Adelbert entered the Prussian army in 1798. But being more devoted to literature than the art of war, and becoming acquainted with Varnhagen von Ense, Fonqué, Werner, and other leaders of the young Romantic school, he founded the celebrated *Musen-Almanach* in 1803, and finally quitted the army in 1807, after the surrender of Hamelin, where he was taken prisoner. In 1810 he visited Paris, and was introduced by August Schlegel to Madame de Staël, at whose court of culture in Chaumont he first turned his attention seriously to botany. Returning to Berlin in 1812, he began the study of science in earnest, and in 1813 also wrote *Peter Schlemihl*, the story of the man who sold his shadow for a Fortunatus' purse. In spite of its many faults, besides being incomplete, it soon became known throughout Germany, and was translated into most European languages, one of the first English translations being illustrated with excellent designs by Cruikshank. In the midst of the troubles of the time, Chamisso stood perplexed between love for the land of his birth and the land of his adoption. He therefore

embraced the more eagerly an appointment as naturalist, to attend a Russian exploring expedition to the South Seas in 1815. After his return in 1818, he wrote a description of the voyage, and was appointed custodian of the Botanical Gardens in Berlin. He published two works on botany, and a treatise on the Hawai language; but it is by his lyrical poems and ballads that he will be remembered. Some of these were published in the *Musen-Almanach*, but Chamisso had little confidence in his power as a poet, and no collection of his poems appeared till after his death. Nevertheless, in spite of the hindrance of mixed nationality, and a rather wearisome domesticity, acquired from his long contact with German life, many of his poems attain to high excellence, and a few have the genuine lyric tone; of these are some of the series, *Frauen Liebe und Leben*, well known through Schumann's setting. The ballad of the old washerwoman and her shroud (*Die alte Waschfrau*) reminds us of Beranger, whilst the satire of the "Song of Woman's Troth" (*Ein Lied von der Weiber treue*), and the "Watchman's Song" (*Nachtwächterlied*) is almost worthy of Heine.

Chamisso's Leben und Briefe, edited by Hitzig. [H. W. N.]

* **Champfleury**, JULES FLEURY (b. 1821), a French novelist and dramatist, wrote *Les Bourgeois de Molinchart* (1854), a satire on provincial life, a work which gained for him a high place among the realistic school of writers. One of his first productions, *Chien - Caillou* (1860), was pronounced a *chef-d'œuvre* by Victor Hugo. M. Champfleury is a very prolific writer of fiction, and of his other works we may mention *Les Souffrances du Professeur Deltheil* (1854), *L'Avocat Trouble Ménage* (1870), and *Fanny Minoret* (1882).

Champollion, JEAN FRANÇOIS (b. 1791, d. 1832), a French *savant* and Orientalist, is noted for his discovery of the clue to the interpretation of the hieroglyphic writing of the ancient Egyptians. Born at Figeac, and educated in Paris, at the age of eighteen he was appointed assistant professor in the Academy of Grenoble. He studied the language and history of ancient Egypt with diligence and enthusiasm, and published in 1814 a *Geographical Description of Egypt under the Pharaohs*. In 1822 he announced to the Academy of Inscriptions his discovery of the key to the hieroglyphics, owing to his observations on the Rosetta Stone, which led him to infer that each symbol represents the initial sound of the Coptic word for the object denoted by the hieroglyphic. His discovery was warmly appreciated, though there arose a discussion whether Dr. Young had not anticipated him. Champollion was sent to Egypt in 1828, at the expense of the Government, to explore the monuments of that country in company with Rosellini.

The result of his research was published after his death under the title of *Monuments of Egypt and Nubia, considered in Relation to History, Religion, etc.* (1835-45). Among his most important works are an *Egyptian Grammar*, and a *Hieroglyphic Dictionary*.

Silvestre de Sacy, *Notice sur Champollion lue à la Séance publique de l'Institut*.

Changarnier, NICHOLAS THÉODULE (b. 1793, d. 1877), French soldier, first acquired a high military reputation in Africa, where he particularly distinguished himself in the Arab campaign of 1836. In 1843 he became general of division, and in 1847, on the resignation of the Duc d'Aumale, became Governor-General of Algeria. Having been elected to the National Assembly, he returned to Paris, and shortly after the insurrection of June, he was invested by Cavaignac with the command of the National Guards. In that capacity he crushed the Parisian outbreaks of January 29th and June 13th, 1849, but failed utterly to see that he was being made a mere cat-paw by the President, Louis Napoleon, who on December 2nd suddenly arrested him, and banished him from France. After the amnesty he lived quietly on his estates until 1870, when patriotic motives induced him to offer his sword to the emperor. It was accepted; he ably seconded the traitor Bazaine in the defence of Metz, and three days before the capitulation endeavoured to exact more favourable terms from Prince Frederick Charles. Released by the Germans in 1871, he gave his support to M. Thiers, whom he aided in schemes for the reorganisation of the army.

Channing, WILLIAM ELLERY (b. 1780, d. 1842), the American preacher, was born at Newport, Rhode Island, and brought up by his mother in all the strictness of orthodox Puritanism, then prevalent in New England. Having entered Harvard College in 1794, he graduated in 1798, began preaching in 1802, and in the following year was appointed to the Federal Street Congregational Church in Boston, where he remained till his death. The rest of his laborious life was marked by few external changes. He married in 1814, and in 1822 travelled in Europe for about a year, acquiring the friendship of Wordsworth, whom he had long profoundly admired, and of Coleridge, who, in a letter to Washington Allston (1823), described him in the well-known sentence as having the love of wisdom and the wisdom of love. In later life he turned his attention rather to the great social and political questions of the time than to the ecclesiastical work of his ministry. An uncompromising abolitionist, when the name implied not only unpopularity, but danger, he published a book on slavery in 1835, and in 1837 publicly protested against the annexation of Texas by the slave-owning States, preferring even a severance of the

Union. He was continually engaged on advanced and daring schemes for the relief and improvement of the poor. Early in life he had said: "The poor need moral remedies. Let the poor be my end." And in 1835 he writes, "The cry is 'Property is insecure, law a rope of sand, and the mob sovereign.' Appearances of approaching convulsions of property shake the nerves of men who are willing that our moral evils should be perpetuated to the end of time, provided their treasures be untouched. I have no fear of revolutions." Channing's theological position is hard to define on account of its extreme breadth. Though generally known as a Unitarian, and himself admiring that system, "as raising us above the despotism of the Church," he wrote in 1841 that he had little or no interest in Unitarians as a sect, being unable himself to endure any sectarian bonds. With "orthodox" Unitarianism, as he called it, he was even at direct variance, maintaining that it had suffered from union with a heart-withering philosophy. Perhaps he may best be described as one of the few noble eclectics. His importance is as a bridge from the cold rationalism of early deistic Unitarianism to the glow and genial enthusiasm of Emerson. As a preacher he is said to have had few equals, and several of his published addresses have been very widely read. The best known are:—*The Importance and Means of a National Literature* (1835); *Self Culture* (1838); *Remarks on the Character and Writings of John Milton* (1839); and *Remarks on the Life and Character of Napoleon Bonaparte* (1840).

Life of W. E. Channing (1848), by his Nephew, William Henry Channing. [H. W. N.]

Chantrey, SIR FRANCIS LEGATT (*b.* 1781, *d.* 1841), the sculptor, was born at Norton, near Sheffield, being the son of a carpenter. In youth he served as apprentice for many years to a carver and gilder, but in 1802 set up as a portrait painter on his own account, and soon attained a high local reputation. Thus encouraged, he entered the Royal Academy Schools in London two or three years later, and turned his attention principally to sculpture, in which he was not for many years so successful as in portraiture. In 1810, however, he won the open competition for an equestrian statue of George III., and after this his advancement was assured and extraordinarily rapid. His genius had been publicly recognised by Nollekens before this, and henceforward he was kept in constant employment by royalty, the aristocracy, and all the most distinguished men of the day. In 1816, the year in which he exhibited his famous group of the *Two Children Sleeping*, now in Lichfield Cathedral, he became A.R.A., and R.A. in 1818. Having refused a baronetcy, he was knighted in 1835. He seldom used the chisel himself on his works, but entrusted the

execution of his designs to experienced workmen. As a sculptor of portraits and busts, whether in bronze or marble, he certainly stands in the very first rank of modern artists. His large fortune was entrusted to the nation as the "Chantrey Bequest," for the encouragement of English art—especially in sculpture. Of his most deservedly celebrated works we may mention the following: the statue of Lady Louisa Russell in girlhood, now at Woburn (1818); the universally known bust of Scott, perhaps his masterpiece of portraiture (1820); the statue of Sir J. Banks, now in the British Museum (1827); the statues of Dr. Anderson and Bishop Heber, both in Madras; the statues of Francis Horner in Westminster Abbey, and of George Canning, now at Liverpool; a bust of the Queen (1840); and the bronze statues of William Pitt, now in Hanover Square; of George IV., in Trafalgar Square, and of the Duke of Wellington, in front of the Royal Exchange, left unfinished at his death.

George Jones, R.A., *Recollections of Chantrey* (1849); John Hollaud, *Memorials of Chantrey* (1851).

Chanzy, ANTOINE EUGÈNE (*b.* 1823, *d.* 1883), French soldier, obtained his commission in 1841, after having served in the ranks. In Algeria, and subsequently at Magenta and Solferino, he served with credit, but owing to his exposure of some military jobbery was disliked by the authorities; and when the Franco-German War broke out he was refused a brigade. Appointed general of division by the Government of the National Defence, he offered a stubborn resistance to the advancing Germans, and even won some partial successes with his raw recruits. But his main object, the relief of Paris by means of an army advancing from the south-west, never came near realisation. On Jan. 11th, 1871, began his retreat from Le Mans, during which he fought a six days' battle with Prince Frederick Charles, displaying much dogged tenacity. He had gathered his shattered forces together behind the Mayenne for a last stand, when the news of the armistice arrived. Having narrowly escaped death at the hands of the Communists, Chanzy took his seat in the National Assembly, and, in 1872, became distinctly a popular hero through his frank declaration in favour of the Republic. It was thought that he, now the recognised leader of the Left Centre, would be the successor of Thiers in the Presidency. But he suddenly threw up politics, probably because he thought that his friend Gambetta was going too far, and accepted the governor-generalship of Algeria. Elected a life-senator in 1875, he absented himself during the great constitutional crisis of 1877, whereby he much offended all true Republicans, though he declined the overtures of the Monarchists. Upon the resignation of Marshal MacMahon in 1879, he was put forward,

without his consent, as candidate for the Presidency, and received no less than 99 out of 300 votes. Soon afterwards Chanzy was appointed ambassador to St. Petersburg, but he withdrew from diplomacy within two years, and was placed in command of the Army Corps at Châlons. There he died suddenly in the midst of his duties, having just missed being rather a great man. [L. C. S.]

* **Chaplin**, THE RIGHT HON. HENRY, M.P. (b. 1843), a Lincolnshire land-owner, was educated at Harrow, and at Christ Church, Oxford. He was first returned for Mid-Lincolnshire in 1868, and has identified himself with agricultural questions, of which he has a thorough knowledge. Mr. Chaplin sat on the Richmond Land Commission for an inquiry into the depression of agriculture. In 1885 he became Chancellor of the Duchy of Lancaster, and at the general election was returned for the Sleaford division of Lincolnshire. He is a large owner and breeder of race-horses.

* **Chard**, MAJOR JOHN ROUSE MERRIOTT, V.C. (b. 1847), an English officer, entered the Royal Engineers in 1868, and took part in the Zulu War of 1878-9. Major Chard's name will long be remembered for his brave defence of Rorke's Drift, when, after the disaster at Isandhlwana, he, together with Lieutenant Bromhead and a band of eighty men of the 24th Regiment, and a barricade of bags and biscuit tins, withstood a force of 4,000 Zulus. The fight began soon after dark, and lasted through the greater part of the night. At dawn the Zulus withdrew, as Lord Chelmsford's troops were seen approaching to the help of their countrymen. Three hundred and fifty-one Zulus lay dead around the entrenchment, and the number killed after that attack was estimated at 1,000. Grey Town and Helpmakaar were undoubtedly saved by Lieutenant Chard and his brave followers. On his return to England he received the Victoria Cross, and was advanced to the rank of major.

Charles I. OF ROUMANIA. [ROUMANIA.]

Charles X., KING OF FRANCE (b. 1757, d. 1836), the fourth son of the Dauphin (son of Louis XV., and therefore brother of Louis XVI.), was known from his birth as the Count d'Artois. An indifferent education, followed by an unfortunate marriage to Maria Theresa of Savoy, caused his tenor of life to be at first deplorable, but he gradually reformed. During the first years of the Revolution he was a stubborn opponent to concession, and became so unpopular, that, by the advice of his brother, Louis XVI., he left France with his sons, the Dukes of Berry and Angoulême, shortly after the fall of the Bastille. He now became the centre of that clique of *émigrés* which lured the unfortunate king to his ruin, and which no amount of European coalitions could force upon

Republican France. On the death of Louis XVI. the Count d'Artois received the title of Monsieur. In 1795 his memory was tarnished by his failure to support the Vendean chief Charette in the disastrous Quiberon expedition; indeed, he never so much as landed on French soil. "Your brother's cowardice," wrote the heroic Royalist to Louis XVIII., "has ruined all." Until the Restoration he lived chiefly in England. On his entry with the Allies into Paris the Count d'Artois managed to stumble into the celebrated *mot*, "Nothing is changed in France; there is only one Frenchman the more," and at first he was not unpopular. He soon identified himself, however, with the party of clericalism and reaction, especially after the assassination of his eldest son, the Duke de Berry, by an Orleanist partisan (1820), and during the last years of Louis XVIII. his ideas were completely in the ascendant. On Sept. 16th, 1824, he succeeded to the throne, being sixty-six years of age, and began by some well-timed acts of conciliation, particularly to the Orleanist family. His brother's minister, De Villèle, an able financier, was retained. But by this time he had passed through all the usual stages between licentiousness and religious bigotry, and he fell completely under the influence of a knot of priests, who succeeded, in 1825, in passing a terribly severe law against sacrilege. Two years later he disbanded the National Guard, which had shown sympathy in his presence with the Orleanist cause. A momentary popularity was gained for the king by the participation of the French navy in the victory of Navarino, which won freedom for Greece; but the general elections resulted in the considerable increase of the Opposition, and Charles was compelled, in consequence (Jan. 1828), to dismiss De Villèle and form a moderate Cabinet, with De Martignac at its head. It was too late; the ministry, deprived of the king's confidence, could only stave off defeat for the time by weak concessions, and finally crumbled to pieces. On Aug. 8th, 1829, it was replaced by a fighting ministry, at the head of which was the Prince de Polignac. As soon as the Chambers met, in March, 1830, a hostile resolution was voted, and Polignac's appeal to the country only resulted in an increase of the strength of the Opposition. The king thereupon decided upon a *coup d'état*. On July 25th, the five ordinances of St. Cloud were issued:—(1) Suspending the liberty of the press; (2) dissolving the new Chamber; (3) suspending freedom of election; (4) summoning a new Chamber; (5) packing the Council of State with Ultra-Royalists. Two days later it was announced that Marshal Marmont, against his personal inclinations, had undertaken the defence of the capital. The July revolution promptly began. The barricades were forced, the Hôtel de Ville was taken by the populace,

and re-taken, but on the 29th several regiments deserted to the side of the insurgents, and Marmont refused to go on slaying. Charles attempted to arrest his fate by a complete surrender, but it was in vain. Old Lafayette was named chief of the National Guard, and by a proclamation inspired by Thiers, Louis Philippe Duke of Orleans was asked to accept the Crown, and at once assumed the title of Lieutenant-General of the realm. Charles X., on Aug. 2nd, abdicated in favour of his grandson, the Duke of Bordeaux, better known as the Count of Chambord (q.v.), and withdrew to England. For some time he lived at Holyrood, spending his time in religious observances, and in faded ceremony; but in 1836 he travelled to Goritz, and there was brought to a close a life of foolish kicking against the pricks, for which, if for any career, the excuses of heredity and environment may justifiably be advanced.

Lamartine, *Histoire de la Restauration*, in which what can be said for Charles is set down. Vanhelle, *Histoire de Deux Restaurations*; Montbel, *Dernière Époque de Charles X.* And various memoirs, e.g. those of Adolphe Sala, A. Massas, and Th. Anne. The final history of the time has, however, yet to be written. [L. C. S.]

Charles Albert, and Charles Felix, OF SARDINIA. [SARDINIA.]

***Charles, ELIZABETH RUNDLE** (b. circa 1826), authoress, the daughter of John Rundle, formerly M.P. for Tavistock, married Mr. Andrew Charles in 1861, having previously published *The Draytons and Davanants* (1841). Her reputation as an authoress of religious and reflective fiction was made by the *Chronicles of the Schönberg-Cotta Family* (1863), a story of the German Reformation, presenting a careful picture of citizen life in the time of Luther and Melancthon. In 1864 this was followed by the *Diary of Mrs. Kitty Trevelyan*, which enjoyed almost as wide a popularity. Mrs. Charles has since written *Winifred Bertram* (1866), *The Martyrs of Spain* (1870), *Against the Stream* (1873), *The Bertram Family* (1876), *Joan the Maid* (1879), *Lapsed, but not Lost* (1881), and other works of a similar character, and of a general Evangelical tone.

Charles F. A. C., DUKE OF BRUNSWICK. [BRUNSWICK.]

Charles LOUIS DE LORRAINE, ARCHDUKE OF AUSTRIA (b. 1771, d. 1847), a German general, the son of Leopold II., joined the army under Prince Coburg on the outbreak of hostilities between France and Austria and Prussia, and behaved with great gallantry in a cavalry charge at Landrecy. He was also present at Neerwinden, and was appointed Governor of the Pays Bas and field-marshal for his services. In 1796 he commanded the armies along the Rhine, being opposed by Jourdan and Moreau. In the passage of the Rhine which ensued he defeated Jourdan at Teining, Amberg, and Würzburg, so that

Moreau, who had penetrated into Bavaria, was obliged to fall back, and the Archduke besieged and took the *tête-du-pont* at Kehl. He was then transferred to Italy, where he was engaged at Tarvis and Glogau, remaining in that country till the Treaty of Campo Formio was signed, in 1797. In 1799 he was again engaged with Jourdan in Suabia, when he defeated him at Stockach, and drove Massena from Zurich. Afterwards he directed the operations on the Lower Rhine, to support the Duke of York, taking Philipsburg and Mannheim. At the renewal of hostilities in 1805 he commanded the Army of Italy on the Adige, and was severely engaged with Massena at Caldiero, after which he retreated into Hungary. In 1809 he again commanded the Austrian army, and checked the French at Aspern and Essling, but was unable to prevent Napoleon from crossing the Danube and defeating him at Wagram, where he was wounded. He was in his early days skilful as a tactician, and showed a genius for strategy; but in this last campaign he evinced a slowness and procrastination which was fatal to success. None the less both Wellington and Napoleon united in classing him among the great generals of the age. In the lately published *Memoirs of Croker* the emperor is recorded to have said that in his knowledge of the art of war the Archduke Charles had no superior; but that he was unable to stand the mental strain of a great engagement, and after the first few hours allowed things to drift helplessly. He saw no further service after Wagram, and wrote the *Principles of Strategy*, a work which Jomini thought sufficiently valuable to be translated into French.

Duller, *Erzherzog Karl von Oesterreich* (1844-5); and the biographies by Thielen (1858) and Wolf (1860). [C. C. K.]

Charlotte Augusta, PRINCESS (b. 1796, d. 1816), was the daughter of George IV. and Caroline of Brunswick. Owing to the disunion of her parents her earlier years were passed in retirement, away from the court, under the care of the Duchess of Leeds, Lady Clifford, and the Bishop of Exeter. She early gave proofs of intellectual powers, and much elevation of character, and became, in consequence, the hope of the nation. She was destined by her father to marry William of Orange, but the match was eventually broken off by the princess, partly in anger at her father's conduct to her mother, partly owing to her repugnance to the prince. In 1815 she married Leopold of Saxe-Coburg, afterwards King of the Belgians (q.v.), the object of her affections; but on November 6th of the following year she died in giving birth to a son, who did not survive her.

***Chartres, ROBERT PHILIPPE D'ORLÉANS, Duc DE** (b. 1840), is the younger brother of the Comte de Paris (q.v.). Educated chiefly

in Germany, he went to America in 1860, and served as a volunteer under MacClellan, for the Northerners, until 1863. In 1870, after his services had been once declined, he was allowed to serve under General Chanzy, under the name of "Robert le Fort." In consequence, after the law of exile had been repealed, he was placed at the head of a squadron, and subsequently became full colonel (1878). In 1883, however, a law of 1834 was put in force, and he was placed upon the retired list.

Chase, SAMUEL PORTLAND (b. 1808, d. 1873), American politician, was distinguished from his first entrance into political life as a prominent supporter of the abolition of slavery. On this account he separated from the Democratic party in 1852, and strenuously opposed the Nebraska-Kansas Bill in 1854. Appointed Secretary to the Treasury in 1861, he instituted in the following year the issue of Government notes, then known as "shin-plasters," and since become a party title as "greenbacks," from the green ink of the reverse. Though productive of the utmost confusion, the measure was perhaps called for by the desperate condition of Federal finance. Having resigned office in 1864, he was appointed Chief Justice of the Supreme Court, and as such presided over the court of impeachment for the trial of President Johnson (1868), when he was said to be in favour of acquittal. He thus lost popularity with the Republicans, and, having failed to regain the favour of the Democrats, made no further advance in political life.

Charles, MICHEL (b. 1793, d. 1880), a French mathematician, was born at Epernon (Eure-et-Loire). After completing his studies at the Polytechnic School of Paris, he obtained a professorship at Chartres in 1825. In 1841 he was appointed professor of geodesy and machinery in his old school, and in 1846 a Chair of superior geometry was especially founded for him. In 1851 he became a member of the Academy. In 1867 he reported to that body his possession of alleged autograph letters of Galileo, Pascal, and Newton, and claimed for Pascal the merit of Newton's most celebrated discoveries. These letters were part of about 27,000 purchased by Charles for 140,000 francs, from a M. Irène Lucas, including a number purporting to have been written by Julius Cæsar, Mary Stuart, Shakespeare, Dante, Petrarch, and Rabelais. Other scientific men with himself regarded them as genuine, but with few exceptions they were eventually proved to be forgeries; Lucas was subsequently punished with two years' imprisonment. Among the works of Charles are a history of arithmetic, treatises on the attractions of various bodies, on conic sections, etc. Charles is regarded as the founder of the new or higher geometry: and in his numerous contributions to the

Comptes Rendus, he explained new methods by which he resolved, without the aid of algebra, the most difficult questions of geometry.

* **Chassepot, ANTOINE ALPHONSE** (b. 1833), inventor of the gun known by his name, was the son of a gunsmith, and himself entered the Government works of St. Thomas, in Paris, becoming principal in 1864. About the same time he invented the Chassepot gun, after a long study of the Prussian needle-gun. He was afterwards appointed superintendent to the factory of arms at Châtellerault. During the Franco-German War the Chassepot rifles were of very doubtful service, owing to their tendency to foul after a few rounds.

Chateaubriand, FRANÇOIS RENÉ DE (b. 1763, d. 1848), was born at St. Malo during the reign of Louis XV., and died in the midst of the imitation Republic, of which he had in his early youth witnessed the great but sinister prototype. The beginning and end of his life mark the character of the man. He was a link between two worlds, and therefore scarcely at his ease in either. By birth he belonged to the old nobility, but to its provincial portion, which had always been inimical to the *Noblesse de Cour*. By everything that constituted his very essence he belonged to his native soil; and since Brittany existed never has there been a Breton who represented more completely, more exclusively, the Breton type, than Chateaubriand. The national defects, above all, characterise him from first to last. His very genius—and, spite of all weaknesses, he had genius—did not save him; he was to the end incomplete, envious, selfish, discontented, and possessed by a "*contrariété*" that is peculiar to the Breton race. Whatsoever came to him, never, in his esteem, came at the right time. When he went to London as ambassador (in 1822) his great complaint against George IV. was that his majesty persisted in treating him as the envoy of the King of France, and apparently knew nothing of either *René* or the *Génie du Christianisme*. But when, on the other hand, certain Roman princes, during his mission to Rome in 1828, laid stress on his literary achievements, he wished above all things that they should acknowledge what a grand seigneur he was born. In 1791, at the age of twenty-three, Chateaubriand, disquieted by the aspect of the Revolution, took his departure for the United States, where he stayed not quite a year, returning to Europe in time to join with his brother the first French emigration in 1792, when both found refuge in London. The fruits of his American wanderings in the south and west, chiefly among the then numerous Indian tribes, was the tale of *Atala*, known to every country, translated into every tongue, though far from being its author's masterpiece. Though not published till 1801, it was written during his exile in London, and like *René* (1802),

was originally an episode in the romance of *Les Natchez*, which was not issued in its completeness till 1826. After the publication of *Atala* and *René*, Chateaubriand's fame as a prose poet was firmly established. When the First Consulate was instituted, the Breton Royalist made his peace with Bonaparte, and in 1803, having dedicated his famous work, *Le Génie du Christianisme*, to the First Consul himself, he accepted a nomination as First Secretary of the Embassy in Rome, under Napoleon's uncle, Cardinal Fesch. After a short career, marked by innumerable indiscretions and mistakes as a diplomatist, Chateaubriand most honourably tendered his resignation to the tyrant who had just committed the foul murder of the Duc d'Enghien. The Breton never forgot that he had served in the *Armée de Condé*, and never from that hour was found elsewhere than in the ranks of the most uncompromising opposition to the Empire. His three first great works, *René*, *Atala*, and the *Génie du Christianisme*, had given him a world-wide fame, equal to that achieved by Rousseau, with the *Nouvelle Héloïse*. During his long life he was to add but three more to the list:—*Les Martyrs* (1809), the *Itinéraire à Jérusalem* (1811), and the *Aventures du Dernier des Abencerrages* (published 1826, but written about fifteen years earlier), decidedly inferior to their predecessors, but still very typical of the man and of his time. But after his death was to be published the work, parts of which confer upon him the right to undying renown, the *Mémoires d'Outre Tombe*, his own autobiography. By the student of the French language in its modern development, Chateaubriand can never be passed over. He is the connecting link between the present and the past. Proceeding straight from Corneille, Racine, and Bossuet, through Jean Jacques to Lamartine and Augustin Thierry, he descends from the *Classiques*, and ushers in the *Romantiques*, inheriting all the inflation of the former, devising to the latter all his wordy redundancy, yet at the same time establishing an individuality of his own, proofs of which will maintain their indisputable beauty for all time. In public life he was chiefly distinguished by his bitter enmity against the emperor, and his loyalty under the Bourbon restoration, when he was appointed ambassador to Berlin (1820), to London (1822), and to Rome (1828), and for a short time (1823-4) held the portfolio of Foreign Affairs. He refused to take the oath to Louis Philippe, and was imprisoned for a time in 1832. There was little to respect in Chateaubriand's character as a statesman, which was the position to which he particularly aspired. He was far too absorbed in his contemplation of self to understand the spirit of sacrifice indispensable to real statescraft, and far too gifted with the variabilities and weaknesses of the poetic temperament ever to attain to the stern

virtues of a perfect citizen. What he had to the highest conceivable degree was the faculty of discerning errors and weakness in others. The faults of all governments, whether of friends or enemies, appeared to him instantaneously, and were by him ruthlessly denounced. He spared none, and his letters to the leaders of his own Royalist creed, whether sovereigns, ministers, or what not, are there to prove his fearless sincerity in the face of the powerful on our earth. They have the free, fiery eloquence of a true Republican of the Republic of old Rome. But, once placed in a situation to act, with or upon other men, never was man rendered more incapable of doing public service by petty private aims, considerations, and passions.

Sainte-Beuve, *Lectures on Chateaubriand*;
Villemain, *Chateaubriand*; Chateaubriand, *Mémoires d'Outre Tombe*. [Y. B. de B.]

Chatham, JOHN PITT, 2ND EARL OF (b. 1756, d. 1835), the son of the great Lord Chatham, and brother of William Pitt, has been described as the man in whom nature avenged herself on England for having given her his father and brother. He entered the army, and eventually became colonel of the 4th Regiment. He was proposed to Pitt by Addington in 1803 as nominal Prime Minister, but Pitt would not hear of the arrangement. His mismanagement at the Admiralty was a source of great embarrassment to his brother. In 1809, when master-general of the ordnance, he was placed in command of the Walcheren Expedition, the ultimate failure of which there can be no doubt was due to the incompetency of its commander.

Chelmsford, THE RIGHT HON. FREDERICK THESIGER, BARON, F.R.S. (b. 1794, d. 1878), entered the navy, and was present at the bombardment of Copenhagen, but quitted that service at the wish of his parents, and was called to the bar in 1818. He soon acquired a high reputation on the Home Circuit, and in 1834 was made a King's Counsel. In 1840 he entered Parliament for Woodstock, having been chosen Solicitor-General by Sir R. Peel, and in the following year he became Attorney-General. In 1852 he filled the same office under Lord Derby, and was Lord Chancellor in Lord Derby's second and third ministries, those of 1858 and 1866, but when Mr. Disraeli became Premier, in 1868, Lord Chelmsford was succeeded by Lord Cairns.

* **Chelmsford**, THE RIGHT HON. FREDERICK A. THESIGER, BARON, G.C.B. (b. 1827), eldest son of the Lord Chancellor, was educated at Eton, and entered the Rifle Brigade in 1844, whence he was transferred to the Grenadier Guards. He became captain in 1850, and major in 1855, and served through the Crimea and the Indian Mutiny, from which he returned as lieutenant-colonel. He was deputy adjutant-general in the Abyssinian cam-

paign, and was present at the capture of Magdala (1868). From 1868 to 1876 he was adjutant-general to the forces in India, after which he was sent to command the 1st Infantry Brigade at Aldershot. In March, 1877, he was made major-general, and placed in command of the British forces in South Africa, and reduced the Kafirs to subjection. In 1878, having succeeded to his father's peerage, he was appointed Governor of Cape Colony, which office he resigned in 1879, when he was appointed chief of the British troops in the Zulu War. He advanced into the country; but while he was absent from the fortified camp at Isandhlwana it was surrounded, and its garrison annihilated. He retreated in time to save the heroic defenders of Rorke's Drift, and made preparations to resist the invasion of Natal by Cetewayo. That invasion never came; and Lord Chelmsford succeeded in April in relieving Colonel Pearson at Ekowe, after beating off the Zulus at Ginghilovo, while General Wood gained a brilliant victory at Kambula Kop. A general advance was ordered for June 2nd, but before it could take place the untoward death of the ex-Prince Imperial occurred. The victory of Ulundi, which, followed by the capture of Cetewayo, brought the war to a close, was fought July 4th. Having thus retrieved his reputation, Lord Chelmsford resigned his command to Sir Garnet Wolseley, who undertook the settlement of Zululand, and returned to England. He was appointed lieutenant-general in 1882, and Lieutenant of the Tower of London in 1884.

Chenery, THOMAS (b. 1826, d. 1884), Oriental scholar, and editor of the *Times*, was born in Barbadoes, educated at Eton, and Caius College, Cambridge, and, after being called to the bar, was despatched by the *Times* to Constantinople, where he acted as its correspondent until the close of the Crimean War, often relieving Dr. Russell, the special correspondent, in his duties at the front. It was during his sojourn at Constantinople, where the gifted linguist, Lord Strangford, was one of his intimate friends, that Chenery acquired his proficiency in Oriental languages. He had a remarkable linguistic talent, and could speak most European languages, besides Turkish, Arabic, and Hebrew, with perfect fluency: but he joined to this talent the rarer qualities of the scholar and philologist. His edition of a portion of the Arabic classic El-Hariry's *Assemblies* (1867) showed that he had mastered the intricacies of the Arabic literary language, as well as the spoken idiom; and his Hebrew preface to the *Machberoth Ithiel* of Yehudah Al-Kharizy (1872) won the admiration of all Jewish scholars by its perfection of style and idiom. His Semitic learning led to his being appointed one of the Old Testament Revision Company, and during his hardest labours at

the *Times* he still continued to assist at the deliberations of the revisers. He also held the Lord Almoner's professorship of Arabic at Oxford from 1868 to 1877, but the salary of this post was nominal, and, there being no students of Arabic at Oxford, he confined himself to delivering an interesting inaugural lecture, and to assisting in the few Oriental examinations of the university. He was constantly employed on the staff of the *Times* from his return after the Crimean War to his death, and in 1877 succeeded Delane as editor. He was indefatigable in his attention to the duties of his post, and his wide reading and intimate acquaintance with European politics, joined to a sound judgment, were of the greatest service to the paper, though perhaps his retired life operated unfavourably against that intimate touch of public opinion which had been the characteristic of the *Times* under Delane. To his colleagues, and to all who had the privilege of his acquaintance, he was ever a kindly, helpful friend, and as a journalist, no less than as a scholar, he did a vast amount of admirable work. [S. L.-P.]

Chénier, MARIE JOSEPH (b. 1764, d. 1811), French poet and dramatist, brother of the great poet André Chénier, guillotined in 1794, won his reputation in 1789 by the political drama of *Charles IX.*, in which Talma also laid the foundation of his fame. Chénier's next success was the drama of *Fénelon* (1793), but it was regarded with suspicion by the Jacobins; and his next attempt, *Timothée*, was suppressed till after Robespierre's death. After his brother's execution he only published one more drama, *Cyrus* (1804), but composed many patriotic and national songs in the intervals of his work as member of the Government, from 1792 to 1802. Of these the most celebrated was the *Chant du Départ*, said to have been only less popular than the *Marseillaise* itself.

Chérif Pasha. [SHÉRIF.]

Cherubini, MARIA LUIGI CARLO ZENOBI SALVATOR (b. 1760, d. 1842), the composer, though well known to serious musicians of the modern school, and held by them in considerable esteem, belonged to the days before Rossini, and studied under the once famous Sarti, whose pupil he became at the early age of thirteen. Between the years 1780 and 1788 he composed no less than eleven operas, including *Iphigenia in Aulis*, which was at one time considered his masterpiece, though it is to his later opera of *Les deux Journées* (known in Germany as *Der Wasserträger*, and in England as *The Water Carrier*) that he owes in a direct manner such reputation as he now enjoys. In 1784 he visited London, and he soon afterwards established himself permanently in Paris, where he resided throughout the Revolution, the Consulate, and the Empire, and

again through the Restoration, until, under the monarchy of Louis Philippe, he died. What caused him to remain in Paris was the important office to which he was appointed in connection with the National School of Music, which, previously neglected and mismanaged, reached under him a high point of excellence. Cherubini was director of the Conservatoire at the very time when Berlioz was studying there; and he seems to have been somewhat shocked by the originality, or eccentricity, as he doubtless considered it, of this not too obedient pupil. It was to Cherubini that some one remarked one day that Berlioz "did not like the fugue." "And the fugue," replied the old master, "does not like Berlioz." Cherubini was a great master of orchestration, and some of his lighter works are as remarkable for their melody as for their harmonic beauties. *Les deux Journées* is altogether beautiful. *Medea*, the only other work by Cherubini which of late years has been played in England, is highly impressive, but, being all in one tragic tone, somewhat heavy. [H. S. E.]

• **Chemelong**, PIERRE CHARLES (b. 1820), a French politician, was born at Orthez, and began his political career in 1865 as representative of the Basses-Pyrénées. He was at first a Bonapartist, but in 1872, upon entering the National Assembly, he became one of the leaders of the Legitimist party. He was a zealous opponent of M. Thiers, and withstood all measures for the definite establishment of a republican form of government. M. Chemelong was one of the delegates sent to Salzburg to the Count de Chambord in Oct., 1873, to request him to accept the throne of France, under conditions. He is one of the founders and the president of the Catholic association to resist the progress of radicalism, and is in every way an earnest worker in the interests of Catholicism.

Chesney, CHARLES CORNWALLIS, R.E. (b. 1826, d. 1876), the best English military critic of his time, was the son of Captain C. C. Chesney, of the East India Company's Artillery, and a nephew of the explorer of the Euphrates. He was educated at Blundell's school at Tiverton, and, passing through the Military Academy at Woolwich, was gazetted as sub-lieutenant in the Royal Engineers in 1845, obtained his company in 1854, became lieutenant-colonel in 1868, and brevet-colonel and commandant of the home district of Royal Engineers in 1873, which post he held till his death in March, 1876. It was, however, in his capacity as professor of military history at the Cadet and Staff College at Sandhurst that he made his high reputation as a military critic. He introduced into the teaching of the college a scientific method which was altogether new to military studies in England. His *Waterloo Lectures*, published in 1868, form a text-book in our

military schools, and also in those of Germany and France. His vindication of the important share the Prussians took in winning the victory of the 18th of June, no less than his demolition of the Napoleonic myths which have gathered round the campaign, testify to his judicial impartiality and devotion to truth at all cost to national pride. No less instructive were his criticisms of the American Civil War, delivered during the progress of the conflict, and published with the title of *The Campaigns in Virginia and Maryland in 1863*, while his *Essays in Military Biography* (1870), reprinted from the *Edinburgh Review* and other periodicals, are full of valuable criticisms of the military careers of such soldiers as Generals Lee and Grant, Von Brandt, Cornwallis, and Chesney's companion and friend, Chinese Gordon. He also published a work on the military resources of Prussia and France in 1870, and was sent by Government to report on matters connected with the Franco-German War. At the War Office his counsels had great weight, and he was engaged in organising the reforms of the army under Lord Cardwell's localisation scheme. [S. L.-P.]

Chesney, FRANCIS RAWDON (b. 1789, d. 1872), the explorer of the Euphrates, and promoter of the Suez Canal, was the son of Alexander Chesney, of an Ulster farming stock, who had emigrated to South Carolina in the second half of the eighteenth century, but returned to Ireland in 1782. Francis was educated at home, and at the local school in the "kingdom" of Mourne, in Co. Down. Before he was fourteen he was sent over to enter at Woolwich, where he was gazetted to the Royal Artillery in 1805. A visit to Turkey in 1829, where he arrived just too late to offer the aid which he had hoped to render to the Porte against Russia, as an artillery officer, led to his first surveying the Isthmus of Suez, and pronouncing the canal a feasible and desirable enterprise, and then to his examining the practicability of an alternative route to India, by way of Syria and the Euphrates. Four several times did Chesney journey to the East in pursuit of this, his favourite object. The first expedition was in 1831, and was the most adventurous of all, for he was alone among hostile tribes of Arabs, of whose language he was ignorant, and had to take his soundings secretly through the bottom of a raft, and not seldom under fire from the banks. On this occasion he explored the lower half of the great river, and on his return to England so impressed the authorities with the importance of the proposed route, that Government sanctioned a grant of £20,000 for the cost of a more complete and exhaustive survey. Accompanied this time by a devoted band of officers, and attended by sappers and miners and engineers, Chesney transported two steamers in sections from the Bay of Antioch to Birejik, on the upper course of the

Euphrates, in spite of overwhelming obstacles and difficulties, material and diplomatic; and though he lost one of the vessels in a storm on the downward voyage, the other arrived safely at the mouth of the river, and proved the accuracy of Chesney's view that the Euphrates was navigable for steamships. Chesney was now busy with the preparation of his voluminous account of the exploration, when he was interrupted by the artillery command in China falling to him in 1843. He remained at Hong-Kong till 1847. In 1850 appeared the first two volumes of his *Expedition for the Survey of the Rivers Euphrates and Tigris*, in which he entered at elaborate length into the geographical and historical bearings of the regions which came into his survey. His connection with the Euphrates, however, was not yet over; twice more he journeyed to the Levant in the interests of the proposed route to India: in 1856 to survey the ground about the Syrian coast, whence it was proposed to start a railway which should carry out Chesney's original scheme, but by land instead of by river; and again in 1862, when he visited Constantinople, at the age of seventy-three, to obtain fresh concessions from the Porte for the railway which was then oncemore under the consideration of the British Government. Even so late as 1871 he attended the Select Committee on the Euphrates railway, and gave his evidence unflinching in favour of the route he had advocated for forty years. He died without seeing his favourite project realised, in consequence of diplomatic opposition on the parts of Russia and France, who foresaw the predominance which would result to English influence in Asia if the Euphrates route were opened. Chesney's works were the *Narrative of the Euphrates Expedition* (1868), which formed the complement of the two more abstruse volumes published in 1850; the *Past and Present State of Firearms* (1851), an authoritative professional work; the *Russo-Turkish Campaigns of 1828-9*, published opportunely in 1854, and some smaller pamphlets, etc., on matters connected with his surveys and his profession. The Geographical Society gave him its gold medal in 1837, and Oxford made him a D.C.L. in 1850. Chesney's work on the Euphrates is not the less valuable because successive Foreign Ministers have failed to turn it to advantage; he was a true explorer, daring, zealous, enthusiastic, possessed of an energy that knew no such word as weariness, and of a determination that would not accept defeat.

Life of General F. R. Chesney, by his wife and daughter, edited by Stanley Lane-Poole (1895).

[S. L.-P.]

* **Chesney, GEORGE TOMKINS** (b. 1830), general, author of *The Battle of Dorking*, and brother of Colonel C. C. Chesney (q.v.), was educated at Woolwich, and joined the Bengal Engineers in 1848. Having been promoted to the rank of lieutenant in 1854, he served

throughout the siege of Delhi, where he was twice severely wounded, was promoted captain in 1858, and in 1872 became major in the Royal Engineers, lieutenant-colonel in 1874, colonel in 1884, and general in 1885, having in the meantime been appointed principal of Cooper's Hill College, and then secretary to the Military Secretariat, Government of India, a post which he resigned in 1885. His great work on *Indian Polity* was published in 1868, but he was first brought prominently into public notice in 1871 by his pamphlet entitled *The Battle of Dorking*, published anonymously, a description of a German invasion of England, and one of the most realistic accounts of warfare ever written. It created much controversy, and was eagerly studied throughout England and the Continent. In 1876 Colonel Chesney published *The Dilemma*, a novel on Indian life; and *The Private Secretary* (1881) is also attributed to his authorship.

Chevalier, MICHEL (b. 1806, d. 1879), a celebrated French political economist, was born at Limoges. In his youth he joined the sect of the Saint Simonians, and was sentenced to one year's imprisonment for the part he took with Père Enfantin in editing *Le Livre Nouveau*, the future gospel of their doctrines. He subsequently retracted all he had written, and in 1833 was sent by M. Thiers to the United States in order to examine the internal communications of that country. His *Letters on North America*, published in the *Journal des Débats*, excited much attention, and he was entrusted with a second mission to England. In 1838 appeared his great work, *Des Intérêts matériels en France*, which suggested many industrial improvements. He was one of the most zealous supporters of Free Trade, and tried in vain to organise a society similar to the Anti-Corn-Law League. At the time of the revolution of 1848, he ably refuted the theories of Louis Blanc and other Socialists in his *Lettres sur l'Organisation du Travail et la Question des Travailleurs*. He was for many years professor of political economy in the College of France. Besides his works already mentioned, he has published *Cours d'Économie politique* (1842-50); *De la Baisse probable de l'Or* (1859); *Le Mexique ancien et moderne* (1863).

* **Chevreul, MICHEL EUGÈNE** (b. 1786), a very distinguished French chemist, was born at Angers, and educated in Paris. In 1824 he was appointed professor of special chemistry at the Gobelins, having leisure to pursue his chemical studies, and his investigation of animal oils. In 1823 he published a treatise on this subject, which established his reputation, and was rewarded by the Society for the Encouragement of National Industry with a prize of 12,000 francs. M. Chevreul also published many interesting scientific works upon colour, which is one of his favourite subjects. In 1828-31 appeared his *Leçons de*

Chimie appliquée à la Teinture; in 1839, *De la Loi du Contraste*. Several of his books have been translated into various European languages. In 1830 he succeeded his former master, Vauquelin, in the Chair of chemistry at the Museum of Natural History, and in 1864 was appointed director of the Museum, and re-elected in 1869 for another period of five years.

• **Childers**, THE RIGHT HON. HUGH C. E., M.P. (b. 1827), is the son of the late Rev. Eardley Childers, of Cantley, Yorkshire. He was educated at Trinity College, Cambridge, and graduated B.A. in mathematical honours in 1850. Emigrating to Australia in the same year, he speedily began to play a prominent part in Victorian politics, and held a seat in the First Cabinet as Commissioner of Trade and Customs. He returned to England in 1857 as agent-general for the Colony, and became interested in city commercial companies. Two years later he contested Pontefract without success; but, on a petition, the sitting member resigned his seat. Mr. Childers soon acquired a reputation as Chairman of Select Committees, and in 1864 first held office as a Lord of the Admiralty, becoming Financial Secretary to the Treasury in the following year. On the formation of Mr. Gladstone's ministry in 1868, Mr. Childers became First Lord of the Admiralty, but resigned in 1871, owing to ill-health. In 1872 he became Chancellor of the Duchy of Lancaster, with a seat in the Cabinet, until October, 1873, when internal disunion necessitated a shuffling of the ministerial pack. On the return of the Liberals to power in 1880 he became Secretary of State for War, and carried still further Mr. Cardwell's ideas as to the localisation of regiments; the substitution of territorial for the old numerical titles, in particular, being subjected to much hostile criticism. In 1882 he succeeded Mr. Gladstone as Chancellor of the Exchequer, and in 1883 carried a large measure for the conversion of stock. But his financial proposals of the same year for the construction of a second Suez Canal were universally censured as being over-generous to M. Lesseps, and were ultimately abandoned; the conference held in London (1884) for the settlement of Egyptian affairs, at which he represented England, was abortive, and in 1885 he was defeated on the budget resolutions, which included a large increase of the wine and spirit duties, a defeat which was the immediate cause of the collapse of the Liberal Government. At the general election of the same year he stood for Pontefract, but without success. Early in 1886 he was returned at a by-election for South Edinburgh, and was appointed Home Secretary in Mr. Gladstone's third administration.

China, THE EMPERORS OF:—(1) KEA-KING (d. 1820) ascended the throne on the abdication of his aged father, Keen-Lung, in 1795. His reign was disturbed by rebellions in the

north-west provinces, and an attempt made by the British Government to establish friendly relations fell through, owing to Lord Amherst's wise refusal to permit the degrading ceremony entitled kow-tow. His son, Two-KWANG (d. 1850), proved as indifferent a ruler as his father had been. The interior of China was troubled by frequent rebellions with which the royal troops were unable to cope. In 1839 the Empire drifted into war with England. The dislike of the Chinese to the opium import traffic culminated in a demand by the Chinese commissioner, Lin, that all the opium in the hands of Englishmen should be handed over to the native authorities. To this our superintendent of trade, Captain Elliott, agreed, and over 20,000 chests were accordingly destroyed. Nevertheless, the British Government, taking umbrage, declared war. The cession of Hong-Kong by one of his generals was disavowed by the emperor, and it was not until Canton had fallen to Sir Hugh Gough, and Nankin was threatened, that Two-Kwang consented to come to terms with our envoy, Sir H. Pottinger. A treaty was concluded in 1842, by which a number of ports were declared open to English trade, and an indemnity of 21,000,000 dollars promised. (3) HEE-Runo, the son of Two-Kwang (d. 1861), did evil according to all that his fathers had done, and was in consequence menaced on every side. Hung-seu-tseuen raised the standard of revolt, took Nankin, and proclaimed himself emperor as the head of the Tae-ping dynasty ('the "princes of peace"'). In 1857 an attack on the lorcha *Arrow* involved the emperor in war with England; Canton promptly fell; in the following year the Peiho Forts were taken, whereupon the Chinese authorities thought it necessary to sign a treaty of peace at Tien-tsin. When it came to the ratification of the treaty, however, the British envoy, Mr. Bruce, was stopped on his way up the Peiho, and an attempt to force a passage was repulsed with loss. A joint French and English expedition was thereupon sent to China; in August, 1860, the Taku Forts fell, and the Chinese were forced to ratify the treaty, of which the chief terms were toleration of Christianity, the payment of a war indemnity, and freedom for the opium trade. Shortly afterwards the emperor died, and was succeeded by his infant son (4) TUNG-CHU (d. 1875). The government was placed in the hands of the able Prince Kung, the emperor's uncle, and ratifier with Lord Elgin (q.v.) of the treaty, who for over twenty years directed the affairs of the Celestial Empire. Availing themselves of the genius of Major C. G. Gordon (q.v.), the authorities managed to suppress the Tae-ping rebellion; in June, 1864, Nankin was recaptured, and with the suicide of the rebel leader, peace was restored in that quarter. Disaffection, however, continued in the province of Yun-nam;

but when the Mahometan leader, Suleiman, was seen to be sending a mission to England, the Government smote and spared not. True to his famous dictum that "opium and missionaries" were the source of all Chinese troubles, Prince Kung attempted a policy of exclusiveness; but events moved too fast for him. The massacre, in a riot, of the French consul and some Roman Catholic priests in 1870, had to be followed by prompt apologies, indemnities, and renewed promises of religious toleration; and in 1875 the murder of the English explorer, Margary (q.v.), caused our consul, Mr. Wade, after a period of exceedingly strained relations, to exact from Prince Kung the important Chee-fow Convention (1876), by which four more ports were opened to trade, and regular official intercourse established between the two nations. In virtue of the convention, a Chinese embassy was established in London in the following year. Indeed, throughout Prince Kung's reign, foreign policy was extremely pacific, and China became a *quantité négligeable*. The Russian annexation of Kuldja in 1871 was bought off by a money payment; and upon the advance of Gordon, war with that Power, which was contemplated in 1880 in consequence of frontier disputes in Kashgar, was abandoned, and a favourable peace negotiated by a skilled diplomatist, the Marquis Tseng. The death of Tung-che brought the direct line of emperors to a close, and another minority ensued, the new emperor, KWANG-SU, being then about three years old. He is the son of Prince Ch'un, the son of Two-Kwang, the Chinese law forbidding the accession of Prince Ch'un on the ground that the new emperor must be younger than his predecessor. The chief event of the new reign has been the advance of the French in Tonquin. To the unjust claims of suzerainty over that province put forward by M. Ferry, Prince Kung returned a defiant "No," but brave deeds were not followed up by brave words, although his friend, the commander-in-chief, Li-Hung-Chang, was understood to be in favour of vigorous measures. The fall of Sontay and Bacninh was witnessed without stirring; and when the somewhat ignominious treaty of Enin-Touin failed, owing to its violation by a Chinese officer, to produce peace, the fall of Prince Kung was inevitable. His rival, Prince Ch'un, seized an opportunity for a *coup d'état*, and Prince Kung retired into private life (April, 1884). Hostilities dragged on until April, 1885, the tide having turned in favour of China, when peace was concluded by the Marquis Tseng, on the basis of the cession of Tonquin to France, in return for the surrender of claims upon Formosa and an indemnity. Since the termination of the war, Prince Ch'un, who before his accession to power had adopted a decidedly Anti-European policy, has shown a disposition to throw open the country to strangers.

Sir H. Ellis, *Journal*; Sir J. Davis, *China; The Chinese Repository*; Gutzhoff, *Life of Two-Kwang*; A. Egmout Hake, *The Story of Chinese Gordon*; Wingrove Cook's letters to the *Times* in 1860. An account of the Second Chinese War has been written by Colonel Fischer. The history of China has been pleasantly written by Mr. D. C. Boulger. For a sketch of Prince Kung, see *Saturday Review*, May 10th, 1884; while a somewhat different view of his character is taken in the *Times* of Sept., 1885.

[L. C. S.]

Chopin, FRÉDÉRIC (b. 1810, d. 1849), composer, was born near Warsaw, French by the father's side, and Polish by the mother's. But he became, as he grew up among Polish influences, so imbued with the Polish spirit that he may be fairly looked upon as a Pole. Chopin commenced his studies as a boy at Warsaw under Ellsner, and he remained there until 1830 or 1831, when, immediately after the great national insurrection, he took refuge at Paris, where he produced much of his best work. It was at Paris, too, that he made his reputation, soon to become European, as a pianist. It was certainly, however, in Poland that he acquired all that gives character to his style; and for this he was in some measure indebted to the music of John Field, the English pianist and composer, who, after much wandering, settled at Moscow, where he wrote (among other works) a number of very beautiful nocturnes, which in certain figures and melodic passages resemble beforehand those of Chopin. At Paris, Chopin belonged to a distinguished group of musicians and writers, among whom Bellini, George Sand, Alfred de Musset, and Heinrich Heine, must in particular be named. Heine calls him "the Raphael of the piano." George Sand's friendship—and more than friendship—for him is well known. For Bellini Chopin entertained the greatest admiration, and he was so much attached to him that he desired to be buried at his side, where, in the cemetery of Père-la-Chaise, he now reposes. He cultivated with passionate ardour, and with the happiest results, every distinctive form of Polish national music, including the mazurka, the polka or polonaise, and the krakowiak or cracovienne. This last-named dance, however, with its brisk measure and its strongly marked rhythm, was not so well suited to Chopin's romantic genius as the dignified and often warlike polonaise, or, above all, the spirited, fascinating mazurka; and his most complete examples of Polish national dances are to be found in his rich and varied collection of mazurkas. These, equally with the dreamy sentimental nocturnes and the brilliant waltzes, are all original; but they are thoroughly Polish by their style and by the striking manner in which they recall rather than reproduce the dances alike of the peasantry and of the nobility of Poland. The *études* of Chopin are as personal to him, and bear as strongly the impress of his powerful individuality, as the above-mentioned works in the

Polish style and in dance rhythms; and they are probably at once the most attractive and the most difficult examples of drawing-room music and music for the concert-room that exist. Chopin is known, moreover, by his sonatas, especially the one in a flat minor, with its beautiful and impressive *Marche funèbre*, his "fantaisies," his "impromptus," his two concertos for pianoforte and orchestra (so lightly scored that Herr Klindworth has thought himself justified in adding additional parts for the brass instruments), and by a few very charming songs.

Karasowky, *Life of Chopin* (trans. 1879).

[H. S. E.]

Christian VIII. AND IX., OF DENMARK. [DENMARK.]

***Christian** (PRINCE), H.R.H. FRIEDRICH CHRISTIAN KARL AUGUSTUS, PRINCE OF SCHLESWIG-HOLSTEIN (b. 1831), is the brother of the Duke of Augustenburg, and in 1866 married Helena Augusta Victoria, Princess of Great Britain and Ireland. He holds the position of Chief Ranger of Windsor Park.

***Christie**, WILLIAM HENRY MAHONEY (b. 1845), Astronomer Royal, was a native of Woolwich, and commenced his youthful studies at King's College School, London. Having won a minor scholarship, he entered Trinity College, Cambridge, in 1864. Here he subsequently gained a foundation scholarship, and was later elected a fellow of his college. He took his B.A. degree in 1868, and that of M.A. in 1871. At an early age science, and particularly astronomy, had engaged his serious attention, and when, in 1870, he was appointed chief assistant at the Royal Observatory, Greenwich, it soon became evident that this institution had gained a zealous and efficient servant. He improved or invented many forms of scientific apparatus in use there, including a recording micrometer, a polarising solar eye-piece, a new spectroscope, and an instrument for determining the colours and brightness of the stars. He has also zealously advocated the use of photography in connection with astronomy. He is F.R.S., and was secretary of the Royal Astronomical Society. On the retirement of Sir G. B. Airy in Sept., 1881, from the position of Astronomer Royal, he was appointed his successor. Among important papers contributed by him to learned societies is one *On the Systematic Errors of the Greenwich North Polar Distances* in the memoirs of the Royal Astronomical Society. He founded a monthly astronomical journal, *The Observatory*, and is the author of a *Manual of Elementary Astronomy* intended for unscientific readers.

Christina Maria, REGENT OF SPAIN (b. 1806, d. 1878), was the daughter of Francis I., King of the Two Sicilies, and married Ferdinand VII. of Spain (q.v.) in 1829. Upon his death in 1833, she became Regent for her infant daughter, Isabella, and was

promptly menaced by the Carlist rebellion. Her partiality for Don Fernando Munoz, an officer of the Guards, whom she secretly married, caused general offence, and her government proving incapable, she was driven from Spain by a revolution headed by Espartero (1840). She returned to Madrid in 1843, and openly celebrated her marriage with Munoz; but, her influence being invariably exercised in favour of oppression, she became so hated by the Spanish people, that in 1854 she was forced once more to leave Spain. Her death took place near Le Havre.

Christophe, HENRI (b. 1767, d. 1820), negro King of Hayti, attracted the attention of Toussaint by his courage in the war of 1790, and after Toussaint's exile, and Dessalines' murder, became ruler over the northern part of Hayti (1806), and was crowned as Henri I. in 1811. In spite of Louis XVIII.'s efforts to recover the island, Christophe retained his power till 1820, when he committed suicide, having become unpopular through his cruelties.

Christy, HENRY (d. 1865), ethnologist, spent all his leisure time and large sums of money in forming the valuable collection of the relics of prehistoric man and of savage tribes now fast disappearing, which were bequeathed by him to the British Museum. The treasures were gathered from all parts of the world, and represent all ages; but the most valuable of his explorations was the discovery of several prehistoric caves in France, at Dordogne, Les Eyzies, and Laugerie.

Ch'an, PRINCE. [CHINA.]

***Church**, FREDERICK EDWIN (b. 1826), American landscape painter, was born at Hartford, Connecticut, and has been engaged from early years in representing the mountain scenery of America, and acquired high reputation for his *Heart of the Andes*, a painting finished after 1857, when he had visited South America for a second time. His *View of Niagara*, exhibited in England, was painted in 1868, and in the same year he visited the East, and was unfortunately tempted to representation of Oriental scenes, when his powers might otherwise have been employed on the unknown beauties of his own continent that still await a painter. For some years now, however, he has been settled near New York.

L. L. Noble on Church's Painting, *The Heart of the Andes* (1869).

Church, SIR RICHARD (b. circa 1785, d. 1873), English general in the service of Greece, entered the British army in 1800, and had served with great distinction in Egypt and Greece before he definitely espoused the cause of the Greek patriots in 1827, and was at once appointed commander-in-chief of the land forces. Having failed in an attack on the Acropolis, he remained encamped on the Isthmus of Corinth till after the battle of

Navarino, when he marched into Acarnania to reduce the west of Greece. His title not being recognised by Capo d'Istria, he retired to Argos in 1830, remaining there, in spite of the President's threats, till the latter's assassination in 1831, when he again placed himself at the head of the army for a time. King Otho appointed him Councillor of State, and he afterwards became Senator, taking part in the deliberations till extreme old age.

* **Church, THE VERY REV. RICHARD WILLIAM** (b. 1815), Dean of St. Paul's, was elected to a fellowship at Oriel College, Oxford, in 1836, but published nothing of note till his volume of *Essays and Reviews*, which appeared in 1854. He was appointed to the deanery of St. Paul's in 1871. His principal works are:—*St. Anselm* (1870), *The Beginning of the Middle Ages* (1874), and the volumes on *Spenser* (1878) and *Bacon* (1884) in John Morley's *English Men of Letters Series*. Dean Church is also an eminent Italian scholar, having been brought up during the greater part of his youth in the South of Europe. His style is remarkable for purity of English and self-contained refinement of tone. In ecclesiastical politics he is a Liberal High-Churchman.

* **Churchill, LORD RANDOLPH SPENCER** (b. 1849), a son of the sixth Duke of Marlborough, was educated at Eton, and at Merton College, Oxford, where he took his B.A. degree in 1870, with a second-class in law and modern history. He was first elected for Woodstock in 1874, but it was not until after the general election of 1880 that he became a prominent member of Parliament. A knot of independent Conservatives then organised themselves under his leadership, and became known as the "Fourth Party." Lord Randolph frequently showed signs of insubordination to his leader, Sir S. Northcote, and protested against the supineness of the front Opposition bench in the daily papers, and in an article in the *Fortnightly Review* entitled *Elijah's Mantle*. On the other hand, he proved a highly effective partisan orator. Outside Parliament he expressed himself in favour of protecting British industries, and attacked with much vigour Mr. Gladstone's Irish and Egyptian policies. Upon the question of the extension of the franchise Lord Randolph displayed some rather sudden changes of opinion. In the following session he frequently voted with the Government against his leaders—having in the interval announced his intention of standing for a division of Birmingham—and lectured Mr. W. H. Smith with much severity for proposing to exclude Ireland from the benefits of the extended franchise. A quarrel with Lord Salisbury on a question of party organisation was followed by a complete reconciliation; and during the summer and autumn agitation Lord Randolph supported his leaders with zeal. His attempt

in the autumn session to prove that Mr. Chamberlain had instigated the Aston riots broke down. Shortly before his departure, in November, on a voyage to India for his health, Lord Randolph was interviewed, and was reported as having formulated a creed for the "Tory Democrat," strongly tinged with State Socialism. On the formation of Lord Salisbury's ministry Lord Randolph's exertions were rewarded by a seat in the Cabinet, and the office of Chief Secretary for India. His speech on the Indian budget was enlivened by an animated attack on the late Viceroy, Lord Ripon, whom he accused of having neglected frontier defences in order to push on philanthropic measures. In 1885 he stood for the Central division of Birmingham and for South Paddington. He was returned for the latter constituency. In August, 1886, he became Chancellor of the Exchequer and leader of the House of Commons, a position which he resigned in December of the same year.

* **Cialdini, ENRICO** (b. 1811), Italian general, began life as a medical student at Parma, but being banished from Italy for his share in the patriotic movement of 1830, took refuge for a time in Paris, and afterwards served in the army of Don Pedro, in Portugal, and of Queen Isabella in Spain, where he remained until the revolution of 1848 recalled him to his own country. Having fought with the highest personal distinction in the service of Charles Albert during 1848 and 1849, he was despatched as major-general to the Crimea in 1855, and afterwards became one of the most prominent figures in the campaign of 1859–61, defeating the Papal army at Castelfidardo in 1860, and capturing the fortresses of Gaeta and Messina in 1861. After this he was created field-marshal, and was for some months Governor of Naples. In the campaign of 1866 he was employed to guard the lower reaches of the Po, and helped to drive the Austrians back upon the Tyrol. In 1867 he was appointed commander-in-chief of the army of Central Italy, and in 1870 accompanied the Duc d'Aosta to Spain, remaining with him till 1873. In 1876 he became Italian ambassador in Paris, but after successfully overcoming many difficulties, retired on leave of absence owing to the strained relations between Italy and France over the Tunis question in 1881, and in 1882 was succeeded by General Menabrea, transferred from London.

* **Cissey, ERNEST LOUIS OCTAVE COURTOT DE** (b. 1810, d. 1882), French general, having received his early training at St. Cyr, and served in Algeria and the Crimea, was appointed to command the first division of the Fourth Army-Corps, forming part of the army of Metz at the outbreak of the war of 1870. Blockaded in that fortress with Marshal Bazaine, he strongly opposed the capitulation. After a short visit to Germany as prisoner of

war, he commanded a corps in the army of Versailles for the suppression of the communistic insurrection, and succeeded in entering Paris in May, 1871. Next month he was appointed Minister of War, and at once undertook the stupendous task of reorganising the army, carried out with astonishing success under M. Thiers' encouragement and assistance. Having retired from office soon after the fall of M. Thiers in May, 1873, he returned in the following year, and was also created Vice-President of the Council, and remained in power, with only one short break till the accession of the Jules Simon ministry in Dec., 1876.

Clapperton, HUGH (b. 1788, d. 1827), African explorer, was born at Annan, and having been pressed into the navy, served for many years in the Spanish Sea and Canada. In 1822 he joined Dr. Oudney and Dixon Denham in an expedition to explore the Lower Niger. After Oudney's death Clapperton succeeded in reaching Saccatoo alone, and obtained new information concerning Lake Tchad. In a second expedition in 1826 he penetrated again to Saccatoo from the Bight of Benin, but was there seized with a fatal attack of dysentery. His servant, Richard Lander, afterwards completed his discoveries, and wrote *Records* of his life (1830).

Clarendon, GEORGE WILLIAM VILLIERS, EARL OF (b. 1800, d. 1870), was the second son of the second Earl of Jersey, in whose favour the title was revived. After a somewhat desultory education, he went to St. Petersburg as *attaché*. In 1823 he was appointed Commissioner of Customs, and in 1831 made an unsuccessful attempt to negotiate a commercial treaty with France. Two years later he was appointed minister at the Court of Madrid. There he firmly supported the cause of Queen Isabella against her cousin Don Carlos, and after England and France, by the Quadruple Alliance of 1834, had pledged themselves to uphold Isabella, he did his best, in concert with Espartero (q.v.), to bring about a moderate and trustworthy form of government. On his return from Spain, the Governor-Generalship of Canada was offered to him for the first time, and declined, as it was later on in his life. Twice, also, the Governor-Generalship of India was his, if he had cared to have it, but he saw rightly that he was more competent to deal with European politics. In Jan., 1840, he entered Lord Melbourne's administration as Lord Privy Seal, and succeeded to the title, and, upon the death of Lord Holland, he also held the office of Chancellor of the Duchy of Lancaster during the last days of the Whig Government. During that period he did his best to keep Lord Palmerston's Gallomania within moderate limits, but acquiesced in the necessity of checking the Franco-Egyptian encroachments in Syria. On the downfall of his friends, Lord Clarendon

watched with sympathetic interest the efforts for the repeal of the Corn Laws, of which movement his brother, Mr. C. P. Villiers, was one of the most prominent champions, and when Sir Robert Peel's measure was introduced in the Upper House, he supported it in a speech of great ability. It was natural, therefore, that on the return of the Whigs to office, in 1846, he should be chosen President of the Board of Trade, an appointment which, sorely against his will, he was induced to exchange for the far less congenial post of Lord Lieutenant of Ireland (1847). Greeted with much enthusiasm, or as Brougham characteristically put it, "venerated and almost worshipped," he proceeded to deal, with marked powers of organisation, with the potato famine which was then raging, and to attempt to cure some of the ills of the Irish land system by means of the Encumbered Estates Act. His popularity, however, waned when he had to deal with the "Young Ireland" rebellion. The rebellion was promptly crushed, Lord Clarendon having to his eternal credit refrained from rekindling the fires of religious hatred by availing himself of the service of the Orange lodges, in spite of much angry criticism at home; and it was mainly through his exertions that the sentences of Smith O'Brien and Meagher were commuted to transportation for life. Disorder had given place to order, when, in 1852, a change of government allowed Lord Clarendon once more an interval of repose. In 1853 he had the misfortune to accept the Secretaryship of State for Foreign Affairs in the Cabinet of Lord Aberdeen, and thus became the man on whom the responsibility for the Crimean War directly fell. It is quite possible that, with a united ministry to back him up, Clarendon might have been able to avert hostilities; but Lord Aberdeen declining to believe that circumstances were at all critical, and Lord Palmerston holding ostentatiously aloof, the Czar was encouraged to defy the Powers, and, to use the Foreign Secretary's famous phrase, we "drifted" into war. At the same time Lord Clarendon was the man who made success possible, by keeping together, through his conciliatory firmness, the members of a most heterogeneous alliance. Lord Clarendon was overthrown, with his colleagues, by Mr. Roebuck's famous resolution of 1855; but at the request of Lord Palmerston he resumed the Secretaryship of Foreign Affairs, and sat as First Plenipotentiary at the Congress of Paris. The results of the treaty, such as they are, belong to him—the neutralisation of the Black Sea, and the cession of Bessarabia. To a later generation his efforts may perhaps seem to have been more usefully employed in procuring the admission of Italy to the congress as a signatory Power, and the Declaration of the Maritime Powers, an offshoot of the congress, by which England at length abandoned her vexatious doctrines as to the

legitimate limits of blockade. The ambition of Lord John Russell caused him to insist upon receiving the office of Foreign Secretary in 1859, and Clarendon's abilities were left unemployed until 1864, when he joined Lord Palmerston's third ministry as Chancellor of the Duchy of Lancaster, but resumed his former post as Foreign Secretary in the following year, under the administration of Earl Russell. Upon the formation of Mr. Gladstone's Cabinet in 1868, he again became Foreign Secretary, and died in harness on the eve of the war between France and Germany, which he, if any one, might have averted. To him was also due the peaceful settlement of the Alabama claims. Lord Clarendon is chiefly remembered as a director of foreign affairs. As such he was enormously industrious. In manner absolutely free from British boorishness, and without putting forward any magniloquent pretensions of being the champion of oppressed nationalities, he was, as a rule, on the side of the weaker. To his friends he was beloved as a man of singular purity of soul. Perhaps, after all, his highest claim to renown is his conduct as Lord Lieutenant of Ireland.

Kinglake, *Invasion of the Crimea*; Sir C. Gavan Duffy, *Young Ireland*. [L. C. S.]

* **Claretie**, ARSÈNE ARNAUD, dit JULES (b. 1840), a French journalist and writer, was born at Limoges, and educated in Paris at the Lycée Buonaparte. He has been a constant contributor to the leading journals of France, his letters which appeared in the *Rappel* and the *Opinion Nationale*, during the war of 1870, attracting much attention. M. Jules Claretie has published a great number of novels, one of the most celebrated being *Madeleine Bertin* (1868), and a variety of historical and critical works. His *Histoire de la Révolution de 1870-71* was very successful, a new and enlarged edition having appeared lately. In addition to this he is the author of several dramas, which have been acted in various theatres of Paris, and in 1885 he succeeded M. l'errin as manager of the Comédie Française.

Clark, CHARLES HERBER. [ADELER.]

* **Clark**, SIR ANDREW, BART., M.D. (b. 1826), educated at Aberdeen and Edinburgh, commenced practice in London in 1854, and has obtained a very large and influential connection in the metropolis. Sir Andrew Clark has made his speciality the diseases of the digestive and respiratory organs, and enjoys a very high reputation for his skill in the treatment of consumption, dyspepsia, etc., being also the "beloved physician," as George Eliot called him, of many brain-workers. He is the author of many professional works, amongst which may be mentioned, *Evidences of the Arrestment of Phthisis, On Tubercular Sputum, Mucous Disease of the Colon, Fibroid Phthisis*. He is senior physician and lec-

turer on clinical medicine to the London Hospital, president of the Metropolitan Counties Branch of the British Medical Association, and consulting physician to the East London Hospital for Diseases of Children. He received a baronetcy in 1883.

Clarke, ADAM (b. 1762, d. 1832), author of the *Commentary*, was born near Londonderry, and brought up as a Methodist, becoming an itinerant preacher in England in 1782. Having settled in London in 1805, he began his great *Commentary on the Holy Bible*, published between 1810 and 1826. A *Bibliographical Dictionary* (1802), *The Succession of Sacred Literature* (1807), *Clar's Biblica* (1820), and other theological works, remain as monuments of his unwearied industry and vast Oriental scholarship.

Clarke, HENRY JACQUES GUILLAUME (b. 1765, d. 1818), one of Napoleon's generals, was born at Landrecies, and served after the revolution with great distinction in the army of the Rhine, till deprived for a time of his commission owing to his noble birth. The Directory, however, sent him to Vienna in 1796, to watch the movements of Bonaparte after his Italian triumphs. Clarke soon attached himself to the future emperor, and having served him faithfully in his early campaigns, was appointed Governor of Lower Austria in 1805, and of Berlin in 1806. In 1809 he was created Duc de Feltre. After Napoleon's fall he supported Louis XVIII., and was Minister of War during 1815 and 1816.

* **Clarke**, HYDE (b. 1815), an English philologist, was employed in diplomatic affairs early in life. In 1836 he was engaged as an engineer in the improvement of Morecambe Bay and Barrow. In 1849 he was detailed to report on the telegraph system for India, and was afterwards Honorary Agent for Darjeeling, and Cotton Councillor in Turkey. His writings, which are voluminous, include:—*Lectures on Colour, Theory of Railway Investment, Engineering of Holland, and Colonisation in Our Indian Empire*. He is, however, best known as a philologist, and has devoted himself ardently to the study of languages, their connections with each other, and their development from a common source; he has also studied closely the languages of the American Continent, and their relation to the comparative philology and mythology of the Old World. Among his works on these and kindred subjects are:—*Comparative Philology, Pre-Hellenic Inhabitants of Asia Minor, The Connection of the Languages of India and Africa, Prehistoric Comparative Philology, The Khita and Khita-Peruvian Epoch, Serpent and Siva Worship and Mythology, The Earliest English, and The Early History of the Mediterranean Populations*. Of late years he has taken an active part in the affairs of the Anthropological Institute

and kindred societies, and as treasurer of the Press Fund has done much to assist the struggling journalist, while in the commercial world his services have been much in requisition as an expert in the ways of States which borrow, but never repay their "loans."

* **Clarke, JOHN S.** (b. 1835), comedian, was born in Maryland, U.S., and appeared on the stage at Philadelphia about 1852. Having played in the principal cities of America, New York (1861), Boston (1866), etc., he came to London in 1867, and appeared at the St. James's Theatre as Wellington de Boots in *The Widow Hunt*, one of his favourite parts. During the same visit he also enacted Robert Tyke in the *School of Reform*, a part requiring almost tragic emotion. Of the other characters in which he is best known we may mention Dr. Pangloss in the *Heir-at-Law*, Dr. Ollapod in *The Poor Gentleman*, Bob Acres in *The Rivals*, and Toodles. In 1882 he revived *The Comedy of Errors* at the Strand Theatre, taking one of the Dromios, with Mr. Paulton as the other. In 1885 he appeared as Newman Noggs in a dramatised version of *Nicholas Nickleby*. He is the greatest master of facial expression and the quiet subtleties of comedy.

* **Clarke, MRS. MARY COWDEN** (b. 1809), is the eldest daughter of Mr. Vincent Novello, and was married in 1828 to the late Mr. Charles Cowden Clarke. She is the compiler of the well-known *Complete Concordance to Shakespeare* (1845), a work which occupied her for sixteen years. She has published besides several novels and other works, amongst which we may mention *The Girlhood of Shakespeare's Heroines*. In conjunction with her husband she edited and annotated *Cassell's Illustrated Shakespeare*.

Clarke, WILLIAM GEORGE (b. 1821, d. 1878), man of letters, was educated at Shrewsbury, and at Trinity College, Cambridge, where he became a fellow in 1844. He was ordained in 1853, but resigned his orders in 1870. Mr. Clarke was public orator of the university from 1867 to 1869, and then became vice-master of Trinity College. The *Cambridge Shakespeare*, in 9 vols., edited by himself and Mr. W. Aldis Wright, appeared between 1863 and 1866, and the highly useful edition known as the *Globe Shakespeare* in 1864. He also contributed to the Clarendon Press series of Shakespeare's plays. Mr. Clarke was editor of *The Journal of Philology*, and published several accounts of vacation travels, and a course of lectures on *The Middle Ages and the Revival of Learning* (1872).

The Academy, Nov., 1878.

Clarkson, THOMAS (b. 1760, d. 1846), the philanthropist, was born at Wisbeach, and educated at St. Paul's School, and St. John's College, Cambridge. In the year 1785 his attention was first drawn to the question of slavery, the Vice-Chancellor of the Uni-

versity having proposed for the prize Latin essay, *Is Involuntary Servitude Justifiable?* Clarkson gained the prize, and the study of the subject had so filled his mind with horror and indignation at the wrongs of the injured negro, that he determined to devote his life to the cause of the slaves. Having published an English version of his essay, he soon afterwards became acquainted with George Harrison, William Dillwyn, and other members of the Anti-Slavery Association, most of them belonging to the Society of Friends, who had set their faces long ago against "the guilty traffic." Clarkson found an earnest and powerful fellow-worker in Wilberforce, who in 1789 made an eloquent speech in the House of Commons against the slave traffic. For many years the efforts of Clarkson and his supporters were unavailing. Neither Pitt nor Fox wished to engage in conflict with the formidable opponents of the suppression, who had invested enormous sums in the African slave trade. At length Mr. Pitt consented to bring forward a discussion, and the slave trade underwent a searching investigation. The labours of Clarkson at this time were incredibly great; he even undertook a journey to Paris, then in the midst of the revolution, to obtain aid from the French Government, but found little support. In 1801 the measure passed both Houses, but did not become law until March, 1807, when "the Magna Charta of Africa was completed." In 1808 he published *The History of the Abolition of the Slave Trade*, followed by *Portraiture of Quakerism*, and *Memoirs of the Life of William Penn*. He lived to witness the final triumph of the cause—the abolition of slavery in the West Indies in 1838. In his youth Clarkson had intended to enter the Church, and even took deacon's orders, but subsequently became a member of the Society of Friends.

Thomas Taylor, *Life of T. Clarkson*; James Elmes, *Thomas Clarkson: a Monograph*.

Clausen, HENRI NICOLAS (b. 1793, d. 1877), Danish theologian and politician, born on the isle of Laland, was educated at Copenhagen, and travelled in Germany, where he fell under the influence of Schleiermacher. In 1820 he was appointed professor of theology in Copenhagen. In 1825 he published his best known work, *The Constitution of the Catholic and Protestant Churches*. In spite of the vehement opposition to his writings, he was appointed rector of the University in 1837, and after 1840 took a prominent part in all the national and political questions of the time, being a strenuous advocate of liberalism in thought and action. As Councillor of State and Minister of Worship, from 1848 to 1851, he had a large share in drawing up the Danish Constitution of 1849. Only few of his numerous theological and political works have been translated from the Danish. His memoirs (*Optegnelser om mit Lærned og min*

Tide Historie) were published in the year of his death.

Clausewitz, KARL VON (b. 1780, d. 1831). Prussian general and tactician, was born at Burg, but came of Polish stock. Having entered the army, he served on the Rhine during 1793 and 1794, and in 1801 went to the military school at Berlin, where he attracted the attention of Scharnhorst, as whose disciple in the art of war he must be regarded. Being aide-de-camp to Prince August of Prussia in 1806, he was taken as prisoner to France after the capitulation of Prenzlau. When Prussia joined with France in the Russian War, Clausewitz transferred his services to the Czar, and having taken part in the campaign of 1813, only returned to the Prussian army in 1815. In 1818 he was appointed director of the School of War at Berlin, and in 1830 was transferred to the artillery department. During these years he was preparing the great series of works on the history and art of war that still form the military text-books of Germany, and, in a certain sense, may be said to have been the foundation of her military successes during the last twenty-five years. The publication of them did not begin till the year after his death.

Clay, HENRY (b. 1777, d. 1852), American orator and statesman, was born at Hanover, in Virginia, in the district known as "The Slashes." Having been admitted to the bar at Richmond, he removed in 1797 to Lexington, in Kentucky, where his great oratorical powers early made him conspicuous. In 1809 he was chosen senator as a Jeffersonian Democrat, and, in 1811, entered the House of Representatives, of which he became Speaker in the same year. To this office he was six times re-elected with short intervals, serving for thirteen years in all. Though himself one of the most strenuous supporters, and indeed chief director, of the war with Great Britain that broke out in 1812, on the right of search, he was nevertheless the principal plenipotentiary in the negotiations that resulted in the Treaty of Ghent (1814). His next public service was his support of the South American States, in their war of independence against Spain (1818). He also maintained the Missouri Compromise of 1821, by which the slave State of Missouri was admitted to the Union, but slavery was limited by a certain latitude north. In 1825 he was a candidate for the Presidency, but having failed to secure any considerable number of votes, he induced the House of Representatives to decide in favour of Adams rather than of General Jackson, none of the candidates having secured an absolute majority. Adams appointed him his Secretary of State, but his character never quite recovered from the imputation cast upon his honesty by Jackson's supporters on this occasion. The

description of the proceeding as "a combination of the Puritan (Adams) and the black-leg," led to a bloodless duel, and though twice again candidate for the Presidency (in 1832 and 1844), he was on both occasions unsuccessful. As one of the most prominent opponents of slavery, he spoke strongly in favour of the establishment of the colony of freed negroes at Liberia, on the West African coast, and warmly opposed the annexation of Texas (1844). His last session in the Senate (1848 to 1851) was almost entirely devoted to the abolition of slavery, and in 1850 his Compromise—also known as the "Omnibus Bill," from the number of its provisions—was accepted, postponing the Civil War for ten years. Though he never filled the high place in political life for which he seemed intended, Clay's speeches remain as monuments of straightforward eloquence, and are invaluable for the history of his country's development.

Calvin Colton, *Life of Henry Clay* (1846).

Clayton, JOHN MIDDLETON (b. 1796, d. 1856), American politician, studied at Yale College, and having practised as a barrister in Delaware, was returned to the Senate in 1829. In 1849 he was appointed Secretary of State by President Taylor, and before the latter's death had negotiated the famous Clayton-Bulwer Treaty with Great Britain, published under President Fillmore in 1850. By this treaty the neutrality of the projected ship-canal through the State of Nicaragua, to connect the Atlantic and Pacific Oceans, was secured. On President Taylor's death he resigned office, but sat in the Senate from 1851 to 1856.

* **Clémenceau, EUGÈNE** (b. 1841), French politician, was born at Moulleron-en-Pareds, in La Vendée, and received his doctor's degree in medicine at Paris in 1869. His political career is entirely subsequent to the Second Empire, and begins with his election as mayor of his arrondissement after the revolution of Sept. 4th, which was followed, in 1871, by his return to the National Assembly as representative of the Seine. During the troubles of the Commune he played a prominent part, his unsuccessful attempt to save General Lecomte and Clément Thomas resulting in an attempt by the Central Committee to arrest him on the one hand, on the other, in accusations of cowardice, which fell to the ground on the trial of the assassins. He failed to be returned at the municipal elections of March; and having in vain tried to reconcile the Commune and the Government, he retired into private life. Soon, however, he reappeared as a member of the Municipal Council of Paris, of which he became president in 1875. In 1876, M. Clémenceau was returned at the general elections for an arrondissement of Paris as an extreme Republican, and was re-elected in the following year. Side by side with Gambetta he resisted

the insidious designs of the Monarchists both inside and outside the Chamber, and was one of the committee of eighteen appointed by the Left to watch over the possible designs of General Rochebouet's extra-Parliamentary Cabinet. After the restoration scare had passed away he distinguished himself by demands for a total amnesty of the Communists, and in 1879 made himself by a great speech, in which he demanded the impeachment of the Waddington Cabinet. Gradually he diverged from Gambetta, and, in particular, was opposed to the latter's policy of making himself the inevitable by pulling down ministry after ministry, shrinking the while from exercising power "in broad daylight, and under the control of public opinion." When, at last, in November, 1881, Gambetta undertook the responsibility of the premiership, M. Clémenceau, became openly hostile, and at first accorded his support to the weak De Freycinet ministry that followed, but overthrew them, with a telling speech, on account of their feeble Egyptian policy, which, said he, combined the inconveniences of intervention and non-intervention. No less hostile was his attitude towards the stronger Ferry Cabinet, and he wisely opposed the Chauvinist colony-grabbing in Tonquin and Madagascar, which proved its ruin. In the summer of 1885 he made a series of great speeches in view of the general elections. His final and amended programme, however, which consisted of proposals for elective magistrates, a ministry absolutely responsible to the legislature, the abolition of the Second Chamber, triennial Parliaments, the separation of Church and State, gratuitous primary education, and the substitution of a militia for the national army, fell exceedingly flat; and more importance was paid to his exhortations to French politicians to desert their little groups and cliques, and to organise themselves into two great parties of Liberal and Conservative Republicans. The result of the elections was to strengthen his position as leader of the Radicals at the expense of Gambetta's old followers, the Opportunists; and M. Brisson, the Premier, resigned in a fit of spleen.

Clemens, FRIEDRICH JAKOB (b. 1815, d. 1862), Roman Catholic philosopher, born at Coblenz, was educated at the Jesuit school at Freiburg, and studied at Bonn and Berlin, where he devoted himself especially to the "Absolute Philosophy," as expounded by Gans and Michelet, after Hegel's death. In 1843 he began to lecture on philosophy at Bonn, and attracted much attention by his subtle connection of modern speculations with the established philosophy of the Church. In 1847 he clearly defined his philosophic position in a treatise on Giordano Bruno and Nicholas of Cusa. In the following year he was returned as a representative to the par-

liament at Frankfurt, and in 1856 was appointed professor of philosophy in Münster. By the charm of his personality, and the enthusiasm and subtlety of his discourses, he did much to maintain the power of the Church in the Rhine Provinces, and, except that he was born a Catholic, might serve as a type of what befell so many minds in Germany after coming under the influence of the "Absolute Philosophy."

Clemens, SAMUEL LANGHORNE. [MARK TWAIN.]

Clementi, MUZIO (b. 1752, d. 1832), composer and pianist, born at Rome, where he learnt the elements of music, was brought to England about 1766, and in 1770 performed publicly in London, meeting with the highest applause. Having acted as conductor to the Italian Opera, he undertook a tour through Europe (1781), making the acquaintance of Haydn and Mozart. About the beginning of this century he started a firm, still known under the name of his partner, Mr. Collard, for the manufacture of pianos; and by this means, and private lessons, acquired a considerable fortune. Amongst his pupils he counted Cramer and Field, Berger and Meyerbeer. After 1810 he did not leave London, but occupied himself almost entirely with composition. He wrote several symphonies, and more than a hundred sonatas, many of which are of permanent value. But his fame will rest on his great series of 100 studies for the piano, the *Grados ad Parnassum*, published in 1817. They still remain a text-book for the instrument. It is interesting to know that he was a favourite composer with Beethoven.

* **Cleveland, GROVER** (b. 1837), President of the United States, was born at Caldwell, Essex Co., New York. He was admitted to the bar at Buffalo, and having fulfilled the offices of Governor of New York State (elected 1882) with remarkable probity, he was chosen as candidate for the Presidency by the Democratic Convention assembled at Chicago in July, 1884. Owing to the unpopularity of his opponent, Mr. Blaine, Mr. Cleveland's nomination was welcomed by several of the Republican party, especially of Boston, who united in his support, receiving the nickname of "Bolters." Through this disaffection in the Republican ranks, Mr. Cleveland was returned in November, though by a very narrow majority. He is the first Democratic President since the war, and owes his position to a national rebellion against party names which had become meaningless. He is the representative of the reform element in America, especially reform in the civil service, and is also a firm opponent of the "Spread-eagle" policy of his former opponent.

Clifford, WILLIAM KINGDON (b. 1845, d. 1879), mathematician and physicist, a native of Exeter, was educated in that town, and at

King's College, London. There, while he distinguished himself in classics, history, and English literature, he displayed a special aptitude for mathematical studies. Entering Trinity College, Cambridge, in 1863, though he did not follow the regular course of study, he maintained his high reputation as a mathematician, and on graduating, in 1867, was second wrangler. He was elected fellow of his college, and in 1870 accompanied the expedition to the Mediterranean to observe the solar eclipse. In 1871 he was appointed professor of applied mathematics at University College, London, and in 1874 was elected F.R.S. His constitution was never robust, although at college he had taken an active part in gymnastic exercises; subsequently his ardent studies appear to have led him to neglect his health, which in 1876 gave way, and compelled him to seek its restoration in sunnier climes. He spent that summer in Spain and Algiers, and returned to England much benefited. In 1878 he again broke down seriously, and was again recommended to go southwards, which he did, but with no permanently beneficial result, and he died in Madeira, March 3rd, 1879. He was a lucid and even brilliant lecturer and writer, being able to render the most abstruse subjects clear and intelligible, and the highest anticipations had therefore been formed of his after career. At college, he had been at first an ardent High Churchman, but he afterwards became a follower of Darwin, and later of Herbert Spencer, whose views he advocated with much ability, though, it must be admitted, with an intellectual arrogance which seriously detracted from the persuasiveness of his address. His published works, not including his various scientific papers, are *Seeing and Thinking*, and *Lectures and Essays*, the latter issued after his death. [R. B.]

Clinton, De Witt (b. 1769, d. 1828), an eminent American statesman, began life as a Republican, or Anti-Federalist, but subsequently became one of the most powerful leaders of the Democratic party in New York, and in 1802 made a very fine speech on the navigation of the Mississippi, opposing the war against Spain, which disputed the right of the Americans to navigate that river. In 1803 he was made Mayor of New York, an office then much more important than it is now. The city prospered under his administration, and the Historical Society and Academy of Fine Arts were established. In 1812 he lost his popularity to some extent owing to a dispute with President Madison concerning the war with Great Britain, for which he did not consider the country sufficiently prepared. The same year he was an unsuccessful candidate for the Presidency of the United States, Madison being elected. Owing to Clinton's exertions the Erie Canal was constructed, and opened in 1825. He lived to see the great

prosperity which it brought to the inhabitants of New York. He was several times elected to the office of Governor of New York. He wrote several treatises upon natural history, a subject in which he took great interest, and was also the author of an interesting essay upon the history of the Indians in New York.

Hosack, *Memoir of De Witt Clinton* (1829).

Clissold, THE REV. AUGUSTUS (b. 1797, d. 1882), a prominent Swedenborgian, was educated at Exeter College, Oxford. He translated Swedenborg's works, and published the following treatises in support of the significance and inspiration of that modern Father of the Church:—*Illustrations of the End of the Church* (1841); *The Spiritual Exposition of the Apocalypse* (1851); *Inspiration and Interpretation* (1861); *Swedenborg and his Modern Critics* (1866); *The Prophetic Spirit in its Relation to Wisdom and Madness* (1870); *The Divine Order of the Universe as Interpreted by Swedenborg, with special Relation to Modern Astronomy* (1877); *The Consummation of the Age, being a Prophecy now Fulfilled and Interpreted in the Writings of Swedenborg* (1879); *Swedenborg's Writings and Catholic Teaching* (3rd edit., 1881).

Clough, ARTHUR HUGH (b. 1819, d. 1861), poet and essayist, was born at Liverpool on Jan. 1st. His father, James Butler Clough, was of an old Welsh family, and was in business as a cotton merchant. His mother's name was Anne Perfect. Arthur was the second son. In his fourth year his parents migrated to America, and the family lived some years at Charlestown, Mass., paying occasional visits to the north, including New York. When Arthur was nearly seven his father returned to England, taking the eldest boy, and was absent nearly a year, during which time Arthur became the constant companion of his mother, and was greatly influenced by her character and teaching. Rigid simplicity, stern integrity, and an enthusiasm to make others see vividly the things she taught, were among her gifts. The impress of these gifts on her son was clear; and he appeared to have been early noticeable for originality and a distaste for the mere imitation of others. On the return of Mr. Clough, the boy's time was divided between learning and reading history and poetry with his mother, rambling on the sea-shore, and accompanying his father to wharves and on board ships. In 1828 the whole family returned to England for a few months; Arthur was left at school at Chester; and the parents went to Charlestown again with the youngest son and a daughter. In 1829 Arthur went to Rugby, where he was known as a grave, studious, verse-writing boy. He quickly mounted through the lower forms, becoming more and more influenced by the powerful character of Dr. Arnold. He worked hard among the

boys to raise the character of the school, and, as editor of *The Rugby Magazine*, acquitted himself with great credit: he is also remembered as a good runner, an excellent swimmer, and at football the best full-back on record. In November, 1836, Clough gained the Balliol scholarship, and in October, 1837, he went into residence at Oxford—at the time of the great Tractarian movement, which involved him in intellectual and spiritual struggles, such as might well interfere with quiet scholastic progress. His career at Oxford was rather influential than successful. He did not take, as his friends expected, the highest honours; but in 1843 he obtained the appointments of fellow and tutor of Oriel, which he relinquished in 1848. In 1847, during the Irish famine, he took a leading part in an association for inducing at Oxford retrenchment of personal expenditure, so as to send relief to the sufferers; and he published a pamphlet entitled, *A Consideration of Objections against the Retrenchment Association*. He had already written most of the poems published in *Ambarvalia*, when, in 1848, he wrote the *Long Vacation Pastoral*, by which he is best known; and in the same year he passed some time in Paris, witnessing, and admirably describing in letters to England, the political, social, and external aspects of the revolution then going forward. *The Bothie of Tober-na-Fuochich, a Long Vacation Pastoral*, was published in 1848, and at once established his reputation as a poet among the select and critical few. He subsequently revised it, and changed its name to *The Bothie of Tober-na-Fuolich*. In 1849 he was at Rome, where he was present at the siege by the French, adding to his Paris letters a no less striking series on the stirring events at Rome, and writing his *Amours de Voyage*. In the same year he published, in conjunction with his friend Burbridge, the little volume called *Ambarvalia*, and entered on the headship of University Hall, London. In 1850 he visited Venice, and began his third long poem, *Dipsychus*. In 1852 he quitted University Hall and went to try his fortunes in the United States, where he lectured, taught Greek, wrote articles for the *North American Review*, *Pittman's Magazine*, etc., and began his revision of the Dryden translation of Plutarch, for an American publishing firm. In 1853 he returned to England to take up an appointment as examiner under the Education Department, which he held till his death. On the strength of this appointment he married in 1854. For seven years he led a quiet, busy life, devoting himself to much unselfish labour, and becoming the father of three children. In 1859 the state of his health became a source of great anxiety to his friends, and he eventually had to obtain six months' leave of absence from the Education Department; he then went to Greece and

Constantinople alone, and later made a tour in the Auvergne and Pyrenees, where he composed some of the poems of the *Mari Magno*. In the autumn of 1861 he was joined by his wife at Paris, whence they proceeded to Florence. Attacked by malaria, his already exhausted constitution was unable to rally, and he died on Nov. 13th. Clough was before all things an honest and subtle thinker, and an earnest exponent of thought. Being of a highly sensitive temperament, the results of his spiritual travail took naturally the form of verse. During his short life he had to do too much of the world's drudgery to admit of his settling down upon a luminous philosophic level, or perfecting his art on the technical side; but the best of what he left us is, nevertheless, truly philosophic in quality of thought, and truly poetic in feeling. His work is markedly original, and always suggestive and bracing; and the curtailment of his career is greatly to be deplored.

Poems and Prose Remains, with selections from *Letters and Memoirs*, edited by Mrs. Clough, (1869); Samuel Waddington, *Arthur Hugh Clough: a Monograph* (1888). [H. B. F.]

* **Cluseret**, GUSTAV PAUL (b. 1823), French officer and general revolutionist, born in Paris, was trained at St. Cyr, and served against the barricades in 1848. During the Italian War he allied himself to Garibaldi, and in 1861 crossed to America, entering the service of the North. After being occupied in American politics for a few years, he attached himself to the Fenian cause, and under the name of Aulif became one of the ring-leaders in the attempt to surprise the arsenal at Chester (1867). Escaping from England, he returned to Paris, and became engaged in revolutionary journalism, being protected by American citizenship. After the fall of the empire he wrote for the *Marseillaise*, and stirred up communistic outbreaks in Lyons and Marseilles. In April, 1871, he was elected member of the Commune, and entrusted with the direction of military force; but having fallen under suspicion, was imprisoned by the Central Committee, and only escaped as the Government troops were entering Paris. Sentenced to death for the second time in absence, he made his way to England and America, and is said since then to have appeared amongst the revolutionists in Switzerland. But his recent career is necessarily obscure.

Clyde, COLIN CAMPBELL, BARON, G.C.B. (b. 1792, d. 1863), general, entered the army, in the 9th Regiment, in 1808, was present at Vimeira and Corunna under Sir John Moore; next shared in the Walcheren Expedition, and in 1810 served again in the Peninsula, at Barrosa and Tarifa. In 1812 he was appointed to assist the army of Ballesteros in the mountains of Ronda, and was engaged at

Tarragona, Osma, and Vittoria. He was twice severely wounded in the assault of St. Sebastian in 1813, and again at the passage of the Bidasoa, by which time he had attained the rank of brevet-captain. He shared in the American Campaign of 1814-15. He was next appointed brigade-major to the force despatched to quell the insurrection of the negroes in Demerara in 1823, and by 1832 had attained the rank of lieutenant-colonel, and commanded the 98th Regiment, which regiment he took to China in 1842, and was present at the battles of Chusan, Chin-kiang-foo, and Nankin. For these services he was made full colonel. On the breaking out of the second Sikh War in 1848 he commanded a division, under Lord Gough, at Ramnuggur, Chenab, Sadoolapore, Chilianwallah (where he was again wounded), and Gujerat. For these services he was rewarded with a K.C.B. and the thanks of Parliament and the East India Company. Commanding in the Peshawur district, under Sir Charles Napier, in 1851-2, he was actively employed against the Momund, Oo-man-Kheyls, and Ranizai tribes. The outbreak of the Crimean War in 1854 saw him commanding the left wing of the Duke of Cambridge's brigade at the Alma, composed of Highland regiments, and he had his horse killed under him. He was thanked by Lord Raglan for his valuable services in the battle, and appointed to the command of Balaklava, where, on the Kamora Heights, he repulsed the first efforts of the Russians, Oct. 25th, 1854. Though he was now made G.C.B., and Grand Cross of the Legion of Honour, General Codrington, his junior in the service, was promoted over his head, but he was made lieutenant-general in 1856. In July, 1857, when the Mutiny had already broken out, he was appointed commander-in-chief in India, and saved our Indian Empire by the relief of Lucknow, which a consummate tactician alone could have accomplished. He personally directed the assault on Shah Nujif's tomb there, afterwards defeating another native army who were besieging Windham at Cawnpore, and dispersing the enemy at Rohilcund and Bareilly. For these eminent services he was created Baron Clyde, of Clydesdale, and promoted to general and field-marshal. Though a strict disciplinarian, Clyde was kindly and courteous in manner, independent and courageous. His want of interest in early life alone prevented a more rapid rise. Although he served forty-five years before he reached the general's list, yet he never resented his unmerited obscurity.

T. R. Holmes, *Indian Mutiny*; L. Shadwell, *Life of Colin Campbell, Lord Clyde* (1881).

[C. C. K.]

* **Cobbe, FRANCES POWER** (b. 1822), a well-known literary lady, was born in the county of Dublin, and educated at Brighton. She has been a constant contributor to periodical

literature, and is a zealous supporter of what is called the "Woman's Rights Movement," advocating very strongly the higher education of women, female franchise, and other measures for the social and political education of the sex. She is a strong opponent of vivisection, against which she has written *Moral Aspects of Vivisection* (1875), and *Mr. Lowe and the Vivisection Act* (1877). In matters of religion Miss Cobbe is a theist, and the beautiful preface to *Alone to the Alone: Prayers for Theists, by Several Contributors* (1871), was written by her. From the long list of her many interesting books we may mention:—*Essays on the Pursuits of Women* (1863); *The Cities of the Past* (1864); *Studies, New and Old, on Ethical and Social Subjects* (1865); *Criminals, Idiots, Women and Minors: Is the Classification Sound?* (1869); *Darwinism in Morals, and other Essays* (1872); *Re-Echoes* (1876).

Cobbett, WILLIAM (b. 1762, d. 1835), political and miscellaneous writer, was the third son of a farmer and publican at Farnham, in Surrey. He was of a restless and enterprising disposition, and in 1782, while on a visit to Portsmouth, went on board the *Pegasus* man-of-war, with the intention of becoming a sailor. He was persuaded to return home; but in the following May, being commissioned to go to Guildford fair, he suddenly mounted a London coach and arrived at Ludgate Hill almost penniless. A hop merchant befriended him and procured him a situation as copying clerk to a solicitor in Gray's Inn. Finding this employment dull, irksome, and incessant, he left London for Chatham in 1784, intending to join the Marines. By a misunderstanding, however, he enlisted into a regiment, the service companies of which were in Nova Scotia. For some time he remained at Chatham, where his indomitable energy in the pursuit of knowledge manifested itself. Being able to write, he was appointed copyist to General Debeig, commandant of the garrison. But he had no knowledge of grammar, and this defect he proceeded to remedy in a very characteristic manner. In his *Life*, written by himself, he observes, "I procured me a *Louth's Grammar*, and applied myself to the study of it with unceasing assiduity. The pains I took cannot be described: I wrote the whole out two or three times; I got it by heart; repeated it every morning and every evening; and when on guard I imposed on myself the task of saying it all over once every time I was posted sentinel." By such means as these he acquired great retentiveness of memory and a large stock of information. Cobbett went to America in 1785, and remained on service there until 1791, when he returned home and obtained his discharge. In March, 1792, he went over to France, having married in the interim. The revolutionary events in France caused him to embark for America. He landed at New

York, but proceeded to Philadelphia, where he opened a bookseller's shop, and began the periodical publication of the papers or pamphlets which acquired celebrity under the title of *Peter Porcupine*. Having been cast in an action for libel to the extent of \$5,000 dollars damages, he left America in disgust. Settling in London he established, in 1801, a morning journal, called *The Porcupine*, in which he supported the policy of Pitt. The journal failed, and was succeeded by the *Weekly Register*, which was published, with few intermissions, from its establishment in 1802 until the year 1835. Cobbett's political writings were greatly admired by Pitt, Wyndham, and other statesmen, and his letters on the Treaty of Amiens created a marked sensation, both in this country and on the Continent. The popularity of Cobbett's productions at this time enabled him to purchase an estate at Botley, in Hampshire. A complete change occurred in his views in 1805, when he passed from a staunch defender of the Church and the monarchy, into an uncompromising Radical. It was said that he was offended by Pitt's declining to be introduced to him. He now bitterly attacked those whom he had previously supported, and in 1810 he was subjected to a Government prosecution, for an article on some military flogging at Ely. He was sentenced to two years' imprisonment in Newgate, and to pay a fine of £1,000. The fine was subscribed by his friends. In consequence of the passing of the Six Acts, and the intended suspension of the Habeas Corpus Act, Cobbett, in 1817, again went to America. He returned in two years, however, bringing with him the bones of Tom Paine. He now took an active part in the cause of Queen Caroline, and made several unsuccessful attempts to enter Parliament. Turning his attention to agriculture, he endeavoured to grow a number of plants and trees indigenous to America, and to introduce Indian corn upon a farm at Barnes Elms, in Surrey. His projects failed, and he ultimately settled down upon the Normandy farm belonging to Colonel Woodroffe, about seven miles from Farnham. After the passing of the Reform Bill of 1832, Cobbett was returned to Parliament for the borough of Oldham. He exerted himself during the session of 1835, while suffering from severe illness, and after speaking upon the Marquis of Chandos's motion on agricultural distress, on May 25th, he returned to his farm, dying there on June 18th. Cobbett was the author of a *History of the Protestant Reformation in England and Ireland*, *The Emigrant's Guide*, *Cottage Economy*, *Poor Man's Friend*, *English Grammar*, *French Grammar*, *Rural Rides*, *Parliamentary History of England*, a series of Lectures, entitled, *Advice to Young Men and Women*, and a great number of political pamphlets and miscellaneous writings. He was powerful in polemics, and all his works

bore testimony to the vigour and originality of his mind.

Edward Smith and J. S. Watson, *Biographies of William Cobbett; and Life of William Cobbett, by himself* (1809). [G. B. S.]

Cobbold, THOMAS SPENCER (b. 1828, d. 1886), well-known man of science, sometime professor of botany at St. Mary's Hospital (appointed 1860), and of anatomy at the Middlesex Hospital. In 1868 he was also appointed Swiney lecturer on geology in connection with the British Museum. His special study, however, was that of helminthology, or the science of internal parasites, upon which he has written a great deal, his illustrated standard treatise upon the subject being regarded as a most valuable contribution to medical science. He is considered the first authority upon the subject of entozoa.

Cobden, RICHARD (b. 1804, d. 1865), political economist, and leader of the Free Trade movement, was the son of a Sussex farmer. He was born at Dunford, near Midhurst, where he was educated at the grammar-school. On the death of his father Cobden went to London, where he entered the warehouse of a Manchester firm as an apprentice, afterwards becoming traveller. He subsequently removed to the vicinity of Manchester, where, with the aid of some relatives, he initiated a new process in connection with the cotton print trade. The business was founded in 1830, and speedily became prosperous. By the time Cobden entered public life, his share of the profits from the "Cobden prints" was computed at about £9,000 per annum. In 1834 Cobden travelled abroad, visiting Egypt, Turkey, and Greece, and in the following year he went to the United States. On his return, he delivered the leading address at the opening of the Manchester Athenæum, and he now began the literary propaganda of his views on political economy. In addition to letters on commercial and economical questions, published in the *Manchester Times*, he issued a pamphlet entitled *England, Ireland, and America, by a Manchester Manufacturer*. This pamphlet, in which the writer unfolded his ideas in favour of peace, retrenchment, non-intervention, and Free Trade, excited a lively controversy. It was followed by a second brochure, with the title of *Russia*, in which, while reiterating his former arguments, Cobden also combated the opinions then prevalent upon the Eastern question. In 1837 Cobden visited France, Belgium, and Switzerland, and in 1838 made a lengthened tour through Germany. On his return, he declared strongly for Free Trade, and became one of the most ardent supporters of the Anti-Corn Law League, established in 1838 in Manchester. He and his friend Mr. Bright travelled through various country districts, inveighing against the evils of Protection, and illustrating

the advantages of Free Trade. In 1841 Cobden was returned for Stockport, and took the parliamentary lead upon the great question then agitating the country. Debates occurred in every session, some of them being of a very impassioned nature. During one of these discussions, in the session of 1843, a painful misunderstanding arose between Cobden and Sir Robert Peel. The former was alleged to have said that he held the Prime Minister "personally responsible for the present lamentable and dangerous state of affairs"—words which Peel interpreted as an incentive to attacks upon his life. The Premier became greatly excited, and, amid a scene of confusion, Cobden explained that what he meant was, that the right hon. baronet was responsible in virtue of his office. The incident then terminated. The efforts of the Free Traders never relaxed, and towards the close of 1845 the necessity for the abolition of the Corn Laws was made manifest to Sir Robert Peel. The memorable measure for repealing the duties on the importation of corn was consequently introduced by the Premier in the session of 1846, and received the royal assent on June 26th. As Cobden had been largely instrumental in securing this beneficent legislation, a proposal was made to raise £100,000 by way of subscription, in recognition of his services. It was well known that his own private affairs had been seriously injured by his disinterested efforts. Eventually, the sum of £79,000 was raised on his behalf, with a portion of which the property at Midhurst, on which he had worked as a boy, was purchased for him, while the remainder was invested by the recipient himself in American railway stock. On the day of the passing of the Corn Law Repeal Bill, the Peel ministry was defeated on their Irish Coercion measure, and went out of office. In the course of his valedictory speech as minister, in the House of Commons, Sir Robert Peel said, referring to the Free Trade measures of his Government—"Sir, the name which ought to be, and which will be, associated with the success of these measures, is the name of the man who, acting, I believe, from pure and disinterested motives, has advocated their cause with untiring energy, and by appeals to reason enforced by an eloquence the more to be desired because it is unaffected and unadorned—the name, I say, which ought to be, and will be, associated with the success of these measures, is that of Richard Cobden." Lord John Russell, who now became Premier, desired to include Cobden in his Government, and offered him the office of Vice-President of the Board of Trade, which he declined. In August, 1846, Cobden went abroad, and was entertained by the King of the French at Château d'Eu. At various congratulatory entertainments which he received on his journey, he spoke in favour of Free Trade, and

explained the proceedings of the League in England. During an audience that he had with the King of Sardinia at Turin on May 24th, 1847, his majesty announced his intention of making immediate reductions in the tariff. Cobden next spent some time at Rome, and, in the course of an interview he had with the Pope, drew the Pontiff's attention to the cruelty and demoralisation which attended the bull-fights at Madrid. His representations led to a communication from the Vatican on the subject. Cobden subsequently visited Venice, Vienna, Dresden, and Berlin, and at Potsdam was received by the King of Prussia. He next journeyed into Russia, visiting St. Petersburg, Moscow, and Nishni-Novgorod, and returned to London in October, 1847. At the general election in that year he was chosen member both for Stockport and the West Riding, but elected to sit for the latter constituency, which he represented for ten years. During this period he devoted himself to the advocacy of Radical views, and visited the provinces, speaking on behalf of national education, financial and parliamentary reform, freehold land societies, Ireland, etc. In 1849 he brought forward a motion in the House of Commons for reducing the expenditure of the country—particularly in the War Department—from £54,185,000 to £44,470,000, the sum expended in 1835. This motion, however, like many others of its class, was unsuccessful. Cobden strongly opposed the Russian and Austrian War loans, and frequently spoke in favour of peace and international arbitration. He received a challenge to fight a duel on account of his speech upon the Borneo massacres, but told his would-be antagonist that he should hand him over to the police if the offence was repeated. The Crimean War was condemned by Cobden in the strongest terms, but it was popular with the country, and resolutions supporting the warlike policy of the Government were carried by his own constituents. On one occasion during the progress of the war, Lord Palmerston delivered a strong philippic against Cobden and his friends in the House of Commons. The peace party failed to gain the ear of the country at this juncture, because of their strong antipathy to war generally. They were not regarded as safe and disinterested judges in regard to any particular wars, such as the war with Russia; but although they failed at this juncture, it was the rapid spread of their principles within the next twenty years which made non-intervention a recognised creed in this country, and destroyed the traditional doctrine that England was bound to take a forward part in European questions, even when not directly concerned. Cobden caused a dissolution of Parliament in 1857 by carrying a vote against the Government condemning the proceedings of Sir John Bowring in China in connection with the *lorcha Arrow*. His attitude on this and

other questions, however, was so distasteful to his Yorkshire constituents, that he did not offer himself again for the West Riding. He appeared as a candidate for the town of Huddersfield, but was defeated, his companion, Mr. Bright, being also rejected by Manchester. When out of Parliament, Cobden travelled the Continent in order to recruit his health, and he also visited the United States. At the general election of 1859 he was returned for the borough of Rochdale. The Conservatives being defeated at the polls, Lord Palmerston became Premier. His lordship offered Cobden the Presidency of the Board of Trade, with a seat in the Cabinet, but, after consultation, the offer was declined. In January, 1860, Cobden was appointed plenipotentiary to negotiate a commercial treaty with France. This important treaty was carried to a successful conclusion, and Mr. Gladstone, as Chancellor of the Exchequer, paid a high tribute to him in the House of Commons for the manner in which he had negotiated the treaty. Cobden declined all public reward for his exertions beyond the bare repayment of the expenses to which he had been put. This refusal was the more honourable to him as it was known that his private affairs were not in a flourishing condition, owing to the depressed state of his American investments. Some time previously his friends had proposed to raise a second subscription for him, but this also Cobden declined, and an improvement shortly afterwards in the share market rendered any such step unnecessary. Towards the close of 1863 a controversy, which proved to be bitter and prolonged, arose between Cobden and Mr. Delane, the editor of the *Times*, in consequence of an accusation in that journal to the effect that the two Gracchi of Rochdale (Cobden and Bright) had excited discontent amongst the poor, and proposed a spoliation of the owners of land. Cobden's health was never very strong, and he was advised to spend his winters abroad. This advice he usually followed, but on the occasion of his visit to his constituents at Rochdale in November, 1864, he made a speech of unusual length, which greatly told upon his strength. The extra exertion required in delivering this address, combined with the heated condition of the room, brought on an illness that resulted in his death. About three weeks before his decease, feeling much better in health, he went up to London, intending to join in the parliamentary debate on the Canadian defence. The weather was very severe, however, and he was suddenly seized with another attack of bronchitis, which proved fatal. In the House of Commons, Lord Palmerston and Mr. Disraeli spoke in warm and eulogistic terms of the deceased, the latter remarking that Cobden was one of those men who, while not present, were still members of the House, independent of dissolutions or the

caprices of constituencies, and even of the course of time. The French Government and press also paid the highest tributes to his memory. Cobden was quiet and unobtrusive in manner, possessing few of those qualities which are generally regarded as essential in popular orators. He was, however, earnest and impressive in speech, his language was always exceedingly clear, and his appeals were enforced by powerful arguments. While cautious in taking up a position, when once assumed he brought to its defence a vigour of thought, a homeliness of illustration, and a power of language which generally carried conviction to the minds of his hearers. He was ever natural in his oratory. He had a mastery over every part of the great Free Trade controversy, such as no other could pretend to; and in the number of speeches which he made on this one subject he showed a boundless fertility of illustration, and an inexhaustible ingenuity in varying the arrangement and the form of his arguments. He succeeded in fighting and winning the battle of Free Trade almost against hope. Time vindicated his principles, and his merits and services were ultimately acknowledged even by his opponents. To his public claims upon the gratitude of his countrymen, he united a private character which was in all respects blameless and praiseworthy.

[G. B. S.]

Cochrane, THOMAS. [DUNDONALD.]

Cockburn, THE RIGHT HON. SIR ALEXANDER JAMES EDMUND, BART, G.C.B. (b. 1802, d. 1880), eminent English judge, was the son of the late Alexander Cockburn, formerly British minister at Columbia. Born at Langton, he received his early education partly in France and partly in England, graduated first-class in civil law in 1824, and subsequently became a fellow of Trinity Hall, Cambridge. He was called to the bar at the Middle Temple in 1829, when he joined the Western Circuit and the Devonshire Sessions. He succeeded to a fair share of junior business at the assizes and sessions, and published, in conjunction with the late Sir William Rowe, a collection of reports of election cases. Obtaining silk in 1841, he soon became one of the recognised leaders of the Western Circuit; and during the railway mania of 1844-5, had a large practice before parliamentary committees. He was for some years Recorder of Southampton, and in 1847 was elected M.P. for that borough in the Liberal interest. He was a steady supporter of the Liberal ministry, and in 1850 established his reputation as a first-class parliamentary speaker by his speech in support of Lord Palmerston's proceedings in the matter of Don Pacifico, a British subject residing at Athens, when he divided the honour with Mr. Gladstone of having saved

the Government from defeat. A month or two later he was appointed Solicitor-General, and was knighted, and in the following spring he succeeded Sir John Romilly as Attorney-General, which post he again held in the subsequent administrations of Lord Aberdeen and Lord Palmerston. In 1856 he succeeded Sir John Jervis as Chief Justice of the Common Pleas. When Lord Palmerston returned to power in 1859 it was expected that Sir Alexander would become Lord Chancellor; but Lord Campbell, his senior, received the appointment, and Cockburn took his position in the Queen's Bench as Lord Chief Justice of England, which he held till his death in 1880. As a debater Sir Alexander Cockburn rendered valuable services to his party, especially during the Crimean War; and as a finished advocate he was for many years without a rival. He was retained in most of the celebrated trials of the day, and among his most successful professional achievements may be mentioned his defence of McNaghten for the murder of Mr. Drummond, Sir Robert Peel's private secretary, in 1843; his defence of Cardinal Newman, for a libel upon Dr. Archilli, in 1853; his defence of his uncle, the Very Rev. Sir William Cockburn, Dean of York, who had been deprived of his deanery for simony, and the case of *Swynfen v. Swynfen*. The last great case in which he was engaged was the prosecution of William Palmer, for murder, in 1856, when, after a trial extending over many days, he delivered a brilliant reply without the help of a single note. But it was not as a case lawyer but as a judge in *Nisi Prius* that he was most successful. He presided over many long and intricate trials, civil and criminal, among which may be mentioned *Campbell v. Spottiswoode*, and *Wason v. Walter*, the judgments of which are cited in every text-book on libel, as correctly expressing the law; the prosecution arising out of the Clerkenwell explosion, in 1867; the Wainwright case, and the Tichborne writ of error. Sir Alexander acted at the Geneva Arbitration of 1871 as representative of this country under the Washington Treaty in the *Alabama* case, and afterwards published an elaborate protest against the indirect claims of the United States Government, which had been brought before the arbitrators. On his return from Geneva he was offered a peerage; but this he declined, on the ground, it is said, that he did not consider it compatible with the duties of a judge, that he should be a member of either of the legislative assemblies of the nation. In 1867 he published a pamphlet on *Nationality*, in which he suggested many reforms, and discussed at considerable length the report of the Naturalisation Commissioners. At his death, he was writing a series of articles for the *Nineteenth Century*, on *The Chase and its History*, some of which had appeared; and he was understood to have

collected materials for an essay upon the question of the authorship of the *Letters of Junius*.

Mr. E. Walford in *Law Times*; *Law Journal*, and *Solicitor's Journal*, for Nov. 27th, 1880; *Times*, Nov. 22nd, 1880; Justin McCarthy, *History of our Own Times*; Foss, *Judges of England*, ix. 167. [W. M.]

Cockerell, CHARLES ROBERT, R.A. (b. 1788, d. 1863), architect and antiquarian, was born in London, and educated by his father, an architect of considerable reputation. Having devoted himself entirely to classic architecture, he visited Athens in 1810, and remained abroad till 1817, during which time he investigated the principal remains of antiquity in the Morea, Asia Minor, the Archipelago, Sicily, and Pompeii. He discovered the Æginetan marbles, now at Munich, in 1811, and the Phigalian marbles in the British Museum, between the years 1813 and 1815. After his return he was frequently employed on public buildings. The chief exception to his adoption of the Classic style was the Gothic college at Lampeter. The work by which his name is now best remembered is the Taylorian Museum at Oxford, designed by him in 1840. He also continued the erection of St. George's Hall, Liverpool, after Elmes's death. His great treatises on Greek architecture, and his numerous designs for the restoration of temples, formed a valuable contribution to science. He collaborated with Stuart and Revett in *Antiquities of Athens* (1825). In 1830 he published the *Temple of Jupiter at Agrigentum*, and in 1860 his greatest work, on the *Temples of Jupiter Panhellenius in Ægina, and of Apollo Epicurius near Phigaleia*.

Codrington, GENERAL SIR WILLIAM JOHN (b. 1804, d. 1884), a son of Admiral Codrington, entered the army in 1821. He was present during the whole of the Crimea, and early in the war became major-general. Having highly distinguished himself at the Alma and at Inkermann, he was placed in command of the light division during the later part of the siege of Sebastopol, and conducted the grand attack on the Redan. In November, 1855, he was made commander-in-chief of the army for the brief remainder of the war. From 1857 to 1859 he represented Greenwich in Parliament; after which he was appointed to command at Gibraltar. He became general in 1860, colonel of the Coldstream Guards in 1875, and retired in 1877.

Codrington, SIR EDWARD (b. 1770, d. 1851), admiral, entered the navy in 1783, and took part in the actions off Brest of 1794, and as commander of the *Orion* in the battle of Trafalgar. He also shared in the Walcheren Expedition, and in 1821 he was gazetted vice-admiral. In 1826, when in command of the Mediterranean squadron, he was sent, in virtue of the Treaty of London, to restrain Ibrahim Pasha, of Egypt, from operations against the Greeks, with instructions to compel an

armistice. Joined by the French and Russian contingents, he appeared before Navarino, and explained to Ibrahim Pasha that the Turkish fleet was not to sail. The order was disobeyed by Ibrahim, and his ships were in consequence turned back. In his anger he let loose his troops upon the inhabitants, and Codrington determined to convoy his ships back to Turkey and to Egypt. During the parley that followed (Oct. 20th, 1827) shots were fired, and the battle of Navarino ensued, in which the enemy's fleet were completely destroyed. The news of the victory was at first received with enthusiasm, but the weak Goderich ministry, fearing that it might involve England in a war with Turkey, threw cold water upon it, and it was referred to in the King's Speech as "the untoward event." This was Codrington's last active service. He became full admiral in 1837.

Campbell, *Lives of the British Admirals*.

Coffee Calcoli, KING. [ASHANTER.]

Coffin, THE RIGHT REV. ROBERT ASTON (b. 1819, d. April, 1885), was born at Brighton, and educated at Harrow, and Christ Church, Oxford. In 1843 he was appointed to the living of St. Mary Magdalene's in that city, subsequently joining the Tractarian movement. In 1845 he was formally received into the Roman Catholic Church. He accompanied Dr. Newman to Rome, and was ordained priest two years later. In April, 1882, Pope Leo XIII. nominated him to the bishopric of Southwark, which comprehends the counties of Surrey, Kent, and Sussex. Dr. Coffin translated into English Blosius's *Oratory of the Faithful Soul*, and also some of the works of St. Alphonso de Liguori. He was a great ascetic.

* **Cohn**, FERDINAND JULIUS (b. 1828), a German botanist, pursued his early studies at Breslau (his birthplace), and at Berlin, where he graduated, and in 1850 became a private teacher of botany in the University of Breslau, being appointed, in 1859, extraordinary, and in 1872 full professor. In 1866 he was mainly instrumental in founding the Institute of Vegetable Physiology at the university, and has made many special studies in microscopic vegetation. He has edited, since 1875, *Beiträge zur Biologie der Pflanzen*, and has written an elaborate popular work on botany, *Die Pflanze*, and an important treatise on *Bacteria*, which has been translated into English (1881), in addition to numerous other scientific papers and memoirs.

* **Cohnheim**, JULIUS FRIEDRICH (b. 1839), a German pathologist, studied in the Prentz-lan Gymnasium, and in the Universities of Berlin, Würzburg, Greifswald, and Prague. He followed the medical profession for a short period, and in 1864 was assistant to Virchow in the pathological institute connected with the Berlin Charity Hospital. In 1868 he was appointed ordinary professor of

pathology and pathological anatomy in the University of Kiel, and in 1872 and 1878 respectively, to similar positions at Breslau and Leipzig, in the latter year becoming also director of the Leipzig Institute of Pathology. He has undertaken many original researches and experiments in connection with the blood, inflammatory processes, etc., and the origin of pus-corpuscles from the white cells of the blood, transmitted through the capillaries; and he has made great discoveries in the pathology of implanting processes, etc. Among his works are—*Untersuchungen über die embolischen Prozesse*; *Neue Untersuchungen über die Entzündung*; *Die Tuberkulose vom Standpunkte der Infectionalehre*, and *Vorlesungen über allgemeine Pathologie*.

Colchester, CHARLES ABBOT, LORD (b. 1757, d. 1829), was born at Abingdon, and in 1781, after a distinguished career at Oxford, was called to the bar. In 1795 he was returned for Helston, in Cornwall, a pocket borough of the Duke of Leeds, and occupied himself with financial and statistical questions, the first census Act of 1800 being introduced by him. In 1801, when his friend Addington became Prime Minister, he became Chief Secretary for Ireland, but in the following year he was recalled to fill the Speaker's Chair. In that capacity Abbot won a very high reputation. Upon him fell the onus of giving the casting vote on Mr. Whitbread's resolution impugning Lord Melville's conduct as treasurer of the navy, and he, too, had to deal with the most serious of the escapades of Sir F. Burdett. In 1817 he resigned on account of ill-health, and was raised to the peerage as Baron Colchester. During the remainder of his life he took an active part in politics as a Tory of the most reactionary type. His son CHARLES (b. 1798, d. 1867), was Postmaster-General during Lord Derby's brief ministry of 1858-9.

Diary of the First Lord Colchester, by his Son; Manning, Lives of the Speakers.

Cole, SIR HENRY, K.C.B. (b. 1808, d. 1882), received his early education at Christ's Hospital, obtained an appointment under the Record Commissioners in 1823, and became assistant keeper of the Records. He wrote and edited several works at this time, and was urgent for the reform of the manner of preserving the public records, and mainly instrumental in forcing on the establishment of the Record Office. He and Sir W. Molesworth founded the *Guide* newspaper, which Cole edited, and he also wrote for the *Westminster, British and Foreign*, and *Edinburgh Reviews*; published, under the pseudonym of Felix Summerly, guide-books to various railway routes, public galleries and buildings, etc.; edited Albrecht Dürer's *Small Passion*, and managed the *Historical Register* and the *Journal of Design*. He was the founder of the South Kensington Museum, art manufacture, art designs, art

schools, art everything, including, it must be added, sometimes art vulgarisation; and he was made a C.B. for his work on the committee of the first great Exhibition of 1852. Cole was an able organiser—knew where to pick up the right men and how to use them. He was an admirable commissioner at the Paris Exhibition of 1855, where he saved £10,000 on the Parliamentary vote, and did equally good work as secretary of the Royal Commission at the later Paris Exhibition of 1867. In 1860 he was appointed director of the South Kensington Museum, and to him is due the organisation of the various branches of this institution. Besides acting on many committees and councils connected with the advance of art and education among the people, Sir Henry Cole greatly aided our manufacturing industry, and his reports largely conduced to the reform of the patent laws. He retired after fifty years' service, in 1873, and in 1875 was made a K.C.B. He was also an Officer of the Legion of Honour, and a Commander of the Iron Crown. His influence has been felt in all branches of industry and of educational and sanitary progress, and will be long remembered at South Kensington.

Fifty Years of Public Work of Sir H. Cole,
edited by A. S. and H. Cole (1884).

* **Cole, VICAR, R.A.** (b. 1833), landscape painter, was born at Portsmouth, and received the greater part of his artistic education from his father, who was an artist of considerable reputation. From his earliest years Mr. Vicar Cole has devoted himself entirely to the representation of landscape, and, with hardly an exception, of English landscape. His chief delight is in quiet pools and autumnal woods, in the meadows and sedges of the Thames, and the wide heaths, the blue distances, and rich cornfields of the southern counties. Few artists have so faithfully studied the peaceful aspects of English scenery. In 1852 he exhibited two scenes on the Wye at the Society of British Artists, and he gradually became a regular contributor to the Royal Academy, being elected A.R.A. in 1870, and R.A. in 1880. All his works are marked by the same general character of sunlight, peace, and English air; and we need here only mention the following of the more important from recent exhibitions:—*The Heart of Surrey* (1874); *Richmond Hill* (1875); *The River Arun* (1876); *Arundel* (1877); *Autumn Leaves* (1878); *Ripening Sunbeams* (1879); *A Thames Backwater* (1880); *August Days* (1881); *The Source of the Thames, and Abingdon* (1882); *Windsor* (1883); *Oxford from Ifley* (1884); and *Sinodun Hill, Dorchester* (1885).

Colebrooke, HENRY THOMAS (b. 1765, d. 1837), the first great Sanskrit scholar of Europe, was the son of Sir George Colebrooke, who was at the head of an old-established banking firm, member for Arundel, and chairman of the court of directors of the East India Com-

pany, in the service of which his son obtained a writership in 1782. The record of his official services practically begins with his appointment as assistant collector at Tirhut in 1786, whence he was transferred to Purneah in 1789, and soon entered upon judicial functions. In 1795 he became magistrate at Mirzapur, and in 1798–1801 he was at the court of Nagpur, on a special mission to win over the Raja to a defensive alliance with the Company, in which, however, he was, through no fault of his own, unsuccessful. In 1801 his intimate knowledge of Hindu law procured him the appointment of judge in the Superior Court of Appeal at Calcutta, of which he became the president in 1805. The high honour of a seat on the Council was attained in 1807, and a year or two after the expiry of his five years of office he returned to England (1815), after thirty-two years of service in the company, having amassed a sufficient fortune to enable him to retire. His duties as a collector of revenue had led him to make the minute and wide-reaching investigation into the agriculture of Bengal, which resulted in the valuable *Remarks on the Present State of Husbandry and Commerce in Bengal*, published in 1795; and similarly his judicial functions induced a profound study of Hindu law, which could be adequately attained only from a perusal of the native authorities; and the results of these researches were his *Digest of Hindu Law on Contracts and Successions* (4 vols., 1798); *Two Treatises on the Hindu Law of Inheritance* (1810); and a *Treatise on Obligations and Contracts*, Part I. (1818). His other works were a *Grammar of the Sanskrit Language*, based upon that of Pāṇini, of which the first volume alone appeared, in 1805; *The Amera Cōsha: a Sanskrit Lexicon* (1808); and the *Algebra, Arithmetic, and Mensuration of Brahmeḡupta and Bhāscara*, with a dissertation on the science of the Hindus (1817); he was also a frequent contributor to *Asiatic Researches*, the *Journal of the Royal Asiatic Society*, the *Quarterly Journal of Science*, and the *Transactions of the Linnean and Geological Societies*, and all his papers bore witness to his extensive researches in ancient Hindu literature and science. His essays on the religious ceremonies of the Hindus, on the Vedas, on the sect of Jains, on Hindu philosophy, astronomy, etc., were written at a time when no one had yet explored for himself the wealth of ancient Indian literature, and when the aids to Sanskrit study were very inadequate. To him belongs the credit of having rescued Sanskrit researches from the disrepute into which they had fallen from the exaggerated assumptions and wild hypotheses of the early scholars, who, without an intimate knowledge of Sanskrit, allowed themselves to be imposed upon by the fabricated mythologies and other impudent forgeries of native pundits, until their statements and comparisons became so

extraordinary, that they confuted themselves, and the whole fabric of Indian scholarship then being built up seemed in danger of toppling to the ground. Colebrooke's calm, dispassionate discussion, his quiet, logical arguments, his obvious scholarship, exposed the mistake of the consequent scepticism as well as of the earlier credulity. He laid the foundations of the exact study of Indian antiquity, and was the first to open out, in the accurate spirit of the man of science, the treasures contained in Sanskrit literature. Most of his work was done during the busy time of his life. On his return to England in 1815, he devoted himself more to physical science than to Sanskrit studies, though he completed several works which had been planned in India, and especially contributed papers to the scientific societies on matters connected with the geology and botany of Hindustan. He had been made president of the Asiatic Society of Bengal in 1807. He now helped to found the Royal Asiatic Society of London in 1823, and became its first director; and in 1824 he was elected president of the Astronomical Society.

Life of H. T. Colebrooke, by his son, Sir T. E. Colebrooke, 1873. [S. L.-P.]

Colenso, THE RIGHT REV. JOHN WILLIAM (*b.* 1814, *d.* 1883), Bishop of Natal, famous as a Biblical critic and philanthropist, was of Cornish descent, graduated at St. John's College, Cambridge, as second wrangler and second Smith's prizeman, in 1836, and became fellow and tutor of his college till appointed to a mastership at Harrow in 1838. Having held this for four years, he returned to Cambridge, and in 1846 was presented with the living of Fornsett St. Mary, Norfolk. Hitherto he had been chiefly known by his mathematical text-books—on *Arithmetic* (1840); *Algebra* (1841); and *Plane Trigonometry* (1851). In 1853, however, he published a volume of *Village Sermons*, and was appointed to the newly founded bishopric of Natal, which owed its existence to the establishment of a Colonial Bishops Fund, 1849. Soon after reaching his see, he published *Ten Weeks in Natal* (1855), being an account of his first pastoral visitations. His great work in Biblical criticism, *The Pentateuch and Book of Joshua Critically Examined*, which created as bitter a controversy as the work of any theologian in this century, began to appear in 1862, and the complete edition was not published till 1879. It was chiefly remarkable for the arithmetical and mathematical acumen, with which the bishop exposed the mistake, common enough in those days, of placing the Biblical account of the Genesis on the same level of authority as the precise historical researches of modern times. Nevertheless, though its conclusions are now generally accepted, or even set aside as unimportant truisms, the book at its publication aroused a storm of

malediction amongst certain sections of the English Church. Confutations of every kind, reasonable and abusive, started upon every side. Both Houses of Convocation condemned the book as heretical in 1864, though the scales of orthodoxy were turned by very small majorities. The Bishop of Capetown made an illegal attempt to depose Colenso from his see. The trustees of the Colonial Bishops Fund, Mr. Gladstone being one, refused to continue his salary, and diverted it to an illegally appointed substitute. Though the Privy Council declared in March, 1865, that the deposition was "null and void," since the sees did not even legally exist, and neither bishop had legal jurisdiction in an independent colony, yet the salary was not restored till Colenso appealed to the Court of Chancery, and in Oct., 1866, the Master of the Rolls delivered judgment entirely in his favour, the costs falling on the defendants, as guilty of breach of contract. In spite of this decision, the Rev. W. K. Macrorie was established at Maritzburg in opposition to Colenso, as bishop for the South African Church of Cape Town, in 1869. In 1874, Colenso revisited England to report the hopeful condition of his diocese to the Archbishop of Canterbury, but especially to plead the cause of the Zulus against the oppressions of the Boers and Cape Town officials, before the Colonial Secretary. Whilst engaged on this errand of mercy, Colenso was inhibited from preaching in the dioceses of London, Lincoln, and Oxford. At Oxford the difficulty was overcome by a simple device, Colenso's sermon being read word for word by a substitute. After his return the bishop, being a personal friend of Cetewayo, became the foremost advocate of Zulu rights, strenuously opposing Sir Bartle Frere's policy, and protesting against the blunders of the Home Government. It was through his efforts that Cetewayo was allowed to visit England, and thus regained his liberty. The natives, whether Kaffir or Zulu, continued to regard him as their natural protector to the end, when he died, worn out by hard work and the climate. He wrote a *Zulu Grammar* and a *Dictionary*. His daughter, Frances Ellen Colenso, published a *History of the Zulu War* in 1880, and *The Ruin of Zululand* in 1884.

[H. W. N.]

Coleridge, HARTLEY (*b.* 1796, *d.* 1849), the poet son of Samuel Taylor Coleridge, best remembered now by Wordsworth's prophetic poem on his childhood, was born at Clevedon. In infancy he meets us now and again in some of his father's greatest lines. In 1800 the family removed to Keswick, and here, going to school at Ambleside, Hartley remained, with only the short break of a visit to London in 1807, till he entered at Merton College, Oxford, as a postmaster, in 1815. To the last

he retained his elfin nature—"a young lamb's heart among the full-grown flocks." The childlike mystery of the man was heightened by his diminutive and delicate figure, the soft dark eyes, and wild hair, early grizzled, and then white. At Oxford he took only a second class, but was soon afterwards elected to a fellowship at Oriel College. The unsympathetic respectability of the provost and other clerical authorities unfortunately deprived him of his fellowship within a year, on the charge of intemperance, to which he had been driven by their suspicious espionage, acting with aggravation on a delicately sensitive mind. His dismissal was the turning point to failure in his life. Going to London, he lived for about two years in Gray's Inn; but he had lost his self-confidence; and his power of will, too weak by inheritance, now quitted him altogether. About this time, however, he composed his fragment of *Prometheus*, perhaps his longest poem, much admired by his father. Returning to Ambleside and then to Grasmere in 1822, he tried for some years to support himself by keeping a boys' school, but as he possessed no qualifications except the power of teaching, he failed, and henceforward followed no profession, but wrote occasional articles for *Blackwood's Magazine*, and in 1832 compiled his biographies of the *Worthies of Yorkshire* for a publisher at Leeds. In 1833 he also published a volume of poems. Poetry came to him with dangerous and unusual ease. A sonnet, his favourite form of verse, for reasons sadly easy to understand, would be completed in a few minutes, always under half an hour. As a poet he is chiefly remembered by a very few songs, such as *She is not fair to outward view*, and by a few sonnets, as those beginning, *The nimble fancy of all-beauteous Greece, Pains I have known that cannot be again, It were a state too terrible for man, and There is an awful quiet in the air*. As a poet's wayward child that "knew well the evening star," his memory will long haunt the Lakes. His letters are full of the humour of melancholy, and it is said that no conversation ever surpassed his. His memoir and poems, and a volume of *Essays and Marginalia*, were published in 1851 by his younger brother, the Rev. DERWENT COLERIDGE (b. 1800, d. 1883), principal of St. Mark's College, Chelsea, from 1841 to 1864, and afterwards rector of Hanwell.

[H. W. N.]

Coleridge, SAMUEL TAYLOR (b. 1772, d. 1834), poet, philosopher, and metaphysician, was born at the vicarage of Ottery St. Mary. The youngest of ten children by a second wife, he grew up a solitary, self-concentrated child, vain and dreamy. When he was nine years old his father died, and soon afterwards he entered Christ's Hospital. He tells us that as a child he never had the language or habits of a child. As a youth, however, he

had one athletic pleasure, swimming, and to excessive indulgence in bathing his prolonged ill-health was largely due. In scholarship he was eminent. In poetic gift he was not then supposed to rank high. He tells us that Bowyer, the master, thrashed Parnassus, Hippocrene, and Pierian springs out of him with ridicule and a birch rod. Tiring of his surroundings, he tried to escape from Christ's Hospital, and apprentice himself to a cobbler. This effort failed rather ignominiously. Then he conceived the idea of becoming a surgeon, and read countless books on medicine. Eventually both cobblery and surgery made way for poetising. The sonnets of Bowles inspired his enthusiasm, and he forthwith wrote and studied the arts of verse. Early in 1791 he entered Jesus College, Cambridge. Here for a time, neglecting mathematics, he devoted himself about equally to poetry and politics. Theology, too, diverted his interest from scholarship, and in 1793 he lost his few chances of a fellowship by avowing himself a Unitarian. His private affairs were not more hopeful. He had thoughtlessly contracted debts at the outset of his university career, and now became involved in a love affair. Due to whatever cause of despondency or reckless indifference to material issues, Coleridge wandered up to London during the October term, 1793, and enlisted in the 15th Dragoons. He then called himself Silas Cumberback, a name with which he thought his horse might have sympathised. His literary attainments led to the discovery of his identity, and he was sent back to Cambridge. There, in 1794, he first became known as a poet. During a walking tour he had made the acquaintance of Southey, at Oxford. Both young men were ardent Republicans, and enthusiasts for the French revolution. Together they visited Bristol, where an aunt of Southey resided. Much came of the visit. Coleridge wrote his dramatic sketch, *The Fall of Robespierre*, took it back to Cambridge, and printed it there. This was his first appearance in print. In December of the same year (1794) he published a series of *Sonnets on Eminent Characters* in the *Morning Chronicle*. Much more important was the circumstance that out of the ardour of the combined Republicanism of the two young poets the famous pantisocratic scheme arose. This was an attempt in theory to establish a state of society that should be free from the inequality and artificiality of the existing condition of things. The new Arcadia was to be founded on the banks of the Susquehanna, and the first colonists were to be ten in number. Five were found, Southey, Coleridge, Lovell (a Quaker), Burnett, and Shadrach Weeks, a servant lad of Southey's aunt. "Shad goes with us; he is my brother," said Coleridge, on announcing the new pantisocrat. It is easy to see the ridiculous side of the vain

dream, but it is equally easy to believe what Coleridge says, namely, that to the arguments called forth in its defence he owed much of the political insight afterwards attained. There was another and yet more important result of the Bristol visit. The poets were introduced to the daughters of a Bristol sugar-boiler named Fricker. Lovell was married to Mary Fricker, Burnett was refused by Martha, Southey became engaged to Edith, and Coleridge to Sara. Having completed this transaction, Coleridge returned to Cambridge, and when he left the university at the end of the year, he did not return to Bristol, but came up to London, rarely corresponding with Sara in the meantime. The connection might have dropped, but Southey, who thought Coleridge had gone too far for any honourable retreat, brought him back to Bristol, and saw him safely married in 1795. Put upon the necessity of earning a livelihood, Coleridge sold a volume of poems to Joseph Cottle, the Bristol bookseller, for thirty guineas, and delivered a course of political lectures. In 1796 he started a miscellany, *The Watchman*, and made a tour of the country to canvass for subscribers. *The Watchman* speedily came to an end. Its collapse threatened pecuniary difficulties, but at that juncture Charles Lloyd, son of a Birmingham banker, went to live with Coleridge, and he is understood to have contributed materially to the expenses of the household. The early friendship with Lamb was revived about this period. A second edition of the *Juvenile Poems* appeared in 1797, and to this volume both Lloyd and Lamb contributed. Coleridge now conceived the idea of becoming a Unitarian minister, and was a candidate for a pulpit at Shrewsbury. It was there that Hazlitt first met him, and he has left an enthusiastic account of the preacher. Shrewsbury invited Coleridge, but the brothers Wedgwood offered him a pension of £150 a year to give him leisure for literature, and hence the invitation was declined. The residence at Nether Stowey embraced the happiest, and perhaps the most prolific, period in Coleridge's life. There, at Sheridan's suggestion, he wrote *Remorse*, and there he made the friendship of Wordsworth, and projected the *Lyrical Ballads*. The best of Coleridge's poetry was written between the summers of 1797 and 1798. The *Ancient Mariner* was begun as a joint poem to pay the expenses of a walking tour. Wordsworth contributed the idea of the albatross, and the idea of the verse came out of a friend's dream. The styles of the poets did not harmonise, and Wordsworth dropped out. When the first draft of the ballad was finished, Southey described it as a "clumsy attempt at German sublimity." It eventually formed the chief poem of the first *Lyrical Ballads* in 1798. No special attention was given to

it for several years, and the author himself satirised it in an epigram. Now it is accepted as one of the noblest pieces of imaginative writing produced by a modern poet. The first part of *Christabel* was written almost contemporaneously, but it lay eighteen years in manuscript. The aim here is different. In sheer midday witchery, the marvellous fragment has hardly been equalled, and certainly has never been excelled. *Christabel* acquired a great reputation among literary people while still in manuscript. Scott and Byron imitated its metrical peculiarity. When it was published in 1816, it met with some applause and much ridicule. Its rank in the poetry of the century is unquestionably of the highest. In poetry Coleridge made no material progress after 1800. Removing to London, he engaged himself in journalism, being chiefly connected with the *Morning Post*. He was a born journalist, possessed of every gift that ensures success except stability and regularity. He had the chance of £2,000 a year, but declined the offer in order to retain his liberty. Several years later, when his publishers failed, and money difficulties pressed heavily, he was glad to earn trifling sums by writing paragraphs for the journals and sermons for lazy clergymen. As a literary critic he had few equals in his generation. His analysis of the art of poetry in his discussion of Wordsworth's poetic canons (*Biographia Literaria*) is probably as subtle a piece of criticism as the language possesses. At intervals he lectured on literature in London and in Bristol. His success was unequal. He had all the powers requisite for a lecturer. His resource was limitless. More than once he lectured with extraordinary power on subjects chosen for him while he was on the platform. His usual theme was poetry, and of the course of lectures of which the fullest record has been preserved (that of 1811-12), the subject was Shakespeare. But health failed him frequently while fulfilling his lecturing engagements, and of the sufferings thereby entailed we have only too painful evidence. In later years he returned to philosophy as to an old love, and became lost to poetry and to criticism in a thick haze of German metaphysics. Kant dominated him. He intended to formulate a system, but did little in a direct way towards that end. Churchism got hold of him, too, and his contributions towards a phase of modern theology is understood to have influenced Maurice, and Newman also, in early years. Of his domestic life, after his twenty-eighth year, only the briefest, as well as the saddest, story can be told. He left Nether Stowey about July, 1800, and settled at Greta Hall, Keswick. Southey joined him there. He had already contracted—in innocence of the consequences—the habit of eating opium. The climate of the Lake Country was not agreeable to his temperament; his

home life was becoming vexatious, and as a consequence he spent much of his time in London. In 1810, after the failure of a miscellany, *The Friend*, conducted from Wordsworth's house at Grasmere, he left the Lake Country, and never returned to it as his home. He saw his wife no more. The years from 1810 to 1816 were years of all but abject misery and total failure. The opium-eating had developed from its small beginning to unparalleled excess. It sapped away his will, and reduced him to the condition of a slave to a sordid appetite. He was only too conscious of his degeneracy. His appeals to his friends to save him from the curse of his own weakness are cries wrung out of the heart at terrible moments. But the salvation came at length. In 1816, just when *Christabel* was about to appear, Coleridge took up his residence with the family of Dr. Gillman, of Highgate. He remained in that household to the end. Between 1816 and 1834 his powers ripened, and his work mellowed. But his brighter era—the era of poetry—was gone with the youth that was gone. He was an old man before his time. Nothing more pathetic is to be found in poetry than the two poems, *Youth and Age* and *Work Without Hope*, in which he looks back on his lost opportunities. His influence on the world was deeper and broader than before, and his home was for many years a centre of intellectual life. Young men destined to achieve eminence themselves gathered about Coleridge as a rallying point. Carlyle alone, or almost alone, of the young men of his generation, held himself aloof. With a vast reputation as a conversationist, with the homage of the greatest men of his age, Coleridge saw his life slipping away, while less than a tithe of all he had intended to do had been done. Three of his children—Hartley, Sara, and Derwent—had grown up to some eminence of public usefulness, and this cheered his last days. Perhaps, all things considered, he was the largest, broadest, deepest, and most ineffectual genius of the nineteenth century.

[T. H. C.]

Coleridge, SARA (b. 1803, d. 1852), the only daughter of the poet, was born at Keswick, and lived for many years with her uncle, Robert Southey. In 1829 she married her cousin, HENRY NELSON COLERIDGE (b. 1800, d. 1843), who was the chief editor of the poet's *Table Talk* and *Literary Remains* (1836). She herself gave much assistance to this task, and was sole editor of the *Aids to Reflection*. In 1837 she published her only original work, *Phantasmion*, a long, romantic fairy story, that met with little appreciation

at the time, but has since (in 1874) been re-issued by Lord Coleridge.

***Coleridge, THE RIGHT HON. JOHN DUKE, BARON** (b. 1821), the eldest son of Sir John Taylor Coleridge (q.v.), was born at Ottery St. Mary, and educated at Eton, and Balliol College, Oxford, afterwards becoming a fellow of Exeter College. Called to the bar in 1846, he became leader of the Western Circuit, Queen's Counsel in 1861, and Benchler of the Middle Temple. Returned for Exeter in the Liberal interest in 1865, he was appointed Solicitor-General by Mr. Gladstone in 1868, was knighted, and in 1871 appointed Attorney-General. He therefore undertook the Crown prosecution of the Tichborne claimant, and stated his case in one of the longest speeches on record, lasting from Jan. 15th to Feb. 16th, 1872. Next year he was created Lord Chief Justice of the Court of Common Pleas, being also raised to the peerage as Baron Coleridge of Ottery St. Mary (December, 1873). On the death of Sir Alexander Cockburn, in 1880, Lord Coleridge naturally succeeded him as Lord Chief Justice of England. In 1846 he married Jane Fortescue, daughter of the Rev. G. T. Seymour. She died in 1878, leaving three sons and one daughter. Lord Coleridge visited America in 1884, and was very warmly received.

Coleridge, THE RIGHT HON. SIR JOHN TAYLOR (b. 1790, d. 1876), nephew of the poet, King's Bench judge, was born at Tiverton, and educated at Corpus Christi College, Oxford, where he became acquainted with Keble and Dr. Arnold, for his long friendship with whom he is now chiefly remembered. Called to the bar in 1819, he became serjeant-at-law in 1832, and one of the judges of the King's Bench in 1835. On his retirement in 1858, he was sworn Privy Councillor. In 1869 he published the well-known memoir of John Keble.

Coles, COWPER PHIPPS (b. 1819, d. 1870), sailor and inventor, entered the navy at an early age, and distinguished himself in the operations by sea of the Crimean War. In 1855 his plan for the construction of shot-proof rafts with guns and mortars was most favourably reported upon by a board of experts appointed by the commander-in-chief, and in 1862 the scheme, developed into the "turret-system," was adopted in the case of the *Royal Sovereign*. The Captain was constructed on the same plan, and Captain Coles accompanied her on the trip which terminated on Sept. 6th by her foundering with her captain, H. T. Burgoyne, and nearly all the crew of 500 men, off Cape Finisterre. Despite the outcry then raised against the turret system, it has since been universally adopted for men-of-war.

Annual Register (1870).

Colfax, SCHUYLER (b. 1823, d. 1885), an American statesman, was born in New York. His early education was very limited, owing to the poverty of his widowed mother. In 1845 he established a weekly journal called the *St. Joseph Valley Register*, which he edited for many years, making it one of the chief organs of the Whig party. As a member of the Convention which framed the Constitution of Indiana, he strongly opposed the clause which prevented free coloured men from settling in that State. In 1854 he was elected a member of Congress, and soon after his election made a very eloquent speech upon the Kansas question. From 1863 to 1869 he was Speaker of the House of Representatives, being several times re-elected to the same office. In 1868 he was chosen Vice-President, General Grant being President. In 1873 Mr. Colfax was implicated in the charge of corruption brought against many members of Congress, but the Judiciary Committee of the House considered that there was no ground for the impeachment, since if he had been guilty of any offence, it was before he became Vice-President. After that time he took no active part in politics.

Harriet Beecher Stowe, *Men of our Times*;
Moore, *Life of Schuyler Colfax*.

Colley, SIR GEORGE POMEROY, C.M.G. (b. 1835, d. 1881), soldier and author, was born in Dublin, entered the army in 1852 as an ensign in the 2nd Regiment of Foot, and was promoted to a lieutenancy in 1854. He served in the Caffre War of 1858, and again in the China War of 1860, being present at the taking of the Taku Forts and the advance on Peking. In 1873 he went with Sir Garnet Wolseley to Ashantee, where he took command of the transport arrangements. For his services there he was nominated Companion of the Order of the Bath, and it was acknowledged that the success of the campaign was in a great measure due to the most efficient manner in which he conducted the department under his charge. In 1879 he became private secretary to Lord Lytton, then Governor-General of India; and when Lord Wolseley went to Zululand to take command there, Sir George was especially requested to accompany him. But on the murder of Sir Louis Cavagnari at Cabul, and the outbreak of the Afghan War, Lord Lytton telegraphed for Sir George to rejoin him. In 1880 he was appointed to succeed Lord Wolseley as Governor of Natal, High Commissioner of South-East Africa, and major-general commanding the forces in Natal and the Transvaal. He guided the military operations against the Boers in 1881, and was twice repulsed, at Laing's Nek and at Ingogo River. On Sunday, Feb. 27th, with 600 men, he climbed Majuba Hill, hoping to force the Boers from their position at Laing's Nek; but the hill-top was found to be untenable,

and, being assailed on all sides by the enemy, the British suffered a grievous defeat, Sir George being among the slain. He had been nominated C.M.G. in 1878, and was knighted in 1879. Sir George was the author of the able article *Army* in the new edition of the *Encyclopædia Britannica*. He also contributed several papers to the periodicals.

Collier, JOHN PAYNE (b. 1789, d. 1883), a distinguished man of letters, but especially noted for his Shakespearean scholarship, entered as a student of the Inner Temple, but soon relinquishing the study of law became a parliamentary reporter on the staff of the *Morning Chronicle*, and shortly afterwards giving up all other work he turned his attention exclusively to the study of Elizabethan literature. In his first work, *The Poetical Decameron*, published in 1820, he aimed at reviving the study of the Elizabethan dramatists, Peele, Nash, Greene, Lodge, Middleton, and others whom he considered so undeservedly neglected. Two years later he privately printed his allegorical poem, *The Poet's Pilgrimage*. In his edition of *Doddsley's Old Plays* he published six plays of high merit, hitherto not included in the work, and in a supplementary volume issued five other plays, which had remained buried in oblivion. His *History of Dramatic Poetry* gave him a foremost place among the writers of the day, and he became librarian to the Duke of Devonshire; Lord Ellesmere and others also placing the literary treasures of their libraries at his disposal. He next published his *Bibliographical and Critical Catalogue*. His *New Facts Regarding the Life of Shakespeare* appeared shortly after, followed by *New Particulars* and *Further Particulars*. He worked for more than twenty years at his life of Shakespeare, which was published in 1857, uniform with his edition of plays. A Civil List pension of £100 per annum for his services to English literature was conferred upon him, and the latter years of his life were spent in retirement at Maidenhead. Besides the works mentioned, he was the author of a number of smaller publications upon Shakespeare and the Elizabethan dramatists.

Collier, THE RIGHT HON. R. P. [MONKEWELL.]

Collingwood, CUTHBERT, LORD (b. 1750, d. 1810), one of the noblest of British sailors, entered the navy in 1761, and in 1780, on the *Hinchinbroke*, a small frigate, began his famous association with Admiral Nelson. He took part in Lord Howe's great "1st of June" victory over the French in 1794, and distinguished himself in the battle off Cape St. Vincent in 1799, for which services he was made rear-admiral. He was deputed in 1803 and onwards to watch the designs of Napoleon off Brest, and he was sent in pursuit of the Toulon fleet when it ventured

forth from Cadiz. In the battle of Trafalgar (Oct. 21st, 1805) he commanded the second line, and was the first to engage, with the words, "What would Nelson give to be here?" After the death of Nelson he took command, and by his skilful management made the victory complete. In spite of his request to be recalled on account of ill-health, he was compelled by the Government to remain at sea, watching affairs round the Mediterranean. His blameless career came to an end off Port Mahon, and he was buried in St. Paul's by Nelson's side.

G. L. N. Collingwood, *Memoir of Admiral Collingwood*; Campbell, *Lives of the Admirals*.

Collins, Mortimer (b. 1827, d. 1876), novelist and poet, was a native of Plymouth. He is best known as a writer of *vers de société*, and some of his lighter pieces have great freedom and delicacy of touch in the lower range of poetic feeling. His volumes of verse were, *Summer Songs* (1860), *Idyls and Rhymes* (1865), *Inn of Strange Meeting* (1871). His novels achieved success, and one of them, *Sweet Anne Page* (1868), secured distinct popularity. Others, less known, are *Who is the Heir?* (1865), *The Ivory Gate* (1869), *Two Plunges for a Pearl* (1872), *Miranda* (1873), and *Frances* (1874). One of his books, *Mr. Carrington*, appeared under the pseudonym of "R. T. Cotton." He published anonymously, in 1871, a volume of essays entitled *The Secret of Long Life*. As a journalist, Mortimer Collins had considerable success. His chief connection was with the *Globe*, but he wrote for other journals, and was accused by Charles Reade of attacking him anonymously in the *Athenæum*. His rank as an author was undoubtedly high, although no single performance of his reached signal excellence.

[T. H. C.]

Collins, William, R.A. (b. 1788, d. 1847), painter of rustic scenes, was the son of a picture dealer, and was born in London. Through his father, who wrote a memoir of George Morland, he became a pupil of that dissipated artist, and in 1807 was admitted as a student at the Royal Academy. His early pictures of rustic life are of comparatively small value, though often popular from a happy choice of subject. *The Country Kitchen* (1811), now in South Kensington, and the well-known *Sale of the Pet Lamb* (1812), are fair specimens of this period. He was elected A.R.A. in 1814, and R.A. in 1820. In the interval between these years he had studied on the coast, and his *Scene on the Norfolk Coast* (1818) was bought by the Regent, and is now at Windsor. After this his art and employment steadily improved, till in 1836 he produced his two masterpieces, *Sunday Morning* and *As Happy as a King*, now in the National Gallery. Unfortunately, he was persuaded by his friend Wilkie to visit Italy in that year, and was thus tempted to abandon his

true province of art. But this was only for a time, and his pictures of *Seaford in Sussex* and *Rustic Civility*, works of his last years, are almost equal to his best.

Life of W. Collins, by his son, W. Wilkie Collins (q.v.), 1846.

* **Collins, William Wilkie** (b. 1824), novelist, was born in London, his father being William Collins, R.A., and his mother a sister of the portrait painter, Mrs. Carpenter. He was educated first at a school in High-bury, and afterwards on the Continent, where he learnt French and Italian. His education was completed at home. After a few years spent in commerce he was entered as a student at Lincoln's Inn, but he was destined to employ his legal knowledge in literary rather than forensic pleading. His first essay in literature was a biography of his father. This was published in 1848. Two years later he made his first attempt as a novelist, but *Antonina*; or, *The Fall of Rome*, achieved only a moderate success. In 1851 Mr. Collins published a volume of picturesque writing entitled, *Rambles beyond Railways: a Narrative of a Walking Tour in Cornwall*. Having secured some amount of attention, Mr. Collins became connected with Dickens in *Household Words* and *All the Year Round*. Mr. Wilkie Collins was perhaps the only prominent associate of Dickens who did not slavishly follow him; and Dickens's admiration of his contributor certainly suffered no abatement from that circumstance. In 1856 he published *After Dark*, in 1857 *The Dead Secret*, in 1858-9 *The Queen of Hearts*. These books showed skill in the narrative art and general literary craftsmanship. In 1859 *The Woman in White* appeared, being first published in *All the Year Round*. It was now no longer possible to doubt that Mr. Wilkie Collins was a great novelist. Such grasp of a central idea, so much power of detail, such hold of interest and marshalling of incident, and, above all, so much art in withholding the key to a mystery, had not been shown by any living English novelist. True, his competitors were great, each possessing gifts to which Mr. Collins could not aspire. He lacked command of the nicer shades of character, and in point of humour his work was not eminent. But his gifts, as a whole, were those of a master of his craft, and *The Woman in White* speedily acquired the reputation of one of the finest novels of the age. It was followed in 1866 by *Armada*, for which the author received a very large remuneration, but did not repeat his former success until he published *The Moonstone*, in 1868. It were hardly too much to say that in sheer ingenuity of construction *The Moonstone* has no superior, and perhaps no equal in fiction—English or foreign. In 1873 *The New Magdalen* appeared, being first published in *Temple Bar*. The central idea in this book was a very bold one, liable to

offend all sticklers for the conventions. And it was undoubtedly open to the objection of gaining false sympathy for a woman who was practising an imposture. But the fundamental nobility of the aim in view was sufficient to over-ride all minor shortcomings. *Basil* (1852) was not an unqualified success; *No Name* (1862) was a fine subject rather inadequately executed; *The Law and the Lady* (1875) was the victim of some rather damaging criticism. The common observation that Mr. Wilkie Collins is deficient in character and in humour is not groundless; but no one who remembers Count Fosco, Mr. Fairlie, and Mercy Merrick, ought to question his command both of heroic and eccentric types. In 1873-4 Mr. Wilkie Collins visited America, and read there two of his short stories, *The Frozen Deep* and *The Dream Woman*. He had a hearty welcome. He has had a career as a dramatist, and has even played in his own person. His first drama, *The Lighthouse*, was privately played at Tavistock House, and was afterwards brought out at the Olympic theatre. *The Frozen Deep* was dramatised, and Dickens played in it. *The Moonstone* and *The Woman in White* were produced at the Olympic, but did not succeed. This can hardly be matter for surprise. The strong element of mystery, which made the novels, must have undone the plays. *The New Magdalen*, however, was dramatised with success, and appears likely to hold the stage.

* **Collinson, ADMIRAL SIR RICHARD** (b. 1811), surveyor and Arctic explorer, born at Gateshead, in Durham, entered the navy as volunteer in 1823, and gained his first experience of surveying on board the *Chanticleer*, which was occupied in making scientific observations on the coasts of the Atlantic. After having surveyed the coast of Africa in the *Ætina*, and Central America in the *Sulphur*, he was appointed lieutenant on the flagship in the China seas during the first Chinese War. After the conclusion of the war he remained to survey the coast-line of China as commander of the *Plover*. The results of his work were published in *The China Pilot* (1855). In 1849, Sir James Ross having returned from his unsuccessful search for the Franklin expedition in Lancaster Sound, the Government despatched the same vessels, the *Enterprise* and *Investigator*, to renew the search by way of Behring Strait, Captain Collinson being appointed to command the *Enterprise*. Starting in 1850, the *Enterprise*, having failed to round Point Barrow, was forced to winter in Hong-Kong. But, being successful next spring, she remained in the ice three winters without communications, exploring in the meantime some five thousand miles of coast. When all hopes of her safety had been given up, she suddenly reappeared in 1854, having penetrated to within a few miles of the spot where her companion ship, the *Investigator*,

had been abandoned by her crew. On Captain Collinson's return he received the Royal Geographical Society's medal, for having proved the existence of a passage from Behring Strait to King William's Land. He was afterwards employed in Canada, and was raised to the rank of admiral in 1862. In 1875 he was appointed deputy-master of the Corporation of the Trinity House.

Colman, GEORGE (b. 1762, d. 1836), dramatist, known as George Colman the Younger, to distinguish him from his father (d. 1794), the author of *Polly Honeycomb* and *The Jealous Wife*, succeeded his father as manager of the Haymarket theatre in 1785, having in the previous year married an actress at Gretna Green. In 1787 he produced his first noticeable drama, *Izzie and Yarico*. In 1796, *The Iron Chest* (lately revived by Mr. Irving) appeared at Drury Lane, but was at first a failure, owing, as Colman asserted, to Kemble's indifferent acting. It was followed in 1797 by Colman's best known comedy, *The Heir-at-Law*, that has become so familiar to playgoers since 1871 through Mr. J. S. Clarke's inimitable personification of Dr. Pangloss. Of his other comedies we may mention *The Poor Gentleman* (1800), and *John Bull* (1802). A volume of comic verses, entitled *Broad Grins*, was published in 1802, and *Poetical Vagaries* in 1812. Like his dramas, Colman's comic ballads run over with a wild and often coarse humour, rendered irresistible by its freedom, spontaneity, and good temper. Unfortunately the change in external morals, during this century, precludes most of his dramas from the modern stage, and most of his verses from the drawing-room. Colman himself was a type of the humorist of that day—large, boisterous, witty, bankrupt, given to much laughing and much drinking, and a boon-companion of the Regent and the Duke of York.

Colman's *Autobiography*; *Random Readings* (1890); and George Buckstone's edition of *Broad Grins* (1874).

* **Colquhoun, ARCHIBALD ROSS** (b. circa 1848), explorer of Chryse, or Indo-China, went to India as a civil engineer in his youth, and gradually rose to be executive engineer of the Indian Public Works. In 1879 he accompanied the Government of India Mission to Siam, and a perusal of Marco Polo's travels suggested to him the idea of penetrating into Upper Burmah, and exploring the boundaries of India and China, partly with a view of discovering a new trade route from China down the Irrawadi. Having been thirteen years in the East, he returned to England in 1881, and a few months afterwards started on the projected expedition with Mr. C. Wahab, also a civil engineer, who died after his return. Starting from Canton, the small party, with an interpreter,

made their way up the Chu-Kiang parallel to the southern boundary of China, till, on approaching the country of the Shāns, they trended north-west, and finally emerged on the Irrawadi, near Bhamo, having traversed a district the greater part of which had never been explored by Europeans. Returning to England in the autumn of 1882, Mr. Colquhoun read a paper on his travels before the Royal Geographical Society that attracted much attention. In 1883 he published *Across Chrysē*, which is a minute account of the expedition. In the same year he visited Hong-Kong and Tonquin as correspondent to the *Times*, and in 1884 his letters were published in a pamphlet entitled, *The Truth about Tonquin*. In 1885 he published *Amongst the Shāns and Burmah and the Burmese*.

Colt, SAMUEL (b. 1814, d. 1862), inventor of the revolver, born at Hartford, Connecticut, was a sailor in early life, and constructed a wooden model of a revolving pistol on his way to Calcutta in 1829. He took out a patent in 1835, but the enterprise was unsuccessful, and was for a time abandoned. He next invented a torpedo, and tried to establish a new line of telegraph to New York; but ill-fortune attended him till, having recovered his patent for revolvers, he started a gun factory in Hartford about 1848, and his supply of revolving pistols and rifles soon made his name well known throughout the world.

Colvin, JOHN R. (b. 1807, d. 1857), Lieutenant-Governor of the north-west provinces of India during the Mutiny, was born in Calcutta, but educated in Scotland and at Haileybury. Having returned to India in 1826, he rose by gradual steps in the Company's service till he became private secretary to Lord Auckland on his appointment as Governor-General in 1836. After six years' valuable work in this capacity he returned to England for a time, but in 1845 was appointed Resident in Nepaul, and was soon afterwards promoted to the Suddee Court. In 1853 he was also created Lieutenant-Governor of the north-west provinces, where he displayed the excellence of his administrative powers till the outbreak of the Mutiny in 1857, when his governments became the focus of the insurrection. Cut off from communication with his superiors, he issued a manifesto from Agra promising pardons and various concessions in hopes of conciliating the native contingents. His conduct was, however, condemned at Calcutta and by the home authorities, and the proclamation was withdrawn. The siege of Agra followed. The population was forced into the narrow limits of the old fort. Colvin's health gave way under anxiety and disappointment, and on Sept. 9th he died.

* **Colvin, SIDNEY** (b. 1845), Keeper of the Prints at the British Museum, born at Nor-

wood, was educated at Trinity College, Cambridge, where he gained the Chancellor's medal for English verse in 1865, and graduated as third classic in 1867, becoming a fellow two years later. He was elected Slade professor in 1873, and appointed director of the Fitzwilliam Museum in 1876, both of which appointments he resigned on receiving a post at the British Museum. Besides contributing to periodical literature he has published:—*A Word for Germany, by an English Republican, being a Letter to Professor Beesley* (1870); *Children in Italian and English Design* (1872); *Drawings of Flaxman* (1876); *Landor, in the English Men of Letters Series* (1878); *Selections from Landor* (1882), and *Keats, also in the English Men of Letters Series*.

* **Colvin, SIR AUCLAND, K.C.M.G., C.S.I.** (b. 1838), son of J. R. Colvin, Lieutenant-Governor of the north-west provinces of India, was born at Karnal, in the Punjab, educated at Eton and Haileybury, and entered the Indian Civil Service in 1858. He held successively several Government secretaryships of importance, and was in 1880 appointed a member of the International Commission for Egyptian Liquidation, and shortly afterwards became the representative of England under the scheme of Anglo-French control. Throughout the Arāby insurrection, Sir Auckland (who was made a K.C.M.G. in 1881) was the guiding counsellor of the Khedive, and whatever was right and whatever was wrong in the policy of the Egyptian Government, after the first show of weakness by the Khedive (which Sir Auckland did his utmost to avert), must be largely ascribed to the strong will, fixed opinions, and resolute manner of the English controller, who, however, recognised the inapplicability of Indian methods to Egyptian rule. When the Dual Control vanished in 1883, he became financial adviser to the Khedive; but shortly afterwards returned to India as Financial Secretary to the Viceroy's Government, in which capacity he introduced an Income-tax Bill in 1885, his budget of December having announced a considerable increase of expenditure owing to the advance of Russia on the northern frontier.

Combe, GEORGE (b. 1788, d. 1858), the phrenologist, born at Edinburgh, became a disciple of Spurzheim, and in 1819 published his *Essays on Phrenology*, followed in 1828 by his main work, *The Constitution of Man considered in Relation to External Objects*. Having married a daughter of Mrs. Siddons in 1833, he visited America in 1838, and afterwards published *Notes on the United States* (1841). Richard Cobden set a high value upon the friendship of Combe, to whom he wrote his most interesting letters. George Combe's brother, Andrew (b. 1797, d. 1847), also a phrenologist, was an eminent writer on physiology.

Combe or Coombe, WILLIAM (b. 1741, d. 1822), satirical poet, was born at Bristol,

and having wasted his substance in riotous living, was forced to come to London to write for his bread. Here he published the *Diaboliad, dedicated to the Worst Man in His Majesty's Dominions* (1777), the *Life of Napoleon, a Hudibrastic Poem* (1805), the *English Dance of Death* (1815), illustrated by Rowlandson; the *Dance of Life* (1817), and in 1813 the *Tour of Dr. Syntax*, by which alone his name is now remembered. Though the humour has become rather old-fashioned, the book is still of importance as a picture of those times, and a specimen of our great-grandfathers' wit. The illustrations by Rowlandson have made Dr. Syntax almost as familiar as Mr. J. S. Clarke has made his first-cousin, Dr. Pangloss.

Combermere, STAPLETON COTTON, VISCOUNT (b. 1773, d. 1865), soldier, entered the army in 1790, and saw service under the Duke of York in Flanders, at the Cape in 1795, and in India during the campaign against Tippoo Sahib. In 1808 he was sent to Spain in command of a brigade of cavalry, and so distinguished himself in the course of the war, notably at Salamanca and Orthes, that he was raised to the peerage as Baron Combermere, and was offered a pension of £500. In 1819 he was made Governor of Barbadoes, and in 1825 commander-in-chief in India, and a member of the Council. He was promptly called upon to take the fortress of Bhurtpore from the usurping Rajah Doorjum Sal, and carried the place in brilliant style on Feb. 6th, 1826. For this achievement he was advanced a grade in the peerage. Lord Combermere saw no active service afterwards, but became Constable of the Tower in 1852, and field-marshal in 1855. As a cavalry officer he had few equals, and was something of a tactician as well.

Lady Combermere and Captain Knollys, *Memoirs and Correspondence of Lord Combermere*.

* **Common**, ANDREW AINSLIE (b. 1841), astronomer, a native of Newcastle-on-Tyne, was educated privately, and for many years past has devoted his leisure to celestial photography in the private observatory which he has erected at Ealing, near London. In 1878 he succeeded in constructing a three-foot reflecting equatorial telescope for celestial photography, for which work he received the gold medal of the Royal Astronomical Society in 1884. Next year he was elected F.R.S., and for the last two years he has been treasurer of the R.A.S. In June, 1881, Mr. Common obtained a successful photograph of comet (b) of that year, and in March of the year following a photograph of the nebula of Orion, which proved a distinct advance on all previous efforts, and gives evidence of a time approaching when the shapes of nebulae and the relative brightness of the different parts will be recorded photographically in a better manner than by the most careful hand drawings. Mr. Common also obtained beautiful photographs

of other nebulae, and of the planets Jupiter and Saturn, and he also applied himself successfully to obtaining photographic star-maps to stars of the eleventh magnitude. In presenting him with their gold medal the Astronomical Society desired to express not so much their appreciation of the originality of his methods of research, as of the great practical success which has attended his efforts in the field of astronomical research. The difficulties which Mr. Common had to surmount in the construction of his telescope were of the most uniquely discouraging nature. Just as the great speculum—a lump of glass of about 38 inches diameter and 7 inches thickness—was ready to receive its final figure at the hands of the optician, it burst into a thousand pieces with a terrific explosion. Within a few hours' time Mr. Common had telegraphed to the glass makers in Paris for two more discs of like dimensions, the extra one to be brought into service in case of another explosion. The second disc, however, was successfully ground, polished, and mounted for work about the middle of 1877, and it is with this instrument that Mr. Common has carried on his unequalled researches. In some respects it is proper to call it the most powerful telescope in existence, although the great refractor of 30 inches aperture now being mounted near St. Petersburg may be expected to surpass it.

Science (Boston, U.S.A.), vol. iii., No. 65, p. 544 (1884); *Monthly Notices, R.A.S.*, vol. xlii., p. 79; *Short Studies from Nature, art. Comets* (1885).

Comonfort, IGNACIO (b. 1810, d. 1868), Mexican general and short-lived president, born at Puebla, was a soldier from his youth, and having become a senator in 1848, assisted Alvarez in forcing Santa Anna to abdicate in 1855. In the same year he succeeded as provisional president, and having crushed a rebellion in 1856, became Constitutional President in the next year, but only retained his power for a few months, being driven into exile early in 1858. In 1863 he returned to command part of the Liberal army against the French, but was murdered by brigands.

Comte, AUGUSTE (b. 1798, d. 1857), a celebrated French philosopher and social and religious reformer, was born at Montpellier, where his father was a cashier in the Inland Revenue department. His mother, a woman of strong character, was a staunch Catholic and royalist. At the age of nine he was sent to the Lycée of his native town, and soon distinguished himself by his ardour for study and his indifference to play. His progress was rapid, especially in mathematics, and he won one of the first places on the list of candidates for the École Polytechnique a year before the legal age of admission. His career in this higher school was cut short after two years, through an act of rebellion in which he was the leading spirit, and Comte had to

return to his father's house at Montpellier. When he came back to Paris he earned a precarious existence by giving lessons in mathematics; he also acted for a few weeks as secretary to Casimir Périér. In 1818 he made the acquaintance of the once famous writer and philanthropist Saint-Simon, the founder of *Industrialism*, and remained on intimate terms with him as his friend and *collaborateur* for six years. But permanent sympathy was hardly possible between men so different in training, objects, and cast of mind, to say nothing of the great disparity of age. A final breach took place in 1824, and it has been continued and enlarged by the disciples of the two speculators. Comte, in his later days, repudiated all debt or gratitude to Saint-Simon, while the followers of the latter freely charged the author of the *Positive Philosophy* with unacknowledged obligations to their master. An impartial judgment would probably now declare that of direct debt of Comte to Saint-Simon there is no trace. Saint-Simon was a disconnected and desultory thinker, with small grasp of principles, and large ignorance of details. He cannot be said to have had a system, and was always shifting his point of view. Comte, on the other hand, had a power of generalisation rarely surpassed, and his system is synthetic and consistent to a fault, while his scientific knowledge in many departments was accurate, and extensive. Yet Saint-Simon had fertility of mind, and original ideas which he was incompetent to work out; and it is easy to conceive that such a mind as Comte's received considerable stimulus in the first instance, from contact with Saint-Simon. In February, 1825, Comte married Caroline Massin. In his later years he described his marriage as the one serious fault in his life. But there is evidence in his letters that he at least was on terms of affection with his wife twelve years after their union. She was a person of considerable ability and force of character, and it appears from Comte's own testimony that she rendered him on one critical occasion a most important service, to be presently mentioned. Comte's ideas rapidly matured and acquired a consistent form after his separation from Saint-Simon. Even before the rupture he had evolved some of his more characteristic conceptions with reference to the reorganisation of society. (See *Opuscules* in appendix to vol. iv. *Politique Positive*.) But in 1826 he went much further, and realised in outline the great synthetic system, the elaboration of which was to occupy the remainder of his life. In a letter to M. de Blainville (unpublished) he relates how he had attained to this result, "after a sustained effort of thought continued during eighty hours, with few and short intervals of sleep." He began a course of lectures on Positive Philosophy, and had delivered four lectures, when the overtaxed brain gave way, and he became

deranged in his mind. The crisis was so severe that he had to be consigned to the care of the famous *alienist* Esquirol, in whose establishment he remained several months, getting worse rather than better. At last it was suggested by De Blainville that possibly the treatment and discipline of the madhouse were aggravating his disease, and it was arranged that Mme. Comte should take him home. This step certainly needed great courage and devotion on his wife's part, and it was crowned with success, as the patient immediately began to improve. But the period of excitement was followed by one of profound depression, and in an access of morbid melancholy, in the spring of 1827, Comte attempted to commit suicide by throwing himself into the Seine. He was rescued, and before the end of the year had completely recovered, and resumed his labours. The first volume of the *Philosophie Positive* appeared in 1830, and the remaining five volumes at the following dates: 1835, 1838, 1839, 1841, 1842, which seems a reasonably rapid rate of composition for a work of such depth and compass. But Comte would probably have accomplished his task in a much shorter space if his time had been his own and his mind free from anxiety. Unfortunately both these conditions were wanting. For a livelihood he had to take the posts of teacher and examiner at the *École Polytechnique*, and in another institution (Laville) he was professor, in each case of mathematics. More serious still was the state of his domestic relations with his wife. In some fifty of her letters before us in MS. there is hardly one not chiefly filled with querulous reproaches and complaints, together with strong assertion of her own conjugal perfections. In the summer of 1842 the inevitable crisis came, and they separated by apparently mutual consent, though each of them afterwards threw the blame on the other. In the preface to the sixth volume of his *Positive Philosophy* Comte had spoken of his official superiors in the Polytechnic School with such asperity, that it is not surprising that great offence was taken by persons who had it in their power to make their displeasure felt. Among them was Arago, whom Comte had attacked by name. In 1844 Comte was not reappointed. He had been in correspondence with John Stuart Mill for some three years before this (it was Mill who made the first advances), and when the latter heard of his friend's loss of office and salary he induced three Englishmen (Sir William Molesworth, George Grote, and Raikes Currie) to subscribe a sum of 6,000 francs (£240) as a temporary subsidy to Auguste Comte, to relieve him from any immediate inconvenience. He was very thankful for this timely aid, and expressed his gratitude to Mill and the subscribers in warm terms. But when he learned that the donation would not be repeated in

the following year, he was so irritated as to write to Mill that his English protectors deserved more blame even than the French Government, which had allowed him to be deprived of his post. In May, 1845, occurred perhaps the most important event in Comte's life—his meeting with Clotilde de Vaux. A woman of thirty, with a pleasing person and attractive manners, Clotilde united to a penetrating mind a lofty and firm character, depth and refinement of feeling, and a natural dignity of thought and conduct. Her position was a sad one, her husband being condemned to penal servitude for life. The charm of her nature and the pathos of her lot touched Comte with pity and admiration, and soon revealed in him a depth of romantic passion hitherto unsuspected even by himself. She never pretended to reciprocate the ardent love he felt for her, but always showed a sense of warm gratitude and friendship in return for his kindness and devotion. She did not live quite a year from the time when he first made her acquaintance, which he always called his "incomparable year," and it certainly modified in many ways the whole cast of his feelings, and even his speculations, for the rest of his life. Comte's extraordinary fertility of mind and power of concentrating his ideas on a given subject enabled him to carry on his work in all circumstances; in poverty, in sickness, in general neglect, in domestic unhappiness, in joy, in grief, in the extreme anguish of bereavement, his brain ceased not to teem with wide and lofty thoughts, which he transferred to paper with as much ease as if he were copying them from a book. Within a year of his terminating his *Positive Philosophy* he published his *Analytical Geometry* (1843), and his *Popular Astronomy* in the year following. In 1846 he conceived the plan and elaborated the chief conclusions of his second and greater work, *Positive Polity*. These he gave to the world in a series of twelve lectures (1847), and the year following they appeared in a volume called *General View of Positivism* (subsequently republished in the first volume of the *Positive Polity*). Meanwhile Comte's pecuniary resources were reduced to the verge of penury. The troubles of 1848 were prejudicial to the private institution where he gave lectures. Comte was one of the dismissed teachers, and with his post he lost 2,000 francs a year. His sole means of subsistence now depended on the small salary he received as *répétiteur* of the Polytechnic School, viz. 2,000 francs, or £80 per annum. In this extremity he tried to resume his old occupation of giving private lessons in mathematics, and published an appeal to the "Public of the West," calling on Europe to repair the injustice he had received from the Government, by supplying him with work "like any other *prolétaire* in the profession he had exercised from his youth." The

appeal met with no response, and some other resource had to be found. Fortunately Comte had in M. Littré a zealous and influential disciple, who organised with success a general subsidy, to which all admirers and friends of the *Positive Philosophy* were invited to contribute. The subscriptions, though never very large or numerous, were sufficient to ensure him a moderate degree of comfort in his latter years. He then took in hand the great work already referred to on *Positive Polity*. He needed about a year to produce each of the four volumes, but only half that time was taken up by the process of writing; six months were devoted to preparatory meditation, in which he thought out the subject he was going to treat with such precision and clearness, even of minor details, that at the end of the process he was accustomed to say that his book was finished, though very often not a line of it had been written. The fourth and last volume of *Positive Polity* was published in 1854. The *Positivist Catechism* appeared in 1852, and the *Subjective Synthesis*, his last work, in 1855. Comte's life was now drawing to a close. In May, 1857, he caught a severe chill at the funeral of his friend, M. Vieillard; a variety of menacing symptoms followed, and he ultimately succumbed on Sept. 5th, wanting three months of sixty years of age. No attempt can be made here to give an exposition of Comte's philosophic, social, and religious views. That many of his ideas will never be accepted in the form he gave them will be admitted now by his sincerest disciples; that his system will be modified and its rigour relaxed by subsequent philosophers, who will yet own their initial obligations to him, is also manifest. But, after all this is said, it will become clearer than ever what a profound, fertile, and suggestive thinker he was. His influence has already extended far beyond the limits of his own school, and controlled unconsciously the views of many who repudiate his doctrines. He belonged to that small class of rare minds, whose errors even are often more valuable and stimulating than other men's truths.

Dr. Robinet, *Notice sur l'Œuvre et sur la Vie d'Auguste Comte* (Paris, 1864); E. Littré, *Auguste Comte et la Philosophie Positive* (Paris, 1864); Documents still in manuscript.

[J. C. M.]

Concha, DON MANUEL DE LA (b. 1794, d. 1874), Spanish general, took part in the war of independence against Napoleon, and in the first Carlist War, being throughout a firm supporter of Isabella as Infanta and as Queen. He may be said, indeed, to have played a leading part in every movement of the royalist army up to 1854, when for a short time he went into exile for his share in O'Donnell's manifesto of the previous year. The last general to support the Queen in

face of the revolution of 1868, he retired soon after her fall, till summoned from private life by the Carlist War in 1874. As commander-in-chief of the army of the North he marched to the relief of Bilbao, and entered it in triumph early in May, but about a week later suffered a severe repulse near Vittoria, whilst trying to make his way to Estella, and was himself slain at the head of his troops.

Congleton, HENRY BROCK PARNELL, 1st BARON (b. 1776, d. 1842), the second son of Sir John Parnell, was educated at Eton and Cambridge. His parliamentary career began in 1802, when he was returned for Portarlington, the pocket-borough of his father-in-law, the Earl of Portarlington; he was elected for Queen's County in 1806, and for Dundee 1833. A moderate Whig in politics, Sir Henry Parnell was a prominent member of his party, and in particular was regarded as a high authority on financial questions, upon which he wrote largely, his most important treatise being one *On Financial Reform* (1830). It was in the same year that he defeated the Duke of Wellington on a motion on the Civil List, and he became in consequence Secretary at War (1831), and Paymaster of the Forces (1835-41), after which he was raised to the peerage as Baron Congleton of Congleton. In the following year, having long suffered from depression and want of health, he committed suicide.

* **Congreve, RICHARD** (b. 1818), the Positivist thinker, was one of Dr. Arnold's pupils at Rugby, and subsequently became fellow and tutor of Wadham College, Oxford, being for a time also assistant-master at Rugby. In 1855 he published his well-known edition of *Aristotle's Politics*, and two years later his pamphlets on *Gibraltar* and *India*, in which he condemned the continuance of the British Empire in the East. About this time he resigned his fellowship, and definitely adopted the Positivist system of social and religious theories. Of his numerous other writings we may mention:—*Elizabeth of England* (1862), *Our Foreign Policy* (1870), *Human Catholicism* (1876), and numerous addresses on the *Worship of Humanity*.

Conington, JOHN (b. 1825, d. 1869), scholar, born at Boston, in Lincolnshire, was educated at Rugby under Dr. Arnold and Dr. Tait, and was elected scholar of Magdalen College, Oxford, in 1843, and of University College in 1846, becoming a fellow of the same college in the following year. In 1854 he was elected first Corpus professor of Latin. He devoted himself mainly to English editions of the classical texts, such as the *Agamemnon* (1848), and the *Choëphoræ* (1857), but his name will chiefly be remembered for his great edition of *Virgil*, published between the years 1861 and 1868,

which is likely to remain a text-book for English students. He also wrote an English verse translation of the *Odes of Horace* (1863), and of the *Æneid* (1866), neither of them of high literary value, and several critical essays and reviews, collected since his death as *Miscellaneous Writings*. His influence and reputation in Oxford were greater than his remaining works would appear to justify.

* **Conkling, ROSCOE** (b. 1828), American politician, born at Albany, was educated for the law, and in 1858 elected to the House of Representatives. Having become a senator in 1867, he was re-elected each six years, till in 1881 he suddenly resigned owing to a dispute with President Garfield. In the meantime he had become one of the most prominent members of the Republican party, having been nearly appointed candidate for the Presidency in 1876. His support to General Grant in 1880, and his personal opposition to Mr. Blaine, divided the party into the Conklings and Anti-Conklings, or the "Stalwarts" and "Half-breeds," or again, the "Machines" and the "Anti-Machines." On the formation of the ministry in 1881, President Garfield appointed Mr. Robertson, one of Mr. Blaine's most strenuous supporters, collector of the customs at New York. The appointment was so obnoxious to Mr. Conkling's party that he and Mr. Platt took the unprecedented course of retiring from the Senate, and submitting themselves to the New York Legislature for re-election. On the returns, however, they were both rejected, though vigorously supported by Vice-President Arthur. Since this occasion Mr. Conkling has taken no prominent part in public affairs.

* **Connaught, H.R.H. ARTHUR WILLIAM PATRICK ALBERT, DUKE OF** (b. 1850), the third son of Queen Victoria, born at Buckingham Palace, received his military education at Woolwich from 1866 to 1868, when he became a lieutenant in the Royal Engineers, passing into the Royal Artillery in 1869. In the same year he joined the Rifle Brigade (Prince Albert's Own), of which he became colonel-in-chief in 1880. At his majority he received a grant of £15,000 a year from Parliament, and in 1874 was created Duke of Connaught and Strathearn, and Earl of Sussex. In 1879 he married Margaret Louise, daughter of the late Prince Frederick Charles of Prussia, nephew of the Emperor, and received a further grant of £10,000 a year. During 1875 and 1876 he was assistant-adjutant-general at Gibraltar, and in 1880 reached the rank of major-general. During the Egyptian expedition of 1882 he commanded the brigade of Guards on service, and took part in the actions of Mahuta and Tel-el-Kebir. Having been created brigade-general at Aldershot in 1883, and major-general of Bengal, he acted as commander of Meerut until the autumn of 1885, and in 1886 at Rawul Pindi.

Connolly, JOHN (b. 1799, d. 1866), authority on lunacy, was educated at Edinburgh, and having studied lunacy in all its forms in London, became chief physician and general director to Hanwell Lunatic Asylum. He wrote several important works connected with this subject, such as *An Inquiry concerning the Indications of Insanity*, and *The Construction and Government of Lunatic Asylums*. He was also the author of a treatise on Hamlet's madness (1863).

Conscience, HENDRIK (b. 1812, d. 1883), the Flemish poet and novelist, of French origin on the father's side, was born at Antwerp, and at the revolution of 1830 volunteered for the Belgian army, in which he served six years. This period was marked by his national and military songs in French and Flemish, the best part of his poetic work. At the end of the war, being cut adrift by his family, he became for a time job-gardener, schoolmaster, and accountant. The year 1837, however, saw his first great prose work, *The Year of Miracles*, a story of the Flemish rebellion against Spain. This work placed him at the head of the movement that aimed at restoring the Flemish language in place of the French. The *Lion of Flanders*, a work of the same tendency, followed in 1838, but after this the author turned to modern subjects and every-day life, which he portrayed with something of the accuracy and humour of Tourgenieff, though wanting in profound personal insight and tragic intensity. Having attracted the attention of the late King Leopold, Conscience in 1845 was appointed assistant professor at Ghent, and entrusted with the education of the royal children. In 1868 he became keeper of the Musée Wiertz in Brussels. Shortly before his death a statue was erected to him as the representative of Flemish nationality. Of his extremely numerous works we may mention the following under their English titles: —*Evening Hours*, *The Executioner's Child*, *The Conscript*, *Martyrdom of a Mother*, *The Blue House*, *The Poor Gentleman*, *Blind Rosa*, *The Demm of Gold*, *The Joy of Life* (1868), *The Justice of Duke Karel* (1876), and *The Peasant's War* (1879).

Constable, ARCHIBALD (b. 1776, d. 1827), the Scottish publisher, was born at Kellie, and in 1795 started a bookseller's shop in Edinburgh. Seeing an opportunity for a great advance in the publisher's art, he began the publication of the *Edinburgh Review* in 1802, and established the rule of paying his authors high. In 1805 he had a share in the publication of *The Lay of the Last Minstrel*, and in 1807 he paid £1,000 for *Marmion*. He also published *Waverley* in 1814, and the great majority of the *Waverley* novels. The degree of his responsibility for the great failure for £250,000 in 1856, involving Scott in ruin and closing his career in misery, has been very

variously estimated. He continued the management of the *Edinburgh Review* up to the same year. In 1835 he started *Constable's Miscellany*.

Lockhart's *Life of Scott* gives the darkest version of Constable's conduct. He is defended by his son Thomas in *Archibald Constable and his Literary Correspondents*, which also supplies some interesting details on the Edinburgh society in which Constable was prominent.

Constable, JOHN (b. 1776, d. 1837), one of the creators of landscape painting, was the son of a comfortable miller, who lived on the banks of Stour at East Bergholt, in Suffolk. The effects of his early training and surroundings are to be seen in all his mature works. Hence came his love for wide and various skies, for mills and canals, broads, and far distances. After gathering a certain amount of useful knowledge at the Dedham Grammar School, where his love of drawing was first noticed, he quietly settled down to follow his father's trade, till in 1795 he was introduced to Sir George Beaumont, who recommended a visit to London. Next year, however, he returned discouraged, and remained working at home till 1799, when he was definitely entered as a student at the Royal Academy, and went to live in Cecil Street, Strand. He worked assiduously, studying especially from Ruysdael and Wilson, till a tour in Derbyshire (1801) revealed to him that there was "room for a natural painter," and that the supremacy of the "brown-fiddle" school of landscape might be disputed. Henceforward, to the best of his power, he followed what he justly called "God Almighty's style." In 1802, his first picture was exhibited at the Academy, and he continued to exhibit annually (except in 1804) up to the year of his death. He became A.R.A. in 1819, and R.A. in 1829. After his marriage (1815) with Miss Bicknell, through whom he inherited a considerable fortune, Constable lived in various parts of the West Central district, till in 1827 he removed to Hampstead, which he had long been in the habit of visiting for the study of skies. Of his numerous works the following of the more celebrated may here be mentioned: —*A Lock on the Stour* (1814); *A Scene on the Stour*, known as *The White Horse* (1819); *Stratford Mill* (1820); *The Hay Wain* (1821); *A Canal Scene*, known as *The Jumping Horse* (1825); *The Cornfield* (1826), now in the National Gallery; *Salisbury Cathedral and Yarmouth Pier*, both finished in 1831; *Waterloo Bridge* (1819–32), once his masterpiece, afterwards covered with blacking and mastic varnish, at the request of several noblemen, to give it "tone;" and *The Valley Farm* (1834), now in the National Gallery. Constable's delight was in gleaming showers, and breezy sunshine after rain, and grey mists of summer mornings. Hence Fuseli's sneer that he painted "great-coat weather." He loved freshness and startling effects. His colours were often laid on with a palette-knife. He

has been justly accused of slovenly drawing and disregard of form, and of a preference for subjects of low class. Nevertheless, few artists have rendered the quiet charm of English scenery more faithfully, and his influence on painting was at the time of the highest importance—an influence felt even more in Paris than in England, and still to be traced in the modern French landscapes.

C. B. Leslie, *Life of Constable*; Ruskin, *Modern Painters*, especially vol. i. [H. W. N.]

Constant, BENJAMIN (b. 1767, d. 1830), the politician and orator, was born at Lausanne, of French parentage, and educated in England and Germany. In 1795 he took up his residence in Paris, joined the Moderate Republican party, and subsequently became a member of the Tribunate. In 1801 his opposition to the First Consul was punished by banishment, a sentence which was shared by his friend Madame de Staël. He travelled much in Europe during the ensuing years, visiting Weimar, where he became acquainted with Goethe and Schiller. In 1813 appeared his celebrated pamphlet *De l'Esprit de Conquête et de l'Usurpation dans leur Rapport avec la Civilisation européenne*, which procured for him the favour of the Allied Powers of Europe. He severely attacked Napoleon in his *Journal des Débats*, but during the Hundred Days he accepted a place in the Imperial Council. After the second restoration he became the leader and moderator of the Liberal party. As a speaker he was unequalled for brilliancy and wit, and his letters are models of style. He professed the Protestant religion, but was a sceptic at heart, and has been called a second Voltaire. He left a number of political and literary works, amongst which we may mention his great work, *La Religion considérée dans sa Source, ses Formes, et ses Développements*.

De Cormenin, *Le Livre des Orateurs*; Sainte-Beuve, articles in the *Revue des Deux Mondes*, 1844 and 1845.

* **Constant, BENJAMIN** (b. 1845), French artist, was born in Paris, and received his artistic education from M. Cabanel (q.v.) and in the School of Fine Arts. In 1869 his picture of *Hamlet and the King* was admitted to the Salon, and since then he has been a regular contributor, the following being amongst the most important of his works:—*Samson and Delilah* (1872); *Prisoners in Morocco* (1875); *Mahomet II.* (1876); *The Harem* (1878); *The Favourite of the Emir* (1879); and *The Last of the Rebels* (1880). His pictures are well known in England through photographs. M. Constant is a prominent member of the modern Realistic school of French artists.

* **Constantine, NICOLÆWITCH** (b. 1827), Grand Duke of Russia, is the second son of Czar Nicholas, and is therefore uncle of the present Czar. Having been educated for the

navy, he rose to the rank of admiral, and held the position of Grand Admiral of the Imperial Fleet. Becoming one of the most prominent leaders of the Muscovite or National Party, he was largely responsible for the outbreak of the Crimean War. Contrary to general expectation, he loyally supported his brother Alexander II. during his ill-fated tenure of supremacy, and in 1865 was appointed President of the Grand Council of the Empire, being re-appointed in 1878. He devoted his attention almost entirely to the reconstruction and organisation of the fleet, but in April, 1881, he was dismissed from his dignities on suspicion of intriguing with the revolutionary party. His son, the Grand Duke Nicholas, was at the same time arrested.

Conway, HUGH, was the pseudonym of FREDERICK FARGUS (b. 1840, d. 1885), novelist, who was engaged in business in Bristol when he published the melodramatic story *Called Back in Arrowsmith's Annual* for 1883-4. Re-published in a cheap form, the book had the most extraordinary success, owing to the boldness and originality of the plot. It was followed in the next number of *Arrowsmith's Annual* by *Dark Days*, a story of similar character, equally successful with the great mass of the excitable and unreflecting public. Hugh Conway's next story, *A Family Affair*, which contains signs of higher artistic merit, was appearing in the *English Illustrated Magazine*, when news came of the author's premature death from typhoid fever at Monte Carlo. Some posthumous novels, entitled *Slings and Arrows*, *At what Cost*, and *A Cardinal Sin*, appeared in the winter of 1885. Except for his example of terseness and compression, Hugh Conway's influence on English literature is hardly likely to be permanent.

* **Conway, MONCURE DANIEL** (b. 1832), lecturer and man of letters, was born in Virginia, U.S. and joined the Methodist ministry at eighteen years of age. Having fallen under the influence of Emerson, he abandoned his former position, went to study at Cambridge (U.S.), and having taken his degree at Harvard University, opened a chapel or lecture hall at Cincinnati in 1860. He distinguished himself by his resolute advocacy of the emancipation of slaves. Some time afterwards he came to England, and was for many years occupant of South Place Chapel, Finsbury. He was personally intimate with Emerson, Carlyle, and Mill, and the most valuable portions of his works are records of such intimacy. His collection of essays, entitled *Idols and Ideals*, gives the most explicit account of his own position, together with his criticism on what he considers the disastrous religion of Christianity. Of his other works, omitting numerous discourses, we may mention:—*Republican Superstitions* (1872), *Demonology and Devil Lore* (1879), *The Wandering Jew* (1881), *Travels in South Kensington*

(1882), and *Emerson at Home and Abroad* (1882). In 1885 he returned to the United States.

Conybeare, THE VERY REV. WILLIAM DANIEL (b. 1787, d. 1857), geologist, was educated at Westminster and Christ Church, and applied himself to geology on leaving College. He was one of the earliest members of the Geological Society, before which he read his first paper in 1814. In the previous year he had made a geological survey of the north of Ireland with Dr. Buckland. In 1821 he read his celebrated paper on the reconstruction of the *Plesiosaurus* from a few scattered and mutilated bones. In the next year he published his *Outlines of the Geology of England and Wales*, long regarded as a text-book. After being for many years rector of Sully, in Glamorganshire, he was appointed to the deanery of Llandaff in 1847.

Conybeare, THE REV. WILLIAM JOHN (b. circa 1818, d. 1857), divine, eldest son of the above, was a fellow of Trinity College, Cambridge, and principal of the Collegiate Institution, Liverpool. His name is well known as the collaborator with the Rev. J. S. Howson, the late Dean of Chester, in the *Life and Epistles of St. Paul*, a work of classic authority. His younger brother, HENRY CONYBEARE (b. 1823), is the civil engineer and architect who constructed the water-works and docks at Bombay (1854 and 1856).

Cook, DUTTON (b. 1832, d. 1883), dramatic and art critic and novelist, was born in London, and educated at private schools and at King's College. From 1868 to 1871, he was assistant editor of the *Cornhill Magazine*, and for many years acted as dramatic critic to the *Pall Mall Gazette*, and subsequently to the *World*. He was the author of various works of fiction, amongst which we may mention *Paul Foster's Daughter*—perhaps his masterpiece (1861)—*Hobson's Choice* (1866), *Over Head and Ears* (1868), *Douleday's Children* (1875). His novels give bright, healthy pictures of English life and quiet domestic affection, and will long continue to charm and interest English readers. He also published several volumes of essays upon art and the drama.

* **Cook**, ELIZA (b. 1818), verse-writer, the daughter of a rich merchant in Southwark, began to write when quite young, and contributed many articles to newspapers and magazines. Her first volume of poems appeared in 1838, under the title of *Melania and other Poems*. This book was favourably received, and was followed by another volume in 1864, and another in 1865, called *Diamond Dust*. In 1849 she published *Eliza Cook's Journal*, which appeared till 1854, when she gave it up on account of failing health. In 1864, the Government settled on her a pension of £100 a year. Miss Cook's poems have

attained a wide popularity, shown by the numerous editions issued; the simplicity of their themes, the absence of abstruse thought and abstruse beauty, together with their acceptable morality, having endeared them to a large class of unpoetic readers some twenty or thirty years ago.

* **Cooke**, JOHN ESTEN (b. 1830), was born at Winchester, Virginia, and studied law at Richmond. During the Civil War he was on the staff of General "Stonewall" Jackson, and General R. E. Lee. After the war he took up his residence for a short time in New York, occupying himself in the work of a journalist, but subsequently returned to his farm near Winchester. He has contributed much to the magazines of the day, and is the author of several popular novels and biographies. Among the most important we may mention *Leather Stocking and Silk* (1854), *The Virginia Comedians* (1855), *Life of Stonewall Jackson* (1866), *Out of the Foam* (1871), *Life of Robert E. Lee* (1871), *Mr. Grantley's Idea* (1879), *Justin Harley* (1874), *The Virginian Bohemians* (1880); and *Virginia: a History of the People* (1883).

* **Cooke**, MORDECAI CUBITT (b. 1825), an English botanist, was a pupil at the dame-school of Horning, Norfolk, till 1834. Then for two and a half years he was under the instruction of an uncle, who was a Nonconformist minister, and finally was apprenticed for five years in a wholesale Manchester and drapery warehouse. At a later period, he was usher in a boarding school, which employment he exchanged for that of clerk in a solicitor's office. After engrossing law papers for several years, he was appointed in 1851 to take charge of a metropolitan national school. In 1856 he passed the Government examination and obtained a certificate, but in 1861 he abandoned scholastic life and became attached to the Indian Museum until it was abolished, when Mr. Cooke was transferred to the Kew Herbarium as the official cryptogamist. In 1859 he obtained a first-class certificate in botany as teacher of science at South Kensington, being the first candidate who ever passed in botany at the Science and Art examinations. Mr. Cooke has especially distinguished himself as a student of the fungi and the fresh-water algae, his works on these orders being the standard treatises in English. He has also paid some attention to zoology and chemistry, his education in these as in other sciences being obtained by persistent self-instruction. In 1877 he was elected an associate of the Linnean Society. He was one of the founders of the Quekett Microscopical Club, of which he has been twice president, and he has been twice awarded the honorary degree of M.A., and once that of LL.D., by American universities, for his investigations of American fungi and his contributions to general cryptogamic botany. Dr. Cooke's chief

technical works are:—*Handbook of British Fungi*, 2 vols. (1871); *Microscopic Fungi* (1865); *The Myxomycetes of Great Britain* (1877); *British Fresh-water Algae*, 2 vols. (1882-4); *Clavis Synoptica Hymenomycesium Europæorum* (in conjunction with Dr. Quellet) (1878); *Illustrations of British Fungi* (1881-5); *Report on the Oils and Oil Seeds of the Indian Museum*; *Report on the Gums and Resins of the Indian Museum*; besides a number of popular and educational works on botany and zoology, and a large number of papers in scientific periodicals. He is the editor of *Grevillea*, a journal of cryptogamic botany, which he projected in 1872, and was the originator and for seven years the editor of *Science Gossip*.

Cooke, Sir William Fothergill (b. 1806, d. 1879), electrician, born at Ealing, entered the East Indian army in 1826, but having retired in 1831, devoted himself entirely to the pursuit of natural science, beginning to study the electric telegraph in 1836. In conjunction with Prof. Wheatstone and J. L. Ricardo, he founded the first telegraph company, constructing the lines from Paddington to West Drayton (1838). These were afterwards extended to Slough, and several other short lines were established in various parts of the country, the longest being from London to Portsmouth, constructed for Government (1844). Cooke was knighted in 1869, and received a Civil List pension for his services in 1871.

Cooper, Abraham, R.A. (b. 1787, d. 1868), battle-painter, was born in London, and in childhood was employed at Astley's theatre, where he began to make studies of the horses, and gradually obtained employment on sporting publications. In 1816 he gained a prize at the British Institution for his *Battle of Ligny*, and next year was elected A.R.A. His celebrated picture of the *Battle of Marston Moor* was exhibited in 1819, and in 1820 he was elected R.A. Besides his numerous contributions to the Academy and Institution, he also illustrated *Sporting* (1838), *The Sportsman's Annual* (1836), and *Recreations in Shooting* (1849).

Cooper, James Fenimore (b. 1789, d. 1851), one of the most popular novelists of the century, was born at Burlington, New Jersey. His father was a judge and member of Congress, and on the family estates in the wild country around Otsego Lake the novelist was brought up. He was at school at Albany and Newhaven, and afterwards at Yale College. At sixteen he joined the United States navy, and stayed long enough in the service to secure a lieutenantancy. Marrying in 1811, he left the navy, and thereafter began to write. His first book, published in 1819, was a fashionable novel, entitled *Precanction*. It possessed no remarkable quality, and being published anonymously, did nothing

for Cooper's reputation. In 1821 *The Spy* appeared, and this was successful; but a far greater and more enduring success was achieved in 1823, when *The Pilot* was published. Two years later a feeble book entitled *Lionel Lincoln* appeared, and then came the author's masterpiece, *The Last of the Mohicans*, which was produced in 1826. In this year Cooper removed to Paris, and occupied himself in journalism there, writing in the *National* on American subjects. While at Paris he wrote his *Prairie* and *Red Rover*, as well as such inferior and unworthy books as *The Waterwitch* (1830); and *The Notions of a Travelling Bachelor* (1828). Three novels, written about the same period—*The Bravo* (1831), *The Heidenmauer* (1832), and *The Headman of Berne* (1833)—are usually cited as efforts to exalt the people at the expense of the aristocracy. In 1833 the novelist returned to America, and wrote several sets of notes on his travels and experiences. His *England* (1837) is chiefly eminent for its bitterness against the English, and his *Home as Found* (1838) is understood to contain an idealised portrait of himself. His later books were *The Pathfinder* (1839), *The Deerslayer* (1841), *The Crater of Vulcan's Peak* (1847), a story introducing supernatural machinery. His last work was *The Ways of the Hour* (1850). Despite his glaring inequalities, he was enormously popular, and secured the admiration of some notable men. Balzac and Hugo were among his warmest upholders, and there were not a few novelists in England prepared to pronounce him the "American Scott." In picturesqueness he was eminent; in invention he was remarkable; but in character he was not the equal of many writers who were far inferior as a whole. One striking and impressive figure he did, however, introduce into fiction. It is no small distinction to be the creator of the type of Leather-stocking Cooper's choice of scene and subject often contributed materially to his success. His *Pilot* is a sea story that will always stand high, and his *Last of the Mohicans* will probably remain without a rival in its own domain of art.

Griswold, *Prose Writers of America* (1847); *American Literature*, vol. i., p. 725.

[T. H. C.]

Cooper, Peter (b. 1791, d. 1883), an American engineer and philanthropist, was born in New York. After trying many trades, he finally entered the glue and isinglass business, which he carried on for half a century, amassing an enormous fortune. He subsequently became interested in the iron manufacture, and erected large works near Baltimore, where he built the first locomotive engine in America. He was the founder of the widely known "Cooper Institute," for the advancement of science and art, designed especially for the working-classes.

Cooper, SIR ASTLEY PASTON (b. 1768, d. 1841), an eminent English surgeon, was born at Brooke, in Norfolk. He was surgeon to George IV., and had an enormous practice in London. His work on *Hernia* is very celebrated; in addition he published a book on *Dislocations and Fractures*, and on *Anatomy and Diseases of the Breast*, and a great number of medical treatises.

* **Cooper, THOMAS** (b. 1805), the Chartist, was born at Leicester. When he was about four years old his mother, recently left a widow, went to live at Gainsborough, where he was sent to the Bluecoat School. At the age of fifteen he apprenticed himself to a shoemaker. Whilst pursuing his trade, he gave up every moment of spare time to his beloved books, rising every morning at three or four o'clock in order to study. By the time he was three-and-twenty, he had taught himself the Greek, Latin, Hebrew, and French languages, together with mathematics, history, and literature. Amongst his friends at Gainsborough was the late Thomas Miller, then a mischievous youth, learning the basket trade, in whom, however, Thomas Cooper discovered the elements of genius. In 1829 he left his last in order to become a school-master; subsequently held appointments on the staff of one or two country newspapers, and in 1840 settled in Leicester, the town of his birth, and became the leader of the Chartists there. The following year he went to lecture in the potteries during the "Riots," was arrested on a charge of conspiracy and sedition, and sentenced to two years' imprisonment in Stafford gaol. Whilst in prison he wrote *The Purgatory of Suicides*, an epic poem in ten books: a "Mind History," as he calls it, in which he deals with the great social and religious questions of the past and present, making the spirits of suicides the actors or speakers. He also wrote a series of stories, which he called *Wise Saws and Modern Instances* (published in 1845). In 1846 he began to write papers upon the *Condition of the People in Douglas Jerrold's Newspaper*, travelling through the north of England to collect material for his work. A few years later he began to be known in London as an active political and historical lecturer. Thomas Cooper began life as a Methodist; during his long imprisonment doubts and unbelief arose in his mind, which culminated in atheism. Towards the end of 1855 he threw aside scepticism, and for many years now he has been lecturing in England and Scotland upon the Evidences of Christianity. He is the author of two novels, *Alderman Ralph* (1853), and *The Family Feud* (1854). His poetical works appeared in 1878.

The Life of Thomas Cooper, written by himself.

* **Cooper, THOMAS SIDNEY, R.A.** (b. 1803), animal painter, was born at Canterbury, where he began making sketches at an early

age, but was entirely self-taught in his art. After obtaining employment for a time as a scene-painter, and then as a drawing-master, he wandered through France and Belgium, and settled in Brussels till the disturbances of 1830 forced him to return to England. Being fortunate enough to gain the patronage of Mr. Vernon, the famous collector, he now advanced rapidly in his profession, began to exhibit in the Royal Academy towards 1840, and was elected A.R.A. in 1845, and R.A. in 1867. He has been the most industrious of painters, and his works are sufficiently familiar in several private collections, and every exhibition at the Academy. In choice of subject he has limited himself almost entirely to cattle, having especial delight in cows and goats, which he groups amidst precipitous rocks or on flat meadows by quiet streams. Few artists have succeeded in drawing the animal forms so faithfully, but of recent years his colouring has become somewhat hard, black, and cold. The names of his pictures are comparatively unimportant, their range being very limited and their manner easily recognised. The following, however, may be mentioned here, with their dates of exhibition at the Academy:—*The Herdsman's Charge* (1876), *A Cool Retreat* (1877), *The Victor's Shout* (1879), *Isaac's Substitute* (1880), *The Scapegoat* (1881), *Cooper's Short-horns* (1882), *In the Rob Roy Country* (1883), and *For Southern Markets* (1884). Mr. Cooper has also published a useful series of lithographs on animal drawing.

* **Cope, CHARLES WEST, B.A.** (b. 1811), historical and figure painter, was born at Leeds, and studied art at the Royal Academy, and in Italy and the Netherlands. He began to exhibit at the Academy when about twenty years of age, and has been a constant contributor ever since, except during the years when he was engaged on the frescoes for the House of Lords. He was elected A.R.A. in 1844, and R.A. in 1848. The subjects of his works, which were far too numerous for separate mention, were chiefly drawn from striking events in English history, or scenes described by English poets. In manner his earlier works resembled both Mulready and Ward, and it was no surprise when he was appointed to execute some of the decorations for the new Houses (1844). His eight frescoes in the Peers' Corridor to illustrate scenes from the history of the Civil War in England were completed about the year 1865, and after that he regularly contributed to the exhibitions at the Academy, his choice of subjects being now rather imaginative than historical. Of the numerous works of his later years the following may be mentioned here:—*Launcelot Gobbo's Siesta* (1870), *Taming the Shrew* (1874), *Bianca's Lovers* (1877), *A Country Club* (1879), *The Good Shepherd giveth his Life for the Sheep* (1880), and *Anne Page*

and *Slender* (1882). Between the years 1867 and 1874 Mr. Cope held the professorship of painting at the Royal Academy.

* **Cope, EDWARD DRINKER** (b. 1840), naturalist and comparative anatomist, was born at Philadelphia, and studied at the University of Pennsylvania and in Europe. He has undertaken several exploring expeditions in the western regions, and has made a large collection of extinct vertebrate animals, of which 400 species were hitherto unknown to science. Professor Cope has written many essays upon fishes, batrachians and reptiles, and has published a series of papers upon the theory of evolution. He is the author of the following treatises:—*Report upon the Extinct Vertebrata obtained in New Mexico in 1874* (1877), and *The Short-footed Ungulata of the Eocene of Wyoming* (1878).

* **Copeland, RALPH** (b. 1837), an Anglo-German astronomer and explorer, a native of Woodplumpton, in Lancashire; was educated at private schools in Manchester and Over Darwen, and from 1865–9 in the University of Göttingen. From 1867–9 he was volunteer assistant in the Göttingen Observatory, and during this period produced, in co-partnership with Professor Börgen, the *Göttingen Catalogue of Stars*. From 1869–70 he was astronomer and physicist to the Second German Arctic Expedition, and on Aug. 12th, 1870, with Payer and a seaman named Ellinger, ascended Payer's Peak, in lat. 73° 8' N.—7,200 feet high—the loftiest elevation ever attained within the Arctic Circle. In 1874–82, Dr. Copeland observed two transits of Venus, the former with Lord Lindsay at Mauritius, the latter at Jamaica. From 1871 to 1874 he studied Moore's law of heat, etc., with Lord Rosse; and on Aug. 21st, 1874, landed from Lord Lindsay's yacht in South Trinidad, and collected some interesting plants described in the *Challenger Report*, vol. i. In 1876 he was appointed astronomer to the Dunecht Observatory, an office which he now fills. Aided by Lohse, he for the first time detected iron in the spectrum of the great comet of 1882. During 1883 he made various astronomical observations on the Andes up to 14,400 feet. For example, at Puno, on Lake Titicaca, 12,540 feet above the sea, he saw with the naked eye Sirius 9° 20' before sunset, being the first accurately recorded observation of a star in full sunlight. There, and at Dunecht, he discovered various nebulae and "gas-stars" by the spectroscopic method; and, since then, has taken an active part in all of the current astronomical work carried on at the Observatory under his charge. He is Ph.D. and a fellow of the English and German Astronomical Societies.

* **Coquelin, BENOIT CONSTANT** (b. 1841), actor, was the son of a baker at Boulogne, and was intended to follow his father's trade, but having a strong desire to go on the stage

he was admitted to the dramatic class at the Conservatoire in 1859. He was the most brilliant pupil of his master, M. Régnier, and won the second prize for comedy in 1860. His first appearance was at the Théâtre Français, in 1860, in the part of Gros René, in *Le Dépit Amoureux*. Since then he has been constantly acting in the classical and modern schools of comedy, and is generally regarded as the most perfectly finished comedian in Europe. Of his favourite rôles we may mention *Scapin*, *Don Juan*, *Aristide* in *Le Lion Amoureux*, and *Leopold* in *Les Fourchambault*. He visited England with the company of the Comédie Française in 1878.

* **Coquelin, ERNEST ALEXANDRE HONORÉ** (b. 1848), is the brother of the above, and has had a very similar career. He was also intended for his father's trade, but preferred to follow his brother on the stage. In 1864 he was admitted to M. Régnier's class, and in 1867 took the first prize for comedy. He made his *début* at the Odéon, in classic comedy, and in 1868 joined his brother at the Comédie Française. In 1875 he took an engagement at the Variétés, but has since returned to the Comédie Française.

* **Corbould, EDWARD HENRY** (b. 1816), historical painter, was the son of an artist, and was born in London, where he early became known as a clever illustrator of books, especially for ballads or early English literature. He designed the illustrations for editions of Percy's *Reliques*, of Spenser, of Johnson's *Seven Champions of Christendom* (1861), of *Mother Goose's Fairy Tales* (1878), and of the *Canterbury Tales* (1878). He also began to exhibit at the Royal Academy at an early age, his subjects being almost entirely drawn from the history of mediæval England, or from scenes in Tennyson's *Idylls of the King*, though occasionally, as in *The Plague of London*, he descended to later times, and sometimes, as in *Florette de Nérac* and *The Destruction of the Idols of Basle*, went to Continental history for his theme. For many years he held the post of instructor in historical painting to the Royal Family.

* **Cormenin, LOUIS MARIE DE LA HAIE, VICOMTE DE** (b. 1778, d. 1866), a French political writer, was born and educated in Paris. He took up the profession of law, and in 1810 was summoned by Napoleon to the Council of State. He was a member of the Chamber for nearly twenty years, opposing every party in turn, but showing himself always a zealous supporter of social and political progress. He had little or no power of oratory, but as a writer he was unrivalled, and is considered the pamphleteer of Louis Philippe's reign. He wrote what was reputed to be the best treatise upon administrative law published in France; his political pamphlets exercised an enormous influence in the country, creating for him many enemies,

and closing the door of the French Academy to him. His *Livre des Orateurs* has been translated into many languages, and has passed through numerous editions.

Cornelius, PETER VON (b. 1783, d. 1867), the German painter, was the son of the inspector of the Academy at Düsseldorf. Being left in poor circumstances at his father's death, he abandoned thoughts of art, and apprenticed himself to a goldsmith, till in 1809 he was set free by his mother's death, and went to Frankfurt, as a step on the way towards Rome. At Frankfurt he published his series of outline designs for *Faust*, that were commended by Goethe, and in some ways show higher promise than was to be fulfilled. Their sale enabled him to reach Rome in 1811, and here he stayed for eight years, working in common with Overbeck and Schadow. In 1816 the publication of a series of illustrations to the *Nibelungenlied* attracted general attention throughout Germany, and made the name of Cornelius widely known. The artist was much patronised by Niebuhr, then ambassador in Rome, and through his influence was appointed Director of the new Academy at Düsseldorf in 1819, and may thus be regarded as one of the founders of the "Düsseldorf school." But at the same time he was also invited to Munich by the Crown Prince, afterwards Ludwig I., and in the end he divided his year between the two cities, till in 1824 he settled in Munich altogether, with the appointment of director to the Academy of Arts. Here he executed some of his largest paintings and frescoes; and size was with Cornelius the general standard of excellence. In 1825 he produced *The Fall of Troy*, and in the following years he covered large spaces of the Glyptothek and Pinacothek with frescoes. In 1822 he was commissioned to decorate the interior of the Church of St. Louis, and with this object produced four enormous frescoes, the largest being *The Last Judgment*, reputed to be the tallest and broadest picture in the world. But in course of time a certain coolness arose between the artist and the king, and in 1841 Cornelius applied for an invitation to Berlin, and was invited accordingly. One of the many artistic schemes of Frederic William IV. was to build a great cathedral in his capital, and Cornelius was entrusted with the execution of frescoes to adorn the "Campo Santo" that was to be. He set to work, and, living partly in Rome, partly in Berlin, produced a series of designs from the history of Christianity, now deposited in the Berlin National Gallery; for the disturbances of 1848, and the king's subsequent madness put an end to all hopes of the new cathedral; and, indeed, the artist's popularity began to wane before many years. Nevertheless, pedantic as his conceptions are, and frigid as is his execution, he has been

generally recognised by German professors as one of the chief restorers of modern art.

Peter von Cornelius: ein Gedenkbuch aus seinem Leben und Wirken, by E. Forster.

Cornell, EZRA (b. 1807, d. 1874), founder of the Cornell University, was born at New York. He gave up all his time to studying and improving the system of the magnetic telegraph, and eventually became one of the richest men in the United States. A large portion of his wealth he set apart for the purpose of founding the Cornell University at Ithaca, New York. Mr. H. W. Sage, of Brooklyn, recently gave £50,000 for the establishment of an institution for women in connection with the University, to be called "The Sage College of Cornell University."

Cornwall, BARRY, was the pseudonym of BRYAN WALLER PROCTER (b. 1787, d. 1874), the poet and man of letters, born in London, and educated at Harrow with Byron. Having entered the bar in 1831, he became one of the Commissioners of Lunacy; but before this time his name had become known as the author of the *Dramatic Scenes* (1819) and the tragedy of *Mirandola* (1821), produced with real success at Covent Garden by Macready. The first edition of his *English Songs and other Small Poems* was published in 1832, and followed in 1835 by his *Life of Edmund Kean*, a work of no very high merit. He also wrote *A Sicilian Story*, the *Flood of Thessaly*, *Marcian Colonna*, and a *Memoir of Charles Lamb* (1866), which remains the highest authority on Lamb's life. His marriage with the daughter of Mrs. Basil Montagu early brought him into contact with all the conspicuous men of letters of the time, and their friendship was retained by his genial, unenvious temperament and the innocence of his life. As age came on new friends gathered round him, attracted by his own fame and that of his daughter, Adelaide Anne Procter (q.v.), Mr. Swinburne being amongst his latest and warmest admirers. Though not profound with the mysteries of life nor obscure with far-reaching significance, Barry Cornwall's poems are always welcome from their simplicity of pathos and natural utterance of joy. Of his longer poems we may mention the *Familiar Epistle to Robert Browning* (1839) and *The Pale Queen*. Some of his pathetic satires, like the *Pauper's Funeral*, are widely familiar; but it is by his songs and short lyrics that he will be longest remembered, such as *Sit down, sad soul, and count the moments flying*; *Sing, maiden, sing*; and *Dawn, gentle flower*, the two last of which have been set to music by Sterndale Bennett.

An Autobiographical Fragment and Biographical Notes, edited by Coventry Patmore (1877).

[H. W. N.]

Cornwallis, CHARLES, FIRST MARQUIS (b. 1738, d. 1805), the eldest son of the first Earl

Cornwallis, entered the army, and in 1761 was gazetted to a lieutenant-colonelcy. Though disapproving of the American War, he repaired to the scene of action, and in 1780, as commander of the British forces in South Carolina, he won the victory of Camden. Two years later his foolhardy attempts upon Virginia resulted in his being surrounded at Yorktown and forced to capitulate. His surrender practically brought the war to an end. In 1786 he was appointed Governor-General of India, and during his administration he personally reduced Tippee Sahib, and effected the important settlement of the Bengal land revenue. In 1798 he was appointed Viceroy of Ireland, and, by firmness mingled with clemency, brought the rebellion to a conclusion. It was his misfortune to have to undertake the wholesale bribery which was a prelude to the Union. "I despise and hate myself," he wrote, "every hour for engaging in this dirty work." Moreover, he had been induced to undertake it under the idea that a measure of Catholic emancipation would follow, and when George III. refused to consent to such a measure, Cornwallis, with Pitt, sent in his resignation. Shortly afterwards he was employed in negotiating the short-lived and short-sighted Peace of Amiens (1803). Lord Cornwallis's honourably laborious career was brought to a close soon after he had landed at Calcutta, as Governor-General of India for the second time.

Cornwallis Correspondence.

Cornwallis, WILLIAM (b. 1744, d. 1819), admiral, served in the American War, commanded a squadron in the East Indies from 1789 to 1793, and was made vice-admiral in 1795, after gallant conduct in an engagement with the French. From 1801 to 1806 he commanded the Channel fleet, and played a prominent part in the great naval operations which culminated in the battle of Trafalgar, in particular paralysing the enemy at Brest by a highly efficient blockade.

Corot, JEAN BAPTISTE CAMILLE (b. 1796, d. 1875), one of the most remarkable of modern French painters, was born in Paris, and educated for commerce, but turned to art against the wishes of his relations, and entered the studio of Michallon, and, then, on the latter's death, of Bertin, Michallon's old master. He was thus educated in art under the full influence of the classical school of the first Empire, and, in spite of all his strangeness and unconventionality, he retained distinct traces of this influence to the last. It is, perhaps, this unusual intermixture of the extremes of romanticism and classicism that makes Corot one of the most interesting of modern artists. After a visit to Italy, he began in 1827 to exhibit his early works—chiefly Italian views—in the annual collections in Paris. For many years he received little or no encouragement, and, indeed, his

powers were unusually slow in coming to maturity. His *Dante and Virgil* and his *Macbeth Meeting the Witches*, which may, perhaps, be regarded as his masterpieces, did not appear till 1859. Meantime he had exhibited *Hagar in the Wilderness* (1835), *St. Jerome* (1837), *The Flight into Egypt* (1840), *The Destruction of Sodom* (1844), a *Dance of Nymphs*, now in the Luxemburg Gallery, *Christ in Gethsemane* (1849), *A Nymph Playing with Cupid* (1857), and many other important works. It would be a mistake to suppose, from the names of his works, that Corot was in any sense an historical or figure painter. He was essentially a landscape painter, and the tone of the landscape is invariably the important motive in his work: for, whereas other painters have generally arranged the landscape to suit the subject, Corot chose his subject to sympathise with the general feeling of his landscape, as was often Turner's way as well. And after 1860 we find, in fact, that the name of the subject generally drops out, and the landscape is left to stand simply on its own merits, as in *Sunrise* (1861), *Storm* (1864), *Morning at Ville d'Avray* (1868), and *Moonlight* (1874). Owing to his love of greys and mists and vapours, his general indistinctness of form, his want of finish, and uncertainty of line, Corot has been rightly regarded as the founder of the "Impressionist" school of French landscape painters. Nature in his works is almost as impalpable as a dream; her lines and edges fade away into thought, and sunshine seldom gleams through the thin haze of pearly grey. He often rightly called his pictures "memories" of certain scenes, for they are rather memories or unconscious aspects of nature than studies of her reality.

Alfred Robaut, *Camille Corot* (Paris, 1884).

* **Corti, LUIGI, COUNT** (b. circa 1826), a prominent Italian diplomatist, who represented his country at the Congress of Berlin in 1878, together with the Count Edoardo de Launay, belongs to a noble and ancient Piedmontese family. When quite young he entered the diplomatic career, and on the formation of the kingdom of Italy he was appointed First Secretary of the Italian Legation at the Court of St. James, under the Marquis D'Azeglio. He held this post until April 6th, 1864, when he was appointed Minister Resident to the King of Sweden and Norway. Three years later, in 1867, he was promoted envoy extraordinary and minister plenipotentiary, and went in this capacity to Madrid, where he successfully concluded a treaty with the Queen of Spain for the reciprocal extradition of criminals between the two kingdoms. In 1870 he was transferred to Washington in the same capacity, and during the six years he resided in the United States he did much to render the already amicable relations that

existed between Italy and that country closer and more cordial. In recognition of his eminent services he was entrusted in 1876 with the important legation of Constantinople. He was selected in 1878 to represent Italy at the Congress of Berlin, as his profound knowledge of Ottoman affairs rendered him particularly adapted to sit at that Congress. Although Italy had neither special interests at stake nor an important part to play at Berlin, Count Corti did not lose any opportunity to uphold and defend Italian claims at the Congress, and also those of minor Eastern States, like Roumania and Greece. At the conclusion of the Congress he was summoned to Rome, where for a few months he acted as Minister for Foreign Affairs, but was afterwards transferred to the legation of Constantinople, and in 1881 was elevated to the dignity of ambassador. Count Corti enjoyed the confidence and personal friendship of the Sultan, and showed on all difficult occasions great tact, giving proofs of being both an experienced and clever diplomatist and a devoted patriot. In 1885 he was appointed to succeed Count Nigra at the Italian embassy in London.

Calendario Generale del Regno d'Italia of different years; Almanach de Gotha, from 1861 to 1885.

Costa, SIR MICHAEL (b. 1810, d. 1884), composer and conductor, was born at Naples. His father was of an old Spanish family. He studied at the Royal Academy of Music at Naples. His first original composition was a cantata for the Academy, *L'Immagine*; this and *Il Delitto punito*, which followed it, were well received. His first opera, *Il Carcere d'Idagonda*, came out at the Teatro Nuovo, and held the stage for a whole season. *Malvina*, his next work, was produced for the theatre of San Carlo. In 1828 Costa came to England, where he assisted at the Birmingham Musical Festival. In 1831 he became conductor at Her Majesty's, where he brought out three successful ballets. In 1837 his opera, *Malek Adhel*, was produced in Paris and London. In 1839 he became a naturalised British subject. In 1846 he was conductor of the Philharmonic Society, and in 1849 of the Sacred Harmonic Society. His chief opera, *Don Carlos*, appeared in 1844, and his oratorio, *Eli*, was performed at Birmingham in 1855. He was appointed leader of the Handel Festivals in 1859, his performances of the oratorios in Exeter Hall having done much to encourage the love of Handel in England. Besides *Eli*, Michael Costa wrote an oratorio on *Naaman*, equally well known through the Sacred Harmonic Society. He may almost be said to have introduced the highest art of conducting into England, and he did much to raise the standard of musical taste in this country. The date of his knighthood was 1869.

M.W.—10

Cotta, JOHANN FRIEDRICH (b. 1764, d. 1832), the famous German publisher, began business in connection with a long-established house in Tübingen. Having acquired the friendship of Schiller in 1794, and of Goethe soon afterwards, he became the publisher also for most of the other great writers in Germany, such as Wieland, Richter, Uhland, Fichte, Hegel, the Humboldts, and many others. Having removed his business to Stuttgart in 1811, he established further extensions at Augsburg and Munich. Though he never published any work of his own, his patriotism for the States of South Germany, and his numerous missions to the various courts on behalf of the freedom of the press, and other constitutional questions, make him an important figure in German history during the first quarter of this century.

Cottenham, CHARLES CHRISTOPHER PEPPYS, EARL OF (b. 1781, d. 1851), was the son of Sir William Pepys, and was educated at Trinity College, Cambridge. Called to the bar in 1802, it was not until 1826 that he became a King's Counsel. He entered Parliament in 1831 in the Fitzwilliam interest, and was appointed Solicitor-General in 1834. An indifferent speaker, it was not until he became Master of the Rolls, on the retirement of Sir John Leach, in 1834, that his breadth of mind became recognised. Additional promotion soon came to him, and in 1836 Pepys became Lord Chancellor, with the title of Lord Cottenham, only to prove, according to Lord Campbell, that he "could not put his sentences together in the House of Lords." Retiring with his party in 1841, he became Lord Chancellor again in 1846, but, his health giving way, the Great Seal was put in commission in 1850, and he went abroad to die.

Lord Campbell, *Life of Lyndhurst in Lives of the Chancellors*; *Annual Register*, 1851.

***Cotton, JAMES SUTHERLAND** (b. 1847), a high authority on India, was born at Coonoor, in the Madras Presidency, and educated at Winchester, and Trinity College, Oxford, being elected fellow of Queen's College in 1871. He was called to the bar in 1874, and assisted Dr. W. W. Hunter in compiling the *Statistical Account of Bengal* (20 vols., 1875-7), the *Statistical Account of Assam* (1879), and the *Imperial Gazetteer of India* (9 vols., 1881). He has written important articles on India and its government in the encyclopædias, and *A Statement exhibiting the Moral and Material Progress and Condition of India during the years 1882-3* (*Parliamentary Papers*, 1885). Since 1881 he has been editor of the *Academy*.

***Cotton, THE RIGHT HON. SIR HENRY, D.C.L.** (b. 1821), Lord Justice of Appeal, a younger son of the late Mr. William Cotton, Leytonstone, Essex, a former governor of the Bank of England, was educated at Eton, and at Christ Church, Oxford, where he took his B.A. degree in 1842, obtaining a first-class in

mathematics, and a second class in the school of *literæ humaniores*. Called to the bar at Lincoln's Inn in 1846, he chose the equity side, and soon acquired a large practice. He obtained silk in 1866. The following year he was made a Bencher of Lincoln's Inn, and in June, 1877, he was appointed to succeed the late Sir George Mellish as one of the Lords Justices of Appeal of the High Court of Judicature, whereupon he was knighted and sworn a member of the Privy Council. In October of the same year the University of Oxford conferred on him the honorary degree of D.C.L.

Cotton, THE RIGHT REV. GEORGE EDWARD LYNCH, D.D. (b. 1813, d. 1866), Bishop of Calcutta, was educated at Westminster School, and at Trinity College, Cambridge, and in 1836 was appointed to a mastership at Rugby School under Dr. Arnold, where he entered thoroughly into the spirit of the Arnold system. In 1852 he was appointed headmaster of Marlborough College, and raised it from rather a low ebb to a high position among the great public schools in the short space of six years. Appointed in 1858 to the metropolitan see of Calcutta, he continued to display the same remarkable powers of organisation and of inspiring subordinates with zeal, until, to the great loss of the Church of India, he was accidentally drowned at Kooshtea, on the Gorai river.

Courbet, GUSTAVE (b. 1819, d. Dec. 31st, 1877, or the first week of 1878), the painter, was born of peasant parentage at Ornans, in Franche-Comté. Though educated for the law at Besançon, he abandoned the study, as well as every other kind of literature, as soon as he arrived in Paris, in 1839, and devoted himself entirely to art. In later life he used to boast that he never had a master in painting, but he studied the Italian and Flemish schools with careful patience. In the Salon of 1844 he exhibited a portrait of himself, always rather a favourite subject with him, and soon afterwards produced the *Walpurgis Night*, almost his only venture in the world of imagination or romance. The revolution of 1848 left him an uncompromising realist. He could claim to be the founder of realism in painting. A born son of earth, headstrong, passionate, sensual, and fearless, he rejoiced in her every natural aspect, and revelled in her natural dirt. He would paint nothing but what he saw, and was willing to paint everything he saw, except what is generally pleasing to society, priests, tyrants, and artists. He could not spell, and he hated the sight of a book. He worked and lived for the most part in his native village, spending his days in the open fields and forests and his evenings with the peasants in their drinking-shops. His pictures were frequently exhibited at the Salon, and were popular in Munich, where the artist was received with much enthusiasm.

In 1869 he accepted a decoration from the King of Bavaria, though he refused the Cross of the Legion of Honour from the emperor. His work, often careless of form and defective in drawing, is nevertheless remarkable for the magnificence of its colour and the simple directness of its delight in the humblest and most unconventional phases of original nature. The following are the titles of some of his most celebrated works: — *L'Après-dînée à Ornans* (1849); *Les Casseurs de Pierres* (1850); *Les Baigneuses* (1853), one of the most severely criticised of his early paintings; *Les Demoiselles des Bords de la Seine* (1857); *Combat de Cerfs* (1861); *Chasse au Renard* (1863); *Remise de Chevreuils* (1866); and *La Mer orageuse* (1870). Having proved himself a thorough-going democrat all his life, he became Director of Fine Arts after the revolution of 1870, and in the following spring threw in his lot with the Commune. Though his own accounts of the affair differed according to the sympathies of his audience, he is generally credited, and probably justly, with the destruction of the Vendôme Column. He certainly directed the operations, though he sometimes protested afterwards that he saved it from the Seine. After the entrance of the troops from Versailles he was arrested, but condemned to only six months' imprisonment. He never recovered from the effects of this year. In 1872 his pictures were refused by the Salon. Having retired to Tour de Peilz, near Geneva, he was condemned by the French Government to pay for the reconstruction of the Vendôme Column, but was allowed to work off the debt by annual instalments of 10,000 fr. To raise the money his pictures were sold, and he wasted his powers on insignificant works for commonplace purchasers. Fortunately, death put an end to his degradation.

E. Gros-Kost, Courbet: *Souvenirs intimes*; Jules Claretie, *Peintres et Sculpteurs contemporains*, 1st Series. [H. W. N.]

Courbet, JEAN (b. 1827, d. 1885), a French naval officer, born at Abbeville, joined the Polytechnic School in 1847. In 1852 he was appointed naval ensign, and in that capacity showed great readiness and varied aptitude in discharging duties which were new to him. He made a voyage round the world on board the *Capricieuse*. As a lieutenant he joined the Government gunnery-school ship, on board of which he distinguished himself by his profound scientific studies. In 1873 he received the full rank of captain, and commanded the *Savoie* in the squadron of evolution. He was then appointed Governor of New Caledonia. In 1882 he returned to France, but he had little rest. In March, 1883, he was appointed to conduct a series of experiments to test the value of the new type of ships. While so engaged he was directed, on the death of Rivière, to take his place as commander of the naval division at Tonquin, the seat of

naval operations in the war with Annam, in which China took an active though informal part. On board the *Bayard*, he set out for the far East, where he arrived early in July. He studied the situation, and proposed to attack Hué. This was done. He took the forts of Thuan-un, and imposed a short-lived treaty on the Chinese Government. On General Bonet's return to France, Admiral Courbet was appointed to take his place. He established his headquarters at Hanoi, and on Dec. 16th took Sontay. He afterwards united all his ships, and went with them up the River Min, where he destroyed the forts and defences of the Chinese. He next proceeded to Kelung, which he seized. Two days before the signature of the peace between France and China he took possession of the Pescadore Islands, directing in person the mixed operations against an enemy in very superior numbers. This was his last exploit. He died of an attack of bile, after two days' illness.

Courier, PAUL LOUIS (b. 1773, d. 1825), French Hellenist, and political and miscellaneous writer, was born in Paris. The son of a proprietor in Touraine, he nevertheless emphatically declined to take the name of his estate, de Meré, "de peur qu'on ne le crût gentilhomme." In early life he devoted himself to the acquirement of classical literature, and attained extraordinary proficiency in the Greek language, which continued to be his favourite study. He made some progress also in mathematics; and having entered the artillery, served with distinction, first in the campaign of 1792, and afterwards in the campaign of Italy and Germany. He rose rapidly to the rank of *chef d'escadron* in the horse artillery, but after the battle of Wagram, in 1809, he threw up his commission, the independence of his nature rendering subordination and obedience irksome and intolerable to him. He went to reside in Florence for a time, and was fortunate enough to discover in the Laurentian Library a complete MS. of Longus's *Daphnis and Chloe*, an edition of which he brought out. He subsequently returned to his estate in France, and divided his attention between literature and his farm. He now acquired an extraordinary notoriety as the author of several powerful political pamphlets, and became one of the most dreaded opponents of the Government of the Restoration. The proposal in 1821 to purchase the estate of Chambord for the Duke of Bordeaux, called forth from Courier the *Simple Discours*, one of his most powerful and successful pieces. For this he was tried, condemned, imprisoned, and fined. On his return, he resumed his former work with his wonted zeal, but was soon after assassinated at the moment when his popularity was greatest. All Courier's writings dealing with the facts and events of his own

time are valuable sources of information as to the condition of France.

Collection complète des Pamphlets politiques et Opuscules littéraires de P. L. Courier, par Armand Carrel (1834); Edinburgh Review, March, 1829; Westminster Review, April, 1866.

***Courtney, LEONARD HENRY** (b. 1832), the son of the late Mr. J. S. Courtney, banker, of Penzance, Cornwall, was educated at Penzance, and at St. John's College, Cambridge, where he graduated as second wrangler and Smith's prizeman in 1855, and became a fellow in 1856. In 1858 he was called to the bar at Lincoln's Inn, and soon afterwards began to write for the *Times*, and to produce important pamphlets on statistics and finance. From 1872 to 1876 he was professor of political economy at University College, London. After unsuccessfully contesting Liskeard in 1874, he was returned, on the death of Mr. Horsman, in 1876. Mr. Courtney distinguished himself by his strenuous opposition to the annexation of the Transvaal, and as an advocate of women's rights. In 1880 he was appointed Under-Secretary of State for Home Affairs, Under-Secretary for the Colonies in 1881, and in 1882 he succeeded Lord F. Cavendish as Financial Secretary to the Treasury. In the autumn of 1884, however, he resigned, when it became known that the Redistribution Bill of the Government would not contain any concession to the principle of proportional representation, of which he is a warm advocate. In the next session Mr. Courtney criticised, with considerable freedom, the Egyptian policy of the Government, but on the ground that they had done too much, not too little. In 1885 he was returned for the South-East division of Cornwall. In 1886 he was appointed Chairman of Committees, but differed from Mr. Gladstone's Home Rule scheme.

Cousin, VICTOR (b. 1792, d. 1867), one of the greatest thinkers, and one of the greatest prose writers of France, in the nineteenth century, was born in Paris, under the very shadow of Notre Dame. His father was a jeweller, and a most ardent republican. The boy inherited the intense love of freedom, and it became the key-note of his character and talent. In 1802 his father made every sacrifice in order to give him a university education, and the boy was sent to the Lycée Charlemagne, where, even at that early age, a short time sufficed to prove the extraordinary variety and strength of his intelligence. In 1810, young Victor Cousin carried off all the prizes the university had to give, except one. He was then eighteen, and attention was naturally drawn to his powers. A position in the Conseil d'Etat was offered to him at once by the Home Minister, but he refused, preferring to enter the then newly created Ecole Normale. According to this first *début*, Cousin was on the road to be one of the leaders of literature in France, when a fortuitous circumstance

turned him suddenly to philosophy and metaphysics. He attended one day the lesson of M. Laromiguière, and, as he has himself noted, "that day changed the tenour of my life. . . . I experienced what Malebranche experienced on first reading a work of Descartes." From the age of eighteen, Fame never abandoned the name of Cousin, but, to the hour of his death, kept him foremost in the ranks of the greatest thinkers and professors of the modern world. At the fall of the empire in 1815, M. Royer-Collard, becoming grand master of the University of France, appointed Cousin as his successor in the Chair of philosophical history, and in the direction of the École Normale. The lectures of the young professor stirred the whole thinking world of Europe, and for the next ten or twelve years his life was one of celebrity and power, alternating with the struggles inflicted upon him by the tyranny of despotic governments. From this period date the two great achievements of his earlier life: the first volumes of his translation of *Plato*, and the original plan of his grandest work, *Du Vrai, du Beau, et du Bien*. From the accession of Charles X. to the year 1828, free-thought fared but ill, even in France; but in 1828, under the Martignac ministry, Cousin once more opened his lectures at the Sorbonne, exciting his thronging audiences to all but fanaticism. From 1828 to 1830 was his period of brightest public glory, for in 1830, with the July monarchy, his ideas and opinions may be said to have begun to reign; the energy inspired by opposition had no longer any object. In 1831 he visited Germany with a view to introducing the Prussian system of education into France. His report on the subject was published in 1833. Cousin was created a peer of France in 1840, under the Thiers Cabinet, was named Minister of Public Instruction, and as head of the University, left his mark most beneficially on many details of its organisation. When the Thiers ministry fell, to pave the way for the fatal Guizot administration of the end of the year 1840, Cousin fell with his friends, and never more wielded governing authority till, in the February revolution of 1848, he was for one brief moment called to power, with M. Thiers, in the vain hope of saving the dynasty by the advent of a Liberal Cabinet. During all the ensuing years, from 1848 to 1867, through republic and empire, Cousin remained strictly in retirement so far as official life went. He was more than once solicited to take office, but his refusal was undeviating; only the remarkable point was, that he never, till his dying day, lost his authority. Never, while the empire lasted, and Cabinets came and went, wielding supremacy, and committing mistake after mistake, was the authority of Cousin upon public opinion at all diminished. But with the mental collapse of France under

Louis Napoleon, and the cessation of his external activity, Cousin's career as an historian began. As a youth he had the highest aims in literature; as a young man, he turned to the philosophical teaching which cast glory round his prime; and towards the close of his career he brought all his gifts and acquirements to bear upon the history of the seventeenth century in France, upon which he shed a glow of light that can never be dimmed while the French language endures. As a philosopher, M. Cousin is the inventor of no system, the prophet of no sect; he is the explainer and commentator of them all, and the admirer of whatsoever is best and highest in each. He was a prophet of eclecticism, but throughout everything and always, he is a Cartesian and therefore a spiritualist, and more than all others has proved the excellence of Descartes's method. As an historian, he has led his readers' minds never to dissociate really wise policy from truth, and to show that grandeur of purpose is inseparable from lasting success. His principal works are:—*Traduction de Platon* (entire) (1825–40); *L'Histoire générale de la Philosophie* (1828); *L'Examen critique de la Philosophie de Locke* (1829); and the collection of all his *Lectures*, parts of which are also contained in *Du Vrai, du Beau, et du Bien* (1854), perhaps his grandest book of all. As an historian, his eleven 8vo volumes on the seventeenth century (containing *La Jeunesse de Mazarin*) will always remain indispensable to all French moralists, all French statesmen, and all those who aspire to write French prose.

Sir W. Hamilton in *Edinburgh Review* (1829);
C. Fuchs, *Die Philosophie von Victor Cousin* (1847).
[Y. B. de B.]

Coutts, BARONESS BURDETT. [BURDETT-COUTTS.]

COUSA, A., OF MOLDAVIA. [MOLDAVIA.]

***Cowen, FREDERICK HYMEN** (b. 1852), composer, was born at Kingstown, Jamaica. At the age of four he showed so much precocious talent for music, that his parents brought him to England, and placed him under the tuition of Sir Julius Benedict and Sir J. Goss, under whom he continued to study till 1865; after this his musical education was carried on at Leipzig and Berlin, and he returned to London in 1868. His first composition was a waltz, written at the age of six. At an early age he wrote an operetta called *Garibaldi*, a trio, pianoforte concerto, and a symphony in c minor. His cantata, *The Rose Maiden*, was produced in 1870, the incidental music to Schiller's *Maid of Orleans* in 1871; a symphony in F major in 1872; *The Corsair*, at Birmingham, in 1876; a sacred cantata, *St. Ursula*, at Norwich in 1881. Besides these Mr. Cowen is the composer of an oratorio, *The Deluge*, *Scandinavian* and *Welsh Symphonies*, and popular songs. His opera, *Pauline*, was brought out with

great success by the Carl Rosa Company at the Lyceum, and his cantata of *The Sleeping Beauty* at the Birmingham Festival of 1885.

* **Cowen, JOSEPH, M.P.** (b. 1831), is the son of the late Sir Joseph Cowen, M.P. for Newcastle-on-Tyne, whose coal-mines and fire-brick manufactory he inherited. He is proprietor of the *Newcastle Daily Chronicle* and the *Newcastle Weekly Chronicle*, and has published some of his speeches. Mr. Cowen was first elected for Newcastle-on-Tyne in January, 1874, and has been returned at the subsequent general elections. An orator of almost the highest class, he may be considered to have caught the mantle of J. A. Roebuck. Independent of party ties, he may perhaps be described as a strongly individualistic Radical, in favour of a vigorous foreign policy. He is also an advocate of Home Rule for Ireland. Among his best speeches are those delivered on behalf of Lord Beaconsfield's Eastern policy, and against the closure resolutions of the autumn of 1882. He retired in 1886.

Major Jones, *Life and Speeches of Joseph Cowen* (1895).

Cowley, EARL, THE RIGHT HON. HENRY RICHARD CHARLES WELLESLEY, K.G., G.C.B., (b. 1804, d. 1884), diplomatist, the son of the first Baron Cowley, diplomatist, became an *attaché* at Vienna in 1824, and served successively in different capacities and grades at the Hague, Stuttgart, Constantinople, Berne, and Frankfurt. On Feb. 15th, 1853, having been made a Privy Councillor two days previously, he was appointed ambassador extraordinary and plenipotentiary to the French republic, a post which he continued to occupy when the republic was transformed into the empire, and which he never quitted until his final retirement in 1867. He successfully carried out the negotiations between this country and France during the Crimean War, and along with Lord Clarendon was English plenipotentiary at the Congress of European Powers which concluded the Treaty of Paris in 1856. In 1857 he signed the treaty of peace with Persia on behalf of Britain; in 1858 he had trying difficulties over the Orsini affair; and in 1860 he was appointed joint plenipotentiary with Mr. Cobden for the negotiation of a treaty of commerce between France and England. Among the other events of importance which occurred while Lord Cowley was at Paris may be mentioned the abortive proposals for a European Congress made by the Emperor Napoleon in 1863; the Danish War in 1864; the Mexican expedition and its disastrous sequel in the execution of the Emperor Maximilian; the negotiations concerning Luxembourg; and the Austro-Prussian War of 1866. Lord Cowley succeeded his father as Baron Cowley in 1847, his title being raised to that of earl in 1857, and he was made a Knight of the Garter in 1866.

Times, July 16th, 1884.

Cowley, MRS. HANNAH (b. 1743, d. 1809), maiden name Parkhouse, dramatist, was born at Tiverton, and was married to Captain Cowley, an officer of the East India Company. She wrote two very successful comedies, *The Runaway* and *The Belle's Stratagem*, and several other plays. She was also the authoress of *The Maid of Aragon*, and other poems.

Baker, *Biographica Dramatica; Gentleman's Magazine*, 1806.

* **Cowper, THOMAS DE GREY, EARL, K.G.** (b. 1834), was educated at Harrow and at Christ Church, Oxford. In 1880 he accepted the office of Lord Lieutenant of Ireland in Mr. Gladstone's administration, and had therefore to deal with an agrarian revolution and a separatist agitation. The Arrears Act and the Land Act had to a certain extent made the outlook brighter, when on May 3rd, 1882, he resigned, owing, it was said, to private reasons. In 1884, the day of the prorogation of Parliament, he wrote to the *Times* suggesting that the franchise difficulty might be got over if the Government would produce their Redistribution Bill in the autumn. It will be remembered that a compromise was eventually effected on these lines.

Cox, DAVID (b. 1783, d. 1859), one of the foremost landscape painters of this century, was the son of a whitesmith, and was born in Birmingham, where in early youth he was apprenticed to a miniature-painter, and afterwards engaged to paint scenes for the local theatre. After working at this employment for four years he removed to London (1804), settling first in Lambeth and afterwards for about eight years near Dulwich Common. Disappointed in his hope of obtaining work at Astley's theatre, he turned to water-colours, and under John Varley's encouragement began the great series of water-colour studies in landscape through which his name is chiefly known. A visit to Wales in 1805 revealed to him new beauties and fresh power, and partly in order to be near his favourite scenes, he removed to Hereford in 1814, having become a member of the Society of Water-Colour Painters in the previous year. At Hereford he lived till 1827, with the best possible results for the development of his art. He then returned to London, and remained at Kennington till 1841, when he removed to Harborne, near Birmingham, where he died and was buried. Though he visited the Netherlands once (1826), and made two short tours in France (1829 and 1832), Cox remained steadily faithful to the scenery of his own land. He loved our soft distances and showering clouds and gleams of sun, and he chose for his almost invariable themes the heaths of Surrey, the rich cornfields, the banks of Thames, the rocks of Snowdon, and the streams of his favourite Bettws. Often as a centre for his landscape

he introduced one of the great English buildings, cathedral towers, or a castle—Harlech, Windsor, or Haddon. In later life he abandoned water-colour almost entirely in favour of oil. Besides his innumerable sketches and finished landscapes, he published illustrations for *Warwickshire Illustrated* (1829), *Wanderings in North Wales* (1835), *Wanderings in South Wales* (1837), and several books of studies and treatises on drawing. A large exhibition of his works was given in Liverpool, 1875.

H. Neal Solly, *Memoirs of David Cox* (1875); William Hall, *David Cox: a Biography* (1881).

* **Cox**, THE RIGHT REV. SIR GEORGE WILLIAM (b. 1827), was educated at Rugby, and at Trinity College, Oxford, where he took a B.C.L. degree in 1849. He took orders, and, after holding some curacies in Devonshire, became vicar of Bekesbourne, Kent, and of Scrayingham, York. His numerous historical works comprise *Collections of Stories from Greek History*, good of their kind, but inferior in merit to Charles Kingsley's *Heroes*; pleasantly written manuals on *The Crusades* (1874), and *British Rule in India* (1881). A more ambitious book on the *Mythology of the Aryan Nations* seems to the ordinary mind to be very hasty in its conclusions; and the same criticism applies to the earlier part of his *History of Greece* (1874, published in another form in 1876), which is written in support of the solar myth theory. In the later chapters, however, the well-worn theme is handled with much freshness. He edited, in conjunction with W. T. Brande, the *Dictionary of Science, Literature, and Art* (1865-7). In 1886 he became Bishop of Bloemfontein.

Coxe, WILLIAM (b. 1747, d. 1828), historian, became curate of Denham in 1771, after which he travelled on the Continent as bear-leader to various young noblemen. The results of his travels were published in 1804, *Travels in Russia, Poland, Sweden, and Denmark*, which are still valuable as a highly interesting record of manners and customs; and *Travels in Sweden* (1789). He was appointed Chaplain to the Tower in 1796, and Archdeacon of Wilts in 1806. His historical works are numerous. The *Memoirs of Walpole* (1798), the *Memoirs of the Duke of Marlborough* (1817-19), and the *Memoirs of Henry Pelham* (1829) cover a large amount of ground, and, because of the valuable documents with which they are enriched, must necessarily be consulted for the period of which they treat. On the other hand, they are dull, and it is to be regretted that an archidiaconal regard for truth does not prevent a good deal of *suppressionis veri*, notably concerning the tergiversations of Marlborough. Dulness, together with occasional paucity of information, and a want of appreciation of the relative importance of institutions to individuals, is also a fault of the *House of Austria* (1792) and of

the *Spanish Bourbons* (1813). Nevertheless, they are still standard authorities in default of better books, and must be considered favourable specimens of the old style of unreflective historical writing.

London Quarterly Review, Oct., 1833.

[L. C. S.]

* **Coxwell**, HENRY TRACEY (b. 1819), the balloonist, was born at Wouldham, near Rochester Castle. His early education at the Military School, Chatham, fitted him for the army, but as his father died before he had yet entered, young Coxwell repaired to London, and became a surgeon-dentist. He left this profession in 1844, however, in order that he might devote his time wholly to aërostatics, which had always had a strong fascination for him. The following year he projected and edited *The Balloon*, and in 1869 he started *The Aërostatic Magazine*. Mr. Coxwell has made numerous and daring ascents, and has done much to familiarise the science of aërostation by papers and lectures.

Coyne, JOSEPH STERLING (b. 1805, d. 1868), dramatic author and critic, was born at Birr, King's Co., Ireland, the son of an officer in the Irish Commissariat. He was intended for the legal profession, which, however, he abandoned for literature. One of his earliest pieces was a farce called *The Phrenologist*, brought out at the Theatre Royal, Dublin, in 1835. In 1836 Mr. Coyne supplied the Dublin manager with two more farces, *Honest Cheats* and *The Four Lovers*. Next year he repaired to London to push his fortune, where the success of the farce, *The Queer Subject*, at the Adelphi theatre, the leading part of which was sustained by John Reeve, decided his future course. The Haymarket and the Adelphi were his favourite fields of activity, although he wrote for nearly every theatre in London. As a writer of farces, interludes, and occasional pieces, he was one of the best known men in London. Among his productions may be mentioned—*The Merchant and his Clerks*, *The Signal*, *The World of Dreams*, *Did you ever send your Wife to Camberwell?* *The Man of Many Friends*, *Samuel in Search of Himself*, *Everybody's Friend*, *Urgent Private Affairs*, *The Old Château*, *Pas de Fascination*, *An Unprotected Female*. Mr. Coyne's most popular farce was *How to Settle Accounts with your Landlady*, which was originally produced at the Haymarket in 1847, and was translated into French and acted at Paris, under the title of *Une Femme dans ma Fontaine*. Mr. Coyne was also the author of *The Scenery and Antiquities of Ireland*, and of some minor works of fiction. Along with the late Mr. Mark Lemon and Mr. Henry Mayhew, he was one of the projectors and original proprietors of *Punch*.

Crabbe, THE REV. GEORGE (b. 1754, d. 1832), poet, was born at Aldeburgh, in Suffolk.

His father came of a family of farmers, or well-to-do yeomen, and was a village schoolmaster, parish clerk, and, later, warehouse keeper and collector of salt duties. Crabbe, who, though a rather delicate and timid child, inherited strength of character from one parent, and a lovable, humane nature from the other, displayed early a studious bent, and but little aptitude for those minor practical affairs to which he was native. In 1768, after a short employment by his father in the warehouse, he was apprenticed to a surgeon near Bury St. Edmunds, and in 1771 to a Mr. Page at Woodbridge. Before completing his apprenticeship he had written a great mass of verse, and had even published *Inebriety, a Poem* (Ipswich, 1775). On leaving Woodbridge, he set up as a surgeon at Aldeburgh, but failed, and determined to go to London as a literary adventurer. In 1780 he issued anonymously *The Candidate: a Poetical Epistle to the Editors of the Monthly Review*. Reduced to desperation by want of material success, he sought the mediation of Burke. Convinced of his worth and genius, Burke commended his work to Dodsley, who published *The Library* in 1781. This was an immediate success, and was followed by *The Village* (1783). Meanwhile, he had taken orders, and been appointed curate at Aldeburgh, an occupation which he soon relinquished for that of domestic chaplain to the Duke of Rutland. At the end of 1783 he married Miss Sarah Elmy, and in 1786 he left Belvoir Castle with his wife for Stathern, where he had obtained a curacy. During the same year, his next poem, *The Newspaper*, appeared. From his thirty-first to his fifty-second year he was absorbed in domestic and village life. In 1789 he became rector of Muston, in Leicestershire. He reappeared as a poet in 1807, issuing a volume which contained, besides reprints of former works, *The Parish Register* and other fresh poems. In 1810 followed *The Borough*, and in 1812 *Tales in Verse*. In 1813 he was left a widower. In the next year he obtained the living of Trowbridge, in Wiltshire, and in 1817 he published a sermon entitled *Variation of Public Opinion as it respects Religion*. In 1819 came forth his *Tales of the Hall*, with the imprint of Mr. Murray, who paid for them, and for the copyright of Crabbe's previous works, £3,000. Crabbe lived on until 1832, officiating in his church until the last two Sundays of his life, and performing his duties as a magistrate. In 1834 his *Posthumous Tales* were published; and his *Life*, by his son, followed in 1838. Crabbe maintained through life an amiable, upright, and vigorous character, and was much beloved and respected. He had great sympathy for the poor, and was a keen observer of commonplace life and external nature. His sound judgment gave an admirable balance to the various shades of experi-

ence and feeling treated in his poems. Conventional to a fault in matters of metre and diction, he was, in essentials, an uncompromising realist. Inferior in intellect and introspection to Wordsworth, he was also without that wilfulness which sometimes offends in the greater poet; and it was perhaps his frank identification of himself with the ways, and joys, and sorrows of the lower classes, which, while rendering his voluminous works priceless as a record of the manners of the time, called forth from the subtle critic Hazlitt that damaging admission of power conveyed in the verdict that it would take half a century to shake him off. Midway between that and Byron's hyperbolic "Nature's sternest painter, yet her best," we may meet the truth. He is not the best of Nature's painters; and though dead over half a century, he is not yet shaken off; nor will he be. His poetry may never again be popular; but it must always have a certain audience among those who study human nature through the medium of literature.

The Life and Poetical Works of the Rev. George Crabbe, edited by his son. [H. B. F.]

* **CRAIK**, DINAH MARIA (b. 1826), novelist, the daughter of Mr. Mulock, a clergyman, was born at Stoke-upon-Trent. Her father, a man of wide knowledge, superintended her education. In 1864, in consideration of her work in the field of literature, she obtained a pension of £60 per annum. In 1865 she became the wife of Mr. George Lillie Craik. Miss Mulock's first novel, *The Ogilvies*, was published in her twenty-third year, and was succeeded in 1850 by the much more widely recognised *Olive*. It was not, however, until 1856 that she published the novel that made her famous, *John Halifax, Gentleman*. In all, she has published about twenty-four novels and stories, some twenty other books for children and young people, two or three collections of essays and papers on ethical and domestic subjects, and two volumes of poems, since revised in one volume, under the title of *Thirty Years*. She has also translated three of the popular works of Madame de Witt, and also Guizot's *M. de Brante*. In turn, many of her romances have been translated into foreign languages, most frequently into Italian and German. While *John Halifax, Gentleman*, is the novel by Mrs. Craik which is generally considered her *chef d'œuvre*, her strongest work is to be found in *A Life for a Life* (1860). This is a critical opinion in which the authoress is said to concur. Mrs. Craik always affects the pure, limpid English, which she was taught to regard as the first consideration of a writer. In other respects her books, though refined in sentiment, lack breadth of treatment; and especially is this noticeable in her delineation of men, not excluding "the ideal Christian Gentleman," John Halifax himself.

Craik, GEORGE LILLIE (b. 1791, d. 1866), man of letters, was born in Fifeshire, and educated at St. Andrews University. His parents intended him for the Scottish Church, but in 1826 he found himself in London, where he determined to devote his life to literature. He was first employed by the Society for the Diffusion of Useful Knowledge, and afterwards by Mr. Charles Knight, the publisher. His first and best production, which has run through several editions, was *The Pursuit of Knowledge under Difficulties*, a book suggested to him by Lord Brougham, which appeared in 1831. He contributed many historical and biographical articles to the *Penny Cyclopædia*, and he wrote the chapters on religion, commerce, industry, and literature in the *Pictorial History of England* (Knight, 1840-9), which he edited in conjunction with Mr. Charles Macfarlane. He produced *Bacon: his Writings and his Philosophy*, in 1846; and *Romance of the Peerage*, in 1850, was soon followed by a *History of English Literature*. He was appointed professor of English literature in Queen's College, Belfast, in 1849, which post he retained till his death. His miscellaneous labours are *Spenser and his Poetry*, *Popular Tumults*, *History of British Commerce*, *The English of Shakespeare*. All his books are characterised by the same solid thought and careful compilation.

Gentleman's Magazine, Aug., 1866; *Athenæum*, June, 1866.

Cramer, JOHANN BAPTIST (b. 1771, d. 1858), an eminent pianist, and one of the principal founders of the modern pianoforte school, belongs to the well-known Cramer family of German musicians. Johann was born at Mannheim, but removed with his father, Wilhelm, to London in 1772, where he spent the greater part of his life. He was self-educated in theory and composition, except that he received a few hints from Muzio Clementi, and a short course of lessons in thorough-bass from C. F. Abel. After 1788, Cramer undertook professional tours on the Continent, living in the intervals in London, and enjoying a well-earned reputation as a pianist and teacher. In 1828 he established the firm of J. B. Cramer and Co., music publishers. All Cramer's works are distinguished by a musical solidity, but most of them suffer from a certain dryness and poverty of expression in the melody. The consequence is that his one hundred and five sonatas, and his countless variations, rondos, and fantasias, are nearly forgotten; while it is always risky to revive any of his seven masterly concertos. But Cramer will always be remembered for his *études*.

* **Cranbrook, THE RIGHT HON. GATHORNE GATHORNE-HARDY, VISCOUNT** (b. 1814), the son of the late Mr. John Hardy, formerly M.P. for Bradford, was educated at Shrewsbury

School, and at Oriel College, Oxford, whence he took his B.A. degree in 1836. Called to the bar in 1840, he made his first effort to enter Parliament in 1847, when he unsuccessfully contested Bradford, and it was not until 1856 that he first entered the House of Commons as member for Leamington. In 1858 Mr. Hardy was appointed Under Secretary of State for the Home Department, and in the following year gained a great triumph for the Conservative party by defeating Mr. Gladstone for Oxford University. In 1866 he was appointed President of the Poor Law Board, and on the retirement of Mr. Walpole he became Secretary of State for Home Affairs until the resignation of the ministry in 1868. Mr. Hardy's reputation as one of the most effective debaters in the House of Commons was increased during the ensuing period, when his attacks on the Government measures, particularly Mr. Gladstone's Irish Church Bill, were highly effective. After the Conservative victory of 1874, he became Secretary of State for War, and later on made some striking speeches on the Eastern question. In 1878 he was raised to the House of Lords, with the title of Viscount Cranbrook, and in the same year succeeded Lord Salisbury as Secretary of State for India. The chief event during his administration was the Afghan War. On the formation of the Conservative administration of 1885, Lord Cranbrook was appointed Lord President of the Council, and in January, 1886, he became Secretary for War.

* **Crane, WALTER** (b. 1845), allegorical and decorative painter, was born in Liverpool, and having received an artistic education, was chiefly known for some years by his illustrations for books of an imaginative or allegorical kind. Of his work in this department we may mention his illustrations to the following editions:—*Agatha's Husband* (1875); *Aladdin's Picture-book* (1876); *The Necklace of Prince Fiorimonde* (1880); *Grimm's Household Stories* (1882); and *The Golden Primer*, by Meiklejohn (1884). Since the opening of the Grosvenor Gallery he has been a constant and large contributor, the following being his most important works, with the dates of their exhibition:—*The Renaissance of Venus* (1877); *The Fate of Persephone* (1878); *The Sirens* (1879); *Truth and the Traveller* (1880); *The Laidley Worm and Europa* (1881); *Fate*, from Omar Khayyâm (1882); *Diana and the Shepherd* (1883); *The Bridge of Life* (1884); *Pandora and Freedom* (1885). His design of *Socialism* for the newspaper *Justice* may be mentioned as of kindred purpose with the last-named work.

Cranworth, ROBERT ROLFE, LORD (b. 1790, d. 1867), Lord Chancellor of England, was the son of a Norfolk clergyman, and took his degree from Trinity College, Oxford, in 1812. Called to the bar in 1816, he took silk

in 1832, and was elected in the following year as a Whig for Penryn. After holding the office of Solicitor-General, Rolfe was raised to the bench in 1839 as Baron of the Exchequer, and in 1850 he was appointed Vice-Chancellor, and raised to the peerage. In 1851 he was created Lord Justice of Appeal; and, according to Lord Campbell, used frequently to settle his differences of opinion with Lord St. Leonards on the principle *presumitur pro negante*. He was Lord Chancellor in Lord Aberdeen's ministry from 1852 to 1858, and again from 1865 to 1867, when advance of years compelled his retirement. Though described as "weak and pliable," he was a lawyer of great ability, and notably free from pedantry and affectation.

***Crawford, FRANCIS MARION** (b. 1854), novelist, was born at the Bagni di Lucca, Tuscany, but is an American citizen by birth, and was educated at St. Paul's School, Concord, New Hampshire, after which he studied at Trinity College, Cambridge, the Polytechnicum, Karlsruhe, and the Universities of Rome and Harvard. In 1880 he visited India (where he was admitted to the Roman Catholic Church), and studied the locality for his first novel, *Mr. Isaacs* (published 1882). This was followed in 1883 by *Dr. Claudius* and *To Leeward*, by *A Roman Singer* and *An American Politician* in 1884, and by *Zoroaster* in 1885. The *Story of a Lonely Parish* and *Prince Sarracinesca* were announced for 1886. Mr. Marion Crawford has also gained distinction for his knowledge of Sanscrit and comparative philology.

Crawford and Balcarres, ALEXANDER WILLIAM CRAWFORD LINDSAY, EARL OF (b. 1812, d. 1880), was the eldest son of James, the twenty-fourth Earl of Crawford, and ninth Earl of Balcarres. Educated at Eton, and at Trinity College, Cambridge, Lord Crawford never took an active part in politics, confining himself to his literary studies. The first book which Lord Crawford published was the two volumes of *Letters from the Holy Land*, published in 1838. His next, in 1846, attracted much attention, under the title of *Progression by Antagonism*, in which he enunciated the principle of action involved in the contest of opposing intellectual forces, illustrating his views by means of a diagram, which he called *A Chart of Human Nature*; the second title of this being *A Theory involving Considerations touching the Present Position, Duties, and Destiny of Great Britain*. In 1847 he published the book by which he is best remembered. His *Sketches of Christian Art*, which made its appearance almost contemporaneously with *L'Art Chrétien* of M. Rio on the same subject, has taken its place with it, and the *Iconographie Chrétienne* of M. Didion, among the classics of art literature. *The Lives of the Lindsays*, a work deservedly of high repute as a

M.W.—10*

contribution to the history of Scotland, has passed through three editions, and continues to be read as one of the most interesting works of the kind. His strong feeling for theological studies was evinced by a thick octavo on *Scepticism a Retrogressive Movement in Theology and Philosophy, as contrasted with the Church of England, Catholic (at once) and Protestant, Stable and Progressive* (1861), and a volume of letters on *Ecumenicity in relation to the Church of England* (1870). He published in 1872 a volume of translated Etruscan inscriptions, and in 1876 a poem in ten books, *Argo; or, the Quest of the Golden Fleece*. But his dominant idea was not so much to write books as to create a perfect library, which might form a kind of literary picture of the history of civilisation. In this endeavour he was successful. His library at Haigh Hall, near Wigan, is considered to be unrivalled among private collections. In the spring of 1881 people were horrified by the report that the corpse of Lord Crawford had been abstracted from the family vault at Dunearch House, Aberdeenshire. After a long search, the body was found hidden in a wood close by. The mystery has never been satisfactorily explained, but it is supposed that a "handsome reward" was the temptation. One of the culprits was brought to justice.

Athenæum, Dec. 25th, 1880.

Crawford, JOHN (b. 1783, d. 1868), author and traveller, was born in the island of Islay, Argyllshire. After studying at Edinburgh University, he became surgeon in the East India Company's service. He proceeded to Penang, where he resided for some time, and from 1811 to 1817 he was British representative at Java. In 1821 he served as envoy to Siam and Cochin-China, and in 1823 was appointed Governor of Singapore. In 1861 he was elected president of the Ethnological Society. Mr. Crawford wrote the *History of the Indian Archipelago* (1820), *Descriptive Dictionary of the Indian Islands and Adjacent Countries* (1856), *Journal of an Embassy to the Courts of Siam and Cochin-China, exhibiting a View of the actual State of these Kingdoms* (1839), *Inquiry into the System of Taxation in India*, a valuable Malay grammar and dictionary, and one or two books of less importance.

Creasy, SIR EDWARD SHEPHERD (b. 1812, d. 1878), historian, after a distinguished career at Eton and at King's College, Cambridge, of which foundation he became a fellow in 1834, was called to the bar in 1837, and became assistant-judge of the Westminster Sessions Court. In 1840 he was appointed professor of history at University College, London, and in 1860 he was appointed Chief Justice of Ceylon, a post which he resigned in 1869 in consequence of ill-health. Of his numerous works, *The Rise and Progress of the British Constitution* has been superseded by more recent investigations, but

the *Fifteen Decisive Battles of the World* (first edition, 1851) is still exceedingly popular—and rightly so—with those who relish that form of entertainment. *The History of the Ottoman Turks* is still among the best English books on the subject, notwithstanding the fact that its author, as he honestly confesses, based his account on that of Von Hammer. Among Sir Edward's later works were a novel, the commencement of a *History of England*, and a treatise on the *Imperial and Colonial Institutions of the Britannic Empire*.

[L. C. S.]

Crémieux, ISAAC ADOLPHE (b. 1796, d. 1880), a celebrated lawyer and legislator, born at Nîmes of Jewish parents, first came into notice by his defence of the *National*, the *Tribune*, and other newspapers, and subsequently, during the debate on the Orient question in 1840, for the zeal he manifested in defending his co-religionists. He entered the Chamber of Deputies in 1846, and became a leading reform agitator and opponent of Guizot. He advocated Free Trade, and opposed the Game Laws and the admission of paid functionaries (ministers excepted) to the Chamber. Foreseeing the result of Count Duchâtel's memorable declaration that no reform would be granted, and that the Government had resolved to put down the Reform banquets, M. Crémieux urged Louis Philippe and his queen to flee, remarking that "no hope for them was left." He next proceeded to the Chamber of Deputies, and advocated the formation of a provisional government. He was then nominated Minister of Justice. After the *Coup d'État* he was arrested and taken to Mazas. He then quitted public life altogether, and devoted himself to his briefs. On the passing of the new law respecting the right of public meeting, in the early part of 1869, M. Crémieux emerged from his retirement, and made his voice heard at various literary and political conferences at Paris. He became Minister of Justice a second time, on the establishment of the Government of the National Defence, and he was one of the ministers composing the Government Delegation at Tours, and subsequently at Bordeaux. On Feb. 14th, 1871, he resigned, and on Dec. 16th, 1875, he was elected senator for life of the National Assembly. He is one of the authors of the *Code des Codes*. He has also published a collection of speeches under the title of *Liberté* (1869), and a long work on the part he played in the war of 1870, *Gouvernement de la Défense nationale, Actes de la Délégation de Tours et de Bordeaux, Ministère de la Justice* (2 vols., Tours, 1871).

Creswell, SIR CRESWELL (b. 1794, d. 1863), lawyer, was educated at the Charterhouse and Emmanuel College, Cambridge, where he took his M.A. in 1818. Called to the bar of the Middle Temple in 1819, he chose the Northern

Circuit, where his natural abilities, aided by local connections—for he was descended from an old Northumbrian family—soon brought him into notice. That he worked hard in Westminster Hall, the long series of *Bramwell and Creswell's Reports* will testify. He was appointed Recorder of Hull in 1830, and four years later he obtained silk. He was elected for Liverpool in 1837, in the Conservative interest; but he was little of a politician, and his seat in the House neither advanced nor retarded him. Sir R. Peel appointed him to succeed Mr. Justice Bosanquet as Justice of the Queen's Bench in 1842, whereupon he was knighted. But the work by which Sir Creswell Creswell is best remembered is the creation of the Divorce Court, over which he was appointed to preside in Jan., 1858. It was an experiment at the time not at all liked by the public, and most dangerous to the reputation of the man who should first undertake it. But Sir Creswell had confidence in himself, and fortunately for himself, for litigants, and for the public generally, that confidence on this occasion was not misplaced. To him chiefly is owing the success of the Divorce Court. His decisions have come to be regarded as a code of divorce law—a code based upon sound, broad principles. His death was the result of a carriage accident.

Solicitors' Journal, Aug., 1863.

Creswick, THOMAS, R.A. (b. 1811, d. 1869), landscape painter, was born at Sheffield, and studied art in Birmingham till he came to London in 1828. He soon gained a high reputation for his faithful representations of English scenery, and in 1842 was elected A.R.A., and R.A. in 1851. He exhibited regularly both at the British Institution and the Royal Academy, and contributed excellent illustrations to the editions of Thomson's *Seasons* (1842), the *Book of English Ballads*; Tennyson's *Poems* (1857), and Walton's *Angler* (re-issued in 1881). His range of subject was limited to the quiet corners, shady lanes, and unnoticed brooks of North Wales and the northern and southern counties of England. He was among the first to attempt an accurate and characteristic representation of foliage, and his drawing of trees is always admirable, though his fondness for pea-green has often injured the colour. The names of his pictures, such as *The Weald of Kent* (1843), *The Valley Mill* (1851), and *Across the Beck* (1864), merely indicate the nature of his subjects, without being distinctive. But his works are easily recognised by the sparkling lights and depths of shadow of the foliage.

Baskin, *Modern Painters*, vol. i., pp. 392, 401.

• **Crispi**, FRANCESCO (b. 1819), an Italian politician, was born at Ribera, in Sicily. He entered the bar at Naples, and ranging himself on the side of the Neapolitan

youth, joined in the conspiracies caused by the tyranny of Ferdinand II., which led to the overthrow of the kingdom of the Two Sicilies in 1848. He was one of the chief promoters of the insurrection of Palermo, became a deputy and general secretary of the war, and for two years was the heart and soul of the resistance offered by the Sicilian people. After a flight to France on the success of the Swiss regiments, Signor Crispi planned the second Sicilian revolt of 1859-60. He joined the volunteers of Garibaldi, and after fighting as a private, he became a minister of State. In this capacity he used his influence for the annexation of the Sicilies to the kingdom of Italy. Signor Crispi next became a member of the first Italian Parliament in 1861, representing Palermo, and on account of his powers as an orator and his eminent services, he became leader of the constitutional opposition, adopting as his programme administrative reform, retrenchment, and liberty to all. Uniting with the old Piedmontese "Third Party," he brought about the Ratazzi ministry in 1867. He was elected president of the Chamber of Deputies in November, 1876. In 1877 he became Minister of the Interior, and played an important part in maintaining an amicable understanding between England, Germany, and Italy in relation to the Eastern question. He resigned in the spring of 1878 for private reasons. His name is intimately associated with many Italian journals, and in 1866 he brought out a remarkable brochure, entitled *Repubblica ed Monarchia*, directed against the Mazzini party.

• **Crofts**, ERNEST, A.R.A. (b. 1847), painter, was born at Leeds, and studied art in Berlin, and later, under E. Hüntner, the German battle painter, at Düsseldorf, where he has for the most part resided. He first attracted general attention in England by his great picture of the *Morning of the Battle of Waterloo*, exhibited at the Royal Academy in 1876. Next year it was followed by *Oliver Cromwell at Marston Moor*; and in 1878 Mr. Crofts was elected A.R.A. In 1879 he exhibited the *Evening after the Battle of Waterloo*; in 1880, *Marlborough at the Battle of Ramilies*; in 1881, *George II. at the Battle of Dettingen*; in 1882, *Hougoumont, Waterloo*, and *At the Farm of Mont St. Jean, Waterloo*; in 1883, *Charles I. on his Way to Execution*; and in 1884, *Wallenstein*.

Croker, THE RIGHT HON. JOHN WILSON (b. 1780, d. 1857), was born in Galway. His father was Surveyor-General of Customs and Excise in Ireland, and his mother, Miss Rathbone, was the daughter of an Irish clergyman. He was educated at Trinity College, Dublin, and in 1801 entered at Lincoln's Inn. He early showed a taste for the exercise of political literature, and in 1807 entered the House of Commons, where he

began to attract notice; and when the Duke of Wellington, then Sir Arthur Wellesley, and Secretary for Ireland, left England for Portugal in July, 1808, he entrusted Croker with the parliamentary business of his office. In 1809 Mr. Perceval made him Secretary to the Admiralty, a place which he retained for twenty-one years without ever being desirous of changing it. In 1810 he became connected with the *Quarterly Review*, and continued a regular contributor for the long period of forty-three years, during the last fourteen of which he was its recognised political authority. He never re-entered Parliament after the carriage of the Reform Bill, and he broke off his friendship with Sir Robert Peel in consequence of the repeal of the Corn Laws. He died in 1857, having outlived most of his contemporaries, and to some extent his own reputation; for when he was reproduced by Mr. Disraeli in the character of Rigby, in *Coningsby*, the world at large hardly knew who Croker was. He was a bold and ready debater; and as one of the speakers on the Reform Bill showed himself more than a match for Mr. Macaulay. But his written style was dull and commonplace; his articles were overloaded with italics; and with all his practice he never acquired the art of putting a point effectively. His letters, however, are better than his essays, and some of them, written to the leaders of the Conservative party, are shrewd, sensible, and forcible. His character has been variously painted. Sir Robert Peel on two separate occasions doubted his sincerity; and he appears in the pages of *Coningsby* as one of the basest of mankind. This portrait is doubtless an exaggeration; but his recently published correspondence contains various passages which seem to show that it had some foundation. Macaulay's cruel attack on Croker's edition of *Boswell's Life of Johnson* (1831) was undoubtedly animated by personal considerations, for the book is not utterly devoid of merit; and Croker also did good service to historical literature by editing Lord Hervey's *Memoirs*, the *Suffolk Papers*, and Walpole's *Letters to Lord Hertford*. He was also one of the projectors of the Athenæum Club.

The *Croker Papers*, published by Mr. Murray in 1884, edited by Mr. L. J. Jennings, M.P., in 3 vols., are a fund of political information, and no history of the nineteenth century can hereafter be written without being largely indebted to them. [T. E. K.]

Croker, THOMAS CROFTON (b. 1798, d. 1854), a popular author and collector of Irish stories and legends, born at Cork, was apprenticed to a mercantile firm, but through the interest of John Wilson Croker, who had been a friend of his father, he became a junior clerk in the Admiralty, where he rapidly rose until he had £800 a year. He retired from the Admiralty in 1850, on a pension of £580.

In early life, when he was still a merchant apprentice, he devoted himself to the collection of legends and songs of the Irish peasantry. In 1824 he published his *Researches in the South of Ireland*, characterised by a happy blending of humour and sentiment with archaeological learning. Next year he produced *The Fairy Legends and Traditions of Ireland*, a work which has frequently been reprinted and translated, and which procured for him the personal acquaintance of Sir Walter Scott. Croker next produced *Legends of the Lakes* (1828), with illustrations by Maclise; *Daniel O'Rourke* (1828), a sort of Irish Munchausen; *Barney Mahoney* (1832); *My Village* (1832); and *Popular Songs of Ireland* (1839). Of all these works, *Barney Mahoney* and *My Village* are the most original—the others partly consist of compilations; but all are marked by a sound knowledge of their subjects, and are reliable as sources of information. In 1827 he was made a member of the Irish Academy, and in 1839 and 1840 he helped to found the Camden and Percy Societies, for the former of which he wrote (1841) a narrative illustrative of the contests of Ireland in 1641 and 1690, and for the latter his *Revolution in Ireland* in 1688, and several other works.

Gentleman's Magazine, Oct., 1854.

* **Croll, JAMES** (b. 1821), a Scottish physicist, was born at Little Whitefield in Perthshire. His school training was limited to five years, and though at an early date he had been taught to read and write by his parents, most of his education was entirely derived from self-application. In science and philosophy he had no teaching, his knowledge being obtained by the study of books between the ages of eleven and sixteen, and to the rudiments thus early acquired may be attributed much of the success he has attained in physics. Apprenticed to a country millwright, he followed this trade up to the age of twenty-four, when he was compelled to abandon it, owing to the effects resulting from an accident sustained in his left elbow joint when a boy. When about thirty-two he received an appointment as an insurance agent, and for several years worked at the duties it entailed. In 1859 he afterwards accepted, owing to the reputation which a small metaphysical treatise which he had published two years before had obtained for him, the office of Keeper of the Andersonian University and Museum, in Glasgow, and here he remained until 1867, when he was invited to join the Geological Survey of Scotland. Since this date he has continued to pour out, both in separate works and in papers published in the scientific journals and Transactions, a long series of researches, many of them relating to the ocean currents, and the physical aspects of the glacial period, which have attracted wide attention, and are now

regarded as part and parcel of the literature of physical geography and geology. In 1876 he received the honorary degree of LL.D. from St. Andrews, and in the same year was elected F.R.S. In 1881 he retired from the Geological Survey. Dr. Croll's chief works are:—*Climate and Time* (1875), *The Philosophy of Theism* (1857), and *Discussions on Climate and Cosmology* (1886). But from 1861 to 1883 may be found in the *Philosophical Magazine*, the *British Association Reports*, the *Reader*, the *Geological Magazine*, the *Quarterly Journal of Science*, and other publications, no less than eighty separate memoirs and papers, many of them, though short, containing a vast amount of research on geological climatology. On geology proper, Dr. Croll has, curiously enough, never written a single line. Indeed, for geology he had never any love, his duties on the survey being for the most part office work.

Crome, JOHN (b. 1769, d. 1821), the artist, generally known as "Old Crome," to distinguish him from his son, John Bernay (b. 1793, d. 1842), an artist of far less importance, was the son of a poor journeyman weaver, and was born at Norwich, where he spent the greater part of his life. As the boy showed an unfortunate talent for art, his parents apprenticed him to a coach and house painter, and in his intervals of leisure he used to wander through the sleepy and peaceful scenery of the neighbourhood, taking rude sketches of stream, and heath, and tree. He formed his style to some extent on Wilson, but chiefly on the Dutch, especially Hobbema. After an introduction to Sir W. Beechey in 1790, he became a drawing-master by profession, and struggled through life just above the low-water mark of poverty. In 1803 he founded the Norfolk Society of Artists, and contributed constantly to their exhibitions. After 1806 he also sent occasional pictures to the Royal Academy. *Moushold Heath* (1816), a characteristic work of his, is now in the National Gallery. He is chiefly memorable for his careful delineation of the distinctive characters of trees, and for artistic treatment of the simplest rural subjects. His colour, though rich and warm, is too often untrue, probably owing to his fatal habit of painting in the studio.

Memoirs, by Dawson Turner, in *Crome's Norfolk Picturesque Scenery* (1838).

Crompton, SAMUEL (b. 1753, d. 1829), inventor, was the son of a weaver of Bolton, Lancashire, and was brought up to the same trade. His great invention, the "spinning-mule," was perfected after five years' toil in 1770, and the superiority of his yarn at once attracted great attention. Unable to obtain a patent, he at length made the plan public, under vague promises of a public subscription, the result of which was a meagre £60. After years of

disappointment and hardship, he received an insignificant grant from the Government, and having made many millionaires, died in great poverty.

G. J. French, *Life of Crompton* (1890).

* **Crookes, WILLIAM** (b. 1832), man of science, is a native of London. At the age of sixteen he entered the Royal College of Chemistry, and after two years (1850) he became assistant to Dr. Hofmann, the distinguished chemist, then professor at the College, and held this post until 1854, when he was appointed to superintend the meteorological department of the Radcliffe Observatory at Oxford. Next year he became teacher at the Science College, Chester. In 1866 he was appointed by Government to report upon the application of disinfectants in arresting the spread of the cattle plague, which was then prevalent in England. In 1871 he accompanied the English expedition to Oran to report on the total solar eclipse which occurred in December of that year. In 1875 he received from the Royal Society the award of a royal medal for chemical and physical researches. In 1876 he was elected a vice-president of the Chemical Society, and next year to the Council of the Royal Society. His first important discovery was the metal thallium, the spectrum of which consists of one emerald-green line, an account of which he read to the Royal Society in 1863. For the next eight years he was engaged in researches on the atomic weight of thallium, an elaborate account of which he submitted to the Royal Society in June, 1872. In 1865 he discovered the sodium amalgamation process for separating gold and silver from their ores. Following up some hints suggested during his observations made when weighing heavy pieces of glass apparatus in a vacuum balance during his researches on the atomic weight of thallium, in 1872 he began his experiments on repulsion resulting from radiation. One important result of these experiments is the radiometer, and so successful had he been with them, that in 1877 he was able to describe the otheoscope, a greatly modified radiometer, susceptible of an almost endless variety of forms. In 1879, in a paper to the British Association, he showed that gases, when very highly rarefied, lose most of the ordinary properties of matter, and pass into a fourth, or ultra-gaseous condition; and in 1886, in another paper, he resolved the earth into a remarkably small number of chemical elements. He is the author of *Select Methods in Chemical Analysis*, which has run through several editions; of the *Manufacture of Beetroot Sugar in England*; a *Handbook of Dyeing and Calico Printing*, and a *Handbook of Dyeing and Tissue Printing*. In 1859 Mr. Crookes founded the *Chemical News*, and in 1864 he became editor of the *Quarterly Journal of Science*.

New Monthly Magazine, 1881.

* **Cross, THE RIGHT HON. RICHARD ASHRETON**, VISCOUNT, G.C.B. (b. 1823), son of the late William Cross, D.C.L., was educated at Rugby, and at Trinity College, Cambridge, where he took his B.A. degree in 1874. He was called to the bar in 1849, and went the Northern Circuit, being at the same time connected with a bank at Wallington, and an active magistrate. He has written a volume on the *Acts relating to the Settlement and Removal of the Poor*, and another, in conjunction with Mr. H. Leeming, on *Quarter Sessions*. From 1857 to 1862 he represented the borough of Preston in Parliament, and during that time attempted to improve the course of procedure in municipal elections. Unsuccessful in 1862, Mr. Cross remained absent from Parliament until 1868, when he was elected for South-west Lancashire. During the expiring days of the Liberal Government he distinguished himself by his able and temperate impeachment of the Government for the Collier (q.v.) appointment. In 1874 Mr. Disraeli astonished the country by appointing Mr. Cross, a comparatively untried man, Secretary of State for Home Affairs, but the choice was amply justified by the skill with which he conducted a number of unambitious measures, such as an Act amending Mr. Bruce's Licensing Act (1874), an Explosives Bill, and an Artisans' Dwellings Bill (1875) through the House. Later on he was one of the chosen exponents of the Eastern policy of the Government, and it was to him that several of the most important despatches were addressed during the Congress of Berlin. In spite of the unfavourable comments that were passed upon his Water Bill, introduced during the dying moments of Lord Beaconsfield's Administration, Mr. Cross was again returned for South-West Lancashire in 1880. He was created shortly afterwards a G.C.B. In 1884 he sat on the Commission of Enquiry into the Housing of the Poor, a subject on which he is a recognised authority, and in 1885, on the return of the Conservatives to office, he became once more Home Secretary, and introduced, under circumstances of some difficulty, a Criminal Law Amendment Bill, which eventually became law. In 1886 he was raised to the peerage, and became Secretary of State for India.

Crosse, ANDREW (b. 1784, d. 1855), a quiet English gentleman, who spent his life in "selling hay, barking oak, cutting down poles, gardening," and making experiments in electricity, was born in Somersetshire. He had fitted up his laboratory with seven furnaces, upon which he remarked that "my house is now thoroughly furnished," and he attached electric wires to the trees of the forest, and conducted through them streams of lightning, and even turned the current through his house with the "dexterity of an able charioteer." He had already made some

important discoveries, but he could not be persuaded to make them known. He was, however, induced to attend the British Association at Bristol in 1836, when he explained that he had made no less than twenty-four minerals and crystalline quartz, which Dr. Buckland, the geologist, pronounced to be "discoveries of the highest order." By an arrangement in which he passed a voltaic current, excited by water alone, through certain mineral solutions, he formed various crystalline bodies analogous to those found in nature. In these experiments, in which he used long-continued voltaic action of low intensity, he had obtained artificial crystals of quartz, arragonite, carbonates of lime, lead, and copper, besides more than twenty other artificial minerals. A few months after the British Association meeting, Mr. Crosse found insects of the *acarus* tribe to have been developed under conditions usually supposed fatal to animal life, namely, in highly caustic solutions and out of contact with atmospheric air. Mr. Crosse next directed his attention to the purification of sea-water and other fluids by electricity. His mode of electrification was curiously simple. Two cylinders of dissimilar metals are placed in two porous earthenware tubes, open at the top and closed at the bottom. The metallic cylinders being connected together by a copper riband, the porous tubes, with the metals inverted in them, were filled with water, and placed in the fluid required to be purified. The electrical action immediately commenced, and the fluid not only became purified, but was rendered antiseptic in a few hours.

Memorials of Andrew Crosse, the Electrician, by his wife (London, 1857); *London Quarterly Review*, 1858.

Crotch, WILLIAM (b. 1775, d. 1847), composer, the son of a Norwich carpenter, when little more than two years old played "God save the King," and other tunes, on the organ with wonderful correctness; and when in his fifth year, performed in public in London. In 1786 young Crotch went to Cambridge to act as assistant to Dr. Randall, the professor of music, where he composed an oratorio, *The Captivity of Judah*, which was performed at Trinity Hall, Cambridge, in 1789. Removing to Oxford, he was appointed organist of Christ Church in 1790. In 1797 he succeeded Dr. Philip Hayes as organist of St. John's College, and professor of music in the University. In 1812 he produced his oratorio *Palestine*, which was received with great favour. In 1820 he was appointed music lecturer at the Royal Institution, London; and finally, on the establishment of the Royal Academy of Music in 1822, he became its principal. Dr. Crotch's chief productions are, *The Captivity of Judah*, wholly different from his juvenile work, though bearing the same title; ten anthems; a motet, *Methinks I hear*; besides several chants, glees, pianoforte

pieces, and fugues and concertos for the organ. He also published *Elements of Musical Composition* (1812), *Specimens of Various Styles of Music* (1831), and the *Substance of several Courses of Lectures on Music at Oxford and in the Metropolis*.

* **Crowe, EYRE, A.R.A.** (b. 1824), historical and subject painter, born in London, received his artistic education under Delaroche (q.v.), in Paris and in Rome. In 1852 he accompanied Thackeray on his tour in the United States. The force of his designs and the fidelity and brilliancy of his colouring have raised him to the first rank amongst contemporary painters of historical or quasi-historical subjects. One of his most striking pictures, *French Savants in Egypt*, was exhibited at the Royal Academy in 1875. It represents the savants and donkeys ordered into the midst of the infantry square during an attack on the expedition of 1798. Next year he was elected A.R.A., and exhibited *Darning Day*, a scene at a Bristol orphanage. Since then he has exhibited the following important works, amongst others:—*Sanctuary* (1877); *Marat* (1879), representing Marat in his bath and Charlotte Corday just opening the door; *Forfeits* (1880); *The Explosion of the Cashmere Gate at Delhi in 1857* (1881); *The Defence of London in 1643* (1882); *The Market Place at Evesham* (1883); and *The Fish Market at Rouen* (1884).

Crowe, MRS. CATHERINE (b. 1800, d. 1876), authoress, whose maiden name was Catherine Stevens, was born at Borough Green, Kent. She was married in 1822, to Lieut.-Colonel Crowe, of the British army. She began her literary career in her thirty-ninth year with *Aristodemus*, a tragedy, which, however, shortly fell out of notice. She was more successful in the realms of fiction; and she produced, in rapid succession, *The Adventures of Susan Hopley*; *Men and Women, or Manorial Rights*; *The Story of Martha Guinnis and her Son*; *Adventures of a Beauty*; and *Linny Lockwood*, in all of which she manifests a delight in the supernatural and mysterious. Her *chef d'œuvre*, *The Story of Lily Dawson*, appeared in 1847. She next appeared as the translator of Kerner's *Seeress of Prevorst*, and *The History of a German Clairvoyante*; and the step from this to *The Night Side of Nature* was easy. This last-mentioned work, which is a fair specimen of the metaphysical extravagance so characteristic of the fifties of the nineteenth century, is a pretended history of the supernatural, or, rather, a collection of ghost stories, tales of prophetic dreams, presentiments, wraiths, and haunted houses, linked together by many skilful and original remarks. The reception of this work encouraged her to bring out *Light and Darkness*; or, *Mysteries of Life*, in the same strain, and *Spiritualism and the Age we Live in*. Her next were three pleasant little books for children:—*Pippie's*

Warning, or Mind your Tempers; Arthur and his First Shilling, and Adventures of a Monkey; followed, in 1871, by *The Last Portrait*.

Blackwood, Sept., 1850; *Victoria Magazine*, May, 1879.

* **Crowther**, THE RIGHT REV. SAMUEL ADJAI, D.D. (b. 1812), Bishop of Niger Territory, is a native of Africa, and was born in Ochugu, which lies a little to the east of the kingdom of Dahomey. Adjai (his native name) was carried off as a slave by the Eyo Mahomedans in 1819, bartered for a horse at Abdahda, sold again at Ijalu, where he suffered great cruelty, bartered again at Ikkeku for some tobacco and rum, sold again to the Portuguese, and finally captured by a British man-of-war, and landed at Sierra Leone in 1822. Adjai, along with some other captured slaves, was placed under the charge of a missionary at Bathurst, near Free Town. He was admitted to the Christian religion in 1825, and took the name of Samuel Crowther, after the vicar of Christ Church, Newgate Street, London. Having now acquired a pretty fair education, he was placed in charge of the mission school at Regent's Town, Sierra Leone, which post he held for some time. He accompanied the first Niger expedition in 1841, and came to London in 1842. Passing through the Missionary College at Islington, he was ordained by the Bishop of London, and subsequently located in his native country, where he devoted himself to his work with all the zeal of an enthusiast. He again accompanied the second Niger expedition in 1854, of which he has written an interesting account; and in 1864 the former slave-boy was consecrated first Bishop of the Niger Territory, West Africa. He has translated the Bible into the Yoruba tongue, has written several tracts for his countrymen, and his services to geography have been recognised by the Royal Geographical Society.

Miss A. F. Childs, *Biography of the Rev. S. A. Crowther*.

Cruikshank, GEORGE (b. 1792, d. 1878), the humorist and caricaturist, was of Scotch descent on both sides, but was born in London, his father, Isaac Cruikshank, being also an engraver and caricaturist of some skill, after the manner of Gillray. George and his elder brother, Robert (b. 1791, d. 1856), who afterwards attained considerable reputation as an illustrator of comic publications, were both brought up to assist in the preparation of their father's plates, though in early youth Robert spent some years at sea. After being engaged for a time at a theatre, where he helped with the scene-painting and occasionally took a part, George began to design political caricatures on his own account, taking up the weapons of Gillray to give the parting thrusts at the "Corsican Scoundrel." In 1811 he began to contribute plates regularly to *The Scourge*, and in 1814 illustrated the

Life of Napoleon, by Dr. Syntax. Soon afterwards he formed an alliance with William Hone, the publisher, in whose windows Cruikshank's political caricatures regularly appeared, exciting the keenest interest amongst the crowd, especially during the last years of the Regency, and at the time of the Queen's trial, when Cruikshank published his representations of the "First Gentleman," and the extraordinary series of satires known as *The Queen's Matrimonial Ladder*. Apart from the Regent, he struck at both parties unsparingly, being no politician, but a humorist. Hence he naturally turned about this time from political to social satire. In 1818 he published his famous design of the *Bank Restriction Note*, signed by Jack Ketch, to which he himself afterwards attributed the abolition of hanging for forgery. In 1821 he illustrated Pierce Egan's *Life in London*, and in 1824 the *Tales of Irish Life*. At this time, too, he discovered what was really his true province in art, a grotesque and partially satirical fairyland, the borders of which are strangely blended with the British public's common world. In 1823 a translation of Grimm's *Fairy Tales* was published, with Cruikshank's illustrations—perhaps, on the whole, the best pieces of work he ever did, unless they are equalled by the illustrations to the *Points of Humour*, published in the same year. In 1824 he illustrated *Peter Schlemihl*, by Chamisso (q.v.), in the same manner; and the *Ingoldsby Legends*, at a much later date, besides many works of his old age, display his inexhaustible genius for ghosts and goblins. The works that followed are far too numerous for separate mention, but the following are some of the most justly celebrated:—*Mornings in Bow Street* (1825–30); *Illustrations of Phrenology* (1826); numerous illustrations to the *Novelists' Library* (1831–2); *The Waverley Novels* (1835–45); *Sketches by Bos* (1836); *Bentley's Miscellany*, which was begun in 1837, and extended to fourteen volumes, including *Oliver Twist*, *Jack Sheppard*, and *The Ingoldsby Legends*; *Life of Mansie Waugh* (1838); *The Tower of London* (1840); *Ainsworth's Magazine* (1842–54), which included *Windsor Castle* and many other tales; and *The Bottle* (1847). The publication of the series of plates illustrating the history of *The Bottle* marked a distinct point in Cruikshank's career, and, in spite of their power and popularity, these plates were the beginning of his art's decline. They were followed next year by *The Drunkard's Children*, and later by *The Gin-shop*, and other works designed to further the temperance cause. In 1862 the artist began *The Worship of Bacchus*, a strange medley in oil-colours, now in the National Gallery. He exhibited it through the country himself, with lectures of earnest warning on the subject. His later years were clouded by poverty and neglect, partly due to his extraordinary pretensions

against the originality of great novelists, especially of Dickens, whom, in a work entitled *Artist and Author: a Statement of Facts* (1872), he accused of having borrowed the ideas for *Oliver Twist* from his designs. His last design was a frontispiece of singular beauty to the *Rose and the Lily*, by Mrs. Blewitt (1877). By the exuberance of his humour, his disregard of conventional propriety, his delight in life, and his profound knowledge of all sorts and conditions, but especially of the lower sort, Cruikshank belongs by natural right to the band of great English humorists, and will remain in men's minds by the side of Hogarth, Fielding and Smollett, Sterne, Thackeray and Dickens.

William Bates, *George Cruikshank* (1879); Blanchard Jerrold, *Life of George Cruikshank* (1882); W. M. Thackeray, *Essay on the Genius of George Cruikshank*, *Westminster Review*, June, 1840. [H. W. N.]

Crusentolpe, MAGNUS JACOB (b. 1795, d. circa 1870), a Swedish politician and writer, born at Jönköping, was educated at the University of Lund, and then betook himself to the study of the law. He next held several political offices, and soon became an energetic politician. His *Political Views*, the first of a series of speeches and pamphlets to "rouse the nation from its apathy," created a lively sensation. Falling out of favour, he withdrew in 1834 from public service, and devoted himself to publications intended to throw light upon the Swedish constitution, the working of government, the wants of the people, and the imbecility, selfishness, and corruption of their rulers. He was at the same time a frequent contributor to the *Aftonblad*, but he was mostly engaged on pamphlets. Of these, two, called *Paintings from the History of the Day*, were greatly celebrated, and ran through many editions. Another, with the title *1720, 1772, 1809*, three memorable epochs in which the Government changed its form, had a great circulation. But never has Swedish literature witnessed such a prodigious sale as that of his *Ställningar och Förhållanden* ("Positions and Relations"), in which he treats in the form of letters the questions and persons of the day. The chief characteristic of his political writings is vigour of thought and expression, which, however, is sometimes allowed to degenerate into unwarranted and excessive asperity and violence. Crusentolpe was also the author of a *History of Russia from the Reign of Peter I. (1682) to that of Nicholas (1825)*, (1855-60).

Democratic Review, 1841.

Csoma de Koros, ALEXANDER (b. circa 1790, d. 1842), a Hungarian traveller and philologist, was born at Körös, in Transylvania, and took the degree of Doctor of Medicine at the University of Göttingen. He thereupon undertook to trace the origin of his countrymen, the Mag-

yars, now supposed by some of the highest authorities to be connected with the Finns. With this object in view, he travelled through Persia and Afghanistan, and finally arrived in Tibet in 1822. He devoted himself for four years (1827-30) to the study of the Tibetan language, and then proceeded to Calcutta in 1830. Here he was appointed librarian to the Asiatic Society, and shortly afterwards published in quick succession an excellent Tibetan grammar, an Anglo-Tibetan dictionary, and an analysis of the *Kah-Gyur*, one of the most important of the Buddhist sacred books. In 1842, having in the meantime received a pension from the Hungarian Government, he again started on his travels, but death overtook him at Darjiling before he had solved his problem.

Revue des Deux Mondes, Juillet, 1847; Theodore Duka, *Life and Works of A. Csoma* (1885).

Cubitt, SIR WILLIAM (b. 1785, d. 1861), a distinguished civil engineer, the son of a Norfolk miller, was apprenticed to a joiner, but soon afterwards quitted this for engineering, for which he had always had a natural talent. He distinguished himself by many inventions of great utility, first as a maker of agricultural implements, and then as a constructor of gas-works. His increasing interest in great engineering undertakings led to his removal to London in 1826. Meanwhile, the subject of the employment of criminals had been much in his thoughts, and the result was the invention of the treadmill, which he meant to be used for grinding corn, pumping water, etc., and did not contemplate it as an instrument of punishment. Shortly afterwards all the principal goals in the kingdom introduced the invention, and in 1822 an account of the treadmill "invented by Mr. William Cubitt, of Ipswich," was issued by the Society for the Promotion of Prison Discipline. His first great undertaking was the improvement of the Lowestoft and Norwich navigation; and this was soon followed by the Oxford Canal, the Birmingham and Liverpool Junction Canal, the improvement of the River Severn, the Bute Docks at Cardiff, the Black Sluice drainage and its outfall sluice at Boston Harbour, the Middlesbrough Docks and coal-drops in the Tees, and the South-Eastern Railway, of which he was chief engineer. On the Croydon Railway he applied the atmospheric system of traction; and on the Great Northern Railway, constructed by his son, Mr. Joseph Cubitt, he effected many valuable improvements. He was knighted in 1850 for his services in connection with the construction of the building for the International Exhibition in Hyde Park. The last important works in which Sir William was engaged were the two large floating stages in the Mersey at Liverpool, and the iron bridge across the Medway at Rochester.

Cudlip, MRS. [THOMAS, ANNIE.]

Cullen, PAUL, CARDINAL, D.D. (b. 1803, d. 1878), Roman Catholic Archbishop of Dublin, Primate of Ireland, and Apostolic Delegate, belonged to a middle-class family in the county of Kildare, and received his early education at Shackleton's famous school in that town, where Edmund Burke had been a pupil. Passing through the ecclesiastical college of Carlow, he completed his studies in the Irish College at Rome. Subsequently admitted to the priesthood, he became rector of the Irish School at Rome, and also held for a time the rectorship of the Propaganda. The death of Dr. Crolly, Roman Catholic Archbishop of Armagh, in 1849, was followed by a difference of opinion amongst the Irish suffragans as to the nomination of his successor. This want of harmony gave Pope Pius the opportunity of appointing one of his own friends to the vacancy, and Dr. Cullen was the friend appointed. Three years later he was promoted to the Archbishopric of Dublin, in succession to Dr. Murray. Finally, in 1866, he was created a prince of the Church as cardinal, and took for his title that of St. Peter in Montorio, the burial-place of the exiled Irish earls, Tyrconnel and Tyrone. Cardinal Cullen was not distinguished as a writer or a preacher, but as a theologian, a fervent, unflinching asserter of Catholicity, and a stout defender of the Church's rights and dignity. He delighted in good works; he established the Diocesan College of Clonliffe, the Catholic University, and the Mater Misericordiae Hospital, besides many churches, hospitals, convents, orphanages, and asylums. At the risk of personal odium, he lent his aid to the British Government in extinguishing the flames of insurrection during the Fenian excitement, and his strong denunciation of secret societies in general threatened to involve him in an acrimonious controversy over Freemasonry.

Cumberland, DUKES OF. [HANOVER.]

Cumming, REV. JOHN, D.D. (b. 1810, d. 1881), theologian, was born of a Highland family in Aberdeen, and educated at the university there. He became minister of the Scotch Church, Crown Court, Covent Garden, London, when but twenty-two, and laboured for half a century with great zeal to an increasing and fashionable congregation. He distinguished himself alike as a platform orator and as a voluminous and popular writer. He was noted for his determined enmity to the Roman Catholic Church, for his bold advocacy of purity in worship, and for his exposition of prophecy. During his fifty years' labours in London he published over two hundred different works, some of them running through many editions. *The Great Tribulation*, a volume of some 500 pages, predicting the speedy "end of all things," exceeded fifteen thousand, and a companion volume, *The Redemption Draweth Nigh*, com-

manded nearly as great a sale. In his writings he treats of almost everything within the range of theological polemics. Some of these writings are:—*Apocalyptic Sketches, Daily Life, Voices of the Night, Voices of the Day, Prophetic Studies, The Church before the Flood, Signs of the Times, and The Finger of God.*

Westminster Review, 1855.

Cumming, ROCALEYN GORDON (b. 1820, d. 1866), Scottish traveller and sportsman, generally known as "the Lion Hunter," evinced in his early years a strong love for Nature in her wildest forms, and a passion for sport. He entered the Indian army, but in consequence of the injurious effects of the Indian climate on his health, resigned his commission, and returned to Scotland, having in the meantime, however, laid the foundation of his large and interesting collection of hunting trophies and specimens of natural history. We next find him in the Cape Rifles, and in 1843 he began his five years' hunter's life, the story of which he has told in his well-known works, *Five Years of a Hunter's Life* (1850), and *The Lion Hunter of South Africa* (1856). He explored part of Central Africa, and at the same time was assiduous in adding to his hunting trophies. This collection, which he called the South African Museum, was afterwards exhibited in London at the time of the Great Exhibition of 1851. It was also exhibited in various parts of the country, and finally settled at Fort Augustus, where it attracted many visitors.

Cummins, MARIA S. (b. 1827, d. 1866), an American novelist, produced in 1854 a very remarkable novel, *The Lamplighter*, which had an enormous sale both in this country and in the States, over 100,000 copies having been sold. *The Lamplighter* was afterwards dramatised. She also wrote *Haunted Hearts* (1841), *El Fureidis* (1841), and *Mabel Vaughan* (1857), and was a frequent contributor to the *Atlantic Monthly* and *Young Folks*.

Cunard, SIR SAMUEL, BART. (b. 1787, d. 1865), founder of the Cunard line of Atlantic steamers, born at Halifax, Nova Scotia, was a merchant in his native town, but having accepted the Government tender to substitute steam vessels for sailing ships, then employed in mail service between England and America, came to England. A company was immediately formed, the members of which were Cunard; Messrs. Burns, of Glasgow; and Messrs. MacIver, of Liverpool, these two firms being then proprietors of rival lines of coasting steamers between Glasgow and Liverpool. For the first contract with the Government four steam vessels were built, and the first voyage was successfully made by the *Britannia*, from Liverpool to Boston, U.S., between July 4th and 19th, 1840. Such was the small beginning of an undertaking which, in the course of forty-five years, has grown into one of the vastest of

private enterprises. In 1852 the company began to substitute iron screw-steamers for the wooden vessels with paddle-wheels in use up to that time. In acknowledgment of his services, Mr. Cunard was created a baronet in 1859.

Cunningham, ALLAN (b. 1784, d. 1842), song-writer and man of letters, was born of upright peasant parentage, in the parish of Keir, in Nithsdale. Two years after his birth, the family removed to Dalswinton, where Burns was living opposite them, across the river. At eleven Allan was apprenticed to a stonemason, and in time displayed great skill in his craft. But meanwhile the memory of Burns had filled the whole valley with peasant poets, and Allan soon discovered that he was at least as clever a rhymist as any of them. In 1809 Cromek, the publisher who cheated Blake (q.v.), visited Dumfriesshire, in hopes of doing a good stroke of business by collecting old ballads and stray fragments of Burns. Recommended to Cunningham, he asked his assistance, and the latter, appreciating Cromek's critical faculty at its true value, promised to supply him to his heart's content. Cromek returned to London, and from time to time Cunningham continued to send him relays of his own songs, that were received with rapture by the unsuspecting old knave, who collected them indiscriminately into the volume of *Nithsdale and Galloway Song*, and at last entreated his young friend to come to London, that he might be more handy for reference. Cunningham arrived in 1810, and having contributed an excellent introduction to the volume, found that his only reward was a bound copy. He lived for some time by writing songs for newspapers, working for the sculptor Bubb, and afterwards composing parliamentary reports. After his marriage he published a volume of *Songs: chiefly in the Rural Language of Scotland* (1813), and about the same time was engaged by Chantrey to work as mason in his studio. In his spare time he wrote a number of articles for the *London Magazine* and *Blackwood*, the most important being *The Recollections of Mark Macrabin, the Cameronian* (1819-21). In 1822, against Scott's advice, he published the indifferent drama, *Sir Marmaduke Maxwell*, followed by a volume of *The Songs of Scotland* in 1824, and within the next three years by two indifferent romances, *Paul Jones* and *Sir Michael Scott*. In 1829 he began the publication of his *Lives of the English Painters*. After living on fairly intimate terms with most of the literary celebrities of the day, especially those who could appreciate Nithsdale, he died within a year of his master, Chantrey, much respected for honesty and simplicity of nature. His poems seldom rise above the ordinary Scotch imitations of Burns, but a few are almost worthy of his model; and *It's Hame and it's Hame, A Wet Sheet and a Flowing Sea*, and *The Mermaid of Gallo-*

way, will perhaps remain in remembrance. His brother, **PETER MILLER CUNNINGHAM** (b. 1789, d. 1864), after being a medical student at Edinburgh, became a naval surgeon, and as such visited Spain and South America, and made four voyages to New South Wales. In 1827 he published *Two Years in New South Wales*, and afterwards wrote essays on *Electricity and Magnetism*, and other subjects connected with science and navigation. **PETER CUNNINGHAM** (b. 1816, d. 1869), Allan's eldest son, also gained some distinction as a man of letters. Having entered the Audit Office in youth, he became chief clerk, and retired in 1860. He published numerous editions of the poets, a small collection of poems, a *Life of Inigo Jones* (1848), a *Memoir of Turner* (1852), and a *Handbook for London* (1849), which is a standard authority, and has passed through innumerable editions.

Introduction to A. Cunningham's *Poems and Songs*, by his son Peter; *Life of A. Cunningham*, by D. Hogg (1875). [H. W. N.]

* **Curci, CARLO MARIA** (b. 1800), an Italian ecclesiastic, is a member of the Society of Jesus. He is a fervent preacher, and an able writer on theological subjects. In 1871 he retired to Florence, and set himself to the study of the Four Gospels. The result of his study he published in the form of lectures, under the title of *Eregetic and Moral Lectures on the Four Gospels* (1874). In these lectures he showed a leaning towards heterodoxy, especially with regard to the temporal power of the Pope, and the result was that he was expelled from the Society of Jesus in 1877. His heterodox notions are propounded at length in *The Modern Dissension between Church and State, examined on the Occurrence of a Personal Matter*, which appeared at Florence in 1877. In the beginning of 1878, however, Father Curci wished to recant, and he wrote to the Pope accordingly; but it was not till he had undertaken a journey to Rome, and submitted three different letters of retraction, that his conduct was regarded as sincere. In his last recantation he had to declare his sincere intention to submit his opinions and writings to the judgment of the Pope. Since then he has been engaged on a translation of the Old Testament with notes. Father Curci founded the *Civiltà Catholica*, which has been for many years one of the main organs of the Jesuits and Ultramontane party.

Curran, JOHN PHILPOT (b. 1750, d. 1817), Irish politician, was the son of Irish Protestants of humble origin. He was educated at Trinity College, Dublin, and called to the Irish bar in 1775. An orator of wonderful pathos, imagination, and humour, he acquired a high reputation at the bar, which was amply justified by his splendid defence of Wolfe Tone and the other rebels of '98. In Parliament his position was

hardly so high, but he was one of the most conspicuous of the band of honest men who opposed the Union under Grattan. On the formation of a Whig ministry in 1808, he was made Master of the Rolls in Ireland, but was totally unsuited to the position, and during the remainder of his life, a prey to intense melancholy, was but a dim reflection of his former brilliant self.

W. H. Curran, *Life of Curran*. See also Grattan in Mr. Lecky's *Leaders of Public Opinion in Ireland*.

Currie, Sir Frederick, Bart. (b. 1799, d. 1875), Vice-President of the Council of India, entered the service of the East India Company in 1817, and in 1842 attained the position of secretary to the Government of India. As secretary to Lord Hardinge during the Sikh campaign of 1845-6, he displayed great ability, and was created a baronet. Next appointed Resident at Lahore, he was made a member of the Council in 1847. In 1854 he returned to England, and became a director of the East India Company, and its chairman in 1857. On the abolition of the Company's government, he was appointed Vice-President of the Council of India, of which he continued to be a member until his death.

Curtius, Ernst (b. 1814, d. 1886), the highest authority on Greek plastic art, was born at Lübeck, studied at Bonn, Göttingen, and Berlin, and in 1837 visited Athens with Professor Brandis. Two years later he accompanied Ottfried Müller in some of his explorations, cut short by his death in 1840. After his return Curtius became professor-extraordinary in Berlin, tutor to Prince Frederick William of Prussia, in 1856 professor at Göttingen, and afterwards professor in Berlin, where he remained till his death. In 1864 he began his excavations at Olympia, the grandest result of which was the discovery of the well-known Hermes and Dionysus, by Praxiteles, in 1877. Of the professor's numerous works on subjects connected with his special study, we may mention the following:—*The Acropolis of Athens* (1844); *The Peloponneseus* (1851); *Attic Studies* (1862); and *The Discovery of Olympia* (1882). His great work is his *History of Greece*, of which Professor A. W. Ward has published a masterly translation (1863-73). To appreciate the value of this fine book, a preliminary acquaintance with facts is necessary, for it is in the nature of a series of dissertations upon epochs and tendencies. No writer has ever succeeded in bringing out so artistically the harmonious beauty of Hellenic civilisation—for instance, in the great chapter on the unity of Greece—and never before has anyone given so complete an estimate of the Solonian reforms, or explicated so clearly the significance of the tangled age of Epaminondas.

* **Curtius, George** (b. 1820), philologist, brother of the above, was born at Lübeck,

and studied at Bonn and Berlin. Having been *privat-docent* for some years, he was appointed professor of classical philology at Prague in 1849. The book by which his name is best known in England is his *School Grammar of the Greek Language* (1862), but he has also written several important philological works, such as *Comparative Grammar in its Relation to Classical Philology* (1845), *The Principles of Greek Etymology* (translated by Wilkins and England), and *The Greek Verb, its Structure and Development* (1873).

Cushing, Caleb (b. 1800, d. 1879), a distinguished American jurist, politician, and scholar, from Essex County, Massachusetts, graduated at Harvard College, and studied law at Cambridge. He was called to the bar in 1825, and commenced practice at Newburyport, Massachusetts, contributing to the *North American Review* articles on historical and legal subjects. He was elected to the State Senate in 1826, and visited Europe in 1829, where he remained for two years. In 1833 he published *Reminiscences of Spain*, and an *Historical and Political Review of the Revolution in France*. Two years later he was elected member of Congress as a Whig, but severed his connection with the Whig party in 1841, when he united with President Tyler, and went over to the Democratic party. He was soon after appointed commissioner to China, and in 1844 negotiated the first treaty of the United States with China. On his return he became an advocate of the Mexican War then in progress, and equipped a regiment of volunteers at his own cost. As colonel of this regiment, he went to Mexico in 1847, and was appointed Brigadier-General. In 1852 he was appointed a justice of the Supreme Court of Massachusetts, and was Attorney-General of the United States from March, 1853, to March, 1857. In 1866 he was appointed by President Johnson member of a commission of three to codify and revise the laws of Congress. In 1872 he was one of the counsel for the settlement of the *Alabama Claims*, and in 1873 he published a book, *The Treaty of Washington*, in which he severely criticised the action of Sir Alexander Cockburn, the English arbitrator.

American Whig Review (1849); *Livingston's Portraits of Eminent Americans* (1851).

Cust, General the Hon. Sir Edward, K.C.B., D.C.L. (b. 1794, d. 1878), military historian, was the youngest son of the first Baron Brownlow. Entering the army in 1810, he served under Wellington in the Peninsular War. He afterwards became equerry to Prince Leopold of Saxe-Coburg. He was appointed Assistant Master of the Ceremonies to the Queen in 1845, and Master of the Ceremonies in 1847. Sir Edward was the author of several works, among which the *Annals of the Wars of the Eighteenth and Nineteenth Centuries* is regarded as a standard work on military history.

Cuvier, FRÉDÉRIC (b. 1773, d. 1838), a French naturalist, was a brother of Georges Cuvier (q.v.). With a strong love for the science of mechanics, he had abandoned his college studies at Montbéliard, and became apprentice to a clockmaker. In 1797, however, his brother Georges invited him to Paris, and this entirely changed the current of his aspirations, and he soon engaged in kindred studies. He was at first employed in preparing the catalogue of skeletons in the collection of comparative anatomy at the Jardin des Plantes, and in 1804 he assumed the direction of the menagerie at the same institution, which enabled him to study the characteristics of the animals confined there. The results are given in his *Histoire Naturelle des Mammifères*, which he wrote in conjunction with Geoffroy Saint-Hilaire. Frédéric Cuvier drew the line between the intelligence of different orders, and showed that domesticity in animals depends on their sociability, and that solitary animals cannot be domesticated, although they may be tamed. In 1810 F. Cuvier was appointed inspector of the Academy, and in 1831 inspector-general of the University of Paris. He was a great advocate for the introduction of the study of popular natural history into schools and colleges. In 1827 he was elected professor of comparative physiology at the Jardin des Plantes. In addition to the great work above mentioned, he wrote *L'Histoire des Cétacés* in the *Suites à Buffon*, a treatise which is still of high value; a work on the teeth of mammals, and numerous memoirs in scientific journals. His last words were: "Let my son place upon my tomb this inscription—'Frédéric Cuvier, brother of Georges Cuvier.'" This, indeed, is his only claim to fame. He was a painstaking and in most respects able man. But he had little of his brother's talent, and without his powerful influence would have certainly never attained the position he so long enjoyed.

Cuvier, GEORGES (b. 1769, d. 1832), the greatest of French naturalists, was a native of Montbéliard (Doubs), then belonging to Württemberg, where his father, a Protestant half-pay officer, had retired to escape the religious persecution at that time rampant in the Jura. To his mother he was, however, indebted for most of his early training. A very delicate youth, he early showed that ardent desire for knowledge which distinguished him through life, and at the age of fourteen formed a kind of learned academy from among his schoolfellows, where the merits of various books were discussed. Charles, Duke of Württemberg, took him under his especial favour, and sent him to the Academy of Stuttgart in March, 1784. He had previously read Buffon, and now his taste for natural history was further stimulated by one of the professors, who gave him a copy of Linnæus's

Systema Naturæ. In July, 1788, after serving for a short period as sub-lieutenant in a Swiss regiment, he became private tutor in the family of Count d'Héricy, then residing near Caen, in Normandy, and for the next six years—all through the "Reign of Terror"—was able to pursue the study of both terrestrial and marine animals under favourable circumstances. Some fossils having been dug up in his vicinity, he conceived the idea of comparing them with living species, and the dissection of certain molluscs suggested to him the necessity of a reform in the classification of animals; hence originated the germs of his two great works, the *Ossemens fossiles* and the *Règne animal*. During his residence at Caen he made the acquaintance of the Abbé Tenier in hiding from the fury of the revolutionaries, who, struck with his ardour and abilities, wrote strongly in his favour to his friends in Paris. The result was that, after a correspondence with Geoffroy Saint-Hilaire and other savants, he left for Paris, where, in 1795, he was appointed assistant to the professor at the Museum of Natural History. He subsequently held various professorships at the École Centrale du Panthéon, the Muséum, the Collège de France, and the Jardin des Plantes. Cuvier and Saint-Hilaire collaborated in the production of the *Mémoires sur une Nouvelle Division des Mammifères*, while the former's *Leçons d'Anatomie Comparée* were delivered during his term at the Muséum. In 1795, on the formation of the National Institute, he was elected a member, Le Lacedèpe and Daubenton being appointed the members of the section of the Natural Sciences, to which he afterwards became perpetual secretary. In 1798 he published his *Tableau Élémentaire de l'Histoire naturelle des Animaux*, in which are stated those principles of classification now universally accepted, and in 1800 his first palæontological paper, the *Mémoires sur les Espèces d'Éléphants vivants et fossiles*, and a host of other zoological researches. In 1799, on the death of Daubenton, he succeeded to the Chair of natural history in the College of France, and in 1802, after the appearance of his *Leçons d'Anatomie Comparée*, became titular professor at the Jardin des Plantes. In the same year he was one of the inspectors-general appointed by Napoleon to establish lycées, or public schools. In 1808 he was also made one of the councillors for life to the Imperial University, by which he was often brought into close communication with the emperor. From 1809 to 1813 he was sent on important educational missions to Italy, Holland, and the Hanseatic towns. He was made Chevalier of the Legion of Honour in 1811, and Councillor of State in 1814. In Louis XVIII's reign he was appointed Royal Commissary, and was enabled to introduce many needed reforms into the criminal and civil law; was made chancellor to the

University, member of the Academy, president of the Comité de l'Intérieur, and grand master of the faculties of Protestant theology, which gave him the superintendence of the religious, civil, and political rights of his creed. In the midst of numerous legislative duties he was still busy with natural history, and in 1828 commenced, in collaboration with Valenciennes, the grand *Histoire naturelle des Poissons*, not completed till long after his decease. He was created baron in 1819, Grand Officer of the Legion of Honour in 1826, a peer of France in 1831, President of the Council in 1832, and just before his death Minister of the Interior. Cuvier lectured at the Collège de France within a few days of his death, which occurred on May 13th, 1832. His library was purchased by the French Government, and a large part of it now belongs to the Jardin des Plantes, in Paris. He had married in 1804 Mademoiselle Duvancel, the daughter of a contractor for the public taxes, by whom he had four children: all of them, however, predeceased him. The mere list of Cuvier's works would occupy many pages. No portion of zoology which he touched did he leave unadorned with notable researches, and in nearly every department his labours were productive of reforms which have left their mark on the age. He effected an entire revolution in classification, by substituting correlation of structure for mere arbitrary arrangements. To him is due also the recognition of comparative anatomy as the essential portion of zoology, while it is not too much to say that his geological and palæontological works put the science of fossils for the first time on a rational basis. Without Linnæus, there might possibly have been a Cuvier; but without a Cuvier, neither Owen nor Darwin could have existed.

Cuvier's life has often been written, among others, by Mrs. Lee, whose biography is not only the best in the English language, but the most complete general one in French. [R. B.]

***Czachi**, HIS EMINENCE VLADIMIR (b. 1834), Cardinal of the Roman Church, was born in Poland, though of Hungarian origin, and was educated in Rome. Towards the end of the long reign of Pius IX., his wide literary culture and his aptitude for work brought him into notice. On the division of the Secretary of State's department into two great branches by Cardinal Antonelli, the ecclesiastical branch was entrusted to Mgr. Czachi, where he soon came to be recognised as one of the best diplomatists at the Vatican. When the Catholic University question with France, and the Polish Catholics' question with Russia, were still pending, it was he who conducted the negotiations on the Vatican side. In October, 1879, Mgr. Czachi was sent as Apostolic Nuncio to Paris, in succession to Mgr. Meglia, and was consecrated Archbishop of Salamis. On Sept. 25th,

1882, he was created a cardinal-priest by Pope Leo XIII., in a consistory held at the Vatican, and on Oct. 4th was invested with the cardinal's hat by M. Grévy.

Czartoryski, ADAM GEORGE, PRINCE (b. 1770, d. 1861), a very prominent actor in the Polish revolution of 1830, son of Prince Adam Casimir, was born at Warsaw, studied at the University of Edinburgh, and on returning to Poland, in 1792, joined the force of Kosciusko against the Russians, on the failure of which effort he was taken as a hostage to St. Petersburg. Here he acquired the favour of the Grand Duke Alexander, who, on his accession to the throne, appointed him Minister of Foreign Affairs. He accompanied Alexander in the campaign of 1807, having previously been present at the battle of Austerlitz; and on the renewal of hostilities in 1812, he was again by the side of Alexander, whom he accompanied to Paris in 1814. He was curator to the University of Wilna from 1803 to 1821; and was appointed Senator Palatinate of the kingdom in 1815. He took the popular side in the revolution of 1830, was appointed President of the Provisional Government, and was placed at the head of the National Government on Jan. 30th, 1831, when he offered half his property for the service of his country. After the terrible days of Aug. 15th and 16th, he resigned his post, but served as a common soldier in the corps of General Romarino during the last fruitless struggles. When all was lost, he fled, and lived an exile in Paris until his death.

J. B. Ostrowski, A. G., Prince Czartoryski (Paris, 1845); *Gentleman's Magazine*, Aug., 1861; *Nation*, 1865.

Czerny, KARL C. (b. 1791, d. 1857), pianist and composer, was born at Vienna, and in his musical education gained much from his intercourse with Wenzel, Krumpolz, Prince Lichnowsky (Beethoven's patron), Hummel, and Clementi. While still a youth he opened a school of music at Vienna, and soon numbered among his pupils Franz Liszt, Theodor Döhler, and Ninette von Belleville. His first published work, *Twenty Variations Concertants*, for pianoforte and violin, on a theme by his friend Krumpolz, appeared in 1805; and the appearance of his second work, *Rondo Brillante*, in 1818, opened a new epoch in his life. From that time he had difficulty in keeping pace with the demands of the publishers. His industry was truly astounding. He wrote various books of exercises, elementary and advanced; his printed compositions amount to nearly 1,000, and he has left besides an enormous mass of MSS., now in the archives of the *Gesellschaft der Musikfreunde* at Vienna, containing twenty-four masses, four requiems, and 300 graduales and offertories, symphonies, overtures, concertos, string trios and quartets, choruses, songs,

and even pieces for the stage. The effect of this incessant activity, however, has been that the host of lesser works has consigned the really good ones to undeserved oblivion.

D

Daguerre, LOUIS JACQUES MANDE (b. 1789, d. 1851), a French artist, the inventor of the daguerreotype, was born at Cormeilles. He early distinguished himself as a scene-painter, and in 1822, with the co-operation of Bouton, he invented the diorama, which they exhibited with great success in London and Paris. About 1830 he began to study photography, and to make experiments in the art. Nine years later his discovery was announced in the Academy of Sciences, a pension of 6,000 francs being granted to Daguerre by the French Government, on condition that the process should be made public. It is probable that the chemist Niépce contributed much to the success of Daguerre's investigations, and recent improvements have brought the art of photography to a perfection that could hardly have been realised by the inventor, in whose time it took twenty minutes to photograph a view.

Lerebours, *Traité de Photographie*.

Dahlgren, JOHN A. (b. 1809, d. 1870), an American rear-admiral, was born in Philadelphia. Whilst still very young he showed a taste for the construction of ordnance, and in 1847 was appointed to that department by the United States Government. He subsequently invented the shell-gun which bears his name. In 1861 he was put in command of the navy-yard at Washington, and two years later, when in command of the fleet before Charleston, he attempted to storm Fort Sumter, but was unsuccessful.

Dahlmann, FRIEDRICH CHRISTOPH (b. 1785, d. 1860), German historian and politician, was by birth a Swedish subject, but the whole influence of his life was directed towards Germany. Having studied in Copenhagen and Wittenberg, he was appointed professor of history in Kiel in 1813. But being appointed secretary of the Corporation of Prelates and Nobility of Schleswig-Holstein, he devoted sixteen years to the political problems of those provinces, thus contributing much to their final solution. Having in consequence fallen under royal displeasure, he gladly accepted a call to Göttingen in 1829, and here again took a prominent part in politics as representative of the University at the Assembly in Hanover. Here, too, he published his two greatest works, the *Politics* (1835), which became the text-book for a whole generation of German statesmen, and his *History of Denmark*. On the death of

William IV. of England, Dahlmann was one of the seven professors who protested against the overthrow of the Constitution by the Duke of Cumberland, and he, together with Jacob Grimm and Gervinus, was dismissed from his professorship. Having wandered about from Jena to Leipzig for five years, he was invited to Bonn in 1842, and for the next six years was perhaps the most popular professor in Germany. In 1844-5 he published his histories of the English and French revolutions. At the revolution of 1848 he played an important part in the reconstruction of the Constitution, insisting especially on his famous second article, which forbade the union of Austrian States with Germany. After 1850 he retired to his professorial work.

Dahomey, THE KINGS OF:—(1) **Gezo** (d. 1858) succeeded his brother Gaze, who abdicated in 1818. He was a warlike king, and organised the Amazon Guard, about which such exaggerated stories have been told. Nevertheless, he was not inimical to Europeans, and in 1849 was visited by Commander Forbes, a visit which was repeated in 1851. Gezo was induced to sign a treaty for the suppression of the slave trade, which was so much waste paper. He left behind him a great name as a warrior and king, although in 1851 he received a crushing defeat from the independent settlement of Abeokuta. (2) ***GLELE** (b. 1820) succeeded his father in 1858. At the "grand customs" performed in honour of his father he massacred about 600 men. In 1862 he seized and is said to have crucified Doherty, a Scripture reader, and was thereupon visited by Captain Wilmot, R.N., but no satisfaction was obtained. In 1864 he too was defeated by Abeokuta. Relations between England and Dahomey became severely strained in 1876, when the king treated European traders with great brutality, and refused compensation. A blockade, however, reduced him to reason, and in May of the following year he made concessions.

R. P. Burton, *Mission to the King of Dahomey*; Skertchley, *Dahomey as it is*.

***D'Albert, EUGÈNE** (b. 1861), pianist and composer, is the son of Mr. CHARLES D'ALBERT (b. 1815), at one time a dancer at Covent Garden, afterwards a teacher of music, and the author of several well-known waltzes. Eugène D'Albert was a student at the National Training School, South Kensington, where he received lessons in composition from Dr. Arthur Sullivan, and in execution from Ernst Pauer. His first public performance was at a students' concert in St. James's Hall, in 1879, when he performed an overture of his own. In the autumn of 1880 he appeared at the Monday Popular Concerts, exciting the highest enthusiasm by his rendering of Schumann's *Études symphoniques*; and a year later he performed a magnificent piano concerto in A of his own composition at a Richter concert.

Herr Richter subsequently took him to Vienna, and he has been enthusiastically received in Berlin and other German cities, Liszt himself expressing the highest admiration of his extraordinary power. He promises to become one of the greatest pianists of this century, and a great composer.

Dalhousie, JAMES ANDREW BROWN-RAM-SAY, FIRST MARQUIS AND TENTH EARL OF (*b.* 1812, *d.* 1860), was the third and eldest surviving son of the ninth earl, and educated at Harrow, and Christ Church, Oxford, where among his contemporaries were Lords Canning and Elgin. In 1836 he married Lady Susan Hay, daughter of the Marquis of Tweeddale. In 1837 he was returned to Parliament for Haddingtonshire, but in 1838 his father's death called him to the House of Lords. An ardent supporter of Peel, he became, in 1841, Vice-President of the Board of Trade under Mr. Gladstone, and in 1844 President. In this capacity he had great influence on the development of the railway system, and overworked himself so much as to permanently impair his health. In the crisis of 1846 he adhered firmly to Peel, but, on that minister's resignation, he was continued in office by Russell. On Jan. 12th, 1848, he was appointed to succeed Lord Hardinge as Governor-General of India. The condition of India was at the time critical. The unsatisfactory compromise which left the Sikhs in possession of the Punjab soon became unworkable, and the young Governor's first work was the successful conduct of the great Sikh War, which, after the decisive battle of Gujerat, led to the annexation of the Punjab (1849). The organisation of the conquered province first indicated the very exceptional capacity which Dalhousie possessed as an administrator. Carried out by the Lawrences, it became the model for future Indian statesmen, and secured in a very short time the loyalty of the martial race defeated at Gujerat. In 1852 Dalhousie successfully directed the second Burmese War, and annexed Pegu to British India. Besides these conquests, he was compelled in several instances to annex protected States, where either heirs of the old princes had failed or misgovernment had reached so extreme a height that it could no longer be endured. Of the former class, Nagpore (1853), Berar and Sattara, of the latter Oudh (1856), were his chief annexations. But though Dalhousie's acquisitions were so considerable, he made few of them willingly, and devoted his best energies to the organisation of the great empire which he ruled. Under him the Civil Service was thrown open to English and Hindoos alike. Great public works were instituted, and the Department of Public Works separated from the Military Department. Railways and telegraphs were introduced, roads and canals opened out, including the great Ganges canal. The Forest Depart-

ment was organised. A legislative council was created, and the Lieutenant-Governorship of Bengal established. The last disabilities of native Christians were removed. Cheap postage and primary schools were introduced. In the midst of such extraordinary activity, Dalhousie's health, never very strong, began to fail. His wife's death in 1853 profoundly affected him. He stayed to complete the annexation of Oudh, and then in 1856 left India, remaining several months at Malta on his way home to prepare for an English climate. He was succeeded by his friend Lord Canning, whose rule almost begins with the outbreak of the Indian Mutiny. At first there was some disposition to make the retiring Governor a scapegoat. His passion for change, his want of sympathy for the native princes, his interference with their internal government, his disregard for their law of adoption, his refusal to continue to Nana Sahib the pension of the Peishwa, his annexations and conquests, were all denounced. But even amidst the extreme excitement of public opinion, the baselessness of such charges against one of the greatest of Governors of India was soon apparent. If Dalhousie had been able to carry out his military policy as well as his general policy, if the English troops withdrawn for the Crimean War had been restored, the Mutiny might almost have been diverted, or at least made less dangerous. The formal thanks of Parliament, and his elevation to a marquise, were public repudiations of such charges. But Dalhousie's health was fatally shattered, and he died when only forty-eight years of age. Few men have won a greater, purer, or more lasting fame in less time. The last Governor-General under the Company was worthy to be ranked beside his most distinguished predecessors.

Marshman, *History of India*, vol. iii.; Duke of Argyll, *India under Dalhousie and Canning*; Sir C. Jackson, *Vindication of the Marquis of Dalhousie's Indian Administration*; Dalhousie's *Minute*, reviewing his administration in India (1856). [T. F. T.]

Dallas, GEORGE MIFFLIN (*b.* 1792, *d.* 1864), an American politician, was born at Philadelphia, and was admitted to the bar in 1813. Two years later he first declared his political opinions, by an address to the Democrats of Philadelphia in vindication of the war of 1812. In 1831 he was elected by the Democrats to the Senate of the United States, where he took a prominent part in the stormy debates of that period, advocating very strongly the tariff of 1842, and the re-charter of the United States Bank. In 1846, during the great dispute upon the tariff, as President of the Senate he gave a casting vote for the abolition of a measure which was obnoxious to the majority of the people, and opposed to the principles of Free Trade. He held the office of ambassador at St. Petersburg from

1837 to 1841, and was American minister in England from 1856 to 1861, retiring from public life upon the election of President Lincoln.

Dalling and Bulwer, HENRY LYTTON EARLE BULWER, LORD (b. 1804, d. 1872), diplomatist and author, was the son of General Bulwer, of Heydon Hall, Norfolk, by Elizabeth, daughter and heiress of Mr. R. Warburton Lytton, of Knebworth. He was educated at Harrow, and Trinity College, Cambridge. After five years of service in the Life Guards, he entered upon a diplomatic career in 1829, and was attached successively to the British embassies at Berlin, Vienna, and the Hague. In 1830 he was elected in the Liberal interest for Wilton, but the same year was sent on a special mission to Brussels. He sat in the House of Commons for Coventry (1831-2), and for Marylebone (1834-7). In 1835 Bulwer was made secretary of legation and *chargé d'affaires* at Brussels. He was afterwards secretary of embassy at Constantinople and Paris, and in 1840 he was gazetted interim minister at the Court of France during the absence of the ambassador. From 1842 to 1848 he was minister plenipotentiary at Madrid, and in Dec., 1849, he was named plenipotentiary at Washington. He negotiated the well-known Clayton-Bulwer Treaty, which remains a conspicuous monument to the diplomatic ability of the English representative. This treaty related to the establishment of a communication by ship canal between the Atlantic and the Pacific Oceans. It was signed April 19th, 1850, and consisted of nine articles. The contracting parties declared that they would not erect fortifications on the banks or in the vicinity of the proposed canal, and that they would not assume dominion over Nicaragua, Costa Rica, the Mosquito coast, or any part of Central America. Lord Dalling and Bulwer was envoy extraordinary to Tuscany (1852-5), and in 1856 he was appointed commissioner to investigate the condition of the Principalities. In 1858 he was nominated to the onerous post of ambassador at Constantinople, in succession to Lord Stratford de Redcliffe. The new ambassador carried out with discretion the Palmerstonian policy in the East. Though following one of the ablest and most astute of ambassadors, he acquitted himself creditably during a difficult period. Returning to England in 1866 as Sir Henry Bulwer, he shortly afterwards re-entered Parliament, representing Tamworth from 1868 to 1871. In the latter year he was raised to the peerage. He married the daughter of the first Baron Cowley, but as he died without issue, the title became extinct. Lord Dalling and Bulwer was the author of an *Ode on the Death of Napoleon*, published in 1822, and he issued, in 1826, a work entitled *An Autumn in Greece*, comprising sketches of the character, customs,

and scenery of the country, with a view of its then critical condition. In 1834 appeared *The Monarchy of the Middle Classes; France, Social, Literary, and Political*; and, two years later, a second series of sketches, completing this work, was issued. Lord Dalling and Bulwer wrote, in 1835, a *Life of Lord Byron*, prefixed to an edition of the poet's works. In 1867 appeared his *Historical Characters*, which included incisive biographical and critical sketches of Talleyrand, Cobbett, Mackintosh, and Canning. Lord Dalling and Bulwer's popular *Life of Lord Palmerston* was published in 3 vols. in 1871-4, the last volume being edited by the Hon. E. Ashley. His able survey of the character and career of *Sir Robert Peel* was published posthumously in 1874. Lord Dalling and Bulwer possessed a wide knowledge of French literature, and an intimate acquaintance with the literary, artistic, and political circles of Parisian society. He exhibited much natural grace and refinement, and his calm and unruffled temper enabled him to gain many advantages in the fields of diplomacy and controversial literature.

Annual Register, 1872.

[G. B. S.]

• **Dallinger, WILLIAM HENRY** (b. 1841), an English biologist, was born at Devonport, was educated at private schools, and though brought up in the tenets of the Church of England, he entered the Wesleyan ministry in 1861, and held charges, first at Faversham, and subsequently at Cardiff and Clifton. He then went to Liverpool, where he remained twelve years, and from there was appointed principal and governor of Wesley's College, Sheffield, a post which he still occupies. Dr. Dallinger took an interest in natural history from his early years, and continued to cultivate it as a relaxation from professional study. In 1868 he devoted himself to minute microscopic observation, mainly induced by the controversy then raging regarding the so-called "spontaneous origin" of life. The organisms known as "septic," or putrefactive, were then the subjects of special dispute, and to the study of these minute forms Dr. Dallinger applied himself, aided by the very finest lenses, which, primarily by the instrumentality of this delicate work, have been progressively improved by English and foreign opticians. The outcome of Dr. Dallinger's researches (recorded in the *Proceedings of the Royal and the Royal Microscopical Societies*) was the demonstration that there is a distinct parental origin to all living things, no matter how minute; that, in short, so far as our knowledge can take us, there is no spontaneous generation, and that no force in nature is sufficient, at this time, to change the dead into the living, save through the medium of organisms already living. Dr. Dallinger still prosecutes his work, having given additional facts in his inaugural address

as president of the Royal Microscopical Society (1885). During the progress of the work, Dr. Dallinger received a grant of £100 from the Royal Society; in 1880 he was elected F.R.S., and in 1884, during the Canadian meeting of the British Association, received the hon. degree of LL.D. from the Victoria University.

Dalrymple, Sir Hzw (b. 1750, d. 1830), obtained an ensign's commission in the 31st Regiment in 1762. Eventually he became Governor of Gibraltar (1806-8), and was next placed in command of the British army in Portugal. He arrived at headquarters the day after Wellesley's victory at Vimiera, and superseded Burrard (q.v.), who had already superseded Wellesley, and had prevented him from taking full advantage of his victory. Shortly afterwards Dalrymple concluded the absurdly generous Convention of Cintra with Junot. Indignation was high in England; he was recalled, and for the time disgraced, but in 1812 he was restored to the grade of general, and shortly afterwards made a baronet.

Dalton, John (b. 1766, d. 1844), one of the founders of modern chemistry, was the son of a Cumberland "statesman," whose farm was at Eaglesfield, near Cockermouth. At the age of thirteen he began to earn his living by acting as assistant in the village school, and at the age of twenty-seven went to Manchester, where for forty years he continued giving lessons in mathematics to pupils at eighteenpence an hour. Indeed, during the greater portion of this period he was very little known to his fellow-citizens, who, many of them for the first time, began to inquire what an old Quaker with little to say for himself had done, that at one of the early meetings of the British Association he should have been treated with a respect approaching to reverence. Up to the year 1792 he had never been in London, and living frugally as a bachelor, amid his books and the chemical apparatus with which he amused his leisure, he declined, until 1833, any pension, or the independent competence which several admirers offered to put at his disposal. Twice every Sunday he attended the Friends' Meeting House; for forty years he ate his Sunday's dinner at one friend's table; every Thursday he spent the afternoon in a bowling-green; and once every year he made an excursion amid his native hills. He had few books, and read still fewer, and when in the heyday of his fame, rarely took the trouble to peruse what had been written about him and the "atomic theory" with which his reputation will for ever be associated. Dalton, taking up the question where Newton had left it, began by assuming that matter is only finitely invisible, "so that each element consists of particles or molecules of a definite and unchangeable weight, size, and shape." In

certain chemical compounds the elements unite in a constant proportion. In trying to discover the reason for this phenomenon, Dalton struck upon the "atomic theory" or hypothesis, the explanation of which belongs to the science of chemistry. This was in 1803, though it was not till 1807 that a sketch of Dalton's ideas was given in the third edition of Thomson's *Chemistry*. Instantly it made the art of analysis comparatively easy and accurate, and gave manufacturers a rule by which waste was precluded, by teaching them how to effect combinations without the loss of any material. Another of his discoveries was the existence of "Daltonism," or colour-blindness, which he first detected in himself by failing to see that the soldiers' coats at a review were not different in hue from the grass; and when made D.C.L. at Oxford he could only compare his doctor's gown to the leaves of the trees around him. These were his chief discoveries. But though not a voluminous writer, he published a number of chemical and mathematical papers in the *Proceedings of the Manchester Literary and Philosophical Society*, of which he was latterly president, and in 1810 a *New System of Chemical Philosophy*, in which his "theory" was fully expounded, besides his *Meteorological Observations and Essays* (1793), and in 1801 the *Elements of English Grammar*. A man of singular modesty and industry—and to patience and industry he attributed all of his success—it was with difficulty that he accepted any of the numerous honours proffered him. At first declining to become a candidate for the Royal Society, he was proposed and elected without his knowledge, and four years later received the king's medal. In 1816 he was made a corresponding member of the French Academy of Sciences, and in 1830 was elected one of its eight foreign associates, in room of Davy. In 1832 he received the degree of D.C.L. from Oxford, and in 1833 a Government pension of £150, which three years later was doubled. In 1834 his bust, by Chantrey, was placed by his fellow-townsmen in the entrance hall of the Manchester Royal Institution. In the same year he was presented at Court, and received the degree of LL.D. from Edinburgh, and in 1844, after several attacks of paralysis, he died, and was buried with public honours at Ardwick cemetery, near Manchester. His character was most amiable, simple, and unostentatious. He delighted in the society of educated and refined women, but "had never time to get married." He smoked, but was otherwise most abstemious, and though liberal in money matters when occasion demanded this, was generally so saving that he left a small fortune saved out of his humble earnings.

Henry, *Life of Dalton* (1854); Smith, *Memoir of John Dalton* (1856); and the various histories of chemistry and scientific discovery.

[R. B.]

* **Dana, JAMES DWIGHT** (b. 1813), geologist and naturalist, was born at Utica, New York, and graduated at Yale College. In 1836 he was appointed mineralogist and geologist of the United States Expedition under Captain Wilkes, a tour which lasted six years. He has since published voluminous reports of his observations during the expedition, under the titles of *Report on the Zoophytes, On the Geology of the Pacific, On Crustacea*. Among his most important works are *System of Mineralogy* (which has passed through several editions), and a *Manual of Geology; Corals and the Coral Islands, and Geological Story briefly Told*, are written in a simpler and more popular style.

Dana, RICHARD HENRY (b. 1787, d. 1879), American poet and man of letters, was born at Cambridge, Massachusetts, being the son of Chief-Justice Francis Dana (b. 1743, d. 1811). Having been educated at Harvard, he became associated with Edward Channing in the *North American Review* (1818), published the *Dying Raven* in 1821, and the *Buccaneer*, a long romantic legend, in 1827. Dana also published two novels, *Tom Thornton* and *Paul Felton*, and two or three further collections of poems, but his work seldom rises above the common excellence of the average American poet. His son, also RICHARD HENRY DANA (b. 1815, d. 1882), was the author of a well-known account of sailor life, *Two Years before the Mast* (1840).

* **D'Anéthan, JULES JOSEPH, BARON** (b. 1803), a Belgian statesman, practised for some time at the bar, and in 1831 was appointed Procureur du Roi. In 1836 he became Advocate-General in the Court of Appeal at Brussels, and in 1843 Minister of Justice, which post he held for four years. On the return of the Clerical party to power in 1870, he became Premier and Minister of Foreign Affairs. He resigned in December, 1871, and in November, 1875, was deputed as envoy extraordinary and minister plenipotentiary for Belgium to the Holy See. In June, 1880, however, he was recalled by M. Frère-Orban on the pretext that the Pope encouraged resistance to the laws of the State instead of (as had been hoped) using his influence to moderate the struggle between the Liberals and the Clericals.

Daniell, JOHN FREDERICK (b. 1790, d. 1845), natural philosopher, was brought up as a sugar refiner, but having turned to science was elected F.R.S. in 1814, and in 1820 published a description of his newly invented hygrometer. This was followed in 1823 by *Meteorological Essays and Observations*, a work that had a very large circulation in the scientific world. In 1821 he had been appointed professor of chemistry in King's College, London, after which he devoted himself chiefly to voltaic electricity, and in 1839 published an *Introduction to Chemical Philo-*

sophy. A curious letter of his on the *Study of Natural Philosophy as part of Clerical Education* appeared in 1857, after his death.

Dannecker, JOHANN HEINRICH (b. 1758, d. 1841), sculptor, was the son of an ostler at Stuttgart, but having received some artistic training, early showed signs of his genius for sculpture. In 1775 he won the friendship of Schiller, by whose bust, executed in 1793, and now in the Weimar Museum, Dannecker will be best remembered. On a visit to Rome in 1785, he was favourably noticed by Goethe and Canova. In 1790 he was appointed professor of sculpture at Stuttgart, and continued for many years to work with unabated vigour, producing several of the large stone fountains and monuments that now adorn the town. He reached the height of his artistic power about the year 1816, when he executed the celebrated figure of *Ariadne on the Panther*. After 1825 his powers began to fail for want of stimulus and encouragement in a dull little court town. After Thorwaldsen he may be regarded as the greatest modern sculptor of North Europe.

Dannecker's Werke in einer Auswahl, by Ludwigsb., with a sketch of his life.

* **Dannreuther, EDWARD** (b. 1844), musician, was born at Strassburg, but passed his boyhood at Cincinnati, returning to Germany in 1859, when he studied at Leipzig. In 1863 he came to London, and soon became known as one of the most distinguished musicians, especially as a pianist and musical critic. In 1872 he founded the Wagner Society in London, and promoted the great Wagner festival of 1877, receiving the master into his house. Since then he has been recognised as one of the foremost and ablest champions of the modern school.

D'Arblay, FRANCESCA BURNEY (b. 1752, d. 1840), was the third child of Dr. Charles Burney, the musician, and was born at Lynn Regis, June 13th, 1752. Her childhood was not marked by any promise of great talent, she was backward in her studies, and received little actual schooling. But she belonged to a gifted family, and her powers of mind were stimulated by the society of the numerous writers and artists who frequented her father's house in London, whither he had moved in 1762. In spite of her quiet manners, Fanny Burney had wit and observation, and she soon began to make trial of both by writing tales in secret. One of her stories was burned by her stepmother, who bade her mind her needle instead of scribbling. But the girl's imagination was too strong to be thus summarily suppressed, and, while she taught her sisters or wrought the fine sewing of the period, the creatures of her fancy filled her thoughts, and she soon began to rewrite the burnt story. From the age of eighteen to her twenty-sixth year she worked at the novel, which appeared at last anonymously in 1778, under the title

of *Evelina*; or, a Young Lady's Entrance into the World. Twenty pounds rewarded the long labour of eight years; but the best judges of English literature found true genius in the new writer, and *Evelina* won her the friendship and admiration of Dr. Johnson, who always showed a peculiar tenderness for the shrewd and spirited girl he called "little Burney." Miss Burney's second novel, *Cecilia*, which appeared in 1782, bears evidence of Johnson's influence in its laboured style, and lacks the gaiety and freshness of *Evelina*. Fanny Burney's writings drew upon her the notice of the king and queen, and in 1786 she unwillingly accepted a post at their dull and decorous court; but her health broke down under the strain of duties which were thoroughly distasteful to her, and in spite of her loyal devotion to Queen Charlotte, she pined for liberty. In the *Diary* which records the events of her five years' servitude, she has given many a graphic sketch of the court and royal family; and while the fidelity of the record renders it a valuable authority for the student of social history, its unflinching vivacity and humour make it the most frequently quoted of her works. Soon after leaving the court, she was married (in 1793) to General D'Arblay, a French refugee; the marriage was very happy, and one son was born in 1794. Her later writings were *Camille*, published by subscription for £3,000 in 1796; the *Wanderer*, which realised £1,600, and was published in 1814, after her long residence in France, and the *Memoirs of Her Father*; but none of these is worthy of her reputation, and when she died at Bath, Jan. 6th, 1840, in her eighty-eighth year, she had long passed away from the memory of the public whom she had charmed in her youth. Madame D'Arblay's claim to a place among our chief authors is founded on *Evelina*, the first realistic novel by a woman in which characters are sketched with vigour and fidelity. It appeared at a time when artificiality prevailed over nature, and stilted sentiments were in vogue; when the few women who wrote books were more didactic than humorous, and more apt to imitate conventional models than to draw from nature. Fanny Burney had no forerunner in the field where she has had so many followers. She gave full scope to her healthy love of fun, and sketched her contemporaries with such faithful power that *Evelina* can never be numbered among forgotten classics.

Diary and Letters of Madame D'Arblay, edited by her niece (1842-6). [S. L.-P.]

Darboy, GEORGES (b. 1813, d. 1871), Archbishop of Paris, was born at Faye-Billot (Haute Marne), and having passed through the ordinary ecclesiastical degrees, and been attached for a time to Mgr. Offre in Paris, was appointed to the bishopric of Nancy in 1859, and to the archbishopric of Paris in 1863. The philosophic liberality and toler-

ance of his views made him an object of suspicion in the Vatican. From 1867 to 1869 the uneasiness continually threatened rupture. At the Ecumenical Council of the same year he strenuously opposed the new doctrines, especially the Papal Infallibility. But returning submissively to Paris, he remained at his post throughout the terrors of the siege during the winter of 1870-1, and the subsequent revolution. Arrested as a hostage on April 4th, 1871, he was kept in prison till May 27th, when, after the Versailles troops had already entered Paris, he was shot in the prison de la Roquette. His death was regarded as the darkest blot on the short-lived administration of the Commune.

Darling, GRACE HORSLEY (b. 1815, d. 1842), the heroine, was the daughter of the Longstone light-house keeper, on the Fern Islands, near Bamborough Castle. In September, 1838, the steamer *Forfarshire* having gone on the rocks in a heavy gale and parted amidships, she with difficulty induced her father to put out in a small open boat with her, and succeeded in rescuing nine of the crew. Forty-five were drowned. A public subscription was opened for her; she was presented to the Queen, and her little boat is still preserved as a memorial of the deed.

Grace Darling: her true Story, from unpublished Papers in Possession of the Family (1880).

D'Arrest, HEINRICH LUDWIG (b. 1822, d. 1875), a German astronomer of some note, who was born in Berlin, and at an early period of life became a pupil of the celebrated Encke. After graduating Ph.D. he became assistant at the Berlin Observatory, and in 1848 removed to Leipzig, where, in 1851, he published *Über das System der kleinen Planeten zwischen Mars und Jupiter*. But seven years earlier, when little more than a student, he had distinguished himself by discovering a comet, and during the years 1845, 1851, and 1857, was so fortunate as to make similar discoveries. These evidences of his acuteness as an observer, and his learning as an astronomer, led to his being called in 1857 to take the Chair of astronomy in Copenhagen University, when a new observatory was built for him in 1861, on elevated ground in the outskirts of the district of Østerbro. Here he resided to the close of his life, pursuing his observations of comets and nebulae, in the course of which he was the first to discover a variable nebular spot. But what rendered D'Arrest's name best known was the discovery of the planet Freia, on Oct. 21st, 1862. Of untiring industry, D'Arrest published a vast number of papers in the different astronomical journals, besides the treatise mentioned, and his *Siderum nebulosorum Observationes Hafnienses* (1867), which contains 4,800 positions and 1,942 nebulous spots, among which are 400 discovered by himself. He died rather suddenly, his end being, it is believed, hastened by the steady

devotion of his life to his chosen work. D'Arrest was of French descent, and in his acuteness of observation and clearness of statement was more Gallic than Teutonic in intellect. But his industry is altogether German, though it may be added that the somewhat exaggerated estimate he entertained regarding his own merits, and the hauteur of a specialist which he was apt to bestow on every other department of intellectual activity, somewhat deteriorated from his personal character; while his supposed or actual German sympathies did not add to his popularity in Danish society. [R. B.]

Daru, PIERRE ANTOINE NOEL BRUNO, COUNT (b. 1767, d. 1829), one of the ablest of Napoleon's administrators, was born at Montpellier, educated for a military career, and early attracted attention by the elegant translations of Horace, and his own trivial verses after the manner of the times. From 1791 till the death of Robespierre he was imprisoned, chiefly at Orleans, on suspicion of sympathy with the English. In 1799, having served for three years under the ministry of Pétiet, he was appointed chief administrator of the army in Switzerland, and after the return of Napoleon from Egypt, and the conclusion of the armistice, he became secretary of the War Department. After this, though displaying the utmost freedom in criticism and suggestion, he advanced rapidly in Napoleon's service, becoming Councillor of State and superintendent of the emperor's household in 1805, and in the following year commissioner for the execution of the Treaty of Presburg, and for a time general administrator to the Grand Army. Though he strongly opposed the policy of the emperor's second marriage, and to the last advised him to choose a Frenchwoman, he was appointed Secretary of State, and as such endeavoured to dissuade Napoleon from the Russian campaign. After the retreat he undertook the administration of the campaign in Saxony, and, faithful to his master to the last, refused to abandon his official position till the abdication at Fontainebleau. After Waterloo he was exiled to Bourges, where he at once set to work upon his great *History of Venice*, completed in 1819, the same year in which he was recalled from banishment. The rest of his life was chiefly spent in literary pursuits, the most important of his numerous publications being a *History of Brittany* (1826), and one or two volumes of poems. His son, * **COUNT NAPOLEON DARU** (b. 1807), who inherits his administrative talent, has also taken a prominent part in public affairs, having served under nearly all the administrations since 1832, even under the Empire as Minister of Foreign Affairs early in 1870. He was a member of the Committee of Defence in Aug., 1870, and has been a senator since 1876. He has voted consistently with the Left Centre.

Darwin, CHARLES, F.R.S. (b. 1809, d. 1882), illustrious English biologist, grandson of Erasmus Darwin, the poet, and of Josiah Wedgwood, the famous potter, was the son of Robert Waring Darwin, a medical practitioner in Shrewsbury, and here the future naturalist was born. There is no evidence that either in childhood or while a boy at Shrewsbury School he displayed any hereditary taste for science, and it was not until he was a medical student in Edinburgh that he began to pay some attention to zoology. However, for medicine as a profession he showed such repugnance that in 1828 he was entered at Christ's College, Cambridge, with, it is said, the intention of taking orders. Here his natural history studies first began in earnest, owing to the enthusiasm aroused in his mind by the lectures, excursions, and pleasant talk of Mr. Henslow, who at that period filled the Chair of botany in the University. Previously, the only zoological objects he cared much for were partridges and foxes. He now devoted himself not only to plants, but to geology and zoology—insects being for a time his favourite theme. In the course of these fresh engrossments, the idea of entering the Church seems to have vanished, or at least fallen into abeyance. At all events, when in 1831 Captain Fitzroy asked Mr. Henslow to recommend a naturalist for the surveying expedition then on the eve of sailing under his command, Darwin, who had just graduated B.A.—not, it appears, with any distinction—was selected, on the post being declined by Mr. Leonard Jenyns (who has since changed his name to Blomefield). Accordingly, in that year began a career which for half a century was the most distinguished in the annals of English science. The *Adventure* and *Beagle* visited South America, Australia, the Cape of Good Hope, and many of the Pacific and Atlantic islands, and Darwin, leaving the ship at Valparaiso, crossed the continent to Buenos Ayres, discovering on the way those gigantic bones of extinct mammals, which first brought him into notice. But though tortured by dyspepsia, and a martyr to sea-sickness, he was indefatigable in pursuing his researches—in general, it may be added, at his own cost, since the Admiralty had made no provision for expeditions such as he undertook. The nature of volcanic islands and coral reefs were first investigated by sea, the animals and plants of the countries visited collected and studied, the habits of the people noted, and, in brief, the foundation laid for the numerous works which he subsequently published, and of the "theory" with which his name is most familiarly associated. Returning from this voyage of five years, he married his cousin, Miss Wedgwood, and for the rest of his life lived in a quiet country house surrounded with gardens, at Down, not far from Bromley, in Kent, rarely stirring from

home, except for a brief excursion, and entirely engrossed in his scientific pursuits. The owner of an ample fortune, which was greatly increased by the death of a brother, Mr. Darwin could devote the entire period of his working life to his unremunerative studies, unharassed except by feeble health. Although the newspapers would insist on giving him the title of "Professor," he neither sought, nor did he require to seek, any official or other employment, and, except for the scientific honours which fell thick upon him, he received none of the less substantial rewards which foreign governments are in the habit of bestowing on those who have done honour to their native land. In 1839 appeared his *Journal of Researches during a Voyage Round the World*, and about the same period he contributed extensively to the official narrative of the expedition. In 1842 he issued the *Structure and Distribution of Coral Reefs*, in which he enunciated the theory which, with some modifications—introduced by Dana and the *Challenger* naturalists—is still held. In 1844 his *Geological Observations on Volcanic Islands, etc.*, and in 1846 his *Geological Observations in South America*, were published. Papers in various journals also appeared; among others, his observations on the formation of vegetable mould, which formed the basis of his subsequent work on the subject (1881), and on the presence of glaciers in Great Britain. In 1851 and 1854 the Ray Society issued his monograph of the *Cirrhripedia* in two large volumes, and soon afterwards his monograph of the *Fossil Lepadæ and Balanoidæ of Great Britain* was issued by the Palæontographical Society. These works contained the result of a vast amount of industry, though all the time he had been labouring at the work which was to eclipse any of his previous efforts. To his intimate friends it was well known that for many years he had formulated a theory to the effect that the species of plants and animals now on the earth were not created as they at present appear, but are the descendants of vanished forms entombed in the crust of the earth, which, falling in the "struggle for existence," have been superseded by others, which, by gaining some advantage in the process of natural selection, have perpetuated these accidental advantages. But he had always hesitated to promulgate his views until, hearing that Mr. A. R. Wallace had struck upon a generalisation almost identical, it was resolved that the two papers embodying these ideas should be read at the same meeting of the Linnean Society. This was the germ of the *Origin of Species*, published in 1859. It immediately created a profound sensation, and was received with almost equal applause and abuse. The author was on one side vaunted as the prophet of a new revelation, and on the other as the assailant of Divine Revelation. Reviews of the book

appeared in almost every publication. Sermons were preached against it. Lectures were delivered in its elucidation. Translations and commentaries appeared in almost every European language, and in a short period the scientific world ranged itself into two camps—the one for, the other against, the "Darwinian theory." The very phraseology of the work became part of the everyday language of life. In twenty-seven years the excitement aroused by the novel ideas then taught has subsided. The majority of biologists have either partially or entirely adopted "Darwinism" as an article of their faith; and when he died and was buried in Westminster Abbey scarcely a dissentient voice was raised against the honours then paid to one who a few years before had been denounced as an enemy of religion and the foremost of atheists, and who never made any pretence of holding the tenets of Christianity. This revolution was due partly to the general advance which had taken place in the intellectual culture of the preceding half-century, and partly to the good-fortune of Mr. Darwin in having on his side the powerful advocacy of nearly all of the chief naturalists in Europe and America. But no small portion of the change may be attributed to the cogent arguments which he continued to pour forth in support of the doctrines outlined in the *Origin of Species*. Thus, in 1862, appeared *The Fertilisation of Orchids*, a work which gave physiological botany an immense impetus. *Climbing Plants* appeared in 1865; *Varieties of Plants and Animals under Domestication*, in 1868; *Descent of Man*, in 1871; *Expression in Man and Animals*, in 1872; *Insectivorous Plants*, in 1875; *Effects of Cross Fertilisation in the Vegetable Kingdom*, in 1876; *Different Forms of Flowers in the Same Species*, in 1877; *Movement in Plants*, in 1881; and in the same year his work on *Earth Worms and Vegetable Mould*. Personally the character of Mr. Darwin was most lovable, and though associated with extreme views he was the most tolerant of men. So far from showing the wild enthusiasm of some of his less instructed disciples, he always inculcated caution, and was ever ready to discuss the points in which his hypothesis failed to account for the phenomena of life. It is unnecessary to add that he would never have listened to the fanaticism of those who would make the acceptance or rejection of his theory the Sibboleth or Shibboleth of scientific soundness, and pronounce men like Agassiz, Carpenter, and Owen, who never adopted it, as behind the age, the "fossils of biology," from the moment they took up that position. Like the "true philosopher" of Bacon, he loved "truth better than his theory." This is not the place to discuss whether his doctrines will live, but it may be pronounced without fear of contradiction that no man, living or dead, ever more powerfully influenced

natural history. Had he never promulgated the "theory" by which he is best known, the immense number of facts which he added to science would have entitled him to the highest place in zoology, botany, and geology. But when the boldness of his generalisations and the great school which he has founded are taken into account, it is, perhaps, no exaggeration to bracket him with Newton, Kepler, and Tycho Brahe. During his lifetime he was honoured by every country in the world; his house was the Mecca of naturalists, and in 1885 a statue of him, erected by a world-wide subscription, was placed in the British Museum (Natural History Department).

"Darwinism" is already the theme of a considerable literature, especially in German and Italian: a list of the chief of these works may be found quoted in Professor Winchell's article "Darwinism" in the *Encyclopædia Americana*. His life and labours have been the theme of innumerable articles, and it is understood that Dr. Francis Darwin is at present engaged on an exhaustive biography of his father. Meantime the main facts of his career, with a very friendly estimate of his discoveries, may be found in the following works:—*Memorial Notices of Mr. Darwin* (by various hands, 1882); Krause's *Charles Darwin und sein Verhältnis zu Deutschland* (1885); Wallace's article in *Century Magazine*, vol. iii., pp. 420-432; and Grant Allen's *Darwin* (1885). [R. B.]

* **Darwin**, GEORGE HOWARD, F.R.S. (b. 1846), geologist and astronomer, the son of Charles Darwin, was educated at Trinity College, Cambridge, where he graduated as second wrangler in 1868, subsequently becoming a fellow. Of his papers read before the Royal Society, of which he became a fellow in 1879, we may mention those on *The Influence of Geological Changes on the Earth's Axis of Rotation* (1876); and on *The Remote History of the Earth* (1878). In 1883 he was appointed Plumian professor of astronomy and experimental philosophy at Cambridge. His younger brother, Mr. FRANCIS DARWIN, is also a distinguished man of science, and is known to have shared in the production of some of his father's more recent works, such as *The Power of Movement in Plants* (1881).

* **Dasent**, SIR GEORGE WEBER (b. 1820), Norse and Icelandic scholar, was born at St. Vincent, and educated at Magdalen Hall, Oxford. After being called to the bar, he published his translation of *The Prose or Younger Edda* (1842); *The Norsemen in Iceland* (1855); and *Tales from the Field* (1873). He has also been engaged in editing and translating Icelandic grammars and dictionaries. For some years he was assistant editor to the *Times*. Besides his works of scholarship, he has written novels, *Annals of an Eventful Life* (1871), *Three to One* (1872), and *Half a Life* (1874). He was knighted in 1876.

D'Aubigné, JEAN HENRI MERLE (b. 1794, d. 1872), theologian and ecclesiastical historian, was born at Geneva, and studied

under Neander in the University of Berlin. After being pastor for some years at Hamburg and Brussels, he returned to Geneva as professor of Church history in the Evangelical Theological College. His greatest work, *The History of the Reformation in the Sixteenth Century*, in 5 vols., appeared between 1835 and 1853, and soon became popular in nations where the Evangelical party was strong, especially in England and America. He also wrote a *History of the Reformation in Europe at the Time of Calvin*, the three concluding volumes of which appeared after his death, besides several minor works, such as *Germany, England, and Scotland*. He died at Geneva.

* **Daudet**, ALPHONSE (b. 1840), novelist, was born at Nîmes, and, having come to Paris in 1857, laid the foundation of his celebrity by a volume of poetry, called *Les Amoureux*. He continued to write poems, essays, plays, and even newspaper articles for some years before he discovered his true powers as a novelist. *Le Petit Chose*, his first attempt, appeared in 1868. But the disasters of the war seemed first to kindle his genius into flame. His great series of novels began to appear soon after its close, and continued in uninterrupted succession, raising him to the highest rank amongst living novelists. He has drawn the portrait of modern France with something of the skill with which Balzac drew the France of the Orleanist reign. His greatest works are:—*Fromont jeune et Risler aîné* (1874); *Jack*, a story of a workman (1876); *Le Nabab* (1878); *Numa Roumestan*, perhaps the most popular of all (59th edition published in 1881); *L'Évangéliste* (1883), *Sapho* (1884), and *Tartarin sur les Alpes* (1886). Several of his novels, notably *Sapho*, have been dramatised with great success. His brother, * ERNEST DAUDET (b. 1837), has lived a similar life, and is also a distinguished novelist and man of letters, especially remarkable as one of the most prominent political writers of the Republican party. Of his novels, we may mention:—*Thérèse* (1859); *La Petite Sœur*; *Le Prince Pogoutzine*, and *Jean le Gueux*; of his political works, *La Vérité sur la Fusion* (1873); *La Terreur Blanche* (1878); *Souvenirs de la Présidence du Maréchal MacMahon* (1880).

Jules Claretie, Alphonse Daudet; A. Gerstmann, *Leben von Alphonse Daudet*.

* **D'Aumale**, HENRI EUGÈNE PHILIPPE LOUIS D'ORLÉANS, DUC (b. 1822), the fourth son of Louis Philippe, was born in Paris, and having been educated at the Collège Henri IV., entered the army at seventeen. He had already inherited a large fortune through the extinction of the Condé family. Having joined the army in Algeria in 1842, he greatly distinguished himself by his brilliant capture

of the camp of Abd-el-Kader, near Goudjilab, and remained in Algeria till 1844, with the exception of a short visit to Paris, where he witnessed the funeral of his favourite elder brother, the Duc d'Orléans. In 1844 he married Marie Caroline Auguste de Bourbon, daughter of the Prince of Salerno. She died in 1869. In 1847 he succeeded Marshal Bugeaud as Governor of Algeria, but on the news of the revolution of the following February, he resigned his command to General Cavaignac, and retired to England, where he resided chiefly at Claremont or Twickenham, devoting himself to literary work, such as the *History of the Princes of the House of Condé* (suppressed till 1869), and political pamphlets, of which we need only mention his spirited answer to the attack made upon the Orleanist family by Prince Napoleon in 1861. It was entitled *Lettre sur l'Histoire de France*, was suppressed and prosecuted in Paris, and led to a challenge from the duke to the prince, which the latter, always extremely careful of his health, declined, to the general disgust of the army. Having in vain petitioned to be allowed to serve in the French army during the war with Germany, he offered himself to the electors of Oise as a candidate for the Assembly early in 1871, and, having expressed his willingness to serve under a republic, was elected by a large majority, and returned to France in June after the repeal of the decree of banishment, but did not enter the Assembly till December. Having been restored in the next year to his rank as general of division and his French property, he was appointed, in 1873, to preside at the trial of Marshal Bazaine, and earned great popularity during the proceedings by his dignity and patriotism. Being nominated to command the seventh army-corps in the following autumn, he refused to take further part in political life, devoting himself entirely to his military duties. But in January, 1883, during the panic caused by Gambetta's death and the issue of Prince Napoleon's manifesto, a bill was proposed by M. Ballue in the Assembly for the expulsion of all royal descendants, not only from the army, but from the soil of France. After much difficulty, the bill, in an altered form, was laid before the Senate, but was rejected. M. Ferry succeeded to power with a new ministry, and General Thibaudin, as Minister of War, deprived the Orleanist princes of command in the army by utilising a law of 1834. In 1886 the Duc d'Aumale was expelled from France, and subsequently made public his bequest of the Chantilly estate to the nation.

Daumer, GEORG FRIEDRICH (b. 1800, d. 1875), philosopher and poet, was born at Nuremberg, and educated at the Gymnasium there, under Hegel. After being for a time a master at the same school himself, he retired on a pension, and devoted himself entirely to

the workings of his thought and imagination. His first work, *Indication of a System of Speculative Philosophy*, was published in 1831. It was followed by numerous other works of the same tendency, the philosophy of which may be regarded as in many respects parallel to Schopenhauer's, though in Daumer the forces of the two principles of life are reversed, and consequently result in progressive optimism. Of his poems, his *Hafiz* (1846) is most artistically complete, though the *Songs of Mary* (1841-59) have higher philosophic interest, the Virgin being worshipped as the incarnation of the great fruitful powers of Nature, out of which all progress must grow.

Daunou, PIERRE CLAUDE FRANÇOIS (b. 1761, d. 1840), politician and man of letters, was born at Boulogne, and though he had received an ecclesiastical education, was returned to the National Convention of 1792 with Carnot and Tom Payne as colleagues. Having rendered himself conspicuous by his opposition to the king's trial, and as an author of constitutional pamphlets, he was imprisoned and narrowly escaped the guillotine. Released in 1794, he played a prominent part in the work of reorganisation, and in the following year became President of the Convention, and afterwards a member of the Committee of Public Safety, and first president of the Council of Five Hundred. After visiting Rome in 1797 to organise the republic there, and serving under the First Consul in the Legislative Commission, he withdrew from public life in 1802, suspecting the designs of Napoleon, and became guardian of the Panthéon Library, where he published several valuable works of research, devoting himself chiefly to the study of Boileau and the history of the Popes. After the restoration he became editor of the *Journal des Savants*, was returned to the Chamber in 1818, and elected professor of history in the Collège de France, continuing to sit in the Chamber till 1834. In spite of the frequent changes and revolutions of his troublous times, he almost alone succeeded in retaining the respect and esteem of all parties. Of his extremely numerous works, historical, critical, and legislative, the collection of his proposals and speeches in the Convention alone possesses permanent interest.

Saint-Beuve: *Revue des Deux Mondes*, Aug., 1844.

David, FELICIEN CÉSAR (b. 1810, d. 1876), French composer, was born at Cadet (Vaucluse), and having learnt the elements of music, came to Paris in 1830, and was there introduced to the Conservatoire by Cherubini. But having thrown in his lot with the Saint-Simonists, he sailed to the East with Father Enfantin in 1832. After suffering imprisonment at Constantinople, and wandering about in the Egyptian deserts with a piano, he returned to Paris in 1835, and published the *Mélodies orientales*; but meeting with no

recognition, he retired to the country, and spent some years on his great "Symphonic Ode," the *Desert*. It was first performed in 1844, and the success was sudden and astonishing. Though quickly followed by other works of a kindred character, namely, *Moses on Sinai*, *Christopher Columbus*, and *Eden* (1848), the *Desert* remains far the greatest monument of David's genius. He also wrote a few comic operas, *Lalla Rookh* (1862), *The Sapphire*, and others unworthy of mention. He succeeded Berlioz as librarian of the Paris Conservatoire.

David, FERDINAND (b. 1810, d. 1873), German violinist and composer, was born at Hamburg, and at thirteen was received by Spohr as a pupil. At sixteen he removed to Berlin, was leading violinist in the Theatre Royal for three years, undertook some very successful musical tours in Russia, and in 1836 settled at Leipzig, where he became leader of the orchestra under Mendelssohn, and violin instructor at the Conservatorium. Throughout his life he remained one of the greatest German violinists, and perhaps the very greatest instructor. He also composed many excellent *salon* pieces, not only for his own but for other solo instruments, and published one of the most valuable instruction books of the century. His arrangements of the early classical compositions for the violin are well known.

David, JACQUES LOUIS (b. 1748, d. 1825), the French artist, was born at Paris, and brought up by his uncle Buron, his father having been killed in a duel. Having early shown signs of his future genius, the boy was entrusted to Vien, to whom he owed the chief part of his artistic education. In 1775 he accompanied him to Rome, and after prolonged study of the classical models, he produced his first great picture, *La Peste de Saint Roch* (1779). This work at once raised him to fame, and having returned to Paris he was admitted to the Academy of Painting for his *Bélisaire*, and created academicien for his *Mort d'Hector*. Other representations of classical subjects now rapidly succeeded, the most celebrated being *Les Horaces* (painted in Rome, 1785), and *Brutus* (1789). After the outbreak of the revolution he was commissioned by the Assembly to execute a painting of *The Oath in the Raquet Court*, a work which remains one of his best known pictures through the engravings. Returned to the Convention as Deputy for Paris in 1792, he took a somewhat prominent part in public affairs during the next two or three years, acting as one of the judges at the king's trial, and arranging all the strange national festivals and stranger costumes of the time. He also painted three or four scenes of contemporary history, such as the death of Marat in his bath, spoke frequently from the tribune with all the stilted pedantry of classical patriotism, and was recognised as one of

the most devoted supporters of Robespierre. Imprisoned for some months after the latter's fall, he regained his liberty through the amnesty of 1795, and returned to less adventurous arts. After the completion of the *Sabines*, now in the Louvre, and the first sketch of *Thermopylae* (finished in 1814), David was introduced to Napoleon on his return from Italy, and painted the portrait of the general crossing the Alps on horseback. After his proclamation as emperor, Napoleon appointed David his chief painter, and employed him to decorate the hall at Versailles with enormous scenes of his coronation, enthronement, etc. Only two of these were finished when, at the return of the Bourbons, David was forced to retire as an exile to Brussels. Here he continued to devote himself to his art with unwearied diligence, engaged chiefly upon portraits and subjects of classical mythology till his death. David may be regarded as the typical representative of the pseudo-classical art favoured by fashion at the end of last century and the beginning of this. His figures are statuesque, chilling, affected, and unreal; his motives display all the refined virtue and elegant heroism of republican magniloquence. His youths in polished nakedness do battle daintily, and harangue in lofty strain, like excited French amateurs on a classic stage. Nevertheless, his work is invaluable for the proper understanding of the spirit of the revolutionary leaders. His pictures ought to be printed as permanent illustrations of Robespierre's speeches and the despatches of Barrère. One of his grandsons, *JÉRÔME FRÉDÉRIC PAUL DAVID (b. 1823), was a Conservative politician of some importance under Napoleon III., and since the war has been a steady supporter of the Conservative Opposition. Another grandson, J. L. Jules David, published *Le Peintre Louis David, Souvenirs et Documents Inédits* (1880).

***Davidson, THE REV. SAMUEL** (b. 1807), Biblical critic, was born at Ballymena, in Ireland, and having studied at the Royal College, Belfast, was appointed to the Chair of Biblical criticism there in 1835, but having inclined rather to Congregationalism than Presbyterianism, he became professor of Biblical literature in the Lancashire Independent College at Manchester, in 1842. After this important works on Biblical criticism followed each other rapidly, the most widely known being, *The Ecclesiastical Polity of the New Testament* (1848-51), the second edition of his *Biblical Criticism* (1852), and *The Text of the Old Testament and the Interpretation of the Bible* (1856), being the second volume of *Horne's Introduction to the Sacred Scriptures*. The liberal tendencies of this work brought him into collision with the authorities of his college, and Mr. Davidson was obliged to resign his Chair. During his subsequent residence in London he has continued his work with zeal and patience, and

amongst other important treatises, had published *Canon of the Bible* (1877), and *The Doctrine of Last Things* (1882).

* **Davidson**, THOMAS (b. 1817), a high authority on palæontology, was born in Edinburgh, but educated in France and Italy. He has devoted his attention to geology in general, but especially to the fossil Brachiopoda, on which he has published an exhaustive monograph—*British Fossil Brachiopoda* (5 vols.). On the return of the *Challenger* he was entrusted with the examination of the Brachiopoda, and published his report in 1880. Amongst numerous other awards from scientific societies he was presented with the gold medal of the Royal Society in 1870.

* **Davies**, THE REV. JOHN LLEWELYN (b. 1826), theologian, was born at Chichester, and educated at Trinity College, Cambridge, of which he became a fellow in 1850. After being incumbent of St. Mark's, Whitechapel, for four years, he was appointed to Christ Church, Marylebone, in 1856. He was for some years a representative of Marylebone on the London School Board, and principal of Queen's College, Harley Street. Besides numerous volumes of sermons and the *Translation of Plato's Republic* (Davies and Vaughan), he has published little or nothing in permanent form, but his frequent contributions to periodical literature have exercised a wide and high influence on the formation of the "Broad Church" party.

* **Davis**, HENRY WILLIAMS BANKS, R.A. (b. 1833), English landscape artist, was born at Finchley, and studied at the Royal Academy. His first work to be exhibited there was *Rough Pasturage* (1861), and since then his contributions have been frequent and regular. We may mention:—*The Strayed Herd* (1866); *Dewy Eve* (1870); *In Picardy* (1874); *The loving herd winds slowly o'er the lea* (1878); *Returning to the Fold* (1880), purchased by the Royal Academy; *Showers in June* (1882); *Ben Eay* (1883); *On the Hill-side* (1884), and *Done Work* (1885). Mr. Davis was elected Associate of the Academy in 1873, and Royal Academician in 1877. He is conspicuous amongst landscape painters for his accurate and sympathetic rendering of animal life.

* **Davis**, JOHN CHANDLER BANCROFT (b. 1822), an American lawyer and diplomatist, the son of the late Senator John Davis, a noted Protectionist, and nephew of the Hon. George Bancroft, the historian, was educated at Harvard College, joined the American bar, and in 1849 went to London as secretary to the Legation, where the historian was minister to England. In 1854 he became American correspondent of the *London Times*, and in 1869 Assistant Secretary of State. He acted as agent for the United States at the Conference held in connection with the *Alabama* dispute, which accepted the Treaty of Wash-

ington in 1871; and gained considerable notoriety at the time for having revived the indirect claims of the United States on England which (in the belief at least of the English diplomatists) had been discussed and waived at Washington. The principal claims of the "indirect" class thus put forward included the national loss incurred through the transfer of much of the American commercial marine to the British flag, the enhancement of insurance, and the prolongation of the war; and the addition of a large sum to the cost of the war and suppression of the rebellion. England resolutely refused to recognise these claims, whilst the States persisted in introducing them. The Treaty of Washington fixing arbitration was likely to fall through, when happily the United States yielded, and the Conference took place, as originally agreed upon, at Geneva, where Mr. Davis acted on behalf of the Government of the United States. In 1878 he became a judge of the Court of Claims, and in 1881 resumed his old post as Assistant Secretary of State, which, however, he has since resigned. Mr. Davis is the author of *The Massachusetts Justice* (1847); *The Case of the United States at Geneva* (1872); *Mr. Sumner, The Alabama Claims and their Settlement* (1878), and *Les Tribunaux des Procès des Etats Unis* (Paris, 1878); and he has been an occasional contributor to the *Edinburgh Review*.

* **Davis**, JEFFERSON (b. 1808), American statesman and soldier, is a native of Kentucky, and was educated at Transylvania College. He graduated at the West Point Military Academy in 1828, and served in the army for seven years. As first lieutenant of dragoons, he conducted, in 1834, various expeditions against the Comanches, Pawnees, and other hostile Indian tribes. He left the army in the succeeding year, married the daughter of Zachary Taylor (afterwards President), and settled down at Mississippi as a cotton planter. Elected to Congress in 1845, he speedily manifested much interest in the questions of the day. In 1846 he was elected colonel of the first regiment of Mississippi Volunteers, and distinguished himself in this capacity at Monterey and Buenvista. Entering the United States Senate in 1847, he was re-elected for the ensuing full term in 1850, and was chosen chairman of the committee on military affairs. He strongly defended the policy of the Slave States, and the doctrine of State rights. He resigned his seat in the Senate to contest the governorship of Mississippi, but was defeated by the Union candidate. Mr. Davis was appointed Secretary of War by President Pierce in 1853, and he held this post till the inauguration of President Buchanan in 1857. In addition to many army reforms, he inaugurated "the system of explorations in the western part of the continent for geographical purposes, and

for determining the best route for a railroad to the Pacific Ocean." Mr. Davis was again member of the Senate from 1858 to 1863. He was one of the most prominent members of the Democratic party, and was frequently mentioned as a candidate for the Presidency. He was a leading member of the secret caucus of Southern senators which met at the Capitol, Jan. 5th, 1861, and framed the scheme of revolution which was shortly afterwards carried into action. The States of South Carolina and Mississippi led the way in seceding from the Union. On Feb. 9th, 1861, Jefferson Davis was unanimously elected by the Confederate Congress which met at Montgomery "President of the Confederate States of America." War ensued, and after the Confederate success at Bull Run, Mr. Davis favoured the diffusion of the forces, and the policy of standing on the defensive, in opposition to the views of Generals Beauregard and Johnston. In Nov., 1861, Mr. Davis was elected by the Confederate States President for the full term of six years, and in the following February the first Congress assembled at Richmond. The President reluctantly yielded to the passing of a conscription law, and on the approach of McClellan's army he declared martial law for ten miles round Richmond. President Lincoln having issued his proclamation of emancipation on Jan. 1st, 1863, Mr. Davis replied by an indignant counter-manifesto, in which he described the emancipation proclamation as "the most execrable measure recorded in the history of guilty man." The war advanced with varying fortunes, but the South sustained serious reverses at Gettysburg, Vicksburg, and Port Hudson. President Davis's policy was now severely canvassed. The finances of the Confederacy collapsed at the beginning of 1863, and charges of mismanagement arose in connection with the commissariat, and of cruelty in the treatment of Northern prisoners. President Davis fought admirably against almost overwhelming difficulties, but at the commencement of 1865 a feeling of despondency began to spread over the South. Mr. Davis still contemplated resistance, however, notwithstanding the contrary advice of his generals. Shortly after the assassination of President Lincoln, Mr. Davis was arrested by a body of Union cavalry at Irwinsville, and conveyed to Fortress Monroe, where he remained confined for two years. General Grant's defeat of Lee practically ended the war. Mr. Davis was brought up at Richmond on a charge of treason, in May, 1867, and admitted to bail, a further charge against him of complicity in the assassination of Lincoln being abandoned. In December, 1868, a *nolle prosequi* was entered in Mr. Davis's case, and he was accordingly discharged. His name was included in the general amnesty proclaimed a few days later. Mr. Davis has devoted himself, in his retire-

ment, to the preparation of a history of the Civil War in which he was so prominent a figure.

Pollard's and Alfried's *Biographies of Jefferson Davis*. [G. B. S.]

* **Davis**, SIR JOHN FRANCIS, BART., K.C.B. (b. 1795), entered upon a Chinese career at the early age of eighteen, as an official in the East India Company's service, and was attached to Lord Amherst's embassy in 1816. In 1832 he became president of the East India Company's factory in China, and soon afterwards one of Lord Napier's assistant commissioners, in arranging the commercial disputes with Canton. In 1834, on the death of Napier, he succeeded to the post of Chief Commissioner, retiring, however, the following year. From 1844 to 1848 he was British plenipotentiary, chief superintendent of British trade in China, and Governor of Hong-Kong. His long experience of the Chinese, and his intelligent sympathy with their prejudices, made him, in many respects, an excellent official; but his conduct in the affair of the Bogue Forts and the Canton expedition of 1847 has been strongly censured. The Home Government could not allow the wisdom of the retaliation thus inflicted for an exhibition of mob bigotry, and Sir John, who had been made a baronet in 1845, retired to England. His numerous works on China are highly esteemed by the public for the intimate acquaintance they display with Chinese life and manners; and his services to linguistic studies include the foundation, at Oxford, of a University scholarship for Chinese, endowed with the sum of £1,666 in Government stock.

* **Davitt**, MICHAEL (b. 1846), Irish politician, is the son of an Irish farmer of Straide, Co. Mayo, from which his parents were evicted when he was four years old. The family removed to Haslingden, in Lancashire, where Davitt worked in a factory and suffered an accident through which he lost his right arm, and was afterwards a book-keeper in a printing office, and a commercial traveller. He defended the Catholic Church during the Murphy anti-Catholic riots, was concerned in the Fenian movements of 1867 and the following years; and in 1870 was arrested for having illegal arms in his possession. He was sentenced to fifteen years' penal servitude; but in Dec., 1877, was released on ticket-of-leave. Received with great enthusiasm in Ireland, he shortly afterwards addressed a London audience, for the first time, in St. James's Hall. In Aug., 1878, he paid his first visit to America, and there formulated a programme which was afterwards to be developed into that of the Land League. On his return to Ireland he directed the agitation begun in Mayo against excessive rent, and having made a successful appeal to America for funds, the Irish National Land

League was established on Oct. 21st, 1879, with Mr. C. S. Parnell as its president; and (1) the protection of the people against the injustice or caprice of landlords; (2) the abolition of the Irish land laws; (3) the assistance of evicted tenants, as its programme. "The soil of Ireland for the people of Ireland," was its war-cry. Arrested in November, for using seditious language, Davitt was admitted to bail, and addressed a large number of meetings in England and Ireland, notably one on the ruins of the homestead from which his family had been evicted. The prosecution being allowed to drop, he went to America, and there, in company with Mr. John Dillon, organised the Land League throughout the United States. On his return he found that the instrument of "Boycotting" had been invented, and used with telling effect, and that the Land League was supreme. Again arrested in Feb., 1881, for a breach of histicket-of-leave, "the father of the Land League" was conveyed to Portland prison, and remained there until May, 1882, when he was again set free. His experiences of prison life were amusingly told in *Leaves from a Prison Diary* (1885), the latter volume of which is chiefly devoted to the exposition of his peculiar views on the subject of land. Mr. Davitt, indeed, had by this time separated from Mr. Parnell on this question, and, in harmony with Mr. Henry George, was in favour of land nationalisation. In 1880 the two parties came into somewhat violent collision when the question arose as to what form of association would best supply the place of the deceased Land League. Mr. Davitt's socialistic "National Land and Industrial Union of Ireland" was rejected in favour of a "National League," after recriminations between Mr. Davitt and its new president, Mr. T. P. O'Connor, M.P. Nevertheless, Mr. Davitt must be, on the whole, described as working parallel to, rather than against, Mr. Parnell; they both agree on the necessity of an independent Parliament for Ireland; and in company with Mr. Parnell's lieutenant, Mr. Healy, Mr. Davitt was in 1882 imprisoned for six months on refusing to find securities for his good behaviour. The expiration of Mr. Davitt's ticket-of-leave in 1885 made him a free man once more; and in the same year, having declined to stand for Parliament, he was elected to the Dublin Town Council.

D. B. Cashman, *Life of Michael Davitt*, to which is added a sketch of the Land League, by Michael Davitt.

* **Davoud Pasha** (b. 1816), Ottoman statesman, was born in Armenia, and is a member of the Armenian branch of the Roman Catholic Church. Having been educated at Berlin, he was appointed professor of modern languages in the Military College at Constantinople, but having passed into the

diplomatic service, was employed on the embassies in various courts of Europe, and attended A'ali Pasha at the Conference of Vienna. Having assisted in the organisation of Moldavia and Wallachia, he was chosen Governor-General of the Lebanon after the civil war in 1861. The seven years of his rule were remarkable in Turkish annals for justice and probity. On his return to Constantinople he was appointed Minister of Public Works, but resigned in 1871. He is the first Christian ever raised to the rank of Mudir, the highest order of Pasha.

Davoust (sometimes spelt **Davout**), LOUIS NICHOLAS, Duke of Auerstadt and Prince of Eckmühl (b. 1770, d. 1823), one of Napoleon's marshals, entered the army at the age of fifteen, and having served with distinction under Dumouriez on the Rhine, followed Bonaparte to Egypt, and gradually rose to be marshal of the empire in 1804. During the German campaign of 1806 he commanded the third corps of the Grand Army, and received the title of Duke of Auerstadt for his great victory at that village with the right wing of the army, on the same day as Napoleon was engaging the enemy at Jena with the left. After being created Prince of Eckmühl, for a victory during the Wagram campaign of 1809, he was appointed Governor of Poland, where his tyrannical cruelty still makes his name an execration for Poles and Germans alike. Having served throughout the Russian campaign, and been wounded at Borodino, he established himself at Hamburg, whence the Allies in vain tried to dislodge him till the first restoration was accomplished. On Napoleon's escape from Elba he was appointed Minister of War, and in three months had organised the army on its former basis. After Waterloo, he took command of the army at Paris, and would have offered battle to the Allies had not the Provisional Government ordered him to come to terms. He signed the Convention of Paris at Saint-Cloud, and lived in retirement, disgraced, and for a time even in danger, under the Bourbons. In 1819, however, he was summoned to the House of Peers, and before his death had made his peace with the powers that were.

Chénier, *Vie de Maréchal Davout*.

Davy, Sir HUMPHRY (b. 1778, d. 1829), one of the first of English chemists, was a native of Penzance, and after a fair elementary education was, in 1795, apprenticed to a surgeon-apothecary in Penzance. An assiduous student, he lost no opportunity of improving his knowledge; but it was not until he was nineteen that he applied himself to chemistry, though for a time the fresh departure obtained little encouragement from his master. Attracting the attention of Mr. Davies Gilbert, afterwards president of the Royal Society, he was introduced to Dr. Beddoes, who employed him

to superintend a pneumatic medical establishment he had founded at Bristol. His first paper was on the nature of heat, light, and respiration; in 1797 he discovered the intoxicating effects of nitrous oxide, and next year published some more complete researches on the nature of this gas. This procured him the post of assistant-lecturer on chemistry to the Royal Institution, London, and a few weeks later that of the chief lecturership and the direction of the laboratory. At first his ungainly appearance was against him. But soon the ability of the young man won the approval of this aristocratic audience, until in a year or two he was courted by the highest society of the metropolis, and took that position in the fashionable world which was so well suited to his temperament. Aided by the liberality of the committee of the Institution, he was speedily enabled to proceed from discovery to discovery, until the world, prepared as it was to expect great things from experimental chemistry, was fairly astounded by the brilliant researches of the young Cornishman. The decomposition of substances until then supposed to be elements, opened up new worlds, until in a few years it seemed as if Davy was to revolutionise the science of which Lavoisier had shown the possibilities. In 1803 he became a fellow, in 1807 secretary of the Royal Society, and all the time still lecturing to great audiences in Albemarle Street, and to scarcely less enthusiastic ones in his discourses before the Board of Agriculture, he poured out paper after paper, each announcing some important fact, or elucidating some hitherto unsuspected principle in physics. Under his hand new substances seemed to grow, and data to accumulate with such apparent ease, that the wonder was how they had not been hit upon before. The researches indicated in his Bakerian Lecture in 1806, secured for him the 3,000-franc prize of the French Institute, for the experiments most conducive to the progress of science, and soon afterwards he was enabled to announce the production of potassium and sodium by the electric decomposition of the alkalies, while the earths he discovered to be compound substances formed by oxygen united with metallic bases. This brilliant research, the greatest perhaps in chemistry, is the foundation of Davy's fame. This led not only to the discovery of potassium and sodium, but to the rapid discovery of barium, strontium, calcium, and magnesium, all new metals. In 1812 Davy was knighted, and marrying a wealthy lady, he resigned the chemical Chair of the Royal Institution, and though France and England were then at war, he received permission to visit the Continent for the purpose of investigating volcanic action. In 1815 he invented the miner's safety lamp, acting, it is believed, independently of Stephenson, with whom it is now generally allowed that the merit of this useful apparatus

must be divided. He was then created a baronet, and in 1820 elected president of the Royal Society. Untiring devotion to science and society had, however, begun to tell on his constitution, and in 1826 he had a paralytic attack affecting his right side. He made two journeys to the Continent in hope of benefiting his health, staying one year at Laybach, and another winter at Rome, but in 1829, being again attacked, he succumbed to the shock, and died at Geneva on May 29th, and there, in the cemetery outside the city walls, his remains repose. His writings, in addition to many memoirs in the *Philosophical Transactions*, comprise *Elements of Chemical Philosophy* (1812), *Consolation in Travel, or the Last Days of a Philosopher* (published after his death in 1831), and *Salmonia*, a work written in imitation of Izaak Walton's *Complete Angler*. Personally he was a somewhat vain and irritable man, whom early success had made haughty to his inferiors. Indeed, in the recollections of Faraday, who as a young man attended upon him in his travels, we have a rather disagreeable picture of the *esavant* who had forgotten the "pit out of which he was digged." He was not very popular among his colleagues, as he was regardless of minor etiquette, and had in consequence to bear the chagrin of frequent snubs, such as the refusal of the ribbon of the Bath, which he fully expected. Yet those who knew him best have attributed his haughty consciousness of superiority not so much to his arrogance as to his timidity, his dread of being patronised as a *parvenu*. But many weaknesses are excusable in one who, as Cuvier remarked in his *éloge* on him, when not thirty-two, "occupied, in the opinion of all who could judge of such labours, the first rank among the chemists of this or of any other age." It may be added that he received almost every honour which learned societies or universities could bestow.

Paris, *Life* (1831); J. Davy, *Works of Sir H. Davy* (1839). [R. B.]

Dawison, BOGUMIL (b. 1818, d. 1872), actor, was born at Warsaw, a Polish Jew by race, and, having left school at twelve, worked as accountant and journalist till eighteen, when he determined to go on the stage. Having played in various towns in Poland, he at last obtained a footing in a German theatre, at Lemberg, in 1841. After four years he removed to Hamburg, and then to Vienna, where he soon excited the highest admiration. In 1853 he accepted an engagement at Dresden, which unfortunately brought him into collision with Emil Devrient (q.v.). Received in Paris with the warmest applause in 1859, he quitted Dresden in 1864, and two years later appeared in America in a series of triumphant performances. But his exertions had been fatal to his health. His memory left him, and he sank into madness, from which

only death set him free. His greatest parts were Mark Antony, Lear, and Shylock, Franz Moor, Mephistopheles, and Don Karlos in *Clavigo*.

Wurzbach, *Zeitgenossen* xi.

* **Dawkins, WILLIAM BOYD** (b. 1838), geologist, was born near Welshpool, educated at Rossall and Oxford, and after becoming geologist to the Geological Survey of Great Britain in 1867, was appointed professor of geology in Owens College, Manchester, in 1874. His two most important published works are, *Cave-hunting* (1874), and *Early Man in Britain* (1880). He also contributed to *Cassell's Natural History*, edited by Dr. P. Martin Duncan. When a committee of specialists was appointed to inquire into the scheme of the Channel Tunnel in 1882, Mr. Dawkins was commissioned to institute a geological survey of the French and English coasts.

Dawson, GEORGE (b. 1821, d. 1876), the Birmingham preacher, was born in London, and educated at the Glasgow University, for the Baptist ministry. In 1844 he was appointed to Mount Zion Chapel, in Birmingham, but the breadth of his views, and the unconventionality of his earnestness, soon caused such uneasiness to the authorities and some of the congregation, that a large secession was unavoidable. "The Church of the Saviour" was accordingly erected in 1847 and presented to George Dawson, who continued to preach and lecture there till his death. The secret of his high influence lay rather in the singular openness of mind with which he seized the essential points in the newest phases of thought, than in profound learning or originality of idea. His extempore lectures were models of concise and strenuous style. Unfortunately he published nothing more permanent than sermons and addresses, but his fresh earnestness and unflinching honesty of belief made him one of the most influential of the early disciples of Emerson and Carlyle.

Alex. Ireland, *Recollections of George Dawson* (1882).

* **Day, FRANCIS** (b. circa 1830), ichthyologist, entered the army as a surgeon at an early age, and from 1859 to 1862 was stationed at Cochin, where he first directed his attention to the study of fishes. The result was a work on *The Fishes of Malabar* (1865). Being transferred to the Madras Presidency as surgeon-major to the Madras army in 1865, he was commissioned by Government in 1867 to visit the weirs in that presidency with a view to discovering their effect on the fish. He also visited Lower Bengal, British Burmah, and the Andaman Islands (1869). After a short stay in England he returned in 1871, and visited every important river in India, forming a collection of over a thousand species of fish. The results of his labours were published in *The Fishes of*

India (1878), which contains descriptions of 1,340 species. Since then Mr. Day has been engaged upon a work on *The Fishes of Great Britain and Ireland* (1880-4), and has written two pamphlets, *Indian Fish and Fishing* and *The Food of Fishes*, for the Fisheries Exhibition of 1883.

Deák, FERENCZ (b. 1803, d. 1876), the Hungarian patriot, was born at Kehida, was educated at the University of Raab, and in 1832 was returned as a deputy to the Diet of Presburg, where his profound historical knowledge and unwavering regard for constitutional forms soon made him a conspicuous member of the moderate or "central" party in the Opposition. As the champion of the peasants against the nobility, he obtained for them important proprietary rights in 1840, but withdrew from the Diet of 1843 as a protest against the violence and corruption of his election, and remained in private life till in 1848 he became for some months Minister of Justice under Count Batthyány. In October, however, the Batthyány ministry was forced to resign, owing to the obvious hostility of the Emperor Ferdinand; the advanced party of Kossuth enjoyed its brief triumph, and in 1849 the new Emperor, Francis Joseph, poured the Austrian troops into Hungary, and the War of Independence began and ended. For the next ten years Deák remained the leader of a constitutional and passive resistance. Having returned to the Diet in 1861, he issued two addresses, respectfully refusing the emperor's diploma of the previous year, that would have abolished absolute government, but at the cost of the absorption of Hungary and a breach of the Constitution. It was only after the fortunate disasters of Sadowa, and the accession of Count von Beust (q.v.) to power, that his hopes were to some extent realised, what was practically Home Rule being granted to Hungary, and the emperor being crowned king at Pesth. Though exposed to vigorous attacks from the extreme Radicals after 1869, Deák remained the actual leader of the Hungarian Diet till his death.

Ferencz Deák: a Memoir (London, 1880).

Decatur, STEPHEN (b. 1779, d. 1820), one of the most celebrated naval officers of America, was born at Sinnepuxent, on the Chesapeake River, Maryland, and, having been brought up chiefly at Philadelphia, entered the navy at nineteen. After some service on the Spanish Main and in the Mediterranean squadrons, he volunteered to destroy the *Philadelphia* frigate, captured by the Turks and then lying in Tripoli harbour. This exploit was successfully performed in 1804: Decatur was raised to the rank of captain, and was soon afterwards appointed commander of various men-of-war in succession, superseding his old commander, Commodore Barron, in command of the *Chesapeake* in 1807. At the outbreak of the war with

Great Britain in 1812 he was in command of the *United States*, and in her captured the British frigate *Macedonian*. After being blockaded during the winter of 1813-14 in New London harbour, he was forced to surrender in the *President* early in the following year. After the conclusion of the peace of 1815 he was despatched in command of the Mediterranean squadron to make reprisals on Algiers. On his victorious return he was appointed Navy Commissioner. As such he was appealed to in 1819 by Commodore Barron, who having been excluded from the service since his surrender of the *Chesapeake* in 1807, now demanded to be reinstated. Decatur's continued refusals on grounds of national honour led to a duel, in which he was mortally wounded.

S. Putnam Waldo, *The Life and Character of Stephen Decatur* (1822).

Decazes (less frequently spelt **DeCazes**), **ÉLIE, Duc** (b. 1780, d. 1860), the minister of the restoration, was born at Libourne (Gironde), and having come to Paris at the beginning of the century, and been employed for a time in the service of Louis Napoleon, King of Holland, became private secretary to Napoleon's mother, and President of the Law Courts in 1811. In 1814 he acquiesced in the Bourbon restoration, but, nevertheless, was compelled to retire from Paris till the second restoration, when the king appointed him to the difficult position of Prefect of Police. As such he is supposed to have been mainly responsible for the criminal mistake of arresting Marshal Ney. Exposed to much unpopularity, but supported by the king, he became Minister of the Interior in 1818, and President of the Council in the following year. But his career was checked by a suspicion of complicity in the assassination of the Duc de Berry by Louvel in 1820, a suspicion entirely unfounded, being due to the wilful misrepresentation of some unguarded words at the time. In consequence of his growing unpopularity, he was sent to London for about a year as ambassador. As member of the House of Peers, he exerted himself to check the downward progress of Charles X. and his ministers. After their fall, he was with some difficulty induced to continue his services to the State under Louis Philippe, but spent continually more of his time on his estates on the Gironde, where he erected one of the largest smelting works in France. After 1848 he took no further part in public life.

M. Bertin, *Biographie de M. le Duc Decazes* (1865).

Decazes, **LOUIS CHARLES ÉLIE AMANIEU, Duc de Glücksberg** (b. 1819, d. 1886), son of the above, early entered the diplomatic service, but played no prominent part in politics till 1871, when he was returned to the Assembly by the Gironde, and took his seat on the Right

Centre. After being ambassador in London for about two months in 1873, he was appointed Minister of Foreign Affairs, and held the portfolio without a break till after the general election in October, 1877, owing this extraordinarily prolonged tenure under so many changes of government to his skilful diplomacy and resolute maintenance of peace. He resigned together with the rest of the Broglie Cabinet soon after the general election of 1877 had averted a monarchical restoration.

* **Defrémery**, **CHARLES** (b. 1822), was born at Cambrai, studied Arabic and Persian at Paris under Caussin de Perceval and Quatremère, and was eventually appointed professor of Arabic at the Collège de France, and Oriental director of the École Pratique des Hautes Études at Paris. His largest works are his admirable edition and translation of the *Travels of Ibn Batuta* (4 vols., 1853-6), and of the *Historiens Orientales des Croisades*, in the editing of which important work he succeeded the late Baron de Saulcy. Defrémery has also published a long series of extremely valuable historical papers, translations from Mirkhond and other Eastern annalists, in the *Journal Asiatique*, the most important of which have been collected and published in two volumes, entitled *Mémoires d'Histoire Orientale* (1854 and 1862). In 1875, on the occasion of the tercentenary of the University of Leyden, he was one of the scholars selected for the honorary degree.

* **Delacour** is the pseudonym of **ALFRED CHARLEMAGNE LARTIGUE** (b. 1815), writer of farces and vaudeville pieces of the average Parisian type. He was born in Bordeaux, and educated in the medical schools in Paris, but early abandoned medicine for the species of literature at which he is so proficient. His productions, generally in one or two acts, are far too numerous for mention; but in this country his name is chiefly known as the joint author, with Alfred Hennequin, of *Les Dominos Roses*, from which *The Pink Dominoes*, produced at the Criterion in 1877, was adapted by Mr. Albery.

Delacroix, **FERDINAND VICTOR EUGÈNE** (b. 1799, d. 1863), the celebrated French artist, was the son of Charles Delacroix, a prominent member of the Convention, and was born at Charenton-St.-Maurice, near Paris. Though he studied art under Pierre Guérin, his first exhibited picture, *Dante and Virgil in Hell* (1822), marked his rebellion against the dominant "classical" school. His next great work, the *Massacre at Chios* (1824), firmly established his reputation as an artist of great audacity and original power; and every one or two years saw another great picture produced, till the artist was well over fifty. His subjects were generally drawn, either from history itself, or from the more or less historical works of Shakespeare, Scott, Goethe, and Byron. We

may here mention—*Sardanapalus Dying in the midst of his Wives* (1827); *Liberty Guiding the People on the Barricades* (1830); *The Murder of the Bishop of Liège*, from *Quentin Durward* (1831); *Algerian Women*, said by many to be his masterpiece (1834); *The Prisoner of Chillon* (1835); *Medea* (1838), a work that produced a most animated discussion amongst art critics, and is one of his most powerful conceptions; *Hamlet with the Skull* (1839); *Marguerite in the Church* (1846); *The Death of Valentin* (1848); *Lady Macbeth* (1850); and *The Pilgrims of Emmaus* (1853). He also published seventeen illustrations to *Faust*, and decorated with frescoes several of the public buildings in Paris, such as the Palais Bourbon, the Luxembourg, the Louvre, and some of the principal churches. In spite of his wild but gorgeous colouring, his want of restraint, his rapid execution, and impatience of form, Delacroix remains the most significant figure in French art during the first half of this century, as well as a typical representative of the earlier "romantic" and realistic school, hardly yet escaped from its predecessor's unreality of form and sentiment, in spite of its frenzied struggles at rebellion.

A. Cantaloube, *Eugène Delacroix* (1864); Georges Sand, *Histoire de ma Vie*.

Delambre, JEAN BAPTISTE JOSEPH (b. 1749, d. 1822), French astronomer, was born at Amiens, and, hindered by poverty and a desultory education, did not turn his mind specially to astronomy till 1780, when he attended Lalande's lectures in Paris, and was soon admitted as collaborator in his observatory. His first calculations, *Tables of the Orbit of Uranus*, were crowned by the Academy in 1790. Having also published the *Tables of Jupiter and Saturn*, he was engaged for some years on the measure of the arc of the meridian from Dunkirk to Barcelona, completed in 1799. In 1807 he succeeded Lalande as professor of astronomy in the Collège de France. In 1814 he published his celebrated *Treatise on Theoretical and Practical Astronomy*, and the rest of his life was chiefly occupied with his *History of the three Periods of Astronomy, Ancient* (1817), *Medieval* (1819), and *Modern* (1821), forming together the most complete and profound history of astronomy then published.

Delane, JOHN THADDEUS (b. 1817, d. 1879), the king of newspaper editors, was the son of a solicitor, who held the appointment of financial manager of the *Times*. The boy was educated with a special view to joining the staff of the leading paper, and after taking his degree from Magdalen Hall, Oxford, where he made the valuable friendship of George Dasent, he proceeded to qualify himself for the post he desired by studying life in various aspects. He walked the hospitals, was called to the bar (1847), and reported on circuit and also at the House of Commons,

where for two years he took his turn in the reporters' gallery. Thus accomplished in various departments of knowledge and experience, he joined the *Times* staff as assistant-editor in 1839; and on the death of Barnes in 1841 became editor, at the early age of twenty-four. For thirty-six years he retained this important post, the duties of which he discharged with admirable tact, judgment, and public spirit. He was no classical scholar, though a well-read man, and he never contributed articles of any sort to his paper. Reports and letters he wrote better than most men, but beyond that his pen did not travel. In his editorial capacity he showed the highest qualities. He possessed great powers of application and concentration, was particularly clear-headed, and had a fine memory. To his contributors, who formed a singularly brilliant staff, he was uniformly courteous, yet firm; and there was not one who did not acknowledge the justice of the editor's criticism when an alteration had to be made in an article. After seeing thirteen administrations rise and fall, Delane retired from the post he had so ably filled in 1877, and was succeeded by Mr. Thomas Chenery (q.v.).

De la Ramée. [OUIDA.]

De la Rive, AUGUSTE (b. 1801, d. 1873), a Swiss natural philosopher, born at Geneva, was elected to the Chair of natural philosophy in the Academy of Geneva at the early age of twenty-two, and immediately directed his attention to the subject of specific heat, more particularly as applied to gases. In 1828 he published, conjointly with Professor Marcet, a series of experiments on the temperature of the crust of the earth. Electricity, however, was his favourite study. His well-known work, *Traité d'Electricité théorique appliquée* (3 vols., 1853-8), has been translated into English by Mr. Charles Walker, F.R.S. He contributed many articles to the monthly journal *Les Archives d'Electricité*, for many years under his own direction, and his original memoirs on magnetism, electro-dynamics, the nature of the voltaic arc, the connection of magnetism with electricity, and on the propagation of electricity in the interior of bodies, ensured him a high European reputation, to which was soon added the title of member or correspondent of nearly every scientific society in Europe. De la Rive was the first to conceive the idea of applying the force of electricity, through the means of alkaline solutions, to the gilding of silver and brass. This process has since been improved upon and patented by Messrs. Elington and Ruolz. After a long and patient study of the phenomena accompanying the aurora borealis, M. de la Rive propounded his theory on the electric origin of the aurora, which he subsequently illustrated by beautiful experiments at Geneva and Paris.

Nature, Dec. 25th, 1873.

Delaroche, HIPPOLYTE, or PAUL, as he always called himself (b. 1797, d. 1856), the well-known French artist, was born in Paris of wealthy parentage, and educated in art at first by Baron Gros, and some years afterwards by Géricault. Under the influence of these artists he developed a mixed style of his own, which has made him known as the leader of the so-called "eclectic" school. His first picture, *Joash saved by Jehoshabea*, was exhibited in 1822, the same year in which Delacroix created a revolution in art by his *Dante and Virgil*. But it was not till 1827 that his two well-known pictures, *The Death of Queen Elizabeth* and *The Death of President Durrant*, made him one of the most prominent and popular artists in France. They were followed in 1831 by such important works as *Cardinal Mazarin on his Death-bed* and *Cromwell Opening Charles I.'s Coffin*. In 1834 he visited Rome, and whilst there married Horace Vernet's daughter, and painted *The Assassination of the Duke of Guise*, and *Strafford on his Way to Execution*. On his return (1837) he was employed to decorate the *Hémicycle* in the Palais des Beaux-Arts, an undertaking which was completed in 1841. In 1843 he again visited Rome, and two years later exhibited his famous picture of *Napoleon at Fontainebleau*. In 1846 he produced his *Young Martyr*, perhaps the best known of all his works in England; and in 1851, *Bonaparte Crossing the Alps*, which is certainly the next familiar. After this he turned chiefly to subjects of religious art, especially the scenes of the Crucifixion, and only three more of his works need here be mentioned—*The Girondins*, exhibited in 1856; *Marie Antoinette after her Condemnation* (1851); and *Marie Antoinette at the Conciergerie*, exhibited after his death. The noblest characteristics of Delaroche are the exactness with which he measured his own powers, and the self-restraint which kept him within his proper limits. His unrivalled popularity amongst the middle classes is easily accounted for by the familiarity of his themes, and the comprehensible pathos or grandeur of his situations.

Henri Delaborde, *Œuvres de Paul Delaroche* (1858); J. Euntz Rees, *Paul Delaroche* (1880).

* **De la Rue**, WARREN (b. 1815), a distinguished man of science, was born in Guernsey, and having been educated at Paris, entered his father's firm of Thomas de la Rue and Co., of which he became the head-partner. He devoted himself to the study of practical science, especially of electricity and astronomical photography, and is especially known for his photographs of the sun during the total eclipse of 1860, taken in Spain. From 1864-6 he was president of the Royal Astronomical Society, and has filled high offices in numerous other scientific associations.

Delavigne, JEAN FRANÇOIS CASIMIR (b. 1793, d. 1843), a French writer of dramas in verse, and of several lyrical pieces, was essentially an intermediary celebrity in modern French literature; intermediary between the versifiers of the First Empire, who knew of nothing out of the prim formal school of the miscalled classical authors, and the often unbridled but undeniably gifted and genuine poets of the end of the Restoration. Delavigne was a Norman, born at Havre, the son of a most respectable *commerçant*, the archetype of a French *bourgeois* of the period between 1812 and 1835. He began his career early, having at sixteen composed an ode on the birth of the King of Rome, which met with the highest official favour, and determined his career. From the age of twenty to twenty-four he produced his nearest approach to anything like poetry—namely, his patriotic appeals against invasion, entitled *Les Messeniennes*, which became for a limited number of years famous, but never attained to lasting renown. During the ten years from 1820 to 1830 he gave forth his principal plays, *Les Vêpres Siciliennes*, *Le Paria*, *Les Comédiens*, *L'École des Vieillards* (by far his best), and added two or three *Messeniennes* to those of 1815. For the revolution of July he wrote the hymn called *La Parisienne*, the popularity whereof vanished with the occasion of its birth; and in 1831 he published *La l'arsoviennne*, to celebrate the Polish insurrection, and with this won a fame of several years. After 1830 he brought out *Louis XI.*, *Les Enfants d'Edouard*, to which were added *Don Juan d'Autriche*, *La Popularité*, *Le Conseiller Rapporteur*, and *La Fille du Cid*. He died a member of the Académie Française, honoured, esteemed, beloved by all who knew him; but except for one great ballad, *La Toilette de Constance*, his chief literary import is to show to what a dead-level of dulness the mental life of France had declined.

J. Morlent, *Casimir Delavigne* (1844).

[Y. B. de B.]

* **Delbrück**, MARTIN FRIEDRICH RUDOLF VON (b. 1817), Prussian statesman, was born at Berlin, and is the son of John Heinrich Gottlieb Delbrück, the private tutor of the two princes, afterwards Frederick William IV. and the present Emperor. Having studied law at Bonn and Berlin, he entered the financial department, and in 1859 became director of the Board of Trade (Commerce and Industry). The next few years he spent in organising the great system of the *Zollverein* between Prussia and the minor German States, thus laying the most secure foundation for Prussia's future predominance. In 1862 he acquired the valuable support of Count Bismarck on his elevation to power. After the conclusion of the Austrian War, Herr von Delbrück was created President of the Federal Council, the North German Bund being now

constituted on a solid basis. Immediately before the outbreak of hostilities in 1870, he proved himself highly serviceable to the State by his diplomatic labours in consolidating the North and conciliating the South. In the absence of Bismarck and the emperor, he was practically supreme in Berlin. As Deputy-Chancellor he visited Versailles in order to confer with his superiors in October; on him devolved the difficult duty of arranging the details of the new Constitution of the empire, as well as of delivering the royal message to the Parliament in November, and carrying the new proposals through the House in the teeth of the violent opposition of the Social Democrats, and the dissatisfaction of other parties. He continued in power as President of the Imperial Council till 1876, when, having acquired unpopularity through his mismanagement of the funds raised for the wounded and pensioners, he resigned to Herr von Hofmann, on the plea of ill-health, though it was generally suspected that he had disagreed with Bismarck on some of the Chancellor's enterprising financial reforms in that year.

Delhi, THE EMPERORS OF, styled the GREAT MOGULS, had for many years been mere puppets in the hands of Sindhia of Gwalior (q.v.), when, in 1803, Lord Lake defeated the Mahrattas outside the walls of Delhi, and took the city. The aged SHAH ALUM (d. 1806), who had nominally ascended the throne in 1771, thereupon became a British pensioner, retaining the title of sovereignty, while the English administered the district. BEHANDUR SHAH (d. 1862), his son, succeeded him, and was holding his purely titular honours when the outbreak of the mutiny took place. Hoping for some slight improvement in his position from a change in the dominant power, he encouraged the movement, and when, after Willoughby's heroic defence, Delhi fell to the mutineers on May 11th, 1857, the sovereignty was restored with some magnificence. On June 8th the siege by the avenging English began, and on the 21st the king surrendered. He was tried by a military commission, and sentenced to perpetual banishment.

T. R. E. Holmes, *Indian Mutiny*.

Delille, L'ABBÉ JACQUES (b. 1738, d. 1813), an eminent didactic poet, was born near Clermont, in Auvergne, and educated in Paris. In 1769 he published a translation of the *Georgics* of Virgil, a work showing much grace, skill, and accuracy. It was received with enthusiasm by the French nation; Frederick the Great pronounced it the most original work of the century, and Voltaire wrote to the Academy in favour of the election of Delille. He next published *Les Jardins*, a poem full of beauties, but unequal. During the revolution, Delille narrowly escaped death by the guillotine; he was saved, how-

M.W.—11*

ever, by the forcible argument of a mason, who advised the judges not to kill all the poets; it would be useful to keep some to celebrate their victories. After the Reign of Terror he quitted his country, and spent several years abroad, chiefly in Switzerland and England, returning to France in 1801. He published there in rapid succession—his poem *Pity*; a translation of Virgil's *Æneid* and of *Paradise Lost*; and *Imagination*, a poem. His translation of the *Æneid* is regarded as the best in the French language.

Sainte-Beuve, in the *Revue des Deux Mondes*, Aug., 1837.

Demetz, FRÉDÉRIC AUGUSTE (b. 1796, d. 1873), a French philanthropist, was the founder of an institution at Mettray, near Tours, for the reformation of juvenile offenders. He was highly successful in the management of these children, and many colonies have been founded upon the model of Mettray, in France and other countries. M. Demetz visited America and England for the purpose of studying the penitentiary systems of the respective countries. He was the author of several pamphlets upon his system of education.

De Morgan, AUGUSTUS (b. 1806, d. 1871), the eminent English mathematician and logician, was born at Madura, in the Madras Presidency, but was educated under Airy at Trinity College, Cambridge, where he graduated as fourth wrangler in 1827. Next year he was appointed first professor of mathematics at University College, London, and the rest of his life was entirely devoted to his science. He became famous as the greatest teacher of mathematics then known, Todhunter and Routh being amongst his pupils. Of his numerous text-books and other treatises, we may here mention:—*The Elements of Arithmetic* (1830), the *Essay on Probabilities* (1838), still the best introduction to the science in our language; *The Elements of Trigonometry* (1837), his celebrated *Treatise on the Differential and Integral Calculus* (1842), *Formal Logic, or the Calculus of Inference*, in which he expounds his and Sir W. Hamilton's principle of the quantified predicate; and four great treatises on the Syllogism (1850–60). He was also the author of innumerable popular essays and articles, and wrote biographies of Newton and Halley.

D'Enghien, LOUIS ANTOINE HENRI DE BOURBON, DUC (b. 1772, d. 1804), a French prince, born at Chantilly, was the son of the Duke of Bourbon, and the last representative of the family of Condé. Having emigrated in 1789, he joined the army of his grandfather, the Prince de Condé, a few years later, and fought bravely against the republic, until the army was disbanded in 1801. He then retired to Ettenheim, in Baden, and occupied himself with the cultivation of his estate; here he was suddenly arrested, by order of Napoleon, upon the charge of

conspiracy, and was taken to the Castle of Vincennes. Having been tried before a mock tribunal, he was found guilty and condemned to be shot. This cruel deed excited great horror and indignation, and is one of the blackest stains upon the memory of Napoleon.

* **Denison**, GEORGE ANTHONY, ARCHDEACON (b. 1805), one of the leaders of the High Church party, was born at Ossington, Notts, and educated at Eton, and Christ Church, Oxford. In 1838 he was appointed to the living of Broadwindsor, Dorset; being transferred in 1845 to the vicarage of East Brent, Somerset, he subsequently became examining chaplain to the Bishop of Bath and Wells, and Archdeacon of Taunton. In 1853 he resigned his examining chaplaincy in consequence of a charge of unsound doctrine brought against him by Bishop Spencer (late of Madras), acting under commission for the Bishop of Bath and Wells. As his defence the Archdeacon published three sermons on *The Real Presence*, preached by him in Wells Cathedral, and his views being considered heretical, proceedings were taken against him in 1854. Two years later judgment was given against him, and he was sentenced to be deprived of all his ecclesiastical preferments. Upon appeal to the Court of Arches this sentence was set aside, and their judgment being confirmed by the Court of Final Appeal, the Archdeacon was warmly welcomed back to his home by the parishioners of East Brent (Feb., 1858). Archdeacon Denison has been one of the most persevering opponents of secular government education and of the "Conscience Clause," and he advocates strongly an advanced ritual in the services of the Church, the use of the confessional, and the revival of Church authority. He was a member of Convocation in 1861 and 1864, and chairman of the committees, the reports of which resulted in the Synodical condemnation of *Essays and Reviews* and of Dr. Colenso's books. He has published a number of sermons and other writings upon religious and social questions. His nephew, EDWARD DENISON (b. 1840, d. 1870), the philanthropist, was the son of the Bishop of Salisbury, and was educated at Eton and Christ Church, Oxford. Having entered the bar, and travelled abroad, he went to live in the Mile End Road, in East London, during the great distress of 1867. He was amongst the first fully to expose the evils of promiscuous doles, and took an active part in the foundation of the Charity Organisation Society, besides suggesting numerous reforms in the working of the Poor Laws. In 1868 he was returned M.P. for Newark, but in the following year was obliged to undertake a voyage to Melbourne, where he died.

G. A. Denison, *Notes of My Life, 1805-1878: Letters and other Writings of the late Edward Denison, M.P.*, edited by Sir Baldwin Leighton (3rd ed., 1884).

Denman, THE RIGHT HON. THOMAS, BARON (b. 1779, d. 1854), politician and judge, was born in London, and educated by Mrs. Barbauld, and at St. John's College, Cambridge. Having entered at Lincoln's Inn in 1806, and obtaining a fair practice at the bar, he was returned to Parliament for the pocket-borough of Wareham in 1818, and in 1820 was elected for Nottingham, which remained his constituency as long as he sat in the House. Already prominent in the Whig party of Brougham and Lambton, he was appointed Solicitor-General; and in the trial of Queen Caroline so distinguished himself by the courage and ability of her defence, that he and Brougham were probably for a time the most popular men in the country. Absent from the Parliament of 1826-30, he returned in the latter year, and was appointed Attorney-General in Earl Grey's administration, but in 1832 succeeded Lord Tenterden as Lord Chief Justice of the King's Bench, and was raised to the peerage two years later. He retained his position till his retirement in 1850, taking active interest in the abolition of the slave trade, and all other Liberal measures. He presided in the House of Lords at the trial of Lord Cardigan for his duel with Captain Tuckett.

Sir Joseph Arnould, *Memoir of Lord Denman* (1873).

Denmark, THE KINGS OF:—(1) **FREDERICK VI.** (b. 1768, d. 1839), of the House of Oldenburg, was from 1784 to 1808 regent to his imbecile father, Christian VII. Throughout this period he proved an enlightened ruler, particularly in the abolition of serfage and of the slave trade; but the revolutionary wave beat even on the shores of remote Denmark; and, forced to join the league of the Northern Powers, Copenhagen was bombarded in 1801 by the British fleet. Again, in 1807, when the Crown Prince, although he promised neutrality, declined to hand over the Danish fleet to England, it was most unjustly seized, and the Danes in consequence espoused the French alliance. For having favoured the beaten side, Denmark was compelled, on making peace with the Allies in 1814, to hand over Norway to Sweden, receiving in exchange the useless gift of Pomerania, which was afterwards sold back again. The remainder of the reign was spent in endeavours to restore the broken finances of the country. (2) **CHRISTIAN VIII.** (b. 1786, d. 1848), succeeded his father in 1839. He, too, was a prince of liberal tendencies, and governed well, but was compelled, during his reign, to suppress the separatist propensities of the outlying districts of his kingdom, notably of Holstein. Attempts at centralisation only increased the discontent. (3) **FREDERICK VII.** (b. 1808, d. 1863), had no easy task before him when he ascended the throne on the death of his father (1848).

Fired by the news of the French revolution, the duchies of Schleswig-Holstein rose in rebellion under the young king's factious relative the Duke of Augustenberg (q.v.), and a provisional government was proclaimed at Kiel. Schleswig was promptly reduced by the Danes, but the intervention of a Prussian army under General Wrangel, as the executant of the German Confederation, entirely altered the state of affairs, and Frederick was forced to conclude an armistice for six months. Soon afterwards the duchies were deserted by the Prussians, and the tide again turned. After crushing the duchies at Idstedt, Denmark concluded peace with Prussia in 1860, by which they were still compelled to remain under the Scandinavian yoke. For the rest, the reign was chiefly occupied with the succession question; Frederick was the last of his line, and in 1852 it was decided at a conference of the Powers that the crown should pass to Prince Christian of Glücksburg and his wife, Frederick's cousin, the Princess Louisa of Hesse. (4) *CHRISTIAN IX. (b. 1818) must at first have regretted that he ever accepted the throne of Denmark in virtue of the Treaty of London. Frederick of Augustenberg promptly revived his father's pretensions to Schleswig, and was energetically backed up both by Prussia and Austria, and the duchies were occupied by troops under Wrangel and the Austrian General Gallentz. Encouraged by vague promises from Lord Palmerston and the French Government, Denmark, in 1864, declared war against Germany, but found herself absolutely unsupported. The line of the Dannerwerk, which defended the peninsula, was forced, and after an heroic resistance the heights of Dybbøl had to be abandoned. There was nothing for it, in 1864, but to make peace. Under the Treaty of Vienna, Christian IX. renounced Holstein, Schleswig, and Lauenburg. With considerable prudence he refrained from taking part in the Austrian and Prussian War of 1866—although, in the event of Austria being victorious, there was a good chance of his recovering his lost dominions—and devoted himself to the reorganisation of his kingdom, even going to the length of selling the islands of St. John, St. Thomas, and St. Cross, to the United States. A new Constitution was granted to the Danes in 1866, but the Liberal majority of the Rigsdag has not always been amenable to reason. Of the King of Denmark's numerous family, his eldest daughter, Alexandra, is married to the Prince of Wales; the second, Dagmar, to the Czar of Russia; the third, Thyra, to the Duke of Cumberland. The Crown Prince married Louisa, daughter of the King of Sweden, in 1869; the second son, George, was chosen King of the Hellenes after the abdication of Otho I., in 1863.

Gallenga, Invasion of Denmark. [L. C. S.]

* **Depretis**, AUGUSTINO (b. 1811), the Italian statesman, was born at Stradella, in Piedmont, where he became a solicitor, after studying for some years at the University of Turin. Having taken an active part in the patriotic movements against Austria, he was appointed Governor of Brescia in 1849, and in 1861 was despatched by Cavour to proclaim the Italian Constitution in Sicily. In the following year he became Minister of Public Works, and in 1866 of Marine and Finance successively. As leader of the Left, or Liberal Opposition, on the defeat of the Minghetti ministry, in 1876, on the grist tax, he formed a new Cabinet, and himself became President of the Council and Minister of Finance. In 1877 Depretis gave place to Signor Cairoli, but was recalled to office as the leader of a coalition ministry at the end of 1878. Defeated after six months' tenure of office, he, in 1881, returned to power with the portfolio of the Interior, owing to the agitation about Italian interests in Tunis. In 1852 he extended the franchise, established *scrutin de liste*, and passed a bill confirming the use of the parliamentary oath. In 1883 he effected a coalition with the Right in support of his repressive measure against Socialism; and in 1884, having quarrelled with his Cabinet on a new Education Bill, he resigned, but was induced to form a new ministry. In 1885 his term of power came to an end, owing to the popular agitation that led to the occupation of Massowah, but he speedily resumed office.

De Quincey, THOMAS (b. 1785, d. 1859), the most graceful and versatile of English essayists, was born at Manchester. His father, Thomas Quincey (without the De), was a merchant, who died when Thomas was only seven years old, but left his family well provided for. Thomas de Quincey was educated at the house of one of his guardians at Salford, and subsequently at Bath Grammar School, where he distinguished himself by his Latin verses. He was afterwards sent to a private school at Winkworth, and finally to Manchester Grammar School, whence, growing impatient of school discipline, he ran away, and went through the period of wanderings and privations which he has immortalised in the *Confessions of an English Opium Eater*. When at last, in 1803, he went up to Worcester College, Oxford, his career was very uneventful; and he left Oxford in 1808 without a degree. By this time he had made the acquaintance of Coleridge and Wordsworth, and, on leaving the University, he took a cottage at Grasmere and became one of the famous circle of Lake scholars, now joined by "Christopher North." Here De Quincey remained till 1830, with occasional visits to London and to Edinburgh. All these years—as, indeed, at all periods of his life—he read voraciously, devoting himself especially to the little-explored fields of

German literature; and his vast stores of reading, joined to a wonderful memory, gave him that polyhistoric breadth and reach which is the astonishment of his readers. In 1819 he was asked to edit the *Westmoreland Gazette*; but he can hardly be said to have been fairly launched upon the career of article writing, to which the rest of his life was devoted, until 1821, when, at the age of thirty-seven, his *Confessions of an English Opium Eater* began to appear in the *London Magazine*, and immediately attracted the notice of the whole world of letters. He wrote for the *London Magazine* till 1824, and then, in 1826, appeared his first contribution to *Blackwood*, on Lessing, followed in 1827 by the inimitable essay on *Murder Considered as One of the Fine Arts*. His work for *Blackwood* now drew him frequently to Edinburgh, and in 1830, finding his scanty income insufficient for maintaining his lodgings and also the cottage at Grasmere, where lived his wife, whom he had married in 1816, and their eight children, he moved his family to Edinburgh, and here they lived until the death of his wife in 1837. His eldest and youngest sons had gone before their mother, and De Quincey now found himself a widower with six young children on his hands. He placed them in a cottage at Laeswade, seven miles from Edinburgh, and this was his home so long as they remained unmarried, though his wandering disposition compelled him to occupy a succession of lodgings in Edinburgh, each of which in turn became choked-up with books and papers. His devotion to opium contributed in no small degree to his notorious eccentricity and dreaminess. He had acquired the habit first in 1804, when he resorted to laudanum to cure an attack of neuralgia, and so mightily did it grow upon him that he was known to take at times as much as 12,000 drops, or about ten wine-glasses, in a day. He was, however, constantly struggling to reduce this appalling quantity, and managed after a while to keep himself within moderate bounds, with occasional opium debauches. His style and manner of writing, however, cannot be said to be the effects of the drug, though its use undoubtedly tended to restrict him to short, detached efforts, and forbade prolonged application. Until 1849 he wrote frequently for *Blackwood*, contributing, among others, his famous *Suspiria de Profundis* (1845), *The English Mail Coach*, and *A Vision of Sudden Death* (1849), and he also wrote constantly for *Tait* between 1834 and 1851. His last years were occupied chiefly in revising the collected edition of his works for Hogg, the publisher. He omitted many articles which his mature judgment did not approve, welded others together, and carefully revised the whole, without, however, attempting to introduce order into the chaotic contents of the fourteen volumes which he himself prepared

for the press to within a few days of his death, and to which two concluding volumes were subsequently added by the publisher. De Quincey's works consist entirely of magazine articles; and in spite of their number, and the extraordinary multiplicity and diversity of their subjects, they are, with hardly an exception, of a high level both of matter and style. His prolixity, indeed, has been cited against him, and there is no denying that, as Goldsmith said of Burke, he winds himself into his subject like a serpent; but the very discursiveness is a sign of intellectual subtlety. De Quincey was continually led away from his main theme by his keen apprehension of analogies with apparently very distant and dissimilar subjects, and his enormous stock of scholarly reading made him peculiarly liable to be run away with at every juncture of his essay. Yet his very digressions, introduced with consummate art, show the mind of a practised thinker. And whatever may be thought of his method, nothing but admiration can be felt for the glorious richness of his language. There is no more impassioned prose in the whole range of English literature, none more musical, and, despite its intricacy, none more perfect in balance and rhythm. Of all his writings, the *Confessions*, the *Art of Murder*, and the *Mail Coach*, with its sequel *Sudden Death*, are not only the best known, but perhaps, with the exquisite piece on the *Three Ladies of Sorrow* in the *Suspiria*, the most perfect examples of his charm and power of style. But his sketches of the Lake school (despite a grain of malice), his autobiography, and his essays in German and other biography (except that on Goethe), and on classical subjects, are scarcely less happy. His historical speculations, as in *Judas Iscariot* and the *Roman Meals*, are full of daring and ingenuity. He also wrote on theological subjects, showing himself a staunch English Churchman, yet asserting the full right of every man to think for himself and say his say publicly. His political writings are few, but are those of a discriminating intellectual Tory. In philosophy and metaphysics his chief work was to translate and interpret Kant to the English reader. His essays in literary criticism are the best of their kind; the articles on the *Antigone*, *Macbeth*, Milton, Pope, Goldsmith, Wordsworth, etc., are still in many respects the best criticisms of a purely literary character in the language. Two short romances belong to the long series of De Quincey's works; one of these, *Klosterheim* (1832) is not included in the English edition, and the other, *The Avenger*, has probably been read by few; neither is very remarkable, yet both are worth reading for their strange, fantastic imagination and for the polished perfection of the style.

The *Life of De Quincey* has been written by H. A. Page (1877); Prof. Masson has also contributed an interesting sketch of him to the *English Men of Letters*; and Mr. Garnett has

published some fresh details in his edition of the *Opium Eater* in the *Parchment Library*.

[S. L.-P.]

Derby, EDWARD GEOFFREY SMITH STANLEY, 14TH EARL OF (*b.* 1799, *d.* 1869), statesman, was born at Knowsley, the family seat, in Lancashire. He was educated at Eton, and Christ Church, where he obtained the prize for Latin verse in 1819, on the subject of Syracuse, a poem above the average of prize compositions, both in style and thought. In 1821 he was returned as Mr. Stanley to the House of Commons for Stockbridge, and occupied the first three years of his parliamentary life in watching and gaining knowledge of the House. He made his maiden speech on the 6th of May, 1824, on a motion of Mr. Hume's for an inquiry into the condition of the Irish Church, which he opposed with great ability. The impression made by this speech was confirmed by his subsequent appearances, and on the formation of Lord Grey's Government in December, 1830, Mr. Stanley was made Chief Secretary for Ireland. He greatly distinguished himself during the debates on the Reform Bill, and the story of his delivering a speech from the supper-table at Brooks's Club, when there seemed some possibility of a reaction, is well known. With the great measure of 1832, however, he thought enough had been done, and almost immediately after the meeting of the first Reformed Parliament began to discover those Conservative leanings which ultimately carried him into the camp of Sir Robert Peel. Before going, however, he "educated Ireland," as Lord Beaconsfield said of him, by establishing those elementary schools all over the country which are still one of the most refreshing sights which greet the eye of the traveller in that country; and he also had charge of the Bill for the abolition of the slave trade, on which he made one of his most celebrated speeches. At this time he was what would now be called a moderate Liberal; and he left his party rather than unite with them in even the partial appropriation of the Church revenues to other than religious purposes. He was one of the most formidable opponents in debate (of which his knowledge, said Lord Macaulay, "resembled an instinct," and earned for him the title of "the Rupert of Debate") that O'Connell ever encountered; and it was chiefly owing to him that the repeal of the Union was, fifty years ago, rendered utterly hopeless. On the formation of Sir Robert Peel's ministry, in November, 1834, Lord Stanley, whose father had become Lord Derby a few months earlier, did not form part of the Government, but, in company with Sir James Graham, the Duke of Richmond, and Lord Ripon, he gave it an independent support, and continued on the same side to the dissolution of Parliament and the great Conservative victory of 1841. In Peel's

second administration Lord Stanley was Colonial Secretary, a post which he resigned on the Repeal of the Corn Laws, in 1846, to become the leader of the Protectionist Conservatives, who amounted in round numbers to about 250 members. Had Lord Stanley remained in the House of Commons, it is not impossible that the events of 1846 might have taken a somewhat different turn, but in 1844 he had been raised to the peerage by the title of Lord Stanley of Bickerstaffe, and his services were lost to his party when they were most imperatively required. After the great battle between Free Trade and Protection was over, it might have been expected, perhaps, that the two sections of the Conservative party would have drawn together again; and Lord Lyndhurst in particular exerted himself to effect a reconciliation. But the quarrel was too bitter to be so speedily composed; and the Peelites gradually drifted further and further away from their former moorings, till they were lost in the ranks of the Liberals. In Feb., 1851, on the resignation of Lord J. Russell, Lord Stanley, who shortly afterwards, by the death of his father, became Earl of Derby, was called upon to form a ministry, but declined the task when he found that neither Lord Palmerston nor Mr. Gladstone would join him. In the following year (1852), however, Lord J. Russell resigned again on a motion of Lord Palmerston's respecting the militia, and this time Lord Derby was almost compelled to undertake the government. Mr. Disraeli became Chancellor of the Exchequer and leader of the House of Commons. A dissolution of Parliament in the summer reinforced the party by thirty or forty seats, and the new Conservative party, which lasted till 1880, was fairly started. What kind of leader Lord Derby made is not a question that will be keenly debated by historians. He threw the regis of his great name, great reputation, and brilliant debating powers over the Conservative party while it was still small and of no reputation, and he and Mr. Disraeli together exactly supplied its principal wants—wit, eloquence, industry, and professional statesmanship. But these essential qualities were in the case of Lord Derby heavily weighted by others, which greatly impaired their usefulness and retarded the progress of his party when the way seemed clear before it. Attentive to business only when actually in office, he made no effort to gain it; and shrank from the labour of conducting a government without a staff of experienced colleagues to share its responsibilities. Several times office was forced upon him, but he accepted it without pleasure, and quitted it without regret; and as his sentiments on this subject were shared by many of the country gentlemen who looked up to him, it is not to be wondered at that from 1852 to 1868 the Conservative party proper never gained a clear majority. He was defeated on the budget in 1852, and

resigned to make way for the coalition ministry under Lord Aberdeen, which, being turned out again in 1855 for their mismanagement of the Crimean War, made way for Lord Palmerston, Lord Derby again declining to take office without some help from other sections of the House. But in 1858, when the Conspiracy to Murder Bill brought Lord Palmerston to the ground, Lord Derby made a second attempt, under much less favourable circumstances than he would have enjoyed in 1855, and found himself obliged to introduce a measure of Parliamentary Reform. It was based on identity of suffrage between towns and counties, and the second reading was rejected by a majority of thirty-nine. Lord Derby dissolved, and though his party emerged from the conflict with a considerable accession of strength, its numbers were not sufficient to avert a vote of want of confidence moved by Lord Hartington, which was carried by a majority of thirteen. But though deposed from office, Lord Derby was practically master of the situation. The Liberal party was divided against itself; and a compact Opposition, counting more than three hundred votes, could actually do what it liked. It chose, however, rather to support a Conservative minister in the disguise of a Whig, than a Conservative minister in his own dress, and Lord Palmerston died in harness. Then, however, the temper of the country showed itself. The Moderate Liberals joined with Lord Derby in opposing Mr. Bright and Mr. Gladstone, and in 1866 brought Lord Derby into power for the third time. It is not our place to discuss the merits and defects of the Reform Bill of 1867, by which household suffrage was given to the boroughs. It is sufficient to say that Lord Derby ended his career as he began it—in the support of a popularised franchise, and in defence of the Established Church of Ireland. He retired from the Treasury in the spring of 1868, leaving his honours to Mr. Disraeli. But in 1869 he spoke against the Church Bill of Mr. Gladstone with the gravity and solemnity almost of a dying man, in language which will be quoted and remembered when even his fiery onslaughts and his exquisite railery have passed into oblivion. Lord Derby died at Knowsley on October 23rd, 1869, in his seventy-first year, and left a blank in the English aristocracy which has not yet been filled up. He was an accomplished scholar, and a keen sportsman, as well as a great statesman; and perhaps had he cared less for Homer, and more for Hansard, than he did, he might have bequeathed a different reputation to posterity. His excellent translation of Homer's *Iliad* is among the best of recent times; while in English literature, and especially English poetry, he was equally well skilled. He was extremely popular on his own estate, and may be said to have been

so, indeed, with all sorts and conditions of men; and when his horse Toxophilite was favourite for the Derby, thousands took an interest in the race who had scarcely ever heard of it before. Lord Derby married a daughter of Lord Skelmersdale, and was succeeded by his eldest son, the present Lord Derby, born in 1826. Lord Derby succeeded the Duke of Wellington as Chancellor of the University of Oxford, a post which he held to his death.

[T. E. K.]

***Derby, EDWARD HENRY STANLEY, 15TH EARL OF (b. 1826)**, the eldest son of the Prime Minister, was educated at Rugby, and at Trinity College, Cambridge, where he took a first class in classics. After an unsuccessful attempt to enter Parliament for the borough of Lancaster, he visited Canada, the United States, and the West Indies, and, during his absence, was elected for Lyme Regis, where the death of Lord G. Bentinck had created a vacancy (1848). His first important speech was on the sugar colonies, and he supported it by two pamphlets in the form of letters to Mr. Gladstone. He also distinguished himself by his activity on various commissions. Lord Stanley next paid a visit to India, and on his return found that he had been appointed Under-Secretary for Foreign Affairs in his father's administration. In 1855 he was offered the place of Secretary to the Colonies by Lord Palmerston, but declined it, and on the return of his father to power, became Secretary of State for India, with a seat in the Cabinet. His India Bill of 1858 brought a miserable chapter to a close by transferring the government of India from the Company to the Crown. Retiring from office with the ministry in 1859, it was not until 1866 that he again held the seals as Secretary of State for Foreign Affairs. During that period he did his best to minimise the national excitement consequent on Lord Palmerston's mismanagement of the *Trent* and *Alabama* affairs. Lord Stanley also distinguished himself for voting against his party in favour of the admission of Jews to Parliament. Secretary of State for Foreign Affairs once more in Lord Derby's last ministry, Lord Stanley was representative of England at the Conference of the Powers held in London, May, 1867, to settle the Luxemburg question, which was done by the arrangement that the Duchy should continue an appanage of Holland, and that the fortifications of the city, which constituted a standing menace to France, should be pulled down. His last important speech in the Lower House was against Mr. Gladstone's Irish Church Bill (1869). In February, 1874, he once more became Secretary of State for Foreign Affairs. At first everything went quietly enough, and it was noticed that he attempted to lessen the importance attached to the purchase of the Suez Canal shares.

When the Eastern question began to burn, Lord Derby refused to countenance the measures of reform which, during 1876, the Powers wished to force upon the Porte, first in the Andrassy Note, and then in the Berlin Memorandum. A strong rebuke was, however, addressed by him to the Porte on the subject of the "Bulgarian atrocities," and he consented to the Conference held in December at Constantinople, by which a last attempt was made to avoid war. On May 6th, 1877, he laid down the conditions on which the English Government would depart from neutrality, viz., an attempt by Russia to blockade the Suez Canal, an attack on Egypt, the occupation of Constantinople, or an alteration of the arrangements for the navigation of the Bosphorus and the Dardanelles. During the war, he made constant efforts to bring the struggle to a close, but disaster after disaster overtook the Turks, and Constantinople was threatened. On Jan. 23rd, 1878, Lord Derby resigned, the British fleet having been ordered to proceed to Constantinople. As soon as the order was countermanded, he withdrew his resignation; but it was renewed and accepted in March, on the questions of calling out the reserved forces, and the occupation of Cyprus. Subsequent explanations on July 11th gave rise to an emphatic denial by Lord Salisbury of the correctness of Lord Derby's assertions. After his withdrawal from the Cabinet, Lord Derby chiefly confined himself to extra-parliamentary speeches on economic questions, until, in 1880, he announced in a letter to Lord Sefton that he had joined the Liberal party. In December, 1882, he became Secretary of State for the Colonies, and held that office until the fall of Mr. Gladstone's ministry in 1885. The chief events of his tenure of power were the outstanding difficulties with the Boers, which were patched up by the Boer deputation of 1883, and Sir C. Warren's expedition to Stellaland; the desire of Queensland to annex New Guinea, upon which the Foreign Secretary threw a bounteous supply of cold water; and the gallant offer of military assistance made by several of the Australian colonies during the Soudan campaign of 1885, which he cordially accepted. He also encouraged the movement for the federation of the Australasian colonies.

* **Dervish Pasha** (b. 1813), Turkish soldier and diplomatist, was educated partly in London and Paris. After holding the position of professor of chemistry in the military school at Constantinople, he was made a general, and in 1849 was appointed Ottoman commissioner for settling the frontier between the Turkish Empire and Persia. In 1856 he represented the Porte at the Council of the Allies held at Paris, and when the Crimean War had come to an end he was the commissioner for the settlement of the Bess-

arabian frontier. In 1861-2 he crushed with decision a revolt which had broken out in Montenegro, and in 1866 he pacified the district of the Lebanon. The defence of Batoum by Dervish Pasha was one of the most creditable of the Turkish exploits during the war of 1878, and no less creditable was the way in which he handed over the place to the Russians, in accordance with the Berlin Treaty, after having put down the revolt of the Lazi population, who desired independence. In 1880 the Albanians refused to carry out their part of the treaty by handing over Dulcigno to Montenegro, relying on the assistance of the Porte. The Sultan was, however, compelled to give way by a naval demonstration of the Powers, and Dervish Pasha was entrusted with the task of reducing the Albanians, which he performed with grim severity. In 1882 he was sent on a mysterious mission to Egypt, with the object of intriguing with Araby Pasha on the one hand, and with the Khedive on the other, but the prompt intervention of England prevented his diplomacy from producing any result; nor was the project of despatching him to Egypt at the head of a Turkish force ever carried out.

Desbarres, JOSEPH FREDERICK (b. 1722, d. 1824), an English hydrographer, of French extraction, entered the English army, and served at Quebec as aide-de-camp to General Wolfe. In 1777, at the expense of Government, he published *The Atlantic Neptune*, a valuable collection of charts and plans. His mathematical talents were of a very high order, and he excelled as a teacher, Captain Cook being one of his pupils for navigation. In 1784 he was made Governor of Prince Edward's and Cape Breton Islands.

Desnoyers, AUGUSTE GASPARD LOUIS BOUCHER, BARON (b. 1779, d. 1857), a celebrated engraver and designer, was born in Paris, his remarkable talent for drawing showing itself at a very early age. One of his engravings having attracted the attention of Darcis, he took the young artist as his pupil, and very soon Desnoyers became one of the first engravers of the day. He devoted his burin chiefly to the works of Raphael, with a success almost unrivalled, one of his masterpieces being *The Transfiguration*. Among his works are engravings after pictures of Leonardo da Vinci, Poussin, Gérard, and other of the great masters.

Archives des Musées Impériaux.

Dessalines, JEAN JACQUES (b. 1760, d. 1806), a negro Emperor of Hayti, was born in Guinea, and brought to Hayti as a slave. He distinguished himself in the servile war which followed the French revolution, and became first lieutenant to Toussaint l'Ouverture. When the latter was transported to France, Dessalines became general-in-chief, expelled the French from the island, and massacred all the whites who had remained

under the pledge of protection. In 1804 he proclaimed himself Emperor of Hayti, but was assassinated two years later. He possessed much personal courage and daring, but was tyrannical and perfidious.

Detmold, JOHANN HERMANN (b. 1807, d. 1856), German caricaturist and politician, was born at Hanover of a Jewish stock, and after studying at Göttingen and Heidelberg, settled in his native town as a solicitor, but devoted his attention mostly to art. In 1838 he was returned by Münden to the Hanoverian Parliament, where he distinguished himself by his "passive resistance" to the Government, and also by the satire of his pamphlets and caricatures. In 1844, after having suffered a long police-supervision, he published his *Marginal Drawings* to cover the expense of a Government fine. Soon after this he removed to Frankfurt, where his lampoons made him the terror of all parties alike. The most permanently valuable of these is *The Deeds and Opinions of Herr Piepmeyer, Deputy to the National Assembly*. In 1849 Detmold was summoned to a post in the ministry, but only held office for about a year.

Oppermann, *Zur Geschichte Hannovers*, vols. i. and ii.

Deutsch, EMANUEL OSCAR MENAHEM (b. 1829, d. 1873), the most brilliant Talmudic scholar of his day, was born at Neisse, in Silesia, where his family, who were Hebrews, had long been settled. At the age of six he entered the local Gymnasium, but two years later was given over to the care of his uncle, David Deutsch of Mislowitz, a learned rabbi, who gave his youthful nephew a severe training in Talmudic lore. At thirteen Emanuel returned to the school of Neisse, and, soon reaching the highest class, matriculated at Berlin University, where he studied theology and the Talmud, and paid his way (æt. 16) by giving lessons, and afterwards by writing some Jewish stories and poems for magazines. In 1855 he was recommended by a Berlin publisher to the authorities of the British Museum for a vacant post in the department of printed books; and here he worked for eighteen years. In October, 1867, he found himself famous as the author of the article on the Talmud in the *Quarterly Review* which took the world by storm. Soon afterwards he began to realise that he was ruining his robust constitution by unremitting study. A visit to Palestine in 1869, while it ministered to his patriotic enthusiasm and gave fresh zest to his favourite Phœnician studies, did not remove the effects of overwork, and a series of lectures and articles, which were demanded of him by an admiring public, increased the evil. In 1872 he went to Egypt in the hope of cure, but after a brief journey up the Nile he was compelled to return to Alexandria, where he died. His best known works are the article

on the *Talmud* (*Quarterly Review*, 1867); the less successful article, *Islam* (*Quarterly Review*, 1869); the series of five articles on the Œcumenical Council (*Times*, 1869), and the articles on *Targums* and the *Samaritan Pentateuch* (*Smith's Dictionary of the Bible*); but he also contributed numerous essays to *Chambers' and Kitzo's Cyclopædias*, the *Saturday Review*, etc., in all of which his wonderful research and fund of learning, and his no less extraordinary command of the English language, were conspicuous. [S. L.-P.]

***De Vere, AUBREY THOMAS** (b. 1814), poet and political writer, is the son of the late Sir Aubrey de Vere, Bart., of County Limerick, the author of the picturesque drama, *Mary Tudor*. He was educated at Trinity College, Dublin, and made his first appearance in the realms of poetry with *The Waldenses, or the Fall of Roza*; a *Lyrical Tale*, in 1842. Next year he brought out *Searches after Prosperpine*, and ten years later a volume of *Poems, Miscellaneous and Sacred*. Mr. de Vere is most at home on Irish themes. In *The Legends of St. Patrick* (1872) he discourses on the precepts—to love, to forgive, to endure, and to contend for the right. *Legends of the Saxon Saints* (1879) takes us back from this age of subjective poetry, where the author thinks we have remained too long, to times of storm and change, when faith in God, stronger for persecution, shows out more triumphantly. Mr. de Vere, in the *Foray of Queen Meade, and other Legends of Ireland's Heroic Age* (1882), follows Sir Samuel Ferguson in his treatment of the grand and half-barbaric period with which he deals. Here he does for the heroic lore of the Celt what Mr. William Morris has accomplished for that of the Teuton. His chief poem substantially embodies the story told in the *Tain bo Cuaigne*. His sympathy with Roman Catholicism gives these poems a peculiar sincerity of tone. Mr. de Vere has also published several other poems. He is the author of several political works:—*English Misrule and Irish Misdeeds* (1848), *The Church Establishment of Ireland* (1867), *The Church Settlement of Ireland* (1868), *Constitutional and Unconstitutional Political Action* (1881), etc.; and he contributes occasionally to the periodicals.

Devonshire, DUKES OF:—(1) **WILLIAM SPENCER CAVENISH** (b. 1790, d. 1858), sixth Duke, was the son of William, the fifth Duke (d. 1814), and of Lady Georgiana Spencer, the friend of Fox. His only distinction in public life was the magnificent extravagance of his embassy to St. Petersburg to witness the coronation of Czar Nicholas in 1826. His splendour so impressed the Russian mind that a kind of Imperial intimacy ensued. The duke held the post of Lord Chamberlain of the Household to George IV. and William IV. for some years. Having died unmarried, he was succeeded by (2) ***SIR WILLIAM**

CAVENDISH (b. 1808), seventh Duke, Earl of Burlington, grandson of Lord George Cavendish, who was the son of William, fourth Duke of Devonshire. Lord Cavendish was educated at Trinity College, Cambridge, where he graduated as second wrangler and Smith's prizeman in 1829, and was returned to Parliament by the University. Having represented North Derbyshire from 1832 to 1834, he succeeded to the Earldom of Burlington in the latter year. In 1862 he was elected chancellor of the University of Cambridge, in succession to Prince Albert; he is also a fellow of the Royal Society, and has a high reputation for learning, having passed his life for the most part in study and retirement.

Devrient, LUDWIG (b. 1784, d. 1832), German actor, was born in Berlin, of Dutch origin, and after a random education went on the stage at Leipzig in 1804. For many years his disorderly life and domestic misery prevented him from attaining the highest success, but after playing in most of the chief towns in Germany and living for a time in destitution at Breslau, he returned to Berlin in 1815, and gradually developed into one of the most powerful and original actors Germany has ever produced. His real strength lay in such parts as Falstaff and Richard III., but though an adherent of the realistic school he mistook his own powers in aiming at the heroic, and would not undertake Iago and Mephistopheles. His nephew, **EMIL DEVRIENT** (b. 1803, d. 1872), was a conspicuous tragic actor, principally engaged at Dresden; and another nephew, **KARL AUGUST DEVRIENT** (b. 1797, d. 1872), for a time the husband of Wilhelmine Schroeder, took the leading parts in the theatre at Hanover. His son, or more probably nephew, is ***OTTO DEVRIENT** (b. circa 1838), one of the best living actors of Germany, now director of the theatre at Oldenburg, and especially famous for his representations of Mephisto, in the performances of *Faust* at Weimar, and as the author of the *Lutherspiel*, performed at Jena to commemorate Luther's tercentenary (1883).

Devrient, WILHELMINE SCHROEDER (b. 1805, d. 1860), a celebrated German vocalist, was born at Hamburg, being the daughter of Mme. Sophie Schroeder, the famous tragic actress. She first appeared in public at the age of fifteen, and in 1823 married Karl August Devrient, the actor; their union, however, was very unhappy, and they were divorced a few years later. Mme. Schroeder-Devrient sang in most of the European capitals, London, Paris, St. Petersburg, until, in 1849, she retired from the stage on the occasion of her second marriage, with M. von Boch, a Livonian noble.

*** Dewar, JAMES, F.R.S.** (b. 1842), chemist and scientist, born at Kincardine-on-Forth, was educated at Dollar Academy and Edin-

burgh University, where he studied chemistry under Dr. Lyon Playfair. He is now Jacksonian professor of natural experimental philosophy in the University of Cambridge, and Fullerman professor of chemistry in the Royal Institution. He is the author of various papers on chemical and physiological subjects, such as *The Transformation of Chinoline into Aniline*, *The Specific Heat of Carbon at High Temperature*, and *The Physiological Action of Light*.

De Wette, WILHELM MARTIN LEBERRECHT (b. 1780, d. 1849), a distinguished German theologian and Biblical scholar, was born near Weimar, and studied theology in the University of Jena. In 1810 he became professor of divinity in the University of Berlin, acquiring a high reputation as a preacher. As a Biblical critic he is best known, his most important works being:—*Contributions to an Introduction to the Old Testament* (1806-7), *A Commentary on the Psalms* (1811), *On Religion and Theology* (1815), *Christian Dogmatics* (1813-16), and *Critical and Historical Introduction to the Old and New Testaments* (1817-26). In 1819 he was dismissed from his professorship for writing a letter of condolence to the mother of Sand, the man who assassinated Kotzebue; shortly afterwards he obtained a Chair of divinity at Bâle. In his youth, at Weimar, De Wette knew Herder, whose broad theological views he shared, and still further developed in after years. Schleiermacher was one of his most intimate friends, though he did not agree with his system, and had still less sympathy with the speculative religious theories of Hegel and Schelling.

Schenkel, *De Wette und die Bedeutung seiner Theologie für unsere Zeit*.

Dibdin, CHARLES (b. 1745, d. 1814), the author of the best sailor songs, was born at Southampton, but came to London when young and went on the stage. As an actor he was not successful, but having become musical manager of Covent Garden theatre, he drew large audiences by his solo musical *Sketches*, composed by himself. In 1796 he opened the Sans-Souci theatre. Though he published a large number of short plays and farces, all his work is forgotten except his incomparable nautical ballads. In these he was particularly favoured by his times, for his life exactly coincided with the period of England's naval greatness. In spite of frequent imitations, no one else has caught the simplicity, the free humour, and spontaneity of the true sailor song. Every Englishman knows *Tom Bowling*; *Poor Jack*; *Blow high, blow low*; *The Jolly Young Waterman*; and *The Anchorsmiths*.

The Professional Life of Mr. Dibdin, written by himself (1803).

Dickens, CHARLES (b. 1812, d. 1870), one of the greatest of English novelists, and altogether the greatest humorist of the century, came of humble parentage, and rose from

a condition of extreme poverty. His father was a clerk in the Navy Pay Office, Portsmouth, at the time of Dickens' birth, which occurred at Landport, Portsmouth. The father was an easy-tempered, unpractical man, and his want of ordinary worldly wisdom was the cause of some of the disasters that befell his household. The mother appears to have been a woman of energy and some accomplishments. At one period she kept a boarding-school in Gower Street. Dickens' parents did little for him, whether as to intellectual training or material comforts. It is understood that they served as models for two of his characters, Micawber and Mrs. Nickleby. This fact is enough to indicate the attitude of the son's mind towards them. Dickens senior left or lost his situation at Portsmouth, and thereafter his family was always in distress. When the son was nine years old they were living in abject poverty, in Bayham Street, Camden Town. Dickens appears to have been a singularly sensitive and observant child. His physical health was not robust. He read all the books his father possessed. The library was meagre enough, but it contained precisely the literature the young mind wanted: *Roderick Random*, *Humphrey Clinker*, *Tom Jones*, *The Vicar of Wakefield*, *Don Quixote*, *Robinson Crusoe*, and *The Arabian Nights*—these were the books he read before he was twelve years of age. He wrote a tragedy in these early years, and, naturally enough, acquired a great fame while still a child as a teller of stories. But it chanced that a relative had a blacking factory, and to the mean and laborious employment of pasting labels on blacking pots the little dreamer of great dreams was sent to earn his six shillings a week. What he suffered in the factory from wounded sensibilities and more tangible physical hardships, he has indicated in his story of the early days of David Copperfield. When he was twelve years old his father had the good fortune to quarrel with a partner in the blacking business, and then Dickens was sent to a school in Mornington Place. Three years later he was employed at the office of an attorney in Gray's Inn, at a salary of thirteen shillings and sixpence a week. The wheel of fortune had brought some luck to his father, who was now a parliamentary reporter. Dickens himself learned shorthand, and obtained employment in Doctors' Commons in 1828. During the ensuing two years he reported law, and at nineteen he became a parliamentary reporter, remaining in that department of journalism as the representative by turns of the *True Sun*, *The Mirror of Parliament*, and *The Morning Chronicle*, during the five years 1831-6. In these days he saw something of coaching. He made his first appearance as an author in the old *Monthly Magazine* for January, 1834, with the sketch entitled "A Dinner at Poplar." In

1836 his *Sketches by Boz* were collected, and published in two volumes, illustrated by George Cruikshank. It was at this period that a well-known publishing firm had a periodical work in contemplation, for which the artist Seymour was to provide some amusing drawings. Mr. Chapman appears to have approached Charles Whitehead in the first instance. Whitehead was then a young author of high promise, but he declined the flattering invitation, and suggested the name of Dickens. The author of the *Sketches by Boz* undertook the work, and the result was the *Posthumous Papers of the Pickwick Club*, which began to appear in April, 1836. Dickens was then no more than twenty-four years of age, and became at once a writer of great mark. In January, 1837, Mr. Bentley engaged the young novelist to edit a magazine he was starting, and while discharging the duties of editor to the well-known *Miscellany*, he printed the best work of his friend Whitehead, the romance of *Richard Savage*. His hands were now full. He was writing the *Pickwick Papers* and *Oliver Twist*, side by side, and not even a week in advance of the printers with either. Next year he wrote *The Life and Adventures of Nicholas Nickleby*, and in April, 1840, he started his *Master Humphrey's Clock*. The sale of the first number of the *Clock* was no less than 70,000 copies, though the orders fell off when it was realised that there was to be no continuous story. To meet this disappointment *The Old Curiosity Shop* and *Barnaby Rudge* were written. In January, 1842, Dickens visited America. He returned to England in June, and wrote his caustic *American Notes*. He was now thirty years of age, and one of the most famous of living Englishmen. A reputation so suddenly acquired could hardly have been sustained after the surprise had worn off. The reaction came speedily. In 1843 *Martin Chuzzlewit* began to appear, but of the first number only 20,000 copies were sold. The sale was still very great, but the decline was still greater, and to meet the dissatisfaction of the publishers the *Christmas Carol* was written. This short story was highly successful. But Dickens was in debt, and to reduce his expenses he removed from London to Genoa, and there finished *Chuzzlewit*. Returning to England in 1844, he applied for a paid magistracy in London, but was unsuccessful. Regular employment of another kind soon came in his way. The *Daily News* was started, and Dickens undertook the editorship, with a salary, it has been said, of £40 a week. His staff included Douglas Jerrold and men of almost equal eminence. Dickens soon retired from the editorship. In 1846 he wrote *Dombey and Son*; in 1849 *David Copperfield*; in 1852 *Great House*; in 1855-7 *Little Dorrit*. In 1850 he started a periodical of his own, under the title of *Household Words*. This was discontinued in 1859 in

favour of *All The Year Round*. His colleagues were writers of mark, including Mr. Wilkie Collins and Mr. James Payn. They were often no more than so many lesser Dickenses, though the novelists mentioned were free from imitative influences. *Hard Times* was written in 1854; the *Tale of Two Cities* in 1859; *Great Expectations* appeared in 1860-1; *Our Mutual Friend* in 1864-5. In 1858 Dickens and his wife had agreed to live apart. The five years ensuing after 1855 were devoted chiefly to a new kind of intellectual activity. The ambition of Dickens was restless, and his taste for variety was not easily appeased. Perhaps it was the desire for fresh conquests that led him to adopt the function of the public reader. Probably the large pecuniary prizes of the public entertainer had some alluring influences. The instinct of Dickens had always gravitated towards the stage. He loved the theatre, and had even acted in his own person at Tavistock House and elsewhere, in plays written by his friends Lord Lytton, Wilkie Collins, and others. He did not write plays, and this may have been due either to the self-criticism, which might have told him that in dramatic dialogue he was not eminent, or to the circumstance that his hands were always kept more than full with work for the publishers. His histrionic tastes spent themselves mainly in the public reading of extracts from his own works. His first systematic attempt in this direction was made in 1858-9. In 1861-3 he repeated the experiment. But his chief campaigns as a reader were in 1866-7 in England, in 1867-8 in America, and again in 1868-70 in England. His success was complete. He earned enormous sums, and added materially to his personal reputation. His selections were judiciously made. He had every gift necessary to a public reader: voice, eye, command of facial expression, and control of the springs of joy and tears. Few, or none, who heard him will forget his reading of the *Christmas Carol*. From the moment when his strongly marked face appeared above the rostrum, and he plunged at once into "Marley was dead," down to the benediction of Tiny Tim, "God Bless us Every One," the attention of the audience was riveted, and their sympathies were held as by a spell. But this new employment took a great deal out of him. He suffered seriously from nervous exhaustion, and only his delight in the work, added to his gratification with the material results, kept him engaged in it. To a man of Dickens' temperament it was an irresistible pleasure to meet his people face to face. Dickens was a great man, but his restlessness was killing him. Twenty-five years after his first visit to America he visited America again. He was now a man of fifty-five, prematurely grown aged, but with all the volatility of a buoyant nature still remaining, and the fire of a fervent spirit unquenched. He had not dealt flatteringly

with America, but the Americans gave him such a reception as no man of letters ever had from any people. He came home a rich man, but not contented. Eager to resume his readings, in spite of all medical remonstrance he began his campaign of 1868-70. He had arranged for the platform his terrible description of the murder of Nancy by Sikes, and his rendering of this scene, which he acted with all the vividness of a tragedian, utterly broke down his enfeebled health. He was writing another story, and *The Mystery of Edwin Drood* began to appear in April, 1870. The story was never finished. On June 8th Dickens was suddenly overcome by a stupor, and on the following day he died. His death occurred at Gadshill Place, a country house near Rochester, which he had bought in 1856, and lived in from 1859. The announcement of his decease created a profound impression throughout the world. In his personal character Dickens was greatly beloved by his friends of the literary craft. No man of his time was more helpful to aspiring young writers. He had the misfortune to quarrel with Thackeray, but even this disagreement was due to the ardour of his comradeship. Generous to a fault; appreciative of others, even to the undue depreciation of himself; magnanimous, genial — Dickens was an ideal man of letters. His rank as a novelist will probably suffer no great deduction from time. In narrative art he had few equals. Employing the dramatic manner inaugurated by Scott, he did not neglect the epic manner of Fielding and the early novelists. His stories are not the most perfect in point of construction. This defect was perhaps due about equally to two causes: the exigencies of the periodical form of publication, and his intentional subordination of every incident to character. As a delineator of character he was unquestionably great, though it is true that he erred on the side of excess. His method was to take a characteristic and work outwards from that. Thus Micawber may be said to represent that universal hopefulness which, in its excess, develops such easy-natured, unpractical men as Dickens' father, always waiting for "something to turn up." This method often gave to Dickens' humour the effect of caricature. But whatever the critical public may think of Dickens' humour, the greater reading public will not draw nice distinctions where they are made to laugh, whether the laughter comes of Shakespearean, or Cervantic, or Aristophanic humour. In pathos Dickens is no less eminent, though here again he may be open to the charge of excess. He is never less than a master except in his purely serious as distinguished from his emotional scenes. Then he degenerates into very commonplace melodrama. In all the writings of Dickens the author himself is one of the characters. He is usually the chorus character, and stands at the wings

of his theatre offering comment and giving stage directions. These indirect passages are the choicest of the good gifts he offers. Remove them from any page of Dickens, and what is left is often bald and flat. But there is another sense in which Dickens himself is nearly always present in his stories. There is usually a child there who looks on the world out of his wondering and innocent eyes: a child that never grows old, but sees the pageant of life, and is sometimes amused by it, sometimes pained by it, and always puzzled by it. Men and women come and go, and some are glad and some are sorrowful, some rich and some poor, and the little bewildered eyes can make nothing of the human tangle. The child is Dickens himself, boy and man, and what the child sees is all that Dickens sees of the world and its ways.

John Forster, *Life*, 3 vols., 1871-2-4; *Letters of Charles Dickens*, edited by his eldest daughter, Mary Dickens (1880); Mary Dickens, *Charles Dickens* (1885). [T. H. C.]

* **Dickinson, WILLIAM HOWSHIP, M.D.** (b. 1832), a distinguished physician, was born at Brighton, and studied at Cambridge and St. George's Hospital, London. Having for some time held the post of assistant physician at St. George's Hospital, he was appointed in 1869 physician to the Hospital for Sick Children. He has made extensive researches in physiology, pathology, and practical medicine, most of his papers being published in the *Transactions of the Medico-Chirurgical Society*. He has also published a work *On the Pathology and Treatment of Albuminuria* (1868), and *Diseases of the Kidneys and Urinary Derangement* (1875-85).

Didot, AMBROISE FIRMIN (b. 1790, d. 1876), a French bookseller and publisher, belonged to a celebrated family of booksellers which had established itself in Paris as far back as the year 1713. Ambroise as a boy showed a peculiar liking for Greek, and, having finished school, he spent three years (1815-18) in Greece and the East. On his return he devoted himself to various agencies of a philanthropic kind, but chiefly to his father's business; and henceforth the history of the Didot firm may be regarded as an index to the history of the book trade in Paris. The Didot house embraced everything connected with bookselling—manufacturing paper, making letter-types, printing, bookbinding, etc. The business grew to such an extent that a branch house was established in Leipzig in 1838. Some of the most important works issued by this house are *La Bibliothèque grecque*, fifty volumes, with Latin translation; *La Bibliothèque latin*, twenty-seven volumes; *La France littéraire*, ten volumes; *L'Encyclopédie moderne*, twenty-nine volumes; *La nouvelle Biographie générale*, forty-six volumes; *L'Univers pittoresque*, sixty-nine volumes, with more than 3,000 engravings.

Diebitsch-Sabalkanski, HANS KARL FRIEDRICH ANTON (b. 1785, d. 1831), Count von Diebitsch and Nardin, Russian field-marshal, born in Silesia, entered the Prussian army at twelve; but soon after passed into the service of Russia. He served in the campaign of 1805, and was wounded at Austerlitz. He was again engaged in active service in the campaign of 1812, and greatly distinguished himself by the recapture of Polotzk and of the defence of an important post which served Wittgenstein's corps in retreat. He took part in the capture of Berlin, and was one of the commissioners in negotiating the secret treaty of Reichenbach. He gave proof of his military skill at the battles of Dresden and Leipzig, and was made a lieutenant-general at the age of twenty-eight. In 1815 he attended the Congress of Vienna, and was afterwards made adjutant-general to the Emperor. In the Turkish War (1828-9) Diebitsch had the chief command. He took Varna, crossed the Balkans, and concluded peace at Adrianople. It was in this war he performed the famous passage of the Balkans, which procured him the surname Sabalkanski (Trans-Balkanian) and the rank of field-marshal. He was sent to suppress the revolt in Poland in 1830, and took part in the incisive battles of the Praga and Ostrolenka.

Dieffenbach, JOHANN FRIEDRICH (b. 1798, d. 1847), a distinguished German surgeon, was born at Königsberg, and having studied medicine there, and at Bonn and Paris, established himself as a surgeon in Berlin, where he soon won renown for his originality of treatment and skill in operation. In 1840 he became director of the University Surgical Hospital. His greatest services to surgery were a wide extension of the principle of transplantation of parts, *chirurgia curtorum*, as it is called, out of which he created what was really a new art of applying the method to healing as well as appearance; scientific application of the transfusion of blood and infusion into the veins; and a method of subcutaneous separation of sinews and muscles.

Dieterici, KARL FRIEDRICH WILHELM (b. 1790, d. 1859), a German statistician and economist, born in Berlin, was educated in the Universities of Königsberg and Berlin, where he distinguished himself in the social sciences. In 1815 he entered the civil administration, and in 1831 became a Privy Councillor. In 1834 he was appointed professor of political economy in Berlin University, and in 1844 director of the National Bureau of Statistics. Then Dieterici published his *Method of Teaching Political Economy* (1835), *Statistics of the Principal Objects of Commerce and Consumption in Prussia* (1842-51), *Public Welfare in the Prussian States* (1846), and *Labour and Capital* (1848). He is also the author of several other works of merit. He belongs to the

so-called German-Manchester school of political economy, rather than to the school of professorial socialists.

Diez, CHRISTIAN FRIEDRICH (b. 1794, d. 1876), a distinguished German philologist, the father of Romantic philology, was born at Giessen, and educated in the university of that town, and in Göttingen. Having spent two years studying at Utrecht, he became professor in the philosophical faculty of the University of Bonn, giving lectures on the Italian, Spanish, and Portuguese languages. He made the poetry of the troubadours, and the Romance languages his especial study, and wrote many books upon this subject, amongst which we may mention:—*Contributions to the Knowledge of Romance Poetry* (1825); *The Poetry of the Troubadours* (1829), *The Life and Works of the Troubadours* (1829), *Grammar of the Romance Language*, still the text-book on the subject (1836-42), *Monuments of the Old Romance Language* (1846), *Etymological Dictionary of the Romance Languages* (1853), and *On the Earliest Portuguese Poetry of Art and Court* (1863). By these works he did for the Romantic dialects what Jacob Grimm did for the dialects of the German stock.

Dilke, ASHTON WENTWORTH (b. 1850, d. 1882), brother of the second baronet, was educated at Trinity Hall, Cambridge. During a tour of two years in the Russian empire he injured his health, but the tour had its good results in a book called *Local Government and Taxation in Russia*. He also introduced the Russian novelist, Tourgenieff, to English readers. He was elected, in 1880, as Radical member for Newcastle-on-Tyne, and brought forward several resolutions, the most important of which was one in favour of throwing election expenses on the rates. Owing to the state of his health he retired shortly before his death, and was succeeded by Mr. John Morley. Mr. Ashton Dilke was proprietor of the *Weekly Dispatch*.

Dilke, CHARLES WENTWORTH (b. 1789, d. 1864), edited in 1814 a collection of old English plays. In 1830 he purchased the *Athenæum*, which he edited with conspicuous ability until 1846. He was manager of the *Daily News* until 1849.

Dilke, SIR CHARLES WENTWORTH, BART. (b. 1810, d. 1869), succeeded his father as proprietor of the *Athenæum*, and sat for several years as member for Wallingford. He rendered valuable services in the Great Exhibition of 1851, as a member of the executive committee, and was rewarded with a baronetcy.

* **Dilke**, THE RIGHT HON. SIR CHARLES WENTWORTH, BART. (b. 1843), the eldest son of the above, was educated at Trinity Hall, Cambridge, whence he took his degree as head of the law tripos in 1866. In the

same year he was called to the bar, and started on a tour through the colonies and the United States. The result was the publication, in 1868, of *Greater Britain*—a record of travels in English-speaking countries during 1866-7—a most suggestive book, indescribably superior to the works of the ordinary globe-trotter. He first stood for Chelsea in 1868, in the Radical interest, and was returned by a large majority. In the following year he succeeded his father as proprietor of the *Athenæum*, which he is reputed to have edited for a while, and is also proprietor of *Notes and Queries*. In 1871 he publicly admitted that he was in favour of a republican form of government, and followed this up in 1872 by a motion for an inquiry into the civil list. Mr. Gladstone delivered a crushing reply, and, when the motion was seconded by Mr. A. Herbert, a scene of wild confusion followed. Nevertheless Sir Charles left his mark on the session, particularly in the amendment introduced in the Education Bill of Mr. Forster, by which elected School Boards were established, and in the Bill conferring the municipal franchise upon women. Re-elected in 1874 for Chelsea, he published, at first anonymously, a satire on the Spanish monarchy, entitled *The Fall of Prince Florestan of Monaco*, and in the following year the works of his grandfather, with the title *Papers of a Critic*, after which he went a second tour round the world. During the last period of the Conservative government Sir Charles Dilke acquired a high reputation in the House by his able speeches both on home and on foreign affairs. He carried, in 1878, the measure extending the hours of polling at parliamentary elections in the metropolis, commonly known as "Dilke's Act." His speeches on the Eastern Question were of much importance; and he moved a resolution censuring the Government for continuing to place confidence in Sir Bartle Frere's direction of affairs in South Africa in 1879. After the general election of 1880 he was offered a seat in the Cabinet by Mr. Gladstone, but declined the honour in favour of his friend Mr. Chamberlain, and became Under Secretary of State for Foreign Affairs. In that capacity he made some weighty speeches upon the settlement of the remaining portions of the Treaty of Berlin. In 1882 he succeeded Mr. Dodson as President of the Local Government Board, with a seat in the Cabinet, but still continued to identify himself with foreign affairs, and defended the Egyptian policy of the Government, both during the stage which ended with the battle of Tel-el-Kebir, and during the stage which culminated in the fall of Khartoum. In 1885 he conducted the Redistribution Bill through the Lower House, and was deservedly complimented by Sir Stafford Northcote on the tact with which he fulfilled that delicate task. His exertions to obtain a reform of local government in England were destined, as far as that Parliament

was concerned, to be fruitless. In the same year he was returned for Chelsea by a narrow majority, having during the contest delivered several speeches of a conciliatory tone towards the Government. Shortly before this he married Emilia, the widow of the Rev. Mark Pattison. In 1886, having lost his seat, he retired from public life.

***Dillmann, CHRISTIAN FRIEDRICH** AUGUST (*b.* 1823), theologian and Orientalist, was born at Illingen, in Würtemberg, and having studied at Tübingen, became professor of exegesis in that university in 1848. In 1854 he was invited to Kiel as professor of Oriental languages; in 1864 to Giessen, and in 1869 to Berlin, as professor of Old Testament exegesis, a position which he still holds. He has devoted especial study to the Æthiopic languages, and of his numerous works on this subject we may mention his *Grammar of the Æthiopic Tongue* (1857), *Æthiopic Lexicon* (1865), and his *Chrestomathia Æthiopica* (1866). He has also drawn up catalogues of the Æthiopic MSS. in the British and Bodleian Museums (1847-8), and in 1869 published an original commentary on the Book of Job.

***Dillon, JOHN, M.P.** (*b.* 1851), is the son of the late John Blake Dillon, a prominent member of the Young Ireland party, and afterwards member for County Tipperary (1865-6), a man who attempted, during his last years, to produce an alliance between the Irish members and English Radicals. Mr. John Dillon was educated at the Catholic University of Dublin. During 1879 and 1880 he assisted Mr. Parnell and Mr. Michael Davitt in founding the Land League in America. He was elected for County Tipperary in 1880, and at once took place as one of the most determined of Mr. Parnell's following. Of his numerous speeches perhaps the most remarkable was that made at a Land League meeting, in which he expressed his opinion that the "cattle would not thrive" on the fields of the occupier of the land of an evicted tenant, and advised the men of the Land League to enroll themselves in order to resist the levying of rent. This speech was the source of a scene of furious recrimination on Aug. 23rd, 1880, between Mr. Forster and the Irish members, but Mr. Dillon afterwards expressed his regret that he should have appeared to countenance the maiming of cattle. Arrested in May, 1881, he was liberated on the ground of ill-health, some months afterwards, but for a while played no part in politics, because he regarded Mr. Parnell's attitude towards the Land Act as not sufficiently uncompromising. Again arrested in October in consequence of the "No-rent" manifesto of the Land League, he was committed to Kilmainham prison with Messrs. Parnell, Sexton, and O'Kelly, and remained there until May 2nd, 1882, when he was released in consequence of negotiations with the Government. Speaking to the

Coercion Bill, he defended boycotting, and refused to denounce outrages as long as the Government refused to denounce evictions. At another time he regretted that Ireland was unable to resist England in arms. In March, 1883, the state of his health compelled him to retire from political life. Mr. Dillon reappeared in 1885, when he was returned for East Mayo in the Parnellite interest, and in 1886 he took his seat once more in the House of Commons. In 1886 he supported the "Plan of Campaign," was indicted for conspiracy, and bound over to keep the peace.

Dindorf, WILHELM (*b.* 1804, *d.* 1883), the classical critic, was born at Leipzig, studied there, was made professor of literary history there, and there he died after a laborious scholar's life spent in annotating and restoring the relics of Greek literature. There is hardly an author, or school of authors, of ancient Greece which he did not edit, and all with such accuracy and penetration that his editions are the generally recognised textbooks in the schools and universities throughout Europe. Scholars in this country for the most part humbly follow the text of his editions, among which may be mentioned Homer, Sophocles, Aristophanes, Demosthenes, Eusebius, and Josephus.

Disraeli, B. [BEACONSFIELD.]

D'Israeli, ISAAC, D.C.L. (*b.* 1766, *d.* 1848), literary historian, born at Enfield, was the only child of Benjamin D'Israeli, a Venetian merchant, who had been for many years a resident in England. He was educated chiefly at Amsterdam and Leyden, where he acquired great proficiency in the classics and modern languages. After a tour through France and Italy, he returned to London, with a strong bias towards literature. He published a number of poetical pieces, and several novels, chiefly of an Oriental character, but ultimately devoted himself to the sphere of literary history and criticism, in which he attained considerable distinction. His *Curiosities of Literature, consisting of Anecdotes, Sketches, Characters, and Observations, Literary, Critical, and Historical*, appeared in 1791, and was afterwards elaborated into three volumes. In 1795 D'Israeli published his *Essay on the Manners and Genius of the Literary Character*, which was followed, in 1796, by *Miscellanies, or Literary Recreations*. An important work, entitled *Calamities of Authors*, in two volumes, appeared in 1812 and 1813; and this was succeeded by the *Quarrels of Authors*, published in 1814. An *Inquiry into the Literary and Political Character of King James the First* was published in 1816, and for the production of his *Commentaries on the Life and Reign of Charles the First*, the University of Oxford conferred upon D'Israeli the degree of D.C.L. His works, the contents of which are sufficiently indicated

by their titles, had chiefly been of a tentative character, and it was the intention of the author that they should be regarded only as preliminary to a comprehensive history of literature. This work was to extend to six volumes, but its projector was compelled to abandon his undertaking, in consequence of being stricken with blindness. In 1841, however, he issued some notices of the earlier period of our literary history, under the title of *Amenities of Literature*. D'Israeli was a contributor to the *Quarterly Review*, and his *Review of Spence's Anecdotes*, in 1820, led to the famous Pope controversy. He was a typical literary character, living only in his books. He died at Bradenham House, his seat in Buckinghamshire.

An edition of his works, including *Notes and a Memoir*, was published in 1858 by his son, Benjamin D'Israeli. [G. B. S.]

Dix, JOHN ADAMS (b. 1798, d. 1879), American general and politician, was born in New Hampshire, and having early entered the army, rose to be aide-de-camp to General Brown, commander-in-chief. In 1828 he quitted the army for the law, and having filled various minor political offices, was appointed major-general of the New York Militia on the outbreak of the Civil War, and subsequently held the same rank in the regular army, receiving also the command in Maryland, and afterwards the direction of the seventh army corps. In 1863, after cutting General Lee's communications by a manœuvre on the York river, he was transferred to New York, of which he had command at the time of the riots. After the close of the war he was appointed minister in Paris, where he remained two years. In 1872 he was elected by the Republican party as Governor of the State of New York, but in 1874 he and his party were defeated by Mr. Tilden, after which General Dix took no further part in political life.

Dixon, HENRY HALL (b. 1822, d. 1870), sporting writer, well known through his pseudonym, "The Druid," was the son of a cotton manufacturer, and was educated at Rugby under Dr. Arnold. He contributed largely on sporting and agricultural matters to the press, but is now chiefly remembered for his admirable memoirs and descriptions of country life in *The Post and the Paddock* (1856), *Scott and Sebright* (1862), *Silk and Scarlet* (1858), *Field and Farm* (1865), *Saddle and Siroloin* (1870), and his treatise on *The Law of the Farm* (1858, 4th edit. 1879).

Dixon, WILLIAM HEPWORTH (b. 1821, d. 1879), journalist, historian, and traveller, born at Great Ancoats, near Manchester, and reared under circumstances that denied him the education of a public school and university, began his career in letters at Cheltenham, where he acted as literary editor of a local

newspaper, whilst contributing articles to Douglas Jerrold's *Shilling Magazine*, the *Illuminated Magazine*, and other periodicals. When still in his twenty-sixth year he proceeded to London, where he entered as student at the Inner Temple, and associated himself with the *Daily News*. For this journal he wrote a series of articles on the *Literature of the Lower Orders*, and another even more remarkable set of papers on *London Prisons*. This latter group of social studies were, soon after their appearance in the paper, worked up into a volume and published in 1850. Having already gained a footing on the *Athenæum*, he improved it whilst gathering the materials of his successive *Memoirs* of John Howard (1849), William Penn (1851), and Robert Blake (1852). He was editor of the *Athenæum* from 1853-66; and during this period he made a systematic study of the State archives, and produced some of his best and most popular books:—*The Personal History of Lord Bacon* (1860), *The Holy Land* (1865), which still remains the favourite handbook of ordinary tourists in Palestine; and *New America* (1866), which was emphatically the book of its particular season. In his first visit to America, Mr. Dixon had the rare good-fortune to discover the Irish State Papers that had been so long and strangely lost, the story of which was told in a remarkable letter of Lord Romilly, published in the *Times*. In 1868 he travelled through Russia, and from the year 1870, when he published *Free Russia*, to 1879, when the third and fourth volumes of *Royal Windsor* were left in uncorrected proofs, no less than twenty-five volumes of history, travel, and fiction proceeded from his unrelenting pen. But even this mass of work affords no adequate record of the exertions and achievements of an author who during the same period threw off a steady series of anonymous contributions. In 1872 Mr. Dixon brought an action for libel against the proprietor of the *Pall Mall Gazette* for certain severe remarks on some passages in his *New America*, *Spiritual Wives*, and *Free Russia*; and after a long trial was awarded one farthing damages. Mr. Dixon was a deputy commissioner to the Royal Commission for carrying out the Great Exhibition of 1851; in 1869 he was appointed a magistrate for Middlesex; and in 1870 he was elected to the London School Board. He was president of the Tonic Sol-Fa Teachers' Association, and a member of the Council of the Olympian Association.

Athenæum, Jan. 3rd, 1880.

Djémil, ESSEÏD MOHAMMED (b. 1827, d. 1872), Turkish pasha and diplomatist, born at Constantinople, was the son of the celebrated Grand Vizier, Réchid Pasha, and was educated in Constantinople, London, and Paris. He began his diplomatic career as Second Secretary of the Ottoman Embassy under the

orders of his father, and was subsequently appointed member of the Council of the Grand Referendary. In 1848 he entered the Imperial Palace as Secretary of the Sultan, and in 1854 was appointed ambassador to Paris and to Turin. In 1856 he took part as second plenipotentiary with A'ali Pasha in the deliberations of the Congress of Paris, and in the following year was appointed plenipotentiary for the Porte at the Conference held in Paris relative to the affairs of the Danube and the rectification of the Russo-Turkish frontiers. Djémil Bey next became Minister for Foreign Affairs, in which post he took part in the negotiations relative to the Treaty of Commerce between Turkey, Austria, and Holland. In 1862, and again in 1866, he was appointed Ottoman ambassador to Paris, filling the post of member of the Grand Council of Justice, and was subsequently member of the Grand Council of the Treasury (1863-6). In 1862 he was raised to the dignity of Vizier and Muchir, with the title of pasha.

Dobell, SYDNEY (b. 1824, d. 1874), poet and man of letters, also known by the *nom de plume* "Sydney Yendys," was born at Cranbrook, in Kent, and educated at his own home. From both parents he inherited literary tastes, his father being the author of a pamphlet on Government, and his mother the daughter of Samuel Thompson, a political reformer, and the founder of a denomination of "free-thinking Christians." He was brought up to his father's business, that of a wine-merchant, and while following this employment he wrote his first poem, *The Roman* (1850), a drama, descriptive of the struggles of a young patriot, who disguises himself as a monk and endeavours to stir up his countrymen to shake off the yoke of Austria and restore unity to Italy. The poem was favourably received by the leading journals, the *Athenæum* hailing the birth of a new poet, and pointing out especially the earnestness and unity of purpose noticeable in *The Roman*. His next work, *Balder* (1854), was very severely attacked, the critics choosing to consider it as an autobiographical sketch, and railing at the egoism and sophistry of a supposed ideal hero; whilst Mr. Dobell himself said in his preface to the second edition, "I intend as the principal object of that work the Progress of a Human Mind from Doubt to Faith, from Chaos to Order. Not of Doubt incarnate to Faith incarnate, but of a doubtful mind to a faithful mind." The faults of *Balder*, however, are obvious; it is confused and chaotic, the conception being almost too large to allow of the whole being carried out with unity and completeness. During a residence in Edinburgh he published, jointly with Mr. Alexander Smith, *Sonnets of the War* (1855), and the following year the struggle still going on in

the Crimea inspired Mr. Dobell's *England in Time of War*, a series of lyrics, amongst which *The Little Girl's Song*, *Home Wounded*, *An Evening Dream*, and *Grass from the Battle Field*, deserve special mention. In politics he was always the friend of liberty and of the people; in his pamphlet on Parliamentary Reform he advocates a system of graduated suffrage and plurality of votes in proportion to the status and responsibilities of each voter. It may be mentioned that he was one of the first, if not the first, to introduce the system of co-operation into his business.

John Nichol, M.A., LL.D., *Introductory Notice and Memoirs to the Poetical Works of Sydney Dobell*.

Döbereiner, JOHANN WOLFGANG (b. 1780, d. 1849), man of science, was born at Hof, and having been educated as a chemist, pursued his studies amidst great difficulties till the Grand Duke Karl August unexpectedly appointed him professor of chemistry in Jena (1810). He is chiefly famous for his discoveries in the properties of platinum, and the composition of vinegar. He was also one of the most intimate friends and instructors of Goethe in old age.

Briefe des Grossherzogs Karl August und Goethe's an Döbereiner (1856).

• **Dobson, HENRY AUSTIN** (b. 1840), one of the most graceful of modern poets, was born at Plymouth, and having received a desultory education in Wales and Germany, was appointed to a clerkship on the Board of Trade in 1856. The first specimens of his poetic work were published in 1868 by Anthony Trollope in his magazine of *St. Paul's*, and in 1873 these and others were collected as *Vignettes in Rhyme*, and *Vers de Société*, followed in 1877 by *Proverbs in Porcelain*. Many of these were again reprinted, amongst several fresh works, in a collection called *Old World Idylls* (1883), and a new series, *At the Sign of the Lyre*, was published in 1885. Mr. Dobson is recognised as a poet of true delicacy of thought and perception, of unerring refinement of form, and one of the greatest masters of the graceful structures of French verse. At times, as in *Before Sedan*, he reaches the depths of natural pathos, and, again, is unsurpassed in society's satire and humorous conceits. He has also written the *Life of Fielding for the English Men of Letters Series*; the *Life of Hogarth* (1879) for the *Biographies of Great Artists*, the *Life of Steele* (1886), and several articles in Ward's *British Poets*.

• **Dobson, WILLIAM CHARLES THOMAS** (b. 1817), R.A., was born at Hamburg, and began his studies from the antique in the British Museum in 1831, subsequently, in 1836, becoming a student of the Royal Academy. In 1843 he received the appointment of headmaster of the Government School of Design at Birmingham, and superintended the pattern-drawing and flower-painting. Resigning this

office in 1845, he travelled in Italy and Germany, studying art by the way. In 1860 he produced *The Plough, Bethlehem*, and *Emilie aus Görwitz*, and shortly after he was elected an associate of the Royal Academy. In 1872 he produced *St. Paul at Philippi*, on his election as an academician. In 1855 Mr. Dobson painted, by command of the Queen, *The Acts Deeds of Dorcas*. His *Reading the Psalms* and *The Child Jesus going down with His Parents to Nazareth* (1857) are in the collection of the Baroness Burdett-Coutts. All these paintings and many others of his have been engraved. In 1870 Mr. Dobson was elected an associate of the Society of Painters in Water Colours, and in 1875 a member of the same society. *The Young Nurse, The Camellia, and Nursery Tales*, are among the best of his water-colour drawings.

* **Dodgson**, THE REV. CHARLES L. [CARROLL.]

* **Dodson**, THE RIGHT HON. J. G. [MONK-BRETTON.]

Dodwell, EDWARD (b. 1767, d. 1832), an antiquarian writer and draughtsman of some note in the department of classical investigation, was educated at Cambridge. He travelled for six years in Greece (1801-6), and spent the rest of his life for the most part in Italy, either at Naples or at Rome. In 1818 he produced a *Classical and Topographical Tour through Greece*, richly illustrated, which has been esteemed one of the best works on that subject, and has been translated into German. The costly volume, *Views in Greece*, consisting of thirty coloured plates, followed in 1821. *Views and Descriptions of Cyclopiæ and Pelasgic Remains in Italy and Greece*, a posthumous work, containing one hundred and thirty plates, was brought out simultaneously at London and Paris, with a French text, in 1834.

* **Dohrn**, ANTON (b. 1842), a German zoologist, after studying at Stettin (of which he is a native) and at Jena, where he graduated Ph.D., became a *privat docent* in the latter University. In 1868-9, when studying marine zoology at Messina, he became greatly impressed with the necessity of establishing a zoological station somewhere on the coast of the Mediterranean, and eventually selected Naples as the most suitable spot. His plan was to combine the scientific station with a public aquarium, the proceeds from the latter to assist in supporting the whole establishment. He persevered for several years, till, in the spring of 1874, a fine building, occupying an area of 7,000 square feet, with aquarium, laboratories, library, etc., was opened for scientific work. On April 11th, 1875, it was formally inaugurated, that date being the close of the first working year. Dr. Dohrn, besides expending from his own resources and

those of a few friends a sum equivalent to £7,500, was aided by the German and Italian Governments, the first by a sum of £3,000, and the latter in regard to the site, etc. The advantages of this zoological station are open to foreigners, Prussia, Italy, Russia, Austria, Holland, and other countries, and also separate universities, including Cambridge, contributing to the institution by paying for one or more tables reserved for the students or professors whom they may elect to send there. Dr. Dohrn has also contributed to a large number of foreign collections specimens of animals, etc., taken at Naples. In addition to numerous papers contributed to scientific journals, he has written, or edited:—*Studien zur Embryologie der Arthropoden*, *Catalogus Coleopterorum Europæ*, *Die Pantopoden des Golfes von Neapel*, etc., *Fauna und Flora des Golfes von Neapel*, etc. (both publications emanating from the Station); *Der Ursprung der Wirbelthiere und das Princip des Functionwechsels* (Origin of Vertebrate Animals and the Principle of Functional Variation), *Untersuchungen über Bau und Entwicklung der Arthropoden* (Investigation into the Structure and Development of the Arthropoda), etc. The "Station" has been the model on which many others have been founded—particularly Agassiz's laboratory at Newport, U.S.A., and the biological laboratory in course of construction at Plymouth.

Dolby, SAINTON. [SAINTON-DOLBY.]

* **Döllinger**, JOHANN JOSEF IGNAZ (b. 1799), the celebrated theologian, was born at Bamberg, and is the son of IGNAZ DÖLLINGER (b. 1770, d. 1841), a physiologist, famous for his discoveries in embryology. Having taken priest's orders in 1822, he was invited to a professorship of ecclesiastical history at Munich in 1826, after which he published several works on the subject, the most important of which was *The Reformation: its Development and Results*. After 1845 he represented his university in the Bavarian parliament, and in 1851 was a delegate to the parliament at Frankfurt. About the same time he began to show tendencies to the heresy which had made his name famous. At Frankfurt he demanded the total separation of Church and State. In 1861 he delivered a course of lectures, afterwards published, deprecating the claim of the Papacy to temporal power. But it was not till the assembling of the Œcumenical Council in 1869-70 that his revolt from the Papacy became notorious. He strenuously opposed all the Vatican decrees, especially the clause of infallibility, and at once became the acknowledged leader of all the moderate, or "Old" Catholics, in opposition to the Ultramontanes. Party spirit ran fiercely, but Dr. Döllinger's action was applauded by the majority of his countrymen—at all events, amongst the

educated classes—though he was excommunicated by the Archbishop of Munich. Early in 1871 he was elected rector of the University; in 1873 was appointed president of the Royal Academy of Science; and in 1874 presided over the great conference of the Old Catholics at Bonn, at which he boldly announced that he did not consider himself bound by the decrees of the Council of Trent, and even held heretical views on the Eucharist. Dr. Döllinger has throughout received the hearty support of the King of Bavaria; but his sect, which established an episcopacy in 1873, is hardly so influential as many in this country at first imagined it would be.

Dombrowski (properly DABROWSKI), JAN HENRYK (b. 1755, d. 1818), a distinguished Polish general, was born at Pierszowice, in the district of Cracow, and entered the service of the Elector of Saxony in 1770. In 1792, however, on the first symptoms of the insurrection in Poland, he proceeded to Warsaw, and took part in the Polish campaigns against Russia and Prussia, where he exhibited such remarkable military talent that on the termination of hostilities he was offered employment in the respective services of Russia and Prussia. Both offers he refused, and he went to France, where, in 1796, he was commissioned by the Directory to form a Polish Legion among his exiled countrymen, of which he was appointed commander. The legion brilliantly distinguished itself in the Italian campaign, and the commander was presented with the standards which his great countryman Sobieski had taken from the Turks when he compelled them to raise the siege of Vienna, and which he had sent to the Church of San Loretto. After the Peace of Amiens, Dombrowski became a general of division in the service of the Cisalpine Republic; and after the battle of Jena, he, along with Wybichi, was ordered by Napoleon (1806) to summon his countrymen to arms. His entrance into Warsaw at the head of twelve Polish divisions is said to have resembled a Roman triumph. In the disastrous Russian campaign of 1812, he commanded one of the three divisions of the fifth *corps d'armée*, and at the passage of the Beresina saved from destruction the relics of Poniatowski's corps. In 1813, at the head of the Poles, he served in the battles of Teltow, Grossbeeren, Jüterbogk, and Leipzig. He returned to Poland on the fall of Napoleon, and in 1815 was appointed a general and Polish senator by the Emperor Alexander, but retired into private life the following year. He occupied his leisure in preparing a *History of the Polish Legions in Italy*, which was published a few years after his death.

Leonard Chodyko, *Histoire des Légions Polonaises en Italie* (1829).

***Domett**, ALFRED, C.M.G. (b. 1811), New Zealand statesman and poet, was born

in London, and educated at St. John's College, Cambridge. On leaving the university he travelled in America, and subsequently spent two years in Italy, Switzerland, and other Continental countries. In 1841 he was called to the bar at the Middle Temple. In 1842 he settled in New Zealand as an agriculturist, and in 1848 he became Colonial Secretary for the province of New Munster, and in 1851 Secretary for the whole of New Zealand. He next represented the town of Nelson in the House of Representatives, and in 1862 he was called upon to form a Government. In 1865 he became Registrar-General of Land, and in 1870 he undertook the administration of confiscated lands. In 1871 he retired from public life, and returned to England. His poems are numerous.

***Donaldson**, JAMES, M.A., LL.D., F.R.S.E. (b. 1831), philologist, was born in Aberdeen, and educated at the university in that city, and the University of Berlin. He became Greek tutor in the University of Edinburgh in 1852; rector of the High School, Stirling, in 1854; classical master in the Royal High School, Edinburgh, in 1856; rector of the same school in 1866; in 1881, professor of Latin in the University of Aberdeen; and in 1886 principal of St. Andrews University, in succession to Principal Shairp. He has published *Modern Greek Grammar for the use of Classical Students* (1853); *Lyra Græca, Specimens of the Greek Lyric Poets from Callinus to Soutos, with Critical Notes and a Biographical Introduction* (1854); *Critical History of Christian Literature and Doctrine from the Death of the Apostles to the Nicene Council* (3 vols., 1864-6); *The Ante-Nicene Christian Library*, edited by him along with Professor Roberts, of St. Andrews (24 vols., 1867-72); *Lectures on the History of Education in Prussia and England, and on Kindred Topics* (1874); *Expiatory and Substitutionary Sacrifices of the Greeks* (1875), and *Culture and Scholarship* (1882).

Donaldson, JOHN WILLIAM, D.D. (b. 1812, d. 1861), philologist, was educated at the London University and at Trinity College, Cambridge, of which he became a fellow, and was for a time head-master of King Edward's School, Bury St. Edmunds. Of his classical works, the *New Cratylus*, a treatise on the philology of the Greek language, was published in 1839, and the *Varronianus*, a companion work on Latin, in 1844. *The Theatre of the Greeks* is also a work of great erudition and somewhat rash speculation. His attempt to reconstruct the *Book of Jasher* met with almost universal censure from Biblical scholars. Dr. Donaldson's numerous writings did much to encourage the study of philology in this country.

Donati, G. B. (b. 1828, d. 1873), Italian astronomer, was born at Pisa, and began his

astronomical career at the Observatory of Florence, where he soon distinguished himself by important observations. The most successful of these was on the study of the spectra of the stars, published in 1860, by which he inaugurated the spectroscopy of celestial bodies, now a leading branch of physical astronomy. He had already become known by his discovery of a new comet, now called Donati's comet, on June 2nd, 1858. In 1864 he succeeded Professor G. B. Arnia as director of the observatory, after which much of his time was spent in the establishment of a new observatory on the hill of Arcetri, near Florence. Professor Donati had commenced a series of notes from the new observatory by the publication of some careful observations of his own on the luminous phenomena of the great Polar aurora of the 4th to the 5th of February, 1872, when he died suddenly of an attack of Asiatic cholera in September of 1873.

Edinburgh New Philosophical Journal (1850);
Nature, Oct. 30th, 1873.

Donizetti, GAETANO (b. 1798, d. 1848), the composer, born at Bergamo, six years after Rossini, and four years before Bellini, forms a link in the history of Italian opera between Rossini and Verdi. Donizetti was intended for the medical profession, but showed at an early age such talent for music that he at last obtained his father's consent to enter the Academy of Naples, where he studied very assiduously. So long, however, as Rossini continued to work, the younger composer, who was but a follower in the footsteps of the elder one, enjoyed but little success; nor, apart from the great reputation of Rossini, which rendered the public unwilling to listen to operas from any feebler hand, did Donizetti put forth his best work until after the author of *William Tell* had (1829) ceased to write. In 1830, however, Donizetti's *Anna Bolena*, produced at Milan, made a powerful impression, and from Italy made its way to France and England, to meet everywhere with unbounded success. *Anna Bolena* was for many years regarded as Donizetti's masterpiece, and opera-goers of fifty years since associate it with the memory of Grisi in the part of Anne Boleyn, and of Lablache in that of Henry VIII. To the same period belongs Donizetti's graceful comic opera *L'Elisir d'Amore*, in which Madame Persiani used to sing the part of the heroine, and Rubini and Mario, in succession, that of the tenor. *Lucia di Lammermoor*, the work by which Donizetti is best known in the present day, was played for the first time at Milan in 1835, with the famous French tenor, Duprez, as Edgardo, and Madame Persiani as Lucia. When composing this opera, Donizetti must have been in his happiest vein. It is full of fresh, spontaneous melody, and it contains two highly dramatic scenes—the elaborate concerted finale of the second act, which,

apart from its qualities of expression, is a model of construction, and the final air (interrupted by chorus) for Edgardo, which owes its dramatic character to the truthfulness with which the composer has entered into the sentiment of the really tragic situation. *Lucrezia Borgia* belongs to the same period as *Lucia*, and has been almost equally successful. Founded on Victor Hugo's *Lucrèce Borgia*, it was for a time excluded from France, partly because the great French poet objected to his work being presented in what seemed to him a musical travesty, partly because no steps had been taken towards compensating him for the infringement of the Italian librettist of his "author's rights." In 1842, *Lucrezia Borgia* was produced with great success at Her Majesty's theatre, the principal parts being sustained by Madame Grisi, Signor Mario, Signor Tamburini, and Signor Lablache. The part of *Lucrezia* was at a later period undertaken with great effect by Made-moiselle Titiens; but of late years, like *Norma* and other tragic operatic parts, it has failed to meet with any fitting representatives. In 1843 *Don Pasquale* was produced, a work worthy of being classed with *L'Elisir d'Amore*, and in the same style. Among Donizetti's comic operas must not be forgotten *La Fille du Régiment*, known in England by the Italian version, *La Figlia del Reggimento*. This work was written for the Opéra Comique of Paris, and it was Donizetti himself who afterwards translated it into Italian. That he possessed literary as well as musical talent was shown in connection with more than one work. The final scene of *Lucia di Lammermoor*, already spoken of, is said to have been suggested by him in place of a less effective finale devised by the librettist; and he wrote on the spur of the moment, and to oblige a manager in distress, the libretto of his own *Campanello*, founded on the French vaudeville *La Sonnette de Nuit*. One of Donizetti's most dramatic works is *La Favorita*, as it is called in the Italian version, originally produced under the name of *La Favorite* at the Paris Opera-house, for which it was specially composed.

[H. S. E.]

Doo, GEORGE THOMAS (b. 1800, d. 1886), engraver, produced in 1824 his first published engraving, *The Duke of York*, after Sir Thomas Lawrence, for which he was appointed engraver to his Royal Highness, and subsequently going to Paris, he worked in the atelier of Suisse, and studied in the school of Gros. On his return, he took an active part in forming an academy in the Savoy (since defunct) for the study of the life model and the best examples of the antique. He next gave a series of lectures in and about London on engraving, its history, theory, and practice; on the dawn and maturity of painting in ancient Greece; on the revival of painting in Italy and Western Europe in the twelfth century. In 1836 he was appointed historical

engraver in ordinary to William IV., and in 1842 to Queen Victoria. In 1855 he was elected an associate of the Royal Academy, and in 1856 a Royal Academician. In 1860 he was appointed chairman of the committee of Class 40 (engravings and etchings) of the London International Exhibition of 1862, and was chosen one of the four representatives of the Royal Academy at the Congrès Artistique, held at Antwerp; and in 1863 he gave evidence before the Royal Academy Commission held at Westminster. Some of his finest transcripts are Lawrence's *Calmady Children*, entitled *Nature*; Raffaello's *Infant Christ*, and Correggio's *Ecce Homo*, in the National Gallery; Lady Meade, Lord Eldon, and Etty's *Combat*. His masterly transcription of Wilkie's *Knox Preaching* is well known.

Doran, JOHN (b. 1807, d. 1878), editor and author, was born of Irish parents in London, and received his early education chiefly in France and Germany. He first became known to the world of letters as a contributor to the *Literary Chronicle* in its earliest and best days. His first substantial work was *The History of Reading*, published in 1835. For the next eleven years he was engaged as editor of a London weekly newspaper. In 1853 he published an edition of *Xenophon's Anabasis*, with notes. This work he followed up by a *Life of Dr. Young*, prefixed to Tegg's edition of that poet's works (1854); *Table Traits, and Something on Them* (1854); *Habits and Men* (1855); *Knights and their Days* (1856); *Saints and Sinners* (1868); *A Lady of the Last Century—Mrs. Elizabeth Montagu* (1873), and many others. Dr. Doran succeeded Mr. Thoms in the editorship of *Notes and Queries*, and at various times, during many years, acted as editor of the *Athenæum*. He was also a large contributor to the best periodical literature to the close of his active and laborious life.

Athenæum, Feb. 2nd, 1878; *Notes and Queries*, Feb. 2nd, 1878; *L'Intermédiaire des Chercheurs et Curieux*, Feb. 25th, 1878.

Doré, PAUL GUSTAVE (b. 1832, d. 1883), painter, was born at Strasburg, and seems to have derived from his birthplace the strange admixture of some of the characteristics of Germany and France so conspicuous in his mature productions. During his education at a Parisian *lycée* he gained a reputation for humour by his satirical drawings and caricatures, as afterwards displayed in his well-known illustrations to *Rabelais*, *Don Quixote*, and the *Wandering Jew*. He was admitted as contributor to the *Journal pour Rire*, and for some years devoted himself to the reproduction of landscape as it appears to a highly "romantic" fancy. At the time of the Crimean War his *Battles of Alma* and *Inkermann* astonished the crowd. But soon after this, having turned from the representation of

the real, he set his imagination to revel amidst the scenes of hell and heaven that Dante's verse called up before his mind. The result was the series of illustrations to the *Divine Comedy* (1861-6), and suggestions for some of his larger pictures, such as *Paolo and Francesca*. At the same time, having failed to obtain recognition amongst the artists of France, he appealed—and not in vain—to the artistic sense of the British public with his long series of illustrations to the *Bible*. These were rapidly followed by illustrations to the *Paradise Lost*, the *Ancient Mariner*, and the *Idylls of the King*. By 1870 Doré's name had become a household word in every English family. In that year his reputation was further enhanced by the exhibition of some larger pictures, together with the originals of the illustrations in the *Doré Gallery* in Bond Street. In 1868 he had exhibited the *Neophyte* in Paris, and since then his talent was directed almost entirely to scriptural or religious subjects. The collection grew with marvellous rapidity, in spite of the enormous size of the painted cartoons, of which the following only can here be mentioned:—*The Triumph of Christianity*, *The Brazen Serpent*, *The Dream of Pilate's Wife*, *Christian Martyrs in the Reign of Diocletian*, *The Entry into Jerusalem*, *Ecce Homo*, *Christ Leaving the Prætorium*, and *The Vale of Tears*. The chief causes of the popularity of these pictures in England are their size, their lively contrasts, and, above all, their sentiment and orthodox treatment. The spectator feels that here at length he has a weirdness of landscape and grandeur of scene, fully satisfying to the most fervid imagination. Doré's defects as an artist were crudeness of colour and irregularity of form. He also designed the memorial to A. Dumas, in Paris.

Occasional references in Ruskin's *Oxford Lectures* (1878), and in Browning's *Fifine at the Fair*. For more rigorous criticism, see *Gustave Doré*, by W. Renton (1877), and for personal reminiscences, the *Daily News* of Jan. 25th, 1883.

D'Orléans, FERDINAND PHILIPPE LOUIS, Duc (b. 1810, d. 1842), the eldest son of Louis Philippe, was born at Palermo, and having entered the army, served with distinction at the siege of Antwerp, and in Algeria after the revolution of 1830 had placed his father on the throne. As he had made himself the popular idol of the army and Parisian society, his sudden death from a carriage accident in the neighbourhood of Paris fell like a blow on the whole nation. In 1837 he had married HELENE LOUISE ELIZABETH (b. 1814, d. 1858), daughter of the Duke of Mecklenburg-Schwerin, who had been brought up at Ludwigslust. They had two sons, the Comte de Paris and the Duc de Chartres, to whose education the duchesse entirely devoted herself after her husband's death. Though she displayed great courage and energy during the revolution of 1848, she failed to secure the

son's succession, and was obliged to flee to Belgium, after which she resided alternately in Germany and England, and was buried beside Louis Philippe at Weybridge.

Dorregaray, DON ANTONIO, MARQUIS OF ERAUL (*b.* 1820, *d.* 1882), Carlist leader, joined the army of Don Carlos in 1836, but entered the royal army in 1839, and distinguished himself in the campaign of Morocco. He withdrew from the public service at the revolution of 1868, and in 1872 embraced the cause of the younger Don Carlos, for whom he won the battle of Estella in 1873. In 1874 he took the chief command of the Carlist forces, and issued a proclamation that he should carry on the contest without mercy, thus covering the acts of violence and pillage done by the Carlist bands. A second manifesto, which he shortly issued, however, endeavoured to cast the odium of these acts on the regular troops. He followed Don Carlos in his flight to England in 1876, but subsequently returned to Madrid, where he died.

Times, March 25th, 1882.

D'Orsay, ALFRED, COMTE (*b.* 1798, *d.* 1852), Lord Byron's *Cupidon déchainé*, generally described as the ideal of a Frenchman before the revolution, was born in Paris, the son of General D'Orsay, who was considered one of the handsomest men in the armies of the empire. When first rising into manhood the Count visited England, and the literary result of this visit was an MS. diary, which afterwards procured him the acquaintance of Lord Byron. This diary is said to be a most extraordinary production, giving, according to Byron, "a most melancholy but true description of all that regards high life in England." Comte D'Orsay made the acquaintance of the Blessingtons, at Valence, on the Rhone, where he was quartered with his regiment in 1821. This acquaintance ripened into intimacy, and in 1827, the Count was married to one of the daughters, Lady Harriet Anne Gardiner, a mere child of fifteen. It was not long, however, before a separation took place. On the death of Lord Blessington in 1829, the Count came into some Irish property by his marriage, and resumed in London the career of sportsman, exquisite, artist, and general *arbitrer elegantiarum*, as all the world knows. Here he met Prince Louis Napoleon, whom he followed to Paris when the Prince went thither to become head of the empire. He now became the confidant and counsellor of the Prince. He strongly advocated lenient measures towards the Prince's political opponents, and no man exerted himself more to assuage the stroke of proscription. The Count's literary productions have been described as lively and imaginative; his profile portraits felicitous and characteristic; and his statuettes, graceful and original.

Gentleman's Magazine, Sept., 1852; *Frazer's Magazine*, Dec., 1854; Jane Welsh Carlyle, *Letters and Memorials*.

Dost Mohammed. [AFGHANISTAN.]

Doubleday, EDWARD (*b.* 1810, *d.* 1849), a high authority on entomology, travelled in North America in his youth, and was afterwards appointed one of the curators of the British Museum. His name is widely known as the author of the *Genera of Diurnal Lepidoptera* (1846-52), in which he was assisted by Professor Westwood and W. C. Hewitson, who completed the work after his death.

Douglas, STEPHEN ARNOLD (*b.* 1813, *d.* 1861), an American politician, author of the doctrine of *Popular Sovereignty*, was born in Vermont, and adopting the profession of the law, began to practice at Jacksonville in 1833. About the same time he entered on politics, and became an active politician and a popular orator of the democratic party, who, in allusion to his small stature, gave him the name of the "Little Giant." In 1841 he became a judge of the supreme court of Illinois, and in 1843 a member of Congress. He represented Illinois in the Senate of the United States from 1847-59, during which time he supported Clay's famous "Compromise Measures" of 1850; and in relation to the extension of slavery in the territories, maintained that Congress should not interfere, but that the people of each territory should be permitted to decide whether it should be a free State or a slave State. This was his doctrine of *Popular Sovereignty*. He was defeated by Buchanan, when a candidate for the nomination in the National Democratic Convention of 1856; but he defeated Abraham Lincoln in 1858, in the contest for the representation of Illinois in the Senate. After the civil war broke out he strongly supported the Government in its efforts to repress it, and made a memorable patriotic speech on this subject before the legislature in 1861.

J. W. Shearman, *Life of Stephen A. Douglas* (1860).

***Douglass,** FREDERICK (*b.* 1817), an American orator, was born a mulatto slave, in Maryland, but escaping from his master when about twenty-one years of age, settled in New Bedford, Massachusetts. In 1841 he began to deliver lectures against slavery, and in 1845 published his autobiography, both of which attracted much attention in the Northern States. In 1846 he made a visit to England, where he delivered anti-slavery addresses, and drew large audiences by his earnest and brilliant eloquence. On his return to America he settled at Rochester, New York, and became editor of *The North Star*. In 1870 he established *The New National Era* at Washington, and acted as United States Marshal for the district of Columbia from 1877 to 1881.

Frederick Douglass, *My Bondage and my Freedom*.

Dove, HEINRICH WILHELM (*b.* 1803, *d.* 1879), scientist, was born at Liegnitz, in Silesia,

and studied at Breslau, and subsequently at Berlin, where he took his degree in 1826. He soon after became assistant-professor, first at Königsberg, and then at Berlin, where he became full professor and a member of the Royal Academy of Sciences. What first secured him a European reputation was his investigation into the laws of cyclone storms, in connection with which he published his *Meteorological Researches* (1837), preceded by *A Treatise on the Art of Measuring, and the Origin and Comparison of the Metrical Standards of Different Nations* (1835). About this time he began those researches which resulted in a great variety of optical discoveries, the most useful of which was, perhaps, the application of the stereoscope to the detection of forged bank-notes. His treatise on the *Distribution of Heat on the Surface of the Globe*, published by the British Association in 1853, is the book by which he is best known to English readers. In addition to this, however, he has published several popular volumes, including *A Treatise on Electricity* (1848). It should be added that Dr. Dove was the most active agent in the organisation of the storm-signal department in Germany, and rendered important services to navigation by his onerous observations and discoveries.

Nature, April 10th, 1879.

Dover, THE RIGHT HON. GEORGE JAMES WELBORE AGAR ELLIS, BARON (b. 1797, d. 1833), historian, entered the House of Commons at the age of twenty-one, and subsequently held office under Earl Grey. In 1826 Lord Dover brought out *The True History of the State Prisoner, commonly called the Iron Mask, Extracted from Documents in the French Archives*, in which, following M. Delort, he demonstrated that person to have been Count Hercules Anthony Matthioli, Secretary of State to Charles III., Duke of Mantua. This was followed in 1828 by *Historical Inquiries respecting the Character of Edward Hyde, Earl of Clarendon, Lord Chancellor of England*, and in 1829 by *The Ellis Correspondence*, in two volumes, consisting of letters written between January, 1666, and December, 1688, by different persons to his ancestor, John Ellis, who was for some time secretary of the revenue at Dublin. He next brought out a *Life of Frederick, King of Prussia* (2 vols., 1831), and edited the *Letters of Horace Walpole to Sir Horace Mann* (1833). A small volume of *Lives of the Most Eminent Sovereigns of Modern Europe*, written for the instruction of his son, was published immediately after his death. Lord Dover was also a frequent contributor to the *Edinburgh and Quarterly Reviews*, *Keepsake*, and other magazines, and was a patron of painting, having prepared in 1822 a *Catalogue Raisonné of the Principal Pictures in Flanders and Holland*, which was printed, but not published.

Gentleman's Magazine, vol. ciii., 1833.

Dowson, JOHN (b. 1810, d. 1881), Indian historian, began his Oriental studies under Edwin Norris at the Royal Asiatic Society, and became successively tutor at Haileybury, and professor of Hindustani at the Staff College, Sandhurst. In the intervals of his professional duties he published a translation of part of the *Ikhwān es-safā* (1862), and an Urdu or Hindustani grammar (1872), certainly the best in existence. The great work, however, on which Dowson's title to fame rests is his edition of the *History of India as told by its own Historians*, from the papers of Sir H. Elliott. These eight substantial volumes, which demanded an infinity of labour and research, laid, for the first time, the sure foundations of an accurate and detailed history of India during the confused period of Mohammedan rule. Another useful publication was the *Classical Dictionary of Hindu Mythology and Religion, Geography, History, and Literature* (1879). He also contributed to the *Encyclopædia Britannica*, and wrote some valuable articles in the *Journal of the Royal Asiatic Society*. [S. L.-P.]

Doyle, JOHN (b. 1789, d. 1868), caricaturist, was born of Irish parents in Dublin, and after he had passed through the Dublin Society's Schools, proceeded to London in 1822. He occasionally exhibited in the Academy between the years 1825 and 1835; but not succeeding he was led to lithograph and publish likenesses of some of the more prominent men of the day. These became popular, and gaining thus a power of seizing with his pencil the prominent peculiarities of face and action, he was led to caricature. As a caricaturist, under the signature of "H. B.," he kept St. James's Street in a state of expectancy as to public things and public men for some twenty years. The strength, grace, and delicacy of his caricatures rested on the fact of their never degenerating into coarseness. In them, it is true, might be seen Lord Brougham's nose, and Lord Morpeth's ill-considered dancing, yet they were never for an instant vulgar.

Doyle, RICHARD (b. 1826, d. 1883), artist, son of the preceding, was born in London. He was a pupil in Sass's school of art, and the Royal Academy, and became one of the founder-illustrators of *Punch*; the still current design on the cover of which was invented by him. But in 1850, his association with this paper came to a somewhat abrupt end, on account of the frequency with which it then ridiculed his Roman Catholic brethren, and especially Cardinal Wiseman. Since that time he contributed innumerable illustrations to books, including *The Newcomes*, *Jar of Honey from Mount Hybla*, and *King of the Golden River*, by Thackeray, Leigh Hunt, and Mr. Ruskin, respectively. Next came out *Fairy Tales*, *Jack the Giant-killer*, and *The Continental Tour of Messrs. Brown, Jones, and*

Robinson, a body of designs which included incidents of the artist's own travels. In the summer of 1885 appeared in the *Pall Mall Budget*, as a posthumous publication, a series of sketches under the headings of *Adventures of Master Tommy who said "Don't care"* and *the Lion*, and *Comic History of England*. His sketches of the *Manners and Customs of Ye English*, in *Punch*, and *Bird's-eye Views of Society*, in *Cornhill*, will preserve his name and illustrate the modes of life and manners of London men and women of his time with extraordinary felicity and fidelity. Many portraits, distinguished by witty exaggerations of personal characteristics, are recognisable in them. Mr. Doyle was without doubt the most graceful and genial, as well as the wittiest of our satirical designers, and since Cruikshank, the most fanciful of our illustrators of fairy-land. Several of his fairy scenes were exhibited at the Grosvenor Gallery in recent years.

Athenæum, Dec. 15th, 1883.

Dozy, REINHART (b. 1820, d. 1884), an eminent Dutch Orientalist, was educated at the University of Leyden, where he studied history and philology, and especially Oriental subjects. In 1844 he received a post in the Manuscript Library of Leyden, and six years later became professor of history at the University. Dozy's special title to fame depends upon his admirable works on the history of Spain under the Moors. His *Histoire des Musulmans d'Espagne* is a model of what such a history should be; accurate without pedantry, and interesting without effort. The style is lucid and brilliant, and there is throughout a clear understanding of the scope and balance of historical narrative. The four volumes of this remarkable work appeared in 1861; and in 1881 appeared a third edition of the more technical and hypercritical but valuable *Recherches sur l'Histoire politique et littéraire de l'Espagne pendant le Moyen Age*. Dozy's other great work is his *Supplément aux Dictionnaires Arabes*, 2 vols. (1877-81). This laborious vocabulary contains a vast number of rare or unusual words and meanings, especially technical terms in arts and sciences, which are met with in Arabic writers, but are not mentioned or fully explained in the usual dictionaries. The *Supplément* shows an immense range of reading, and is indispensable to Orientalists. Dozy also edited Abd-el-Wahid's *History of the Almohades*, which reached a second edition in 1881; wrote a peculiar and speculative volume on the Israelites at Mekka (*Israeliten te Mekka*, 1864), and a popular outline of the history of Mohammedanism, which was translated into French (*L'Islamisme*, 1883). He also published some researches on the Abbadite dynasty of Seville, on Arabic derivation of Spanish words, and was a collaborator with

De Goeje in the edition and translation of El-Idrisy's *Description de l'Afrique et de l'Espagne* (1866), and in others of the great editions of Arabic texts which have issued from the Leyden press of Messrs. Brill. He was a member of the French Institute.

[S. L.-P.]

Drake, FRIEDRICH (b. 1805, d. 1882), sculptor, was born at Pyrmont, and having shown early sign of talent in modelling, became a pupil of Rauch, in Berlin. He afterwards became associated with his master, and was favoured by Friedrich Wilhelm IV., for whom he executed some large allegorical works to adorn the palace in Berlin. But it is on his busts and statues that his reputation principally rests. Of these we may mention the statue of Möser, at Osnabrück (1836), of Rauch, in Berlin (1852), two of Friedrich Wilhelm III. (1845 and 1850), and busts of the two Humboldts, Schinkel, Bismarck, Ranke, and Raumer. About 1860 he was made professor of sculpture in the University of Berlin.

Draper, HENRY (b. 1837, d. 1882), an American chemist and astronomer, the son of J. W. Draper (q.v.), was a Virginian by birth, but removed to New York with his father, and in 1858 took the degree of M.D. in the university of that city, his thesis being on the function and structure of the spleen, which he illustrated by means of photography, an art at that date scarcely ever applied to such a purpose. In 1859 he was appointed professor of physiology in the university; but in 1873 he resigned in order to teach analytical chemistry in the same establishment, in which, on the death of his father in 1882, he became professor of systematic chemistry. Inheriting great wealth from his wife, much of his time was occupied in attending to the affairs of the property which he superintended, and in performing the duties which devolved upon him as the recognised head of scientific society in the Empire City. His researches on the spectra of the heavenly bodies were, however, vigorously pursued, and in photographing various celestial objects he attained unprecedented success, as his numerous papers in the scientific periodicals so abundantly prove. He also issued a *Text-Book of Chemistry* (1864), and gave promise of a career even more distinguished than that of his father. But in 1882, contracting pneumonia during an excursion to the Rocky Mountains, he succumbed in a few weeks, leaving numerous researches only half finished, and many others merely begun, and so briefly indicated that they could not be finished by his friends. He spent large sums in the construction of the telescopes and other apparatus necessary to his work, and in 1874 he superintended the photographic department of the Transit of Venus Commission, on the conclusion of

which the United States Government caused a special medal to be struck in his honour. He organised the party for the observation of the eclipse of July 29th, 1878, and at his private observatory at Hastings-on-the-Hudson, he carried out many works which are usually defrayed out of the public purse. It may be added that he was a member of the National Academy of Sciences, and that in 1881 his *Alma Mater* and the University of Wisconsin simultaneously, but independently, conferred on him the degree of LL.D.

Sketch of his Life in Science (Boston, U.S.A.), Feb. 16th, 1883.

Draper, JOHN WILLIAM (b. 1811, d. 1882), M.D., LL.D., a distinguished chemist and physiologist, was born in Liverpool, and received his early education at a Wesleyan school in that town. On the opening of the University of London he proceeded to London and studied chemistry, natural philosophy, and the higher mathematics. He went to America in 1833, and continued his chemical and medical studies in the University of Pennsylvania, where he graduated in 1836 with the rare distinction that his thesis was selected for publication. He became professor of physical sciences in Hampden-Sidney College, in Virginia, in 1837; he was transferred to the Chair of chemistry and natural history in the University of the City of New York in 1839; transferred again to the Chair of chemistry in the University Medical College in 1841, and to the Chair of physiology in 1850. Dr. Draper, in the meantime, acquired a wide reputation as a teacher and scientist, and his services were acknowledged in his unanimous election to the presidency of the scientific and medical departments of the last-mentioned university. Dr. Draper has made many contributions to scientific literature, among which are—*Treatise on the Forces which produce the Organisation of Plants* (1844); *Human Physiology, Statistical and Dynamical, or the Conditions and Cause of Life in Man* (1856), and papers to the *Edinburgh Scientific Journal*. In these works the subject to which he chiefly devoted his attention was the chemical action of light, in connection with which he effected some discoveries. But Dr. Draper's name is perhaps as widely known in the literature of philosophy and history. In 1863 he published *The History of the Intellectual Development of Europe*, which has been translated into French, German, Italian, Polish, and Russian. In 1866 he brought out *Thoughts on the Future Civil Policy of America*; in 1870 *The History of the American Civil War*, in 3 vols., and in 1874 *History of the Conflict between Religion and Science*.

North American Review, 1867; Popular Scientific Monthly, 1874.

Drew, ANDREW (b. 1792, d. 1878), a vice-admiral, entered the Royal Navy at fourteen, and was in active service during the remainder

of the Napoleonic wars. He was present at the attack on the French flotilla off Boulogne, at the siege of Copenhagen, and the capture of the Danish fleet; he served in the Walcheren Expedition, and acquitted himself in the hard-fought action between the *Eurotas* and the French frigate *Clorinde*, for which he was made lieutenant. In 1824, with one hundred and sixty men, he successfully defended Cape Coast Castle against an attack by 50,000 Ashantees. But the most daring exploit in his life, if not the most daring exploit recorded in history, was his successful attack on the rebel steamer *Caroline* during the rebellion of 1838, in Upper Canada. The *Caroline* was employed in conveying arms, ammunition, and men from the United States shore to Navy Island, then in possession of the rebels, and Captain Drew was ordered to intercept the steamer. With five small boats, each carrying about seven men, he crossed the river where the stream was running at the rate of five or six miles an hour, captured the vessel, and sent it burning over the Falls of Niagara. For this service he was especially thanked by the Houses of Parliament of Upper Canada, and a petition was sent home from the Governor in Council, praying the Queen to bestow some especial mark of favour upon him for his services. In 1842, as commander of H.M.'s sloop *Wasp*, he was sent to the West Indies, where he discovered a most dangerous shoal, of which he made a careful survey and received the thanks of the Admiralty for this service. This shoal now appears upon the Admiralty chart as "Drew's Rock." In 1843 he was appointed to the rank of post-captain, and in 1863 to that of rear-admiral.

Dreyse, NICOLAS (b. 1788, d. 1867), inventor of the needle-gun, was born at Sömmerda, and brought up to the trade of a locksmith. When eighteen years of age he set out on his travels, as all young artisans do, in Prussia, before they are licensed to work as masters, and passing through Jena, just after the fight, he naturally enough visited the battle-field. This led to an examination of the muskets of the combatants, the construction of which he considered very defective. He immediately began to devise an improvement. Arriving in Paris in 1809, he was entrusted by Colonel Pauli, on behalf of the Emperor Napoleon, with a commission for the manufacture of a breech-loading gun, but the weapon manufactured proved a failure. Having obtained a clue to the construction of a breech-loader, Herr Dreyse followed the idea with the greatest perseverance for nearly thirty years. Prejudice and routine, however, proved formidable antagonists, and it was not till its superiority was admitted in the war between Austria and Prussia in 1866, that the gun was looked on with favour. But since this war all the nations of Europe have introduced a similar weapon. Herr Dreyse

established a large manufactory at Sömmerda, his native town.

Dris, FRANÇOIS XAVIER JOSEPH (b. 1773, d. 1850), a French writer and moralist, was born at Besançon, and proceeding in 1792 to Paris to study the law, he joined instead the volunteer *bataillon* of the Doubs, and for the next three years served in the army of the Rhine. Receiving his discharge on the score of ill-health, he tried literature, and after a few unsuccessful attempts he brought out in 1799, *Essai sur l'Art Oratoire*, in which he acknowledges his indebtedness more especially to Hugh Blair. This early reference to Scottish literature is interesting in connection with the peculiarly Scottish tone of mind which is observable in his writings, and has attracted the notice of Sainte-Beuve. He was now on intimate terms with the sympathetic Ducis and the sceptical Cabanis; and it was on the advice of the philosopher that, in order to catch the public ear, he produced the romance of *Lina*, which Sainte-Beuve has characterised as a mingled echo of Florian and Werther. He produced his *Essai sur l'Art d'être heureux* in 1806; *Éloge de Montaigne* in 1812; *Essai sur le Beau dans les Arts* in 1815; and *De la Philosophie morale, ou des différents Systèmes sur la Science de la Vie*, in 1823, which last gained for him the Monthyon prize and admission to the Académie Française in 1824. The doctrine expounded in this work is that men must be taught to think of their duties, and not only of their rights, before society will be in a proper state. His greatest work was the result of very careful and prolonged study—*Histoire du Règne de Louis XVI.* (1838–42). In it he displays greater vigour of style and deeper powers of thought than previously. Along with Picard he wrote *Memoirs of Jacques Fauriel*.

Sainte-Beuve, *Causeries du Lundi*, t. III.; Guizot, *Discours Académiques*.

Droste von Vischering, CLEMENS AUGUST (b. 1773, d. 1845), Archbishop of Cologne, was born on the family estate of Vorhelm, near Münster, and was brought up under the strong Catholic influence of the Princess Galitzin, the Stolbergs, and Friedrich Schlegel. Having taken priest's orders, he naturally rose to his position through his hereditary influence in the cathedral of Münster, and was active in the defence of its rights during the French occupation. Prominent as one of the foremost champions against unbelief and heretical innovations of every kind, he was appointed to succeed Spiegel as Archbishop of Cologne in 1835. The hesitation of the Berlin Government to sanction the appointment was abundantly justified. Droste showed himself a ferocious Ultramontane. He alarmed the comfortable by his asceticism, the universities by his narrow tyranny, and finally the Government by his refusing to celebrate "mixed marriages." In 1837 he was forcibly

deposed by Friedrich Wilhelm III., detained for some time in confinement at Minden, and afterwards allowed to retire to his estates; Johannes von Geissel, Bishop of Speyer, being appointed to succeed him. Thus the final conflict between the Church and the German State was postponed for nearly forty years.

Drouot, ANTOINE (b. 1774, d. 1847), a French general of artillery, surnamed by Napoleon "the Sage of the Great Army," was born at Nancy, and entering the army at an early age, fought as captain at Hohenlinden in 1800, at Wagram in 1809, at Borodino in 1812, at Lützen and Bautzen in 1813. In all these engagements he showed remarkable skill and courage, in the last engagement especially, where he commanded the Imperial Guard, for which he was made a general of division and aide-de-camp to Napoleon. He followed Napoleon, to whom he was ever faithful, to Elba, of which he was chosen Governor. On Napoleon's return to France, Drouot was one of the officers who addressed the proclamation to the army. He was at the side of Napoleon at the battle of Waterloo, in June, 1815, and on the following day in an ever-memorable extempore oration he re-animated the drooping spirits of his countrymen. He next became commander of the Imperial Guard at Paris, but after the restoration he lived as a private citizen. M. Héguet pronounces him as the best artillery officer Europe has ever produced.

Nollet-Fabert, *Biographie du Général Drouot*; Henri le Page, *Le Général Drouot*.

Drouyn de Lhuys, EDOUARD (b. 1805, d. 1881), statesman and diplomatist, born in Paris, entered the diplomatic service, becoming in 1831 attached to the French embassy at Madrid, and afterwards, through the influence of Count Gerard d'Rayneval, was promoted to chargé d'affaires at the Hague, during those events which led to the separation of Belgium from Holland. In 1840, he was placed at the head of the commercial department under the Minister of Foreign Affairs, and in 1842 he entered the Chamber as *Député* for Melun, defeating the candidate of M. Guizot. On his dismissal from office by M. Guizot for his hostility to the Government, he became an active member of the *Réforme* party, and after the famous banquet of the 12th arrondissement had been interdicted, he signed, along with the other chiefs of the Opposition, the accusation drawn up against M. Guizot and his colleagues. He became Minister of Foreign Affairs in M. Odillon-Barrot's ministry, under Prince Louis Napoleon, in 1848, and directed the French policy in all the difficult European complications of the year. In 1849 he was appointed to the London embassy, and his diplomatic tact served him well during the differences that arose between France and England over the Pacifico quarrel with Greece. On the *Coup d'État* of 1851, he again became Foreign

Minister, but resigned in 1855, being disappointed with the decisions of the Vienna conferences. In 1863, he became Foreign Minister for the third time, and held office during the Dano-German War, and the conferences of London and Vienna. M. Drouyn de Lhuys became a senator under the Empire. On the fall of the Empire in 1871 he fled to Jersey, but subsequently returned to France.

Drummond, SIR GORDON (d. 1824), was one of the English generals during the American War of 1812-14. In 1814 he defeated the Americans at Fort Oswego, and soon afterwards gained a second victory over them at Lundy's Lane. In August of that year, however, he was defeated at Fort Erie, to which he afterwards laid unsuccessful siege. Appointed Governor-General of Canada in 1815, he held that post for two years.

* **Du Cane, SIR EDMUND FREDERICK** (b. 1830), K.C.B., was born at Colchester, Essex, of Irish parents. Educated at Woolwich Military Academy, he obtained his commission as second lieutenant in the Royal Engineers in 1848. He was appointed to assist in preparing and carrying out the Great Exhibition of 1851; and shortly afterwards was appointed in command of a company of sappers to proceed to Australia to assist in carrying out Lord Grey's convict establishment in Western Australia. While here he became a magistrate of the colony and a visiting magistrate of convict depôts, and directed the labour of convicts, who were employed in developing the communications of the colony. Lieutenant Du Cane rendered valuable services in connection with the carrying out of Lord Palmerston's defence schemes at Dover and Plymouth. In 1863 he became a Director of Convict Prisons and Inspector of Military Prisons. In 1869 he was made Chairman of Directors of Convict Prisons, Surveyor-General of Prisons, and Inspector-General of Military Prisons. In 1877 he became Chairman of the Prison Commissioners, appointed by royal warrant under the Prisons Act, 1877, for the purpose of reorganising and managing the county and borough prisons, which came under the control of Government in 1878. Lieutenant du Cane became a major in 1872, a lieutenant-colonel and C.B. in 1873, and a K.C.B. in 1877. His published works include an *Introduction to Mr. W. A. Guy's Result of Censuses of the Population of Convict Prisons* (1875); and *An Account of the Manner in which Sentences of Penal Servitude are carried out in England* (1872; 4th ed. 1882).

* **Duchinski, HENRI FRANÇOIS** (b. 1816), a Polish author, was born in Ukraine. The main object of his life has been to prove that the Russians are descended from the Slavs, and cannot trace their origin from the Muscovites. His first production on this subject

appeared when he was still in his teens. In 1846 he went to Turkey, and then visited nearly every part of Europe, collecting facts and holding discussions on the Russian problem. We find him in Italy in active co-operation with the patriot leaders of the 1848 revolution, Depretis and Rascalla; shortly after he is an Hungarian attaché in Turkey; then he is deep in history in Constantinople, where he is, on the outbreak of the Crimean War, enjoying the popularity of two successful pamphlets, one on the defence of Turkey against Russia, the other on the Russian problem. He next passed through Austria, Germany, France, and Switzerland, and in 1862, when the Russian Government decided to celebrate the thousandth anniversary of its existence, he published *Le Monument de Novgorod* in French and Polish, in which he seeks to demonstrate that the Muscovite estate does not even date from the fourteenth century. He has also published *The Oriental Question* (1853), *Panslavism* (1854), and *The Principles of the History of Poland and other Slav Races* (1858-63, 3 vols.). His wife, Severine Duchinska, has also written a number of original books which have placed her in the front rank of contemporary Polish authors.

Ducis, JEAN FRANÇOIS (b. 1733, d. 1816), a French dramatic poet, noted more especially for his adaptations of Shakespeare to the Parisian stage, was born at Versailles, of humble parents, and retained all through life the simple tastes and straightforward independence fostered by his bourgeois education. In 1767 he produced a French version of Shakespeare's *Hamlet*, which was a success, and in 1772 *Romeo and Juliet*, which was equally successful. *Edipe chez Admète*, imitated partly from Euripides and partly from Sophocles, appeared in 1778, and secured for him the Chair in the Academy vacant by the death of Voltaire. *Macbeth*, in 1793, was almost a failure, but *Othello*, in 1792, supported by the acting of Talma, was a great success. M. Ducis now determined to produce a play of his own, and in 1796 appeared *Abufar, ou la Famille Arabe*, which had a flattering reception, soon followed by a similar piece, *Phédon et Waldemar, ou la Famille de Sibérie*, which, however, was a failure. The fate of this play determined M. Ducis' stage career, for he now gave up literary work altogether, and spent the rest of his life in quiet retirement at Versailles. Ducis cannot in any deep sense of the word be said to be Shakespearean. He was an honest and ardent admirer of Shakespeare; but his ignorance of the English language left him at the mercy of such translators as Letourner and Laplace, and besides even this modified Shakespeare had still to undergo a process of purification and correction before he could be presented to the fastidious

criticism of French taste. M. Ducis was also the author of *Le Banquet de l'Amitié*, a poem in four cantos (1771); *Épître à l'Amitié* (1786); *Recueil de Poésies* (1809), and several other works of minor importance.

Campeiron, *Essai de Mémoires sur Ducis*; *Sainte-Beuve, Causeries du Lundi*, t. iv.

Duckworth, Sir John Thomas (b. 1748, d. 1817), admiral, son of the Rev. Henry Duckworth, rector of Fulmer, Bucks, entered the navy in 1759, became lieutenant in 1770, commander in 1779, post-captain in 1780, commodore in 1796, and rear-admiral in 1799. He reduced Minorca in 1798 without the loss of a single man, and was appointed commander-in-chief at the Leeward Islands in 1800. On the occasion of the Northern Confederacy, in conjunction with Lieut.-General Sir Thomas Trigge, he seized on the Swedish and Danish Islands, for which action he received the Order of the Bath. In 1802 he was promoted to the chief command at Jamaica, and in 1805 to second in command in the Mediterranean. In the beginning of 1806 he was detached to the West Indies in pursuit of the French fleet, which he defeated in the memorable engagement of St. Domingo. For this success he was voted an annuity of £1,000 by Parliament, and was presented with a sword by the Corporation of London. Early in 1807 he was again detached to Constantinople, and effected the passage of the Dardanelles. In 1810 he was sent to Newfoundland as governor and commander-in-chief; in 1813 he was created a baronet; and finally, in 1815, he was appointed to the chief command of Plymouth, where he closed his long and honourable career of service in 1817.

Gentleman's Magazine, vol. lxxvii. pp. 275, 372.

* **Duclerc, Charles Théodore Eugène** (b. 1812), French politician and financier, at the age of twenty-two became a regular contributor to *Le Bon Sens* and the *Revue du Progrès*, and subsequently one of the editors of the *Dictionnaire politique* (Paris, 1842), at the same time writing the economical and financial articles in *Le National*. In the meantime he brought out a pamphlet on a subject that was seriously agitating the public at the time, *De la Régence*. In 1846 M. Duclerc retired into private life, but he was not allowed to rest long. On the revolution in 1848, he was nominated deputy mayor of Paris, and in that capacity he busied himself in municipal reform, in particular the police of Paris, whom he desired to see placed on a footing similar to the police of London. He next became assistant secretary to the Minister of Finance, where his knowledge of economics served him in good stead on the question of paper currency. He was soon urged to take the portfolio of Finance. In 1871 he was elected to represent Basses-Pyrénées in the National Assembly, shortly

after became a finance commissioner, then Vice-President, and finally, in 1875, he was elected a life-senator. In 1878 he was a candidate for the presidency of the republic. He took office on the fall of the De Freycinet ministry in 1882, and in the Egyptian imbroglio, he offered a passive resistance to all that was done or proposed, his plea for such a policy being based on the rights of France in the Dual Control. His ministry came to an end in 1883, the end being precipitated by the manifesto which Prince Napoleon had just issued. The prince was arrested, and M. Duclerc hurried through the legislature a bill to expel all pretenders to the throne of France from the country. But no sooner was the bill passed than a reaction set in, and M. Duclerc was forced to resign.

Ducrot, Auguste Alexandre (b. 1817, d. 1882), a French general and author, was born at Nevers, and entering the army served for many years in Algeria and Italy. In 1865 he was promoted to the rank of general of division, and in 1865 was put in command of the sixth division, quartered at Strasburg. He greatly distinguished himself in the campaigns of the Franco-Prussian War. At the battle of Sedan, on Sept. 1st, 1870, he fought valiantly, and received from MacMahon the command-in-chief when the latter was wounded. After the surrender Ducrot refused to accept the favours which were extended to French officers, and was put under arrest at Pont-à-Mousson. Shortly afterwards he escaped, and obtaining command of the 13th and 14th army corps, he fought the terrible battles of Rueil, La Jonchère, and Buzenval. He was next engaged in the two unsuccessful sorties in the south of Paris, and on the Marne in December, and in the last and disastrous sortie of January, 1871. In 1872 he was elected to the National Assembly, and in September of the same year he was appointed commander-in-chief of the 8th army corps at Bourges, but in January, 1878, he was removed from this command. General Ducrot was the author of *La Journée de Sedan*, *De l'État-major et des différentes Armes*, *La Vérité sur l'Algérie*, and *La Défense de Paris*, 1870-1, in 3 vols., illustrated with coloured maps.

Dudevant, Madame. [SAND, GEORGE.]

Dudley, John William Ward (b. 1781, d. 1833), Earl of Dudley, of Castle Dudley, Co. Stafford, a highly gifted but eccentric nobleman, was the only child of the third Viscount Dudley. He entered the House of Commons on attaining his majority, where he soon distinguished himself. He had a seat in the House till, in 1823, when his father died, he entered the House of Lords. He acted as Foreign Secretary in Canning's Administration in 1827: The Earl of Dudley was a man of powerful talents, varied accomplishments,

and a generous disposition; but his manners were always marked by eccentricities. He was a friend of Lord Byron and Horne Tooke. He wrote a *Life of Horne Tooke*, and was a frequent contributor to the *Quarterly Review*.

Dufaure, JULES ARMAND STANISLAS (b. 1798, d. 1881), a French orator and statesman, was born at Saujon, and educated for the bar. He practised law in Bordeaux, and in 1834 was elected to the Chamber of Deputies, becoming a Councillor of State in the ministry of M. Guizot, and subsequently Minister of Public Works. He went into opposition on the rejection of the law of dotation, and exerted much influence in the Chamber as the chief of the Third Party. After the revolution of 1848 he was elected for the Charente-Inférieure, became leader of the Moderate Democrats, and from October to December acted as Minister of the Interior. He filled the same office for five months in 1849. For the next twenty years M. Dufaure devoted himself closely to his bar practice and pamphlet-writing. During the prosecution of the Count of Montalembert in 1862, M. Dufaure defended the publisher of his pamphlet with great skill and eloquence. After the fall of the Empire he was again returned to the National Assembly by his old constituents in Charente-Inférieure, and acted as Minister of Justice in M. Thiers's government (1871-4). He held the same office in the administration of M. Buffet (1875-6), and in 1876 he, now representing the Arrondissement of Marennes, was entrusted by the Marshal President with the formation of a Cabinet. In August, 1876, he was elected a life-senator in succession to the late M. Casimir Périer. Four months later his ministry came to an end in consequence of a defeat in the senate, but in December, 1877, he was again entrusted with the formation of a new ministry. In 1879 he resigned his portfolio on the fall of Marshal MacMahon.

Duff, THE REV. ALEXANDER (b. 1806, d. 1878), a successful Indian missionary, was born at Pitlochry, Perthshire, and was early destined for the Church. He was educated at the University of St. Andrews, where he came under the influence of Thomas Chalmers, then professor of moral philosophy there. In 1830 he sailed for Calcutta, where he became one of the finest pioneers of the Gospel. He established himself at Calcutta, opened a school, taught the rudiments as well as the higher branches of literature, science, philosophy and theology, and organised mission stations in and around Calcutta. Before fifteen years had passed both the school and the mission churches had proved a remarkable success. When the great Disruption of 1843 from the Scotch Church took place he concurred in all the views contained in the Claim of Right, he courageously supported

Chalmers, and "came out." His influence in India is partly attested by the fact that all the other missionaries seceded with him. In 1850 Dr. Duff returned to Scotland, and in the following year was elected moderator of the General Assembly. In 1853 he was examined by a committee of the House of Lords on Indian affairs, and took some part in the preparation of the famous Education Despatch of 1854. Finally quitting India, in 1863, on the score of ill-health, he was elected professor of evangelistic theology in the Free Church College, Edinburgh. Dr. Duff published, among other works:—*New Era for the English Language and Literature in India* (1837), *Female Education in India* (1839), *India and its Evangelisation* (1851), *India and Indian Missions, Qualifications, Duties, and Trials of Indian Missionaries* (1858), *Indian Rebellion, its Causes and Results* (1859).

Dr. Thomas Smith, *Life of Rev. Alexander Duff*.

***Duff, THE RIGHT HON. MOUNTSTUART ELPHINSTONE GRANT** (b. 1829), Governor of Madras, is the only son of the late James Cuninghame Grant Duff, of Eden, Aberdeenshire (formerly Resident at Sattara, and author of *The History of the Mahrattas*). He was educated at Edinburgh University, and Balliol College, Oxford. He joined the Inner Temple, and was called to the bar in 1854. In 1857 he was elected, in the Liberal interest, member for the district of Elgin Burghs, which constituency he continued to represent till 1881. In the first Gladstone administration (1868-74), he held the office of Under-Secretary of State for India, and on Mr. Gladstone's return to power in 1880, became Under-Secretary of State for the Colonies, and was sworn of the Privy Council. He was appointed to the Governorship of Madras, in succession to the late Right Hon. W. P. Adam, in 1881. Mr. Grant Duff published, in 1866, *Studies in European Politics*, followed in 1868 by *The Political Survey of Europe*. He is also the author of *Notes of an Indian Journey* (1876), and *Political and Literary Essays* (1878). Mr. Grant Duff was elected Lord Rector of Aberdeen University in 1867, and again in 1870.

***Dufferin, THE RIGHT HON. FREDERICK TEMPLE BLACKWOOD, EARL OF, K.C.B.** (b. 1826), the son of the fourth baron, was educated at Eton, and at Christ Church, Oxford, and succeeded to the title in 1841. During the potato famine, he visited the affected districts, and gave a straightforward account of his terrible experiences in *A Narrative of a Journey from Oxford to Skibbereen*. He has also written on *Irish Emigration, and the Tenure of Land in Ireland*; *Mr. Mill's Plan for the Pacification of Ireland Examined*; and *Contributions to an Inquiry on the State of Ireland*, besides some light pieces. In 1855 he was attached to Lord John Russell's mission to Vienna. In 1859 he made a yacht
